RE: National Heatset Printing Site / Soil Vapor Extraction System  
Operation & Maintenance Report (October – December 2010)  
1 Adams Boulevard, Farmingdale, New York  
New York State Department of Environmental Conservation Site 1-52-140  
EA Project No. 14474.29

Dear Mr. Dyber:

This letter report provides an overview of the ongoing operation of the soil vapor extraction (SVE) system at the National Heatset Printing Site in Farmingdale, New York (Figure 1). EA Engineering, P.C. and its affiliate EA Science & Technology, Inc. (EA) assumed management of the on-site SVE system under Work Assignment No. D004441-29. The activities are being conducted under the New York State Department of Environmental Conservation (NYSDEC) State Superfund Standby Contract. SVE system details are presented in an Operation & Maintenance (O&M) Manual (Shaw, 2003)<sup>1</sup>.

In accordance with our approved Work Plan, monthly site visits were performed up to the June 2009 event. After the June 2009 visit, the frequency of the O&M visits was changed to quarterly. The decision was made in coordination with NYSDEC and was based on the reliability of system operation and the potential cost savings in system monitoring/maintenance. During the reporting period, O&M visits were performed on the following dates by YEC personnel on behalf of EA.

Date	Purpose
12/28/10	Quarterly Visit (December 2010)

<sup>1</sup> The Shaw Group. 2003. Soil Vapor Extraction Operation and Maintenance Manual. October.

## 1. SYSTEM OPERATION

Based on the motor's hour meter, the system was operational for a total of 1,216 hours out of an available 2,208 hours (55 percent of the total available) during this reporting period (27 September 2010 to 28 December 2010). YEC personnel found the system off on arrival on 28 December 2010. The system shut down during the reporting period due to an apparent power issue. The Sensaphone auto-dialer did not call out and was not functioning on arrival. YEC personnel contacted Sensaphone technical support from the field for troubleshooting assistance. It was determined there was an electrical short in the unit and YEC removed the unit from the control panel to ship to Sensaphone for repairs. The SVE system did restart after resetting the fail-safes.

Operational data for this period have been based on the measurements and effluent sample data collected on 28 December 2010. Operational data are summarized in Table 1 and on the site visit data collection forms provided in Attachment A. Key operating parameters for the SVE system are summarized below.

Date	Extraction Well Flow rate (cfm)	Extraction Well Vacuum (H <sub>2</sub> O)	SVE Blower Flow rate (cfm)	DCE Conc. <sup>1</sup> (mg/m <sup>3</sup> )	TCE Conc. <sup>1</sup> (mg/m <sup>3</sup> )	PCE Conc. <sup>1</sup> (mg/m <sup>3</sup> )
12/28/10	90	25	275	0.015	0.041	0.318

<sup>1</sup>PCE, DCE & TCE concentration measured via laboratory analysis.

NOTE: cfm = Cubic feet per minute.  
PCE = Tetrachloroethylene.  
TCE = Trichloroethene.  
DCE = cis-1,2 - Dichloroethene

A complete set of operational data collected are presented in Tables 1 through 3.

The dilution valve was adjusted from the 25 percent open position to 75 percent open during the 1<sup>st</sup> Quarter 2010 by YEC due to water generation that led to a system shut down.

The auto-dialer was sent to Sensaphone on 30 December 2010. YEC will return to the site to reinstall the auto-dialer once repaired.

## 2. MONITORING PROBES

The following vacuum data (in. of water column) were observed at the listed vapor monitoring points during the monitoring period.

28 December 2010	
Vapor Monitoring Point	Vacuum Reading (Inches H <sub>2</sub> O)
VP-1	1.1
VP-2	0.4
VP-3	0.25
VP-7	0.25
VP-8	0.15
VP-9	0.10
VP-10	0.20
VP-11	0.10
VP-12	0.04
VP-13	--
VP-14	--
VP-15	--

NOTE: -- Unable to access monitoring point due to being covered by business products.

The vapor points will continue to be monitored during future site visits.

## 3. DEPTH-TO-WATER MEASUREMENTS

The following gauging data (ft below top-of-casing) were collected during the monitoring period.

Date	MW-C	MW-E	MW-G
12/28/10	18.33	--	18.52
NOTE: -- Unable to access monitoring point.			

Based on the gauging data, the water table dropped approximately 1 ft during the monitoring period. The wells will continue to be gauged during future site visits.

## 4. AIR DISCHARGE MONITORING

YEC personnel collected grab air samples from the system effluent using Tedlar bags and submitted the samples to Alpha Analytical. The samples were analyzed for volatile organic compounds using U.S. Environmental Protection Agency Method TO-15. PCE, TCE, and *cis*-1,2-DCE were detected at the following concentrations.

Date	DCE Conc. <sup>1</sup> (mg/m <sup>3</sup> )	TCE Conc. <sup>1</sup> (mg/m <sup>3</sup> )	PCE Conc. <sup>1</sup> (mg/m <sup>3</sup> )
12/28/10	0.015	0.041	0.318
NOTE: ND = Not Detected J = Analyte detected below detection limits. Units = mg/m <sup>3</sup>			

Analytical results are summarized in Table 2 and the laboratory data reports are presented in Attachment B. A summary of the field monitoring and laboratory air discharge analytical results are presented as Table 3.

Based on the effluent sampling results, a total of 0.79 lbs of PCE has been discharged during Quarter No. 4 for a total of 43.92 lbs for the year 2010 toward the permitted annual discharge limit of 270 lbs. A total of 0.10 lb of TCE has been discharged during Quarter No. 4 for a total of 1.44 lbs for the year 2010 toward the permitted annual discharge limit of 120 lbs. No *cis*-1,2-DCE was discharged during the reporting period (the annual discharge limit is 5,510 lbs).

## 6. CONCLUSIONS AND RECOMMENDATIONS

Based on the data collected from the SVE system during this reporting period, EA recommends continued operation of the SVE system.

Please do not hesitate to contact me at 315-431-4610 with any questions you might have regarding this report.

Sincerely,

EA SCIENCE AND  
TECHNOLOGY, INC.

Notes:

<sup>(1)</sup> Calculated flows based on the average of flows measured on 3-29-05 and 4-28-05

<sup>(2)</sup> Run time meter reading not indicative of SVE system run time; actual hours run is assumed 100% of available.

PID = Total VOC concentration measured with photoionization detector

ppm = parts per million (volume/volume basis)

PCE = Tetrachloroethene (PCE) concentration measured with Drager tube of 10-500 ppm range

scfm = standard cubic feet per minute

cfm = cubic feet per minute

-- = measurement not recorded or not applicable.

Influent SVE = Readings collected between the SVE Blower and the Carbon Units

Mid GAC = Readings collected between the lead and lag carbon units

Effluent GAC = Readings collected after the lag carbon unit

GAC = granular activated carbon unit

As of 4/28/05, the calculation of "Available" run time hours is based on 24 hours, rather than 24.5 hours as previously calculated.

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

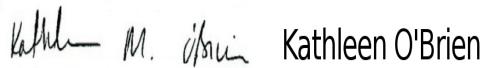

For additional information, please contact Client Services at 800-624-9220.

#### Volatile Organics in Air

L1020589-01: Sample was transferred from a Tedlar bag into a fused silica lined canister upon receipt in order to extend the holding time for analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. ## GLOSSARY

### **Acronyms**

EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

### **Terms**

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

### **Data Qualifiers**

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than five times (5x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The RPD between the results for the two columns exceeds the method-specified criteria; however, the lower value has been reported due to obvious interference.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.

*Data Qualifiers*

- RE** - Analytical results are from sample re-extraction.  
**J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).  
**ND** - Not detected at the reporting limit (RL) for the sample.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.
