Site/Project Name:	Remedial Investigation, at Former Camp Hero State Park, Montauk, New York.	Page	1
Laboratory:	Eurofins Laboratories, Inc. – Lancaster, PA.		
Laboratory SDG:	APP77		
Date(s) of Collection:	June 15th, 2017		
Number/Type Samples & Analyses:	16 soil samples and 2 field duplicates for a project-specific list of metals (re-analysis of APP34 metals)		
Data Reviewer:	Devon Chicoine AECOM/Arlington, VA		
Completed:	December 7th, 2017		

SUMMARY

AECOM conducted a reduced-level data validation on the ADR output for soil data included in Sample Delivery Group (SDG) APP77. This reduced-level data validation verified appropriate application of DV qualifications and reviewed laboratory narrative issues to interpret potential data usability for exceedances noted by the ADR and to identify potential issues not included in the ADR, Data quality requirements can be found in the Final *2017 Sampling and Analysis Plan, Remedial Investigation at Former Camp Hero, Montauk, New York*, prepared by AECOM in June, 2017.

REVIEW ELEMENTS

This reduced-level data validation report included an evaluation of the project-specific DQOs in terms of data accuracy, precision, sensitivity, representativeness, and completeness. The validation procedures employed consisted of the following:

Review of ADR output for the following QC parameters:

✓ Holding times and sample preservation

✓ Laboratory method blank data

NA Field rinsate blank data

NA Trip blank data

✓ Laboratory control sample (LCS) recoveries

✗ Matrix spike (MS) and/or matrix spike duplicate (MSD) results

✓ Surrogate recoveries

✗ Laboratory duplicate results

✗ Field duplicate results

✓ Quantitation limits and sample results

The following additional reviews were conducted on the hardcopy data package:

✓ Review of COC documents to verify sample identities

✓ Review of laboratory narrative or sample log-in documents to verify any potential problems with custody seals, container integrity, sample preservation, labeling, etc.

✓ Spot-check of "J" data, reported below the RL, as reported in the ADR.

✓ General reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. The symbol (✗) indicates that data were qualified on the basis of this parameter.

FINDINGS

The following table defines the data qualifiers assigned by ADR.

For the soil sample (DU04-S011-00-01), both the total chromium and hexavalent chromium results appear to be valid and verified by the lab. The calculated trivalent chromium result for the sample is nondetect at the hexavalent chromium limits.

Due to the Eurofins SW6020A metals data breach, the original metals results under APP34 were rejected for very low level check standards. The 16 soil samples and 2 field duplicates were re-digested and analyzed.

Antimony was detected in the initial calibration blank and in the interferent check solution ICSA. Two antimony results below the limit of detection were qualified as J+.

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is an estimated quantity with an unknown bias.
J+	The result is an estimated quantity, but the result may be biased high.

Attachment A presents a summary of qualified data. Based on review of the ADR output and laboratory narrative, all DQOs were met with any exceptions appropriately qualified by ADR and ADR Discrepancy reports.

Attachment B and Table B-1 present summaries of the SW6020A instrument calibration review.

Lab report reviewed: APP 77 Reviewed by: Steve Szocik 12/11/2017

Solid Data Review Summary for Method SW-846 6020A

The laboratory re-digested and re-analyzed the samples reported in APP34 and submitted the new results as APP77. The attached table presents the quality control parameters evaluated.

The laboratory quantitated with a two point calibration utilizing a zero point and a high concentration standard. The majority of the quality control samples analyzed met the project acceptance criteria. There were a few detections in the instrument blanks and interference check standards, but overall the effects were minor and would result in qualification but do not affect the usability of the results.

Three different concentrations of analytical standards and the laboratory control sample (LCS) were evaluated. The initial calibration verification (ICV), continuing calibration verification (CCV), the low level check standard (LLC) and LCS are analyzed at varying concentrations along the calibrated instrument range. The ICVs, CCVs, and LLC do not go through the digestion process and serve as instrument verification without any contribution from the preparation procedure. The analysis of the LCS evaluates the variability of both the analytical and preparation processes. All of the LCS recoveries were within acceptance limits supporting acceptable accuracy for both preparation and analysis at the LCS spiked concentrations.

The ICVs and CCVs serve to measure the accuracy in the middle and the lower end of the calibrated range. The laboratory selected the ICV to be one half the concentrations of the high calibration standard and the CCV at one quarter of the upper calibration standard. All of the ICV and CCV percent recoveries (%Rs) were acceptable indicating accuracy at concentrations throughout the calibration range.

The LLC is used to verify the accuracy at the limit of quantitation (LOQ) which is the lowest concentration where precision and accuracy is known. The LLC was analyzed at the LOQ for these soil samples. The laboratory used limits of 80-120%R for the LLC. All of the observed LLC recoveries were acceptable.

All of the instrument and preparation blanks were less than the LOQ. Furthermore, except for manganese all blank detections were less than the LOD. Manganese was detected at a concentration between the LOD and LOQ. Detected manganese results less than the LOQ were affected and would be J+ qualified with a high bias indicated. All manganese sample results were above the LOQ. Sodium was observed in one CCB at a negative concentration less than the LOD. Sodium results less than the LOD may be affected if associated to this CCB. However, sodium is a commonly detected at much higher concentrations and is likely not affected; all but one sodium results were reported between the LOD and LOQ and qualified as trace results by the lab.

All of the observed detections in the ICSA interferent check for the un-spiked analytes were also less than the LOQ. Except for cobalt and manganese all of the ICSA detections were also less than the LOD. Detected sample results less than the LOQ may be affected and would be J+ qualified with a high bias indicated. All cobalt and manganese samples results were above the LOQ.

All of the observed calibration blank and interferent check standard detections were less than the LOQ and associated to estimated results. Therefore, any qualifications added because of the calibration and blank review would be associated to data already qualified as estimated.

RE: Camp Hero, Montauk, NY (GTX-306582)

Dear Brendan:

Enclosed are the test results you requested for the above referenced project. GeoTesting Express, Inc. (GTX) received two samples from you on 6/12/2017. These samples were labeled as follows:

Sample
DUI-5005-15-17
DUI-5015-25-27

GTX performed the following test on each of these samples:

ASTM D5084 - Flexible Wall Permeability

The results presented in this report apply only to the items tested. This report shall not be reproduced except in full, without written approval from GeoTesting Express. The remainder of these samples will be retained for a period of sixty (60) days and will then be discarded unless otherwise notified by you. Please call me if you have any questions or require additional information. Thank you for allowing GeoTesting Express the opportunity of providing you with testing services. We look forward to working with you again in the future.

Respectfully yours,

Joe Tomei

GeoTesting EXPRESS

WARRANTY and LIABILITY

GeoTesting Express (GTX) warrants that all tests it performs are run in general accordance with the specified test procedures and accepted industry practice. GTX will correct or repeat any test that does not comply with this warranty. GTX has no specific knowledge as to conditioning, origin, sampling procedure or intended use of the material.

GTX may report engineering parameters that require us to interpret the test data. Such parameters are determined using accepted engineering procedures. However, GTX does not warrant that these parameters accurately reflect the true engineering properties of the *in situ* material. Responsibility for interpretation and use of the test data and these parameters for engineering and/or construction purposes rests solely with the user and not with GTX or any of its employees.

GTX's liability will be limited to correcting or repeating a test which fails our warranty. GTX's liability for damages to the Purchaser of testing services for any cause whatsoever shall be limited to the amount GTX received for the testing services. GTX will not be liable for any damages, or for any lost benefits or other consequential damages resulting from the use of these test results, even if GTX has been advised of the possibility of such damages. GTX will not be responsible for any liability of the Purchaser to any third party.

Commonly Used Symbols

A	pore pressure parameter for $\Delta\sigma_1 - \Delta\sigma_3$
B	pore pressure parameter for $\Delta\sigma_3$
CAI	CERCHAR Abrasiveness Index
CIU	isotropically consolidated undrained triaxial shear test
CR	compression ratio for one dimensional consolidation
CSR	cyclic stress ratio
C_c	coefficient of curvature, $(D_{30})^2 / (D_{10} \times D_{60})$
C_u	coefficient of uniformity, D_{60}/D_{10}
C_c	compression index for one dimensional consolidation
C_α	coefficient of secondary compression
c_v	coefficient of consolidation
c	cohesion intercept for total stresses
c'	cohesion intercept for effective stresses
D	diameter of specimen
D	damping ratio
D_{10}	diameter at which 10% of soil is finer
D_{15}	diameter at which 15% of soil is finer
D_{30}	diameter at which 30% of soil is finer
D_{50}	diameter at which 50% of soil is finer
D_{60}	diameter at which 60% of soil is finer
D_{85}	diameter at which 85% of soil is finer
d_{50}	displacement for 50% consolidation
d_{90}	displacement for 90% consolidation
d_{100}	displacement for 100% consolidation
E	Young's modulus
e	void ratio
e_c	void ratio after consolidation
e_o	initial void ratio
G	shear modulus
G_s	specific gravity of soil particles
H	height of specimen
H_R	Rebound Hardness number
i	gradient
I_S	Uncorrected point load strength
$I_{S(50)}$	Size corrected point load strength index
H_A	Modified Taber Abrasion
H_T	Total hardness
K_o	lateral stress ratio for one dimensional strain
k	permeability
LI	Liquidity Index
m_v	coefficient of volume change
n	porosity
PI	plasticity index
P_c	preconsolidation pressure
p	$(\sigma_1 + \sigma_3) / 2$, $(\sigma_v + \sigma_h) / 2$
p'	$(\sigma'_1 + \sigma'_3) / 2$, $(\sigma'_v + \sigma'_h) / 2$
p'_c	p' at consolidation
Q	quantity of flow
q	$(\sigma_1 - \sigma_3) / 2$
q_f	q at failure
q_o, q_i	initial q
q_c	q at consolidation
S_r	Post cyclic undrained shear strength
T	temperature
t	time
U, UC	unconfined compression test
UU, Q	unconsolidated undrained triaxial test
u_a	pore gas pressure
u_e	excess pore water pressure
u, u_w	pore water pressure
V	total volume
V_g	volume of gas
V_s	volume of solids
V_s	shear wave velocity
V_v	volume of voids
V_w	volume of water
V_o	initial volume
v	velocity
W	total weight
W_s	weight of solids
W_w	weight of water
w	water content
w_c	water content at consolidation
w_f	final water content
w_l	liquid limit
w_n	natural water content
w_p	plastic limit
w_s	shrinkage limit
w_o, w_i	initial water content
α	slope of q_f versus p_f
α'	slope of q_f versus p_f'
γ_t	total unit weight
γ_d	dry unit weight
γ_s	unit weight of solids
γ_w	unit weight of water
ε	strain
ε_{vol}	volume strain
ε_h, ε_v	horizontal strain, vertical strain
μ	Poisson's ratio, also viscosity
σ	normal stress
σ'	effective normal stress
σ_c, σ'_c	consolidation stress in isotropic stress system
σ_h, σ'_h	horizontal normal stress
σ_v, σ'_v	vertical normal stress
σ'_{vc}	Effective vertical consolidation stress
σ_1	major principal stress
σ_2	intermediate principal stress
σ_3	minor principal stress
τ	shear stress
φ	friction angle based on total stresses
φ'	friction angle based on effective stresses
φ'_r	residual friction angle
φ_{ult}	φ for ultimate strength

Eurofins Lancaster Laboratories Environmental LLC (ELLE)
Corrective Action Summary Letter

This page intentionally left blank.

eurofins | Lancaster Laboratories Environmental

October 26, 2017

Mark MacEwan
AECOM
Senior Program Manager
3101 Wilson Blvd
Suite 900
Arlington, VA 22201

Subject: Eurofins Lancaster Laboratories Environmental LLC (ELLE) Corrective Action Summary for AECOM Camp Hero NY

Dear Mr. MacEwan,

Below is the summary of Eurofins Lancaster Laboratories Environmental LLC's (ELLE's) investigation and corrective action plan for the Inductively Coupled Plasma-Mass Spectrometry (ICP-MS) data integrity issue that was initially communicated to your team on October 18, 2017. Our assessment of the impacted data is ongoing. Attached to this summary letter is a table of the affected data for AECOM Camp Hero NY, current as of October 26, 2017.

Background:

On September 14, 2017, a data validator contacted ELLE in regard to a result for which they were unable to confirm the value from ICP-MS data they were trying to validate. The Metals Department Manager (Robert Strocko) looked into the issue and determined that the reason the raw results did not match the result reported out of the Laboratory Information Management System (LIMS) was due to a manual change to the data import file. The following morning, Friday September 15, the Operations Director (Rick Karam), Quality Assurance (QA) Director (Dorothy Love) and Information Technology (IT) Manager (Holly Trego) were notified about the discrepancy. The IT Manager ran a comparison of data sets from the same instrument going back to January 2017 and found more instances of data changes. The changes were found to have been one digit in the record (i.e. 8938.514 to 7938.514) and were associated with only one employee. After notifying Human Resources, the Metals Department Manager, Operations Director, and QA Director met with the employee to discuss the issues with the data. During this meeting the employee admitted to making changes a few times. At that point their employment was immediately terminated. Executive management was notified of this issue and a full investigation into the scope of the data changes was launched.

Dorothy Love notified ELLE's primary TNI (The NELAC Institute) accreditation bodies of the issue by phone on Friday September 15, 2017. As the scope of the issue became more clear, and was shown to include Department of Defense (DoD) samples, additional notifications were required. Dorothy Love notified ELLE's DoD ELAP accrediting body (AB), American Association for Laboratory Accreditation (A2LA), of the DoD issue on September 19, 2017 per DoD ELAP accreditation requirements. A2LA in turn notified the DoD as is the established protocol.

CONFIDENTIAL—DO NOT RELEASE TO NON-CLIENT THIRD PARTIES.

Impact Evaluation:

The IT Manager utilized a comparison query to look for discrepancies between the calculated result using the three replicate readings and the result that was originally reported in the LIMS. The changes were being made to the calculated result and not to the replicate readings, therefore we were able to recalculate from the instrument record and determine the value that should have been reported. This initial assessment was done for the instrument associated with the original suspect data set. Once it was determined that the employee had altered the data, we evaluated all ICP-MS data from every instrument back to January 1, 2015. It has been determined that the changes were only made by the terminated employee and spanned across four instruments. Three are Agilent and one is Perkin-Elmer. The Agilent instruments give the replicate readings in intensity. The intensity is then put through a calculation to determine the final result. Without knowledge of the calculation, the employee made the changes to the final result and not to the individual replicates, so we can recalculate the result using the initial instrument output file. The Perkin-Elmer comparison needs to be evaluated manually by comparing data records due to differences with the information as it comes off the instrument, and is only used to analyze drinking water samples. The Perkin-Elmer provides the replicate readings as a concentration. We have found that in some cases, the employee had changed the replicate reading but did not recalculate the associated Relative Standard Deviation (RSD). The comparisons to assess the data from the Perkin-Elmer instrument require re-importing the records to look for discrepancies. This review is taking longer as it requires manual intervention to import the data.

Rounding issues created challenges with the assessment but we were able to set a threshold based on review of data during a non-impacted cycle. This rationale and approach was confirmed as acceptable with a 3rd party statistician. The query comparison performed was able to confirm that the changes were only associated with this employee's data sets and only occurred in the time period from 6/21/2016 to 9/15/2017.

The vast majority of the data changes were made to Quality Control (QC) and/or calibration checks, not to actual sample results. Where we see sample result changes, these are primarily cases where the result exceeded the linear calibration range of the instrument and were changed to be slightly lower than the upper limit of the calibration range. There are a few cases where lower concentration results were changed. It is not clear as to the reason for these changes. For the majority of the cases, while the samples should have been reanalyzed, they were not and where there is no sample aliquot remaining to be reanalyzed within hold time, the data would now need to have a corresponding qualification added.

As of today, we have reviewed approximately 95% of the data. However, there are files from the Perkin-Elmer instrument that are being restored from archives which then need to be evaluated.

Client notification and reanalysis/qualification:

Notification to clients regarding affected projects was made on October 18, 2017. We established a toll free number that clients can use to connect with Eurofins designated

corrective action team to address any technical concerns and to provide additional detail. We are committed to working with your team and any applicable regulators to provide them with the necessary information concerning the impact upon the Camp Hero project data (result change vs QC qualification, etc.) related to this event.

Upon your request, revised reports, electronic data deliverables, and data packages with the corrected data and corresponding data qualifications will be provided. If valid sample aliquots are still available in the laboratory, ELLE will provide retesting free-of-charge, if needed. ELLE will work collaboratively with your team to resolve the potential need for resampling and reanalysis associated with this data quality issue.

Root cause:

The root cause of the data changes is that one employee made the decision to not follow established procedures and to deviate from our ethics and quality policies. The employee's motivation for this breach appears to have been a desire to avoid the time and effort necessary to clean and maintain his instruments and to avoid reanalysis of the samples as required in Eurofins standard operating procedures. The employee had completed the company mandated ethics training and had signed off on all relevant ethics and quality SOPs yet made the decision to make these changes. Interviews conducted with other analysts and supervisory personnel in the Metals Laboratory indicate that no other employees were aware that the employee was engaged in data manipulation. There were no indications that the employee was not acting in compliance with applicable ethics and quality policies.

The system used to transfer instrument data files into LIMS is not unique to ELLE; similar processes are used across the industry. That being said, it does create vulnerability and we are working to close that vulnerability within our system.

Corrective actions:

Our Ethics training for 2017 was conducted this past summer. The employee in question attended the training in June, signed the Ethics Statement and completed the quiz successfully. The training was clearly focused on what practices are acceptable and what practices are NOT acceptable,, and clearly stated that we do not tolerate ethics violations. The training included information about how our data is used to ensure that our staff understands the importance of data generated and reported to the client and to the world at large.

On October 24, 2017, an all employee meeting occurred that addressed this issue and expectations were again emphasized around the ethics policy and ethics statement. Upon completion of the investigation, another round of ethics training will be conducted.

The changes that the employee made were to the import file used to transfer the data from the instrument to the LIMS. We have implemented a daily automated comparison query to ensure that the data matches when it is imported so that no further data is being impacted. We are reviewing all other data transfer processes used for other areas of the laboratory to determine if

CONFIDENTIAL—DO NOT RELEASE TO NON-CLIENT THIRD PARTIES.

there are vulnerabilities with the data files in those systems which can be locked down and/or monitored.

Upon completion of the investigation, all current and future correction actions will be reviewed, monitored, and fully implemented.

Commitment:

From day 1 of discovery of the data manipulation by this one employee, we assembled a team of people dedicated to determining the full scope of the issue, began the assessment of the impact to our clients, and provided our regulators with assurances that we will implement the necessary corrective action to remediate the data quality issue and prevent it from reoccurring. After completing our investigation to determine the magnitude of the data quality impacts, we are communicating our findings to our clients and are committed to working with them to remedy any harm that may have resulted from the incident. This team includes the ELLE President, Vice-President, Operations Director, QA Director, IT Manager, Metals Manager, Client Services Manager, Sales Director, Marketing Manager, and a dedicated project manager to oversee our progress. The team meets on a daily basis to ensure that we have covered all aspects and concerns and are completing the corrective actions required.

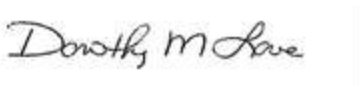
We take this breach of our protocol and policies very seriously and are committed to the actions and resources necessary to make it right.

Revised reports, SEDD files, and data packages will be submitted to AECOM no later than 5 pm on November 9, 2017 for the Camp Hero project.

Please let me know if anyone on your team or your client has any questions or need additional information. You can reach me at 717-556-7327 or via email at dorothylove@eurofinsus.com . Please note that the investigation is ongoing and we reserve the right to modify and/or supplement the information based upon the results of the investigation. Any additional information related to the Camp Hero program will be communicated to your team promptly.

Thank you.

Sincerely,



Dorothy Love

RE: Camp Hero Project Laboratory Subcontractor Data Quality Breach

Dear Megan:

This letter is intended to document the laboratory data quality breach that occurred on the Camp Hero project as well as the actions that have been taken by the laboratory and AECOM-Tidewater Joint Venture (JV) project team to ensure that overall quality of the project remains at the highest level. The laboratory quality issue involves the laboratory subcontractor Eurofins Lancaster Laboratories Environmental LLC (ELLE) on the Camp Hero project being completed by AECOM-Tidewater JV on United States Army Corps of Engineers (USACE) contract W912DR-13-D-0016 and task order DB01. A total of approximately 15,000 analytical metals results from 596 samples in 33 sample delivery groups (SDGs) were potentially affected. These samples were collected during two field events: The Phase II remedial Investigation (RI) conducted in December 2016 and the Phase III RI conducted in June 2017. Based on the evaluation of this matter conducted by ELLE and AECOM Camp Hero project chemists (Ms. Devon Chicoine and Ms. Debbie Masonheimer), one of the 33 SDGs required re-analysis, 19 (0.13%) sample results required an actual value change, and 226 (1.6%) sample results required qualifier changes. Based on our review of the data and working with ELLE on this matter, it is our professional opinion that the resulting data is defensible and useable for the various evaluations to be conducted as part of the Camp Hero RI. Additional details are provided below.

On September 14, 2017, an external data validator contacted ELLE in regard to an inductively coupled plasma-mass spectrometer (ICP-MS) result for which could not be confirmed during the validation process. The ELLE metals department manager looked into the issue; it was determined that the reason that the raw result did not match the result presented in the report out of the Laboratory Information Management System (LIMS) was due to a manual change made by a single analyst to the data import file between the instrument and the LIMS. The analyst was questioned, admitted to falsifying numbers, and was subsequently terminated. Upon further review, ELLE determined that there were multiple instances where values were changed and a full-scale investigation was launched encompassing the terminated employee's tenure. The ELLE Quality Assurance (QA) manager notified their accreditation agency on 15 September 2017. When it was discovered that the scope of the breach affected Department of Defense (DoD) samples, ELLE notified their DoD accreditation agency, American Association of

703.682.4901 fax

Accreditation Laboratories (A2LA) on 19 September 2017. ELLE continued to assess impact, and public health concerns (such as drinking water) were addressed first.

This data breach was verbally communicated to the AECOM chemists on 17 October 2017 and the USACE Camp Hero project COR and PM (Greg Goepfert) were notified via phone on 20 and 23 October 2017 respectively. A corrective action letter from ELLE was submitted to AECOM on 26 October 2017, which was provided to USACE on 1 November 2017. A complete timeline of events is provided in Attachment A. The ELLE Corrective Action Summary is included in Attachment B.

There were 33 Camp Hero data packages affected by the metals data breach in samples collected during the RI Phase II (4) and III (29) field events. AECOM chemists prepared a summary of the breach per data package and assessed the impact of each analyte, which is included in Attachment C. The comprehensive spreadsheets compiled by ELLE containing the metals breach items by data package and analyte were previously provided to the USACE chemist, Ms. Yixian Zhang.

Most of the changes were made to quality control (QC) results. Where sample results changed, it was due to results exceeding the linear calibration range of the instrument. The sample results were changed to be slightly lower than the upper limit of the calibration range. Sample analytes that exceeded the calibration range were reanalyzed where the samples were within holding time. Sample CH-MW016-02F and its matrix spike/matrix spike duplicate manganese results in SDG APP62 originally exceeded the linear range of the instrument. The samples were reanalyzed and the re-analyzed results were diluted to be within the linear range.

AECOM received all of the revised Level II and Level IV lab reports for the 33 metals SDGs impacted by the data breach by 9 November 2017. Only 14 Staged Electronic Data Deliverable (SEDD) files were impacted out of the 33 SDGs since instrument calibration data are not part of the required SEDD files. The laboratory provided SEDD as Stage 2a files which consisted of project and laboratory quality control samples. AECOM prepared a summary of issues per SDG and reviewed the issues with Ms. Zhang. AECOM chemists proposed to complete a more in-depth review of the calibration issues. The independent calibration review was performed by an AECOM senior validation chemist (Mr. Steve Szocik) for one solid (APP34) and one aqueous (APP61) SDG. The two data packages were representative of the calibration-related impacts noted by ELLE including low level calibration check (LLC) compliance issues with multiple analytes.

For APP34, the LLC exhibited percent recoveries (%R) less than 10% for most of the target metals. ELLE indicated that the LLC may have been a blank sample and may not be indicative of the accuracy of the analytical system. ELLE suggested that the lab control sample (LCS) be used to confirm low level validity. The non-compliant LLC appeared to be an isolated incident based on the acceptable percent recovery (%R) of the other LLC samples reported for this SDG. Following the calibration review, AECOM determined that there were 18 samples for DU04 in SDG APP34 that required reanalysis due to multiple QC failures at the lower end of the calibration range. The 18 samples were reanalyzed within the holding time for metals and reported in SDG APP77. APP34 was the only SDG with LLC values at less than 75 %R (the QC range is 80-120 %R).

AECOM-Tidewater JV 703.682.4900 tel
3101 Wilson Blvd., #900 703.682.4901 fax
Arlington, VA 22201

For APP61, the recoveries were acceptable in the LLC except for a few analytes (aluminum at 132%, calcium at 126% and barium at 125%). The high LLC recoveries do not affect analytes not detected. A single aluminum detection was observed in one instrument blank, which caused two samples to have estimated results (CH-MW020-02 and CH-MW024-02).

In summary, there were a few detections in the instrument blanks and interference check standards across the 33 SDGs that were flagged for review. Out of approximately 15,200 metals results in the 33 SDGs, only 19 (0.13%) metals results required an actual value change. There were 226 (1.6%) results which required qualifier changes. Note that qualifier changes were only applied to sample results with exceedances in QC samples (blanks, LCS/LCSD, MS/MSD, etc.); no qualifiers were changed due to minor exceedances in calibration checks. The rejected metals results in SDG APP34 have acceptable results in SDG APP77, and are not included in the total count for result or qualifier changes. Additional details on the impacts of the metals data quality breach are discussed in data validation memos for the 33 SDGs that are included in the Camp Hero Phase III Field Report. Based on the information provided above, it is our professional opinion that the data is defensible and useable.

As for corrective actions, ELLE has proposed and implemented multiple procedural changes as outlined in the corrective action letter. AECOM has addressed this laboratory data quality breach through AECOM Design and Consulting Services Americas (DCS-A) Business Line Management, DCS-A Quality and Office of Risk Management, DCS-A Legal and Federal Contract and Procurement (FCAP). On future projects, we plan to independently verify activities provided in the ELLE corrective action plan. ELLE has notified AECOM that their DoD accreditation was never suspended or terminated due to this data quality breach. The accreditation agency, A2LA, has notified EELE that their proposed corrective actions were acceptable. A copy of the correspondence from A2LA to ELLE is provided in Attachment B.

We welcome any feedback on our management and execution of this unfortunate situation. Please contact me at 703-682-9092 or mark.macewan@aecom.com if you have any questions or require any additional information.

Sincerely,

Mark MacEwan

Attachment A: Laboratory Data Quality Breach Timeline

Date	Parties Involved	Discussion
10/17/2017	AECOM and ELLE	Initial call regarding data breach
10/18/2017	ELLE QA manager	Email to all project contacts affected by the breach.
10/19/2017	AECOM and ELLE	Initial call regarding the breach to provide details to the project team. Weekly calls were scheduled between key personnel at ELLE and AECOM.
10/20/2017	ELLE Account Manager	Received a list of nearly 600 project samples that were affected by the breach. List was not detailed as to issues.
10/23/2017	AECOM	Provided a list of priority data packages and required ELLE to provide additional details for those packages.
10/26/2017	ELLE QA Manager	Released impact memo for AECOM to provide to USACE
10/30/2017	ELLE Operations Vice President	ELLE provided a spreadsheet summarizing all impacted metal results for the 33 data packages
10/30/2017	AECOM	Requested some samples be reanalyzed due to results exceeding upper calibration limit.
11/7/2017	AECOM	Prepared summary of metals breach issues
11/9/2017	ELLE Account Manager	ELLE provided all Level II reports, SEDDs, and Level IV reports regarding the breach.
11/13/2017	USACE and AECOM chemists	Ms. Zhang requested a calibration review after receiving the laboratory summary spreadsheet. Both parties agreed that two packages (one aqueous and one solid) would be reviewed.
11/15/2017	AECOM	Started the calibration form review by AECOM senior chemist, redoing validation, data validation memos, entering qualifiers, etc.
11/29/2017	USACE and AECOM chemists	CH Metals Breach Summary - Ms. Zhang requested a revised excel spreadsheet to provide more details. She was concerned with APP34 where 17 metals had a low to no recovery in the low level calibration (LLC) solution
11/30/2017	USACE bi-weekly call	AECOM notified USACE that APP34 metals results with low recoveries in the LLC solution would be rejected and that ELLE was instructed to reanalyze. Preliminary results were requested by 12/7/2017.
12/8/2017	ELLE	Re-prepared and analyzed replacement metals package APP77 received. SEDD files and data packages were received on 12/8/2017
12/13/2017	USACE and AECOM chemists	A comparison table of the APP34 and APP77 was sent to Ms. Zhang and she responded “It appears that the results from the re-analysis (APP77) are in general comparable to the results from the original analysis (APP34), indicating that QC failures at the lower end of the calibration range in APP34 was likely a result of mis-injection of a blank solution”.
12/9/2017	AECOM	Field Report for phase III released with corrected data packages.

Subject: Eurofins Lancaster Laboratories Environmental LLC (ELLE) Corrective Action Summary for AECOM Camp Hero NY

Dear Mr. MacEwan,

Below is the summary of Eurofins Lancaster Laboratories Environmental LLC's (ELLE's) investigation and corrective action plan for the Inductively Coupled Plasma-Mass Spectrometry (ICP-MS) data integrity issue that was initially communicated to your team on October 18, 2017. Our assessment of the impacted data is ongoing. Attached to this summary letter is a table of the affected data for AECOM Camp Hero NY, current as of October 26, 2017.

Background:

On September 14, 2017, a data validator contacted ELLE in regard to a result for which they were unable to confirm the value from ICP-MS data they were trying to validate. The Metals Department Manager (Robert Strocko) looked into the issue and determined that the reason the raw results did not match the result reported out of the Laboratory Information Management System (LIMS) was due to a manual change to the data import file. The following morning, Friday September 15, the Operations Director (Rick Karam), Quality Assurance (QA) Director (Dorothy Love) and Information Technology (IT) Manager (Holly Trego) were notified about the discrepancy. The IT Manager ran a comparison of data sets from the same instrument going back to January 2017 and found more instances of data changes. The changes were found to have been one digit in the record (i.e. 8938.514 to 7938.514) and were associated with only one employee. After notifying Human Resources, the Metals Department Manager, Operations Director, and QA Director met with the employee to discuss the issues with the data. During this meeting the employee admitted to making changes a few times. At that point their employment was immediately terminated. Executive management was notified of this issue and a full investigation into the scope of the data changes was launched.

Dorothy Love notified ELLE's primary TNI (The NELAC Institute) accreditation bodies of the issue by phone on Friday September 15, 2017. As the scope of the issue became more clear, and was shown to include Department of Defense (DoD) samples, additional notifications were required. Dorothy Love notified ELLE's DoD ELAP accrediting body (AB), American Association for Laboratory Accreditation (A2LA), of the DoD issue on September 19, 2017 per DoD ELAP accreditation requirements. A2LA in turn notified the DoD as is the established protocol.

Impact Evaluation:

The IT Manager utilized a comparison query to look for discrepancies between the calculated result using the three replicate readings and the result that was originally reported in the LIMS. The changes were being made to the calculated result and not to the replicate readings, therefore we were able to recalculate from the instrument record and determine the value that should have been reported. This initial assessment was done for the instrument associated with the original suspect data set. Once it was determined that the employee had altered the data, we evaluated all ICP-MS data from every instrument back to January 1, 2015. It has been determined that the changes were only made by the terminated employee and spanned across four instruments. Three are Agilent and one is Perkin-Elmer. The Agilent instruments give the replicate readings in intensity. The intensity is then put through a calculation to determine the final result. Without knowledge of the calculation, the employee made the changes to the final result and not to the individual replicates, so we can recalculate the result using the initial instrument output file. The Perkin-Elmer comparison needs to be evaluated manually by comparing data records due to differences with the information as it comes off the instrument, and is only used to analyze drinking water samples. The Perkin-Elmer provides the replicate readings as a concentration. We have found that in some cases, the employee had changed the replicate reading but did not recalculate the associated Relative Standard Deviation (RSD). The comparisons to assess the data from the Perkin-Elmer instrument require re-importing the records to look for discrepancies. This review is taking longer as it requires manual intervention to import the data.

Rounding issues created challenges with the assessment but we were able to set a threshold based on review of data during a non-impacted cycle. This rationale and approach was confirmed as acceptable with a 3rd party statistician. The query comparison performed was able to confirm that the changes were only associated with this employee's data sets and only occurred in the time period from 6/21/2016 to 9/15/2017.

The vast majority of the data changes were made to Quality Control (QC) and/or calibration checks, not to actual sample results. Where we see sample result changes, these are primarily cases where the result exceeded the linear calibration range of the instrument and were changed to be slightly lower than the upper limit of the calibration range. There are a few cases where lower concentration results were changed. It is not clear as to the reason for these changes. For the majority of the cases, while the samples should have been reanalyzed, they were not and where there is no sample aliquot remaining to be reanalyzed within hold time, the data would now need to have a corresponding qualification added.

As of today, we have reviewed approximately 95% of the data. However, there are files from the Perkin-Elmer instrument that are being restored from archives which then need to be evaluated.

Client notification and reanalysis/qualification:

Notification to clients regarding affected projects was made on October 18, 2017. We established a toll free number that clients can use to connect with Eurofins designated

corrective action team to address any technical concerns and to provide additional detail. We are committed to working with your team and any applicable regulators to provide them with the necessary information concerning the impact upon the Camp Hero project data (result change vs QC qualification, etc.) related to this event.

Upon your request, revised reports, electronic data deliverables, and data packages with the corrected data and corresponding data qualifications will be provided. If valid sample aliquots are still available in the laboratory, ELLE will provide retesting free-of-charge, if needed. ELLE will work collaboratively with your team to resolve the potential need for resampling and reanalysis associated with this data quality issue.

Root cause:

The root cause of the data changes is that one employee made the decision to not follow established procedures and to deviate from our ethics and quality policies. The employee's motivation for this breach appears to have been a desire to avoid the time and effort necessary to clean and maintain his instruments and to avoid reanalysis of the samples as required in Eurofins standard operating procedures. The employee had completed the company mandated ethics training and had signed off on all relevant ethics and quality SOPs yet made the decision to make these changes. Interviews conducted with other analysts and supervisory personnel in the Metals Laboratory indicate that no other employees were aware that the employee was engaged in data manipulation. There were no indications that the employee was not acting in compliance with applicable ethics and quality policies.

The system used to transfer instrument data files into LIMS is not unique to ELLE; similar processes are used across the industry. That being said, it does create vulnerability and we are working to close that vulnerability within our system.

Corrective actions:

Our Ethics training for 2017 was conducted this past summer. The employee in question attended the training in June, signed the Ethics Statement and completed the quiz successfully. The training was clearly focused on what practices are acceptable and what practices are NOT acceptable,, and clearly stated that we do not tolerate ethics violations. The training included information about how our data is used to ensure that our staff understands the importance of data generated and reported to the client and to the world at large.

On October 24, 2017, an all employee meeting occurred that addressed this issue and expectations were again emphasized around the ethics policy and ethics statement. Upon completion of the investigation, another round of ethics training will be conducted.

The changes that the employee made were to the import file used to transfer the data from the instrument to the LIMS. We have implemented a daily automated comparison query to ensure that the data matches when it is imported so that no further data is being impacted. We are reviewing all other data transfer processes used for other areas of the laboratory to determine if

CONFIDENTIAL—DO NOT RELEASE TO NON-CLIENT THIRD PARTIES.

there are vulnerabilities with the data files in those systems which can be locked down and/or monitored.

Upon completion of the investigation, all current and future correction actions will be reviewed, monitored, and fully implemented.

Commitment:

From day 1 of discovery of the data manipulation by this one employee, we assembled a team of people dedicated to determining the full scope of the issue, began the assessment of the impact to our clients, and provided our regulators with assurances that we will implement the necessary corrective action to remediate the data quality issue and prevent it from reoccurring. After completing our investigation to determine the magnitude of the data quality impacts, we are communicating our findings to our clients and are committed to working with them to remedy any harm that may have resulted from the incident. This team includes the ELLE President, Vice-President, Operations Director, QA Director, IT Manager, Metals Manager, Client Services Manager, Sales Director, Marketing Manager, and a dedicated project manager to oversee our progress. The team meets on a daily basis to ensure that we have covered all aspects and concerns and are completing the corrective actions required.

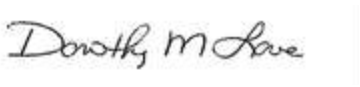
We take this breach of our protocol and policies very seriously and are committed to the actions and resources necessary to make it right.

Revised reports, SEDD files, and data packages will be submitted to AECOM no later than 5 pm on November 9, 2017 for the Camp Hero project.

Please let me know if anyone on your team or your client has any questions or need additional information. You can reach me at 717-556-7327 or via email at dorothylove@eurofinsus.com . Please note that the investigation is ongoing and we reserve the right to modify and/or supplement the information based upon the results of the investigation. Any additional information related to the Camp Hero program will be communicated to your team promptly.

Thank you.

Sincerely,



Dorothy Love

November 2, 2017

Dorothy Love
Eurofins Lancaster Laboratories Environmental, LLC
2425 New Holland Pike
P.O. Box 12425
Lancaster PA 17605-2425
United States

Dear Ms. Love:

The purpose of this letter is to summarize the sequence of events regarding your laboratory's reporting of a prohibited practice occurring and the subsequent actions that were taken to address and contain any effect on customer data.

On September 14, 2017, a data validator notified your laboratory of a potential data issue. The management team of the laboratory determined that there was indeed a prohibited practice that had taken place and was centered on one employee and immediately began a full investigation into the impact on customer data and implementation of corrective action. The requirements of the DoD Quality System Manual section 4.9.4 state:

> "All DoD ELAP laboratories must report any instances of in appropriate and prohibited laboratory practices, as detailed in Section 5.2.7 of the DoD QSM, to their AB within fifteen (15) business days of discovery. DoD ELAP laboratories must submit records of associated corrections taken or proposed corrective actions to the AB within thirty (30) business days of discovery."

Therefore, you notified A2LA of this discovered prohibited practice on September 19, 2017. Notification to clients regarding their projects that were impacted was made on October 18, 2017 and a full corrective action was submitted to A2LA and the DoD on October 19, 2017 which was then accepted and the issue closed.

This matter was handled professionally and efficiently meeting the requirements for accreditation in the DoD Environmental Laboratory Accreditation Program (ELAP) administered by A2LA and therefore there was no impact on the accreditation status of your laboratory throughout this process.

Sincerely,

Accreditation Manager

Attachment C: Summary of Lab Issues and Assessment

Attachment C: Summary of Lab Issues and Assessment

SDG	Media	SEDD Reissued ?	Analyte	Lab QC Issue Type	AECOM Assessment	Impact	ADR Automaically Applied Qualifiers
APP03	Groundwater	confirm	calcium	ICSA/ ICSAB	The ICSA and ICSAB percent recoveries for calcium were within QC specifications (changed from 93.4% to 106.73%) in the original report as well as in the corrected report. QC specification is 80-120%	none	none
APP08	Soil	no	silver, antimony	CCV	The CCV percent recoveries for silver (changed from 106.1% to 110.11%) and antimony (changed from 106.87% to 110.87%) were within QC specifications in the original run as well as in the corrected package. QC specification is 80-120%	none	none
APP10	Groundwater	confirm	calcium	ICSA/ ICSAB	The ICSA and ICSAB percent recoveries for calcium were within QC specifications (changed from 93.4% to 106.73%) in the original report as well as in the corrected report. QC specification is 80-120%	none	none
APP11	Soil	yes	manganese	Result	The result for manganese for field sample 203-SB16-01DUP changed from 299 mg/kg to 315 mg/kg. The upper end of the linear range was 302 mg/kg. Normal and Field Duplicate precision will increase slightly.	major	none required
APP17	Sediment	no	vanadium	LLC	The percent recovery for Vanadium in the Low Level Check Standard changed from 108.1% to 138.1%. The QC specification is 80-120%. All vanadium results were above LOQ.	minor, no additional qualifiers	none
			calcium	CCV	The percent recovery for Calcium in the Continuing Calibration Verification changed from 107.61% to 115.61%. The QC specification is 90-110%.	minor, no additional qualifiers	none
APP18	Sediment	no	vanadium	LLC	The percent recovery for Vanadium in the Low Level Check Standard changed from 108.1% to 138.1%. The QC specification is 80-120%. All vanadium results were above LOQ.	minor, no additional qualifiers	none
			calcium	CCV	The percent recovery for Calcium in the Continuing Calibration Verification changed from 107.61% to 115.61%. The QC specification is 90-110%.	minor, no additional qualifiers	none
APP19	Surface water	yes	silver	LCS	The percent recovery for Silver in the Laboratory Control Sample changed from 101% to 61%. The QC specification is 85-116%.	minor, no additional qualifiers	J- (detects), UJ (nondetects)
APP20	Surface water	yes	silver	MS	The percent recovery for Silver in the Matrix Spike changed from 100% to 60%. The QC specification is 85-116%.	minor, no additional qualifiers	J- (detects), UJ (nondetects)
		yes	silver	MSD	The percent recovery for Silver in the Matrix Spike Duplicate changed from 103% to 63%. The QC specification is 85-116%.	minor, no additional qualifiers	J- (detects), UJ (nondetects)
		yes	silver	LCS	The percent recovery for Silver in the Laboratory Control Sample changed from 101% to 61%. The QC specification is 85-116%.	minor	J- (detects), UJ (nondetects)
APP21	Sediment	yes	barium, calcium, copper, lead, thallium, vanadium, zinc	LCS	The percent recovery for Barium in the Laboratory Control Sample changed from 95% to 83%. The QC specification is 86-116%. The percent recovery for Calcium in the Laboratory Control Sample changed from 94% to 84%. The QC specification is 86-118%.The percent recovery for Thallium in the Laboratory Control Sample changed from 96% to 76%. The QC specification is 86-118%. The percent recovery for Vanadium in the Laboratory Control Sample changed from 104% to 84%. The QC specification is 82-116%. The percent recovery for Thallium in the Laboratory Control Sample changed from 96% to 76%. The QC specification is 83-118%. The percent recovery for Lead in the Laboratory Control Sample changed from 98% to 152%. The QC specification is 84-118%. The percent recovery for Zinc in the Laboratory Control Sample changed from 104% to 116%. The QC specification is 82-119%. The percent recovery for Copper in the Laboratory Control Sample changed from 105% to 145%. The QC specification is 84-119%.Qualifiers could change.	minor	J- (detects with low bias), J+ (detects with high bias), UJ (nondetects)
			nickel	CCV	The percent recovery for Nickel in the Continuing Calibration Verification changed from 104.06% to 112.06%. The QC specification is 90-110%.	minor, no additional qualifiers	none
			manganese, cobalt	ICSA	The absolute value of 0.0047 mg/kg for Manganese was > 2 times the Limit of Quantitation (LOQ) in the associated Interference Check Standard A. The QC specification is < 2 times the absolute value of the LOQ of 0.0040 mg/kg. The absolute value of 0.0011 mg/kg for Cobalt was > 2 times the Limit of Quantitation (LOQ) in the associated Interference Check Standard A. The QC specification is < 2 times the absolute value of the LOQ of 0.0010 mg/kg. The ICSAB was within QC limits for manganese and cobalt.	minor, no additional qualifiers	none
			barium, calcium	LLC	The percent recovery for Calcium in the Low Level Check Standard changed from 95.68% to 70.68%. The percent recovery for Barium in the Low Level Check Standard changed from 99.28% to 74.28%. The QC specification is 80-120%. All barium and calcium results were above LOQ.	minor, no additional qualifiers	none
APP22	Surface water	no	manganese	ICSA	The absolute value of 3.8 ug/l for Manganese was > 2 times the Limit of Quantitation (LOQ) in the Interference Check Standard A. The QC specification is < 2 times the absolute value of the LOQ of 4.0 ug/l. Manganese was detected in the ICSA and outside of QC limits; however in the ICSAB, manganese was within QC limits.	minor, no additional qualifiers	none
APP23	Sediment	yes	calcium	LCS	The percent recovery for Calcium in the Laboratory Control Sample changed from 95% to 85%. The QC specification is 86-118%.	minor	J- (detects), UJ (nondetects)
			calcium	LLC	The percent recovery for Calcium in the Low Level Check Standard changed from 109.15% to 124.15%. The QC specification is 80-120%. All calcium results were above LOQ.	minor, no additional qualifiers	none
APP24	Surface water	yes	zinc	MB	The result for zinc in the MB changed from < 7.5 ug/l to 39.9 ug/l. Detected zinc results could change to nondetects.	major	20 sample results became nondetects
			vanadium, calcium	CCV	The CCV percent recoveries for vanadium (changed from 105.06% to 113.06%) and calcium (changed from 104.02% to 116.02%) were within QC specifications in the original run as well as in the corrected package. QC specification is 80-120%	minor, no additional qualifiers	none
			cobalt	ICSA	The absolute value of 1.2 ug/l for Cobalt was > 2 times the Limit of Quantitation (LOQ) in the Interference Check Standard A. The QC specification is < 2 times the absolute value of the LOQ of 1.0 ug/l. Cobalt was detected in the ICSA and outside of QC limits; however in the ICSAB, cobalt was within QC limits.	minor, no additional qualifiers	none
APP25	Sediment	yes	manganese	MB	The result for manganese in the MB changed from < 0.200 mg/kg to 0.184 J mg/kg. Detected manganese results could change to nondetects.	major	none reguired
			manganese	LCS	The percent recovery for Manganese in the Laboratory Control Sample associated with this sample changed from 106% to 122%. The QC specification is 85-116%. Qualifiers could change.	minor	J+ (detects), UJ (nondetects)
			calcium	CCV	The percent recovery for Calcium in the Continuing Calibration Verification changed from 95.75% to 87.75%. The QC specification is 90-110%.	minor, no additional qualifiers	none
			calcium	LLC	The percent recovery for Calcium in the Low Level Check Standard changed from 90.05% to 77.55%. The QC specification is 80-120%. All calcium results were above LOQ.	minor, no additional qualifiers	none
			calcium	ICSA/ ICSAB	The percent recovery for Calcium in the Interference Check Standard A changed from 88.65% to 71.98%. The percent recovery for Calcium in the Interference Check Standard AB changed from 89.66% to 79.66%. The QC specification is 80-120%.	minor, no additional qualifiers	none
			cobalt	ICSA	The absolute value of 0.00098 mg/kg for Cobalt was > 2 times the Limit of Quantitation (LOQ) in the Interference Check Standard A. The QC specification is < 2 times the absolute value of the LOQ of 0.0010 mg/kg.Cobalt was detected in the ICSA and above QC limits; however in the ICSAB, cobalt was within QC limits.	minor, no additional qualifiers	none
APP26	Surface water	yes	manganese	MB	The result for manganese in the MB changed from < 2.0 ug/l to 1.5 J ug/l. Detected manganese results could change to nondetects.	major	14 sample results became nondetects
			antimony	LCS	The percent recovery for Antimony in the Laboratory Control Sample changed from 98% to 82%. The QC specification is 85-117%. Qualifiers could change.	minor	J- (detects), UJ (nondetects)
			cobalt	ICSA	The absolute value of 1.4 ug/l for Cobalt was > 2 times the Limit of Quantitation (LOQ) in the Interference Check Standard A. The QC specification is < 2 times the absolute value of the LOQ of 1.0 ug/l.Cobalt was detected in the ICSA and above QC limits; however in the ICSAB, cobalt was within QC limits.	minor, no additional qualifiers	none
APP27	Sediment	confirm	vanadium	ICSAB	The percent recovery for Vanadium in the Interference Check Standard AB changed from 108.74% to 123.74%. The QC specification is 80-120%.	minor, no additional qualifiers	none
APP28	Surface water	confirm	antimony, calcium, silver	CCV	The CCV percent recoveries for antimony (changed from 107.71% to 111.71%) calcium (changed from 107.85% to 111.85%) and silver (changed from 106.56% to 110.56%.) QC specification is 90-110%	minor, no additional qualifiers	none
			arsenic, barium, calcium, cadmium, chromium, manganese	LLC	The percent recoveries in the LLC were not within QC specification for several analytes. The LCS which is 2 to 5 times the LLC was within specifications for these analytes. (arsenic changed from 92.18% to 79.68%; calcium changed from 117.33% to 122.33%; barium changed from 116.95% to 114.95%; silver changed from 105.8% to 125.8%; manganese changed from 105.73% to 123.23%; chromium changed from 110.25% to 122.75%; cadmium changed from 119.8% to 139.8%)	minor, no additional qualifiers	none
APP29	Soil	yes	calcium	MB	The result for calcium in the MB changed from <40.0 mg/kg to 20.3 J mg/kg. Detected calcium results could change to nondetects.	major	none required

			antimony, chromium, calcium	CCV	The CCV percent recoveries for antimony (changed from 95.8% to 87.8%) and calcium (changed from 93.3% to 89.3%) QC specification is 90-110%. The Internal standard for Chromium, SC-1, recovered at 132% in the Continuing Calibration Verification. The QC specification is 70-130%.	minor, no additional qualifiers	none
			cadmium	LLC	The percent recovery for Cadmium in the Low Level Check Standard changed from 104% to 124%. The QC specification is 80-120%.The LCS which is 2 to 5 times the LLC was within specifications for cadmium.	minor, no additional qualifiers	none
			cadmium	ICSAB	The percent recovery for Cadmium in the Interference Check Standard AB changed from 113.1% to 123.1%. The QC specification is 80-120%.No impact to the qualifiers.	minor, no additional qualifiers	none
APP30	Soil	no	vanadium	LLC	The percent recovery for Vanadium in the Low Level Check Standard changed from 96.9% to 76.9%. The QC specification is 80-120%. The LCS which is 2 to 5 times the LLC was within specifications for vanadium.	minor, no additional qualifiers	none
APP31	Soil	yes	antimony, arsenic, barium, cadmium, cobalt, copper, nickel, silver, zinc	CCV	The Internal standard for arsenic, nickel, calcium, cobalt, barium, cadmium, copper, and silver recovered at 131% in the Continuing Calibration Verification. The QC specification is 70-130%.	minor, no additional qualifiers	none
			manganese, thallium	LCS	The percent recovery for Manganese in the Laboratory Control Sample changed from 104% to 116%. The QC specification is 85-116%. The percent recovery for Thallium in the Laboratory Control Sample changed from 93% to 83%. The QC specification is 83-118%.Qualifiers could change.	minor	J- (detects with low bias), J+ (detects with high bias), UJ (nondetects)
			silver	LLC	The percent recovery for Silver in the Low Level Check Standard changed from 95.4% to 75.4%. The QC specification is 80-120%. The LCS which is 2 to 5 times the LLC was within specifications for cadmium.	minor, no additional qualifiers	none
APP34	Soil	confirm	calcium, aluminum, antimony, sodium	CCV	The percent recovery for Calcium in the Continuing Calibration Verification changed from 93.84% to 89.84%. The percent recovery for Aluminum in the Continuing Calibration Verification changed from 107.02% to 127.02%. The percent recovery for Antimony in the Continuing Calibration Verification changed from 93.56% to 89.56%. The percent recovery for Sodium in the Continuing Calibration Verification changed from 93.22% to 89.22%. The QC specification is 90-110%.	Rejected all the metals; samples were re-analyzed	R (manually applied)
			aluminum, antimony, arsenic, cadmium, calcium, chromium, cobalt, copper, iron, magnesium, manganese, nickel, potassium, sodium, magnesium, vanadium, zinc, silver	LLC	The percent recovery for Sodium in the Low Level Check Standard changed from 101.45% to -.7%. The percent recovery for Cadmium in the Low Level Check Standard changed from 100.5% to -.5%. The percent recovery The percent recovery for calcium in the low level check standard changed from 110% to 0%. for Antimony in the Low Level Check Standard changed from 101.75% to 1.75%. The percent recovery for Arsenic in the Low Level Check Standard changed from 101.4% to 1.4%. The percent recovery for Zinc in the Low Level Check Standard changed from 100.79% to .79%. The percent recovery for Silver in the Low Level Check Standard changed from 100.5% to -.5%. The percent recovery for Potassium in the Low Level Check Standard changed from 102.26% to -.51%. The percent recovery for Aluminum in the Low Level Check Standard changed from 105.23% to -1.23%. The percent recovery for Iron in the Low Level Check Standard changed from 105.17% to -5.17%. The percent recovery for Nickel in the Low Level Check Standard changed from 100.4% to -.4%. The percent recovery for Magnesium in the Low Level Check Standard changed from 104.72% to -.22%. The percent recovery for Cobalt in the Low Level Check Standard changed from 101.3% to -1.3%.The percent recovery for Chromium in the Low Level Check Standard changed from 107.25% to 7.25%. The percent recovery for Vanadium in the Low Level Check Standard changed from 102.3% to -2.3%. The percent recovery for Manganese in the Low Level Check Standard changed from 104.33% to -4.33%. The percent recovery for Copper in the Low Level Check Standard changed from 100.23% to .23%. The percent recovery for Iron in the Low Level Check Standard changed from 105.17% to -5.17%. The QC specification is 80-120%. The LCS which is 2 to 5 times the LLC was within QC limits.	Rejected all the metals; samples were re-analyzed	R (manually applied)
APP36	Soil	yes	manganese	MB	The result for manganese in the MB changed from <0.200 mg/kg to 0.198 J mg/kg. Detected manganese results could change to nondetects.	major	none required
			manganese, selenium, vanadium	CCV	The percent recovery for Selenium in the Continuing Calibration Verification changed from 105.6% to 113.6%. The QC specification is 90-110%. The Internal standard for Vanadium recovered at 104%. The Internal standard for Manganese recovered at 106% in the Continuing Calibration Verification. The QC specification is 70-130%.	minor, no additional qualifiers	none
APP40	Soil	yes	manganese	LCS	The percent recovery for Manganese in the Laboratory Control Sample changed from 92% to 48%. The QC specification is 85-116%. Qualifiers could change.	minor	J- (detects), UJ (nondetects)
			manganese, vanadium	CCV	The Internal standard for Vanadium recovered at 87% and manganese recovered at 82% in the Continuing Calibration Verification. The QC specification is 70-130%.	none	none
			manganese, vanadium	LLC	The percent recovery for Manganese in the Low Level Check Standard changed from 100.58% to -150.58%. The percent recovery for Vanadium in the Low Level Check Standard changed from 94.5% to 54.5%. The QC specification is 80-120%. All sample results were above LOQ. The LCS which is 2 to 5 times the LLC was within QC limits.	minor, no additional qualifiers	none
APP45	Soil	no	calcium	ICV, CCV	The percent recovery for Calcium in the Initial Calibration Verification changed from 93.26% to 89.26%. The QC specification is 90-110%. None	Call-a-Head Porta John unit, good condition

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0700 completed the Morning Tailgate Health and Safety Meeting and UXO Awareness Training, and reviewed the health and and safety procedures and task hazards associated with scheduled field work for the day. New team members received a tour of the investigation areas within Camp Hero State Park.

Preparation Activities

The team unloaded and organized supplies/equipment in the Conex Box. The team completed location flagging for soil sample locations and monitoring well locations at DU01 - DU03, DU05 - DU07, and DU10 - DU18, and for surface water and sediment sample locations CH-SWSD001 - 007 and CH-SWSD011 - 140.

Wetlands Delineation

Wetlands delineation, including wetlands flagging, equipment buffer zone flagging, and collection of GIS data for wetland boundaries, was completed at DU01, DU02, DU03, DU05, DU06, DU12, DU13, and DU14.

Rare Plant Surveys

Rare plant species were flagged at DU02, DU05, DU06, DU07, DU12, DU15, and DU16. Southern arrowwood was the only rare plant noted on the site at this time.

Sample Management

Soil/sediment and surface water/groundwater sample jars were inventoried, organized, and segregated into bottleware kits, and staged in Conex box in preparation for sampling.

WORK COMPLETED BY AECOM SUBCONTRACTORS

None

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

- Tom Dess (NY State Parks Superintendent) was notified of the number of team members on site at the start of the day.

Contractor Daily Reports

DATE: 5/31/2017 Wednesday

DR No. 01		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

REQUEST FOR INFORMATION (RFI)

None

TRANSMITTALS / SUBMITTALS

None

AIR MONITORING COMMENTS:

None (no air monitoring was conducted because no intrusive activities were completed.)

SAFETY OBSERVATIONS/VIOLATIONS/COMMENTS

The AECOM team purchased permethrin-imbedded clothing to be worn on site as a tick-preventative measure. The team reviewed concerns about tick safety and practiced caution in the field by tucking pants into socks, performing tick checks, and wearing permethrin-treated clothing.

SITE OBSERVATIONS

Surface water appeared to be prevalent throughout the site at this time, in greater volumes than during the Fall of 2016. Some of the mapped streams did not match the streams present on site - surface water/sediment sampling locations were adjusted accordingly.

ATTACHMENTS

None

Superintendent (Signature):

Amanda Martin

Daily Photos

Cascade/ADT	None

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0700 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with scheduled scheduled field work for the day. The ADT team arrived onsite at 0830 and completed a separate Morning Tailgate Health and Safety Meeting with the Site Supervisor and SSHO, which included UXO Awareness Training, reviewing the health and and safety plan, and reviewing task hazards associated with scheduled field work for the day.

Preparation Activities

The team finalized location flagging for soil samples, monitoring wells, and surface water/sediment samples.

Wetlands Delineation

Wetlands delineation, including wetlands flagging, equipment buffer zone flagging, and collection of GIS data for wetland boundaries, was completed at DU07, DU08, DU09, DU15, DU16, DU17, and DU18.

Rare Plant Surveys

Rare plant species were flagged at DU08, DU11, DU13, DU14, and DU17. Southern arrowwood was the only rare plant noted on the site at this time.

Vegetation Clearance

Vegetation clearance for drill rig access was completed by ADT/Cascade with AECOM Geologist and Botanist oversight at DU09, DU14, DU13 (monitoring well access only), DU11 (monitoring well access only), DU17, and DU01.

Surface Water and Sediment Sampling

Surface water and sediment samples were collected at locations CH-SWSD101 through CH-SWSD110. Samples were collected for metals (including mercury) and SVOCs/PAHs. 10% of samples were also collected for hexavalent chromium (with pH and ORP for sediment). The pH of the liquid hexavalent chromium was checked and adjusted in the field according to the procedure outlined in the SAP. Water quality parameters were collected for surface water. Field data were recorded on the SW/SD sample forms and electronically via the EDGE software.

Sample Management

Surface water and sediment samples collected collected were Quality Control checked, recorded on Chain of Custody records, and packed on ice for storage. Sample coolers will be picked up by the Eurofins Lancaster courier on Friday 6/2/17 and held on fresh ice until that time. Chain of Custody records will be e-mailed to the Project Chemist (Devon Chicoine) and the Laboratory Project Manager prior to delivery to the laboratory.

WORK COMPLETED BY AECOM SUBCONTRACTORS

Vegetation clearance for drill rig access was completed by ADT/Cascade with AECOM Geologist and Botanist oversight at DU09, DU14, DU13 (monitoring well access only), DU11 (monitoring well access only), DU17, and DU01.

SUBCONTRACTORS:	SITE DELIVERIES (indicate size, type, and condition):
Cascade/ADT	None

WORKED PERFORMED BY AECOM

The AECOM and Cascade/ADT team arrived on site at 0700 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with scheduled field work for the day.

Wetlands Delineation and Mitigation

Wetlands delineation, including wetlands flagging, equipment buffer zone flagging, and collection of GIS data for wetland boundaries, was finalized at all DUs. Wetlands mitigation procedures were addressed at DUs with drilling operations planned. See attached "'Summary of Observed Wetlands and Proposed Mitigation Procedures" table. The DU sampling grid for DU07 was shifted to the west to allow for more sample locations to be accessed by a drill rig, while avoiding the 100 ft wetland bufer zone and still encompassing a representative expsoure area covering the targeted former areas of concern.

Vegetation Clearance

Vegetation clearance for drill rig and sampling access was completed by ADT/Cascade with AECOM Geologist and Botanist oversight at DU04, DU05, DU07, DU10 - DU13, DU15, DU16, and DU18. Additional rare plant species were flagged during this process while considering rig access routes.

Surface Water and Sediment Sampling

Surface water and sediment samples were collected at locations CH-SWSD056 through CH-SWSD079. The stream channel for locations CH-SWSD066, 070, 071, and 079 were dry; therefore, only sediment samples were collected at these locations. Samples were collected for metals (including mercury) and SVOCs/PAHs. 10% of samples were also collected for hexavalent chromium (with pH and ORP for sediment). The pH of the liquid hexavalent chromium was checked and adjusted in the field according to the procedure outlined in the SAP. Water quality parameters were collected for surface water, including pH, DO, ORP, specific conductivity, temperature, and turbidity. Field data were recorded on the SW/SD sample and electronically via the EDGE software.

Filtered surface water samples were also collected for all parameters if the turbidity of the surface water was > 10 NTU. The turbidity of the water was below 10 NTU at all locations except CH-SWSD068 and CH-SWSD072.

Stream Characterization

Stream characterization survey forms were completed for stream segments associated with SW/SD sample locations CH-SWSD056 through 065 and CH-SWSD096 through 110. Stream characterization information collected included stream width, bottom type, water dpeth, whether the stream was revetted, if it has perennial flow, whether it is shaded, and additional significant site and ecological observations.

Sample Management

Surface water and sediment samples collected collected were Quality Control checked, recorded on Chain of Custody records, and packed on ice for storage. Seven sample coolers were picked up by the Eurofins Lancaster courier for transport to the laboratory. Additional coolers of samples were prepared and will be stored on fresh ice until the next courier pick-up. Chain of Custody records were e-mailed to the Project Chemist (Devon Chicoine) and the Laboratory Project Manager prior to delivery to the laboratory.

DR No. 03		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

WORK COMPLETED BY AECOM SUBCONTRACTORS

ADT/Cascade completed vegetation clearance at DU04, DU05, DU07, DU10 - DU13, DU15, DU16, and DU18.

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

- Tom Dess (NY State Parks Superintendent) was notified of the number of team members on site at the start of the day.
- One fact sheet was provided to a Montauk resident asking team members about the project.

REQUEST FOR INFORMATION (RFI)

None

TRANSMITTALS / SUBMITTALS

None

AIR MONITORING COMMENTS:

None (no air monitoring was conducted because no intrusive activities were completed.)

SAFETY OBSERVATIONS/VIOLATIONS/COMMENTS

During surface water and sediment sampling along streams with wooden reventments, the team was cautious not to step or stand on the revetments, as some are rotting and could collapse under weight. Additionally, the team observed some wooden planks that had been displaced with nails face up. The team was cautious to not step on or touch the nails during sampling activities.

SITE OBSERVATIONS

A box turle (endangered species) was observed near DU09.

Summary of Observed Wetlands and Proposed Mitigation Procedures, June 2, 2017
Phase III Remedial Investigation
Camp Hero, Montauk, New York

DU	Wetlands Observed	Wetlands Mitigation Required	Proposed Mitigation Procedures
DU01	No Wetland Conditions Observed	None	Site Standard (1)
AST35/FPH	Wetland Conditions Observed	Wells located to delineate downgradient portion of DU01 LNAPL plume; two wells planned in observed wetlands are still required to delineate groundwater impacts; mitigation procedures will be required.	Relocate wells outside wetland limits where possible; where not possible, utilize wetland mats and catch basin to collect liquid and soil cuttings to minimize potential release to wetlands. Relocating wells is consistent with SAP flexibility and 5/9/17 site walk.
DU02	Wetland Conditions Observed within State Mapped Wetland Boundary (Class 2)	None - no drilling	Site Standard (1)
DU03	Wetland Conditions Observed throughout approx. 90% of DU	Planned drill rig sampling operations located within observed wetlands.	Hand auger samples instead of using direct push drill rig within wetland limits. Collecting subsurface soil samples within wetlands with a hand auger is consistent with SAP flexibility.
DU04	No Wetland Conditions Observed	None - no drilling	Site Standard (1)
DU05	Wetland Conditions Observed throughout approx. 40-50% of DU	Planned drill rig sampling operations located within observed wetlands.	Hand auger samples within wetland limits. Collecting subsurface soil samples within wetlands with a hand auger is consistent with SAP flexibility.
DU06	Wetland Conditions observed through minimal portion of DU	Planned drill rig sampling operations located within observed wetlands.	Relocate sample borings outside wetland limits. Wells to be installed in park-maintained lawn outside of wetland limit. Collecting subsurface soil samples within wetlands with a hand auger is consistent with SAP flexibility.
DU07	Wetland Conditions Observed within State Mapped Wetland Boundary (Class 1). Additional wetland conditions outside state-mapped boundary observed. Wetlands cover approx. 75% of DU.	Planned drill rig sampling operations, planned well installations within observed wetlands and buffer zone.	Entire DU07 boundary will be shifted slightly west to avoid wetlands to the extent possible, while still encompassing the exposure area. Hand auger samples instead of using direct push drill rig wells within wetland limits and 100 ft buffer zone of state mapped wetlands. Relocate wells outside of wetland limits and 100 ft buffer zone of state mapped wetlands. Well location CH-MW038 will be adjusted to avoid wetlands and 100 ft buffer zone, placed in park-maintained lawn to west of DU. Well CH-MW039 will be moved to in vicinity of DU15 because moving well outside buffer zone at DU07 would put well close to previously-installed wells CH-MW006 and CH-MW005 (already sufficient groundwater coverage in the area).
DU08	Wetland Conditions Observed within State Mapped Wetland Boundary (Class 1). Additional wetland conditions outside state-mapped boundary observed. Wetlands cover approx. 90% of DU.	Planned drill rig sampling operations, planned well installations within observed wetlands and buffer zone.	Relocate wells along existing, maintained roadway and shoulder. Drill rigs will not leave road. As discussed on 5/9/17 site walk, surface water and sediment samples will be collected instead of soil samples.
DU09	No Wetland Conditions Observed	None	Site Standard (1)
DU10	No Wetland Conditions Observed	None - no drilling	Site Standard (1)
DU11	Wetland Conditions Observed throughout approx. 10% observed	Planned well installations within observed wetlands.	Relocate wells outside of wetland limits, if necessary, and utilize wetland mats and catch basin to collect liquid and soil cuttings to minimize potential release to wetlands. Relocating wells is consistent with SAP flexibility and 5/9/17 site walk.
DU12	No Wetland Conditions Observed	None	Site Standard (1)
DU13	No Wetland Conditions Observed	None	Site Standard (1)
DU14	No Wetland Conditions Observed	None	Site Standard (1)

Summary of Observed Wetlands and Proposed Mitigation Procedures, June 2, 2017
Phase III Remedial Investigation
Camp Hero, Montauk, New York

DU	Wetlands Observed	Wetlands Mitigation Required	Proposed Mitigation Procedures
DU15	Wetland Conditions Observed within State Mapped Wetland Boundary (Class 1). Additional wetland conditions extended north of mapped wetlands. Wetland conditions cover 100% of the DU.	Planned drill rig sampling operations, and planned well installation downgradient of debris area with previous PCB detection in grab-groundwater, within observed wetland and buffer zone.	Relocate well outside of wetland limits and 100 ft buffer zone. For soil samples, consistent with SAP, subsurface soil samples within wetlands will be collected with hand auger. For well location CH-MW040, move to northwest outside buffer zone pending decision on mitigation procedures. Add well CH-MW039 to the northeast outside the buffer zone.
DU16	Wetland conditions observed within approx. 20% of the DU.	Planned drill rig sampling operations within observed wetlands.	Relocate sample borings outside wetland limits or hand auger samples. Collecting subsurface soil samples within wetlands with a hand auger is consistent with SAP flexibility.
DU17	Wetland conditions observed within approx. 30% of the DU.	Planned well installation within observed wetlands.	Relocate well location outside of wetland limits. Collecting subsurface soil samples within wetlands with a hand auger is consistent with SAP flexibility.
DU18	No Wetland Conditions Observed (although state mapped wetlands are shown)	None	Site Standard (1)
STB	Wetland Conditions Observed within State Mapped Wetland Boundary (Class 1).	Planned well installations within100 ft buffer zone.	Relocate wells outside of wetland limits on park-maintained lawn (within 100 ft buffer). Collecting subsurface soil samples within wetlands with a hand auger is consistent with SAP flexibility.

Notes

(1) Site Standard Mitigation Procedures include, but are not limited to, minimal vegetation clearance, tree clearing limited to trees under 3", etc.

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0700 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with scheduled field work for the day.

Surface Water and Sediment Sampling

Surface water and sediment samples were collected at locations CH-SWSD046 through 059 and CH-SWSD112 through 114. Additionally, surface water samples were collected at CH-SWSD115 through 125; sediment samples will be collected during the next day of sampling. Samples were collected for metals (including mercury) and SVOCs/PAHs. 10% of samples were also collected for hexavalent chromium (with pH and ORP for sediment). The pH of the liquid hexavalent chromium was checked and adjusted in the field according to the procedure outlined in the SAP. Water quality parameters were collected for surface water, including pH, DO, ORP, specific conductivity, temperature, and turbidity. Field data were recorded on the SW/SD sample and electronically via the EDGE software.

Filtered surface water samples were also collected for all parameters if the turbidity of the surface water was > 10 NTU.

Stream Characterization

Stream characterization survey forms were completed for stream segments associated with SW/SD sample locations CH-SWSD084 through 001, 085 through 026, 025 through 004, and 007 through 146 (refer to SAP Figure 17-1). Stream characterization information collected included stream width, bottom type, water depth, whether the stream was revetted, if it has perennial flow, whether it is shaded, and additional significant site and ecological observations. A pipe (potentially associated with the sitewide waste disposal system) was discovered discharging to the stream along the main eastern discharge channel, south of location CH-SWSD095 but north of the septic tank. Additionally, a manole with flowing water was noted adjacent to the pipe (see photos below).

Sample Management

Surface water and sediment samples collected collected were Quality Control checked, recorded on Chain of Custody records, and packed on ice for storage. Coolers will be stored on fresh ice until the next courier pick-up. Chain of Custody records were e-mailed to the Project Chemist (Devon Chicoine) and the Laboratory Project Manager prior to delivery to the laboratory.

WORKED PERFORMED BY AECOM

The AECOM and Cascade/ADT team arrived on site at 0700 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with scheduled field work for the day. New team members review the Accident Prevention Plan and signed the acknolwedgement and applicable AHAs. Toshiro Gibson lead UXO Anomaly Avoidance training for the team.

Preparation Activities

The drillers staged their equipment and supplies at the drum storage area across from the Motor Pool building, as requested by NYS Parks. A decontamination pad was also contructed in this area. Additionally, a site walk was completed with the drill team leads to assess accissibility at certain locations of concern.

Two planned well locations will not be accessible with the sonic drill rig for installation:

- CH-MW024 (near AST35/FPH); the space between the FPH building, fence, and AST35 containment wall are not wide enough; additionally, the well is located strategically to target the edge of the DU01 LNAPL plume, but falls within a wetland; a smaller, lighter rig would cause less damage to the wetland compared to the large Fraste XL Sonic drill rig.
- CH-MW040 (near DU15); location is too heavily vegetated and steep slopes for sonic rig access. Note this one is offset to the northeast on the maps to avoid the wetland and buffer zone per DR 6/1/17. Vegetation but it would require removing trees greater than 3", which should be avoided due to Northern long-eared bat habitat concerns.

The recommendation from the drilling team and the AECOM/USACE Geology team (Paul Young and PJ Mion, via phonecall) is to install these wells using the direct push rig. They will confirm with the rest of the USACE team with a final answer tomorrow.

The main reason for using the sonic rig is to install a 2" sand annulus around the casing to allow more water to enter the well. The direct push rig would install a well with a smaller sand annulus. However, both of these wells are in /adjacent to wetland areas so water recovery will likely be fine with a 1" sand annulus.

Additionally, surface water and sediment sampling locations CH-SWSD141 - 155 were flagged near DU08.

UXO Anomaly Avoidance

UXO anomaly avoidance was conducted by the UXO Technician II at STB well locations, DU05, DU07, DU09 through DU17. All locations were cleared for investigation activities.

Vegetation Clearance

Vegetation clearance for SW/SD sampling access was completed by ADT/Cascade with AECOM scientist oversight at DU08.

United States Army Corps of Engineers
Former Camp Hero Remedial Investigation
Montauk, New York

Contractor Daily Reports

DATE: 6/5/2017 Monday

DR No. 05		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

Surface Water and Sediment Sampling

Surface water and sediment samples were collected at locations CH-SWSD080 through 095. Samples were collected for metals (including mercury) and SVOCs/PAHs. 10% of samples were also collected for hexavalent chromium (with pH and ORP for sediment). The pH of the liquid hexavalent chromium was checked and adjusted in the field according to the procedure outlined in the SAP. Water quality parameters were collected for surface water, including pH, DO, ORP, specific conductivity, temperature, and turbidity. Field data were recorded on the SW/SD sample and electronically via the EDGE software.

Filtered surface water samples were also collected for all parameters if the turbidity of the surface water was > 10 NTU.

Monitoring Well Installation

Monitoring wells CH-MW026 through 028 were installed in the vicinity of former AOC "Suspected Tank B" (STB). Monitoring wells CH-MW041 and 042 were installed in the vicinity of DU06 (former power plant). Wells were installed via sonic drilling methods in accordance to the SAP.

Sample Management

Surface water and sediment samples collected collected were Quality Control checked, recorded on Chain of Custody records, and packed on ice for storage. The courier picked up 11 coolers for transport to the laboratory. Chain of Custody records were e-mailed to the Project Chemist (Devon Chicoine) and the Laboratory Project Manager prior to delivery to the laboratory.

WORK COMPLETED BY AECOM SUBCONTRACTORS

None

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

- Tom Dess (NY State Parks Superintendent) was notified of the number of team members on site at the start of the day.

REQUEST FOR INFORMATION (RFI)

- Paul Young (USACE) requested concurrence from Megan Cullen (USACE Technical Lead) on the monitoring well installation deviation described in the "Preparation Activities" section above.
- Amanda Martin requested confirmation on the Wetlands Mitigation Procedures described in the 6/2/17 Daily Report; Paul Young will contact Megan Cullen tomorrow.

TRANSMITTALS / SUBMITTALS

None

AIR MONITORING COMMENTS:

Continuous air monitoring was completed downwind of the drill rig, in accordance with the modified generic NYSDOH CAMP (see SAP Appendix H). No exceedances were observed.

SAFETY OBSERVATIONS/VIOLATIONS/COMMENTS

For surface water and sediment sample access near DU08 (Chlorine Contact Chamber), two paths were created through the dense vegetation. At one point, one path crosses the revetted stream where samples will be collected. Plywood planks were placed across the revetted stream to create a path of safe access for the team.

SUBCONTRACTORS:	SITE DELIVERIES (indicate size, type, and condition):
Cascade/ADT	20 CY roll-off container for soil cuttings, Clean Ventures, good condition
	6,000 gal Frac Tank, Rain for Rent, good condition

WORKED PERFORMED BY AECOM

The AECOM and Cascade/ADT team arrived on site at 0700 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with scheduled field work for the day.

UXO Anomaly Avoidance

UXO anomaly avoidance was conducted by the UXO Technician II at DU01, AST35/FPH, DU04, DU08, and DU18. All locations were cleared for investigation activities.

Vegetation Clearance

Vegetation clearance for drill rig access was completed by ADT/Cascade with AECOM oversight at AST35/FPH, DU15 (CH-MW040), and DU11 (CH-MW032).

Surface Water and Sediment Sampling

Surface water and sediment samples were collected at locations CH-SWSD031 through 045. Sediment samples were collected at locations CH-MW015 and 119 through 125 (where surface water were collected on 6/2/17). Samples were collected for metals (including mercury) and SVOCs/PAHs. 10% of samples were also collected for hexavalent chromium (with pH and ORP for sediment). The pH of the liquid hexavalent chromium was checked and adjusted in the field according to the procedure outlined in the SAP. Water quality parameters were collected for surface water, including pH, DO, ORP, specific conductivity, temperature, and turbidity. Field data were recorded on the SW/SD sample and electronically via the EDGE software.

Filtered surface water samples were also collected for all parameters if the turbidity of the surface water was > 10 NTU.

Monitoring Well Installation

Monitoring wells CH-MW029, 030, 032 to 035 were installed in the vicinity of DU11, DU12, DU17, and DU13. Well CH-MW043 was installed behind (south of) the motor pool building adjacent to the former hydraulic lift. Wells were installed via sonic drilling methods in accordance to the SAP.

Sample Management

Surface water and sediment samples collected collected were Quality Control checked, recorded on Chain of Custody records, and packed on ice for storage. Samples will be held on fresh ice until the next courier pick-up. Chain of Custody records were e-mailed to the Project Chemist (Devon Chicoine) and the Laboratory Project Manager prior to delivery to the laboratory.

WORK COMPLETED BY AECOM SUBCONTRACTORS

Cascade/ADT installed monitoring wells CH-MW029, 030, 032 to 035 and 043. A hydraulic line ruptured on one of the drill rigs during drilling activities and Cascade/ADT completed maintenance and clean-up for 45 minutes. Absorbant pads were used to contain the minimal hydraulic fluid released. Additionally, the team staged soil cuttings and liquid IDW in drums for transport to the soil roll-off and poly tank and completed well vaults and concrete pads. Two team members completed vegetation clearance at at AST35/FPH, DU15 (CH-MW040), and DU11 (CH-MW032).

Contractor Daily Reports

DATE: 6/6/2017 Tuesday

DR No. 06		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

- Tom Dess (NY State Parks Superintendent) was notified of the number of team members on site at the start of the day.

- Mr. Dess was also contacted regarding scheduling of installation of monitoring wells CH-MW036 and 037 near DU08 (Chlorine Contact Chamber), since the Old Montauk Highway will be closed on the date of the installation. Mr. Dess indicated that he had photography shoots scheduled in that area on Wednesday 6/7/17, Thursday 6/8/17, and Tuesday 6/13/17. The agreement was to install wells at DU08 on Friday 6/9/17, on the last day of well installation.

- Paul Young (USACE New England Technical Project oversight) indicated that the team has USACE approval for installation of the two monitoring wells (CH-MW024 and 040) could be installed with the direct push rig, with the well construction specifications discussed by the AECOM and USACE geologists.The USACE New England Technical Project oversight requested the prepacked well screens be constructed of 2-inch well screens with a sand pack surrounding the 2-inch well screens at least a 1.25-inch thick for a total outside diameter of the prepacked well screens and sand filter to be 3.25. It was also mentioned by USACE that small diameter augers could be used by the direct push drilling rig. Alternatively, the wells could be constructed traditionally if the direct push rig could spin small augers.

- Mark Kauffman (AECOM HTRW Advisor) discussed the wetlands mitigation summary with Megan Cullen (USACE New England Technical Lead), who referred information on the concerns to Greg Goepfert (USACE New York Project Manager). Mr. Goepfert and Ms. Cullen agreed that the team could proceed as recommended after documenting the decisions in the summary table and requested a few revisions to the table (see attached). The team will proceed with work in wetland areas as documented on the Wetlands

- Nick Acampora (NYSDEC) was notified that the teab is on track to complete the well installations and Shelby tube sample collection at former Building 203 Thursday (June 8, 2017). Mr. Acampora indicated that he intends to visit the site on that date.

REQUEST FOR INFORMATION (RFI)

The AECOM team updated the Summary of Observed Wetlands and Proposed Mitigation Procedures to show additional details for planned wetland mitigation measures. AECOM requested that the USACE Technical Team please notify AECOM as soon as possible if any feedback is received that should consider be considered to proceed with planned activities.

TRANSMITTALS / SUBMITTALS

None

AIR MONITORING COMMENTS:

Continuous air monitoring was completed downwind of the drill rig, in accordance with the modified generic NYSDOH CAMP (see SAP Appendix H). No exceedances were observed.

SAFETY OBSERVATIONS/VIOLATIONS/COMMENTS

Rainy and potentially stormy weather was forecasted for the day; the team reviewed storm procedures, which included a 30-minute stand-down if lightening were to strike within a 30-mile radius of the Site. The team discussed using the Conex Box/staging area as the muster point and waiting out heavy storms inside vehicles.

Daily Photos

Photo 1. Installation of monitoring well CH-MW043 outside the Motor Pool building, adjacent to the location of the former hydraulic lift.

Summary of Observed Wetlands and Proposed Mitigation Procedures, 6 June 2017
Phase III Remedial Investigation
Camp Hero, Montauk, New York

DU	Wetlands Observed	Wetlands Mitigation Required	Proposed Mitigation Procedures
DU01	No Wetland Conditions Observed	None	Site Standard (1)
AST35/FPH	Wetland Conditions Observed	Wells located to delineate downgradient portion of DU01 LNAPL plume; two wells planned in observed wetlands are still required to delineate groundwater impacts; mitigation procedures will be required.	Relocate wells outside wetland limits where possible; relocating wells is consistent with SAP flexibility and 5/9/17 site walk. Where it is not possible to relocate the well (CH-MW024), utilize wetland mats and catch basin to collect liquid and soil cuttings to minimize potential release of sediment to wetlands, utilize one point of entry and exit, rake ruts and re-seed with wetland seed mix, and verify successful mitigation two weeks post-installation.
DU02	Wetland Conditions Observed within State Mapped Wetland Boundary (Class 2)	None - no drilling	Site Standard (1)
DU03	Wetland Conditions Observed throughout approx. 90% of DU	Planned drill rig sampling operations located within observed wetlands.	Hand auger samples instead of using direct push drill rig within wetland limits. Collecting subsurface soil samples within wetlands with a hand auger is consistent with SAP flexibility.
DU04	No Wetland Conditions Observed	None - no drilling	Site Standard (1)
DU05	Wetland Conditions Observed throughout approx. 40-50% of DU	Planned drill rig sampling operations located within observed wetlands.	Hand auger samples within wetland limits. Collecting subsurface soil samples within wetlands with a hand auger is consistent with SAP flexibility.
DU06	Wetland Conditions observed through minimal portion of DU	Planned drill rig sampling operations located within observed wetlands.	Relocate sample borings outside wetland limits. Wells to be installed in park-maintained lawn outside of wetland limit. Collecting subsurface soil samples within wetlands with a hand auger is consistent with SAP flexibility.
DU07	Wetland Conditions Observed within State Mapped Wetland Boundary (Class 1). Additional wetland conditions outside state-mapped boundary observed. Wetlands cover approx. 75% of DU.	Planned drill rig sampling operations, planned well installations within observed wetlands and buffer zone.	Entire DU07 boundary will be shifted slightly west to avoid wetlands to the extent possible, while still encompassing the exposure area. Hand auger samples instead of using direct push drill rig wells within wetland limits and 100 ft buffer zone of state mapped wetlands. Relocate wells outside of wetland limits and 100 ft buffer zone of state mapped wetlands. Well location CH-MW038 will be adjusted to avoid wetlands and 100 ft buffer zone, placed in park-maintained lawn to west of DU. Well CH-MW039 will be moved to in vicinity of DU15 because moving well outside buffer zone at DU07 would put well close to previously-installed wells CH-MW006 and CH-MW005 (already sufficient groundwater coverage in the area).
DU08	Wetland Conditions Observed within State Mapped Wetland Boundary (Class 1). Additional wetland conditions outside state-mapped boundary observed. Wetlands cover approx. 90% of DU.	Planned drill rig sampling operations, planned well installations within observed wetlands and buffer zone.	Relocate wells along existing, maintained roadway and shoulder. Drill rigs will not leave road. As discussed on 5/9/17 site walk, surface water and sediment samples will be collected instead of soil samples within the DU wetland area.
DU09	No Wetland Conditions Observed	None	Site Standard (1)
DU10	No Wetland Conditions Observed	None - no drilling	Site Standard (1)
DU11	Wetland Conditions Observed throughout approx. 10% observed	Planned well installations within observed wetlands.	Relocate wells outside of wetland limits, if necessary, and utilize wetland mats and catch basin to collect liquid and soil cuttings to minimize potential release to wetlands. Relocating wells is consistent with SAP flexibility and 5/9/17 site walk.
DU12	No Wetland Conditions Observed	None	Site Standard (1)

Summary of Observed Wetlands and Proposed Mitigation Procedures, 6 June 2017
Phase III Remedial Investigation
Camp Hero, Montauk, New York

DU	Wetlands Observed	Wetlands Mitigation Required	Proposed Mitigation Procedures
DU13	No Wetland Conditions Observed	None	Site Standard (1)
DU14	No Wetland Conditions Observed	None	Site Standard (1)
DU15	Wetland Conditions Observed within State Mapped Wetland Boundary (Class 1). Additional wetland conditions extended north of mapped wetlands. Wetland conditions cover 100% of the DU.	Planned drill rig sampling operations, and planned well installation downgradient of debris area with previous PCB detection in grab-groundwater, within observed wetland and buffer zone.	Relocate well CH-MW040 outside of wetland limits and 100 ft buffer zone. For well location CH-MW040, move to northwest outside buffer zone. Move well CH-MW039 to the southeast of the DU, within the buffer zone, but on an existing asphalt which will prevent disturbance to the wetland. For soil samples, consistent with SAP, subsurface soil samples within wetlands will be collected with hand auger.
DU16	Wetland conditions observed within approx. 20% of the DU.	Planned drill rig sampling operations within observed wetlands.	Relocate sample borings outside wetland limits or hand auger samples. Collecting subsurface soil samples within wetlands with a hand auger is consistent with SAP flexibility.
DU17	Wetland conditions observed within approx. 30% of the DU.	Planned well installation within observed wetlands.	Relocate well location outside of wetland limits. Collecting subsurface soil samples within wetlands with a hand auger is consistent with SAP flexibility.
DU18	No Wetland Conditions Observed (although state mapped wetlands are shown)	None	Site Standard (1)
STB	Wetland Conditions Observed within State Mapped Wetland Boundary (Class 1).	Planned well installations within100 ft buffer zone.	Relocate wells outside of wetland limits on park-maintained lawn (within 100 ft buffer). Collecting subsurface soil samples within wetlands with a hand auger is consistent with SAP flexibility.

Notes

(1) Site Standard Mitigation Procedures include, but are not limited to, minimal vegetation clearance and tree clearing limited to trees under 3".

WORKED PERFORMED BY AECOM

The AECOM, USACE, and Cascade/ADT team arrived on site at 0700 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with scheduled field work for the day.

UXO Anomaly Avoidance

UXO anomaly avoidance was conducted by the UXO Technician II at DU03. All locations were cleared for investigation activities.

Surface Water and Sediment Sampling

Surface water and sediment samples were collected at locations CH-SWSD126 through 140 for PCBs, metals (including mercury), and SVOCs/PAHs. Surface water and sediment samples were collected at locations CH-SWSD027 thorough 030 and CH-SWSD098 through 100 for metals (including mercury) and SVOCs/PAHs. 10% of site samples were and 100% of background samples were also collected for hexavalent chromium (with pH and ORP for sediment). The pH of the liquid hexavalent chromium was checked and adjusted in the field according to the procedure outlined in the SAP. Water quality parameters were collected for surface water, including pH, DO, ORP, specific conductivity, temperature, and turbidity. Field data were recorded on the SW/SD sample and electronically via the EDGE software.

Filtered surface water samples were also collected for all parameters if the turbidity of the surface water was > 10 NTU.

Monitoring Well Installation

Monitoring wells CH-MW025, 031, 038, and 039 were installed via sonic drilling methods in accordance with the SAP. Monitoring well construction and boring lithology information were recorded electronically via the EDGE software.

Sample Management

Surface water and sediment samples collected collected were Quality Control checked, recorded on Chain of Custody records, and packed on ice for storage. The courier picked up 11 coolers for transport to the laboratory. Chain of Custody records were e-mailed to the Project Chemist (Devon Chicoine) and the Laboratory Project Manager prior to delivery to the laboratory.

WORK COMPLETED BY AECOM SUBCONTRACTORS

Cascade/ADT installed monitoring wells CH-MW025, 031, 038, and 039 . Additionally, the team staged soil cuttings and liquid IDW in drums for transport to the soil roll-off and poly tank, emptied/transferred IDW to said containers, completed well vaults and concrete pads, and restored the work area after drilling activities.

Cascade/ADT	None

WORKED PERFORMED BY AECOM

The AECOM, USACE, and Cascade/ADT team arrived on site at 0700 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with scheduled field work for the day.

Surface Water and Sediment Sampling

Surface water and sediment samples were collected at locations CH-SWSD001 to 003 and 015 to 023 for metals (including mercury) and SVOCs/PAHs. Additionally, sediment samples were collected at locations CH-SWSD096 to 098 for sediment (surface water collected at earlier date) for the same parameters. 10% of site samples were and 100% of background samples were also collected for hexavalent chromium (with pH and ORP for sediment). The pH of the liquid hexavalent chromium was checked and adjusted in the field according to the procedure outlined in the SAP. Water quality parameters were collected for surface water, including pH, DO, ORP, specific conductivity, temperature, and turbidity. Field data were recorded on the SW/SD sample and electronically via the EDGE software.

Filtered surface water samples were also collected for all parameters if the turbidity of the surface water was > 10 NTU.

Shelby Tube Sample Collection

Two shelby tube samples were collected at DU01 (former Building 203) from locations DU01-SO09 (near CH-MW019) and DU01-SO15 (near CH-MW021) from the clay confining layer. Three samples were planned in the SAP (two from perched aquifer material and one from clay material), but the sandy aquifer material could not be collected in the shelby tube device because the sandy material slipped out of the tube at every attempt. As a result, two samples were collected in the clay; no aquifer material could be collected, and the third shelby tube sample was eliminated. Shelby tube permeability results will be supplemented by slug testing in the stated monitoring wells.

Monitoring Well Installation

Monitoring wells CH-MW022 and 023 were installed via sonic drilling methods in accordance with the SAP. Monitoring well construction and boring lithology information were recorded electronically via the EDGE software.

LNAPL Gauging

Existing monitoring wells at DU01 and temporary piezometer PZ-03 were gauged for LNAPL thickness. Consistent with the previous event, LNAPL was present only in PZ-03 and CH-MW017. Thickness was 0.41 ft and 1.22 ft, respectively. The groundwater elevation was approximately 5 ft higher than during the December event, which may explain why LNAPL thickness at these two locations is smaller than in December.

Sample Management

Surface water and sediment samples collected collected were Quality Control checked, recorded on Chain of Custody records, and packed on ice for storage. Samples will be stored on fresh ice until the next courier pick-up. Chain of Custody records were e-mailed to the Project Chemist (Devon Chicoine) and the Laboratory Project Manager prior to delivery to the laboratory.

Contractor Daily Reports

DATE: 6/8/2017 Thursday

DR No. 08		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

WORK COMPLETED BY AECOM SUBCONTRACTORS

Cascade/ADT installed monitoring wells CH-MW022 and 023 and collected 2 shelby tube samples. Additionally, the team staged soil cuttings and liquid IDW in drums for transport to the soil roll-off and poly tank, emptied/transferred IDW to said containers, completed well vaults and concrete pads, and restored the work area after drilling activities.

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

- Tom Dess (NY State Parks Superintendent) was notified of the number of team members on site at the start of the day. Additionally, the team confirmed the road closure for DU08 work on 6/9/17 with Mr. Dess and confirmed what type of grass seed the NYS Parks would prefer to reseed the lawns with drill rig tracks (tall fescue).

- Nick Acampora (NYSDEC) visited the site to see work occurring at DU01 (former Building 203). Mr. Acampora confirmed the LNAPL thickness in locations CH-MW017 and PZ-03, viewed new monitoring well installations, and viewed one soil core for shelby tube sampling (DU14-SO15). Petroleum impacts were noted in the core. Mr. Acampora indicated the NYSDEC would prefer for LNAPL to be pumped from the existing wells weekly while the team was on site; he will discuss this with the NYSDEC and USACE.

REQUEST FOR INFORMATION (RFI)

None

TRANSMITTALS / SUBMITTALS

Cascade/ADT	None

WORKED PERFORMED BY AECOM

The AECOM, USACE, and Cascade/ADT team arrived on site at 0700 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with scheduled field work for the day.

Surface Water and Sediment Sampling

Surface water and sediment samples were collected at locations CH-SWSD0141 to 155 for metals (including mercury) and SVOCs/PAHs. Additionally, surface water samples (only) were collected at background locations CH-SWSD008 to 010, 014, and 015 for the same parameters. Sediment samples at thse locations will be collected at a later date. 10% of site samples and 100% of background samples were also collected for hexavalent chromium (with pH and ORP for sediment). The pH of the liquid hexavalent chromium was checked and adjusted in the field according to the procedure outlined in the SAP. Water quality parameters were collected for surface water, including pH, DO, ORP, specific conductivity, temperature, and turbidity. Field data were recorded on the SW/SD sample forms and electronically via the EDGE software.

Filtered surface water samples were also collected for all parameters if the turbidity of the surface water was > 10 NTU.

Monitoring Well Installation

Monitoring wells CH-MW036 and 037 were installed via sonic drilling methods in accordance with the SAP. Monitoring well construction and boring lithology information were recorded electronically via the EDGE software.

Sample Management

Surface water and sediment samples collected collected were Quality Control checked, recorded on Chain of Custody records, and packed on ice for storage. The courier picked up 12 coolers of samples for delivery to the laboratory. Samples collected later in the day will be stored on fresh ice until the next courier pick-up. Chain of Custody records were e-mailed to the Project Chemist (Devon Chicoine) and the Laboratory Project Manager prior to delivery to the lab.

DR No. 09		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

WORK COMPLETED BY AECOM SUBCONTRACTORS

Cascade/ADT installed monitoring wells CH-MW036 and 037. Additionally, the team staged soil cuttings and liquid IDW in drums for transport to the soil roll-off and poly tank, emptied/transferred IDW to said containers, completed well vaults and concrete pads, and restored the work area after drilling activities. Cascade/ADT decontaminated their drill rigs and demobilized from the site at 1100.

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

- Tom Dess (NY State Parks Superintendent) was notified of the number of team members on site at the start of the day. Additionally, coordinated the road closure for DU08 work with Mr. Dess, confirming the times of road closure and re-opening.

REQUEST FOR INFORMATION (RFI)

None

TRANSMITTALS / SUBMITTALS

None

AIR MONITORING COMMENTS:

Continuous air monitoring was completed downwind of the drill rig, in accordance with the modified generic NYSDOH CAMP (see SAP Appendix H). No exceedances were observed.

SAFETY OBSERVATIONS/VIOLATIONS/COMMENTS

Old Montauk Highway between the State Park Bluffs parking lot and Chlorine Contact Chamber was closed during installation of monitoring wells CH-MW036 and 037, and during setup of the surface water/sediment sampling crew. A "Road Closed" sign was placed at the entrance of the road with traffic cones. An exclusion zone was set up around the drilling activities. Tom Dess (NYS Parks Superintendent) was notified at the time of road closure and road re-opening.

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0700 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with the scheduled field work for the day.

Surface Water and Sediment Sampling

Surface water and sediment samples were collected at locations CH-SWSD011 to 013, 024 to 026, and 111 for metals (including mercury) and SVOCs/PAHs. Additionally, sediment samples (only) were collected at background locations CH-SWSD008 to 010, 014, and 015 for the same parameters. Surface water at these locations were collected at an earlier date. 10% of site samples and 100% of background samples were also collected for hexavalent chromium (with pH and ORP for sediment). The pH of the liquid hexavalent chromium was checked and adjusted in the field according to the procedure outlined in the SAP. Water quality parameters were collected for surface water, including pH, DO, ORP, specific conductivity, temperature, and turbidity. Field data were recorded on the SW/SD sample forms and electronically via the EDGE software.

Filtered surface water samples were also collected for all parameters if the turbidity of the surface water was > 10 NTU. Equipment blanks were collected for the non-disposible sampling equipment used this week (the hand auger and the Eijkelkamp flap gouge auger).

Sample Management

Surface water and sediment samples collected collected were Quality Control checked, recorded on Chain of Custody records, and packed on ice for storage. Samples will be stored on fresh ice until the next courier pick-up. Chain of Custody records were e-mailed to the Project Chemist (Devon Chicoine) and the Laboratory Project Manager prior to delivery to the lab.

WORKED PERFORMED BY AECOM

The AECOM and Cascade/Zebra team arrived on site at 0700 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with scheduled field work for the day.

Direct Push Soil Sampling

Direct push soil borings were conducted at the following DUs for collection of soil samples:

DU05: soil samples were collected at locations DU05-SO01 to 03, 05 to 07, 09 to 11, and 15 from 0 - 1 ft bgs (surface soil) and 1 - 10 ft bgs (subsurface soil) or 1 - 2 ft bgs (subsurface soil) if hand augered due to wetlands or access issues. Samples were collected for analysis of metals (including mercury). 10% of soil samples (site-wide) were collected for hexavalent chromium (with pH and ORP).

DU12: soil samples were collected at locations DU12-SO01 to 07, 09, 10, and 13 to 15 from 0 - 1 ft bgs (surface soil) and 1 - 10 ft bgs (subsurface soil) for analysis of SVOCs/PAHs and metals (including mercury). 10% of soil samples (site-wide) were collected for hexavalent chromium (with pH and ORP).

DU14: soil samples were collected at locations DU14-SO07, 08, 10, 12, and 14 to 16 from 0 - 1 ft bgs (surface soil) and 1 - 10 ft bgs (subsurface soil) for analysis of SVOCs/PAHs.

DU16: soil samples were collected at locations DU16-SO01 to 16 from 0 - 1 ft bgs (surface soil) and 1 - 10 ft bgs (subsurface soil) for analysis of SVOCs/PAHs.

Field and sample data were recorded on the Soil Boring/Sample Forms and electronically via the EDGE software.

Monitoring Well Development

Well development was conducted at the following newly-installed monitoring wells:

CH-MW025: well development continued; 8 gal were remoevd today for a total of 13 gal removed over 10 rounds of pumping dry. Development not complete.

CH-MW026: well development began; 12 gal were removed today over 6 rounds of pumping dry. Development not complete.

CH-MW027: well development continued; 8 gal were remoevd today for a total of 17.75 gal removed over 9 rounds of pumping dry. Development not complete.

CH-MW028: well development continued; 5.9 gal were removed today for a total of 13.7 gal removed over 6 rounds of pumping dry. Development not complete.

CH-MW039: well development began; 20.7 gal were removed today over 4 rounds of pumping dry. Development not complete.

CH-MW041: well development continued; 21 gal were removed today for a total of 38 gal removed over 7 rounds pumping dry. Development not complete.

CH-MW042: well development began; 18.6 gal were removed today over 5 rounds of pumping dry. Development not complete.

Additional rounds of well development will be continued, in attempt to remove a minimum 3X the volume added during well construction.

Sample Management

Soil samples collected collected were Quality Control checked, recorded on Chain of Custody records, and packed on ice for storage. Samples will be held on fresh ice until the next courier pick-up. Chain of Custody records were e-mailed to the Project Chemist (Devon Chicoine) and the Laboratory Project Manager prior to delivery to the lab.

Cascade (Zebra)	None

WORKED PERFORMED BY AECOM

The AECOM and Cascade/Zebra team arrived on site at 0700 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with scheduled field work for the day.

Direct Push Soil Sampling

Direct push soil borings were conducted at the following DUs for collection of soil samples:

DU14 soil samples were collected at locations DU14-SO01 through DU14-SO06, DU14-SO09, and DU14-SO13 from 0 - 1 ft bgs (surface soil) and 1 - 10 ft bgs (subsurface soil) for analysis of SVOCs/PAHs.

DU07 soil samples were collected at locations DU05-SO01 to 03, 04, 08, 12, 13, and 16 from 0 - 1 ft bgs (surface soil) and 1 - 10 ft bgs (subsurface soil). Samples were collected for analysis of metals (including mercury).

DU12 soil samples were collected at locations DU12-SO08, 11, 12, and 16 from 0 - 1 ft bgs (surface soil) and 1 - 10 ft bgs (subsurface soil) for analysis of SVOCs/PAHs and metals (including mercury).

DU01 soil samples were collected at locations DU01-SO01 to 16 from 1 - 10 ft bgs (subsurface soil) for analysis of VOCs, SVOCs/PAHs, and metals (including mercury). Locations originally planned within the former building footprint were offset due to refusal at the depth of the building foundation.

10% of metals samples (site-wide) were also evaluated for hexavalent chromium (with pH and ORP). Field and sample data were recorded on the Soil Boring/Sample Forms and electronically via the EDGE software.

Monitoring Well Development

Well development was conducted at the following newly-installed monitoring wells:

CH-MW028: well development finalized; 5.9 gal were removed today for a total of 13.7 gal removed over 6 rounds of pumping dry.
CH-MW036: well development began; 16.5 gal were removed over 7 rounds of pumping dry. Development not complete.
CH-MW037: well development began; 161.7 gal were remoevd without going dry. Development complete.
CH-MW039: well development continued; 60.6 gal were remoevd today for a total of 81.3 gal removed over 13 rounds of pumping dry. Development not complete.
CH-MW040: well development began; 16.9 gal were removed total over 14 rounds of pumping dry. Development complete.
CH-MW041: well development finalized; 21 gal were removed today for a total of 38 gal removed over 7 rounds pumping dry.
CH-MW042: well development finalized; 18.6 gal were removed today over 5 rounds of pumping dry. Development not complete.

Additional rounds of well development will be continued on the specified wells, in attempt to remove a minimum 3X the volume added during well construction.

Sample Management

Soil samples collected collected were Quality Control checked, recorded on Chain of Custody records, and packed on ice for storage. Coolers were picked up by the courier at 0900; sample collected after courier pick-up will be held on fresh ice until the next courier pick-up. Chain of Custody records were e-mailed to the Project Chemist (Devon Chicoine) and the Laboratory Project Manager prior to delivery to the lab.

WORKED PERFORMED BY AECOM

The AECOM and Cascade/Zebra team arrived on site at 0700 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with scheduled field work for the day.

Direct Push Soil Sampling

Surface and subsurface soil samples were collected at the listed DUs as follows:

DU03 soil samples were collected at locations DU03-SO01 to 06, 09, 10, and 13 to 15 from 0 - 1 ft bgs (surface soil) and 1 - 2 ft bgs (subsurface soil with hand auger in wetland area and buffer). Samples were collected for analysis of SVOCs and metals (including mercury).

DU04 soil samples were collected at locations DU04-SO01 to 16 from 0 - 1 ft bgs (surface soil) for analysis of metals (including mercury).

DU07 soil samples were collected at locations DU05-SO05 to 07, 09 to 11, and 14 to 16 from 0 - 1 ft bgs (surface soil) and 1 - 2 ft bgs (subsurface soil with hand auger in wetland area and buffer). Samples were collected for analysis of metals (including mercury).

DU10 soil samples were collected at locations DU10-SO01 to 16 from 0 - 1 ft bgs (surface soil) for analysis of metals (including mercury). for analysis of SVOCs/PAHs and metals (including mercury).

DU15 soil samples were collected at locations DU15-SO01 to 16 from 0 - 1 ft bgs (surface soil) and 1 - 2 ft bgs (subsurface soil with hand auger in wetland area and buffer). Samples were collected for analysis of SVOCs/PAHs, PCBs, and metals (including mercury).

Additionally, 10% of metals samples (site-wide) were also evaluated for hexavalent chromium (with pH and ORP). Field and sample data were recorded on the Soil Boring/Sample Forms and electronically via the EDGE software.

Monitoring Well Development

Well development was conducted at the following newly-installed monitoring wells:

CH-MW025: well development finalized; 13 gal were removed over 10 rounds of pumping dry.
CH-MW026: well development finalized; 12 gal were removed over 6 rounds of pumping dry.
CH-MW027: well development finalized; 17.75 gal removed over 9 rounds of pumping dry.
CH-MW029: well development began and finalized; 43.2 gal removed over 19 rounds of pumping dry (recharging between rounds in 6 minutes).
CH-MW031: well development began; 4.2 gal removed over 6 rounds of pumping dry.
CH-MW034: well development began; 8.76 gal removed over 6 rounds of pumping dry.
CH-MW035: well development began; 2.61 gal removed over 7 rounds of pumping dry.
CH-MW036: well development finalized; 16.5 gal were removed over 7 rounds of pumping dry.
CH-MW039: well development finalized; 60.6 gal were remoevd today for a total of 81.3 gal removed over 13 rounds of pumping dry.
CH-MW040: well development finalized; 16.9 gal were removed total over 14 rounds of pumping dry.

Additional rounds of well development will be continued on the specified wells, in attempt to remove a minimum 3X the volume added during well construction.

Sample Management

Soil samples collected collected were Quality Control checked, recorded on Chain of Custody records, and packed on ice for storage. Samples will be held on fresh fresh ice until the next courier pick-up. WORKED PERFORMED BY AECOM

The AECOM and Cascade/Zebra team arrived on site at 0700 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with scheduled field work for the day.

Soil Sampling

Surface and subsurface soil samples were collected at the listed DUs as follows:

DU02 soil samples were collected at locations DU02-SO01 to 16 from 0 - 1 ft bgs (surface soil) with a hand auger, shovel, or disposable plastic scoop. Samples were collected for analysis of metals (including mercury).

DU03 soil samples were collected at locations DU03-SO07, 08, 11, 12, and 16 from 0 - 1 ft bgs (surface soil) and 1 - 2 ft bgs (subsurface soil with hand auger in wetland area and buffer). Samples were collected for analysis of SVOCs and metals (including mercury).

DU09 soil samples were collected at locations DU04-SO01 to 16 from 0 - 1 ft bgs (surface soil) with a shovel for analysis of metals (including mercury).

Additionally, 10% of metals samples (site-wide) were also evaluated for hexavalent chromium (with pH and ORP). Field and sample data were recorded on the Soil Boring/Sample Forms and electronically via the EDGE software.

Monitoring Well Development

Well development was conducted at the following newly-installed monitoring wells:

CH-MW031: well development continued; 2.5 gal removed for a total of 6.7 gal removed over 7 rounds of pumping dry.
CH-MW032: well development began; 39 gal removed over 9 rounds of pumping dry; development not complete.
CH-MW033: well development began and finalized; 118 gal removed over 4 rounds of pumping dry.
CH-MW034: well development continued; 4 gal removed for a total of 12.76 gal over 7 rounds of pumping dry.
CH-MW035: well development continued; 3.6 gal removed today for a total of 6.21 gal removed over 9 rounds of pumping dry.
CH-MW038: well development began and finalized; 66.9 gal removed over 10 rounds of pumping dry.

Additional rounds of well development will be continued on the specified wells, in attempt to remove a minimum 3X the volume added during well construction.

IDW Management

IDW soil samples were collected from the roll-off (non-LNAPL impacted soil) and 55-gal drum (LNAPL impacted soil) for waste characterization. Samples were picked up by the courier today; results should be expected on Thursday 6/22/17.

Sample Management

Soil samples collected were Quality Control checked, recorded on Chain of Custody records, and packed on ice for storage. The courier picked up samples at 0930; samples collected after the pick-up time will be held on fresh ice until the next courier pick-up. Chain of Custody records were e-mailed to the Project Chemist (Devon Chicoine) and the Laboratory Project Manager prior to delivery to the lab.

Young & Young	None

WORKED PERFORMED BY AECOM

The AECOM and Young & Young (surveyors) team arrived on site at 0700 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with scheduled field work for the day. New team members reviewed and the Accident Prevention Plan.

Soil Sampling

Surface soil samples were collected at the listed DUs as follows:

DU17 soil samples were collected at locations DU17-SO01 to 16 from 0 - 1 ft bgs (surface soil) with a hand auger for analysis of metals (incl. mercury).
DU18 soil samples were collected at locations DU18-SO01 to 16 from 0 - 1 ft bgs (surface soil) with a hand auger for analysis of metals (incl. mercury).

Additionally, 10% of metals samples (site-wide) were also evaluated for hexavalent chromium (with pH and ORP). Field and sample data were recorded on the Soil Boring/Sample Forms and electronically via the EDGE software.

Monitoring Well Development

Well development was conducted at the following newly-installed monitoring wells:

CH-MW019: well re-development began; this well was installed and developed during the December 2016 Phase II event. However, due to low recharge with low water table in December, well re-development was recommended. 5.9 gal were removed over 5 rounds of pumping dry. Re-development not complete.
CH-MW022: well development began; 9.9 gal removed over 7 rounds of pumping dry. Development not complete.
CH-MW023: well development began; 9.5 gal removed over 2 rounds of pumping dry. Development not complete.
CH-MW024: well development began and finalized; 18.3 gal removed over 8 rounds of pumping dry. Development complete.
CH-MW031: well development continued; 2 gal removed for a total of 14.1 gal removed over 11 rounds of pumping/bailing dry over 5 days. Well still turbid, development not complete.
CH-MW032: well development continued and finalized; 33.25 gal removed today for a total of 72.25 gal over 16 rounds of pumping dry; development complete.
CH-MW043: well development began; 44.5 gal removed over 12 rounds of pumping dry. Development not complete.

Additional rounds of well development will be continued on the specified wells, in attempt to remove a minimum 3X the volume added during well construction.

Land Surveying

Land surveying was completed at the following locations:

Soil Sample Locations: DU02, DU04, DU05, DU06, DU16
Surface Water and Sediment Sample Locations: CH-SWSD096 to 110 and CH-SWSD111
Monitoring Wells: CH-MW001 to 004, 010 to 015, 018, 023, 025 to 028, 039, 041, and 042

Latitude, longitude, and ground surface elevation were collected at each location. Top of casing elevation was also collected for monitoring wells.

Contractor Daily Reports

DATE: 6/19/2017 Monday

DR No. 16		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

Sample Management

Soil samples collected were Quality Control checked, recorded on Chain of Custody records, and packed on ice for storage. The courier picked up samples at 0930; samples collected after the pick-up time will be held on fresh ice until the next courier pick-up. Chain of Custody records were e-mailed to the Project Chemist (Devon Chicoine) and the Laboratory Project Manager prior to delivery to the lab.

WORK COMPLETED BY AECOM SUBCONTRACTORS

Young & Young completed surveying of the locations described above.

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

- Tom Dess (NY State Parks Superintendent) was notified of the number of team members on site at the start of the day.

WORKED PERFORMED BY AECOM

The AECOM and Young & Young (surveyors) team arrived on site at 0700 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with scheduled field work for the day.

Soil Sampling

Surface soil samples were collected at the listed DUs as follows:

DU11 soil samples were collected at locations DU11-SO01 to 16 from 0 - 1 ft bgs (surface soil) with a hand auger for analysis of metals (incl. mercury).
DU13 soil samples were collected at locations DU13-SO01 to 16 from 0 - 1 ft bgs (surface soil) with a hand auger for analysis of metals (incl. mercury).

Additionally, 10% of metals samples (site-wide) were also evaluated for hexavalent chromium (with pH and ORP). Field and sample data were recorded on the Soil Boring/Sample Forms and electronically via the EDGE software.

Monitoring Well Development

Well development was conducted at the following newly-installed monitoring wells:

CH-MW019: well re-development continued and finalized; this well was installed and developed during the December 2016 Phase II event. However, due to low recharge/low water table in December, well re-development was recommended. 6.6 gal were removed over 6 rounds of pumping dry. Re-development complete.
CH-MW022: well development continued and finalized; 5.1 gal removed today for a total of 16.5 gal removed over 9 rounds of pumping dry. Development complete.
CH-MW023: well development continued and finalized; 21.35 gal removed today for a total of 30.85 gal removed over 7 rounds of pumping dry. Development complete.
CH-MW031: well development continued and finalized; 2 gal removed today for a total of 16.1 gal removed over 12 rounds of pumping/bailing dry over 6 days. Development complete.
CH-MW030: well development began and finalized; 15.5 gal removed over 4 rounds of pumping dry (over 2 well volumes removed); development considered complete.
CH-MW043: well development continued; 34.75 gal removed for a total of 79 gal removed over 18 rounds of pumping dry. Development complete.

Additional rounds of well development will be continued on the specified wells, in attempt to remove a minimum 3X the volume added during well construction.

Land Surveying

Land surveying was completed at the following locations:

Soil Sample Locations: DU15, DU07, DU18, DU10, DU11, DU12
Surface Water and Sediment Sample Locations: CH-SWSD001 to 003, 031 to 045, 056 to 079, 126 to 140
Monitoring Wells: CH-MW005, 006, 008, 030, 033, 040

Latitude, longitude, and ground surface elevation were collected at each location. Top of casing elevation was also collected for monitoring wells.

WORKED PERFORMED BY AECOM

The AECOM and Young & Young (surveyors) team arrived on site at 0700 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with scheduled field work for the day.

Monitoring Well Sampling

Groundwater samples were collected from the following monitoring wells:

CH-MW036: groundwater samples were collected for analysis of SVOCs/PAHs andn metals (incl. mercury). Filtered and unfiltered samples were collected.
CH-MW038: groundwater samples were collected for analysis of SVOCs/PAHs and metals (incl. mercury). Filtered and unfiltered samples were collected.
CH-MW039: groundwater samples were collected for analysis of SVOCs/PAHs and metals (incl. mercury). Filtered and unfiltered samples were collected. MS/MSD samples were also collected.
CH-MW040: groundwater samples were collected for analysis of SVOCs/PAHs, PCBs, and metals (incl. mercury). Filtered and unfiltered samples were collected. Duplicate samples were also collected.
CH-MW041: groundwater samples were collected for analysis of SVOCs/PAHs and metals (incl. mercury). Filtered and unfiltered samples were collected.
CH-MW042: groundwater samples were collected for analysis of SVOCs/PAHs and metals (incl. mercury). Filtered and unfiltered samples were collected.

Additionally, 10% of metals samples (site-wide) were also evaluated for hexavalent chromium (with pH and ORP). Field and sample data were recorded electronically via the EDGE software.

Hydraulic Conductivity Testing

Hydraulic conductivity testing (slug tests) was conducted at CH-MW020. Three rising-head and three falling-head tests were conducted.

Land Surveying

Land surveying was completed at the following locations:

Soil Sample Locations: DU03, DU09, DU13, DU14
Surface Water and Sediment Sample Locations: CH-SWSD016 to 025, 080 to 095, 112 to 125, and 141 to 155.
Monitoring Wells: CH-MW007, 031, 034 to 037

Latitude, longitude, and ground surface elevation were collected at each location. Top of casing elevation was also collected for monitoring wells.

Sample Management

Soil samples collected were Quality Control checked, recorded on Chain of Custody records, and packed on ice for storage. Samples will be held on fresh ice until the next courier pick-up. Chain of Custody records were e-mailed to the Project Chemist (Devon Chicoine) and the Laboratory Project Manager prior to delivery to the lab.

WORKED PERFORMED BY AECOM

The AECOM and Young & Young (surveyors) team arrived on site at 0700 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with scheduled field work for the day.

Monitoring Well Sampling

Groundwater samples were collected from the following monitoring wells:

CH-MW025: groundwater samples were collected for analysis of VOCs, SVOCs/PAHs, and metals (incl. mercury). Filtered and unfiltered samples were collected or SVOCs/PAHs and metals.

CH-MW026: groundwater samples were collected for analysis of VOCs, SVOCs/PAHs, metals (incl. mercury), and MNA parameters*. Filtered and unfiltered samples were collected or SVOCs/PAHs and metals.

CH-MW027: groundwater samples were collected for analysis of VOCs, SVOCs/PAHs, and metals (incl. mercury). Filtered and unfiltered samples were collected or SVOCs/PAHs and metals.

CH-MW028: groundwater samples were collected for analysis of VOCs, SVOCs/PAHs, and metals (incl. mercury). Filtered and unfiltered samples were collected or SVOCs/PAHs and metals.

CH-MW029: groundwater samples were collected for analysis of SVOCs/PAHs and metals (incl. mercury). Filtered and unfiltered samples were collected.

CH-MW037: groundwater samples were collected for analysis of SVOCs/PAHs, metals (incl. mercury), and MNA parameters*. Filtered and unfiltered samples were collected for SVOCs/PAHs and metals. Duplicate samples were collected.

Additionally, 10% of metals samples (site-wide) were also evaluated for hexavalent chromium (with pH and ORP). Field and sample data were recorded electronically via the EDGE software.

** MNA parameters consist of biochemical oxygen demand, total oxygen demand, total organic carbon, ferrous iron (field analysis), chlorides, sulfates and sulfides, nitrates and nitrites, alkalinity, methane, ethane, and ethene.*

Hydraulic Conductivity Testing

Hydraulic conductivity tests (slug tests) were conducted at monitoring wells at DU01. Three rising-head and three falling-head tests were conducted and CH-MW016, one falling-head test was conducted at CH-MW018, and one falling-head test was conducted at CH-MW021.

Land Surveying

Land surveying was completed at the following locations:, which completed the Phase III surveying effort:

Soil Sample Locations: DU01, DU17
Surface Water and Sediment Sample Locations: CH-SWSD004 to 015, 024 to 030, and 046 to 055.
Monitoring Wells: CH-MW016, 017, 019 to 022, and PZ-3.

Latitude, longitude, and ground surface elevation were collected at each location. Top of casing elevation was also collected for monitoring wells.

Sample Management

Soil samples collected were Quality Control checked, recorded on Chain of Custody records, and packed on ice for storage. Samples will be held on fresh ice until the next courier pick-up. Chain of Custody records were e-mailed to the Project Chemist (Devon Chicoine) and the Laboratory Project Manager prior to delivery to the lab.

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0800 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with the scheduled field work for the day.

Monitoring Well Sampling

Groundwater samples were collected from the following monitoring wells:

CH-MW016: groundwater samples were collected for analysis of VOCs, SVOCs/PAHs, metals (incl. mercury), and MNA parameters*. Filtered and unfiltered samples were collected for SVOCs/PAHs and metals. Additionally, a MS/MSD sample was collected.

CH-MW043: groundwater samples were collected for analysis of VOCs, SVOCs/PAHs, and metals (incl. mercury). Filtered and unfiltered samples were collected or SVOCs/PAHs and metals.

Additionally, 10% of metals samples (site-wide) were also evaluated for hexavalent chromium (with pH and ORP). Field and sample data were recorded electronically via the EDGE software.

** MNA parameters consist of biochemical oxygen demand, total oxygen demand, total organic carbon, ferrous iron (field analysis), chlorides, sulfates and sulfides, nitrates and nitrites, alkalinity, methane, ethane, and ethene.*

Hydraulic Conductivity Testing

Hydraulic conductivity tests (slug tests) were continued and finalized at monitoring wells at CH-MW019 and CH-MW021.

IDW Management

Liquid IDW samples were collected from the poly frac tank (IDW-WW062717-01) and the drums containing petroleum-impacted water (IDW-WW062717-02) for analysis of TCLP VOCs and SVOCs, Full TCLP, RCRA 8 Metals, flashpoint, ignitability, and pH. Samples will be picked up by the laboratory courier on Wednesday June 28, 2017, and delivered to the laboratory on Thursday June 29, 2017. An expedited turn-around-time of 6 days was requested and results are expected on Friday July 7, 2017.

Anomaly Inspection near Radar Tower Fence

Mr. Greg Goepfert (USACE New York Project Manager) received information from a History Channel contact indicating two possible anomalies near the Radar Tower fence (see attached figure). Mr. Geopfert inquired as to whether these locations correspond to any of our previous findings, and Ms. Megan Cullen (USACE NAE Technical Lead) requested that do a visual inspection and magnetometer inspection, if possible.

A visual and Shonsdadt (magnetometer) survey of the anomaly area in question was completed by the field team. There were no visual indicators of anomalies (see below photo). The Shondstadt survey was completed along the entire East fenceline of the Radar Tower. There was interference from the metal fence within a 3 to 4 ft range of the fence, but there were no larger Shondstadt responses in the area of the suggested anomalies compared to the rest of the fenceline interference (no indication of large subsurface anomalies).

The Cashin Associates 1998 Feasibility Study/Hazardous Materials Survey did not identify any areas of concern near the suggested anomaly locations. The AECOM historical records search and utility drawings review did not identify any potential hazardous waste storage or use in this area. Therefore, no environmental investigation was conducted in this area.

Mr. Brendan McGuinness (AECOM Technical lead) indicated that the historic water utility distribution drawings provided by NYS State Parks do identify a 3-inch water line from the well 1 (pump house) across the street and a 6-inch water line (likely steel from date of use) from the water reservoir to Battery 113 ran underground through this area shown as anomolies. These former utilities could potentially result in the magnetic anomalies.

Contractor Daily Reports

DATE: 6/27/2017 Tuesday

DR No. 22		**WRITTEN BY**: Amanda Martin	**PROJECT NUMBER**: 60443903

WORKED PERFORMED BY AECOM (continued)

Demobilization Preparation

Location flagging was removed from all remaining DUs and SWSD locations.

Sample Management

Soil samples collected were Quality Control checked, recorded on Chain of Custody records, and packed on ice for storage. Samples were picked up by the courier for transport to the laboratory at 0900. Samples collected after courier pick-up will be held on fresh ice until the next courier pick-up. Chain of Custody records were e-mailed to the Project Chemist (Devon Chicoine) and the Laboratory Project Manager prior to delivery to the lab.

WORK COMPLETED BY AECOM SUBCONTRACTORS

None

AGREEMENTS MADE/CONVERSATIONS (Refer to telecons, phone records, and/or logbooks for details)

- Tom Dess (NY State Parks Superintendent) was notified of the number of team members on site at the start of the day.

WORKED PERFORMED BY AECOM

The AECOM team arrived on site at 0800 completed the Morning Tailgate Health and Safety Meeting and reviewed the task hazards associated with the scheduled field work for the day.

Monitoring Well Sampling

Groundwater samples were collected from the following monitoring well:

CH-MW019: groundwater samples were collected for analysis of VOCs, SVOCs/PAHs, and metals (incl. mercury). Filtered and unfiltered samples were collected for SVOCs/PAHs and metals.

Additionally, 10% of metals samples (site-wide) were also evaluated for hexavalent chromium (with pH and ORP). Field and sample data were recorded electronically via the EDGE software.

Hydraulic Conductivity Testing

Hydraulic conductivity tests (slug tests) were finalized at monitoring wells at CH-MW019 and CH-MW021.

Sample Management

Soil samples collected were Quality Control checked, recorded on Chain of Custody records, and packed on ice for storage. Samples were picked up by the courier for transport to the laboratory at 0900. Samples collected after courier pick-up will be held on fresh ice until the next courier pick-up. Chain of Custody records were e-mailed to the Project Chemist (Devon Chicoine) and the Laboratory Project Manager prior to delivery to the lab.

Demobilization Activities

Upon completion of the Phase III field investigation, the following demobilization activities were completed:

- All gates were locked and double-checked (as was daily practice).
- All wells were locked with well locks.
- All flagging associated with the investigation was removed throughout the park.
- Keys were returned to the State Park office (2 - 3900 park master keys, 2 - West Gate House keys).
- The West Gate House was emptied and cleaned.
- Equipment and supplies were inventoried, cleaned if necessary, and packed for transport.
- The Conex box by the West Gate House was emptied, cleaned, and scheduled for pickup between on June 29 2017.
- The Porta John by the West Gate House was scheduled for pickup on June 29 2017.
- Grass seed (tall fescue, per NYS Park's request) was planted in areas with ruts from the drill rigs.

The AECOM team demobilized from the site at 1200.

Surface Water and Sediment Sample Collection Form
Camp Hero, Montauk, New York

CH-SWSD001

Date 6/8/17
Time 1100
Staff AWelsh

Loc ID ~~SWSD001~~ SWSD001-SED
Northing
Easting

Site Conditions
Water depth (ft): 2.5"
Flowing: (Yes) No
Channel width (ft): 74"
Revetted Channel: Yes (No)
Notes (not covered in Habitat Form):

Field Data Meter Type: YSI 6920 Meter ID: 15E101087

Water Quality Parameters:	Middle of Water Column
Measurement Depth (ft)	1.25"
Temperature (deg. C)	14.75
Sp. Conductance (mS/cm)	0.218
Dissolved Oxygen (mg/L)	4.59
Dissolved Oxygen (% sat)	45.3
pH (S.U.)	5.33
Turbidity	1.8
ORP	230.1

Surface water sample collection: (circle if collected: FD MS/MSD)
Sample ID: CH-SWSD001-SW01
Sample Time: 1120
Type of Sample Grab (Pump) / Other Peristaltic
Sample depth (inches): 1.25"
No. of samples collected: 1
No. of samples rejected: N/A Rationale: N/A
Analyses Collected SVOCs, Metals, Cr, Hardness

Sheen Yes / (No) Odor Yes / (No)
Notes (not covered in Habitat Form):

Sediment collection: (circle if collected: FD MS/MSD)
Sample ID: CH-SWSD001-SE01
Sample Time: ~~6/8/17 1125~~ 1145
Core penetration depth (inches): 7
RPD depth (inches): 7
Number of cores collected: 8
Number of cores rejected: 0 Rationale: NA
Analyses Collected: SVOCs, TOC, Metals, Hg, Cr, Geochem

flap gauge auger

Sheen Yes / (No) Odor Yes / No
Notes and material description (include sediment type, texture, color, layering, entrained debris, biota):
1.7 ppm; wet brown fine to medium sand from 0-5 in; wet dark brown clayey sand 5-7 in

Camp Hero, Montauk, New York

CH-SWSD019

Date 6/8/17
Time 1308
Staff A Wilson

Loc ID	SW SD 019
Northing	
Easting	

Site Conditions
Water depth (ft): 3" Flowing: (Yes) / No
Channel width (ft): 36" Revetted Channel: (Yes) No
Notes (not covered in Habitat Form):

Field Data Meter Type: YSI 6920 Meter ID: 15E101087

Water Quality Parameters:	Middle of Water Column
Measurement Depth (ft)	1.5"
Temperature (deg. C)	16.23
Sp. Conductance (mS/cm)	0.193
Dissolved Oxygen (mg/L)	7.17
Dissolved Oxygen (% sat)	71.4
pH (S.U.)	4.75
Turbidity	1.5
ORP	279.1

Surface water sample collection: circle if collected: FD MS/MSD
Sample ID: CH-SWSD019-SW01
Sample Time: 1315
Type of Sample Grab / (Pump) / Other peristaltic
Sample depth (inches): 1.5
No. of samples collected: 1
No. of samples rejected: N/A Rationale: N/A
Analyses Collected: Cr, Metals, SVOCs, Hardness

Sheen Yes / (No) Odor Yes / (No)
Notes (not covered in Habitat Form):

Sediment collection: circle if collected: FD MS/MSD
Sample ID: CH-SWSD019-SE01
Sample Time: 1330
Core penetration depth (inches): 9
RPD depth (inches): 9
Number of cores collected: 8
Number of cores rejected: 0 Rationale: NA
Analyses Collected: SVOC, TOC, Metals, Hg, Cr, Geochem

flap gasp auger

Sheen Yes / (No) Odor Yes / (No)
Notes and material description (include sediment type, texture color, layering, entrained debris, biota):
3.4 ppm; remove 2 in wet leafy material; 0-7 in wet brown fine to coarse sand; 7-9 in dark brown sand with silt

Sample Time: 1600
Type of Sample: Grab / Pump / Other peristaltic
Sample depth (inches): 4.25
No. of samples collected: 1
No. of samples rejected: 0 Rationale: NA
Analyses Collected: SVOCs, metals, hardness

Sheen: Yes / No Odor: Yes / No
Notes (not covered in Habitat Form):

Sediment collection: (circle if collected: FD MS/MSD)
Sample ID: CH-SWSD059-SE01
Sample Time: 1630
Core penetration depth (inches): 8
RPD depth (inches): 6
Number of cores collected: 10
Number of cores rejected: 2 Rationale: poor recovery
Analyses Collected: SVOCs, Metals, TOC

Sheen: Yes / No Odor: Yes / No
Notes and material description (include sediment type, texture color, layering, entrained debris, biota):
0.2 ppm
wet dark brown organic silt

Measurement Depth (ft)	1.5
Temperature (deg. C)	14.61
Sp. Conductance (uS/cm)	0.145
Dissolved Oxygen (mg/L)	5.13
Dissolved Oxygen (% sat)	50.3
pH (S.U.)	5.95
Turbidity	10.1
ORP	190.9

Surface water sample collection: (circle if collected: FD MS/MSD)
Sample ID: CH-SWSD114-SW01
Sample Time: 1220
Type of Sample: Grab (Pump) / Other: peristaltic
Sample depth (inches): 1.5
No. of samples collected: 1
No. of samples rejected: 0 Rationale: NA
Analyses Collected: SVOCs, metals, hardness
Sheen: Yes / (No) Odor: Yes / (No)
Notes (not covered in Habitat Form):

Sediment collection: (circle if collected: FD MS/MSD)
Sample ID: CH-SWSD114-SE01
Sample Time: 1505
Core penetration depth (inches): 6
RPD depth (inches): 6
Number of cores collected: 2
Number of cores rejected: 0 Rationale: NA
Analyses Collected: SVOCs, TOC, Metals, Hg
Sheen: Yes / (No) Odor: Yes / (No)
Notes and material description (include sediment type, texture, color, layering, entrained debris, biota):

auger

0.8 ppm
0-1 in wet dark brown organic silt
1-6 in wet light brown sand with clay

Sample Time:	~~1320~~ 1315
Type of Sample	Grab / (Pump) / Other Peristaltic
Sample depth (inches):	~~0.75~~ 0.75
No. of samples collected:	1
No. of samples rejected:	NA Rationale: NA
Analyses Collected:	SVOC, PCB, Metal, Hardness

Sheen Yes / (No) Odor Yes / (No)
Notes (not covered in Habitat Form):

Sediment collection: circle if collected: FD MS/MSD

Sample ID:	CH-SWSD127-SE01
Sample Time:	~~1335~~ 1340
Core penetration depth (inches):	12
RPD depth (inches):	12
Number of cores collected:	6
Number of cores rejected:	0 Rationale: NA
Analyses Collected:	SVOCs, TOC, Metals, Hg, PCBs

flap gauge auger

Sheen Yes / (No) Odor Yes / (No)
Notes and material description (include sediment type, texture color, layering, entrained debris, biota):
1.3 ppm; remove 1in leaves/roots; 0-3 in wet dark brown silt; 3-9 in wet very dark brown silty clay

Surface water sample collection:

circle if collected: FD (MS/MSD)

Sample ID: CH-SWSD140-SW01

Sample Time: 0830

Type of Sample: Grab / (Pump) / Other

Sample depth (inches): 275"

No. of samples collected: 1

No. of samples rejected: N/A Rationale: N/A

Analyses Collected: Metals, Hardness, SVOC, PCB

Sheen: Yes / (No) Odor: Yes / (No)

Notes (not covered in Habitat Form):

Sediment collection:

circle if collected: FD MS/MSD

Sample ID: CH-SWSD140-SE01

Sample Time: 0935

Core penetration depth (inches): 12

RPD depth (inches): 12

Number of cores collected: 10

Number of cores rejected: 0 Rationale: NA

Analyses Collected: SVOCs, TOC, Metals, Hg, Cr, Geochem, PCBs

flap gauge auger

Sheen: Yes / (No) Odor: Yes / (No)

Notes and material description (include sediment type, texture color, layering, entrained debris, biota):

0.4 ppm; 0-4 in wet leafy, woody organic material; 4-11 in wet dark brown silty fine sand; 11-12 in wet gray ~~clayey~~ fine sand with clay

Stream Exposure Area Characterization Sheet
Camp Hero, Montauk, New York

Date	6/3/2017
Time	1000
Staff	C. LAVAGNINO
Weather	60s OVERCAST

Location IDs within Stream Segment	017, SWSD001-003 CHSWSD016-023 H-22 CHSWS081-084

Has there been heavy rain within last 7 days? Yes / No

Stream Width (ft): 3

Bottom Type: litter + sand + (silt, sands, gravel, cobble, boulder, bedrock, etc)

Stream Segment Length (ft):

Revetted Stream: (Yes) / No

Water Depth (ft): 0.3

Water Velocity (ft/sec): 1 ft/sec

Does channel appear to have perennial flow? (Yes) / No — Comments:

Is stream unshaded (looking downstream)? Left side - Yes / (No) Right side - Yes / (No) — Comments:

Is sediment deposition occurring in the channel? (Yes) / No — Comments:

~~Has stream channel eroded into the Calvert formation? Yes / No~~ — Comments:

Is erosion occuring along stream banks? Left side - Yes / (No) Right side - Yes / (No) — Comments:

Is vegetation growing in the channel? (Yes) / No — Type:

Land use left side (looking downstream): FORESTED — Wetlands present on left side? (Yes) / No

Land use right side (looking downstream): FORESTED — Wetlands present on right side? (Yes) / No

Trash present in the channel? Yes / (No) — Type:

Floc present in channel? Yes / (No) % of bottom covered: Color of floc:

Groundwater discharge/seep observed? (Yes) / No — Comments: WTL

Discharge pipe(s) present within segment? Yes / (No) Actively flowing? Yes / No Evidence of discharge? Yes / No

Pipe diameter (ft): Pipe construction: (Concrete, Metal, Plastic, etc) Odor: (Sewage, Chlorine, etc)

Fish observed: Yes / (No) — Type:

Invertebrates observed: Yes / No — Type:

Other wildlife observed: (Yes) / No — Type:

Songbirds Deer evidence squirrel

Sketch of Stream Segment Features (include sample locations and proximity riffles, pools, boulders, fallen trees, vegetation, pipes etc.)

Location IDs within Stream Segment	CH-SWSD004-007

Has there been heavy rain within last 7 days? Yes / No

Stream Width (ft) _____ Bottom Type: silts and organics (Silt, Sands, Gravel, Cobble or Bedrock, etc)

Stream Segment Length (ft) _____ Revetted Stream: Yes / (No)

Water Depth (ft) _____ Water Velocity (ft/sec) slow trickle

Does channel appear to have perennial flow? (Yes) / No Comments _____

Is stream unshaded (looking downstream)? Left side - Yes / (No) Right side - Yes / (No) Comments heavy - moderate shading

Is sediment deposition occurring in the channel? (Yes) / No Comments _____

Has stream channel eroded into the Calvert formation? (N/A) Yes / No Comments _____

Is erosion occuring along stream banks? Left side - (Yes) / No Right side - (Yes) / No Comments _____

Is vegetation growing in the channel? (Yes) / No Type moss and aquatic plants

Land use left side (looking downstream) forest Wetlands present on left side? Yes / (No) ?

Land use right side (looking downstream) forest Wetlands present on right side? Yes / (No) ?

Trash present in the channel? Yes / (No) Type _____

Floc present in channel? Yes / (No) % of bottom covered _____ Color of floc? _____

Groundwater discharge/seep observed? Yes / (No) Comments _____

Discharge pipe(s) present within segment? Yes / (No) Actively flowing? Yes / (No) Evidence of discharge? Yes / (No)

Pipe diameter (ft) _____ Pipe construction: _____ (Concrete, Metal Plastic, etc) Odor _____ (Sewage, Chlorine, etc)

Fish observed: Yes / (No) Type _____

Invertebrates observed (Yes) / No Type bugs

Other wildlife observed: Yes / (No) Type _____

Floc present in channel? Yes / No % of bottom covered: Color of floc:

Groundwater discharge/seep observed? Yes / No Comments: Adj wetlands

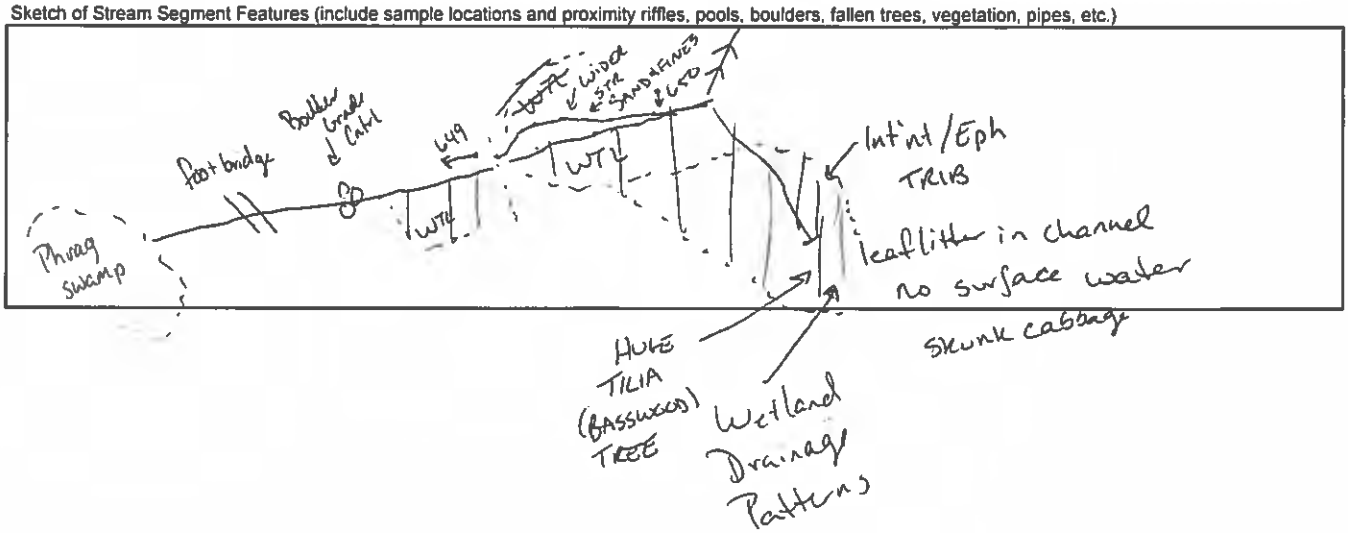
Discharge pipe(s) present within segment? Yes / No Actively flowing? Yes / No Evidence of discharge? Yes / No
Pipe diameter (ft): Pipe construction: (Concrete, Metal, Plastic, etc) Odor: (Sewage, Chlorine, etc.)

Fish observed: Yes / No Type:

Invertebrates observed: Yes / No Type: Caddisfly 2+ families netspinner (Hydropsychidae) None other

Other wildlife observed: Yes / No Type: Deer evidence

Sketch of Stream Segment Features (include sample locations and proximity riffles, pools, boulders, fallen trees, vegetation, pipes, etc.)



Stream Exposure Area Characterization Sheet
Camp Hero, Montauk, New York

Date 06/07/2017
Time 16
Staff R. MacPhee
Weather Sunny ~60°F

Location IDs within Stream Segment	DU06, DU05 SWSD-100-110

Has there been heavy rain within last 7 days? Yes / No

Stream Width (ft) 32
Stream Segment Length (ft) ~23
Water Depth (ft): 1'

Bottom Type: Silt and organic (Sands, Gravel, Cobble, Boulder, Bedrock, etc)
Revetted Stream: (Yes) No
Water Velocity (ft/sec) very slow trickle

Does channel appear to have perennial flow? Yes / (No) Comments
Is stream unshaded (looking downstream)? Left side - Yes / (No) Right side - Yes / (No) Comments heavy tree cover while down
Is sediment deposition occurring in the channel? Yes / (No) Comments
Has stream channel eroded into the Calvert formation? (NA) Yes / No Comments
Is erosion occuring along stream banks? Left side - Yes / (No) Right side - Yes / No Comments
Is vegetation growing in the channel? (Yes) / No Type Skunk Cabbage, other emergent veg.
Land use left side (looking downstream) wetlands / forest Wetlands present on left side? (Yes) No
Land use right side (looking downstream) wetlands / forest Wetlands present on right side? (Yes) No
Trash present in the channel? Yes / (No) Type

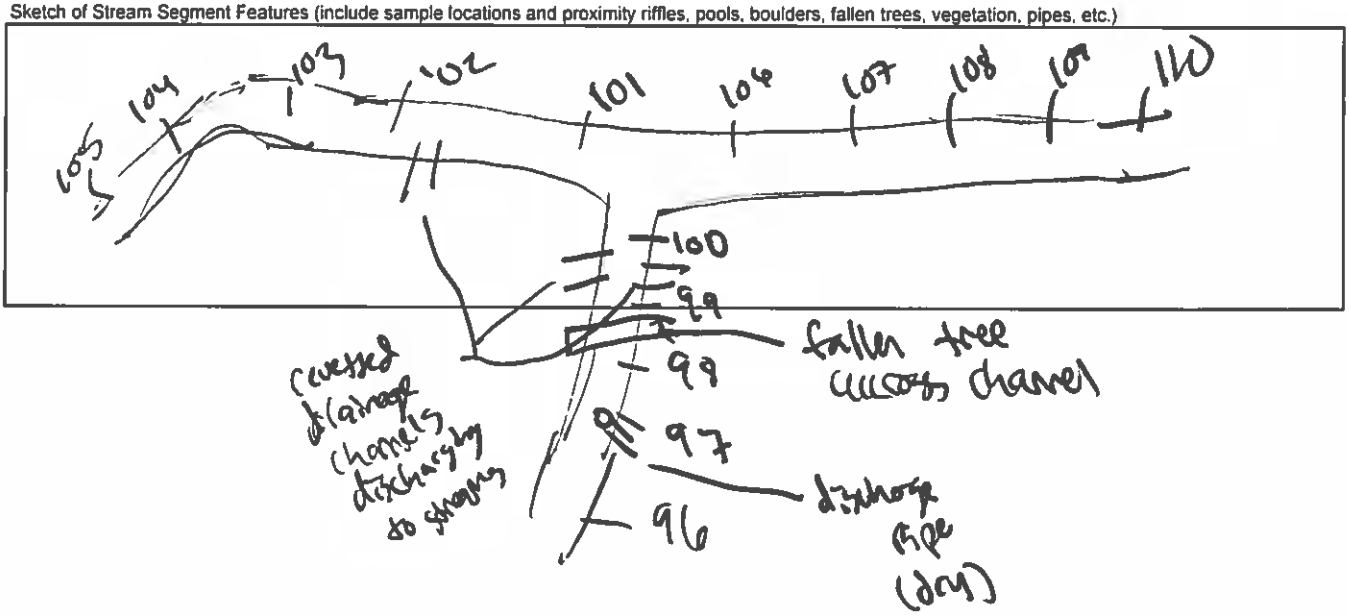
Floc present in channel? Yes / (No) % of bottom covered: NA Color of floc? NA

Groundwater discharge/seep observed? Yes / (No) Comments

Discharge pipe(s) present within segment? (Yes) / No Actively flowing? Yes / (No) Evidence of discharge? (Yes) / No erosion
Pipe diameter (in.) 8 inches Pipe construction: Steel (Concrete, Metal, Plastic, etc) Odor: none (Sewage, Chlorine, etc)

Fish observed: Yes / (No) Type
Invertebrates observed: (Yes) / No Type bugs
Other wildlife observed: (Yes) No Type turtle shell, turkeys

Sketch of Stream Segment Features (include sample locations and proximity riffles, pools, boulders, fallen trees, vegetation, pipes, etc.)



Stream Exposure Area Characterization Sheet
Camp Hero, Montauk, New York

Date: 6/7/17
Time: 1200
Staff: Rachel MacPhee
Weather: Cloudy ~60°F

Location IDs within Stream Segment	CH-SWSD127 TO 139 DUP5

Has there been heavy rain within last 7 days? Yes / No

Stream Width (ft) @ 1 ft: 25'
Stream Segment Length (ft):
Water Depth (ft) @ 1 ft: 5'

Bottom Type: Silty sediment (Silts, Sands, Gravel, Cobble, Boulder, Bedrock, etc)
Revetted Stream: (Yes) No
Water Velocity (ft/sec): N.O flows - standing water

Does channel appear to have perennial flow? Yes / (No) Comments:
Is stream unshaded (looking downstream)? Left side - Yes / (No) Right side - Yes / (No) Comments: moderate - heavily shaded
Is sediment deposition occurring in the channel? (Yes) / No Comments: Sediment in bottom of channel
Has stream channel eroded into the Calvert formation? (N/A) Yes / No Comments:
Is erosion occuring along stream banks? Left side - Yes / (No) Right side - Yes / (No) Comments:
Is vegetation growing in the channel? Yes / (No) Type:
Land use left side (looking downstream): Forest / Wetland — Wetlands present on left side? (Yes) / No
Land use right side (looking downstream): Forest / wetland — Wetlands present on right side? (Yes) / No
Trash present in the channel? Yes / (No) Type:

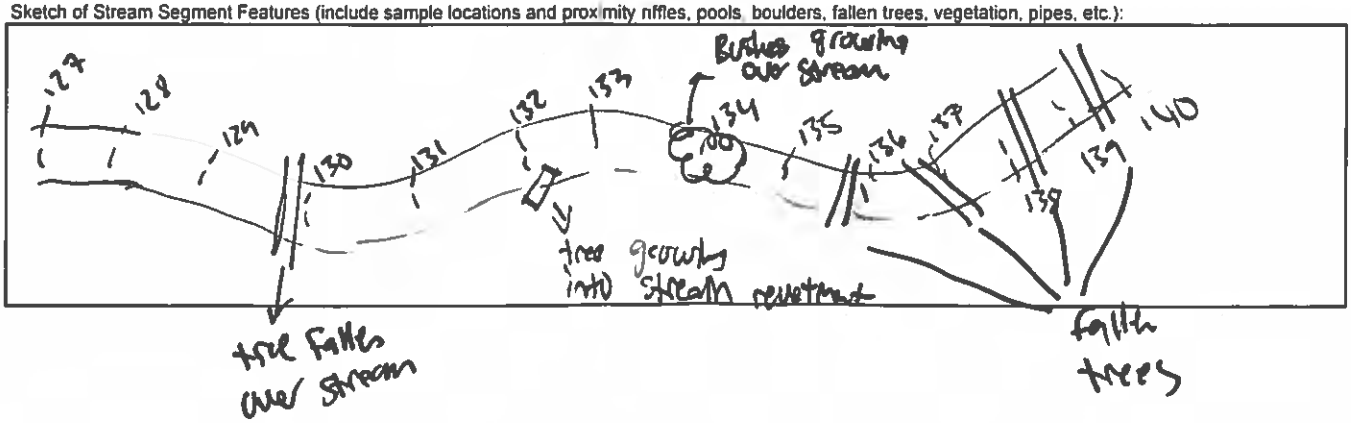
Floc present in channel? Yes / (No) % of bottom covered: Color of floc:

Groundwater discharge/seep observed? Yes / (No) Comments:

Discharge pipe(s) present within segment? Yes / (No) Actively flowing? Yes / No N/A Evidence of discharge? Yes / (No)
Pipe diameter (ft): N/A Pipe construction (Concrete, Metal, Plastic etc.): N/A Odor (Sewage, Chlorine etc): N/A

Fish observed: Yes / (No) Type: N/A
Invertebrates observed: (Yes) / No Type: dead salamander near SWSD-139
Other wildlife observed: (Yes) / No Type: turkeys

Sketch of Stream Segment Features (include sample locations and proximity riffles, pools, boulders, fallen trees, vegetation, pipes, etc.):



* Fallen trees caught on top of revetment, not touching water or sediment in the stream channel *

Comments

Moisture Content
D - Dry
M - Moist
W - Wet
S - Saturated
Soil Type Options

Soil Type (Refer to Soil Description Sheets)	
GW	well-graded gravel, fine to coarse gravel
GP	poorly graded gravel
GM	silty gravel
GC	clayey gravel sand
SW	well-graded sand, fine to coarse sand
SP	poorly graded sand
SM	silty sand
SC	clayey sand
ML	silt
CL	clay of low plasticity, lean clay
OL	organic silt, organic clay
MH	silt of high plasticity, elastic silt
CH	clay of high plasticity, fat clay
OH	organic clay, organic silt
Pt	peat

Comments

Typically, 0 - ~5" very dark grayish brown silt w/sand
5" - 12" yellowish brown sandy silt (increasing sand)
Cohesive, non-plastic
Rare gravel, predominantly fine sand

Dry to 1.0' depth

Root zone extends to ~ 5" bgs

Moisture Content
D - Dry
M - Moist
W - Wet
S - Saturated
Soil Type Options

Soil Type (Refer to Soil Description Sheets)

GW	well-graded gravel, fine to coarse gravel
GP	poorly graded gravel
GM	silty gravel
GC	clayey gravel sand
SW	well-graded sand, fine to coarse sand
SP	poorly graded sand
SM	silty sand
SC	clayey sand
ML	silt
CL	clay of low plasticity, lean clay
OL	organic silt, organic clay
MH	silt of high plasticity, elastic silt
CH	clay of high plasticity, fat clay
OH	organic clay, organic silt
Pt	peat

Comments: PID → PGM7320, Ambient = 0.0 ppm
AECOM shovel used for digging.
S009, S015 and S002 have DUP
S001 and S011 have Cr(VI) additional analysis.

Moisture Content
D - Dry
M - Moist
W - Wet
S - Saturated
Soil Type Options

Soil Type (Refer to Soil Decsription Sheets)	
GW	well-graded gravel, fine to coarse gravel
GP	poorly graded gravel
GM	silty gravel
GC	clayey gravel sand
SW	well-graded sand, fine to coarse sand
SP	poorly graded sand
SM	silty sand
SC	clayey sand
ML	silt
CL	clay of low plasticity, lean clay
OL	organic silt, organic clay
MH	silt of high plasticity, elastic silt
CH	clay of high plasticity, fat clay
OH	organic clay, organic silt
Pt	peat

Comments

Moisture Content	
D	Dry
M	Moist
W	Wet
S	Saturated
Soil Type Options	

Soil Type (Refer to Soil Decsnption Sheets)	
GW	well-graded gravel, fine to coarse gravel
GP	poorly graded gravel
GM	silty gravel
GC	clayey gravel sand
SW	well-graded sand, fine to coarse sand
SP	poorly graded sand
SM	silty sand
SC	clayey sand
ML	silt
CL	clay of low plasticity, lean clay
OL	organic silt, organic clay
MH	silt of high plasticity, elastic silt
CH	clay of high plasticity, fat clay
OH	organic clay, organic silt
Pt	peat

Level Reference Settings At Log Creation
Level Measurement Mode: Level Depth To Water
Specific Gravity: 0.999
Level Reference Mode: Set new reference
Level Reference Value: 0 (ft)
Level Reference Head Pressure: 6.91292 (PSI)

Other Log Settings
Depth of Probe: 15.9647 (ft)
Head Pressure: 6.9142 (PSI)
Temperature: 11.6646 (C)

Log Notes:

Create Date: 7/10/2017 9:19:06 AM

Device Properties:
Device: Level TROLL 700
Site: Camp Hero
Device Name:
Serial Number: 169305
Firmware Version: 2.09
Hardware Version: 3
Device Address: 1
Device Comm Cfg: 19200,8,Even,1,(Modbus-RTU)
Used Memory(%): 26
Used Battery(%): 41

Log Configuration
Log Name: CH-021 FH1
Created By: Unknown
Computer Name: Pocket PC
Application: WinSituMobile.exe
Application Version: 5.6.0.10
Create Date: 3/4/2006 4:00:24 AM Eastern Standard Time
Log Setup Time Zone: Eastern Standard Time
Notes Size(bytes): 4096
Overwrite when full: Disabled
Scheduled Start Time: Manual Start
Scheduled Stop Time: No Stop Time
Type: Step Test
Steps: 2 (Linear)
Step: 1
Duration: Days: 0 hrs: 00 mins: 05 secs: 00
Interval: Days: 0 hrs: 00 mins: 00 secs: 01
Step: 2
Duration: Days: 0 hrs: 04 mins: 00 secs: 00
Interval: Days: 0 hrs: 00 mins: 01 secs: 00

Level Reference Settings At Log Creation
Level Measurement Mode: Level Depth To Water
Specific Gravity: 0.999
Level Reference Mode: Set new reference
Level Reference Value: 0 (ft)
Level Reference Head Pressure: 2.21004 (PSI)

Other Log Settings
Depth of Probe: 5.10291 (ft)
Head Pressure: 2.21004 (PSI)
Temperature: 11.499 (C)
