Re: National Heatset Printing
Operation & Maintenance Report-
November-December 2006
1 Adams Boulevard
Farmingdale, New York
NYSDEC Site 1-52-140

File: 10653/35518 #5

Dear Mr. Dyber:

This letter provides an overview of the ongoing operation of the soil vapor extraction (SVE) system at the National Heatset Printing Site in Farmingdale, New York (Figure 1). A site visit was performed by YEC, Inc. (YEC) personnel on December 21, 2006 on behalf of O'Brien & Gere Engineers, Inc (OBG) in accordance with our approved Work Plan.

System Operation

Based on the run time meter, the system was operational for a total of 528 hours during this reporting period (November 29, 2006 to December 21, 2006). The system operational data is summarized in Table 1 and on the site visit data collection form provided in Appendix A.

A flow of 132 cfm and a vacuum of 54 inches of water column were observed at the extraction well. The SVE blower operated at a flow of 178 cubic feet per minute (cfm) as measured at the SVE influent. Field personnel recorded a tetrachloroethene (PCE) concentration of 1.0 ppm (by Draeger tube) and a concentration of volatile organic compounds (VOCs) of 0.1 ppm (by PID) from the extraction well (pre-dilution).

VOC concentrations of 4.6 ppm (by PID) and a PCE concentration of 3.0 ppm (by Draeger Tube) were observed at the SVE influent port during the site visit. VOC concentrations of 0.0 ppm (by PID) and a PCE concentration of 0.0 ppm (by Draeger Tube) were observed from the Vapor-phase Granular Activated Carbon (VGAC) mid sampling port and the effluent sampling port. Refer to Table 1.

Monitoring Probes

A vacuum of 2.2, 0.7, 0.33, 0.45, 0.31, 0.2, 0.21, 0.05, 0.025, 0.00, and 0.00 inches of water column were observed during the site visit at vapor monitoring points VP-1, VP-2, VP-3, VP-7, VP-8, VP-9, VP-11, VP-12, VP-13, VP-14, and VP-15, respectively. Monitoring point VP-10 was covered by cardboard pallets in Eagle Box Company and was inaccessible. The vapor points will continue to be monitored during future site visits.

PCE Removal

PCE removal was calculated for this reporting period using SVE influent PCE concentrations and flow rate measured at the SVE influent sampling point. The SVE system removed approximately 5 pounds of PCE from the extraction well during this reporting period and has removed approximately 2,534 pounds of PCE to date. A summary of the estimated PCE mass removal over time is presented in Table 2.

Air Discharge Monitoring

YEC personnel collected an air sample from the system effluent during the December 21 site visit. This sample was submitted to Mitkem Corporation for analysis, however, the lab reported that the bag was received partially deflated, indicating a possible leak. YEC returned to the Site on December 28, 2006 to collect an additional effluent sample. The December 28 sample was analyzed for volatile organic compounds (VOCs) using USEPA method TO-14. Concentrations of PCE, TCE and Cis-1, 2-DCE were not detected above the method detection limit of 1.0 mg/m^3. Analytical results are summarized in Table 3 and the laboratory data report is presented in Appendix B. A summary of the field monitoring and laboratory air discharge monitoring results is presented as Table 4.

Based on the effluent sampling results, no PCE, TCE or Cis-1, 2-DCE was discharged during the reporting period. A total of 4.11 lb of PCE has been discharged during the year 2006 toward the permitted annual discharge limit of 270 lb. A total of 0.71 lb of cis-1, 2-DCE has been discharged during the year 2006 toward the permitted annual discharge limit of 5,510 lbs. A total of 0.66 lb of TCE has been discharged during the year 2006 toward the permitted annual discharge limit of 120 lb.

Conclusions and Recommendations

Based on the data collected from the SVE system during this reporting period, OBG recommends continued operation of the SVE system. As was recommended in the October-November Operation and Maintenance Report, the dilution valve was reduced to the 25% open position. The extraction well (MW-F) valve remained at the 100% open position.

Please do not hesitate to contact me at 315-437-6100 with any questions you might have regarding this report.

Very truly yours,

O'BRIEN & GERE ENGINEERS, INC.

Marc Dent

Notes:

[1] Calculated flows based on the average of flows measured on 3-29-05 and 4-28-05

[2] Run time meter reading not indictitive of SVE system run time; actual hours run is assumed 100% of available.

PID = Total VOC concentration measured with photoionization detector

ppm = parts per million (volume/volume basis)

PCE = Tetrachloroethene (PCE) concentration measured with Drager tube of 10-500 ppm range

scfm = standard cubic feet per minute

cfm = cubic feet per minute

-- = measurement not recorded or not applicable.

Influent SVE = Readings collected between the SVE Blower and the Carbon Units

Mid GAC = Readings collected between the lead and lag carbon units

Effluent GAC = Readings collected after the lag carbon unit

GAC = granular activated carbon unit

As of 4/28/05, the calculation of "Available" run time hours is based on 24 hours, rather than 24.5 hours as prevously calculated.

Notes:

[1] = VOC concentrations of 2,000 ppm and PCE concentrations of 500 ppm are greater than the limit of their respective monitoring device and are to be taken as estimations.

[2] SVE Influent (post-dilution) monitoring point data used for calculation of PCE Removal for dates including and subsequent to March 29, 2005; Removal updated on 1-3-06 to represent SVE Influent flow rate.

Removal Rate = [(flow(cfm)*influent conc.(ppmv)*MW*12.187)/(273.15+C)]*1 cu. m./35.31 cu. ft*1g/1000 mg*1 lb/453.6 g *60 min/1 hr*24 hr/1 day*days of operation

[3] Run time meter reading not indictitive of SVE system run time; actual hours run is assumed equal to elapsed time.

Where:
MW = molecular weight
Molecular weight (MW) of PCE is 165.85
C = degrees centigrade, as measured
lb = pounds
ppmv = parts per million (volume/volume basis)
-- = information not available
flow = average of the present and the previous months measured SVE influent rate in cubic feet per minute (cfm)

Attn: Mr. Marc Dent

RE: Client Project: NYSDEC – National Heatset
Lab Project #: E1998

Dear Mr. Dent:

Enclosed please find the data report of the required analyses for the samples associated with the above referenced project. If you have any questions regarding this report, please call me.

We appreciate your business.

Sincerely,

Agnes R. Ng
CLP Project Manager

MITKEM CORPORATION

Client: O'Brien & Gere

Client Project: National Heatset, 12/28/06

Lab Project: E1854

Date samples received: 12/29/06

Project Narrative

This data report includes the analysis results for one (1) air sample in a Tedlar bag that was received from O'Brien & Gere on December 29, 2006. Analyses were performed per specification in the Chain of Custody form, following discussions with the client. For reference, a copy of the Mitkem Work Order form is included for cross-referencing the client sample ID and laboratory sample ID.

All of the analyses were performed according to method specifications, as modified by Mitkem. No unusual occurrences were noted during sample analysis.

All pages in this report have been numbered consecutively, starting with the title page and ending with a page saying only "Last Page of Data Report".

This data report has been reviewed and is authorized for release as evidenced by the signature below.
