Executive Summary

This Preliminary Assessment/Site Inspection (PA/SI) Report presents the results of and recommendations from the 2014 PA/SI activities conducted at the Gabreski Air National Guard Base (ANGB), located in Westhampton Beach, New York, as part of the Compliance Restoration Program (CRP). The project objective was to determine the presence or absence of contamination and either (1) obtain a No Further Action (NFA) decision for the areas of concern (AOCs) at Gabreski ANGB, with regulatory concurrence from the New York State Department of Environmental Conservation (NYSDEC) or (2) identify the data quality objectives required for conducting a follow-on remedial investigation at the AOCs that did not meet the criteria for NFA.

The eight AOCs addressed by the PA/SI at Gabreski ANGB are:

- TU014 – Former Underground Storage Tanks (USTs) in Former Building 218
- TU013 – Hydraulic Lifts in Building 230
- TU015 – Former USTs in Former Building 276
- DD020 – Former Battery Room Drain in Building 358
- TU016 – Former USTs in Building 370
- TU017 – Former USTs in Former Building 374
- TU018 – Former UST #41
- TU019 – Former UST #42

Based on recommendations from previous investigations and the PA, additional SI activities were not warranted for DD020, TU018, and TU019. NFA was previously established for these sites based on NYSDEC concurrence during the PA/SI Work Plan (AECOM, 2014).

Concentrations of chemicals of potential concern (COPCs) detected in soil and groundwater samples collected from the AOCs during the 2014 SI were compared to the project action limits (PALs) for Gabreski ANGB. The PALs for the soil samples are the NYSDEC Commissioner Policy (CP) 51 – Soil Cleanup Guidance and the EPA Regional Screening Levels (RSLs) for residential soil. The PALs for the groundwater samples are the NYSDEC Technical & Operational Guidance Series (TOGS) – 1.1.1 Ambient Water Quality Standards and Guidance Values, the EPA Maximum Contaminant Levels (MCLs) for drinking water, and the EPA RSLs for tap water.

Twenty soil samples and two groundwater samples were collected at TU014. Acetone exceeded the PALs in at least one soil sample. 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 4-isopropyltoluene, ethylbenzene, isopropyltoluene, naphthalene, n-propylbenzene, and sec-butylbenzene exceeded the PALs in at least one groundwater sample. Due to the detection of COPCs at concentrations exceeding PALs, the EPA Hazard Ranking System (HRS) score was determined for TU014 using HRS Quickscore software. HRS Quickscore assigns a number to risk for each pathway of exposure for a source, and then calculates a site score, which represents the risk that a nearby population will be exposure to high concentrations of the COPCs. A site score of 28.50 is necessary for the site to be placed on the National Priorities List (NPL). The groundwater migration pathway received a score of 2.67 and the overall site score was 1.34.

Twenty-eight soil samples and seven groundwater samples were collected at TU013. None of the detected analytes exceeded the PALs in the soil samples. Bis(2-ethylhexyl)phthalate exceeded its PAL in at least one groundwater sample. HRS scoring was not conducted for this site because bis(2-ethylhexyl)phthalate is a typical laboratory artifact.

Six soil samples and two groundwater samples were collected at TU015. None of the detected analytes exceeded the PALs in the soil or groundwater samples. HRS scoring was not conducted.

Six soil samples and one groundwater sample were collected at TU016. Acetone exceeded the PALs in at least one soil sample. None of the detected analytes in the groundwater sample exceeded their respective PALs. HRS scoring was not conducted for this AOC because acetone was barely exceeding the state criterion and well below the RSL.

Five soil samples and one groundwater sample were collected at TU017. Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene exceeded their respective PALs in at least one soil sample. Bis(2-ethylhexyl)phthalate exceeded the PAL in the groundwater sample. HRS scoring was conducted for this

site. The groundwater migration pathway received a score of 1.61, the soil exposure pathway received a score of 1.20, and the overall site score was 1.00.

Recommended for NFA

- TU013 – The results of the 2014 SI do not provide evidence of a release; detected analyte concentrations did not exceed regulatory levels.
- TU015 – The results of the 2014 SI do not provide evidence of a release; detected analyte concentrations did not exceed regulatory levels.
- DD020 – NFA already approved by NYSDEC.
- TU016 – The results of the 2014 SI do not provide evidence of a release; acetone exceeded the state criterion but was well below the RSL.
- TU018 – NFA already approved by NYSDEC.
- TU019 – NFA already approved by NYSDEC.

Recommended for Further Investigation

- TU014 – further investigation is recommended for volatile organic compounds (VOCs) in groundwater.
- TU017 – further investigation is recommended for semi-volatile organic compounds (SVOCs) in soil.

Table ES-1 summarizes information relevant to the ongoing data quality objectives (DQO) process for the AOC recommended for further investigation. Completed Remedial Action Cost Engineering Requirements worksheets are included as Appendix F for National Guard Bureau Programming Purposes.

Table ES-1. Information Relevant to the DQO Process

AOC	Constituents Detected Above Screening Criteria	Sampling Recommendation(s)	Objectives
Former USTs in Former Building 218 (TU014)	Soil: acetone Groundwater: 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 4-isopropyltoluene, ethylbenzene, isopropylbenzene, naphthalene, n-propylbenzene, sec-butylbenzene	Soil: 8 soil samples Groundwater: 4 wells	Determine the nature and extent of contaminated media. Evaluate the risk posed by current concentrations in soil and groundwater.
Former USTs in Former Building 374 (TU017)	Soil: benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1,2,3-cd)pyrene, Groundwater: bis(2-ethylhexyl)phthalate	Soil: 8 soil samples Groundwater: 4 wells	Determine the nature and extent of contaminated media. Evaluate the risk posed by current concentrations in soil and groundwater.

1 Introduction

This Preliminary Assessment/Site Inspection (PA/ SI) Report presents the results of and recommendations from the 2014 PA/SI activities conducted at the Gabreski Air National Guard Base(ANGB) located in Westhampton Beach, New York, as shown on Figure 1-1. This project was completed by AECOM under contract to the United States Army Corps of Engineers (USACE) Baltimore District and the Air National Guard (ANG).

A detailed description of the field procedures and scope of work performed during this SI is included in the Final Preliminary Assessment/Site Inspection Work Plan (WP; AECOM, 2014). Field activities for the SI were conducted from 22 September through 1 October 2014. This PA/SI report describes the investigation activities conducted at the areas of concern (AOCs) and presents the analytical results of the soil and groundwater sampling. Finally, it provides conclusions and recommendations based on the results of the investigation.

1.1 Project Objectives and Scope

The project objective was to determine the presence or absence of contamination and either (1) obtain a No Further Action (NFA) decision for the AOC sites, with regulatory concurrence from the New York State Department of Environmental Conservation (NYSDEC) or (2) identify the data quality objectives required for conducting a follow-on remedial investigation at the AOC sites if it did not meet the criteria for NFA.

The scope of work included the installation of soil borings and collection of soil and groundwater samples to evaluate concentrations of chemicals of potential concern (COPCs) and screen for the presence or absence of contamination. The resulting data were used to make recommendations supporting NFA or additional RI activities. The scope of work for the project also included a PA to confirm the scope of the SI. The results of the PA for this project were presented in Section 5 of the WP (AECOM, 2014) and are summarized in Section 4 of this report.

1.2 Report Organization

This SI Report is organized into the following sections:

Section 1 Introduction - Introduces the project including the scope and objectives.

Section 2 Installation Description – Presents the description and history of the installation.

Section 3 Environmental Setting - Describes the geographic and environmental setting of the Base. Information on the regional and local climate, topography, geology, hydrogeology, hydrology, and soil is provided.

Section 4 Preliminary Assessment - Summarizes the results of PA.

Section 5 Field Program - Details the AOC-specific field investigation activities and methods and summarizes the results.

Section 6 Area of Concern Pathway and Environmental Hazard Assessments – Details the purpose of EPA Hazard Ranking System (HRS) Quickscore and how it is used for this site.

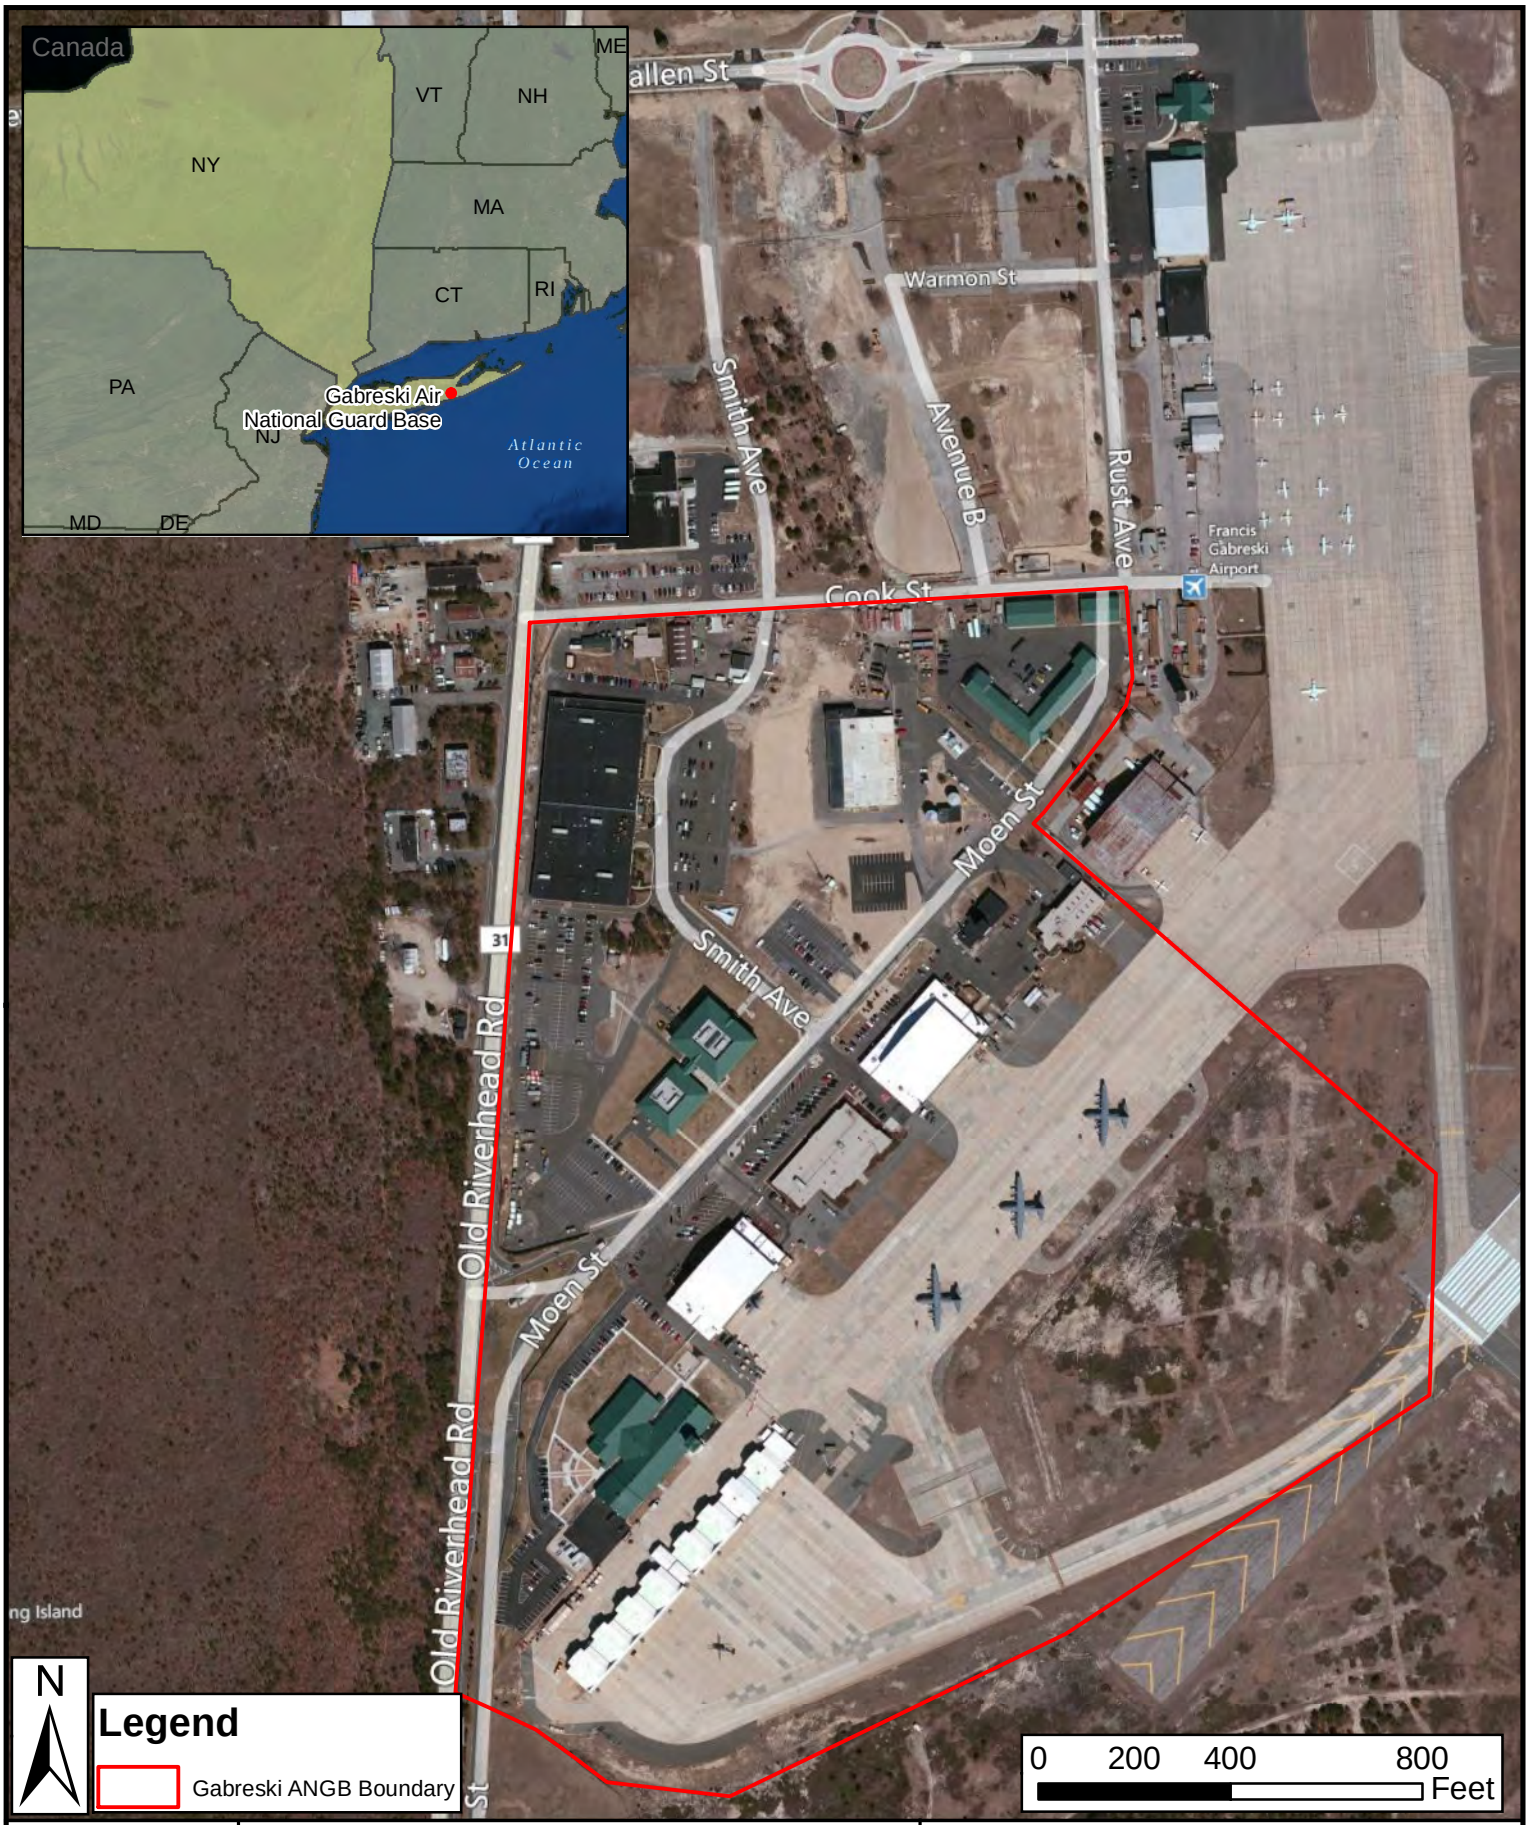
Section 7 Conclusions and Recommendations - Summarizes the PA/SI conclusions and recommendations for either NFA or additional investigation of each AOC.

Section 8 References - Provides a list of references used in this PA/SI Report.

The following appendices are included in this PA/SI Report:

Appendix A Field Documentation

Appendix B Analytical Data Packages



Appendix C Data Validation Report

Appendix D Investigation Derived Waste Documentation

Appendix E HRS Quickscore Reports

Appendix F Remedial Action Cost Engineering Requirements Worksheets

2 Installation Description

2.1 Location

Gabreski ANGB is located at the Francis S. Gabreski Suffolk County Airport in Westhampton Beach, New York on the southeast side of Long Island in the Atlantic Ocean. The New York Air National Guard (NYANG) currently leases the 88.5-acre property from Suffolk County.

2.2 Organization and AOC History

The US Army developed the site in 1941 as the Westhampton Beach Army Airfield to use for gunnery training for World War II fighter pilots and instructors. At this time, Suffolk County owned the property but leased it to the U.S. Government. From 1948 to 1951, the US Army discontinued its use of a majority of the property, and a private oil company leased the airfield. In 1951, the US Air Force reactivated the airfield as the Suffolk County Air Force Base. In 1969, the Air Force deactivated and closed the base and Suffolk County began operating the airfield as Suffolk County Airport, which was renamed Francis S. Gabreski Airport in 1991 (ANG, 2002).

Military operations were reintroduced in June 1970 when the 102nd Air Refueling Squadron of the 106th Air Refueling Group, NYANG, relocated to Suffolk County. In 1972, the unit's mission changed from air refueling to fighter-interceptor, with the new mission of controlling the skies along the northeast U.S. coast. In 1975, the designation and mission changed again to "aerospace Rescue and Recovery," later shorted to "Air Rescue" and then simply "Rescue." The current names of the 102nd Rescue Squadron and 106th Rescue Wing were assigned in 1995. However, the location of the ANG facilities has not changed since 1971.

The current mission of the 106th Rescue Wing is to provide peacetime and combat search and rescue services on a world-wide basis using HC-130P Hercules aircraft and HH-60G Pave Hawk helicopters. Operations related to aircraft maintenance include corrosion control, non-destructive inspection, minor painting, fuel cell maintenance, engine maintenance, avionics repair, hydraulics, washing, and wheel and tire maintenance. Ground-vehicle maintenance operations include fluid changes (e.g., oil, transmission, antifreeze, etc.), filter changes (fuel, oil, transmission, air, etc.), brake repair, lube, grease and repair of axle and drive trains, body repair, welding, minor painting, and washing.

To support the activities listed above, aircraft and vehicle maintenance facilities are active and involve the use, storage, and disposal of hazardous materials including petroleum, oil, lubricants, acids, paints, thinners, strippers, and solvents (ANG, 2002).

Seven AOCs have been identified at the Base including their Enterprise Environmental Safety and Occupational Health-Management Information System Site Identification (EESOH-MIS Site ID):

- Former underground storage tanks (USTs) in Former Building 218 (TU014)
- Hydraulic Lifts in Building 230 (TU013)
- Former USTs in Former Building 276 (TU015)
- Former Battery Room Drain in Building 358 (DD020)
- Former USTs in Building 370 (TU016)
- Former USTs in Former Building 374 (TU017)
- Former UST #41 (TU018)
- Former UST #42 (TU019)

The AOCs are presently not included in any remediation program. The operational history, previous investigations, and recommendations for each AOC are discussed in Section 4 of this Report. Figure 2-1 shows the AOC locations at Gabreski ANGB.

3 Environmental Setting

3.1 Climate

The climate in Westhampton Beach is defined as mild and is influenced by its proximity to the Atlantic Ocean coastal area. Summers tend to be warm or mild with an average temperature of 71.9 ºF. Winters are cold with an average temperature of 32º4, few or no days of sub-zero temperatures, and 26 to 32 inches of snowfall. The average daily high temperature in July is 82ºF. The highest afternoon temperatures occur from July through August and range between the high 70's, and low 80's with temperatures above 85ºF occasionally occurring. The average daily low temperature of 23ºF occurs in January.

The average annual precipitation is between 43 and 44 inches per year, with approximately one-half the annual rainfall occurring from November through March. Including evapotranspiration, the average net precipitation is 42 inches per year. The average wind velocity is 9 miles per hour (mph) and the average humidity is 70 percent. About 106 days per year are described as clear, 133 as partly cloudy, and 136 as cloudy (ANGRC, 1995).

3.2 Base Topography and Drainage

The property is generally flat with subtle rolling terrain and stream channels that slope sown from the north to the south-southeast. Surface elevations from approximately 20 feet (ft) above mean sea level (AMSL) in the southern portion of the property to 70 ft in the northern portion of the base.

There is no surface water drainage at Gabreski ANGB. Surface water runoff is contained within the base and does not discharge to local creeks.

3.3 Geology

Gabreski ANGB is located on a glacial outwash plain that slopes south from the Ronkonkoma Moraine to bays and barrier islands, which form the southern boundary of Long Island. Depth to bedrock beneath the airport ranges from 1500 to 1600 ft. The bedrock is overlain by Cretaceous sediment called the Raritan formation and the Magothy formation (ANG, 2002).

3.4 Soil

The soil types at Gabreski ANGB have been mapped by the Natural Resources Conservation Service (NRCS, 2013) and are as follows:

- Urban land (Ur)- More than 80 percent covered by building and pavement (originally occurring soils, which have been altered by digging, mixing, and moving are likely the Plymouth loamy sand-PI-described below)
- Cut and fill land (Cu)- Gently sloping, complex due to grading and structures
- Plymouth loamy sand (PI)- 0 to 3 percent slope, excessively drained, and resulting from outwash plains and moraines.

3.5 Groundwater/Hydrogeology

Groundwater beneath the site is found within two different aquifers: 1) Lloyd Aquifer—the deepest aquifer, which provides a good source of drinking water in an area where salt water intrusion is common; 2) Magothy (a good source of drinking water); and 3) Upper Glacial the unconfined, shallow surficial aquifer, which is the major source of potable water in the area. This unconfined aquifer consists of very porous and highly permeable coarse sands and gravels, and can yield large quantities of water (ANG, 2002). It is generally 120 ft thick, and flows southeast toward the headwaters of Quantuck Creek. Depth to groundwater varies from 5 ft below ground surface (bgs) in the southern portion of the site to 40 ft at higher elevations.

3.6 Surface Water Hydrology

A detailed description of site topography and drainage is located in Section 3.2 of this Report. Surface runoff is contained within the Base and potential impacts to surface water from operations at Gabreski ANGB are considered negligible for the purpose of this PA/SI Report.

3.7 Critical Habitats /Threatened Endangered Species

According to the U.S. Fish and Wildlife Service (USFWS), there are nine endangered species found in Suffolk County: the piping plover, roseate tern, red knot, sandplain gerardia, seabeach amaranth, Northern long-eared bat, hawksbill sea turtle, leatherback sea turtle, and the green sea turtle (USFWS, 2014). The piping plover, roseate tern, and red knot are all species of births; the status of the piping plover is threatened, the status of the roseate tern is endangered, and the status of the red knot is proposed threatened. The sandplain gerardia and seabeach amaranth are species of flowering plants whose statuses are endangered and threatened, respectively. The Northern long-eared bat is a species of mammal whose status is proposed endangered. The hawksbill sea turtle, leatherback sea turtle, and green sea turtle are all species of reptiles whose statuses are endangered, endangered, and threatened, respectively.

4 Preliminary Assessment

The PA included interviews, records searches, and visual surveys to review available information, evaluate current site conditions and develop recommendations for additional SI activities or NFA for identified AOCs. On-site PA activities were conducted in conjunction with an Installation-specific kickoff meeting at Gabreski ANGB on 25 November 2013.

Data from the two previous investigations and recommendations for additional investigation were presented and discussed in the WP (AECOM, 2014). The findings and SI recommendations are summarized below.

4.1 Previous Investigations

4.1.1 TU014 - Former USTs at Building 218

Two USTs were reported to have been removed from Building 218 in 1996, including UST #2: 550-gallon No. 2 fuel oil and UST #DE2: 275-gallon diesel (BB&E, 2011). Closure documents for these tanks are not available. The approximate locations of the former USTs were determined based on historical drawings and reference to existing structures.

4.1.2 TU013 - Former Building 230-Former Hydraulic Lifts

Seven hydraulic lifts with in-ground sumps for hydraulic oil were located in the former Building 230 for the maintenance of vehicles. Sampling was not conducted when the hydraulic lifts were removed and filled with concrete in 1994. There were no reports of leaks or releases from the former hydraulic lifts and no reports of soil or groundwater sampling conducted in the vicinity to investigate this AOC specifically. Building 230 has been demolished and the area is now an asphalt parking lot. However, the approximate locations of the former lifts were determined based on historical drawings and reference to existing structures.

4.1.3 TU015 - Former Building 276- 2 Former USTs

Two 1,000-gallon gasoline USTs (USTs #37 and #38) were reportedly removed from Building 276 in 1996 (BB&E, 2011). Closure documents for these tanks are not available. The area around the former USTs has been significantly modified during the recent year due to the construction of a new entrance over the former USTs. However, the approximate locations of the former USTs were determined based on historical drawings and reference to existing structures.

4.1.4 DD020 - Building 358-Former Battery Room Drain

Building 358 is an active hangar at the Base. It previously housed a battery room in the northwest corner of the building, which had a floor drain. Although not specially documented in the environmental baseline survey (EBS) or PA at Building 358, it was common practice at ANG facilities to dispose of neutralized acids to the sanitary sewer via building drains. The corrosive chemicals could have potentially resulted in deterioration and leakage from the drain system. BB&E recommended that an inspection or sewer line video survey of the battery room drain be conducted (BB&E, 2011). If evidence of significant deterioration/corrosion was present at the building drains, then subsurface soil sampling for metals and pH analyses would be recommended.

The PA inspection of the Building 358 battery room revealed that it had been replaced with an office at least ten years ago.

4.1.5 TU016 - Building 370-1 Former UST

One 1,200-gallon solvent UST (UST#64) was reportedly removed from Building 370 in 1996. Closure documents for this tank are not available. However, the approximate location of the former UST was determined based on historical drawings and reference to existing structures.

4.1.6 TU017 - Former Building 374-1 Former UST

One 2,500-gallon diesel UST (UST #68) was reportedly removed from Building 374 in 1996. Closure documents for this tank are not available. Building 374 was demolished and a new Building 324 and a transformer pad have been constructed in the area.

However, the approximate location of the former UST was determined based on historical drawings and reference to existing structures.

4.1.7 TU018 and TU019 - Former UST #41 and UST #42

The 2002 EBS identified former waste oil tanks, UST #41: 500-gallon and UST #42: 5,000-gallon as reportedly removed in 1993 (ANG, 2002). However, based on the activities conducted for the PA, documentation as to their former locations or removal is not available. Installation personnel suggest that the tanks may have been removed and replaced with new tanks and that is why they did not show up on existing drawings. In addition, the Suffolk County Department of Health has no current registration records for facility USTs #41 or #42.

4.2 Regulatory Framework

For the purposes of the SI Report, soil and groundwater analytical testing results will be screened against Applicable or Relevant and Appropriate Requirements (ARARs) and other regulatory criteria including:

- NYSDEC Commissioner Policy (CP)-51, Soil Cleanup Guidance
- NYSDEC Technical & Operational Guidance Series (TOGS), 1.1.1 Ambient Water Quality Standards and Guidance Values
- EPA Maximum Contaminant Levels (MCLs) for drinking water
- EPA Regional Screening Levels (RSLs) for residential soil and tap water.

Where multiple criteria exist, the state criterion was used. If a state criterion does not exist, the EPA criterion was used.

4.3 PA/SI Work Plan Recommendations

Table 4-1 outlines the findings of the PA including recommendations for additional investigations at the AOCs at Gabreski ANGB. The field sampling approach for this AOC is summarized in Section 5.

Table 4-1. Summary of the Recommendations from the Preliminary Assessment

EESOH-MIS	Site Description	Recommendation	Rationale
TU014	Former USTs at Building 218	Site Investigation	Based on information obtained during the PA, sampling data and closure documentation for UST removal are not available. Ten borings are proposed in the area of the former USTs at former Building 218 to collect soil and groundwater samples for analysis of volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs).
TU013	Building 230- Former Hydraulic Lifts	Site Investigation	Based on information obtained during the PA, sampling data and closure documentation for hydraulic lift removal are not available. Fourteen borings are proposed in the area of the former lifts in Building 230 to collect soil and groundwater samples for analysis of VOCs and SVOCs.
TU015	Former Building 276 – 2 Former USTs	Site Investigation	Based on information obtained during the PA, sampling data and closure documentation for UST removal are not available. Four borings are proposed in the area of the former USTs in former Building 276 to collect soil and groundwater samples for analysis of VOCs.
DD020	Building 358 – Former Battery Room Drain	No Further Action	Based on information obtained during the PA, information regarding the location of this former drain on which to base an SI is not available.
TU016	Building 370- 1 Former UST	Site Investigation	Based on information obtained during the PA, sampling data and closure documentation for the UST removal are not available. Five borings are proposed in the area of the former UST in Building 370 to collect soil and groundwater samples for analysis of VOCs and SVOCs.
TU017	Former Building 374 – 1 Former UST	Site Investigation	Based on information obtained during the PA, sampling data and closure documentation for UST removal are not available. Five borings are proposed in the area of the former UST in former Building 374 to collect soil and groundwater samples for analysis of VOCs and SVOCs.
TU018	Former 500 Gallon Waste Oil UST	No Further Action	Based on the information obtained during the PA, information regarding the location of this former waste oil UST on which to base an SI is not available.
TU019	Former 5,000 Gallon Waste Oil UST	No Further Action	Based on information obtained during the PA, information regarding the locations of this former waste oil UST on which to base an SI is not available.

5 SI Field Operations

This section summarizes the 2014 SI field activities conducted at the AOCs at Gabreski ANGB and the analytical results of soil and groundwater sampling. Sampling and analytical activities were conducted in accordance with the procedures specified in the Final WP (AECOM, 2014). Boring logs are provided in Appendix A-1, and analytical data packages for soil and groundwater samples collected during the SI are presented in Appendix B.

5.1 General Approach

5.1.1 Field Sampling

The SI boring locations were based on historical data, potential source areas, and site conditions as observed during the PA. Prior to intrusive activities, utility clearance of all boring locations was conducted by Gabreski ANGB. Soil samples were collected via direct-push technology (DPT).

The soil cores were screened for VOCs with a photoionization detector (PID) immediately upon opening the liner. Lithology for each soil core was recorded on a soil boring log. Recorded information included depth interval, recovery thickness, PID concentrations, moisture, relative density, color, texture, lithological descriptions, odors, groundwater or perched water depth, organic material, cultural debris, or color changes indicating staining.

Two soil samples were generally collected from each boring in the dry soils above the water table interface at the most impacted depth intervals based on field observations including PID readings, odor, or evidence of staining.

If encountered, groundwater was sampled by converting selected borings into secured temporary monitoring wells. The temporary wells were installed using DPT and constructed of a 5-foot section of 1-inch diameter Schedule 40 poly-vinyl chloride screen with casing to ground surface. Following installation, the temporary wells were allowed to equilibrate with the surrounding formation and grab groundwater samples were collected.

Samples were collected into laboratory-supplied containers and submitted to the analytical laboratory for analysis of selected parameters. Samples were packaged on ice and transported daily via overnight commercial carrier under standard chain-of-custody procedures to the laboratory.

Quality control (QC) samples collected as part of the SI included field duplicates, matrix spike and matrix spike duplicate (MS/MSD), and trip blanks. Field duplicates were collected at a rate of 10% with MS/MSD samples collected at the rate of 5%. QC samples were analyzed for the same parameters as the accompanying samples. Trip blanks accompanied each cooler containing samples for VOC analysis. A temperature blank was also placed in each cooler to check that samples are preserved at or below four degrees Celsius during shipment.

Following collection of the soil and groundwater samples, DPT boreholes were abandoned with bentonite and completed at ground surface with concrete as per ANG guidelines.

5.1.2 Deviations from the Work Plan

The following deviations from the WP occurred:

- Due to the presence of multiple utilities in the area of TU017, the fifth boring on the east side of the former UST location was not performed.
- As a result of the depth to groundwater being deeper than anticipated (45 ft bgs on average), and lack of any evidence of contamination (visual, olfactory, and PID measurements), samples from soil borings at TU015, TU016, and TU017 were collected from shallower depths (approximately 20 ft bgs) and not from the depth interval immediately above the soil/groundwater interface.

5.1.3 Data Analysis

As discussed in Section 4.2, analytical results from the 2014 SI were compared against the project action limits (PALs) including appropriate risk-based screening criteria and/or established regulatory criteria to determine whether further investigation is required.

5.1.4 Data Validation

The laboratory analytical data generated during the SI were reviewed for conformance with the project data quality objectives specified in the SI Work Plan and to ensure that the precision and accuracy of the data were adequate for their intended use. All analytical data were found to be useable (as qualified). Appendix D contains the data validation report, which details the scope, quality assurance/ quality control (QA/QC) sample collection and analysis, and results of the analytical data review and validation.

Detected concentrations below the level of quantitation (LOQ) are reported with a 'J' flag. The LOQ is the lowest concentration of a substance that produces a quantitative result within specified limits of precision and bias. Measurements between the detection limit and the LOQ assure the presence of the analyte with confidence, but their numeric values are estimates (DoD, 2009).

Non-detects are reported as the limit of detection (LOD) followed by a 'U' flag. The LOD is the smallest amount or concentration of a substance that must be present in a sample to be detected at a 99% confidence level. The failure to obtain a detection is reported as "<LOD" because the false-negative rate at the LOD is 1% (DoD, 2009).

The data review and validation performed on the entire data set indicates the overall high quality of the definitive-level data collected for this site. None of the data were qualified as rejected and completeness for this data set is 100 percent. Results qualified as an estimated are generally for marginal QC exceedances and blank-qualified results below or near the LOQs, and the qualifications do not significantly affect project objectives.

5.2 Investigation Derived Waste

Investigation-derived waste (IDW) was managed in compliance with the Final WP (AECOM, 2014). One drum of solid IDW and three drums of liquid IDW were containerized in a 55-gallon drums and disposed of offsite at a licensed waste disposal facility by Environmental Waste Solutions, LLC. IDW disposal documentation is included in Appendix D.

5.3 TU014 - Former USTs at Building 218

5.3.1 Field Sampling

Ten borings (SB15 – SB24) were advanced at TU014 as depicted on Figure 5-1. Twenty soil samples (two per boring) and a duplicate were collected and analyzed for VOCs and SVOCs. Two groundwater samples were collected at SB15 and SB20 and analyzed for VOCs and SVOCs.

5.3.2 Results

Soil

Table 5-1 summarizes the analytical results of the soil sampling. Twenty VOCs and fourteen SVOCs were detected in the soil samples. Only acetone exceeded the PALs in two of the samples.

Groundwater

Table 5-2 summarizes the analytical results of the groundwater sampling. Fifteen VOCs and twenty-one SVOCs were detected in the groundwater samples. Concentrations of 1,2,4-Trimethylbenzene, 1,3,5-trimethylbeznene, 4-isopropyltoluene, ethylbenzene, isopropylbenzene, naphthalene, n-propylbenzene, and sec-butylbenzene exceeded their respective PALs in at least one groundwater sample.

5.4 TU013 – Hydraulic Lifts in Building 230

5.4.1 Field Sampling

Fourteen borings (SB01-SB14) were advanced at TU013 as depicted on Figure 5-2. Twenty-eight soil samples and one duplicate sample from the deeper interval at SB14 were collected and analyzed for VOCs and SVOCs. Seven groundwater samples from SB02, SB03, SB05, SB08, SB09, SB12, and SB13 were collected and analyzed for VOCs and SVOCs.

5.4.2 Results

Soil

Table 5-3 summarizes the analytical results of the soil sampling. Thirteen VOCs and seventeen SVOCs were detected in the samples; however, none of the detected analytes exceeded their respective PALs.

Groundwater

Table 5-4 summarizes the analytical results of the groundwater sampling. Five VOCs and eighteen SVOCs were detected in the groundwater samples. Bis(2-ethylhexyl)phthalate was the only detected analyte to exceed the PAL.

This page intentionally left blank.

5.5 TU015 – Former USTs in Former Building 276

5.5.1 Field Sampling

Four borings (SB25-SB28) were advanced at TU015 as depicted on Figure 5-3. Six soil samples (two samples from both SB25 and SB27, and one sample each from SB26 and SB28) and two groundwater samples (from SB25 and SB27) were collected and analyzed for VOCs.

5.5.2 Results

Soil

Table 5-5 summarizes the analytical results of the soil sampling. Eleven VOCs were detected in the soil samples; however, none of the detected analytes exceeded their respective PALs.

Groundwater

Table 5-6 summarizes the analytical results of the groundwater sampling. Two VOCs were detected in the groundwater samples, but neither of the detected analytes exceeded their respective PALs.

This page intentionally left blank.

5.6 TU016 – Former USTs in Building 370

5.6.1 Field Sampling

Five borings (SB29-SB33) were advanced at TU016 as depicted on Figure 5-4. Six soil samples (two samples from SB29 and one sample from each boring SB30 and SB33) and two duplicate samples from SB29 were collected and analyzed for VOCs and SVOCs. One groundwater sample was collected from SB29 and analyzed for VOCs and SVOCs.

5.6.2 Results

Soil

Table 5-7 summarizes the analytical results of the soil sampling. Eleven VOCs and nine SVOCs were detected in the soil samples. Acetone was detected at a concentration exceeding the PAL in one soil sample.

Groundwater

Table 5-8 summarizes the analytical results of the groundwater sampling. Four SVOCs were detected in the groundwater samples; however, none of the detected analytes exceeded their respective PALs.

This page intentionally left blank.

5.7 TU017 – Former USTs in Former Building 374

5.7.1 Field Sampling

Four borings (SB34 through SB36 and SB38) were advanced at TU017 as depicted in Figure 5-5. Five soil samples (two samples from SB34 and one sample from each SB35, SB36, and SB38) and two duplicate samples were collected and analyzed for VOCs and SVOCs. One groundwater sample was collected from SB34 and analyzed for VOCs and SVOCs.

5.7.2 Results

Soil

Table 5-9 summarizes the analytical results of the soil sampling. Nine VOCs and twenty-five SVOCs were detected in the soil samples. Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene exceeded their respective PALs in the shallow sample at SB34.

Groundwater

Table 5-10 summarizes the analytical results of the groundwater sampling. Two VOCs and five SVOCs were detected in the groundwater samples. Bis(2-ethylhexyl)phthalate exceeded the PAL.

This page intentionally left blank.

6 Area of Concern Pathway and Environmental Hazard Assessments

HRS (Hazard Ranking System) Quickscore is the primary tool used by the EPA to determine whether a site is placed on the National Priorities List (NPL). This numeric based screening system assigns number values to factors related to risk conditions at a site. The main factors related to risk are:

- Likelihood that a site has released or has the potential to release hazardous substances into the environment
- Characteristics of the waste
- People or sensitive environments (targets) affected by the waste

HRS Quickscore evaluates four pathways of exposure (i.e., routes through which humans and the environment can be impacted by site contamination. The four pathways are:

- Groundwater migration (drinking water)
- Surface water migration (drinking water, human food chain, and sensitive environments)
- Soil exposure (resident population, nearby population, and sensitive environments)
- Air migration (resident population and sensitive environments)

Exposure pathways describe the course a chemical or physical agent takes from the source to the exposed receptor. The follow five components comprise an exposure pathway:

- Source (facility operations, spill, etc.)
- Exposure media (concrete, soil, groundwater, etc.)
- Exposure point (slab surface, drinking water well, etc.)
- Exposure route (ingestion, inhalation, and external exposure)
- Receptor (industrial worker, resident, wildlife)

If any of these elements is missing, the pathway is incomplete and is not considered further in the HRS assessment. A pathway is considered complete when all five components are present to permit potential exposure of a receptor to a source of contamination. It is important to note that the HRS guidance defines a source as “any area where a hazardous substance has been deposited, stored, disposed, or placed, plus those soils that may have become contaminated from hazardous substance migration.” Also, an area of observed contamination “covered by a permanent, or otherwise maintained, essentially impenetrable material (e.g., asphalt)” is excluded from the area of observed contamination for the purposes of HRS Quickscore (EPA, 1995).

This PA/SI identified eight AOCs at the Gabreski ANGB. Based on the results of historical records and previous investigations during the initial PA Phase DD020, TU018, and TU019 were determined not to warrant field investigation. HRS Quickscore was not used to evaluate these sites. TU013, TU015, and TU016 did not have any exceedances of concern in the samples, so these AOCs were not evaluated using HRS Quickscore.

TU014 was evaluated using HRS Quickscore software. The groundwater migration pathway received a score of 2.67 and the overall site score was 1.34.

TU017 was evaluated using HRS Quickscore software. The groundwater migration pathway received a score of 1.61, the soil exposure pathway received a score of 1.20, and the overall site score was 1.00.

In order for a site to be placed on the NPL, the site must receive an HRS score of at least 28.50. The full HRS Quickscore reports for each site are scored in Appendix E.

This page intentionally left blank.

7 Conclusions and Recommendations

On-site PA activities were conducted in conjunction with an Installation specific Kick-off meeting at Gabreski ANGB on 25 November 2013. SI field activities, which included soil and groundwater sampling at five AOCs, were conducted 22 September through 1 October 2014.

7.1 Conclusions

7.1.1 TU014 – Former USTs in Former Building 218

Twenty soil samples (two per boring) and two groundwater samples were collected at TU014 and analyzed for VOCs and SVOCs. Twenty VOCs and fourteen SVOCs were detected in the soil samples. Only acetone exceeded the PALs in two of the soil samples. Fifteen VOCs and twenty-one SVOCs were detected in the groundwater samples. Concentrations of 1,2,4-Trimethylbenzene, 1,3,5-trimethylbeznene, 4-isopropyltoluene, ethylbenzene, isopropylbenzene, naphthalene, n-propylbenzene, and sec-butylbenzene exceeded their respective PALs in at least one groundwater sample. HRS scoring was conducted for this site. The groundwater migration pathway received a score of 2.67 and the overall site score was 1.34.

7.1.2 TU013 – Hydraulic Lifts in Building 230

Twenty-eight soil samples and seven groundwater samples were collected at TU013 and analyzed for VOCs and SVOCs. Thirteen VOCs and seventeen SVOCs were detected in the soil samples; however, none of the detected analytes exceeded their respective PALs. Five VOCs and eighteen SVOCs were detected in the groundwater samples. Bis(2-ethylhexyl)phthalate was the only detected analyte to exceed the PAL. HRS scoring was not conducted for this site because bis(2-ethylhexyl)phthalate is a typical laboratory artifact.

7.1.3 TU015 – Former USTs in Former Building 276

Six soil samples and two groundwater samples were collected at TU015 and analyzed for VOCs. Thirteen VOCs were detected in the soil samples; however, none of the detected analytes exceeded their respective PALs. Two VOCs were detected in the groundwater samples, but neither of the detected analytes exceeded their respective PALs. HRS scoring was not conducted for this site because detected analyte concentrations did not exceed PALs.

7.1.4 TU016 – Former USTs in Building 370

Six soil samples and one groundwater sample were collected at TU016 and analyzed for VOCs and SVOCs. Eleven VOCs and nine SVOCs were detected in the soil samples. Acetone was detected at a concentration exceeding the PAL in one soil sample. Four SVOCs were detected in the groundwater samples; however, none of the detected analytes exceeded their respective PALs. HRS scoring was not conducted for this site because acetone was the only detected analyte exceeding the screening criteria. The NYSDEC criterion for acetone is 50 µg/kg and the RSL is 61,000,000 µg/kg. The exceeding concentration of acetone at TU016 was 67 µg/kg.

7.1.5 TU017 – Former USTs in Former Building 374

Five soil samples and one groundwater sample were collected at TU017 and analyzed for VOCs and SVOCs. Nine VOCs and twenty-five SVOCs were detected in the soil samples. Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene exceeded their respective PALs in the shallow sample at SB34. Two VOCs and five SVOCs were detected in the groundwater samples. Bis(2-ethylhexyl)phthalate exceeded the PAL. HRS scoring was conducted for this site. The groundwater migration pathway received a score of 1.61, the soil exposure pathway received a score of 1.20, and the overall site score was 1.00.

7.2 Recommendations

Based on the findings of the PA/SI, NFA under the CRP is recommended for DD020, TU018, and TU019.

Based on analytical results for soil and groundwater sampling, NFA is recommended for TU013, TU015, and TU016.

Based on analytical results for soil and groundwater sampling, further investigation is recommended for TU014 and TU017.

At TU014, further investigation is recommended for VOCs in groundwater.

At TU017, further investigation is recommended for SVOCs in soil.

Table 7-1 summarizes information relevant to the ongoing data quality objectives (DQO) process for the AOC recommended for further investigation. Completed Remedial Action Cost Engineering Requirements worksheets are included as Appendix F for National Guard Bureau Programming Purposes.

Table 7-1. Information Relevant to the DQO Process

AOC	Constituents Detected Above Screening Criteria	Sampling Recommendation(s)	Objectives
Former USTs in Former Building 218 (TU014)	Soil: acetone Groundwater: 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 4-isopropyltoluene, ethylbenzene, isopropylbenzene, naphthalene, n-propylbenzene, sec-butylbenzene	Soil: 8 soil samples Groundwater: 4 wells	Determine the nature and extent of contaminated media. Evaluate the risk posed by current concentrations in soil and groundwater.
Former USTs in Former Building 374 (TU017)	Soil: benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1,2,3-cd)pyrene, Groundwater: bis(2-ethylhexyl)phthalate	Soil: 8 soil samples Groundwater: 4 wells	Determine the nature and extent of contaminated media. Evaluate the risk posed by current concentrations in soil and groundwater.

SDG CASE NARRATIVE

AECOM - Alexandria, VA
Gabreski ANGB, NY

SDG Executive Summary

This case narrative applies to samples received on September 23, 2014 through October 02, 2014. All samples were scheduled for analysis in accordance with parameters outlined on the field chain of custody record, the TriMatrix bid form, and/or oral and written correspondence between AECOM - Alexandria, VA and TriMatrix Laboratories, Inc.

Each sample receipt event was assigned a unique TriMatrix work order number. Sample receipt documentation is included in section A of this data package.

Project Technical Issues/Problems

Project-related data qualification designations, narrations, and reporting conventions are included in Attachment 1 - *Project Technical Narrative(s)*.

QA/QC Data Qualifications/Narrations

Quality assurance issues and/or quality control data qualifications and narrations related to the analysis and reporting of this SDG are presented in Attachment 2 - *Statement of Data Qualifications*. The absence of a statement page for a particular analyte group (*e.g.* Percent Solids) implies that no qualifying statements were generated for that analyte.

Data Review and Approval

All data was peer-reviewed by a second analyst, and then by appropriate data management staff against laboratory quality control requirements and project specifications. It was then reviewed and approved by the group supervisor/manager prior to further review by the project chemist.

Data Deliverables

This report relates only to the sample(s) as received. Estimates of analytical uncertainties for the test results contained within this report are available upon request. Test results are in compliance with the requirements of the DoD Quality Systems Manual for Environmental Laboratories Version 4.2, the National Environmental Laboratory Accreditation Conference (NELAC), and one or more of the following certification programs:

ACLASS DoD-ELAP/ISO17025 (#ADE-1542); Arkansas DEP (#13-049-0); Florida DEP (#E87622-24); Georgia EPD (#E87622-24); Illinois DEP (#003329); Kansas DPH (#E-10302); Kentucky DEP (#0021); Louisiana DEP (#103068); Michigan DPH (#0034); Minnesota DPH (#367345); New York ELAP (#46503); North Carolina DNRE (#659); Texas CEQ (#T104704495-14-4); Virginia DCLS (#2592); Wisconsin DNR (#999472650); USDA Soil Import Permit (#P330-09-00163).

SDG CASE NARRATIVE

The data deliverables, both hardcopy and/or electronic (EDD), that comprise this data package are intended to comply with the documents referenced in the introductory section of this narrative. The EDD, if requested, will be issued separately from this hardcopy report. Hold time reports for each test procedure are presented following the CLP-like forms section of this report.

This report shall not be reproduced, except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

SDG CASE NARRATIVE

Sample Receipt and Login -- Work Order: 1409384

TriMatrix Laboratories received the cooler(s) for this work order on September 23, 2014, at 08:25am. Receiving documents include field chain-of-custody (COC) record(s), sample receipt form(s), and FedEx shipping document(s). The condition of the custody seals, the type and location of the coolant, and the temperatures recorded for each cooler are presented on the TriMatrix *Sample Receiving / Log-In Checklist* provided in section A of this package. The receipt temperature of the samples was determined by using an infrared thermometer to record the temperature of three random samples of varying container types and the accompanying temperature blank, if present.

Samples were scheduled for the analyses listed on the corresponding COC form. Field IDs and assigned laboratory identifiers are presented in the table below.

Field Sample Name	Laboratory Sample ID	Matrix	Date Sampled
FQC-TB092214JC-001	1409384-01	Water	9/22/2014
GA-TU15SB27-22	1409384-02	Soil	9/22/2014
GA-TU15SB27-45	1409384-03	Soil	9/22/2014
GA-TU15GW27-01	1409384-04	Ground Water	9/22/2014
GA-TU15SB28-15	1409384-05	Soil	9/22/2014
GA-TU15SB25-27	1409384-06	Soil	9/22/2014
GA-TU15SB25-45	1409384-07	Soil	9/22/2014
GA-TU15GW25-01	1409384-08	Ground Water	9/22/2014
GA-TU15SB26-10	1409384-09	Soil	9/22/2014

Any administrative issues encountered during the receipt and analysis of this work order were documented via e-mail correspondence with the client.

SDG CASE NARRATIVE

Attachment 1
Project Technical Narrative(s)

Sample Result Reporting Convention

Sample results are reported as LOD "U" (e.g. 0.001 U) if the target analyte was not detected at or above the detection limit (DL). The LOD is the Limit of Detection as defined in the DoD QSM and numerically determined by TriMatrix.

If a sample for an organic analyte is reanalyzed and also reported, the second analysis includes the suffix "RE*n*" where *n* = the first, second, etc. reanalysis. If a sample is reanalyzed for confirmation purposes but that confirmation was not performed simultaneously, the second set of sample results is reported on a second Form 1 since the confirmation analysis did not occur at the same time and/or date.

Percent Solids and Metals Data Reporting

Unless otherwise noted, all soil samples requiring metals analysis are dried at 50° to 60° C to a constant weight prior to acid digestion. In order to report results on a dry weight basis, correction for percent solids is not applicable.

Data Qualifier Designation

If applicable, sample results are qualified with:

a "U" flag as defined above;
a "J" flag if the analyte was detected, but the concentration is greater than the DL and less than the LOQ (the Limit of Quantitation as defined in the DoD QSM);
a "B" flag if the analyte was detected above one-half the LOQ (above the LOQ for a common laboratory contaminant) in the associated method blank, and the sample concentration was less than or equal to ten times the method blank result;
a "E" flag if the analyte exceeded the instrument calibration range;
a "N" flag for a non-target analyte identified as a tentatively identified compound using mass spectrometry;
a LIMS-generated statement of qualification that will be reported in Attachment 2 to this narrative.

Batch and Analytical Batch Designation

A Quality Control (QC) Batch is a seven-digit number that associates all samples that have been prepared together (or analyzed together if there is no preparation). Quality Control batches are limited to no more than twenty samples, excluding batch QC (method blanks, control spikes, etc.). Some batches may contain multiple sets of method blanks (BLK) and laboratory control samples (BS), where a set of method quality control analyses were prepared in concert with each set of samples on a given day.

An Analytical Batch (or Sequence) is a seven-digit number that associates all samples analyzed as a set under one analytical run.

SDG CASE NARRATIVE

Attachment 1
Project Technical Narrative(s)

Semivolatile Organic Compounds by EPA Method 8270D (Continued)

Sample/Analyte: 1410085-06RE1 GA-TU17SB38-15

Narrative: The RL for this analysis was elevated due to insufficient sample volume or weight received.

Analysis: USEPA-8270D

Sample/Analyte: 1409479-09 GA-TU13GW02-01
1409479-10 GA-TU13GW05-01
1409479-11 GA-TU13GW03-01

Narrative: This sample was re-extracted due to low surrogate recovery in the initial extract. The re-extracted sample had acceptable surrogate recovery, but was extracted outside of the EPA holding time. Both sample extract results were reported.

Analysis: USEPA-8270D

Sample/Analyte: 1410025-06 GA-TU13SB14-34

Narrative: This sample was reextracted due to low surrogate recovery. The reextract also had low surrogate recovery, confirming matrix interference. Both results are reported.

Analysis: USEPA-8270D

Sample/Analyte: 1409479-05 GA-TU13SB04-07

Narrative: This sample was reextracted due to low surrogate recovery. The reextract had acceptable surrogate recovery, both samples are reported.

Analysis: USEPA-8270D

Sample/Analyte: 1409422-07 GA-TU14SB15-35
1409479-04 GA-TU13SB02-33
1409479-06 GA-TU13SB04-33
1409479-18 GA-TU13SB05-33

Narrative: This sample was reextracted out of hold due to low surogate recovery. The reextract also had low surrogate recovery, confirming matrix interference. Both results are reported.

Analysis: USEPA-8270D

Sample/Analyte: 1410014-08 GA-TU13SB11-34

SDG CASE NARRATIVE

Attachment 2
Statement of Data Qualifications

Volatile Organic Compounds by EPA Method 8260C

Sample/Analyte:	1410085-06 GA-TU17SB38-15	Methylene Chloride
	1410085-08 GA-TU017SB34-37DUP	Methylene Chloride
	1410085-09 GA-TU017SB38-15DUP	Methylene Chloride

Qualification: The SCV for this initial calibration had a recovery outside the control limit. All results for this analyte in the associated calibration should be considered as estimated.

Analysis: USEPA-8260C

Sample/Analyte:	1410085-03 GA-TU17GW34-01	Carbon Disulfide
	1410085-07 FQC-TB100114JC-001	Carbon Disulfide

Qualification: The CCV for this analytical sequence had a recovery outside the control limit. All results for this analyte in the analytical sequence should be considered as estimated.

Analysis: USEPA-8260C

Sample/Analyte:	1409444-03 GA-TU14SB23-25	2-Butanone (MEK)
	1409444-03 GA-TU14SB23-25	Acetone
	1409444-03 GA-TU14SB23-25	Methylene Chloride
	1409444-04 GA-TU14SB23-33	2-Butanone (MEK)
	1409444-04 GA-TU14SB23-33	Acetone
	1409444-04 GA-TU14SB23-33	Methylene Chloride
	1409444-05 GA-TU14SB24-07	2-Butanone (MEK)
	1409444-05 GA-TU14SB24-07	Acetone
	1409444-05 GA-TU14SB24-07	Methylene Chloride
	1409444-06 GA-TU14SB24-33	2-Butanone (MEK)
	1409444-06 GA-TU14SB24-33	Acetone
	1409444-06 GA-TU14SB24-33	Methylene Chloride
	1409444-07 GA-TU14SB21-5	2-Butanone (MEK)
	1409444-07 GA-TU14SB21-5	Acetone
	1409444-07 GA-TU14SB21-5	Methylene Chloride

SDG CASE NARRATIVE

Attachment 2
Statement of Data Qualifications

Semivolatile Organic Compounds by EPA Method 8270D

Qualification: The RPD between the MS and MSD results exceeded the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.

Analysis: USEPA-8270D

Sample/Analyte:	
1409422-07RE1 GA-TU14SB15-35	2-Chlorophenol
1409422-07RE1 GA-TU14SB15-35	2-Methylphenol
1409422-07RE1 GA-TU14SB15-35	3+4-Methylphenol
1409422-07RE1 GA-TU14SB15-35	4-Chloro-3-methylphenol
1409422-07RE1 GA-TU14SB15-35	Benzoic Acid
1409422-07RE1 GA-TU14SB15-35	Benzyl Alcohol
1409422-07RE1 GA-TU14SB15-35	N-Nitroso-di-n-propylamine
1409422-07RE1 GA-TU14SB15-35	Phenol
1409499-08 GA-TU16SB29-15	3-Nitroaniline
1409499-08 GA-TU16SB29-15	4-Chloroaniline

Qualification: The MS and/or MSD recovery was less than 10%. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount. The non-spiked sample result is considered unusable.

Analysis: USEPA-8270D

Sample/Analyte:	
1409499-08 GA-TU16SB29-15	3,3´-Dichlorobenzidine

Qualification: The LCS recovery was outside of the control limit with no allowed marginal exceedences. The result for this analyte in any sample from the associated QC batch is considered qualified.

Analysis: USEPA-8270D

Sample/Analyte:	
1409422-01 GA-TU14SB16-12	3,3´-Dichlorobenzidine
1409422-01RE1 GA-TU14SB16-12	3,3´-Dichlorobenzidine
1409422-02 GA-TU14SB16-35	3,3´-Dichlorobenzidine
1409422-03 GA-TU14SB15-13	3,3´-Dichlorobenzidine
1409422-04 GA-TU14SB17-21	3,3´-Dichlorobenzidine
1409422-05 GA-TU14SB17-34	3,3´-Dichlorobenzidine
1409422-06 GA-TU14SB19-35	3,3´-Dichlorobenzidine
1409422-07 GA-TU14SB15-35	3,3´-Dichlorobenzidine

Aqueous Samples: For each sample and container type, check the box if pH is acceptable. If pH is not acceptable for any sample container, record pH in box, and note on Sample Receiving Checklist and on Sample Receiving Non-Conformance Form. If approved by Project Chemist, add acid or base to the sample to achieve the correct pH. Add up to, but do not exceed 2x the volume initially added at container prep (see table below for initial volumes used). Add orange pH tag to sample container and record information requested. Record adjusted pH on this form. Do not adjust pH for container types 3, 6, and 15.

Aqueous Samples: For each sample and container type, check the box if pH is acceptable. If pH is not acceptable for any sample container, record pH in box, and note on Sample Receiving Checklist and on Sample Receiving Non-Conformance Form. If approved by Project Chemist, add acid or base to the sample to achieve the correct pH. Add up to, but do not exceed 2x the volume initially added at container prep (see table below for initial volumes used). Add orange pH tag to sample container and record information requested. Record adjusted pH on this form. Do not adjust pH for container types 3, 6, and 15.

Container Size (mL)	Original Vol. of Preservative (mL)
Container Type 5	NaOH
500	2.5
1000	5.0
Container Type 4	H_2SO_4
125	0.5
250	1.0
500	2.0
1000	4.0
Container Type 13	H_2SO_4
500	2.5

Aqueous Samples: For each sample and container type, check the box if pH is acceptable. If pH is not acceptable for any sample container, record pH in box, and note on Sample Receiving Checklist and on Sample Receiving Non-Conformance Form. If approved by Project Chemist, add acid or base to the sample to achieve the correct pH. Add up to, but do not exceed 2x the volume initially added at container prep (see table below for initial volumes used). Add orange pH tag to sample container and record information requested. Record adjusted pH on this form. Do not adjust pH for container types 3, 6, and 15.

Container Size (mL)	Original Vol. of Preservative (mL)
Container Type 5	NaOH
500	2.5
1000	5.0
Container Type 4	H_2SO_4
125	0.5
250	1.0
500	2.0
1000	4.0
Container Type 13	H_2SO_4
500	2.5

Aqueous Samples: For each sample and container type, check the box if pH is acceptable. If pH is not acceptable for any sample container, record pH in box, and note on Sample Receiving Checklist and on Sample Receiving Non-Conformance Form. If approved by Project Chemist, add acid or base to the sample to achieve the correct pH. Add up to, but do not exceed 2x the volume initially added at container prep (see table below for initial volumes used). Add orange pH tag to sample container and record information requested. Record adjusted pH on this form. Do not adjust pH for container types 3, 6, and 15.

Container Size (mL)	Original Vol. of Preservative (mL)
Container Type 5	NaOH
500	2.5
1000	5.0
Container Type 4	H_2SO_4
125	0.5
250	1.0
500	2.0
1000	4.0

Aqueous Samples: For each sample and container type, check the box if pH is acceptable. If pH is not acceptable for any sample container, record pH in box, and note on Sample Receiving Checklist and on Sample Receiving Non-Conformance Form. If approved by Project Chemist, add acid or base to the sample to achieve the correct pH. Add up to, but do not exceed 2x the volume initially added at container prep (see table below for initial volumes used). Add orange pH tag to sample container and record information requested. Record adjusted pH on this form. Do not adjust pH for container types 3, 6, and 15.

Container Size (mL)	Original Vol. of Preservative (mL)
Container Type 5	NaOH
500	2.5
1000	5.0
Container Type 4	H_2SO_4
125	0.5
250	1.0
500	2.0
1000	4.0
Container Type 13	H_2SO_4
500	2.5

SURROGATE STANDARD RECOVERY AND RT SUMMARY

USEPA-8260C

Laboratory: TriMatrix Laboratories, Inc.
SDG: 50094-12
Client: AECOM - Alexandria, VA
Project: Gabreski ANGB, NY
Matrix: Soil
Calibration: 4J01002
Sequence: 4J01003
Instrument: 350

Lab Sample Id Surrogate Compound Name	RT	Calibration Mean RT	RT Diff	RT Diff Limit	% Recovery	Recovery Limits	Q
Calibration Check (4J01003-CCV1)		**Lab File ID: CCV0930A.D**		**Analyzed: 09/30/14 14:15**			
Dibromofluoromethane	5.11	5.11	0.00	+/-1.0	101	80 - 120	
1,2-Dichloroethane-d4	5.70	5.69	0.01	+/-1.0	104	80 - 120
