1. INTRODUCTION

This is the 4th monthly report prepared for the New York State Department of Environmental Conservation (NYSDEC) in accordance with NYSDEC contract no. D004134 for the operation of the groundwater treatment system at the Active Industrial Site located at 67 West Montauk Highway in Lindenhurst, New York. On May 21, 2002 Blue Water Environmental, Inc. (Blue Water) completed the monthly Operation and Maintenance (O&M) monitoring and sample collection of the Active Industrial groundwater pump and treatment system in accordance with the referenced contract. The following sections briefly describe the groundwater treatment system operation during the April 2002 operation period.

2. OPERATIONAL DESCRIPTION

The groundwater treatment system was in operation for 37 days during the April 2002 reporting period (April 5, 2002 to May 21, 2002). During this operation period, both wells (RW-1 and RW-2) and both air stripping towers (in-series) were on-line and the vapor phase granular activated carbon units were not changed-out.

The discharge flow meter recorded approximately 8,450,166 gallons of water treated by the system during the April 2002 reporting period with an average system flow of 180 gallons per minute (gpm). The RW-1 and RW-2 flow meters recorded an average recovery flow of 80 gpm and 100 gpm, respectively.

The following is a summary of system operation to date:

- | | |
|---|---------------------------|
| ▪ Total Water Treated to Date: | 33,158,338 gallons |
| ▪ Total Mass of VOCs Recovered to Date: | 102 pounds |
| ▪ Mass of VOCs Removed in April 2002 Period: | 32 pounds |

3. SUMMARY OF ON-SITE MONTHLY ACTIVITIES

During the month of April 2002, the following tasks were performed:

- **April 30, 2002:** On Tuesday, April 30, 2002, a high pressure well alarm triggered a system shutdown. Blue Water personnel visited the site and troubleshooting activities were conducted without being able to re-start the system. On May 1, 2002, additional troubleshooting activities identified three fuses that needed replacement. After the fuses were replaced, two additional fuses blew in the RW-2 pump controller. On May 6, Blue Water and R&R Electric personnel continued troubleshooting activities. It was found that the RW-2 electrical connector was shorted and was then replaced with a chemically bound

connection. The system was re-started on May 6, 2002 with minor adjustments to the stripper tower alarm floats.

- May 17, 2002: On May 17, 2002, a high pressure well alarm triggered a system shutdown. Blue Water personnel reprogrammed the Variable Frequency Drive Number 2 (VFD-2), balanced flow across the system, and re-started the system on Monday, May 20, 2002. Additionally, the air stripper intake screen was cleaned.
- May 21, 2002: Influent and Effluent water samples were collected and analyzed for volatile organic compounds (VOCs). Effluent water samples were also collected and analyzed for RCRA Metals, alkalinity, residual chlorine, pH, chemical oxygen demand (COD), total dissolved solids (TDS), and total suspended solids (TSS). The samples were submitted to Environmental Testing Laboratory, Inc. of Farmingdale, New York. Carbon influent and midfluent air samples were collected and analyzed for VOCs under method 6021 by Microseeps and discharge air samples were collected and analyzed for VOCs under TO-14 by Air Toxics Ltd.

4. SUMMARY OF FIELD DATA AND ANALYTICAL RESULTS

The April ground-water influent analytical results indicate that the system is successfully recovering and treating approximately 0.037 pounds per hour of volatile organic compounds (VOCs). The in-series tower air stripping system is removing approximately 100% of the contaminant mass from the water into the vapor stream. The system cumulative mass removal since startup is approximately 102 pounds of VOCs.

There was an exceedance of manganese at 2.37 milligrams per liter (mg/L) in the treated water discharge vs. the NYSDEC effluent limit of 2.0 mg/L. There was an exceedance of c-1,2-Dichloroethene at 0.0038 lbs/hr in the treated vapor discharge vs. NYSDEC permitted emission limit of 0.003 lbs/hr. Blue Water changed the primary vapor phase carbon bed on Friday June 17, 2002, which was within 4 days of receipt of the May 21, 2002 analytical data. The carbon influent and midfluent chain of custody was inadvertently dated for May 15, 2002 instead of May 21, 2002.

Table 1 summarizes the process water analytical data, Table 2 summarizes the process air analytical data, Table 3 summarizes operational parameters collected during the April 2002 O&M monitoring and sampling event, Table 4 summarizes the TO-14 effluent vapor sample data, and Table 5 summarizes the VOC effluent discharge rates. Laboratory analytical data has been included in Appendices A and B.

LABORATORY NARRATIVE

TO-14

Bluewater Environmental

Workorder# 0205550

One 6 Liter Summa Canister sample was received on May 28, 2002. The laboratory performed analysis via EPA Method TO-14 using GC/MS in the full scan mode. The method involves concentrating up to 0.5 liters of air. The concentrated aliquot is then flash vaporized and swept through a water management system to remove water vapor. Following dehumidification, the sample passes directly into the GC/MS for analysis. See the data sheets for the reporting limits for each compound.

During the five point calibration, two low-level standards are used. The low-level standard for TO-14 compounds is spiked at 0.5 ppbv and represents the reporting limit for these compounds. The low-level standard for the non-TO-14 compounds is spiked at 2.0 ppbv and represents the reporting limit for these compounds. The TO-14 compounds are present in both standards but are excluded from reporting in the 2.0 ppbv standard since a lower level is already included in the curve.

Method modifications taken to run these samples include:

<i>Requirement</i>	<i>TO-14</i>	<i>ATL Modifications</i>
Internal standard retention times.	Not specified.	Within 0.50 minutes of most recent daily CCV internal standards
Internal standard recoveries.	Not specified.	Within 40% of the daily CCV internal standard area for blanks and samples.
Initial calibration criteria.	Not specified.	RSD of 30% or less for standard compounds, 40% or less for non-standard and polar compounds
Continuing calibration verification criteria	Not specified.	70 - 130% for at least 90% of standard compounds, 60 - 140% for at least 80% of non-standard and polar compounds

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

There were no analytical discrepancies.

Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit.

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates

as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Residual Chlorine - EPA 330.3/330.3M

Sample: N9163-2

Client Sample ID: Effluent

Collected: 05/21/2002 12:00

Matrix: Liquid

Type: Grab

Remarks:

Analyzed Date: 05/22/2002

Cas No	Analyte	MDL	Result	Units	Q
	Residual Chlorine	NA	ND	ppm

Total Dissolved Solids - 2540C

Sample: N9163-2

Client Sample ID: Effluent

Collected: 05/21/2002 12:00

Matrix: Liquid

Type: Grab

Remarks:

Analyzed Date: 05/22/2002

Cas No	Analyte	MDL	Result	Units	Q
	Total Dissolved Solids	9.92	3100	mg/l

Total Suspended Solids - 2540D

Sample: N9163-2

Client Sample ID: Effluent

Collected: 05/21/2002 12:00

Matrix: Liquid

Type: Grab

Remarks:

Analyzed Date: 05/22/2002

Cas No	Analyte	MDL	Result	Units	Q
	Total Suspended Solids	4.58	7.00	mg/L

Case Narrative

The following compounds were calibrated at 25, 50, 100, 150 and 200 ppb levels in the initial calibration curve:

Acetone
2-Butanone
4-Methyl,2-pentanone
2-Hexanone

M&P-Xylenes and 2-Chloro ethyl vinyl ether were calibrated at 10, 40, 100, 200 and 300 ppb levels.

All other compounds were calibrated at 5, 20, 50, 100 and 150 ppb levels.

ORGANIC METHOD QUALIFIERS

Q - Qualifier - specified entries and their meanings are as follows:

- U - The analytical result is a non-detect.
- J - Indicates an estimated value. The concentration reported was detected below the Method Detection Limit.
- B - The analyte was found in the associated method blank as well as the sample. It indicates possible/probable blank contamination and warns the data user to take appropriate action.
- E - The concentration of the analyte exceeded the calibration range of the instrument.
- D - This flag identifies all compounds identified in an analysis at a secondary dilution. In the case of a surrogate this flag indicates a system monitoring compound diluted out.

INORGANIC METHOD QUALIFIERS

C - (Concentration) qualifiers are as follows:

- B - Entered if the reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Instrument Detection Limit (IDL).
- U - Entered when the analyte was analyzed for, but not detected.

Q - Qualifier specific entries and their meanings are as follows:

- E - Reported value is estimated because of the presence of interferences.

M - (Method) qualifiers are as follows:

- A - Flame AA
- AS - Semi-automated Spectrophotometric
- AV - Automated Cold Vapor AA
- C - Manual Spectrophotometric
- F - Furnace AA
- P - ICP
- T - Titrimetric

OTHER QUALIFIERS

- ND - Not Detected
- NA - Not Applicable
- NR - Not Required
- * - Outside Expected Range (NYCDEP Table I/II or Surrogate Limits)

OTHER

- All soil and sediment samples are reported on a dry weight basis.
