Data Validation Report

This page intentionally left blank.

A total of 65 soil samples, 6 field duplicates, 8 trip blanks, and 1 equipment blanks, 13 groundwater, collected on 9/22/2014 through10/1/2014; at Gabreski Air National Guard Base (ANGB) in Westhampton Beach, New York were analyzed at Trimatrix Laboratories, Inc., of Grand Rapids, Michigan (Trimatrix), for volatile organic compounds (VOCs) and semivolatile organic compounds (SVOCs).

The analytical data were validated according to the quality assurance (QA) requirements and method-specific criteria presented in Worksheets #12, #15, and #28 of the *Tier II Quality Assurance Project Plan*, Appendix B of the Work Plan for the *Regional Compliance Restoration Program Preliminary Assessment/Site Inspection Gabreski Air National Guard Base, Westhampton Beach, New York* (the QAPP) (AECOM, 2014). These requirements are based on the requirements presented in Appendices F and G of the DoD QSM, version 4.2, the method-specific standard operating procedures (SOPs), and other applicable guidance. The qualification requirements and data qualifiers are based on the *EPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review* (EPA-540/R-08/01, June 2008), *EPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review* (EPA-540/R-10-011, January 2010), and the QAPP. The reviewer's professional judgment was used to evaluate data quality when called for in the National Functional Guidelines (NFGs) and in instances with no clear policy or conflicting guidance on how the data should be qualified. The data validation process was performed by the AECOM chemist. The following documentation and QC parameters were evaluated.

- Case Narrative
- Data Summary Sheets
- Sample Custody
- Holding Times
- Initial and Continuing Calibrations and Tuning Criteria
- Method, Laboratory, and Trip Blanks
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Recoveries and Relative Percent Differences (RPDs)
- Surrogate Recoveries for System Monitoring Compounds
- Internal Standards
- Target Compound Identification and Quantitation
- Limits of Quantitation (LOQs), Limits of Detection (LODs), and Method Detection Limits (DLs)
- Sample Preparation Sheets
- Instrument Run Logs
- Field Duplicate Relative Percent Differences (RPDs)

Qualifiers were assigned by the reviewer to all definitive-level data that failed to meet specified analytical and QC criteria. No data were qualified with the "R" qualifier as rejected and considered unusable. Data qualified with the "J" qualifier are considered estimated and may be quantitatively uncertain. All non-detected results are qualified with the "U" qualifier. The "U" qualifier is included before the "J" qualifiers where applicable. "UJ-" indicates qualification with potential low bias due to low QC sample recoveries. Blank-qualified results are qualified with the "UJ" qualifiers and are considered to be estimated and non-detected at the reported concentrations. All of the results met validation criteria for PARCC parameters with the following exceptions.

Sample GA-TU14SB19-16 was not analyzed for SVOCs. It was a lab oversight.

All holding times were met for methods SW8260 and SW8270 except for sample GA-TU13SB14-34 and GA-TU13SB11-34 for method SW8270. The samples were re-extracted due to low surrogate recovery. The re-extracted had acceptable surrogate recovery, but was extracted outside the holding time. All SVOC detect results were flagged "J" and non detect results were flagged "UJ".

For the Initial Calibration run, target constituent RRF values were all greater than 0.05 and the %RSD values were less than 30% for all target constituents. Continuing calibration verifications were performed at the required frequency and met all acceptance criteria.

LCS or LCSD recoveries not within specified control limits (greater than the upper limit) for batch 1410325 for analytes butyl benzyl phthalate, carbazole, 2-chloronaphthalene, chysene, and bis(2-ethylhexyl)phthalate, phenol, and 2,4,5-trichlorophenol and for batch 1410920 for analyte 2,4-dinitrophenol. Positve results were qualified J.

Internal standard areas in Method SW8270 were not within specified criteria for sample GA-TU13SB01-08, GA-TU13SB01-32, GA-TU13SB02-14, GA-TU13SB04-07, GA-TU13SB08-15, GA-TU13SB10-15, GA-TU13SB10-34, GA-TU13SB11-34, GA-TU13SB14-15, GA-TU13SB14-34, GA-TU14SB16-12, GA-TU16SB29-44DUP, GA-TU16SB30-08, GA-TU16SB31-08, GA-TU16SB32-17, GA-TU16SB33-10, GA-TU17SB35-15, GA-TU17SB36-20, and GA-TU17SB38-15 due to sample matrix interference. The samples were reanalyzed at a higher dilution. The higher concentration results were determined to be the most appropriate for use for reporting purposes.

SURROGATE RECOVERY: SURROGATE RECOVERY LESS THAN THE LOWER CONTROL LIMIT

GA-TU14SB15-35 Analyte: 2-Fluorophenol

GA-TU13SB02-33 Analyte: 2-Fluorophenol

GA-TU13SB05-33 Analyte: 2-Fluorophenol

GA-TU13SB04-33 Analyte: Phenol-d6

Samples were re-extracted and the surrogate recoveries were within control limits.

- Dimethyl phthalate in sample GA-TU16GW29-01.

- Di-n-butyl phthalate in sample GA-TU16GW29-01.

All of the blank-qualified results were trace results or were not significantly greater than the LOQs. Therefore, the effect of blank qualifications on project objectives is not expected to be significant and considered a chemical of potential concern for this project.

A field duplicate was collected for sample GA-TU13SB14-34, GA-TU14SB15-35, GA-TU16SB29-44, GA-TU16SB29-15, GA-TU17SB34-37, and GA-TU17SB38-15. All of the SW8260B field duplicate results were in excellent agreement and met the less-than 20 except for 1,1,1-trichloroethane, bis(2-ethylhexyl)phthalate, and xylene, meta + para in GA-TU13SB14-34; ethylbenzene, toluene, xylene, meta + para, and xylene, ortho in GA-TU14SB15-35. The detected results were qualified as estimated (J) for results greater than 5 times the LOQ with RPDs greater than 20.

MS/MSD analyses were performed at a frequency of approximately 1:20 environmental samples for EPA Method SW8260B and SW8270. Sample GA-TU14SB15-35 and GA-TU16SB29-15 was designated as MS/MSD samples. All of the MS/MSD results met the specified control limits.

Analytical results that are at or above the DL, but below the LOQ, were reported by the analytical laboratory. Such trace results are considered estimated due to quantitative uncertainty near the limit of detection, and are qualified as “J” by the laboratory and “J” in validation.

All analytical results and LOQs, LODs, and DLs are adjusted for stoichiometric factors such as dilutions, amounts of sample extracted, and dry weight corrections for soils. All results reported from diluted analyses were detected, and project objectives are not affected.

The data review and validation performed on the entire data set indicate the overall high quality of the definitive-level data collected for this project. None of the data were qualified as rejected and completeness for this data set is 100 percent. Results qualified as estimated are generally for marginal QC exceedances and blank-qualified results below or near the LOQs, and the qualifications do not significantly affect project objectives.

GENERATOR: _____ **WASTE:** _____

Persons generating or treating certain subcategories of hazardous waste EPA HW#'s D001, D002, D003, D004-D011 or D012-D043 may be required under 40 CFR 268.40 to identify the 40 CFR 268.2(i) *underlying hazardous constituents (UHC's)* that were present in the waste at the *point of generation*. UHC's can be identified by using knowledge of the waste and/or by testing the waste to determine which of the substances listed in 40 CFR 268.48 were present above the treatment standard concentrations specified in the UTS Table.

Description: The Preliminary Assessment / Site Inspection (PA/SI) Report presents the results of and recommendations from the 2014 PA/SI activities conducted at the Gabreski Air National Guard Base located in Westhampton Beach, New York. HRS (Hazard Ranking System) Quickscore is used by the EPA to determine whether a site is placed on the NPL (National Priorities List).

SITE SCORE = / $(S^2_{gw} + S^2_{sw} + S^2_s + S^2_a)/4$		1.34

Pathways not assigned a score:
The groundwater migration pathway was evaluated. The soil exposure pathway was not scored because acetone was the only detected analyte exceeding regulatory levels and acetone is not likely to be associated with #2 fuel oil and diesel USTs. The air migration and surface water migration pathways were not evaluated because these media were not sampled as a part of this PA/SI.
