Re: National Heatset Printing  
**Operation & Maintenance Report-**  
**August-September 2006**  
1 Adams Boulevard  
Farmingdale, New York  
NYSDEC Site 1-52-140

File: 10653/35518 #5

Dear Mr. Dyber:

This letter provides an overview of the ongoing operation of the soil vapor extraction (SVE) system at the National Heatset Printing Site in Farmingdale, New York (Figure 1). A site visit was performed by YEC, Inc. (YEC) personnel on September 21, 2006 on behalf of O'Brien & Gere Engineers, Inc (OBG) in accordance with our approved Work Plan.

#### System Operation

Based on the run time meter, the system was operational for a total of 1085 hours during this reporting period (August 7, 2006 to September 21, 2006). However, during a site visit on August 30, 2006, OBG personnel observed that the system blower was not operating, but that the run-time meter continued to operate. The elapsed time the blower was not in operation is not known. The blower was reset and restarted, and operated for the remainder of the site visit. To be on the conservative side, discharge data for this report have been calculated assuming the blower was operational for 100% of the reporting period. The system operational data is summarized in Table 1 and on the site visit data collection form provided in Appendix A.

A flow of 124.5 cfm and a vacuum of 53 inches of water column were observed at the extraction well. The SVE blower operated at a flow of 227 cubic feet per minute (cfm) as measured at the SVE influent. Field personnel recorded a tetrachloroethene (PCE) concentration of 4.0 ppm (by Draeger tube) and a concentration of volatile organic compounds (VOCs) of 8.9 ppm (by PID) from the extraction well (pre-dilution).

Mr. Jeff Dyber, P.E.  
December 5, 2006  
Page 2

VOC concentrations of 7.7 ppm (by PID) and a PCE concentration of 9.0 ppm (by Draeger Tube) were observed at the SVE influent port during the site visit. VOC concentrations of 9.7 ppm (by PID) and a PCE concentration of 7.0 ppm (by Draeger Tube) were observed from the Vapor-phase Granular Activated Carbon (VGAC) mid sampling port, and a VOC concentration of 2.1 ppm (by PID) and a PCE concentration of 0.0 ppm (by Draeger Tube) were observed from the effluent sampling port. Refer to Table 1.

#### **Monitoring Probes**

A vacuum of 2.6, 0.75, 0.35, 0.55, 0.50, 0.20, 0.25, 0.11, 0.05, 0.02 and 0.00 inches of water column were observed during the site visit at vapor monitoring points VP-1, VP-2, VP-3, VP-7, VP-8, VP-9, VP-11, VP-12, VP-13, VP-14, and VP-15, respectively. Monitoring point VP-10 was covered by boxes in Eagle Box Company and was inaccessible. The vapor points will continue to be monitored during future site visits.

#### **PCE Removal**

PCE removal was calculated for this reporting period using SVE influent PCE concentrations and flow rate measured at the SVE influent sampling point. The SVE system removed approximately 27 pounds of PCE from the extraction well during this reporting period and has removed approximately 2,494 pounds of PCE to date. A summary of the estimated PCE mass removal over time is presented in Table 2.

#### **Air Discharge Monitoring**

YEC personnel collected an air sample from the system effluent and submitted the sample to Mitkem Corporation for analysis. The sample was analyzed for volatile organic compounds (VOCs) using USEPA method TO-14. PCE was detected at a value of 2.0 mg/m<sup>3</sup>. TCE was detected at an estimated value of 0.8 mg/m<sup>3</sup>, and Cis-1,2-DCE was detected at an estimated value of 0.4 mg/m<sup>3</sup>. Analytical results are summarized in Table 3 and the laboratory data report is presented in Appendix B. A summary of the field monitoring and laboratory air discharge monitoring results is presented as Table 4.

Based on the effluent sampling results, 1.64 lb of PCE, 0.66 lb of TCE and 0.33 lb Cis-1,2-DCE was discharged during the reporting period. A total of 3.42 lb of PCE has been discharged during the year 2006 toward the permitted annual discharge limit of 270 lb. A total of 0.71 lb of cis-1, 2-DCE has been discharged during the year 2006 toward the permitted annual discharge limit of 5,510 lbs. A total of 0.66 lb of TCE has been discharged during the year 2006 toward the permitted annual discharge limit of 120 lb.

#### **Conclusions and Recommendations**

Based on the data collected from the SVE system during this reporting period, OBG recommends continued operation of the SVE system. The extraction well (MW-F) valve remained at the 100% open position, and the dilution valve remained at the 50% open position during this site visit. Because VOCs were present at the effluent port, the granular activated carbon (GAC) was replaced on October 11, 2006.

Mr. Jeff Dyber, P.E.

Notes:

(1) Calculated flows based on the average of flows measured on 3-29-05 and 4-28-05

a Run time meter reading not indicative of SVE system run time; actual hours run is assumed 100% of available.

PID = Total VOC concentration measured with photoionization detector

ppm = parts per million (volume/volume basis)

PCE = Tetrachloroethene (PCE) concentration measured with Draeger tube of 10-500 ppm range

scfm = standard cubic feet per minute

cfm = cubic feet per minute

O'Brien & Gere Engineers, Inc.

17110653551815SVE monthly report-OBG/SVE Tables (DBG).xls

= measurement not recorded or not applicable.

Influent SVE = Readings collected between the SVE Blower and the Carbon Units

Mid GAC = Readings collected between the lead and lag carbon units

Effluent GAC = Readings collected after the lag carbon unit

GAC = granular activated carbon unit

As of 4/28/05, the calculation of "Available" run time hours is based on 24 hours, rather than 24.5 hours as previously calculated.

Notes:

<sup>(1)</sup> = VOC concentrations of 2,000 ppm and PCE concentrations of 500 ppm are greater than the limit of their respective monitoring device and are to be taken as estimations.

<sup>(2)</sup> SVE Influent (post-dilution) monitoring point data used for calculation of PCE Removal for dates including and subsequent to March 29, 2005; Removal updated on 1-3-06 to represent SVE Influent flow rate.

Removal Rate = [(flow(cfm)\*influent conc.(ppmv)\*MW\*12.187)/(273.15+C)]\*1 cu. m./35.31 cu. ft\*1g/1000 mg\*1 lb/453.6 g

\*60 min / hr\*24 hr/1 day\*days of operation

<sup>(3)</sup> Run time meter reading not indicative of SVE system run time; actual hours run is assumed equal to elapsed time.

Where: MW = molecular weight

lb = pounds

Molecular weight (MW) of PCE is 165.85

ppmv = parts per million (volume/volume basis)

C = degrees centigrade, as measured

-- = information not available

flow = average of the present and the previous months measured SVE influent rate in cubic feet per minute (cfm)

Notes:  
-- = Measurement not recorded

Discharge Rate (Field Mon., lb/hr) = [(flow(cfm)\*influent conc.(ppmv)\*MW\*12.187)/(273.15+C)]\*1 cu. m./35.31 cu. ft\*1g/1000 mg\*1 lb/453.6 g\*60 min/1 hr

Discharge (Field Mon., lb/hr) = Discharge Rate (lb/hr) \* # of days\*24hours/day\*60 minutes/hr

Discharge Rate (Lab Res., lb/hr) = flow (cfm)\*effluent conc. (mg/cu. m.)\*1g/1000mg\*1lb/453.6g\*1cu. m./35.31cu. ft\*60min/1 hr

Discharge (Lab Res., lb) = Discharge Rate (lb/hr) \* # of days\*24hours/day

Where:  
C = degrees centigrade, assumed to be 25

J = Estimated Value

hr = hours

(<sup>1</sup>) Calculated flows based on the average of flows measured on 3-29-05 and 4-28-05

Molecular weight (MW) of PCE=165.85; TCE=131.4; cis-1,2-DCE=96.94  
cfm = cubic feet per minute  
mg/cu. m = milligrams per cubic meter

ppmv = parts per million (vol/vol)  
lb = pounds

| Permit Limit | lb/hr | lb/yr |
|--------------|-------|-------|
| PCE          | 0.031 | 270   |
| TCE          | 0.014 | 120   |
| cis-1,2-DCE  | 0.63  | 5,510 |

APPENDIX B  
LABORATORY REPORT OF ANALYSES

*"Environmental Testing For The New Millennium"*

---

October 31, 2006

O'Brien & Gere  
5000 Brittonfield Parkway  
Syracuse, NY 13221-4873  
Attn: Mr. Marc Dent

RE: Client Project: NYSDEC – National Heatset  
Lab Project #: E1459

Dear Mr. Dent:

Enclosed please find the data report of the required analyses for the samples associated with the above referenced project. If you have any questions regarding this report, please call me.

We appreciate your business.

Sincerely,

A handwritten signature in black ink, appearing to read "Agnes R. Ng".

Report of Laboratory Analyses for O'Brien & Gere

Client Project: National Heatset, 09/21/06

Mitkem Work Order ID: E1459

October 31, 2006

Prepared For:                   O'Brien & Gere  
                                      5000 Brittonfield Parkway  
                                     P. O. Box 4873  
                                     Syracuse, NY 13221-4873  
                                     Attn: Mr. Marc Dent

Prepared By:                   Mitkem Corporation  
                                     175 Metro Center Boulevard  
                                     Warwick, RI 02886  
                                     (401) 732-3400

**Client: O'Brien & Gere**

**Client Project: National Heatset, 09/21/06**

**Lab Project: E1459**

**Date samples received: 09/25/06**

### **Project Narrative**

This data report includes the analysis results for one (1) air sample in a Tedlar bag that was received from O'Brien & Gere on September 21, 2006. Analyses were performed per specification in the Chain of Custody form. For reference, a copy of the Mitkem Work Order form is included for cross-referencing the client sample ID and laboratory sample ID.

All of the analyses were performed according to method specifications, as modified by Mitkem. No unusual occurrences were noted during sample analysis.

All pages in this report have been numbered consecutively, starting with the title page and ending with a page saying only "Last Page of Data Report".

This data report has been reviewed and is authorized for release as evidenced by the signature below.
