RTI Laboratories - Definitions and Acronyms

WO#: 1606652

Date Reported: 8/25/2016
Revision v1

DEFINITIONS:

DF: Dilution factor; the dilution factor applied to the prepared sample.

DL: Detection Limit; The lowest concentration of analyte that can be detected by the method in the applicable matrix.

DUP: Duplicate; aliquots of a sample taken from the same container under laboratory conditions and processed and analyzed independently, used to calculate Precision (%RPD).

LCS: Laboratory Control Sample; prepared by adding a known amount of target analytes to a specified amount of clean matrix and prepared with the batch of samples, used to calculate Accuracy (%REC).

LCSD: A duplicate LCS sample, used to calculate both Accuracy (%REC) and Precision (%RPD)

LOD: Limit of Detection; a laboratory verified concentration that can be detected at three times greater than the noise level. This concentration is equal to or greater than the DL.

LOQ: Limit of Quantitation; The lowest verified limit to which data is quantified without qualifications. Analyte concentrations below the LOQ are reported with a "J" qualifier.

MBLK: Method Blank; a sample of similar matrix that does not contain target analytes or interference that may impact the analytical results and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedure, used to assess and verify that the analytical process is free of contamination.

Mg/Kg or mg/L: Units of part per million (PPM) – milligram per Kilogram (W/W) or milligram per Liter (W/V).

MS: Matrix Spike; prepared by adding a known amount of target analytes to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available, used to calculate Accuracy (%REC)

MSD: A duplicate MS sample, used to calculate both Accuracy (%REC) and Precision (%RPD)

% REC: Percent Recovery of a known spike (SPK); a measure of accuracy expressed as a percentage of a measured (recovered) concentration compared to the known concentration (SPK) added to the sample. This is compared to the Low Limit and High Limit.

% RPD: Relative Percent Difference; a measure of precision expressed as a percentage of the difference between two duplicates relative to the average concentration. This is compared to the RPD Limit.

Qual: Qualifier that applies to the analyte reported

SPK: Spike; used in the QC section for both SPK Value and SPK Ref Val

Ug/Kg or ug/L: Units of part per billion (PPB) – microgram per Kilogram (W/W) or microgram per Liter (W/V).

QUALIFIERS:

*: Reported value exceeds the maximum allowed concentration by regulation or permit.

B: Analyte detected in the associated Method Blank at a concentration greater than 1/2 the LOQ

G: ICB/CCB result is greater than the MDL

H: Holding time for preparation or analysis has been exceeded

J: Estimated result. Greater uncertainty is associated with this result and data reported is estimated.

M: Manual Integration used to determine area response

P: Second column RPD exceeds 40%

Q: % REC exceeded control limits. When applied to sample analytes - denotes an associated LCS recovery that exceeded control limits.

R: % RPD exceeds control limits

T: MBLK result is greater than 1/2 of the LOQ

U: The analyte concentration is less than the DL. The result is reported as less than the LOD

X: Matrix spike recovery for the noted analyte exceeded control limits. Applied to the MS/MSD parent sample.

Y: Percent Difference/Drift in the associated CCV exceeded acceptance criteria.

Z: Percent Difference/Drift in the associated ICV exceeded acceptance criteria.

RE: Camp Hero

Work Order #: 1606675

Dear Devon Chicoine:

There were no problems with the analytical events associated with this report unless noted in the Case Narrative.

This report may only be reproduced in its entirety. Individual pages, reproduced without supporting documentation, do not contain related information and may be misinterpreted by other data reviewers.

Quality control data is within laboratory defined or method specified acceptance limits except if noted.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Katherine Griffin

Project Manager

RTI Laboratories - Case Narrative

WO#: 1606675

Date Reported: 8/16/2016
Revision v1

Client: AECOM Design and Consulting Services (DCS)

Project: Camp Hero

Concentrations reported with a J flag in the Qual field are values below the reporting limit (RL) but greater than the established method detection limit (MDL). There is greater uncertainty associated with these results and data should be considered as estimated. These analytes are not routinely reviewed nor narrated below as to their potential for being laboratory artifacts.

Concentrations reported with an E flag in the Qual field are values that exceed the upper quantification range. There is greater uncertainty associated with these results and data should be considered as estimated.

Any comments or problems with the analytical events associated with this report are noted below.

Sample Analysis:
Samples were analyzed at the RTI Laboratories
- Metals, ICP/MS - 6020A
- Silver and/or Antimony, ICP/MS - 6020A-SA
- Polychlorinated Biphenyls - 8082A
- Volatile Organic Compounds - 8260C
- Semi-Volatile Organic Compounds - 8270D-MOD
- Semi-Volatile Organic Compounds - 8270D SIM
- Explosives - 8330B

Sample 1606675-014A for VOC analysis was performed at a dilution past the recommended hold time. Due to the high solid content of the sample was unable to be performed with out dilution. Sample would not inject with out dilution.

Analytical Comments for Test SW_6020A, Analytical Run No 87810, Batch ID 40425:
Sample 1606675-013DMSD: Recoveries for Magnesium and Sodium exceeded control limits.

Analytical Comments for Test SW_6020A, Analytical Run No 87826, Batch ID 40425:
Sample 1606675-003D: Internal standard exceeded control limits upon initial analysis. Sample was diluted; Data reported with elevated reporting limits.
Sample 1606675-013DMS: Recovery for Aluminum exceeded control limits. Suspected matrix interference for Aluminum.
Sample 1606675-013DMSD: Recovery for Aluminum exceeded control limits. Suspected matrix interference for Aluminum.
Sample 1606675-014D: Internal standard exceeded control limits upon initial analysis. Sample was diluted; Data reported with elevated reporting limits.

Analytical Comments for Test SW_6020A, Analytical Run No 87866, Batch ID 40425:
Sample 1606675-003D: Internal standard exceeded control limits upon initial analysis. Sample was diluted; internal standard still exceeded control limits. Data reported with elevated reporting limits.

Analytical Comments for Test SW_8082A, Analytical Run No 87275, Batch ID 40329:
Sample 1606675-014C: Surrogate DCB exceeded control limits.
Sample 1606675-015B: Surrogate DCB exceeded control limits.

Analytical Comments for Test SW_8082A, Analytical Run No 87558, Batch ID 40397:
Sample 1606675-004C: DCA exceeded QC limit.

Analytical Comments for Test SW_8260A, Analytical Run No 87032, Batch ID R87032:
Sample VOA10 CCV 062916: CCV results for 1,2-Dibromo-3-chloropropane exceed the 20% criteria.
Sample VOA10 CCVE 062916: Dichlorodifluoromethane, exceed the 50% criteria.
Samples1606636-001A MS/MSD: Spike recovery for 1,2-Dibromo-3-chloropropane was outside the control limits.
Sample 1606636-012A MSD: Spike recovery for 1,2-Dibromo-3-chloropropane was outside the control limits. RPD for 1,2-Dibromo-3-chloropropane and 2-Hexanone were outside the control limits.

Analytical Comments for Test SW_8260A, Analytical Run No 87063, Batch ID R87063:
Sample VOA10 LCS 063016: Recovery for Methylene chloride exceeded control limits.
Sample VOA10 LCSD 06301: Recovery for Methylene chloride exceeded control limits.
Sample VO10 CCVE 063016: Ending CCV results for several analyses exceeded the 50% criteria. Unable to reanalyze samples within recommended holding time.

Analytical Comments for Test SW_8260A, Analytical Run No 87322, Batch ID R87322:
Sample VOA11B ICV 070916: 1,2-Dibromo-3-chloropropane, Bromoform, trans-1,3-dichloropropene exceed limits.
Sample ID VOA11B CCV 071216: Styrene exceeded QC limits.
Sample VOA11B LCS 07121: Spike recoveries for Chlorodibromomethane, Bromodichloromethane and styrene exceeded QC limits.
Sample 1606675-014A MS: Spike recoveries bromodichloromethane, Bromoform, Chlorodibromomethane, cis-1,3-dichloropropene, and Styrene exceeded QC limits
Sample 1606675-014A MSD: Spike recoveries Bromodichloromethane, Chlorodibromomethane, cis-1,3-dichloropropene, and styrene exceeded QC limits

Analytical Comments for Test SW_8270A-LL, Analytical Run No 86948, Batch ID 40220:
Sample MB-40220: Surrogate recoveries for 2,4,6-Trimbromophenol, 2-Fluorobiphenyl, Nitrobenzene-d5 and Terphenyl-d14 were outside the control limits.
Sample LCS-40220: 4-Nitrophenol, N-Nitrosodimethylamine and Phenol were outside the control limits.
Sample LCSD-40220: 4-Nitrophenol, Benzoic acid, N-Nitrosodimethylamine and Phenol were outside the control limits.
Sample 1606675-001B: Surrogate Phenol-d5 exceeded recovery control limit.
Sample 1606675-002B: Surrogate Phenol-d5 and Terphenyl-d14 exceeded recovery control limit.
Sample 1606675-003B: Surrogate Phenol-d5 exceeded recovery control limit.
Sample 1606675-004B: Surrogate Phenol-d5 exceeded recovery control limit.
Sample 1606675-005B: Surrogate Recoveries for Phenol-d5 and 2-Fluorobiphenyl exceeded recovery control limits.
Sample 1606675-006B: Surrogate Phenol-d5 exceeded recovery control limit.

Analytical Comments for Test SW_8270A-LL, Analytical Run No 86948, Batch ID R86948:
Sample ICV S8 050216: ICV results for Bis(2-chloroisopropyl) ether and Benzoic Acid exceeded control limit.
Sample CCV S8 062616: CCV results 2,4-Dinitrophenol, Benzoic acid, N-Nitrosodiphenylamine and Pentachlorophenol
Sample CCVE S8 062616: Ending CCV results for Benzoic acid, Hexachlorocyclopentadiene exceeded recovery control limit.

Analytical Comments for Test SW_8270A-LL, Analytical Run No 87057, Batch ID 40235:
Sample MB-40235: Surrogate recovery for Phenol-d5 was outside the control limits.
Sample LCS-40235: LCS results for 4-Nitrophenol, Benzoic acid, N-Nitrosodimethylamine, Pentachlorophenol, and Phenol exceeded control limits. Surrogate recovery for Phenol-d5 was outside the control limits.
Sample LCSD-40235: LCSD results for 4-Nitrophenol, Benzoic acid, N-Nitrosodimethylamine, Pentachlorophenol, and Phenol exceeded control limit. The RPD for 4-Nitrophenol was outside the control limits. Surrogate recovery for Phenol-d5 was outside the control limits.
Sample 1606675-007B: Surrogate results for Phenol-d5 exceeded control limit.
Sample 1606675-012B: Surrogate results for Phenol-d5 exceeded control limit.
Sample 1606675-013B: Surrogate results for Phenol-d5 exceeded control limit.
Sample 1606675-014B: Surrogate results for Phenol-d5 exceeded control limit.
Sample 1606740-003A MS: Spike recoveries for N-Nitrosodimethylamine and Phenol were outside the control limits.
Sample 1606740-007A MS: Spike recoveries for 4-Nitrophenol, N-Nitrosodimethylamine and Phenol were outside the control limits. Surrogate recovery for Phenol-d5 was outside the control limits.

Analytical Comments for Test SW_8270A-LL, Analytical Run No 87057, Batch ID R87057:
Sample ICV S8 050216: ICV results for Bis(2-chloroisopropyl) ether and Benzoic acid exceeded control limit.
Sample CCV S8 062816: CCV results for 4,6-Dinitro-2-methylphenol, Benzoic acid, Bis(2-chloroisopropyl) ether, N-Nitrosodimethylamine, Pentachlorophenol exceeded QC limit.
Sample CCVE S8 062816: Ending CCV for 2,4-Dinitrophenol, 4,6-Dinitro-2-methylphenol exceeded control limit.

Analytical Comments for Test SW_8330A, Analytical Run No 87250, Batch ID 40130:
Sample LCSD-40130: Recovery (63%) and RPD result for PETN exceeded control limits.

RTI Laboratories - Definitions and Acronyms

WO#: 1606675

Date Reported: 8/16/2016
Revision v1

DEFINITIONS:

DF: Dilution factor; the dilution factor applied to the prepared sample.

DL: Detection Limit; The lowest concentration of analyte that can be detected by the method in the applicable matrix.

DUP: Duplicate; aliquots of a sample taken from the same container under laboratory conditions and processed and analyzed independently, used to calculate Precision (%RPD).

LCS: Laboratory Control Sample; prepared by adding a known amount of target analytes to a specified amount of clean matrix and prepared with the batch of samples, used to calculate Accuracy (%REC).

LCSD: A duplicate LCS sample, used to calculate both Accuracy (%REC) and Precision (%RPD)

LOD: Limit of Detection; a laboratory verified concentration that can be detected at three times greater than the noise level. This concentration is equal to or greater than the DL.

LOQ: Limit of Quantitation; The lowest verified limit to which data is quantified without qualifications. Analyte concentrations below the LOQ are reported with a "J" qualifier.

MBLK: Method Blank; a sample of similar matrix that does not contain target analytes or interference that may impact the analytical results and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedure, used to assess and verify that the analytical process is free of contamination.

Mg/Kg or mg/L: Units of part per million (PPM) – milligram per Kilogram (W/W) or milligram per Liter (W/V).

MS: Matrix Spike; prepared by adding a known amount of target analytes to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available, used to calculate Accuracy (%REC)

MSD: A duplicate MS sample, used to calculate both Accuracy (%REC) and Precision (%RPD)

% REC: Percent Recovery of a known spike (SPK); a measure of accuracy expressed as a percentage of a measured (recovered) concentration compared to the known concentration (SPK) added to the sample. This is compared to the Low Limit and High Limit.

% RPD: Relative Percent Difference; a measure of precision expressed as a percentage of the difference between two duplicates relative to the average concentration. This is compared to the RPD Limit.

Qual: Qualifier that applies to the analyte reported

SPK: Spike; used in the QC section for both SPK Value and SPK Ref Val

Ug/Kg or ug/L: Units of part per billion (PPB) – microgram per Kilogram (W/W) or microgram per Liter (W/V).

QUALIFIERS:

*: Reported value exceeds the maximum allowed concentration by regulation or permit.

B: Analyte detected in the associated Method Blank at a concentration greater than 1/2 the LOQ

G: ICB/CCB result is greater than the MDL

H: Holding time for preparation or analysis has been exceeded

J: Estimated result. Greater uncertainty is associated with this result and data reported is estimated.

M: Manual Integration used to determine area response

P: Second column RPD exceeds 40%

Q: % REC exceeded control limits. When applied to sample analytes - denotes an associated LCS recovery that exceeded control limits.

R: % RPD exceeds control limits

T: MBLK result is greater than 1/2 of the LOQ

U: The analyte concentration is less than the DL. The result is reported as less than the LOD

X: Matrix spike recovery for the noted analyte exceeded control limits. Applied to the MS/MSD parent sample.

Y: Percent Difference/Drift in the associated CCV exceeded acceptance criteria.

Z: Percent Difference/Drift in the associated ICV exceeded acceptance criteria.

RE: Camp Hero - B113

Work Order #: 1606829

Dear Devon Chicoine:

There were no problems with the analytical events associated with this report unless noted in the Case Narrative.

This report may only be reproduced in its entirety. Individual pages, reproduced without supporting documentation, do not contain related information and may be misinterpreted by other data reviewers.

Quality control data is within laboratory defined or method specified acceptance limits except if noted.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Katherine Griffin

Project Manager

RTI Laboratories - Workorder Sample Summary

WO#: 1606829

Date Reported: 8/25/2016
Revision v1

Client: AECOM Design and Consulting Services (DCS)

Project: Camp Hero - B113

Lab Sample ID	Client Sample ID	Tag No	Date Collected	Date Received	Matrix
1606829-001A	B113-LC02-01		6/21/2016 2:00 PM	6/23/2016 10:00 AM	Liquid

RTI Laboratories - Case Narrative

WO#: 1606829

Date Reported: 8/25/2016
Revision v1

Client: AECOM Design and Consulting Services (DCS)

Project: Camp Hero - B113

Concentrations reported with a J flag in the Qual field are values below the reporting limit (RL) but greater than the established method detection limit (MDL). There is greater uncertainty associated with these results and data should be considered as estimated. These analytes are not routinely reviewed nor narrated below as to their potential for being laboratory artifacts.

Concentrations reported with an E flag in the Qual field are values that exceed the upper quantification range. There is greater uncertainty associated with these results and data should be considered as estimated.

Any comments or problems with the analytical events associated with this report are noted below.

Sample Analysis:
Samples were analyzed at the RTI Laboratories
- Ignitability - SW1010
- Metals, ICP/OES - SW6010C
- Reactivity, Cyanide - SW7.3.3.2
- Reactivity, Sulfide - SW7.3.4.2
- Mercury - SW7470A
- Volatile Organic Compounds - SW8260C
- Semi-Volatile Organic Compounds - SW8270D
- Solid pH Measured in Water at Reported Temperature - SW9045D

Analytical Comments for Test SW_7.3.3.2, Analytical RunNo 87203, Batch ID 40367:
- Sample LCS-40367: Recovery for Reactive Cyanide exceeded control limits.
- Sample LCSD-40367: Recovery for Reactive Cyanide exceeded control limits.

Analytical Comments for Test SW_7.3.4.2, Analytical RunNo 87366, Batch ID 40367:
- Sample LCS-R87366: Recovery for Reactive Sulfide exceeded control limits.
- Sample 1606829-001BMS: Recovery for Reactive Sulfide exceeded control limits.
- Sample 1606829-001BMSD: Recovery for Reactive Sulfide exceeded control limits.

Analytical Comments for Test SW_7.3.4.2, Analytical RunNo 87366, Batch ID R87366:
- Sample LCS-R87366: Recovery for Reactive Sulfide exceeded control limits.

Analytical Comments for Test SW_8270A, Analytical RunNo 87051, Batch ID 40283:
- Sample LCSD-40283: LCSD results for Pentachlorophenol exceeded control limit.

RTI Laboratories - Definitions and Acronyms

WO#: 1606829

Date Reported: 8/25/2016
Revision v1

DEFINITIONS:

DF: Dilution factor; the dilution factor applied to the prepared sample.

DL: Detection Limit; The lowest concentration of analyte that can be detected by the method in the applicable matrix.

DUP: Duplicate; aliquots of a sample taken from the same container under laboratory conditions and processed and analyzed independently, used to calculate Precision (%RPD).

LCS: Laboratory Control Sample; prepared by adding a known amount of target analytes to a specified amount of clean matrix and prepared with the batch of samples, used to calculate Accuracy (%REC).

LCSD: A duplicate LCS sample, used to calculate both Accuracy (%REC) and Precision (%RPD)

LOD: Limit of Detection; a laboratory verified concentration that can be detected at three times greater than the noise level. This concentration is equal to or greater than the DL.

LOQ: Limit of Quantitation; The lowest verified limit to which data is quantified without qualifications. Analyte concentrations below the LOQ are reported with a "J" qualifier.

MBLK: Method Blank; a sample of similar matrix that does not contain target analytes or interference that may impact the analytical results and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedure, used to assess and verify that the analytical process is free of contamination.

Mg/Kg or mg/L: Units of part per million (PPM) – milligram per Kilogram (W/W) or milligram per Liter (W/V).

MS: Matrix Spike; prepared by adding a known amount of target analytes to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available, used to calculate Accuracy (%REC)

MSD: A duplicate MS sample, used to calculate both Accuracy (%REC) and Precision (%RPD)

% REC: Percent Recovery of a known spike (SPK); a measure of accuracy expressed as a percentage of a measured (recovered) concentration compared to the known concentration (SPK) added to the sample. This is compared to the Low Limit and High Limit.

% RPD: Relative Percent Difference; a measure of precision expressed as a percentage of the difference between two duplicates relative to the average concentration. This is compared to the RPD Limit.

Qual: Qualifier that applies to the analyte reported

SPK: Spike; used in the QC section for both SPK Value and SPK Ref Val

Ug/Kg or ug/L: Units of part per billion (PPB) – microgram per Kilogram (W/W) or microgram per Liter (W/V).

QUALIFIERS:

*: Reported value exceeds the maximum allowed concentration by regulation or permit.

B: Analyte detected in the associated Method Blank at a concentration greater than 1/2 the LOQ

G: ICB/CCB result is greater than the MDL

H: Holding time for preparation or analysis has been exceeded

J: Estimated result. Greater uncertainty is associated with this result and data reported is estimated.

M: Manual Integration used to determine area response

P: Second column RPD exceeds 40%

Q: % REC exceeded control limits. When applied to sample analytes - denotes an associated LCS recovery that exceeded control limits.

R: % RPD exceeds control limits

T: MBLK result is greater than 1/2 of the LOQ

U: The analyte concentration is less than the DL. The result is reported as less than the LOD

X: Matrix spike recovery for the noted analyte exceeded control limits. Applied to the MS/MSD parent sample.

Y: Percent Difference/Drift in the associated CCV exceeded acceptance criteria.

Z: Percent Difference/Drift in the associated ICV exceeded acceptance criteria.

RE: Camp Hero

Work Order #: 1606833

Dear Devon Chicoine:

There were no problems with the analytical events associated with this report unless noted in the Case Narrative.

This report may only be reproduced in its entirety. Individual pages, reproduced without supporting documentation, do not contain related information and may be misinterpreted by other data reviewers.

Quality control data is within laboratory defined or method specified acceptance limits except if noted.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Katherine Griffin

RTI Laboratories - Case Narrative

WO#: 1606833

Date Reported: 8/25/2016
Revision v1

Client: AECOM Design and Consulting Services (DCS)

Project: Camp Hero

Concentrations reported with a J flag in the Qual field are values below the reporting limit (RL) but greater than the established method detection limit (MDL). There is greater uncertainty associated with these results and data should be considered as estimated. These analytes are not routinely reviewed nor narrated below as to their potential for being laboratory artifacts.

Concentrations reported with an E flag in the Qual field are values that exceed the upper quantification range. There is greater uncertainty associated with these results and data should be considered as estimated.

Any comments or problems with the analytical events associated with this report are noted below.

Sample Analysis:
Samples were analyzed at the RTI Laboratories
Metals, ICP/MS - 6020
Silver and/or Antimony, ICP/MS - 6020A-SA
Polychlorinated Biphenyls - 8082A
Volatile Organic Compounds - 8260C
Semi-Volatile Organic Compounds - 8270D-MOD
Semi-Volatile Organic Compounds - 8270D SIM
Explosives - 8330B

Analytical Comments for Test SW_8260A, Analytical Run No 87115, Batch ID R87115:
Sample VOA11B ICV 063016: ICV results for Bromoform exceeds the control criteria.
Sample VOA11B CCV 070116: CCV results for 1,2-Dibromo-3-chloropropane and Bromoform exceed the control criteria.
Sample VOA11B LCS 07011: Recoveries for Bromoform and Chlorodibromomethane exceeded control limits.
Sample VOA11B LCSD 0701: Recoveries for 1,2,3-Trichloropropane, 1,2-Dibromo-3-chloropropane, Bromoform, Chlorodibromomethane exceeded control limits.
Sample 1606833-007A: Surrogate recovery for 4-Bromofluorobenzene was outside control criteria.

Analytical Comments for Test SW_8260A, Analytical Run No 87161, Batch ID R87161:
Sample VOA11B ICV 063016: ICV result for Bromoform exceeded control criteria.
Sample VOA11B CCV070516: CCV result for 1,2-Dibromo-3-chloropropane exceeded control criteria.
Sample VOA11B MBLK2 070: Chloromethane detected in method Blank and the samples below LOQ.
Sample VOA11B LCS 07051: Recoveries for Bromoform and Chlorodibromomethane exceeded control limits.
Sample 1606905-005AMS: Recoveries for 1,2,3-Trichloropropane, 1,2-Dibromo-3-chloropropane, Bromoform and Chlorodibromomethane were outside control limits. Sample was not associated with work order.
Sample 1606905-005AMSD: Recoveries for Bromoform, Chlorodibromomethane, Chloroethane and Methylene chloride were outside control limits. The RPD percentage for 1,2-Dibromo-3-chloropropane was above control limit. Sample was not associated with work order.
Sample 1606833-014A: Surrogate recovery for Toluene-d8 was outside control criteria.
Sample VOA11B CCVE070516: Ending CCV result for Dichlorodifluoromethane exceeded control criteria.

Analytical Comments for Test SW_8270A-SIM, Analytical Run No 87824, Batch ID 40256:
Sample LCSD-40256: The RPD percentage for Benzo(k)fluoranthene was above control limit.
Sample 1606833-007B: Surrogate recoveries for 2-Fluorobiphenyl, Nitrobenzene-d5 and Terphenyl-d14 were outside control criteria, possibly due to matrix interference. Sample was analyzed with further dilutions on 8/3/16 at a 20x and a 2,000x.
Sample 1606833-009B: Surrogate recoveries for 2-Fluorobiphenyl, Nitrobenzene-d5 and Terphenyl-d14 were outside control criteria.
Sample 1606833-010B: Surrogate recoveries for 2-Fluorobiphenyl, Nitrobenzene-d5 and Terphenyl-d14 were outside control criteria.

Analytical Comments for Test SW_8270A-LL, Analytical Run No 87381, Batch ID R87381:
Sample ICV S7 031416: ICV result for Bis(2-chloroisopropyl) ether exceeded control criteria.
Sample CCV S7 063016: CCV results for Benzoic acid and Bis(2-chloroisopropyl) ether exceeded control criteria.
Sample CCVE S7 063016: Ending CCV results for Benzoic acid and Pentachlorophenol exceeded control criteria.

Analytical Comments for Test SW_8270A-LL, Analytical Run No 87381, Batch ID 40262
Sample LCS-40262: Recoveries for Benzoic Acid, N-Nitrosodimethylamine and Phenol exceeded the control limits.
Sample MB-40262: Surrogate recovery for Phenol-d5 was outside control criteria.
Sample 1606833-008B: Surrogate recovery for Phenol-d5 exceeded control limits.
Sample 1606833-014B: Surrogate recovery for Phenol-d5 exceeded control limits.
Sample 1606833-014B: Surrogate recovery for Phenol-d5 exceeded control limits.
Sample 1606422-008BMS: Spike recoveries for 4-Bromophenyl phenyl ether, 4-Nitrophenol, Hexachlorobenzene, N-Nitrosodimethylamine and Phenol were outside control criteria. Surrogate recovery for Phenol-d5 was outside control limits. Sample was not associated with work order.
Sample 1606422-008BMSD: Spike recoveries for multiple analytes were outside control criteria. RPD percentage for N-Nitrosodimethylamine was above control limit. Surrogate recovery for Phenol-d5 was outside control limits. Sample was not associated with work order.

Analytical Comments for Test SW_8270S-LL, Analytical Run No 87828, Batch ID R87828:
Sample ICV S8 080216: ICV results for 4,6-Dinitro-2-methylphenol, Bis(2-chloroisopropyl) ether and exceeded QC limits.
Sample CCV S8 080316: CCV results for 4,6-Dinitro-2-methylphenol, Benzoic acid, Bis(2-chloroisopropyl) ether and Pentachlorophenol exceeded control limits.

Analytical Comments for Test SW_8270S-LL, Analytical Run No 87828, Batch ID 40262
Sample 1606833-006: Surrogate Phenol-d5, Nitrobenzene-d5, 2-Fluorobiphenyl exceeded control limit.

Analytical Comments for Test SW_6020A, Analytical Run No 87684, Batch ID 40440:
Sample 1606631-005DMS: Recoveries for Aluminum and Calcium were outside control criteria. Sample was not associated with the work order.
Sample 1606631-005DMSD: Recoveries for Aluminum, Calcium and Sodium were outside control criteria. Sample was not associated with the work order.

Analytical Comments for Test SW_8330A, Analytical Run No 87250, Batch ID 40253:
Sample MB-40253: RDX was detected in the Method Blank at a concentration >1/2 the LOQ.
Sample 1606833-014DMS: Recovery for 4-Amino-2,6-dinitrotoulene exceeded control limits.
Sample 1606833-014DMSD: Recovery for 4-Amino-2,6-dinitrotoulene exceeded control limits.

Analytical Comments for Test SW_8082A, Analytical Run No 87275, Batch ID 40329:
Sample 1606833-004C: Surrogate recovery for Decachlorobiphenyl exceeded control limits.
Sample 1606833-005C: Surrogate recovery for Decachlorobiphenyl exceeded control limits.

RTI Laboratories - Definitions and Acronyms

WO#: 1606833

Date Reported: 8/25/2016
Revision v1

DEFINITIONS:

DF: Dilution factor; the dilution factor applied to the prepared sample.

DL: Detection Limit; The lowest concentration of analyte that can be detected by the method in the applicable matrix.

DUP: Duplicate; aliquots of a sample taken from the same container under laboratory conditions and processed and analyzed independently, used to calculate Precision (%RPD).

LCS: Laboratory Control Sample; prepared by adding a known amount of target analytes to a specified amount of clean matrix and prepared with the batch of samples, used to calculate Accuracy (%REC).

LCSD: A duplicate LCS sample, used to calculate both Accuracy (%REC) and Precision (%RPD)

LOD: Limit of Detection; a laboratory verified concentration that can be detected at three times greater than the noise level. This concentration is equal to or greater than the DL.

LOQ: Limit of Quantitation; The lowest verified limit to which data is quantified without qualifications. Analyte concentrations below the LOQ are reported with a "J" qualifier.

MBLK: Method Blank; a sample of similar matrix that does not contain target analytes or interference that may impact the analytical results and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedure, used to assess and verify that the analytical process is free of contamination.

Mg/Kg or mg/L: Units of part per million (PPM) – milligram per Kilogram (W/W) or milligram per Liter (W/V).

MS: Matrix Spike; prepared by adding a known amount of target analytes to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available, used to calculate Accuracy (%REC)

MSD: A duplicate MS sample, used to calculate both Accuracy (%REC) and Precision (%RPD)

% REC: Percent Recovery of a known spike (SPK); a measure of accuracy expressed as a percentage of a measured (recovered) concentration compared to the known concentration (SPK) added to the sample. This is compared to the Low Limit and High Limit.

% RPD: Relative Percent Difference; a measure of precision expressed as a percentage of the difference between two duplicates relative to the average concentration. This is compared to the RPD Limit.

Qual: Qualifier that applies to the analyte reported

SPK: Spike; used in the QC section for both SPK Value and SPK Ref Val

Ug/Kg or ug/L: Units of part per billion (PPB) – microgram per Kilogram (W/W) or microgram per Liter (W/V).

QUALIFIERS:

*: Reported value exceeds the maximum allowed concentration by regulation or permit.

B: Analyte detected in the associated Method Blank at a concentration greater than 1/2 the LOQ

G: ICB/CCB result is greater than the MDL

H: Holding time for preparation or analysis has been exceeded

J: Estimated result. Greater uncertainty is associated with this result and data reported is estimated.

M: Manual Integration used to determine area response

P: Second column RPD exceeds 40%

Q: % REC exceeded control limits. When applied to sample analytes - denotes an associated LCS recovery that exceeded control limits.

R: % RPD exceeds control limits

T: MBLK result is greater than 1/2 of the LOQ

U: The analyte concentration is less than the DL. The result is reported as less than the LOD

X: Matrix spike recovery for the noted analyte exceeded control limits. Applied to the MS/MSD parent sample.

Y: Percent Difference/Drift in the associated CCV exceeded acceptance criteria.

Z: Percent Difference/Drift in the associated ICV exceeded acceptance criteria.

RE: Camp Hero

Work Order #: 1606859

Dear Devon Chicoine:

There were no problems with the analytical events associated with this report unless noted in the Case Narrative.

This report may only be reproduced in its entirety. Individual pages, reproduced without supporting documentation, do not contain related information and may be misinterpreted by other data reviewers.

Quality control data is within laboratory defined or method specified acceptance limits except if noted.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Katherine Griffin

Project Manager

RTI Laboratories - Workorder Sample Summary

WO#: 1606859

Date Reported: 8/25/2016
Revision v2

Client: AECOM Design and Consulting Services (DCS)

Project: Camp Hero

Lab Sample ID	Client Sample ID	Tag No	Date Collected	Date Received	Matrix
1606859-001A	B113-WP01-01		6/21/2016 3:00 PM	6/23/2016 10:00 AM	Wipe
1606859-002A	B113-CC01-01		6/21/2016 2:30 PM	6/23/2016 10:00 AM	Solid

RTI Laboratories - Case Narrative

WO#: 1606859

Date Reported: 8/25/2016
Revision v2

Client: AECOM Design and Consulting Services (DCS)

Project: Camp Hero

Concentrations reported with a J flag in the Qual field are values below the reporting limit (RL) but greater than the established method detection limit (MDL). There is greater uncertainty associated with these results and data should be considered as estimated. These analytes are not routinely reviewed nor narrated below as to their potential for being laboratory artifacts.

Concentrations reported with an E flag in the Qual field are values that exceed the upper quantification range. There is greater uncertainty associated with these results and data should be considered as estimated.

Any comments or problems with the analytical events associated with this report are noted below.

Sample Analysis:
Samples were analyzed at the RTI Laboratories
Polychlorinated Biphenyls - 8082A
Polychlorinated Biphenyls - SW8082A

Analytical Comments for Test SW_8082S, Analytical Run No 87007, Batch ID 40257:
Sample 1606859-002A: Recovery of both surrogates TCMX and DCB exceeds QC control limits. %RPD is >40%

Analytical Comments for Test SW_8082W, Analytical Run No 87630, Batch ID 40498:
Sample LCS-40498: Recovery for Aroclor 1016 (62.8%) exceeded control limits - LCSD recovery was within control limits.
Sample LCSD-40498: RPD result was elevated for Aroclor 1016.
Sample 1606859-001A: Recovery for surrogate DCB (131%) was slightly elevated.
Sample MB-40498: Surrogate recovery for Decachlorobiphenyl was outside the control limits.
Sample 1606859-001A: Second column RPD was > 40% for Aroclor 1254 and both Surrogates TCMX and DCB.

RTI Laboratories - Definitions and Acronyms

WO#: 1606859

Date Reported: 8/25/2016
Revision v2

DEFINITIONS:

DF: Dilution factor; the dilution factor applied to the prepared sample.

DL: Detection Limit; The lowest concentration of analyte that can be detected by the method in the applicable matrix.

DUP: Duplicate; aliquots of a sample taken from the same container under laboratory conditions and processed and analyzed independently, used to calculate Precision (%RPD).

LCS: Laboratory Control Sample; prepared by adding a known amount of target analytes to a specified amount of clean matrix and prepared with the batch of samples, used to calculate Accuracy (%REC).

LCSD: A duplicate LCS sample, used to calculate both Accuracy (%REC) and Precision (%RPD)

LOD: Limit of Detection; a laboratory verified concentration that can be detected at three times greater than the noise level. This concentration is equal to or greater than the DL.

LOQ: Limit of Quantitation; The lowest verified limit to which data is quantified without qualifications. Analyte concentrations below the LOQ are reported with a "J" qualifier.

MBLK: Method Blank; a sample of similar matrix that does not contain target analytes or interference that may impact the analytical results and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedure, used to assess and verify that the analytical process is free of contamination.

Mg/Kg or mg/L: Units of part per million (PPM) – milligram per Kilogram (W/W) or milligram per Liter (W/V).

MS: Matrix Spike; prepared by adding a known amount of target analytes to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available, used to calculate Accuracy (%REC)

MSD: A duplicate MS sample, used to calculate both Accuracy (%REC) and Precision (%RPD)

% REC: Percent Recovery of a known spike (SPK); a measure of accuracy expressed as a percentage of a measured (recovered) concentration compared to the known concentration (SPK) added to the sample. This is compared to the Low Limit and High Limit.

% RPD: Relative Percent Difference; a measure of precision expressed as a percentage of the difference between two duplicates relative to the average concentration. This is compared to the RPD Limit.

Qual: Qualifier that applies to the analyte reported

SPK: Spike; used in the QC section for both SPK Value and SPK Ref Val

Ug/Kg or ug/L: Units of part per billion (PPB) – microgram per Kilogram (W/W) or microgram per Liter (W/V).

QUALIFIERS:

*: Reported value exceeds the maximum allowed concentration by regulation or permit.

B: Analyte detected in the associated Method Blank at a concentration greater than 1/2 the LOQ

G: ICB/CCB result is greater than the MDL

H: Holding time for preparation or analysis has been exceeded

J: Estimated result. Greater uncertainty is associated with this result and data reported is estimated.

M: Manual Integration used to determine area response

P: Second column RPD exceeds 40%

Q: % REC exceeded control limits. When applied to sample analytes - denotes an associated LCS recovery that exceeded control limits.

R: % RPD exceeds control limits

T: MBLK result is greater than 1/2 of the LOQ

U: The analyte concentration is less than the DL. The result is reported as less than the LOD

X: Matrix spike recovery for the noted analyte exceeded control limits. Applied to the MS/MSD parent sample.

Y: Percent Difference/Drift in the associated CCV exceeded acceptance criteria.

Z: Percent Difference/Drift in the associated ICV exceeded acceptance criteria.

RE: Camp Hero

Work Order #: 1606936

Dear Devon Chicoine:

There were no problems with the analytical events associated with this report unless noted in the Case Narrative.

This report may only be reproduced in its entirety. Individual pages, reproduced without supporting documentation, do not contain related information and may be misinterpreted by other data reviewers.

Quality control data is within laboratory defined or method specified acceptance limits except if noted.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Katherine Griffin

Project Manager

RTI Laboratories - Case Narrative

WO#: 1606936

Date Reported: 8/25/2016
Revision v1

Client: AECOM Design and Consulting Services (DCS)

Project: Camp Hero

Concentrations reported with a J flag in the Qual field are values below the reporting limit (RL) but greater than the established method detection limit (MDL). There is greater uncertainty associated with these results and data should be considered as estimated. These analytes are not routinely reviewed nor narrated below as to their potential for being laboratory artifacts.

Concentrations reported with an E flag in the Qual field are values that exceed the upper quantification range. There is greater uncertainty associated with these results and data should be considered as estimated.

Any comments or problems with the analytical events associated with this report are noted below.

Sample Analysis:
Samples were analyzed at the RTI Laboratories
Metals, ICP/MS - 6020
Silver and/or Antimony, ICP/MS - 6020A-SA
Polychlorinated Biphenyls - 8082A
Volatile Organic Compounds - 8260C
Semi-Volatile Organic Compounds - 8270D-MOD
Semi-Volatile Organic Compounds - 8270D SIM

Analytical Comments for Test SW_8260A, Analytical Run No 87138, Batch ID: R87138:
Sample VOA11B ICV 063016: ICV result for Bromoform exceeded the control criteria.
Sample VOA11B CCV2 070116: CCV results for 1,2-Dibromo-3-chloropropane and Bromoform exceeded the control criteria.
Sample VOA11B LCS2 070116: Recoveries for Bromoform and Chlorodibromomethane exceeded the control limits.
Sample 1606912-001AMS: Spike recoveries for 1,2-Dibromo-3-chloropropane, Bromoform and Chlorodibromomethane exceeded control limits. Sample was not associated with work order.
Sample 1606912-001AMSD: Spike recoveries for 1,2-Dibromo-3-chloropropane, Bromoform, Chlorodibromomethane and Methylene chloride exceeded control limits. Sample was not associated with work order.

Analytical Comments for Test SW_8270A-LL, Analytical Run No 87828, Batch ID: 87828:
Sample ICV S8 080216: ICV results for 4,6-Dinitro-2-methylphenol and Bis(2-chloroisopropyl)ether exceeded control limits.
Sample CCV S8 080316: CCV results for Benzoic acid, Bis(2-chloroisopropyl)ether and Pentachlorophenol exceeded control limits

Analytical Comments for Test SW_8270A-LL, Analytical Run No 87828, Batch ID: 40292:
Sample 1606936-001B: Sample was prepared outside method recommended hold time by 0.898 day, due to delayed FedEx delivery.

Analytical Comments for Test SW_8270A-LL, Analytical Run No 87476, batch ID: 40292:
Sample LCS-40292: Recoveries for 4-Nitrophenol, Benzoic Acid and N-Nitrosodimethylamine were outside control criteria.
Sample LCSD-40292: Recoveries for Benzoic Acid and N-Nitrosodimethylamine were outside control criteria. The RPD percentage for 4-Nitrophenol was above control limit.

Analytical Comments for Test SW_8270A-SIM, Analytical Run No 87476, Batch ID: 40293:
Sample 1606936-001B: Sample was prepared outside method recommended hold time by 0.898 day, due to delayed FedEx delivery.

Analytical Comments for Test SW_6020A, Analytical Run No 87684, Batch ID 40440:
Sample 1606631-005DMS: Recoveries for Aluminum and Calcium were outside control criteria. Sample was not associated with the work order.
Sample 1606631-005DMSD: Recoveries for Aluminum, Calcium and Sodium were outside control criteria. Sample was not associated with the work order.

RTI Laboratories - Definitions and Acronyms

WO#: 1606936

Date Reported: 8/25/2016
Revision v1

DEFINITIONS:

DF: Dilution factor; the dilution factor applied to the prepared sample.

DL: Detection Limit; The lowest concentration of analyte that can be detected by the method in the applicable matrix.

DUP: Duplicate; aliquots of a sample taken from the same container under laboratory conditions and processed and analyzed independently, used to calculate Precision (%RPD).

LCS: Laboratory Control Sample; prepared by adding a known amount of target analytes to a specified amount of clean matrix and prepared with the batch of samples, used to calculate Accuracy (%REC).

LCSD: A duplicate LCS sample, used to calculate both Accuracy (%REC) and Precision (%RPD)

LOD: Limit of Detection; a laboratory verified concentration that can be detected at three times greater than the noise level. This concentration is equal to or greater than the DL.

LOQ: Limit of Quantitation; The lowest verified limit to which data is quantified without qualifications. Analyte concentrations below the LOQ are reported with a "J" qualifier.

MBLK: Method Blank; a sample of similar matrix that does not contain target analytes or interference that may impact the analytical results and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedure, used to assess and verify that the analytical process is free of contamination.

Mg/Kg or mg/L: Units of part per million (PPM) – milligram per Kilogram (W/W) or milligram per Liter (W/V).

MS: Matrix Spike; prepared by adding a known amount of target analytes to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available, used to calculate Accuracy (%REC)

MSD: A duplicate MS sample, used to calculate both Accuracy (%REC) and Precision (%RPD)

% REC: Percent Recovery of a known spike (SPK); a measure of accuracy expressed as a percentage of a measured (recovered) concentration compared to the known concentration (SPK) added to the sample. This is compared to the Low Limit and High Limit.

% RPD: Relative Percent Difference; a measure of precision expressed as a percentage of the difference between two duplicates relative to the average concentration. This is compared to the RPD Limit.

Qual: Qualifier that applies to the analyte reported

SPK: Spike; used in the QC section for both SPK Value and SPK Ref Val

Ug/Kg or ug/L: Units of part per billion (PPB) – microgram per Kilogram (W/W) or microgram per Liter (W/V).

QUALIFIERS:

*: Reported value exceeds the maximum allowed concentration by regulation or permit.

B: Analyte detected in the associated Method Blank at a concentration greater than 1/2 the LOQ

G: ICB/CCB result is greater than the MDL

H: Holding time for preparation or analysis has been exceeded

J: Estimated result. Greater uncertainty is associated with this result and data reported is estimated.

M: Manual Integration used to determine area response

P: Second column RPD exceeds 40%

Q: % REC exceeded control limits. When applied to sample analytes - denotes an associated LCS recovery that exceeded control limits.

R: % RPD exceeds control limits

T: MBLK result is greater than 1/2 of the LOQ

U: The analyte concentration is less than the DL. The result is reported as less than the LOD

X: Matrix spike recovery for the noted analyte exceeded control limits. Applied to the MS/MSD parent sample.

Y: Percent Difference/Drift in the associated CCV exceeded acceptance criteria.

Z: Percent Difference/Drift in the associated ICV exceeded acceptance criteria.

RE: Camp Hero

Work Order #: 1606937

Dear Devon Chicoine:

There were no problems with the analytical events associated with this report unless noted in the Case Narrative.

This report may only be reproduced in its entirety. Individual pages, reproduced without supporting documentation, do not contain related information and may be misinterpreted by other data reviewers.

Quality control data is within laboratory defined or method specified acceptance limits except if noted.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Katherine Griffin

Project Manager

RTI Laboratories - Workorder Sample Summary

WO#: 1606937

Date Reported: 8/25/2016
Revision v1

Client: AECOM Design and Consulting Services (DCS)

Project: Camp Hero

Lab Sample ID	Client Sample ID	Tag No	Date Collected	Date Received	Matrix
1606937-001A	107-WP01-01		6/19/2016 9:10 AM	6/28/2016 9:38 AM	Wipe

RTI Laboratories - Case Narrative

WO#: 1606937

Date Reported: 8/25/2016
Revision v1

Client: AECOM Design and Consulting Services (DCS)

Project: Camp Hero

Concentrations reported with a J flag in the Qual field are values below the reporting limit (RL) but greater than the established method detection limit (MDL). There is greater uncertainty associated with these results and data should be considered as estimated. These analytes are not routinely reviewed nor narrated below as to their potential for being laboratory artifacts.

Concentrations reported with an E flag in the Qual field are values that exceed the upper quantification range. There is greater uncertainty associated with these results and data should be considered as estimated.

Any comments or problems with the analytical events associated with this report are noted below.

Sample Analysis:
Samples were analyzed at the RTI Laboratories
Polychlorinated Biphenyls - 8082A
Polychlorinated Biphenyls - SW8082A

Sample 1606937-003A was unable to processed for PCB Analysis via method SW_8082. Client notified and analysis cancelled.

Analytical Comments for Test SW_8082S, Analytical Run No 87680, Batch ID 40484:
Sample 1606937-002A: TCM and DCA recovery exceeds QC control limits, %RPD difference is>40%

Analytical Comments for Test SW_8082W, Analytical Run No 87630, Batch ID 40498:
Sample LCS-40498: Recovery for Aroclor 1016 (62.8%) exceeded control limits - LCSD recovery was within control limits.
Sample LCSD-40498: RPD result was elevated for Aroclor 1016.

Analytical Comments for Test SW_8082W, Analytical Run No 87635, Batch ID 40498:
Sample LCS-40498: Recovery for Aroclor 1016 (66.1%) exceeded control limits - LCSD recovery was within control limits.
Sample LCSD-40498: RPD result was elevated for Aroclor 1016.

RTI Laboratories - Definitions and Acronyms

WO#: 1606937

Date Reported: 8/25/2016
Revision v1

DEFINITIONS:

DF: Dilution factor; the dilution factor applied to the prepared sample.

DL: Detection Limit; The lowest concentration of analyte that can be detected by the method in the applicable matrix.

DUP: Duplicate; aliquots of a sample taken from the same container under laboratory conditions and processed and analyzed independently, used to calculate Precision (%RPD).

LCS: Laboratory Control Sample; prepared by adding a known amount of target analytes to a specified amount of clean matrix and prepared with the batch of samples, used to calculate Accuracy (%REC).

LCSD: A duplicate LCS sample, used to calculate both Accuracy (%REC) and Precision (%RPD)

LOD: Limit of Detection; a laboratory verified concentration that can be detected at three times greater than the noise level. This concentration is equal to or greater than the DL.

LOQ: Limit of Quantitation; The lowest verified limit to which data is quantified without qualifications. Analyte concentrations below the LOQ are reported with a "J" qualifier.

MBLK: Method Blank; a sample of similar matrix that does not contain target analytes or interference that may impact the analytical results and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedure, used to assess and verify that the analytical process is free of contamination.

Mg/Kg or mg/L: Units of part per million (PPM) – milligram per Kilogram (W/W) or milligram per Liter (W/V).

MS: Matrix Spike; prepared by adding a known amount of target analytes to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available, used to calculate Accuracy (%REC)

MSD: A duplicate MS sample, used to calculate both Accuracy (%REC) and Precision (%RPD)

% REC: Percent Recovery of a known spike (SPK); a measure of accuracy expressed as a percentage of a measured (recovered) concentration compared to the known concentration (SPK) added to the sample. This is compared to the Low Limit and High Limit.

% RPD: Relative Percent Difference; a measure of precision expressed as a percentage of the difference between two duplicates relative to the average concentration. This is compared to the RPD Limit.

Qual: Qualifier that applies to the analyte reported

SPK: Spike; used in the QC section for both SPK Value and SPK Ref Val

Ug/Kg or ug/L: Units of part per billion (PPB) – microgram per Kilogram (W/W) or microgram per Liter (W/V).

QUALIFIERS:

*: Reported value exceeds the maximum allowed concentration by regulation or permit.

B: Analyte detected in the associated Method Blank at a concentration greater than 1/2 the LOQ

G: ICB/CCB result is greater than the MDL

H: Holding time for preparation or analysis has been exceeded

J: Estimated result. Greater uncertainty is associated with this result and data reported is estimated.

M: Manual Integration used to determine area response

P: Second column RPD exceeds 40%

Q: % REC exceeded control limits. When applied to sample analytes - denotes an associated LCS recovery that exceeded control limits.

R: % RPD exceeds control limits

T: MBLK result is greater than 1/2 of the LOQ

U: The analyte concentration is less than the DL. The result is reported as less than the LOD

X: Matrix spike recovery for the noted analyte exceeded control limits. Applied to the MS/MSD parent sample.

Y: Percent Difference/Drift in the associated CCV exceeded acceptance criteria.

Z: Percent Difference/Drift in the associated ICV exceeded acceptance criteria.

RE: Camp Hero

Work Order #: 1608800

Dear Devon Chicoine:

There were no problems with the analytical events associated with this report unless noted in the Case Narrative.

This report may only be reproduced in its entirety. Individual pages, reproduced without supporting documentation, do not contain related information and may be misinterpreted by other data reviewers.

Quality control data is within laboratory defined or method specified acceptance limits except if noted.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Katherine Griffin

Project Manager

RTI Laboratories - Workorder Sample Summary

WO#: 1608800

Date Reported: 9/21/2016
Original

Client: AECOM Design and Consulting Services (DCS)

Project: Camp Hero

Lab Sample ID	Client Sample ID	Tag No	Date Collected	Date Received	Matrix

RTI Laboratories - Case Narrative

WO#: 1608800

Date Reported: 9/21/2016
Original

Client: AECOM Design and Consulting Services (DCS)

Project: Camp Hero

Concentrations reported with a J flag in the Qual field are values below the reporting limit (RL) but greater than the established method detection limit (MDL). There is greater uncertainty associated with these results and data should be considered as estimated. These analytes are not routinely reviewed nor narrated below as to their potential for being laboratory artifacts.

Concentrations reported with an E flag in the Qual field are values that exceed the upper quantification range. There is greater uncertainty associated with these results and data should be considered as estimated.

Any comments or problems with the analytical events associated with this report are noted below.

Sample Analysis:
Samples were analyzed at the RTI Laboratories
- Ignitability - SW1010
- Ignitability - SW1030
- Metals, ICP/OES - SW6010C
- Reactivity, Cyanide - SW7.3.3.2
- Reactivity, Sulfide - SW7.3.4.2
- Mercury - SW7470A
- Volatile Organic Compounds - SW8260C
- Semi-Volatile Organic Compounds - SW8270D
- Solid pH Measured in Water at Reported Temperature - SW9045D

Analytical Comments for Test SW_6010A, Analytical Run No 88519, Batch ID 40893:
Sample 1608800-001AMS: Recoveries for Arsenic, Chromium, Lead and Selenium exceeded control limits. Suspected matrix interference for Selenium.
Sample 1608800-001AMSD: Recoveries for Chromium, Lead and Selenium exceeded control limits. Suspected matrix interference for Selenium.

Analytical Comments for Test SW_7.3.3.2, Analytical Run No 88952, Batch ID 41082:
Sample LCS-41082: Recovery for Reactive Cyanide exceeded control limits.
Sample LCSD-41082: Recovery for Reactive Cyanide exceeded control limits.

Analytical Comments for Test SW_7.3.4.2, Analytical Run No 88946, Batch ID 41082:
Sample LCS-41082: Recovery for Reactive Sulfide exceeded control limits.
Sample LCSD-41082: Recovery for Reactive Sulfide exceeded control limits.

Analytical Comments for Test SW_8270A, Analytical Run No 88679, Batch ID 40932:
Sample 1608800-001AMSD: Spike recovery for Pyridine was outside the control limits. RPDs for Hexachlorobutadiene, Hexachloroethane, Nitrobenzene, Pyridine exceeded control limits.

Analytical Comments for Test SW_8270A, Analytical Run No 88679, Batch ID R88679:
Sample CCV S8 090816: Pentachlorophenol, and Pyridine exceeded 20% criteria.

RTI Laboratories - Definitions and Acronyms

WO#: 1608800

Date Reported: 9/21/2016
Original

DEFINITIONS:

DF: Dilution factor; the dilution factor applied to the prepared sample.

DL: Detection Limit; The lowest concentration of analyte that can be detected by the method in the applicable matrix.

DUP: Duplicate; aliquots of a sample taken from the same container under laboratory conditions and processed and analyzed independently, used to calculate Precision (%RPD).

LCS: Laboratory Control Sample; prepared by adding a known amount of target analytes to a specified amount of clean matrix and prepared with the batch of samples, used to calculate Accuracy (%REC).

LCSD: A duplicate LCS sample, used to calculate both Accuracy (%REC) and Precision (%RPD)

LOD: Limit of Detection; a laboratory verified concentration that can be detected at three times greater than the noise level. This concentration is equal to or greater than the DL.

LOQ: Limit of Quantitation; The lowest verified limit to which data is quantified without qualifications. Analyte concentrations below the LOQ are reported with a "J" qualifier.

MBLK: Method Blank; a sample of similar matrix that does not contain target analytes or interference that may impact the analytical results and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedure, used to assess and verify that the analytical process is free of contamination.

Mg/Kg or mg/L: Units of part per million (PPM) – milligram per Kilogram (W/W) or milligram per Liter (W/V).

MS: Matrix Spike; prepared by adding a known amount of target analytes to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available, used to calculate Accuracy (%REC)

MSD: A duplicate MS sample, used to calculate both Accuracy (%REC) and Precision (%RPD)

% REC: Percent Recovery of a known spike (SPK); a measure of accuracy expressed as a percentage of a measured (recovered) concentration compared to the known concentration (SPK) added to the sample. This is compared to the Low Limit and High Limit.

% RPD: Relative Percent Difference; a measure of precision expressed as a percentage of the difference between two duplicates relative to the average concentration. This is compared to the RPD Limit.

Qual: Qualifier that applies to the analyte reported

SPK: Spike; used in the QC section for both SPK Value and SPK Ref Val

Ug/Kg or ug/L: Units of part per billion (PPB) – microgram per Kilogram (W/W) or microgram per Liter (W/V).

QUALIFIERS:

*: Reported value exceeds the maximum allowed concentration by regulation or permit.

B: Analyte detected in the associated Method Blank at a concentration greater than 1/2 the LOQ

G: ICB/CCB result is greater than the MDL

H: Holding time for preparation or analysis has been exceeded

J: Estimated result. Greater uncertainty is associated with this result and data reported is estimated.

M: Manual Integration used to determine area response

P: Second column RPD exceeds 40%

Q: % REC exceeded control limits. When applied to sample analytes - denotes an associated LCS recovery that exceeded control limits.

R: % RPD exceeds control limits

T: MBLK result is greater than 1/2 of the LOQ

U: The analyte concentration is less than the DL. The result is reported as less than the LOD

X: Matrix spike recovery for the noted analyte exceeded control limits. Applied to the MS/MSD parent sample.

Y: Percent Difference/Drift in the associated CCV exceeded acceptance criteria.

Z: Percent Difference/Drift in the associated ICV exceeded acceptance criteria.

Good afternoon,
May I have a hand getting this cooler out. One set of bottles for each below.
Thanks!
Kathy

Hi Kathy,

Can you provide a set of soil and liquid IDW sampling bottleware to Nicole Schulman (address below) as soon as possible? We originally were not going to sample IDW during this phase, but the client has changed their mind and wants it done ASAP. We have some bottleware but not a complete set.

Shipping Address:
Nicole Schulman

Subject: RE: Camp Hero - IDW

Hi Amanda,

I've been put on a long term project but I can probably make it there. There's a chance I might do it during a weekend if I sample it on a Saturday or sunday do you know the hold time? could I keep it cold until I ship on Monday? Do I have all the bottleware that I will need for this? If so do you think that the bottleware is still good or do you think maybe I should get new bottles? Also do you happen to remember the gate code so that I don't have to try and explain to the guard what I'm up too lol

Thanks,
Nicole

Hi Nicole,

Hope you are doing well!

The USACE has decided that we need to sample the liquid and solid IDW at Camp Hero. Are you available to conduct the sampling sometime in the near future?

Thanks,
Amanda

Data Validation Reports

This page intentionally left blank.

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606306		
Date(s) of Collection:	June 7th, 2016		
Number/Type Samples & Analyses:	1 Groundwater sample for PAH, PCB, and Metals		
Senior Data Reviewer:	Naoum Tavantzis AECOM/Baltimore, MD		
Completed:	August 29th, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for the groundwater data included in Sample Delivery Group (SDG) 1606306. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✗ Laboratory method blank data

NA Field rinsate blank data

NA Trip blank data

✗ Laboratory control sample (LCS) recoveries

✓ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✓ Surrogate recoveries

NA Laboratory duplicate results

NA Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR. ADR Discrepancy reports are included in Attachment B.

Laboratory SDG:	1606337		
Date(s) of Collection:	June 8th, 2016		
Number/Type Samples & Analyses:	26 groundwater samples and 1 trip blank for a project-specific list of VOCs, PAHs, Lead, PCBs		
Data Reviewer:	Zachary Neigh AECOM/Baltimore MD		
Completed:	August 29th, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606337. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✗ Laboratory method blank data

NA Field rinsate blank data

✗ Trip blank data

✗ Laboratory control sample (LCS) recoveries

NA Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

NA Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606387		
Date(s) of Collection:	June 9th, 2016		
Number/Type Samples & Analyses:	7 groundwater samples, 1 water sample, and 1 trip blank for a project-specific list of VOCs, SVOCs, PAHs, PCBs, and metals		
Data Reviewer:	Zach Neigh AECOM/Baltimore, MD		
Completed:	August 31, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606387. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENT

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✗ Holding times and sample preservation

✗ Laboratory method blank data

NA Field rinsate blank data

✗ Trip blank data

✗ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

NA Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

Sample WDS-SB24-GW was analyzed twice for SVOCs. The initial run had 2 surrogates that didn't meet the control limits. The lab re-ran the sample but it was extracted outside of the recommended hold time. The initial results were used.

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

ATTACHMENTS

Attachment A: Data Qualifier Summary and ADR Discrepancy Reports

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606422		
Date(s) of Collection:	June 7th, 2016 – June 21st, 2016		
Number/Type Samples & Analyses:	7 ground water and 1 trip blank samples for a project-specific list of VOCs, SVOCs, PCBs, and metals		
Data Reviewer:	Devon Chicoine AECOM/Arlington, VA		
Completed:	August 26, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for ground water data included in Sample Delivery Group (SDG) 1606422. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✗ Holding times and sample preservation

✗ Laboratory method blank data

NA Field rinsate blank data

✗ Trip blank data

✗ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

✓ Laboratory duplicate results

NA Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

Sample WDS-SB21-GW was analyzed twice for SVOCs. The initial run had 3 surrogates that didn't meet the control limits. The lab re-ran the sample but it was extracted outside of hold time. The initial results were used.

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

ATTACHMENTS

Attachment A: Data Qualifier Summary and ADR Discrepancy Reports

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606425		
Date(s) of Collection:	June 10th, 2016		
Number/Type Samples & Analyses:	16 soil samples analyzed for a project-specific list of SVOCs, SVOCs by SIM, and Metals		
Data Reviewer:	Tara Bhat AECOM/Germantown, MD		
Completed:	August 29th, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for the groundwater data included in Sample Delivery Group (SDG) 1606425. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✓ Laboratory method blank data

NA Field rinsate blank data

NA Trip blank data

✗ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

NA Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR and/or by manual data review:

Qualifier	Explanation
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J-	The result is an estimated quantity, but the result may be biased low.
J+	The result is an estimated quantity, but the result may be biased high.
UJ	The result is not detected. The quantitation limit may be inaccurate or imprecise.

Attachment A presents a summary of qualified data and ADR discrepancy reports. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR.

ATTACHMENTS

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606431		
Date(s) of Collection:	June 7th, 2016 – June 21st, 2016		
Number/Type Samples & Analyses:	10 soil samples for a project-specific list of lead		
Data Reviewer:	Devon Chicoine AECOM/Arlington, VA		
Completed:	August 25, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606431. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✓ Laboratory method blank data

NA Field rinsate blank data

NA Trip blank data

✓ Laboratory control sample (LCS) recoveries

NA Matrix spike (MS) and/or matrix spike duplicate (MSD) results

NA Surrogate recoveries

✓ Laboratory duplicate results

✓ Field duplicate results

✓ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR. (no data qualifiers were assigned)

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606465. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✗ Laboratory method blank data

NA Field rinsate blank data

✗ Trip blank data

✗ Laboratory control sample (LCS) recoveries

NA Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

NA Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

Samples FPH-SB01-GW, FPH-SB02-GW, FPH-SB03-GW, FPH-SB04-GW, and FPH-SB04-GW DUP were analyzed by the lab for 8270D SIM and regular 8270D. The final results will be presented in 8270D except for FPH-SB01-GW.

The following table defines the data qualifiers assigned by ADR and/or during manual data review of ADR output:

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606512		
Date(s) of Collection:	June 13th, 2016		
Number/Type Samples & Analyses:	14 soil samples for a project-specific list of SVOCs, PCBs, lead, and metals		
Data Reviewer:	Victoria Kirkpatrick AECOM/Germantown, MD		
Completed:	August 30th, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606512. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✗ Holding times and sample preservation

✗ Laboratory method blank data

NA Field rinsate blank data

NA Trip blank data

✗ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

✓ Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR and/or during manual data review of ADR output:

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

ATTACHMENTS

Attachment A: Data Qualifier Summary and ADR Discrepancy Reports

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606524		
Date(s) of Collection:	June 7th, 2016 – June 21st, 2016		
Number/Type Samples & Analyses:	17 soil samples for a project-specific list of PAHs, SVOCs STAR, PCBs, energetics, metals		
Data Reviewer:	Victoria Kirkpatrick AECOM/Germantown, MD		
Completed:	August 30th, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606524. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✗ Holding times and sample preservation

✗ Laboratory method blank data

NA Field rinsate blank data

NA Trip blank data

✗ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

✓ Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR and/or during manual data review of ADR output:

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

ATTACHMENTS

Attachment A: Data Qualifier Summary and ADR Discrepancy reports

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606580		
Date(s) of Collection:	June 14th, 2016 – June 15th, 2016		
Number/Type Samples & Analyses:	10 groundwater samples and 1 trip blank for a project-specific list of VOCs, PAHs, Lead, PCBs		
Data Reviewer:	Zachary Neigh AECOM/Baltimore MD		
Completed:	August 25th, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606580. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✗ Laboratory method blank data

NA Field rinsate blank data

✗ Trip blank data

✗ Laboratory control sample (LCS) recoveries

NA Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

✓ Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606593		
Date(s) of Collection:	June 14th,2016		
Number/Type Samples & Analyses:	19 soil samples for a project-specific list of SVOCs, PAHs, PCBs, and metals		
Data Reviewer:	Victoria Kirkpatrick AECOM/Germantown, MD		
Completed:	August 31th, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606593. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✗ Holding times and sample preservation

✓ Laboratory method blank data

NA Field rinsate blank data

NA Trip blank data

✗ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

✓ Laboratory duplicate results

✓ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The initial analysis of the LCS demonstrated a slightly high bias for several PAH compounds. The re-analysis demonstrated acceptable results. However, the lab flagged the samples on the original analysis. The affected samples were WDS-SB03-06, WDS-SB07-05, WDS-SB14-11, WDS-SB15-13, WDS-SB16-13, WDS-SB17-13, MP-SB01-04, MP-SB01-04 DUP, H21-SS01-01, H21-SB01-11, H21-SS02-01, H21-SB02-10.

Sample WDS-SB06-05 was analyzed under SVOC SIM as well as regular 8270 for PAHs. The results will be presented in SVOC SIM.

The following table defines the data qualifiers assigned by ADR and/or during manual data review of ADR output:

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports. Preferred

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606601		
Date(s) of Collection:	June 15th, 2016		
Number/Type Samples & Analyses:	8 soil samples for a project-specific list of SVOCs, PAHs, PCBs, and metals		
Data Reviewer:	Zach Neigh AECOM/Baltimore, MD		
Completed:	August 31st, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606601. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Fin al *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✓ Laboratory method blank data

NA Field rinsate blank data

NA Trip blank data

✗ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

✓ Laboratory duplicate results

NA Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

✓ Review of COC documents to verify sample identities

✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.

✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.

✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR and/or during manual data review of the ADR output.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606603		
Date(s) of Collection:	June 7th, 2016 – June 21st, 2016		
Number/Type Samples & Analyses:	8 soil samples for a project-specific list of SVOCs STAR, SVOCs, PCBs, lead, and metals		
Data Reviewer:	Devon Chicoine AECOM/Arlington, VA		
Completed:	August 29, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606603. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✓ Laboratory method blank data

NA Field rinsate blank data

NA Trip blank data

✗ Laboratory control sample (LCS) recoveries

✓ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

✓ Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

✓ Review of COC documents to verify sample identities

✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.

✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.

✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

ATTACHMENTS

Attachment A: Data Qualifier Summary and ADR Discrepancy Reports

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606605		
Date(s) of Collection:	June 15th, 2016		
Number/Type Samples & Analyses:	16 soil samples for a project-specific list of SVOCs by SIM and metals		
Data Reviewer:	Victoria Kirkpatrick AECOM/Germantown, MD		
Completed:	August 26th, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606605. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✗ Laboratory method blank data

NA Field rinsate blank data

NA Trip blank data

✗ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✓ Surrogate recoveries

✓ Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606606		
Date(s) of Collection:	June 15th, 2016		
Number/Type Samples & Analyses:	16 soil samples for a project-specific list of PAHs and metals		
Data Reviewer:	Zach Neigh AECOM/Baltimore, MD		
Completed:	August 31, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606606. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✓ Laboratory method blank data

NA Field rinsate blank data

NA Trip blank data

✓ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

✓ Laboratory duplicate results

✓ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

✓ Review of COC documents to verify sample identities

✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.

✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.

✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606652		
Date(s) of Collection:	June 7th, 2016 – June 21st, 2016		
Number/Type Samples & Analyses:	17 soil samples and 1 trip blank for a project-specific list of VOCs, SVOCs, PAHs, PCBs, and metals		
Data Reviewer:	Zach Neigh AECOM/Baltimore, MD		
Completed:	August 30, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606652. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Fin al *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✗ Laboratory method blank data

NA Field rinsate blank data

✗ Trip blank data

✗ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

✓ Laboratory duplicate results

✓ Field duplicate results

✓ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

Sample 203-SB05-21 was analyzed by both 8260C and 8260C-ME methodologies due to some high concentrations during the 8260C analysis of three analytes; the three analytes are benzene, ethylbenzene, and xylenes (total). The result that are not being used for each method were manually qualified using 'NP' for not preferred.

Samples 203-SB05-05 and H17-SB01-05 for 1-Methylnaphthalene are considered estimated. (exceeded calibration and re-analyses was not performed)

The following table defines the data qualifiers assigned by ADR and/or during manual data review of the ADR output.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

ATTACHMENTS

Attachment A: Data Qualifier Summary and ADR Discrepancy Reports

Project Name and Number: - USACE Project: USACE Project: Camp Hero

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606675		
Date(s) of Collection:	June 17th, 2016 – June 19th, 2016		
Number/Type Samples & Analyses:	11 groundwater samples and 4 trip blanks for a project-specific list of VOCs, SVOCs, PCBs, energetics, and metals		
Data Reviewer:	Zach Neigh AECOM/Baltimore, MD		
Completed:	August 30, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for ground water data included in Sample Delivery Group (SDG) 1606675. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✗ Holding times and sample preservation

✗ Laboratory method blank data

NA Field rinsate blank data

✗ Trip blank data

✗ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

NA Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

✓ Review of COC documents to verify sample identities

✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.

✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.

✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

ATTACHMENTS

Attachment A: Data Qualifier Summary and ADR Discrepancy Reports

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606833		
Date(s) of Collection:	June 7th, 2016 – June 21st, 2016		
Number/Type Samples & Analyses:	10 groundwater samples for a project-specific list of VOCs, SVOCs, PCBs, energetics, and metals		
Data Reviewer:	Devon Chicoine AECOM/Arlington, VA		
Completed:	August 22, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for ground water data included in Sample Delivery Group (SDG) 1606833. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✗ Laboratory method blank data

✓ Field rinsate blank data

✗ Trip blank data

✗ Laboratory control sample (LCS) recoveries

✓ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

✓ Laboratory duplicate results

✓ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

✓ Review of COC documents to verify sample identities

✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.

✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.

✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

ATTACHMENTS

Attachment A: Data Qualifier Summary and ADR Discrepancy Reports

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606859		
Date(s) of Collection:	June 7th, 2016 – June 21st, 2016		
Number/Type Samples & Analyses:	1 wipe and 1 concrete sample for a project-specific list of PCBs		
Data Reviewer:	Devon Chicoine AECOM/Arlington, VA		
Completed:	August 29, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606859. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✓ Laboratory method blank data

NA Field rinsate blank data

NA Trip blank data

✗ Laboratory control sample (LCS) recoveries

NA Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

✓ Laboratory duplicate results

NA Field duplicate results

✓ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J+	The result is an estimated quantity, but the result may be biased high.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606286		
Date(s) of Collection:	June 7th, 2016		
Number/Type Samples & Analyses:	12 soil samples for project-specific list of Polynuclear Hydrocarbons, PCBs, and Metals		
Senior Data Reviewer:	Victoria Kirkpatrick AECOM/Germantown, MD		
Completed:	August 26th, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606286. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016*

Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✗ Laboratory method blank data

NA Field rinsate blank data

NA Trip blank data

✓ Laboratory control sample (LCS) recoveries

✓ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

NA Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR. ADR Discrepancy reports are included in Attachment B.

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606293		
Date(s) of Collection:	June 7th, 2016		
Number/Type Samples & Analyses:	21 soil samples for a project-specific list of VOCs, SVOCs, PAHs, PCBs, and metals		
Data Reviewer:	Victoria Kirkpatrick AECOM/Germantown, MD		
Completed:	August 29th, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606293. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✗ Laboratory method blank data

NA Field rinsate blank data

✗ Trip blank data

✗ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

✓ Laboratory duplicate results

✓ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR and/or during manual data review of ADR output:

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606392		
Date(s) of Collection:	June 7th, 2016 – June 21st, 2016		
Number/Type Samples & Analyses:	20 soil samples and 1 trip blank for a project-specific list of VOCs, SVOCs, PAHs, PCBs, and metals		
Data Reviewer:	Zach Neigh AECOM/Baltimore, MD		
Completed:	August 29th, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606392. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✗ Laboratory method blank data

✓ Field rinsate blank data

✓ Trip blank data

✗ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

✓ Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

✓ Review of COC documents to verify sample identities

✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.

✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.

✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR and/or during manual data review.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

ATTACHMENTS

Attachment A: Data Qualifier Summary and ADR Discrepancy Reports

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606467		
Date(s) of Collection:	June 12th, 2016		
Number/Type Samples & Analyses:	20 soil samples and 1 trip blank for a project-specific list of VOCs, STAR VOCs, SVOCs, PAHs, PCBs, lead, and metals		
Data Reviewer:	Zachary Neigh AECOM/Baltimore MD		
Completed:	August 30, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606467. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✗ Laboratory method blank data

NA Field rinsate blank data

✗ Trip blank data

✗ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

✓ Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

✓ Review of COC documents to verify sample identities

✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.

✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.

✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The initial analysis of the LCS demonstrated a slightly high bias for several PAH compounds. The re-analysis demonstrated acceptable results. However, the lab flagged the samples on the original analysis. The affected samples were H18-SS01-01 (MS/MSD), H18-SS01-01 DUP, H18-SS01-02, H18-SS02-01, and H18-SS02-02.

The following table defines the data qualifiers assigned by ADR and/or during manual data review of the ADR output:

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

ATTACHMENTS

Attachment A: Data Qualifier Summary and ADR Discrepancy Reports

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606506		
Date(s) of Collection:	June 13th, 2016		
Number/Type Samples & Analyses:	12 soil samples for a project-specific list of PAHs, PCBs, and metals		
Data Reviewer:	Victoria Kirkpatrick AECOM/Germantown, MD		
Completed:	August 30th, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606506. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✗ Holding times and sample preservation

✓ Laboratory method blank data

NA Field rinsate blank data

NA Trip blank data

✓ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✓ Surrogate recoveries

✓ Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606525		
Date(s) of Collection:	June 13th, 2016		
Number/Type Samples & Analyses:	18 soil samples and 1 trip blank for a project-specific list of VOCs and STAR VOCs		
Data Reviewer:	Victoria Kirkpatrick AECOM/Germantown, MD		
Completed:	August 31st, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606525. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✗ Laboratory method blank data

NA Field rinsate blank data

✗ Trip blank data

✗ Laboratory control sample (LCS) recoveries

NA Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✓ Surrogate recoveries

✓ Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

ATTACHMENTS

Attachment A: Data Qualifier Summary and ADR Discrepancy reports

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606529		
Date(s) of Collection:	June 14th, 2016		
Number/Type Samples & Analyses:	4 groundwater samples and one trip blank sample for a project-specific list of VOCs and SVOCs		
Senior Data Reviewer:	Victoria Kirkpatrick AECOM/Germantown, MD		
Completed:	August 31st, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606529. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016*

Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✗ Holding times and sample preservation

✗ Laboratory method blank data

NA Field rinsate blank data

✗ Trip blank data

✗ Laboratory control sample (LCS) recoveries

NA Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

NA Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

Sample AST35-SB04-GW was analyzed twice for SVOCs. The initial run had 3 surrogates that exceeded the control limit. The lab re-ran the sample but it was outside hold time. The initial results were used.

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR. ADR Discrepancy reports are included in Attachment B.

ATTACHMENTS

Attachment A: Data Qualifier Summary and ADR Discrepancy Reports

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606585		
Date(s) of Collection:	June 7th, 2016 – June 21st, 2016		
Number/Type Samples & Analyses:	20 soil samples and 1 trip blank for a project-specific list of VOCs, SVOCs, PAHs, PCBs, and metals		
Data Reviewer:	Zach Neigh AECOM/Baltimore, MD		
Completed:	August 26th, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606585. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

- ✓ Holding times and sample preservation
- ✗ Laboratory method blank data
- ✓ Field rinsate blank data
- ✓ Trip blank data
- ✗ Laboratory control sample (LCS) recoveries
- ✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results
- ✓ Surrogate recoveries
- ✓ Laboratory duplicate results
- ✓ Field duplicate results
- ✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

H2-SS02-02 acetone result was over calibration in the low level VOC analyses. The sample was re-run using methanol preserved vials. Results were taken from the low level.

Samples STB-SB03-06, STB-SB04-06DUP, STB-SS05-01, STB-SS06-01, STB-SS07-01, H1-SS01-01, H1-SS01-02, H1-SS02-02, H2-SS01-01, H2-SS01-02, and H2-SS02-01 were initially analyzed twice for the low level VOCs. Responses for internal standards exceeded method specified criteria. Sample re-analyses were performed using the methanol preserved vials.

The following table defines the data qualifiers assigned by ADR and/or during manual data review of the ADR output:

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

ATTACHMENTS

Attachment A: Data Qualifier Summary and ADR Discrepancy Reports

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606588		
Date(s) of Collection:	June 7th, 2016 – June 21st, 2016		
Number/Type Samples & Analyses:	18 soil samples and 1 trip blank for a project-specific list of VOCs		
Data Reviewer:	Tara Bhat AECOM/Arlington, VA		
Completed:	August 30, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606588. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✗ Laboratory method blank data

NA Field rinsate blank data

✗ Trip blank data

✗ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✓ Surrogate recoveries

✓ Laboratory duplicate results

✓ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

ATTACHMENTS

Attachment A: Data Qualifier Summary and ADR Discrepancy reports

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606604		
Date(s) of Collection:	June 7th, 2016 – June 21st, 2016		
Number/Type Samples & Analyses:	7 soil samples for a project-specific list of VOCs, PAHs, PCBs, and metals		
Data Reviewer:	Devon Chicoine AECOM/Arlington, VA		
Completed:	August 29, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606604. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✗ Laboratory method blank data

✓ Field rinsate blank data

✗ Trip blank data

✗ Laboratory control sample (LCS) recoveries

✓ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

✓ Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR and/or during manual data review of the ADR output:

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606936		
Date(s) of Collection:	June 7th, 2016 – June 21st, 2016		
Number/Type Samples & Analyses:	1 groundwater sample for a project-specific list of VOCs, SVOCs, PCBs, and metals		
Data Reviewer:	Naoum Tavantzis AECOM/Baltimore, MD		
Completed:	August 30, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for ground water data included in Sample Delivery Group (SDG) 1606936. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

- ✗ Holding times and sample preservation
- ✗ Laboratory method blank data
- ✓ Field rinsate blank data
- ✓ Trip blank data
- ✗ Laboratory control sample (LCS) recoveries
- ✓ Matrix spike (MS) and/or matrix spike duplicate (MSD) results
- ✓ Surrogate recoveries
- ✓ Laboratory duplicate results
- ✓ Field duplicate results
- ✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR and/or added during manual review of the ADR output:

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J-	The result is an estimated quantity, but the result may be biased low.
R	The result was rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

ATTACHMENTS

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606631		
Date(s) of Collection:	June 15th, 2016 – June 17th, 2016		
Number/Type Samples & Analyses:	14 groundwater samples and 5 trip blanks for a project-specific list of VOCs, SVOCs, PAHs, PCBs, and metals		
Data Reviewer:	Zach Neigh AECOM/Baltimore, MD		
Completed:	August 31st, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for ground water data included in Sample Delivery Group (SDG) 1606631. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✗ Holding times and sample preservation

✗ Laboratory method blank data

NA Field rinsate blank data

✗ Trip blank data

✗ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

NA Laboratory duplicate results

NA Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

✓ Review of COC documents to verify sample identities

✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.

✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.

✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

ATTACHMENTS

Attachment A: Data Qualifier Summary and ADR Discrepancy Reports

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606389		
Date(s) of Collection:	June 9th, 2016		
Number/Type Samples & Analyses:	18 soil samples for a project-specific list of SVOCs by SIM and Metals		
Senior Data Reviewer:	Victoria Kirkpatrick AECOM/Germantown, MD		
Completed:	August 26th, 2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606389. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✗ Holding times and sample preservation

✓ Laboratory method blank data

NA Field rinsate blank data

NA Trip blank data

✗ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✓ Surrogate recoveries

NA Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

✗ Review of COC documents to verify sample identities

✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.

✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.

✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

ATTACHMENTS

Attachment A: Data Qualifier Summary and ADR Discrepancy Reports

Site/Project Name:	Surface Soil, Sub-Surface Soil and Groundwater Temporary Well Sampling, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	RTI Laboratories, Inc. – Livonia, MI.		
Laboratory SDG:	1606430		
Date(s) of Collection:	June 12th, 2016		
Number/Type Samples & Analyses:	18 soil samples for project-specific list of VOC STAR Fuel and SVOC SIM STAR Fuel		
Senior Data Reviewer:	Victoria Kirkpatrick AECOM/Germantown, MD		
Completed:	August 26th,2016		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for surface soil, sub-surface soil data included in Sample Delivery Group (SDG) 1606430. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2016 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2016.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✓ Laboratory method blank data

NA Field rinsate blank data

NA Trip blank data

✗ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✗ Surrogate recoveries

NA Laboratory duplicate results

✗ Field duplicate results

✗ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

- ✓ Review of COC documents to verify sample identities
- ✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.
- ✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.
- ✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J-	The result is an estimated quantity, but the result may be biased low.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
U	The result has been evaluated to be undetected at the reporting limit or at the reported concentration; result is considered to be a false positive.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR. ADR Discrepancy reports are included in Attachment B.

SUBCONTRACTORS:	SITE DELIVERIES (indicate size, type, and condition):

WORKED PERFORMED BY AECOM

Geophysics - set up GPS base station for calibration. Reviewed geophysical survey sites and conducted initial sweep of each site with schonstead magnetometer. Flagged the vegetated areas of each geophysical site that requires vegetation removal. Swept with magnetometer and visually inspected AGC Sites 1, 2 and 3.

Protected Plant Site Survey - Surveyed and flagged species at Bldg 2010, H-14, H-21, Tank GH-9, H-19, H-20, and H-22.

AECOM performed site survey for suspected well pump tank F shown on historic plans but could not find a well or well house. Debris and a brick cesspool manhole was identified in the area of the suspected well and potential UST. However the area appeared to be historically graded, disturbed and a overgrown with thick vegetation.

AECOM performed additional site survey for suspected open pits at H-21 described in the Cashin 1995 Report but could not locate such site features. Manholes for the site wide septic sytem were found but no open pits. Additional field review is planned with USACE on-site staff tomorrow.

WORK COMPLETED BY AECOM SUBCONTRACTORS

- None

SAMPLING PERFORMED:

- None

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone recors, and/or logbooks for details)

Based on the heavy presence of protected plant species at the suspected UST G (remote well house), the use of a Shonstedt hand-held magnetometer was initially proposed, rather than EM-61 methods, to reduce vegetation removal and potential protected plant species damage. In addition, like-construction at other well houses suggest that if a UST were present for the well pump, it would typically be small and near the ground surface - therefore readily detected with a magnetometer.

WORKED PERFORMED BY AECOM

Protected Plant Site Survey-Surveyed and flagged species at H-5, H-16, chlorine contact chamber of sanitary system, and Bunker 216 (Bunker 216 required 3.5 hours).

Geophysics-set up GPS base station. Completed geophysics at Building 22, Building 2, and Building 3001, scouted proposed sites for Wednesday and completed base station diagnostics.

AECOM performed additional site survey for suspected open pits at H-21 described in the Cashin 1995 Report with USACE and verified location of the referenced pits. AECOM performed site survey for the septic tank near the chlorine chmaber of sanitary system but could not locate tank. Manholes for the site wide septic sytem near the tank were found. Additional field review is location using a hand held GPS unit is planned. AECOM and USACE performed site survey of H-5. The construction debris site was identified and the site location to be updated on site maps.

WORK COMPLETED BY AECOM SUBCONTRACTORS

Vegetation Clearance-Brush removal contractor (CGI) under AECOM oversight cleared brush for drill rig access at Building 112, 113, a portion of background BG-01, Building 2, a portion of H-13 (fuel pump house), and H-13.

SUBCONTRACTORS:	SITE DELIVERIES (indicate size, type, and condition):
CGE	

WORKED PERFORMED BY AECOM

Protected Plant Site Survey-Surveyed and flagged species at Background locations BG-02, BG-03, and BG-04, and surveyed areas of additional brush clearing required at the fuel pump building. Steve Glenn (AECOM Botanist and Mike Penko (USACE Ecologist) have telephoned and emailed NYS Heritage Program to discuss handling of numerous southern arrowwood seedlings and saplings that exist throughout Camp Hero and in some AOC areas. with NYS Heritage Program.

Geophysics-set up GPS base station. Completed geophysics at Plotting Room 112, Fuel Pump House, and additional coverage at Building 2.

AECOM and the USACE project team conducted site survey for protected plants, suitability, and inspected soil types at Background locations BG-02, BG-03, and BG-04. AECOM and the USACE project team conducted site survey of H-3 (Drum location). AECOM and the USACE project team met with Superintendent Dess and reviewed project activities, project team visited recently collapsed Building 10 (post office) and inspected materials inside. The project team drove to Bunker 113 and discussed building access for Bunker 113 and general Camp Hero site access was reviewed for RI Phase 1 drilling activities. Mr. Dess indicated where AECOM/USACE could break into cinder block at Building 113 for entry. Mr. Dess indicated the cinder block at this location could be broken with a sludge hammer. The NYS Parks service could repair the access in wall, possibly installing a steel locking door at that time. Mr. Dess showed the project team the available building at the west gate of Camp Hero which could be utilized for sample preparation. The west gate of the facility could also be used for ingress and egress (utilizing code 6767 for ingress to the park through gate).

WORK COMPLETED BY AECOM SUBCONTRACTORS

Vegetation Clearance-Brush removal contractor (CGI) under AECOM oversight cleared brush for drill rig access at H-14 (coal storage area), at Former Building 34 next to motor pool, Plotting room 113, and additional area for distribution pipe mapping behind the fuel pump house.

SAMPLING PERFORMED:

DR No. 03		**WRITTEN BY**: Brendan McGuinness	**PROJECT NUMBER**: 60443903

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

The concrete square secondary retention structure at H-13 (former 200,000 gallon fuel tank) near fuel pump house still has 2-3 feet of standing water. The situation will be monitored to see if water recedes but AECOM discussed the potential that borings scheduled within the former containment structure may need to relocated to immediately outside of the structure due to standing water.

SUBCONTRACTORS:	**SITE DELIVERIES (indicate size, type, and condition):**
New England Geotech	1 Call-a-head Porta-John - delivered on Friday 6/3/2016
	1 AB Richards Storage Container, 20 ft - delivered Friday 6/3/2016
	(No DR completed on Friday 6/6/2016 because no other work completed on site. Nicole Schulman was on site
	to receive deliveries)

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0700 and received UXO Awareness Training as part of the Morning Tailgate Health and Safety Meeting. The team reviewed the Work Plan and received a site tour, as all but one of the team had not yet visited the site. The team then organized bottleware, inventoried equipment, and began flagging drilling locations (were able to flag about 1/4 of the boring/sampling locations). Locations H-18, H-7, and H-8 could not be identified by the team, including the USACE team members that were on site. The Tailgate Health and Safety meeting and UXO Awareness training was provided to New England Geotech team members when they arrived on site, and the team assisted them in staging their equipment.

Note that New York 811 - Dig Safe contractors had not completed utility mark-outs by Monday 6/6/2016. Dig Safe tickets were placed on Wednesday 5/25/16, 8 days in advance of the required 2-day notice. Mark-out was originally guaranteed by 0700 on Monday 6/6/2016.On 6/3/16 at14:36 EDT, participating facility owners responded to the Ticket Check with a 48-hour delay notice (indicating mark-outs would not be completed until possibly 0700 EDT 6/8/2016). AECOM called the responsible contractor, indicating the request was urgent, and was told mark-out would be completed on Monday 6/6/2016. However, no utility mark-out contractor was on site Monday 6/6/2016. Therefore, no drilling could be performed on 6/6/2016.

WORK COMPLETED BY AECOM SUBCONTRACTORS

New England Geotech arrived on-site around 12 PM. The team staged their equipment and drums at the Motor Pool, and assembled decontamination pads.
Because New York 811 - Dig Safe contractors had not completed utility mark-outs, no drilling could be performed on 6/6/2016.

SAMPLING PERFORMED:

Sampling was completed at AOC H-9 per the RI WP.

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

- None

REQUEST FOR INFORMATION (RFI)

WORK AND SAMPLING PERFORMED BY AECOM

The AECOM team arrived on site at 0700 and completed the Morning Tailgate Health and Safety Meeting. The team reviewed the health and safety procedures with all on-site team members and task hazards associated with scheduled field work for the day.

UTILITY CLEARANCE

The New York 811- Dig Safe contractor for National Grid, Long Island Power, and Suffolk County Water arrived on-site around 1000 to complete utility mark-outs. Mark-out was overseen by A. Martin (Site Supervisor) and was completed around 1400. Upon mark-out completion, Ms. Martin submitted AECOM Utility Clearance Checklists to the Mark MacEwan (AECOM Project Manager) for approval, prior to beginning any intrusive activities.

SITE SURVEY AND FLAGGING OF BORING LOCATIONS

The AECOM team flagged boring locations at AOCs in the morning, while awaiting arrival of the utility clearance contractor. Site survey by the project team was unable to locate debris noted by previous Cashin Report at AOC H-7, H-8, and H-18 on 6/6/2016. Further attempts were made, with a shondstadt survey of each area. H-18 was located but the Shondstadt survey uncovered no results for H-7 or H-8. No further investigation will be completed at these two AOCs.

SOIL SAMPLING

Surface and near-surface soil samples were collected via hand-auger at H-3 and H-22. Once signed utility clearance checklists were received from the AECOM Project Manager, geoprobe borings (and associated soil sampling) were completed at AOCs H-11 (SB01, SB02), H-12 (SB01), and WDS (SB21 through SB27).

GROUNDWATER SAMPLING

Temporary wells were set in the borings at AOCs H-11, H-12, and WDS. One groundwater sample was obtained from H11-SB02 for analysis of PAHs and metals. Due to slow groundwater recharge to temporary wells, sufficient sample volume was not available to complete the scheduled groundwater analysis. The temporary wells were covered with plastic and scheduled for further groundwater sampling the following day.

UXO ANOMALY AVOIDANCE

UXO Anomaly avoidance was performed at the following AOCs. All areas were cleared.

Background 01	*H-12*
Background 04	*H-18*
Building 2010	*Suspected Tank B*
H-11	*WDS (SB20 through SB27)*

SAMPLE MANAGEMENT AND SHIPMENT

Soil and groundwater samples collected were held on ice overnight for next-day quality control check and shipment.

WORK COMPLETED BY AECOM SUBCONTRACTORS

New England Geotech completed borings and set temporary wells at AOC H-11 (SB01 and SB02), H-12 (SB01), and WDS (SB21 through SB27). Additionally, NE Geotech assisted with hand-augering samples at H-3 and H-22.

Contractor Daily Reports

DATE: 6/7/2016 Tuesday

DR No. 08		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

Site survey by the project team was unable to locate debris noted by previous Cashin Report at AOC H-7, H-8, and H-18. The USACE team project manager, Megan Cullen, directed AECOM to conduct magnetometer and visual sweep of these areas. If the debris can not be located with the magnetometer or visually, then no further investigation will be conducted.

WORK AND SAMPLING PERFORMED BY AECOM

The AECOM team arrived on site at 0700 and completed the Morning Tailgate Health and Safety Meeting. The team reviewed the health and safety procedures with all on-site team members and task hazards associated with scheduled field work for the day.

Geoprobe borings were completed at the following AOCs.

Former Building 2010 (UST 30). Two soil borings were advanced (SB01 and SB02):

- 2010-SB01: four soil samples were collected (0 - 4, 4 - 5, 5 - 6, 6 - 7 ft bgs) for lead analysis only. One MS/MSD sample was collected at 2010-SB02-04. A temporary well was set at this location because there was no water. PJ Mion (USACE Geologist) agreed with this assessment.
- 2010-SB02: four soil samples were collected (0 - 4, 4 - 5, 5 - 6, 6 - 7 ft bgs) for lead analysis only. Two duplicate samples were collected at at 2010-SB02-04 and 2010-SB02-05. A temporary well was set at this location.

Site-Wide Waste Disposal System (WDS). One soil boring was completed (SB20).

- WDS-SB20. One soil sample was collected from 5 - 6 ft bgs for analysis of VOCs, SVOCs/PAHs, PCBs, and metals.

Suspected Tank B (STB). Four borings were completed at STB (SB01 through SB04). One subsurface soil sample was collected from each soil boring. at the water table. Three additional surface soil samples were collected via hang-auger (SS05 through SS07). Samples were collected for analysis of NYSDEC STARs fuel oil list VOCs and SVOCs.

Groundwater Sampling was completed at the following AOCs.

H-11. Groundwater sampling was completed at the temporary well H11-SB01 for analysis of PAHs and metals.

Site-Wide Waste Disposal System (WDS). Groundwater sampling was completed at temporary wells set in borings WDS-SB22, WDS-SB25, and WDS-SB26 for analysis of VOCs, SVOCs/PAHs, PCBs, and metals. Duplicate samples were collected at WDS-SBB22 and WDS-SB26. The field team origionally attempted to sample WDS-SB27 on Tuesday 6/7/2016, but groundwater recharge was not sufficent to collect the sample volume. The field team decided to leave the well overnight to recharge (per discussion with USACE); however, on Wednesday 6/8/16, the well had still not sufficiently recharged to collect sufficent sample volume. Therefore, only VOCs, PAHs and metals samples were collected at WDS-SB27. Full analysis was obtained from adjacent wells WDS-SB25 and WDS-SB26.

Sample Management and Shipment

Soil and groundwater samples collected on Wednesday 6/8/2016 were checked for Quality Control, recorded on Chain of Custody records, and packed for shipment. Six coolers were delivered to FedEx in East Hampton, NY, and shipped overnight to RTI Labortories (Livonia, MI). Chain of Custody records were e-mailed to the project chemist (Devon Chicoine) and the RTI Laboratories Project Manager (Kathy Griffin) in the evening for shipment tracking.

Other Activities

Test pits were conducted at Suspected Tank C. Miscellaneous building debris was uncovered. No evidence of a Tank was identified. Pictures of test pits and debris have been uploaded to the project sharepoint site.

Waste oil cans and containers inside Building 10 were inspected by the AECOM UXO technician and USACE project team. No UXO was identified inside the building. Pictures of waste cans have been uploaded to the project sharepoint site.

The AECOM team held an evening meeting to review the site plans, field progress, and discuss concerns that USACE had brought up over the course of the field work. Specific items such as review of AOC sampling approach prior to field work, decontamination, and control of the pace of sampling by the drilling teams, and field notation were included in the review.

Contractor Daily Reports

DATE: 6/8/2016 Wednesday

DR No. 9		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

WORK COMPLETED BY AECOM SUBCONTRACTORS

New England Geoprobe completed borings and set temporary wells at AOCs former Building 2010 (SB01 and SB02). Temporary wells were abandoned at WDS-SB25, WDS-SB26, and H11-SB02.

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

Further attempts to collect sufficient groundwater sample for all the proposed analysis at temporary well location WDS-SB27 had was discontinued due to inadequate recharge after 48 hours and complete groundwater analyses were not collected. Building 2010 lead analysis of soil at former UST- One of two temporary wells was not installed due to a steep grade next to building. Because residual petroleum was noted in soil at the suspected tank B site, four subsurface soil samples and three surface soil samples were obtained. No tank was identified through test pits and hand held magnetometer. No tank or impacted soil was observed at suspected tank C, and no further sampling was conducted as discussed with the USACE project team.

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0700 and completed the Morning Tailgate Health and Safety Meeting. The team reviewed the health and safety procedures with all on-site team members and task hazards associated with scheduled field work for the day.

Soil Sampling

Geoprobe borings were completed and soil samples were collected at the following AOCs.

Background Loaction 01. Borings SB01 through SB04 (surface soil and subsurface soil) and SS05 through SS08 (surface soil only).

Per RI WP, no temporary wells were set in Background location borings because no groundwater will be collected in Phase 1.

H-17. Borings SB01 through SB03, surface soil samples were collected. No groundwater was encountered - sandy lithology caused borholes to collapse after removing rod; therefore, boreholes could only be advanced to approximately 20 ft bgs.

AECOM Geologist recommends returning with steel casing to advance borings to 35 ft bgs, and use DPT inside casing to obtain groundwater.

Groundwater Sampling

Temporary wells were reinstalled at H-12 (SB01), WDS-SB03, and WDS-SB24 to 15 ft bgs (5 ft deeper than original boring) with a 10-foot screen, in order to obtain sufficient groundwater to fill sample bottleware. All reinstalled wells had much greater recharge than the orginial temporary wells.

After reinstallation of temporary wells, groundwater samples were collected at H12-SB01 (plus MS/MSD), WDS-SB23 (plus duplicate), and WDS-SB24.

Additionally, PVC plugs were purchased to provide well caps for temporary wells.

UXO Anomaly Avoidance

UXO Anomaly Avoidance was performed at the following AOCs. All areas were cleared.

AST-35	*H-2*	*Fuel Pump House and Distribution Line*
Building 201	*H-4*	*WDS-SB10*
Building 203	*H-6*	*WDS-SB12*
Building 34	*H-14*	*WDS-SB13*
	H-17	*WDS-SB19*

Site Survey

The fuel pump house distribution line was further traced with a hand-held magnetometer. Hand digging along the distribution line from the pumphouse showed that the distribution line had been cut and removed after approximately 6-feet from the fuel house (see photograph below). Soil excavated from around the existing fuel line did not indicate noticable staining or petroeum odor.

Vegetation Removal

AECOM directed vegetation clearing of AOCs at background sampling locations.

Flagging/Designation of Sample Locations

Brendan McGuinness (Technical Lead) flagged sample locations at AOCs H-2, H-4, H-5, H-6, H-14, H-15, H-21, H-35, and the fuel pump house, Former Buidling 34, and multiple locations of the site wide sanitary system.

Sample Management and Shipment

Soil and groundwater samples collected on Wednesday 6/8/2016 we Quality Control checked, recorded on Chain of Custody records, and packed for shipment.

Seven coolers were delivered to FedEx in East Hampton, NY, and shipped overnight to RTI Labortories (Livonia, MI). Chain of Custody records were e-mailed to the project chemist (Devon Chicoine) and the RTI Laboratories Project Manager (Kathy Griffin) in the evening for shipment tracking.

Former Camp Hero Remedial Investigation
Montauk, New York

Contractor Daily Reports

DATE: 6/9/2016 Thursday

DR No. 10		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

WORK COMPLETED BY AECOM SUBCONTRACTORS

New England Geotech

New England Geotech completed borings and set temporary wells at Background 01 (SB01 through SB04) and AOC H-17 (SB01 through SB03). Additionally, Keith Precious purchased PVC caps as well covers. 'NE Geotech abandoned borings H12-SB01, WDS-SB23, and WDS-SB24.

Clean Globe Environment

CGE completed vegetation removal activities at Background Sampling locations.

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

H-12: Due to the slow recharge of groundwater to temporary wells installed at H-12, two wells were redrilled and installed due to concerns of overnight rain infiltration through fill material at these locations which were screened within fill material.

FPH: After the Fuel Pump House distribution line was determined to be cut approximately 6 ft from the pump house, further borings which were scheduled as part of Phase 1 along the fuel distribution line area which was removed were suspended pending the results of initial borings near the fuel pump house.

REQUEST FOR INFORMATION (RFI)

None

TRANSMITTALS / SUBMITTALS

None

AIR MONITORING COMMENTS:

Continuous air monitoring was completed downwind of the geoprobe boring, in accordance with the modified generic NYSDOH CAMP (see RI WP Appendix B). No exceedances were observed.

SAFETY OBSERVATIONS/VIOLATIONS/COMMENTS

None

SITE OBSERVATIONS

New England Geotech needs to get an additional 20 ft of steel casing in order to complete borings to groundwater at location H-17. Also, NE Geotech needs to change decontamination water more often - muddy water was noticed by AECOM team members.

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0700 and completed the Morning Tailgate Health and Safety Meeting. The team reviewed the health and safety procedures with all on-site team members and task hazards associated with scheduled field work for the day.

Soil Sampling

Geoprobe borings were completed and soil samples were collected at the following AOCs.

Background Location 02. Borings SB01 through SB04 (surface soil and subsurface soil) and SS05 through SS08 (surface soil only). Surface and subsurface soil samples were collected for analysis of PAHs and metals. No temporary wells were set in Background location borings because background groundwater samples will not be collected in Phase 1, per the RI WP.

Background Location 03. Borings SB01 through SB04 (surface soil and subsurface soil) and SS05 through SS07 (surface soil only). Surface and subsurface soil samples were collected for analysis of PAHs and metals. No temporary wells were set in Background location borings because background groundwater samples will not be collected in Phase 1, per the RI WP.

Building F100C (UST 34). Borings SB01 and SB02 were completed. Four soil samples were collected per boring. Additional QC (DUP and MS/MSD) samples were collected. Temporary wells were installed in the borings; the team will return to collect groundwater samples at a later date.

Groundwater Sampling

Groundwater samples were collected at AOC Suspected Tank B locations STB-SB01 (upgradient) and STB-SB03 (downgradient) for analysis of the NYSDEC STARS List for Fuel Oil VOCs and SVOCs. An MS/MSD sample was collected at STB-SB01. *Note that samples were only collected at two of the four temporary wells at AOC STB, a deviation from the RI WP because no tank was found to be in place, per discussion with Brendan McGuinness and PJ Mion on 6/8/2016. (See DR from 6/8/2016 for details).*

UXO Anomaly Avoidance

UXO Anomaly Avoidance was performed at the following AOCs. All areas were cleared.

BG02	*H-21*	*F100C*
BG03	*EFO*	*WDS-SB01*
P113	*MP*	*WDS-SB02*
H-15	*H-16*	*WDS-SB03*

Vegetation Removal

AECOM directed vegetation clearing of AOCs FPH, H-16, H-15, WDS (SB01 to SB03), and Building 203.

Flagging/Designation of Sample Locations

AECOM flagged sample locations at AOCs Plotting Room 113 and H-22. The team attempted (again) to locate AOC H-8 (identified in the Cashin Report) and could not locate it after over an hour of searching.

Sample Management and Shipment

Soil and groundwater samples collected on Thursday 6/9/2016 we Quality Control checked, recorded on Chain of Custody records, and packed for shipment. Eight coolers were shipped overnight via FedEx for Saturday delivery to RTI Labortories (Livonia, MI). Chain of Custody records were e-mailed to the project chemist (Devon Chicoine) and the RTI Laboratories Project Manager (Kathy Griffin) in the evening for shipment tracking.

Site Management

AECOM developed a Field Tasks Tracking Sheet, organized by AOC, to better manage which tasks have and have not been completed. The tracking sheet will be updated daily and attached to the Daily Report.

United States Army Corps of Engineers
Former Camp Hero Remedial Investigation
Montauk, New York

Contractor Daily Reports

DATE: 6/10/2016 Friday

DR No. 11		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

WORK COMPLETED BY AECOM SUBCONTRACTORS

New England Geotech

New England Geotech completed borings at locations Background 02 and Background 03 (SB01 through SB04). No temporary wells were set in background locations. NEG completed borings and installed temporary wells at AOC Building F100C (SB01 and SB02). Additionally, NEG abandoned borings WDS-SB22 and WDS-SB27.

Clean Globe Environment

CGE completed vegetation removal activities at AOCs FPH, H-16, H-15, WDS (SB01 to SB03), and Building 203.

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

The AECOM Project Manager (Mark MacEwan) and Site Supervisor (Amanda Martin) discussed the necessity of installing the four piezometers in the vicinity of AOCs Fuel Pump Houst, AST-35, Building 201, and former Building 203. The purpose of these piezometers was to gauge water levels only; however, temporary wells are being installed in the same vicinity as the piezometers which will be sufficient for determining groundwater elvetations. Therefore, the piezometers will not be installed.

Additionally, because groundwater elevation data cannot be determined without surveying the temporary wells, it was decided that all temporary wells should be left in place (not abandoned) during Phase 1 and be surveyed after the sampling event so that groundwater elevations throughout Camp Hero State Park could be determined. This information will be essential in deciding the placement of permanent monitoring wells, should that be necessary, during the Phase 2 field field operations.

REQUEST FOR INFORMATION (RFI)

None

TRANSMITTALS / SUBMITTALS

None

AIR MONITORING COMMENTS:

Continuous air monitoring was completed downwind of the geoprobe boring, in accordance with the modified generic NYSDOH CAMP (see RI WP Appendix B). No exceedances were observed.

SAFETY OBSERVATIONS/VIOLATIONS/COMMENTS

The team noted that the grass near Buildings 107, 201, and former 203 was very high and many team members had ticks crawling on their clothing after entering the area to locate nearby soil boring locations. As such, a request was made to Tom Dess (State Park Superintendent) to mow the lawn in the area, if possible. Mr. Dess indicated that the park management team intended to mow the area in the near future, but it was a low priority compared to other areas of the park. The area may or may not be mowed prior to AECOM working in the area, and AECOM may need to consider vegetation clearance (mowing the grass) in the area. The CGE vegetation removal crew did not have a lawn mower as part of their equipment; thus, mowing the grass in the area could not be completed on 6/10/16.

SITE OBSERVATIONS

AECOM attempted to locate H-8 for the third time this week (with the third group of people). Over eight team members have spent 8+ hours searching for H-8 to no avail. No further attempts will be made to locate H-8 and no samples will be collected associated with that AOC.

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0700 and completed the Morning Tailgate Health and Safety Meeting. The team reviewed the health and safety procedures with all on-site team members and task hazards associated with scheduled field work for the day.

Soil Sampling

Geoprobe borings were completed and soil samples were collected at the following AOCs.

AST35. Four borings (FPH-SB01 through FPH-SB04) were completed. Soil samples were collected for analysis of the NYSDEC STARs List for Fuel Oil VOCs and SVOCs. Temporary wells were installed in the borings; the team will return to collect groundwater samples at a later date.

Fuel Pump House and Distribution Line (FPH). Four borings (FPH-SB01 through FPH-SB04) were completed. Soil samples were collected for analysis of the NYSDEC STARs List for Fuel Oil VOCs and SVOCs. Petroleum odor was noted at FPH-SB04 throughout the depth of the boring. Maximum PID reading was 203 PPM at 9 to 10 ft bgs. Temporary wells were installed in the borings; the team will return to collect groundwater samples at a later date.

H-6. Three borings were completed (H6-SB01 through H6-SB03). Soil samples were collected for analysis of PCBs and lead. Temporary wells were installed in the borings; the team will return to collect groundwater samples at a later date.

H-4. Three borings were completed (H4-SB01 through H4-SB03). Soil samples were collected for analysis of PCBs and lead. Temporary wells were installed in the borings; the team will return to collect groundwater samples at a later date.

Waste Disposal System (WDS) - Site Wide. One boring was completed (WDS-SB10). Soil samples were collected for analysis of VOCs, SVOCs, PCBs, and metals. A temporary wells was installed in the boring; the team will return to collect a groundwater sample at a later date.

Plotting Room 113 (P113). Three borings were completed (P113-SB01 through P113-SB03). Soil samples were collected for the NYSDEC STARS List for Fuel Oil and Gasoline VOCs, SVOCs, and lead. Temporary wells were installed in the borings; the team will return to collect groundwater samples at a later date.

QA/QC (MS/MSD and Duplicate) samples were collected at various AOCs to achieve a rate of 10% duplicates and 20% MS/MSD per analysis site-wide.

Note that depth to groundwater was very shallow (as shallow as 1 ft bgs) at FPH, AST35, P113, and H-6. Therefore, surface only one soil sample (0 - 1 ft bgs) was collected at some borings.

Groundwater Sampling

Groundwater samples were collected at the following AOCs.

Building F100C (UST 34). Two groundwater samples (from F100C-SB01 and F100C-SB02) were collected for analysis of lead.

Building 2010 (UST 30). One groundwater sample (from F100C-SB02) was collected for analysis of lead.

Waste Disposal System (WDS) - Site Wide. Two groundwater samples were collected from WDS-SB20 and WDS-SB21 for analysis of VOCs, SVOCs, PCBs, and metals. Sampling at WDS-SB20 was incomplete due to insufficient recharge in the well; the team will allow the well to recharge overnight and return the following morning to fill the remainder of the bottlware.

QA/QC (MS/MSD and Duplicate) samples were collected at various AOCs to achieve a rate of 10% duplicates and 20% MS/MSD per analysis site-wide.

UXO Anomaly Avoidance

No UXO Anomaly Avoidance was performed on 6/12/2016, as all areas where drilling occurred had been pre-cleared by the UXO Tech the previous week. However, the UXO Tech was present as an added safety precaution during drilling at AOC H-4 due to the presence of surface and potential subsurface debris. No debris was encountered in the borings.

Flagging/Designation of Sample Locations

AECOM flagged sample locations at AOCs WDS (SB14 through SB17).

Sample Management and Shipment

Soil and groundwater samples collected on Friday 6/10/16 and Sunday 6/12/2016 weew Quality Control-checked and recorded on Chain of Custody records.

No coolers were shipped (FedEx closed on Sundays) but the coolers were prepared for packing and shipping on Monday 6/13/16.

Contractor Daily Reports

DATE: 6/12/2016 Sunday

DR No. 12		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

WORK COMPLETED BY AECOM SUBCONTRACTORS

New England Geotech

New England Geotech completed borings at AOCs AST 35 (SB01 through SB04), FPH (SB01 through SB04), H-6 (SB01 through SB03), H-4 (SB01 through SB03), WDS (SB10), and Plotting Room 113 (SB01 through SB03). Additionally, NEG "shallow" soil borings at H-18 (SS01 through SS02) for the collection of surface and near-surface samples.

Clean Globe Environment

John Hudson (CGE) assisted Nicole Schulman (AECOM) with soil sampling and logging at AOCs FPH, H-6, H-4, and P113. Additionaly, he assisted with sample QC and cooler packing.

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

None

REQUEST FOR INFORMATION (RFI)

None

TRANSMITTALS / SUBMITTALS

None

AIR MONITORING COMMENTS:

Continuous air monitoring was completed downwind of the geoprobe boring, in accordance with the modified generic NYSDOH CAMP (see RI WP Appendix B).
No exceedances were observed.

SAFETY OBSERVATIONS/VIOLATIONS/COMMENTS

Poison ivy was noted to be prevalent at AOCs FPH, AST35, H-6, and P113. The team used caution to avoid the plants and discussed procedure for poison ivy treatment in case of exposure.

SITE OBSERVATIONS

None

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0700 and completed the Morning Tailgate Health and Safety Meeting. The team reviewed the health and safety procedures with all on-site team members and task hazards associated with scheduled field work for the day. John Schroeder arrived on-site for the first day and received UXO Anomaly Awareness Training and revewied all applicable AHAs in the APP.

Soil Sampling

Geoprobe borings were completed and soil samples were collected at the following AOCs.

Motor Pool. Two borings (MP-SB02 and -SB03) were completed. Soil samples were collected for analysis of the NYSDEC STARs List for Fuel Oil VOCs and SVOCs, energetics, and PCBs. Temporary wells were installed in the borings; the team will return to collect groundwater samples at a later date.

Engineering Field Office (EFO). One boring (EFO-SB01) was completed. Soil samples were collected for analysis of energetics. A temporary well was installed in the borings the team will return to collect the groundwater sample at a later date.

H-5. Four co-located sets of surface soil and near-surface soil samples were collected (H5-SS01 through H5-SS04). Soil samples at H5-SS01 and -SS02 were collected for analysis of VOCs, SVOCs, PCBs, and metals. Soil samples at H5-SS03 and -SS04 were collected for analysis of PCBs and lead.

H-14. Three borings were completed (H14-SB01 through H14-SB03). Soil samples were collected for analysis of PAHs and metals. Water was not encountered in H14-SB01; the team advanced the boring to 25 ft bgs (per the RI WP). The team will check to see if water has entered the boring the following morning. Temporary wells were installed in the borings; the team will return to collect groundwater samples at a later date. If no water has entered H14-SB01, an alternative plan will be discussed with the Technical Lead, Brendan McGuinness, and the USACE Geologist, PJ Mion.

H-16. One boring was completed (H16-SB01). Soil samples were collected for analysis of VOCs, SVOCs, PCBs, and metals. A temporary well was installed in the boring; the team will return to collect a groundwater sample at a later date.

Waste Disposal System (WDS) - Site Wide. Five borings were completed (WDS-SB08, -SB09, -SB11, -SB12, -SB13). Soil samples were collected for analysis of VOCs, SVOCs, PCBs, and metals. Temporary wells were installed in the borings; the team will return to collect a groundwater sample at a later date.

Former Building 34 (034). One boring (034-SB01) was completed. Soil samples were collected for analysis of PAHs, PCBs, and metals. Additionally, four co-located sets of surface soil and near-surface soil samples (034-SS02 through 034-SS05) were collected for the same analyses. A temporary well was installed in the boring; the team will return to collect a groundwater sample at a later date.

QA/QC (MS/MSD and Duplicate) samples were collected at various AOCs to achieve a rate of 10% duplicates and 20% MS/MSD per analysis site-wide.

Groundwater Sampling

Groundwater samples were collected at the following AOCs.

Fuel Pump House (FPH). Three groundwater samples (from FPH-SB02, FPH-SB03, and FPH-SB04) were collected for analysis of VOCs and SVOCs.

QA/QC (MS/MSD and Duplicate) samples were collected at various AOCs to achieve a rate of 10% duplicates and 20% MS/MSD per analysis site-wide.

UXO Anomaly Avoidance

No UXO Anomaly Avoidance was performed on 6/13/2016, as all areas where drilling occurred had been pre-cleared by the UXO Tech the previous week.

Flagging/Designation of Sample Locations

AECOM flagged sample locations at AOCs WDS (SB06 and SB07).

Sample Management and Shipment

Soil and groundwater samples collected collected on Sunday 6/12/16 were Quality Control checked, recorded on Chain of Custody records, and packed for shipment. Additionally, the coolers which were prepared on Sunday 6/12/16 (samples from Friday 6/10/16) were packed for shipment. Eleven coolers were shipped overnight via FedEx for delivery to RTI Labortories (Livonia, MI) on Tuesday 6/14/16. Chain of Custody records were e-mailed to the project chemist (Devon Chicoine) and the RTI Laboratories Project Manager (Kathy Griffin) in the evening for shipment tracking.

Contractor Daily Reports

DATE: 6/13/2016 Sunday

DR No. 13		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

WORK COMPLETED BY AECOM SUBCONTRACTORS

New England Geotech

New England Geotech completed 13 borings total between AOCs WDS, EFO, MP, H-16, Former Building 34, and H-14.
Additionally, NEG completed 8 "shallow" soil borings at former Building 34 and H-5 for the collection of surface and near-surface soil samples.

Clean Globe Environment

John Hudson (CGE) assisted Nicole Schulman (AECOM) with soil sampling and logging at AOCs WDS, EFO, MP, Former Building 34, and H-14.

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

Tom Dess, Camp Hero State Park Superintendent, was unaware that drilling was planned to occur inside the Motor Pool building adjacent to the former hydraulic lift. However, Mr. Dess indicated that it would not be a problem and that he would coordinate with the necessary employees to schedule the drilling inside the Motor Pool at 0900 on Tuesday 6/14/16.

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0700 and completed the Morning Tailgate Health and Safety Meeting. The team reviewed the health and safety procedures with all on-site team members and task hazards associated with scheduled field work for the day.

Soil Sampling

Geoprobe borings were completed and soil samples were collected at the following AOCs.

Motor Pool. One boring (MP-SB01) was completed. Soil samples were collected for analysis of the NYSDEC STARs List for Fuel Oil VOCs and SVOCs. A temporary well was installed in the boring; the team returned in the afternoon to collect a groundwater sample (details below).

H-21. Three borings were completed (H21-SB01 through H21-SB03). Soil samples were collected for analysis of VOCs, SVOCs, PCBs, and metals. Temporary wells were installed installed in the borings; the team will return to collect a groundwater samples at a later date.

Waste Disposal System (WDS) - Site Wide. Nine borings were completed (WDS-SB01, -SB02, -SB03, -SB06, -SB07, -SB14, -SB15, -SB16, and -SB17). Soil samples were collected for analysis of VOCs, SVOCs, PCBs, and metals. Temporary wells were installed in the boring; the team will return to collect groundwater samples at a later date. Additionally, soil samples at WDS-SB04 and -SB05 were collected via hand auger for the same analyses.

QA/QC (MS/MSD and Duplicate) samples were collected at various AOCs to achieve a rate of 10% duplicates and 20% MS/MSD per analysis site-wide.

Groundwater Sampling

Groundwater samples were collected at the following AOCs.

AST-35. Three groundwater samples were collected from temporary wells at borings AST35-SB02, -SB03, and -SB04 for analysis of VOCs and SVOCs. The team attempted to collect a sample from AST35-SB01; however, recharge in the well was insufficient to fill the bottleware. AST35-SB01 was installed to approximately 10 ft bgs with a 5-foot screen; the team will install a new temporary well at this location on 6/15/16 to 15 ft bgs with a 10-foot screen, in attempt to collect sufficient water.

Motor Pool (MP). The team attempted to collect a groundwater sample from MP-SB01. However, recharge in the well was insufficient to fill the bottleware (the well produced less that 500 mL after a couple hours worth of pumping then pausing to recharge). The team will reassess the volume of water in the temporary well on 6/15/16; if there is still insufficient water to complete sample collection, the team will discuss how to proceed with the technical lead, Brendan McGuinness.

QA/QC (MS/MSD and Duplicate) samples were collected at various AOCs to achieve a rate of 10% duplicates and 20% MS/MSD per analysis site-wide.

UXO Anomaly Avoidance

UXO Anomaly Avoidance was performed at WDS-SB06, -SB07, -SB14, -SB15, -SB16, and -SB17. All areas were cleared.

Flagging/Designation of Sample Locations

AECOM adjusted flagged sample locations at AOC WDS (-SB06, -SB07, and -SB14) once the UXO Tech cleared the areas. Underground anomalies (non-UXO) were identified near both -SB06/-SB07 and -SB14. Near -SB06 and -SB07, a large anomly was identified by the UXO Tech on the north side of Coast Artillery Road where the historic maps of the Site-Wide Sanitary Sewer indicate a 90-degree turn in the sewer line. Two shallow holes were dug and a portion of a concrete pad was exposed. The WDS-SB06 and -SB07 borings were placed upgradient and downgradient of the concrete pad.

Additionally, historic pipes were found underground in the vicinity of WDS-SB14. The UXO Tech identified a large anomaly in the woods which connected to the pipes (per magnetometer readings); the team believes the anomaly may be the historic septic tank indicated on the Site-Wide Sanitary Sewer maps. WDS-SB14 was located adjacent to the anomaly area in a spot cleared by the UXO Tech.

Contractor Daily Reports

DATE: 6/14/2016 Tuesday

DR No. 14		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

WORKED PERFORMED BY AECOM (continued)

Sample Management and Shipment

Soil and groundwater samples collected collected on Monday 6/13/16 were Quality Control checked, recorded on Chain of Custody records, and packed for shipment. Seven coolers were shipped overnight via FedEx for delivery to RTI Labortories (Livonia, MI) on Tuesday 6/14/16. Chain of Custody records were e-mailed to the project chemist (Devon Chicoine) and the RTI Laboratories Project Manager (Kathy Griffin) in the evening for shipment tracking.

RTI Laboratories notified the team that one of the coolers shipped on Thursday 6/9/16 for delivery on 6/10/16 was delivered by FedEx four days late on 6/14/16. The cooler was out of temperature at 21.6°C. The cooler contained SVOC, PCB, and lead samples at AOCs Suspected Tank B (STB), Building 2010, and WDS (-SB20). As a result, the team will need to recollect soil samples at these locations.

The project chemist (Devon Chicoine) discussed confirmation of sample receipt with RTI laboratories; in the future, the team will be notified daily if samples are not received.

WORK COMPLETED BY AECOM SUBCONTRACTORS

New England Geotech

New England Geotech completed 13 borings total between AOCs WDS, MP, and H-21.

Clean Globe Environment

John Hudson (CGE) assisted Nicole Schulman (AECOM) with soil sampling and logging at AOCs WDS, MP, and H-21.

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

The AECOM Technical Lead (Brendan McGuinness), USACE Geologist (PJ Mion), and Site Supervisor (Amanda Martin) discussed the following concerns:

AST35. There was insufficient recharge in temporary well AST35-SB01. The approach described in the Groundwater Sampling section of this Daily Report (see above) was agreed upon as the best approach to retreive sufficient sample volume.

H-14. No water entered H14-SB01 overnight from 6/13/16 to 6/14/16 (the temporary well was installed to 25 ft bgs on 6/13/16). Because groundwater is present in the other two temporary wells at H-14 (-SB02 and -SB03) for sample collection, H14-SB01 will not be advanced to a greater depth in attempt to find groundwater.

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0700 and completed the Morning Tailgate Health and Safety Meeting. The team reviewed the health and safety procedures with all on-site team members and task hazards associated with scheduled field work for the day. Greta White arrived on site to replace Kelly Lurie as the SSHO. Ms. White reviewed and signed all applicable AHAs in the on-site APP.

Soil Sampling

Samples were recollected from the following locations. Note: Due to the delay of the FEDEX shipment of the samples collected on 6/8/16 (see details in the Daily Report from 6/14/16), some locations were resampled.

New geoprobe borings were completed and soil samples were collected.

Former Building 2010 (UST 30). Two soil borings were completed (2010-SB01 and -SB02):

- At 2010-SB01: four soil samples were collected (0 - 4, 4 - 5, 5 - 6, 6 - 7 ft bgs) for lead analysis only. One MS/MSD sample was collected at 2010-SB02-04.
- At 2010-SB02: four soil samples were collected (0 - 4, 4 - 5, 5 - 6, 6 - 7 ft bgs) for lead analysis only. Two duplicate samples were collected at at 2010-SB02-04 and 2010-SB02-05.

Site-Wide Waste Disposal System (WDS). One soil boring was completed (SB20). One soil sample was collected from 5 - 6 ft bgs for analysis of VOCs, SVOCs/PAHs, PCBs, and metals.

Suspected Tank B (STB). Four borings were completed at STB (SB01 through SB04). Only one subsurface soil sample was collected from each boring at the water table. Three additional surface soil samples were collected via hang-auger (SS05 through SS07). Samples were collected for analysis of NYSDEC STARs fuel oil list VOCs and SVOCs.

Geoprobe borings and soil sample collection was completed at the following AOCs.

Background Location 04. Four borings (BG04-SB01 through -SB04) and three additional surface soil locations (-SS05 through -SS07) were completed. Surface and subsurface soil samples were collected for analysis of PAHs and metals. No temporary wells were set in Background location borings because background groundwater samples will not be collected in Phase 1, per the RI WP.

H-1. Two surface soil locations (H1-SS01 and H1-SS02) were completed via hand-auger. One surface soil and one near-surface soil sample was collected per location for analysis of VOCs, SVOCs, PCBs, and metals.

H-2. Two surface soil locations (H2-SS01 and H2-SS02) were completed via hand-auger. One surface soil and one near-surface soil sample was collected per location for analysis of VOCs, SVOCs, PCBs, and metals.

H-15. Three borings (H15-SB01 through -SB03) were completed. Soil samples were collected for analysis of PAHs and metals. No groundwater was encountered in the borings; the borings were advanced to 25 ft bgs (per the RI WP) and a temporary well was installed. The temporary wells will be guaged at a later date to see if groundwater has entered the boring; if no groundwater is present, no samples will be collected (per the RI WP).

H-19. Two surface soil locations (H22-SS01 and H22-SS02) were completed via disposable scoop. Samples were collected for analysis of VOCs, PAHs, and metals. The surface soil at the two locations was screened using the PID bag-headspace test. The PID reading at both locations was 0.0 PPM; therefore, no geoprobe borings/subsurface soil sampling will be completed at H-19, per the RI WP.

H-22. Two surface soil locations (H22-SS01 and H22-SS02) were completed via hand-auger. One surface soil and one near-surface soil sample was collected per location for analysis of VOCs, SVOCs, PCBs, and metals.

QA/QC (MS/MSD and Duplicate) samples were collected at various AOCs to achieve a rate of 10% duplicates and 20% MS/MSD per analysis site-wide.

Replacement Well

A replacement well was installed at AST35-SB01 to 15 ft bgs with a 10-foot screen. The original temporary well was installed to approximately 10 ft bgs with a 5-foot screen; however, the well did not produce sufficient sample volume after multiple attempts to collect a sample.

Contractor Daily Reports

DATE: 6/15/2016 Wednesday

DR No. 15		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

WORKED PERFORMED BY AECOM (continued)

Groundwater Sampling

Groundwater samples were collected at the following AOCs.

H-4. Three groundwater samples were collected from temporary wells at borings H4-SB01, -SB02, and -SB03 for analysis of PCBs and metals.

H-6. Three groundwater samples were collected from temporary wells at borings H6-SB01, -SB02, and -SB03 for analysis of PCBs and metals.

Waste Disposal System (WDS) - Site Wide. The team attempted to collect a groundwater sample from WDS-SB10. Recharge is the well was insufficient to fill all sample bottleware. One additional attempt will be made to finalize the sample on 6/16/16. If insufficient sample volume is retreived, the volume collected will be sent to the lab and no additional attempts will be made.

Motor Pool (MP). The team attempted to collect a groundwater sample from MP-SB01 twice (once in the morning and once in the evening). These were the second and third attempts to fill the bottleware. Again, insuffient water was present in the well to fill the remaining bottleware. One additional attempt will be made to finalize the sample on 6/16/16. If insufficient sample volume is retreived, the volume collected will be sent to the lab and no additional attempts will be made.

QA/QC (MS/MSD and Duplicate) samples were collected at various AOCs to achieve a rate of 10% duplicates and 20% MS/MSD per analysis site-wide.

Sample Management and Shipment

Soil and groundwater samples collected collected on Tuesday 6/14/16 and Wednesday 6/15/16 were Quality Control checked, recorded on Chain of Custody records, and packed for shipment. Six coolers were shipped overnight via FedEx for delivery to RTI Labortories (Livonia, MI). Chain of Custody records were e-mailed to the project chemist (Devon Chicoine) and the RTI Laboratories Project Manager (Kathy Griffin) in the evening for shipment tracking.

WORK COMPLETED BY AECOM SUBCONTRACTORS

New England Geotech

New England Geotech completed 14 borings total between Background 04 and AOCs STB, Building 2010, WDS (-SB20), and H-15.

Clean Globe Environment

John Hudson (CGE) assisted Nicole Schulman (AECOM) with soil sampling and logging at AOCs H-1, H-2, H-19, H-22, and H-15.

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

Mr. Greg Goepfert (USACE Project Manager) was on site and discussed concerns with Amanda Martin (Site Supervisor). Mr. Goepfert requested that Tom Dess (NY State Parks Superintendent) was notified each morning of the project team's presence on site, along with the number of team members present.

Additionally, Mr. Goepfert requested that AECOM provide secondary containment for the cans found in Building 10 (Kitchen) and dispose of the containers, in the instance that Tom Dess cannot dispose of them. Mr.Goepfert indicated that he would discuss possible disposal by the Parks Service with Tom Dess, since the items appear to be general consumer items (oil cans, paint cans) and the Parks Service has a maintenance building at Camp Hero.

Tom Dess (NY State Parks Superintendent) was notified in the morning that 12 team members were on site (including USACE, AECOM, CGE, and NEG). Mr. Dess also inquired about weekend work and was reassured that, per previous site meetings and discusion, no weekend work took place in the picnic area where camping occurred over the weekend. Mr. Dess was also concerned that the drill rig had left track marks in the woods near Background Location 01.
Ms. Martin informed Mr. Dess that track marks were an unfortunate result of collecting soil samples with a drill rig; Mr. Dess indicated that the Park Maintenance would place a log at the entrance to the area so the public would be aware that the track marks were not a public access road.
Additionally, Mr. Dess requested 2-days notice prior to when AECOM wants to perform sampling inside of Battery 113.

REQUEST FOR INFORMATION (RFI)

None

TRANSMITTALS / SUBMITTALS

None

AIR MONITORING COMMENTS:

Continuous air monitoring was completed downwind of the geoprobe boring, in accordance with the modified generic NYSDOH CAMP (see RI WP Appendix B).
No exceedances were observed.

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0700 and completed the Morning Tailgate Health and Safety Meeting. The team reviewed the health and safety procedures with all on-site team members and task hazards associated with scheduled field work for the day.

Soil Sampling

Geoprobe borings and soil sample collection was completed at the following AOCs.

Former Building 203. Five borings (203-SB01 through -SB05) were completed. Two soil samples were collected per boring for analyses of VOCs, SVOCs, PCBs, and metals. No water was encountered in any of the borings; a dense clay layer was encountered between 2 and 22 ft bgs. Elevated PID readings were observed in two borings. Details of each boring are provided below.

-SB01: Boring was advanced to 25 ft bgs. No water was encountered; the clay layer was encountered at 13 ft bgs. A temporary well was installed to 25 ft bgs with a 10-foot screen.

-SB02: Boring was advanced to 25 ft bgs. No water was encountered; the clay layer was encountered at 2 ft bgs. A temporary well was installed to 25 ft bgs with a 10-foot screen.

-SB03: Boring was advanced to 25 ft bgs. No water was encountered; the clay layer was encountered at 5 ft bgs. A temporary well was installed to 25 ft bgs with a 10-foot screen.

-SB04: Boring was advanced to 25 ft bgs. No water was encountered; the clay layer was encountered at 14 ft bgs. A PID reading of 11.3 PPM was observed at approximately 11 ft bgs in the sandy silt layer just above the clay, which was the assumed transmissive zone. A temporary well was installed to 25 ft bgs with a 10-foot screen.

-SB05: Boring was advanced to approximately 22 ft bgs. No water was encountered; the clay layer was encountered at 22 ft bgs. A PID reading of 402.8 PPM was observed at 21 ft bgs, just above the clay layer in a sandy silt (the assumed transmizzive zone). One soil sample was collected from this interval. A temporary well was installed to 22 ft bgs with a 10-foot screen.

The team will return at a later date to determine if water is present in the temporary wells; if present, a groundwater sample will be collected.

Building 201 (Radar Tower). One boring (201-SB01) was advanced to 25 ft bgs. No water was encountered; the clay layer encountered in nearby borings at former Building 203 was also not encountered. A temporary well was installed to 25 ft bgs with a 10-foot screen; the team will return at a later date to see if water is present in the well.

Site-Wide Waste Disposal System (WDS). Two borings (WDS-SB18 and -SB19) were completed. Soil samples were collected for analysis of VOCs, SVOCs, PCBs, and metals. No water was encountered in WDS-SB18; the boring was advanced to 25 ft bgs and a temporary well was installed with a 15-foot screen. The team will return at a later date to see if water is present in the wells. Water was encountered at WDS-SB19 at 13.5 ft bgs; a temporary well was installed to 20 ft bgs with a 10-foot screen. A groundwater sample will be collected at a later date.

QA/QC (MS/MSD and Duplicate) samples were collected at various AOCs to achieve a rate of 10% duplicates and 20% MS/MSD per analysis site-wide.

The soil borings and soil sampling completed on 6/16/16 finished the remaining soil sampling planned for the Phase 1 RI field effort. As such, New Englang Geotech demobilized from the site.

UXO Anomaly Avoidance

PZ-1 was relocated because the Geoprobe hit refusal at 6 ft bgs after three attempts at the original PZ-1 location. The relocated PZ-1 was cleared by the Nina Bennerson (AECOM UXO Tech II) prior to drilling. The magnetometer indicated multiple large hits in the area of the original PZ-1 location; the team suspects that the foundation from former Building 203 may still be in place and contain rebar.

Contractor Daily Reports

DATE: 6/16/2016 Thursday

DR No. 16		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

WORKED PERFORMED BY AECOM (continued)

Replacement Well

A replacement well was installed at H14-SB02 to 24 ft bgs with a 15-foot screen. The original temporary well was installed to 15 ft bgs; however, the well was dry after 24 hrs, so the team decided to reinstall the temporary well to greater depth in attempt to obtain a groundwater sample.

Piezometer Installation

Three piezometers (PZ-1, PZ-2, PZ-3) were installed near Building 203. All three borings were advanced to 25 ft bgs with a 15-foot screen. All three borings were dry and a dense clay layer was encountered, so the team is unsure of whether water will enter the piezometers. The team will return at a later date to see if water is present in the boring and to collect water level measurements.

Groundwater Sampling

Groundwater samples were collected at the following AOCs.

AST-35. One groundwater sample was collected from the replacement temporary well at AST35-SB01 for analysis of VOCs and SVOCs.

Plotting Room 113 (P113). One complete groundwater sample was collected from P113-SB02 for analysis of VOCs, SVOCs, and metals. Two partial samples were collected from P113-SB01 and P113-SB02; the recharge in the well was insufficient to fill all sample bottleware. The team will attempt to fill the remaining bottleare on 6/17/16; if recharge is still insufficient, no futher attempts will be made.

Waste Disposal System (WDS) - Site Wide. Three groundwater samples were collected at WDS-SB01, -SB02, and -SB03 near the chlorine contact chamber for analysis of VOCs, SVOCs, PCBs, and metals. Additionally, the groundwater sample from WDS-SB10 was finalized.

Motor Pool (MP). The team finalized the groundwater sample from MP-SB01 and was able to collect sufficient sample volume (this was the fourth attempt). Additionally, the team assessed the existing well outside of the Motor Pool building (named MP-MW01 for the Phase 1 RI Work). Water from the well is used for non-potable purposes inside the motor pool building. The system was visually surveyed by J Schroeder, A Martin, and PJ Mion. No existing tap is available for water collection prior to the water entering a permanent filtration system. The team decided the best course of action is sampling directly from the well; however, depth to water was 50 ft bgs and the peristaltic pump could not retrive water from that depth. The team will reassess how to collect a sample from MP-MW01 at a later date.

QA/QC (MS/MSD and Duplicate) samples were collected at various AOCs to achieve a rate of 10% duplicates and 20% MS/MSD per analysis site-wide.

Building Access Assessment

Greta White (AECOM SSHO) and Amanda Martin (AECOM Site Supervisor) assessed access to Buildings 107 (Electrical Substation) and 201 (Radar Tower).

Building 107 (Electrical Substation). Access to Building 107 had an available entrance and appears to be safe from the outside. Tom Dess (NYS Parks Superintendent) was contacted about access to Building 107; Mr. Dess indicated that the building is concrete below the First Floor (which is wooden) and that the structure should be stable. Theteam has permission to enter from Mr. Dess. The team will attempt to enter the building at a later date to see if fluid is present in transformer in the basement.

Building 201 (Radar Tower) – Ms. Martin and Ms. White saw no available entrances to Building 201 other than breaking into the building at previously-sealed entrances. Mr. Dess was contacted about access; Mr. Dess that he was not aware that the team needed to enter the Radar Tower. He indicated that the building is completely sealed; the structures and stairwells inside are not stable; and he does not believe it is safe for anyone to enter. AECOM/USACE has permission to break into the building, if absolutely essential, at our own risk; however, Mr Dess indicated that USACE/AECOM would be responsible for re-sealing the entrance. Accessing Building 201 will be discussed with the Project Manager (Mark MacEwan) before the team proceeds.

Sample Management and Shipment

Soil and groundwater samples collected collected on Wednesday 6/15/16 and Thursday 6/16/16 were Quality Control checked, recorded on Chain of Custody records, and packed for shipment. Six coolers were shipped overnight via FedEx for delivery to RTI Labortories (Livonia, MI). Chain of Custody records were e-mailed to the project chemist (Devon Chicoine) and the RTI Laboratories Project Manager (Kathy Griffin) in the evening for shipment tracking.

The RTI Laboratories Project Manager (Kathy Griffin) contacted AECOM at 11 AM on 6/16/16 that one of the 6 coolers shipped on 6/15/15 had not yet arrived. Ms. Griffin tracked the package and indicated the cooler was scheduled to arrive at 3:00 PM on 6/16/16. However, a call from Ms. Griffin at 7:30 PM indicated that FedEx did not deliver the cooler in the afternoon; the latest tracking information indicates the cooler will arrive by 10:30 AM on 6/17/17.

WORK COMPLETED BY AECOM SUBCONTRACTORS

New England Geotech

New England Geotech completed 15 borings total between AOCs former Building 203 and associated piezometers, Building 201, WDS (-SB18 and -SB19), H-17, and one replacement well at H-14 (H14-SB02). NEG completed all borings needed for the Phase 1 RI field effort and demobilized from the site. However, NEG was contacted once AECOM received notice of the delayed cooler and agreed to have one driller return to the site on 6/17/16, in case resampling was necessary.

Clean Globe Environment

John Hudson (CGE) assisted Nicole Schulman (AECOM) with soil sampling and logging at AOCs former Building 203 and WDS. Additionally, he collected groundwater samples at AOC WDS (-SB01 through -SB03) and assissted with coordination for surveying by CGE the week of 6/20/16 and providing supplies for breaking into Battery 113 (to be provided by other CGE employees on Monday 6/20/16).

Contractor Daily Reports

DATE: 6/16/2016 Thursday

DR No. 16		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

Tom Dess (NY State Parks Superintendent) was notified in the morning that 11 team members were on site (including USACE, AECOM, CGE, and NEG). Additionally, Amanda Martin (AECOM Site Supervisor) asked Mr. Dess is Monday 6/20/16 or Tuesday 6/21/16 would be preferable to the NYS Parks for the Battery 113 work. Mr. Dess indicated that Monday 6/20/16 would be preferable; the Battery 113 work was scheduled for Monday Morning 6/20/16. Mr. Dess will have maintenance staff repair the break-in once sample collection is complete.

Additionally, access to Buildings 107 (Electrical Substation) and 201 (Radar Tower) was discussed with Mr. Dess (see "Building Access Assessment" section above). Mr. Dess believes it is not safe to work near the radar tower due to large, sharp pieces of metal falling off the radar tower. Ms. Martin explained that the team had been previously instructed to wear hardhats at all times near the radar tower, avoid the area on windy days, and use a “spotter” to check for loose/moving metal pieces.

REQUEST FOR INFORMATION (RFI)

None

TRANSMITTALS / SUBMITTALS

None

AIR MONITORING COMMENTS:

Continuous air monitoring was completed downwind of the geoprobe boring, in accordance with the modified generic NYSDOH CAMP (see RI WP Appendix B). No exceedances were observed.

SAFETY OBSERVATIONS/VIOLATIONS/COMMENTS

While working near the Radar Tower, the team wore hardhats at all times and used a “spotter” to check for loose/moving metal pieces. There was little to no wind during the time working near the radar tower; if the wind had increased, the team would have avoided working near the Radar Tower until conditions were safe.

Some team members elected to wear tyvek suits for tick protection while working near the Radar Tower and former Building 203, as many ticks were noticed in the area during flagging and other previous activities.

SITE OBSERVATIONS

None

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0700 and completed the Morning Tailgate Health and Safety Meeting. The team reviewed the health and safety procedures with all on-site team members and task hazards associated with scheduled field work for the day.

Geoprobe Borings

The RTI Laboratories Project Manager (Kathy Griffin) notified AECOM on 6/16/16 that one of the 6 coolers shipped on 6/15/15 had not yet arrived (see Daily Report from 6/16/16 and below Sample Management section for details). While pending arrival of the cooler at the laboratory, geoprobe borings were advanced at the following locations for the collection of soil to be held for sampling, if resampling were required. The team was unable to wait for the cooler to arrive to decide whether to conduct the borings, as New England Geotech (NEG) had to demobilize from the site by 0900.

Former Building 2010 (UST 30). Two soil borings were completed (2010-SB01 and -SB02).

Site-Wide Waste Disposal System (WDS). One soil boring was completed (SB20).

Suspected Tank B (STB). Four borings were completed at STB (SB01 through SB04).

However, the cooler arrived at the laboratory below the required preservative temperature and resampling was not necessary. The soil was returned to the borings.

The soil borings and soil sampling completed on 6/16/16 finished the remaining soil sampling planned for the Phase 1 RI field effort. As such, New England Geotech demobilized from the site.

Groundwater Sampling

Groundwater samples were collected at the following AOCs.

Plotting Room 113 (P113). The collection of two groundwater samples at P113 was finalized (P113-SB01 and P113-SB02); the recharge in the well was insufficient to fill all sample bottleware on 6/16/16. Samples were collected for analysis of VOCs, SVOCs, and metals. However, groundwater had not recharged sufficiently overnight to collect the 4 L volume requested by RTI Laboratories for the SVOC-PNA method; only 2 L of volume was provided for the analysis.

Waste Disposal System (WDS) - Site Wide. Five groundwater samples were collected at WDS-SB08, -SB11, -SB12, -SB13, and -SB15 for analysis of VOCs, SVOCs, PCBs, and metals. Additionally, partial samples were collected from WDS-SB06 and -SB09. Recharge in these wells was insufficient to fill all sample bottles; two attempts were made on 6/17/16. One additional attempt will be made on 6/19/16 and whatever volume is collected will be

Motor Pool (MP). One groundwater sample was collected from MP-SB03 for analysis of VOCs, SVOCs, PCBs, and energetics.

H-14. Two groundwater samples were collected from H14-SB01 and H14-SB02 for analysis of PAHs and metals. No groundwater was present in H14-SB03.

QA/QC (MS/MSD and Duplicate) samples were collected at various AOCs to achieve a rate of 10% duplicates and 20% MS/MSD per analysis site-wide.

Water Level Measurements

In addition to the temporary wells sampled on 6/17/16, the team attempted to sample the following wells, but found that the wells were dry:

H14-SB02, H15-SB01, H15-SB02, H15-SB03, WDS-SB14, WDS-SB16, and WDS-SB17. No groundwater samples will be collected from these locations, per the RI WP.

Debris Removal

The old boiler on the Camp Hero State Parks Bluffs was removed and disposed of as solid waste.

DR No. 16		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

Sample Management and Shipment

The RTI Laboratories Project Manager (Kathy Griffin) contacted AECOM at 7:30 PM on 6/16/16 that one of the 6 coolers shipped on 6/15/15 had not yet arrived. Ms. Griffin contacted AECOM at 9:30 AM on 6/17/16 that the delayed cooler had arrived. The cooler temperature was 1.4°C, below the required 4°C, so the included samples will be analyzed. The project chemist (Devon Chicoine) and managers agreed that the samples would not have to be recollected.

Soil and groundwater samples collected collected on Thursday 6/16/16 and Friday 6/17/16 were Quality Control checked, recorded on Chain of Custody records, and packed for shipment. Eleven coolers were shipped overnight for Saturday Delivery via FedEx for delivery to RTI Labortories (Livonia, MI). Chain of Custody records were e-mailed to the project chemist (Devon Chicoine) and the RTI Laboratories Project Manager (Kathy Griffin) in the evening for shipment tracking.

WORK COMPLETED BY AECOM SUBCONTRACTORS

New England Geotech

New England Geotech completed 7 borings between AOCs STB, 2010, and WDS (-SB20 only) to collect soil cores, should soil resampling be necessary if the delayed cooler was out of hold temperature. After the resampling effort, NEG had completed all borings needed for the Phase 1 RI field effort and demobilized from the site. During the Phase 1 RI Field Activities, NEG completed a total of 119 borings to 10+ ft bgs (including the resampling AOCs STB, 2010, and WDS (-SB20) and reinstallation of wells. Additionally, they completed a total 27 5-foot borings for collection of surface soil.

Clean Globe Environment

John Hudson (CGE) assisted with debris removal from the Camp Hero State Park Bluffs and groundwater sampling.

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

None

REQUEST FOR INFORMATION (RFI)

None

TRANSMITTALS / SUBMITTALS

None

AIR MONITORING COMMENTS:

Continuous air monitoring was completed downwind of the geoprobe boring, in accordance with the modified generic NYSDOH CAMP (see RI WP Appendix B).
No exceedances were observed.

SAFETY OBSERVATIONS/VIOLATIONS/COMMENTS

None

SITE OBSERVATIONS

None

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0700 and completed the Morning Tailgate Health and Safety Meeting. The team reviewed the health and safety procedures with all on-site team members and task hazards associated with scheduled field work for the day.

Groundwater Sampling

Groundwater samples were collected at the following AOCs.

Waste Disposal System (WDS) - Site Wide. Three groundwater samples were collected at WDS. Samples began on 6/17/16 at WDS-SB06 and WDS-SB09 were finalized. The sample at WDS-SB08 was collected for analysis of VOCs, SVOCs, PCBs, and metals. The temporary well at WDS-SB09 had insufficient recharge to fill all sample bottles (after four attempts); only VOCs, metals, and 3-1 L bottles for PNA and PCBs could be collected. Additionally, a partial sample was collected from WDS-SB07. Recharge was insufficient to fill all sample bottles after two attempts. One additional attempt will be made on 6/20/16 and whatever volume is collected will be submitted to the lab for analysis of a shortened analyte list.

Motor Pool (MP). One partial groundwater sample was collected from MP-SB02 for analysis of VOCs, SVOCs, and energetics. Recharge was insufficient to fill all sample bottles after ten attempts. One additional attempt will be made on 6/20/16 and whatever volume is collected will be submitted to the lab for analysis of a shortened analyte list.

Engineering Field Office (EFO). One partial groundwater sample was collected from EFO-SB01 for analysis of energetics. Recharge was insufficient to fill all sample bottles after ten attempts (need MS/MSD and Duplicate). One additional attempt will be made on 6/20/16.

Former Building 34. One groundwater sample was collected from 034-SB01 for analysis of PAHs, PCBs, and metals.

H-16. One groundwater sample was collected from H16-SB01 for analysis of VOCs, SVOCs, PCBs, and metals.

H-21. Two groundwater samples were collected from H21-SB02 and -SB03 for analysis of VOCs, SVOCs, PCBs, and metals. One partial sample was collected from H21-SB01; recharge was insufficient to fill all sample bottles. One additional attempt will be made on 6/20/16.

QA/QC (MS/MSD and Duplicate) samples were collected at various AOCs to achieve a rate of 10% duplicates and 20% MS/MSD per analysis site-wide.

Water Level Measurements

Water levels were measured in all temporary wells in the vicinity of Former Building 203, to determine radial flow on the hill adjacent to former Building 203. Wells gauged included those at AOCs FPH, AST-35, former Building 203 (including PZ-1 through PZ-3), Building 201 (Radar Tower), and WDS (-SB18 and -SB19 only). Water was present in all wells except the one at the Radar Tower (201-SB01). Groundwater samples will be collected from the temporary wells at a later date, with the exception of 201-SB01.

Additionally, approximately 5 ft of light non aqueous phase liquid (LNAPL) which appeared to be weathered petroleum product was observed in piezometer PZ-3, from approximately 8.00 ft btoc to 13.30 ft btoc, determined using an interface probe. Piezometer PZ-3 is located at AOC Former Building 203. AECOM notified the USACE Project Management (Gregory Geopfert and Megan Cullen) immediately.

NYS DEC Pollution Complaint Number 1602757

Due to LNAPL measured at PZ-3 at AOC Building 203, the USACE Project Management (Gregory Geopfert) and Megan Cullen) reported a petroleum release at AOC Building 203 to the NYS DEC hotline within 2 hours of discovery. Pollution Complaint Number PC-1602757 was assigned to the reported release. Mr. Dess (NYS Camp Hero Park Superintendent) was also notified that a release at former Building 203 had been reported to NYSDEC.

Building 107 (Electrical Substation) PCB Sampling

The team performed a survey of the transformers in the basement of Building 107 to identify any staining from the transformers. The team wore tyvek suites, rubber booties, respirators with P100/OV cartridges, hardhats, headlamps, and nitrile gloves while working inside the building, due to potential safety concerns with PCBs and working in old/abandoned buildings. Another team member was located outside the entrance of the building within earshot in case of emergencies.

Please see photos 4 and 5 of "transformers" below. After inspection of the units, these features on the wall may be more appropriately labeled as electrical distribution boxes. Previous reports have noted that transformers, which were formerly located outside Building 107, were previously properly decommissioned.

Parts of the transformer were still located in the basement of the building (see photos below). Dried product was present on part of the transformer. No staining was observed on the floor; however, most of the floor was covered in mats and/or heavy plywood/wooden ramps/walkways were covering much of the floorspace, and the team was not able to move the wooden objects to see the entire floorspace. Additionally, part of a metal rack which previously ran around the edge of the ceiling had collapsed over part of the transformer and part of the wooden planks.

Contractor Daily Reports

DATE: 6/19/2016 Sunday

DR No. 18		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

Building 107 (Electrical Substation) PCB Sampling (continued)

The team collected one PCB wipe sample on the outside of the transformer where dried product was observed. Additionally, a sample of dried product was collected from the transformer and the floor (where dried droplets could be picked up). Although no staining was observed, the team attempted to collect a concrete chip sample with a chisel and sledgehammer. After 2 hours of attempted sample collection, approximately only 2 oz of concrete chips had been collected, only 1/4 of the 8 oz requested by the laboratory. The team halted concrete chip sample collection to discuss a more efficient sample method.

AECOM ordered more heavy-duty tools (rotary drill-demolition hammer) for chip sample collection to collect the sample.
Concrete chip sample collection will be resumed Monday or Tuesday 6/20/16 when the demolition drill is available.

Materials Survey (Building 10)

The team performed a materials survey of Building 10 to inventory the oil and paint cans previously found by Tom Dess (State Park Superintendent). Materials found were inventoried by type, quantity, and size (see below). The team wore tyvek suites, rubber booties, respirators with P100/OV cartridges, hardhats, and nitrile gloves while working inside the building, due to potential safety concerns with working in old/abandoned buildings.

Item	Quantity	Location
Chevron HyJet IV, Phosphate Ester	25-1 Quart Metal Cans	Main Room
Mobil Jet Oil II	5-1 Quart Metal Cans	Main Room
Exxon Turbo Oil 2389	5-1 Quart Metal Cans	Main Room
Skydrol - Monsanto 500 B-4 Fire Starter Fluid	2-1 Gallon Metal Cans	Main Room
3100 Clean Compound Jet Engine Path Cleaner, B&B Chemical Company	2-5 Gallon Metal Cans	Main Room
Modern All-Purpose Enamel	4-1 Gallon Metal Cans	Back Room

All cans in the Main Room were in poor condition - most were leaking or had leaked, were bulging, rusty, and the labels were barely readable. In the back room, the four Enamel cans were severely rusted and fused to the cart on which they were sitting. (See photos below.)

Sample Management and Shipment

Soil and groundwater samples collected collected on Friday 6/17/16 and Sunday 6/19/16 were Quality Control checked and recorded on Chain of Custody records, and stored on fresh ice for shipment on Monday 6/20/16.

WORK COMPLETED BY AECOM SUBCONTRACTORS

None

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

AECOM ordered a more heavy-duty tools (demolition hammer) for concrete chip sample collection to collect the concrete chip samples.
Concrete chip sample collection will be resumed Tuesday 6/19/16 when the demolition drill is available. As a result, the concrete chip sampling in Battery 113 was rescheduled for Tuesday 6/21/16, instead of Monday 6/20/16, per conversation with Tom Dess (NYS Parks Superintendent).

SAFETY OBSERVATIONS/VIOLATIONS/COMMENTS

As mentioned above, the team wore tyvek suits, rubber booties, respirators with P100/OV cartridges, hardhats, headlamps, and nitrile gloves while working inside Buildings 10 and 107, due to potential health and safety concerns with PCBs and working in old/abandoned buildings. Another team member was located outside the entrance of the building within ear shot in case of emergencies.

DR No. 18		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

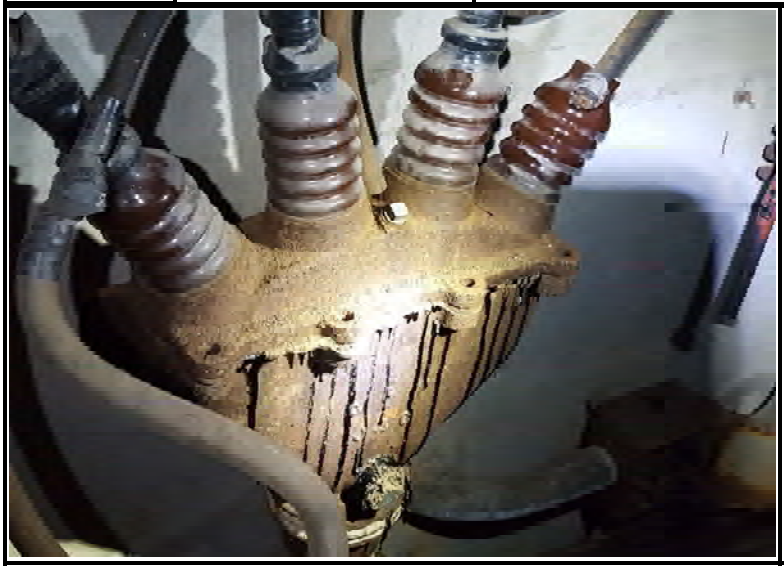

Photo 5. Dried product on outside of "transformer". This feature may more appropriately be identified as distribution boxes or electrical splitters. AECOM is following up with staff electrician for proper identification and reference in future reports. One wipe sample was collected from the casing surface; additionally, chips of the dried product were collected for analysis. Concrete chip samples are scheduled to be taken beneath the unit.

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0700 and completed the Morning Tailgate Health and Safety Meeting. The team reviewed the health and safety procedures with all on-site team members and task hazards associated with scheduled field work for the day. Kelly Lurie arrived on-site at 1600 and replaced Greta White as the SSHO, after which Ms. White demobilized from the site.

Groundwater Sampling

Groundwater samples were collected at the following AOCs.

Former Building 203. One groundwater sample was collected at 203-SB01 for analysis of VOCs, SVOCs, PCBs, and metals. Four partial samples were collected at 203-SB02, -SB03, -SB04, and -SB05. Recharge in these wells was insufficient to fill all required sample bottleware. Approximately 1-Liter of water was produced at each well over 6 hours of sample collection. Additional attempts will be made on 6/21/16; if sufficient volume cannot be collected, the volume collected will be sent to the laboratory for a shortened analyte list.

Waste Disposal System (WDS) - Site Wide. The partial groundwater sample from WDS-SB07 began on 6/19/16 was finalized for analysis of VOCs, SVOCs, PCBs, and metals. Recharge was insufficient to fill all sample bottles after four attempts; only 3 amber liters could be collected. Two were submitted for analysis of PAHs and one for PCBs.

Two partial samples were collected at WDS-SB18 and -SB19. Recharge in these wells was insufficient to fill all required sample bottleware. Additional attempts will be made on 6/21/16 and the volume is collected will be submitted to the lab for analysis of a shortened analyte list.

Motor Pool (MP). The partial groundwater sample from MP-SB02 was finalized for analysis of VOCs, SVOCs, and energetics.

Engineering Field Office (EFO). The partial groundwater sample from EFO-SB01 was finalized for analysis of energetics.

H-21. The partial sample was from H21-SB01 was finalized for analysis of VOCs, SVOCs, PCBs, and metals.

QA/QC (MS/MSD and Duplicate) samples were collected at various AOCs to achieve a rate of 10% duplicates and 20% MS/MSD per analysis site-wide.

Surveying and GPS Coordinate Collection

GPS co-ordinates for borings/temporary wells and surface soil samples were collected at AOCs STB (Building 22), H-11, H-12, H-17, WDS (-SB18 through -SB27), Building 2010, and Building 201 in conjuction with surveying oversight. AECOM collection Northing and Easting co-ordinates (x,y), while the CGE Surveyors collected elevation data. (See details below in "Work Completed by AECOM Subcontractors."

Sample Management and Shipment

Soil and groundwater samples collected collected on Friday 6/17/16, Saturday 6/19/16, and Monday 6/20/16 were Quality Control checked, recorded on Chain of Custody records, and packed for shipment. Eight coolers were shipped overnight via FedEx for delivery to RTI Labortories (Livonia, MI). Chain of Custody records were e-mailed to the project chemist (Devon Chicoine) and the RTI Laboratories Project Manager (Kathy Griffin) in the evening for shipment tracking.

WORK COMPLETED BY AECOM SUBCONTRACTORS

Two new team members from Clean Globe Environmental (CGE), Tony Fiorentone and Chris Gamble, arrived on site. They received UXO Awareness Training and reviewed/signed all applicable Activity Hazard Analyses (AHAs) in the on-site Accident Prevention Plan (APP). CGE completed surveying for elevation information at AOCs STB (Building 22), H-11, H-12, H-17, WDS (-SB18 through -SB27), Building 2010, and Building 201. CGE was off-site from 1330 to 1400 for lunch.

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

Tom Dess (NY State Parks Superintendent) was notified in the morning that 11 team members would be on site on 6/20/16 (including USACE, AECOM, and CGE).

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0700 and completed the Morning Tailgate Health and Safety Meeting. The team reviewed the health and safety procedures with all on-site team members and task hazards associated with scheduled field work for the day.

Groundwater Sampling

Groundwater samples were collected at the following AOCs.

Former Building 203. Four groundwater samples were finalized at 203-SB02, -SB03, -SB04, and -SB05. Recharge in the wells was insufficient to fill all desired sample bottleware after over 10 attempts per well over two days; analyses able to be collected are described below.

- -SB02 VOCs, metals, 2 full Liters and 1 partial liter for SVOC-PNA, and 2-L for PCBs were collected.
- -SB03 VOCs, metals, 2 full Liters and 1 partial liter for SVOC-PNA, and 2-L for PCBs were collected.
- -SB04 VOCs, metals, and 1.5-L for SVOC-PNA were collected.
- -SB05 VOCs, metals, and 2-L for SVOC-PNA were collected.

Waste Disposal System (WDS) - Site Wide. The partial groundwater samples at WDS-SB18 and -SB19 were finalized for analysis of VOCs, SVOCs, PCBs, and metals. Recharge in these wells was insufficient to fill all desired sample bottleware after 10 attempts over two days; only two or three amber liters could be collected instead of six.

H-14. Two groundwater samples were collected from H14-SB01 and H14-SB03 for analysis of PAHs and metals.

H-17. One groundwater sample was collected from H17-SB03 and H14-SB03 for analysis of VOCs, SVOCs, PCBs, and metals. Additionally, one partial groundwater sample was collected from H17-SB02. Recharge in the well was insufficient to fill all sample bottleware; additional attempts will be made to complete the sample on 6/22/16.

QA/QC (MS/MSD and Duplicate) samples were collected at various AOCs to achieve a rate of 10% duplicates and 20% MS/MSD per analysis site-wide.

Battery 113 Survey and Sample Collection

A site survey of Battery 113 was conducted to identify the presence of tanks and waste drums, assess if standing water was present in pits, and identify visual evidence of potentially PCB-contaminated stained concrete. Prior to entering the building, the team conducted demolition of the sealed entryway to Battery 113 to create an entrance for the team, using a hammer drill and sledge hammer. Appropriate safety protocols were observed (see "Safety Observations" Section).

Four team members entered the battery to complete the survey. Team members woree tyvek suites, rubber booties, nitrile gloves, full or half-face respirators with P100/OV cartridges, hardhats, and head lamps. The buddy system was utilized while inside the Battery; no team member was ever left alone. Additionally, at least one team member was stationed outside the entrance of the Battery at all times to 1) prevent park visitors from trespassing in the secure area and attempting to enter, 2) as a safety precaution for the people inside, and 3) to bring additional supplies to the people ' inside the Battery so they wouldn't have to exit until the work was complete. The team used extreme caution navigating the battery and taking care with where to step; many of the pit/manhole covers were not stable and were collapsing. Additionally, white mold was present throughout the building on walls, ceilings, old furniture, and other structures.

Two pits with standing water were observed (see locations indicated on attached field map). Additional pits/open manholes/trenches were observed throughout the Battery, but no others contained standing water. One liquid characterization sample was collected from an open pit (B113-LC02-01) for disposal purposes (analyses: VOCs, SVOCs, PCBs, and metals). A second sample was not collected from the other pit with water because it appeared to contain human waste.

Approximately mid-way down the main hallway, another narrow hallway led to the Power Room where Tanks 3 and 4 were still present on the wall. No labels were present on the tanks, but the team approximates that each tanks had a 250 gallon capacity. The team was able to determine that fluid was still present in the Tanks; however, the team could not tell how full the tanks were. There was a level meter on the wall that potentially measured tank volume, which read 3/4 full; however, the team could not verify the meter's purpose or whether it was still working. The cylinders below Tanks 3 and 4 were not labeled (or were too rusted to read the labels; however, they appeared to be empty (hollow noise when the team knocked on the cylinders).

DR No. 20		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

WORKED PERFORMED BY AECOM (continued)

Battery 113 Survey and Sample Collection (continued)

One liquid characterization sample (B113-LC01-01) was collected from diesel Tanks 3 and 4 and taken for fuel analysis, ignitability, and toxicity for purposes of disposal characterization. Approximtaly 16 L of volume was collected and volume was still present in the tanks.

Trenches with piping were present in the room with the tanks; some of the trenches were covered with metal plate covers and others were covered with wooden planks. The wooden planks were rotting and falling apart in most places. No tanks or storage units were observed in the trenches. Additionally, the Cashin report had mentioned drums present in the Tanks 3 and 4 room. No drums were present at the time of the survey.

No transformer units were observed on the main hallway of the Battery. However, a transformer room was present adjacent to the power room where the 2 diesel tanks were located. Portions of the transformer were remaining; dried oil was observed on parts of the transformer and staining was noted on the concrete floor (see photos below). One wipe sample (B113-WP01-01) was collected from the oil-stained surface of the transformer; one concrete chip sample (B113-CC01-01) was collected at the locationof the stained concrete, using the hammer drill with a decontaminated drill bit. Additionally, an equipment blank was collected from the decontaminated drill bit after sampling.

Surveying and GPS Coordinate Collection

GPS co-ordinates for surface soil sample locations were collected at AOCs H-1, H-1, H-19, H-22, BG02, and BG04.

Sample Management and Shipment

No samples were shipped to RTI Laboratories on 6/21/16. Groundwater samples began on 6/20/16 were finalized and additional concrete chip, wipe, and liquid chatacterization samples were collected on 6/21/16. All samples were held on fresh ice overnight for shipment on 6/22/16.
The fuel sample from the diesel tanks were arranged to be taken to AB Environmental laboratory for purposes of disposal charcaterization.

WORK COMPLETED BY AECOM SUBCONTRACTORS

Chris Gamble (CGE) was on site and completed demolition of the Battery 113 entrance for AECOM to access the bunker. Additionally, Mr. Gamble was stationed outside the entrance to Battery 113 while team members were inside to prevent trespassers from entering and as a safety precaution.
Once the work at Battery 113 was complete for the day, Mr. Gamble assisted with GPS co-ordinate collection for surface soil sample locations at AOCs H-1, H-1, H-19, H-22, BG02, and BG04.

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

Tom Dess (NY State Parks Superintendent) was notified in the morning that 10 team members would be on site on 6/20/16 (including USACE, AECOM, and CGE).

SAFETY OBSERVATIONS/VIOLATIONS/COMMENTS

Hearing protection, eye protection, utility glvoes, hard hats, and saftey boots were utilized by the team during demolition of the Battery 113 entrance. All team members that entered Battery 113 wore tyvek suites, rubber booties, nitrile gloves, full or half-face respirators with P100/OV cartridges, hardhats, and head lamps.
The buddy system was utilized while inside the Battery; no team member was ever left by themselves. Additionally, at least one team member was stationed outside the entrance of the Battery at all times to 1) prevent park visitors from attempting to enter, 2) as a safety precaution for the people inside, and 3) to bring additional supplies to the people inside the Battery so they wouldn't have to exit until the work was complete.

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0700 and completed the Morning Tailgate Health and Safety Meeting. The team reviewed the health and safety procedures with all on-site team members and task hazards associated with scheduled field work for the day.

Groundwater Sampling

Groundwater samples were collected at the following AOCs.

Engineering Field Office (EFO). One groundwater sample was collected at EFO-SB01 for analysis of energetics. (This was a resample due to an out-of-temperature cooler containing the previous sample).

Motor Pool (MP). Two groundwater samples were collected at MP-SB03 and MP-MW01 (the existing well for nonpotable water at the Motor Pool). MP-SB03 was collected for analysis of VOCs, SVOCs, PCBs, Energetics; MP-MW01 was collected for analysis of VOCs, SVOCs, PCBs, Energetics, and metals. (MP-SB03 was a resample due to an out-of-temperature cooler).

QA/QC (MS/MSD and Duplicate) samples were collected at various AOCs to achieve a rate of 10% duplicates and 20% MS/MSD per analysis site-wide.

The team made multiple visits to Building 3001 to attempt to identify the existing well in the area (called 3001-MW01 for the Phase 1 RI work); historic maps indicated that the well was in the back of the building under the Verizon Antenna, which was gated off from access and not accessible by the park service. Tom Dess was able to meet the team around 1700 and identified the well in another location: within the manhole where the new Suffolk County Water Line entered near Building 3001. The team will attempt to sample the well on 6/23/2016.

Building 107 - Sample Finalization

The concrete chip sample (107-CC01-01) in Building 107 was finalized; sample collection began on 6/19/16 in conjuction with the Building 107 Survey. However, the hammer/chisel method was not sufficient for obtaining concrete chips in this building and a hammer drill was obtained from CGE to finalize the sample. The team wore tyvek suites, rubber booties, respirators with P100/OV cartridges, hardhats, headlamps, and nitrile gloves while working inside the building due to due to potential safety concerns with PCBs and working in old/abandonded buildings. Another team member was located outside the entrance of the building within earshot in case of emergencies.

Surveying and GPS Coordinate Collection

GPS co-ordinates for borings/temporary wells and surface soil samples were collected at AOCs former Building 203, Building 2010, AST-35, FPH, WDS (-SB01 through -SB17), Motor Pool, Engineering Field Office, former Building 34, H-4, H-6, H-14, H-21, and Plotting Room 113, in conjuction with surveying oversight. AECOM collected Northing and Easting co-ordinates (x,y), while the CGE surveyors collected elevation data.

Sample Management and Shipment

Soil, groundwater, wipe, chip, and liquid characterization samples collected on Monday 6/20/16, Tuesday 6/21/16, and Wednesday 6/22/16 were Quality Control checked, recorded on Chain of Custody records, and packed for shipment. Eight coolers were shipped overnight via FedEx for delivery to RTI Labortories (Livonia, MI). Chain of Custody records were e-mailed to the project chemist (Devon Chicoine) and the RTI Laboratories Project Manager (Kathy Griffin) in the evening for shipment tracking.

DR No. 21		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

WORK COMPLETED BY AECOM SUBCONTRACTORS

Chris Gamble and Tony Fiorintine (CGE) completed surveying of the remaining temporary wells at AOCs former Building 203, Building 2010, AST-35, FPH, WDS (-SB01 through -SB17), Motor Pool, Engineering Field Office, former Building 34, H-4, H-6, H-14, H-21, and Plotting Room 113.

f

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

Tom Dess (NY State Parks Superintendent) was notified in the morning that 11 team members would be on site on 6/20/16 (including USACE, AECOM, and CGE).

SAFETY OBSERVATIONS/VIOLATIONS/COMMENTS

One team member discovered an imbedded tick during evening tick check on 6/21/2016. An AECOM incident report was completed by the SSHO Kelly Lurie and all appropriate managers were notified.

SITE OBSERVATIONS

None

None	Call-a-Head NY picked up the Porta-John from the Site. Pick-up of the Storage Units (AB Richards) was
	scheduled for Tuesday 6/28/2016.

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0700 and completed the Morning Tailgate Health and Safety Meeting. The team reviewed the health and safety procedures with all on-site team members and task hazards associated with scheduled field work for the day.

Groundwater Sampling

The team attempted to collect a groundwater sample from the existing well at Building 3001, which was previously used for water in the building, prior to connection to Suffok County Water 5 years ago. However, after pumping 2.4 liters from well 3001-MW01, the pump stopped producing water. The peristaltic tubing intake was at a depth of 18.36 btoc. A depth to water measurement at the time the pump stopped producing water confirmed the water level to be 18.36 feet btoc. The initial depth to water prior to any pumping was 2.42 feet btoc, representing an initial water column of 15.94 feet from the water surface to the tubing intake. The 2.4 liters removed was consistent with the volume of water in a 15.94 column of water in 1-inch PVC pipe.

A depth to water measurement 30 minutes later at 0900 confirmed that the water level was still at 18.36 feet btoc, as did another measurement 30 minutes after that at 0930. Taking these observations into account, the team determined that it was very likely that the 1-inch PVC pipe was simply the water supply line from the pump, and that there was no communication between the water bearing formation and the 1-inch PVC pipe. Hence, the team chose not to submit the water collected because:

1. The water in the 1-inch PVC casing is stagnant water trapped in the casing by the supply pump check valve from approximately 5 years earlier when the water supply was changed over to the municipal supply line, OR
2. The water in the 1-inch PVC casing is surface water runoff from the surrounding paved/grass area.

While there is a 6-inch drain pipe at the bottom of the vault, the top of the well cap and 1-inch PVC pipe was just 14 inches above the vault floor. One cannot rule out a scenario in which a heavy rain could flood the vault with enough surface runoff to exceed the ability of the drain pipe to drain the vault, thus allowing surface runoff into the 1-inch PVC casing (which is not plugged).

The dimensions of the vault are 62 inches long, 60 inches wide, and 65 inches deep. The vault entrance is 36 inches long and 27 inches wide. Although there were ladder rungs to allow access into the vault, and the 4-inch well cap could likely be removed to inspect the well further, the vault may be a confined space, which would require further preparation to enter. Brendan McGuinness (AECOM) will research Suffolk County records to see if there is a well abandonment record.

Temporary Well Abandonment

All temporary wells were abandoned except those at former Building 203 (where the free product was located), AST-35, and the FPH. These temporary wells were left in place, because 1) they were located in locked areas of the park and 2) in case the need to re-sample arises, associated with the spill report filed for the AOC. Temporary wells which were left in place were cut at-grade and closed with a PVC cap.

Temporary wells were abandoned per applicable NYSDEC guidelines by removing (at minimum) the top 5-feet of riser from the temporary well and backfilling with bentonite, with sand at the top.

Status of Former Deep Supply Well at Building F100C

As requested by Mr. Goepfert (USACE), AECOM surveyed for the location and condition of the formerly used deep water well outside of Building F100c (and topographically downgradient of Building 203). However, the well could not be located outside of Building F100c and AECOM could not get inside the pump house building due to nailed up boarding to see if the well head existed inside the building.

GPS Coordinate Collection

GPS co-ordinates for borings/temporary wells and surface soil samples were collected at AOCs H-15, Plotting Room 113, Building 3001, H-2, H-5, H-9, H-18, H-20, BG01 and BG03.

Contractor Daily Reports

DATE: 6/23/2016 Thursday

DR No. 22		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

WORKED PERFORMED BY AECOM (continued)

IDW Management

One drum with liquid IDW (from purge water and decontamination water) and one drum with soil IDW (from petroleum-contaminated soil cores) were staged on-site at the Motor Pool. The drums were properly labeled with Non-Hazardous Waste Labels. The drums will be stored here until the Phase 2 RI Field Event, and IDW generated during Phase 2 will be added to the drums. At the end of Phase 2, IDW samples will be collected for waste characterization and off-site disposal of IDW will be arranged in a manner appropriate to its classification.

Sample Management and Shipment

Environmental samples collected on Sunday 6/19/16 (chip, wipe) and Tuesday 6/21/16 (groundwater) were Quality Control-checked, recorded on Chain of Custody records, and packed for shipment. One cooler was shipped overnight via FedEx for delivery to RTI Labortories (Livonia, MI). The Chain of Custody record was e-mailed to the project chemist (Devon Chicoine) and the RTI Laboratories Project Manager (Kathy Griffin) in the evening for shipment tracking. Additionally, custody of cooler #084, containing the fuel characterization samples, was transferred to ChrisGamble (CGE) at 1400 for transport to AB Oil for characterization (contracted through CGE). The cooler was delivered to AB Oil the afternoon of 6/23/2016.

Demobilization from the Site

Once the tasks for the day were complete, the team packed all supplies and equipment, cleaned the storage unit and guard shack, packaged unused bottleware and coolers for shipment to RTI Laboratories, and demobilized from the site. The Camp Hero State Park master keys and West Gate Guard Shack key were returned to Tom Dess at Montauk Downs.

WORK COMPLETED BY AECOM SUBCONTRACTORS

Chris Gamble was on site from 1000 to 1400 to assist with well abandonment and other miscellaneous tasks. Custody of cooler #084, containing the fuel characterization samples, was transferred to to Mr. Gamble at 1400 for transport to AB Oil for characterization (contracted through CGE). The cooler was delivered to AB Oil the afternoon of 6/23/2016. The sample will be analyzed by Dexsil test for halogenated solvents, toxicity and ignitability.

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

Tom Dess (NY State Parks Superintendent) was notified in the morning that 10 team members would be on site (including USACE, AECOM, and CGE).

Fuel Pump House / AST 35. Collection of temporary well location surface elevations by the Clean Globe Environmental (CGE) land surveying team, June 2016.

Fuel Pump House / AST 35. Geologist Mike Glinski (AECOM) performing PID-screening of soil cores from location FPH-SB01, June 2016.

Fuel Pump House / AST 35. Geologist Mike Glinski (AECOM) completing soil logging at FPH-SB01 while Kathryn Priess (AECOM) collects soil samples, June 2016.

Fuel Pump House / AST 35. Soil core collection from location AST35-SB03 with the Direct Push 6620 DT rig by New England Geotech (NEG), June 2016.

Fuel Pump House / AST 35. View of the former AST 35 containment area and the Fuel Pump house from the North, with sample locations flagged, June 2016.

Fuel Pump House / AST 35. Nicole Schulman (AECOM) completing soil logging at AST35-SB03 while John Hudson (CGE) collects soil samples, June 2016.

Fuel Pump House / AST 35. The end of the former fuel distribution line at the Fuel Pump House, identified by Shondstadt® magnetometer, June 2016.

Fuel Pump House / AST 35. Location FPH-SB03 had elevated PID readings in soil and the temporary well headspace and petroleum odor in purged groundwater, June 2016.

Former Building 034. Debris at former Building 034, which led to development of an additional AOC, May 2016.

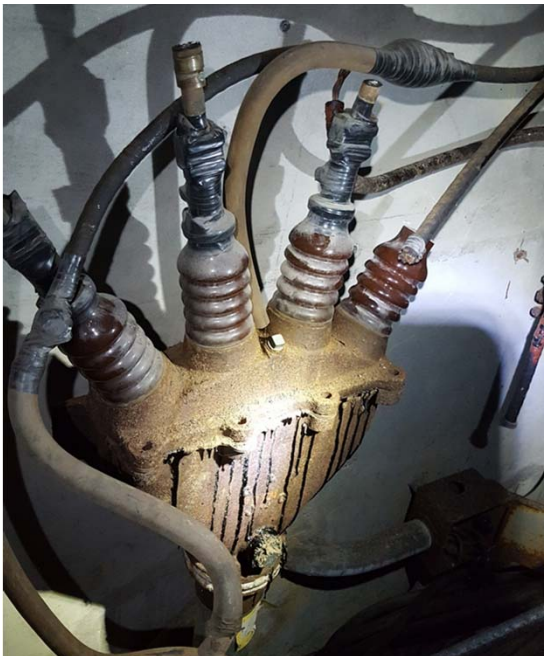
Former Building 034. Furnace at former Building 034 near former building remnants, May 2016.

Former Building 034. Botanist Steve Glenn (AECOM) performs the rare plant survey at former Building 034, May 2016.

Building 107 (Electrical Substation). Greta White and Amanda Martin (AECOM) in PPE before entering Building 107 to collect concrete chip samples for PCBs, June 2016.

Building 107 (Electrical Substation). Portions of the former transformer, including a medium voltage cable breakout, June 2016.

Building 107 (Electrical Substation). Portions of the former transformer, including a medium voltage cable breakout and metal boxes, June 2016.



Building 107 (Electrical Substation). Close-up of a medium voltage cable breakout with dried oil, June 2016. One wipe sample was collected from the surface.

Battery 113. Chris Gamble (CGE) begins demolition of the entrance to Battery 113 with a demolition drill, June 2016.

Battery 113. John Schroeder (AECOM) progresses demolition of the entrance to Battery 113 with a sledge hammer, June 2016.

Battery 113. Final crawlspace entrance to Battery 113, June 2016.

Battery 113. Hazardous materials survey team in PPE, including tyvek suits and Air-Purifying Respirators (APRs), prior to entrance to Battery 113, June 2016.

Battery 113. Hazardous materials survey team entering Battery 113 with lights, sampling equipment, and other supplies, June 2016.

Battery 113. Pit with standing water in Battery 113. Liquid characterization sample B113-LC02-01 collected at this location, June 2016.

Battery 113. Second pit with standing water near entrance to Battery 113. No liquid characterization collected at this location, June 2016.

Battery 113. Access to main hallway of Battery 113 from entryway, June 2016. This demolition was already present when the team entered the Battery.

Battery 113. Metal gate at hallway to Power Room in Battery 113, June 2016. Gate is rusted in place and cannot open further.

Battery 113. Stairwell and hallway from main hallway in Battery 113 to the Power Room, with rotten wooden floorboards near foot of stairwell, June 2016.

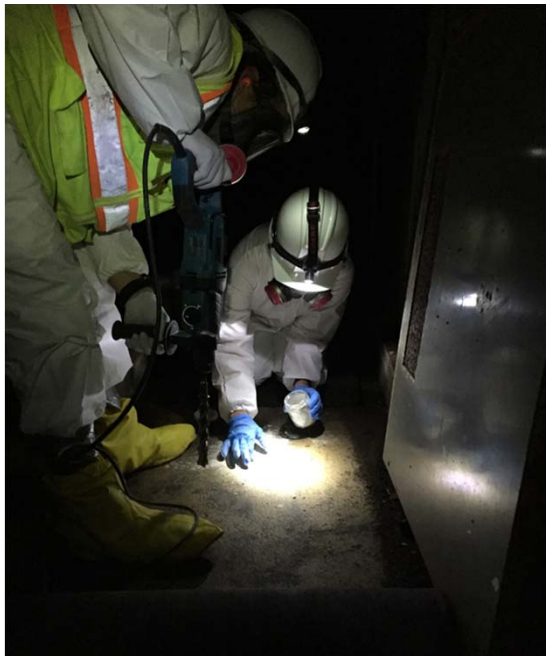
Battery 113. Fuel ASTs 3 and 4 in the Power Room of Battery 113. Tanks were not labeled; weathered fuel was present in tanks, June 2016.

Battery 113. Three extremely rusted, unlabeled cylinders present below ASTs 3 and 4; the cylinders appeared to be empty, June 2016.

Battery 113. Trenches with piping in the Power Room of Battery 113, June 2016.

Battery 113. Trenches with piping in the Power Room of Battery 113, covered with rotting wooden planks, June 2016.

Battery 113. Floor staining in Electric Room of Battery 113 which was the location of concrete chip sample B113-CC01-01, June 2016.



Battery 113. Collection of concrete chip sample in Battery 113 Electric Room with rotary hammer drill at location of floor staining, June 2016.

Battery 113. Former Transformer case in Battery 113 Electric Room, June 2016.

Battery 113. Partial cable components of the former transformer in the Electric Room of Battery 113, June 2016.

Battery 113. Partial cable components of the former transformer in the Electric Room of Battery 113, June 2016.

Former Building 203. Soil core collection from location 203-SB02 with the Direct Push 6620 DT rig by New England Geotech (NEG), June 2016.

Former Building 203. Former Building 203 area with the Radar Tower in the background, location 203-SB04 in the foreground, June 2016.

Former Building 203. The end of the former fuel distribution line from the Fuel Pump House at former Building 203, identified by Shondstadt® magnetometer, June 2016.

Former Building 203. Location PZ-03 at former Building 203 being gauged with an interface probe; five feet of free product was identified on 17 June 2016.

Building 203. Drilling equipment parked at former Building 203 beside the Radar Tower (Building 201), June 2016.

Building 2010. Pipe on the east side of Building 2010, June 2016.

Building 2010. Pipe at Building 2010, June 2016.

Building 2010. Unknown structure near Building 2010, June 2016.

Existing well at Building 3001. Vault for historic water well at Building 3001, showing the confined nature of the space, June 2016.

Existing well at Building 3001. Vault for historic water well at Building 3001, showing surface runoff potential, June 2016.

Existing well at Building 3001. Inside of the vault for the existing well at Building 3001, showing 4-inch casing with a 1-inch PVC pipe, with 6-inch drain pipe, June 2016.

Existing well at Building 3001. Municipal water supply line and prior holes for well supply line inside vault, June 2016.

Building F100C. New England Geotech completing decontamination of the drill rod at Building F100C, June 2016.

Building F100C. Piping at Building F100C, June 2016.

H-9. Additional debris at H-9 near boiler, May 2016.

H-11 and H-12. Drilling activities at AOCs H-11 and H-12 in the picnic area of Camp Hero State Park, June 2016.

H-11 and H-12. Drilling activities at AOCs H-11 and H-12 in the picnic area of Camp Hero State Park, June 2016.

H-15. Soil core collection at H-15, June 2016.

H-15. Soil cores from location H15-SB02, from 0 to 25 ft bgs, with very slight moisture noted from 15 to 25 ft bgs, June 2016.

H-17. Soil cores from H-17, displaying sandy lithology, June 2016.

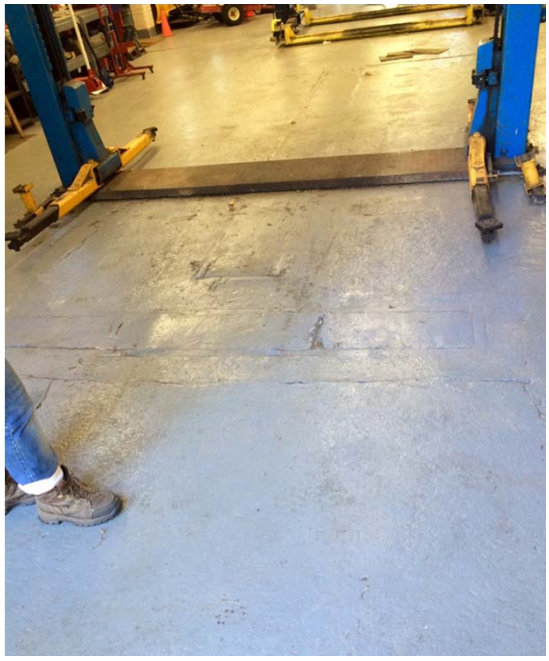
H-18. UXO Technician II LeNina Bennerson (AECOM) performs a magnetometer survey of H-18; there was no drum at this location but metal debris were identified, June 2016.

H-19. The former AST at AOC H-19, May 2016. Surface soil sampling and PID headspace screening were conducted underneath the AST in June 2016.

H-20. The drum at H-20, located within the wooden revetments of Camp Hero State Park, June 2016.

H-20. Geologist Mike Glinski (AECOM) and Mike Podamy (NEG) conduct surface soil sampling adjacent to H-20, June 2016.

Motor Pool. Marked electric lines from the utility clearance at the Motor Pool, June 2016.



Motor Pool. Motor Pool garage bay drilling location (MP-SB01), which was the site of the former DoD hydraulic lift, June 2016.

Motor Pool. Soil core collection from location MP-SB01 inside the Motor via the Direct Push 6620DT rig by NEG, June 2016.

Motor Pool. Soil core collection from location MP-SB01 inside the Motor via the Direct Push 6620DT rig by Keith Precious (NEG), June 2016.

Motor Pool. John Hudson (CGE) completing PID screening of the soil core from MP-SB01, the location within the Motor Pool garage bay, June 2016.

Motor Pool. Close-up of the soil core from MP-SB01, the location within the Motor Pool garage bay, June 2016.

Motor Pool. Existing well at the Motor Pool near active ASTs, June 2016.

Plotting Room 113. Entrance to Plotting Room 113. Metal debris was located nearby via magnetometer survey in May 2016; sampling was conducted in June 2016.

Suspected Tank B (Building 22). Mike Podamy (NEG) conducting soil borings around Suspected Tank B via Direct Push rig 6620DT, June 2016.

Suspected Tank C (former Building 2). Building debris uncovered while conducting "test holes" at the suspected tank C location, June 2016.

Suspected Tank C (former Building 2). Pipe uncovered while conducting "test holes" at the suspected tank C location, June 2016.

Suspected Tank C (former Building 2). "Test holes" were conducted in June 2016, to investigate anomalies identified in the May 2016 geophysical survey.

Suspected Tank H (Building 109). "Test holes" were conducted in June 2016, to investigate anomalies identified in the May 2016 geophysical survey.

Suspected Tank H (Building 109). Wire mesh and rebar identified in “test holes” to investigate anomalies identified in the May 2016 geophysical survey, June 2016.

Suspected Tank H (Building 109). Wire mesh and rebar identified in “test holes” to investigate anomalies identified in the May 2016 geophysical survey, June 2016.

Suspected Tank H (Building 109). Backfilled "test holes" at suspected tank H, June 2016.

Waste Disposal System. Soil core collection from a waste disposal system location via the Direct Push 6620DT rig by Keith Precious (NEG), June 2016.

Waste Disposal System. Re-collection of the WDS-SB01 0 to 5 ft bgs run, which yielded more recovery than the initial run; still wet/mucky near surface, June 2016.

Waste Disposal System. Soil core collection from location WDS-SB01 by the chlorine contact chamber via the Direct Push 6620DT rig by Mike Podamy (NEG), June 2016.

Waste Disposal System. Soil core collection from location WDS-SB03 by the chlorine contact chamber via the Direct Push 6620DT rig by Keith Precious (NEG), June 2016.

Waste Disposal System. Concrete cover/manhole near roadside at the original RI Work Plan WDS-SB06 location, June 2016.

Waste Disposal System. Portion of water line found in vicinity of the original RI Work Plan WDS-SB06 location, June 2016.

Waste Disposal System. Uncovered concrete feature/suspected septic tank or cleanout found in area to which WDS-SB06 and -SB07 were relocated, June 2016.

Waste Disposal System. Flagged locations for WDS-SB06 and WDS-SB07 across the road from the original RI Work Plan locations, June 2016.

Waste Disposal System. Advancing boring WDS-SB07, June 2016. Location was relocated across the street due to identification of a suspected septic tank.

Waste Disposal System. Soil core from location WDS-SB07 showing zone of concrete rubble around 6.5 to 7 ft bgs, June 2016.

Waste Disposal System. Soil cores at location WDS-SB14, including the first four runs (0 to 20 ft bgs), June 2016.

Kathryn Priess (AECOM) collecting groundwater samples.

Mike Glinski (AECOM) collecting groundwater samples.

John Schroeder (AECOM) collecting groundwater samples.
