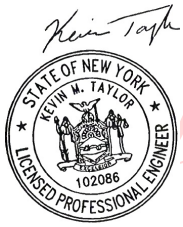
CERTIFICATION

I, Kevin M. Taylor, certify that I am currently a registered professional engineer as defined in 6 New York Codes, Rules, and Regulations (NYCRR) Part 375 and that this Site Characterization Report (SCR) was prepared in accordance with applicable statutes and regulations and in substantial conformance with the New York State Department of Environmental Conservation's (NYSDEC's) Division of Environmental Remediation's (DER's) Technical Guidance for Site Investigation and Remediation (DER-10).



I certify that the information and statements in this certification are true. I understand that a false statement made herein is punishable as Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law.

It is a violation of Article 145 of New York State Education Law for any person to alter this document in any way without the express written verification of adoption by any New York State licensed engineer in accordance with Section 7209(2), Article 145, New York State Education Law.

1.0 INTRODUCTION

H2M architects + engineers (H2M) has prepared the following Site Characterization Report (SCR) to summarize the subsurface investigation of potential per- and polyfluoroalkyl substance (PFAS) areas of concern that were identified by the Suffolk County Department of Health Services (SCDHS) in a PFAS groundwater study dated August 2, 2023 conducted proximate to the property known as the Orient Fire District fire department (Site) located at 23300 Main Road (a.k.a., New York State [NYS] Route 25), Orient, New York. The purpose of the investigation was to determine if contamination is present at levels that pose a threat to public health and/or the environment and require further investigation. A Site Location Map is included as **Figure 1** and a Sampling Locations Figure is included as **Figure 2**.

1.1 Project Background

The Site has been assigned a tracking number of 152273 by New York State Department of Environmental Conservation (NYSDEC). This investigation was a requirement of an Order on Consent and Administrative Settlement (Index No. CO 1-20240328-55) entered between the Orient Fire District and the NYSDEC to address hazardous substances suspected present at the Site. The primary contaminants of concern are a class of chemicals referred to as PFAS, primarily perfluoro-octane sulfonate (PFOS) and perfluoro-octanoic acid (PFOA). This SCR documents the investigative activities that were completed at the Site targeting potential PFAS contamination.

2.0 SITE DESCRIPTION AND HISTORY

This section describes the Site history, physical characteristics, and previous environmental investigations performed at the Site.

2.1 Site Description

The Site is located at 23300 Main Road in Orient, NY and is identified on the Suffolk County Tax Map as:

- 1000 – 018.00 – 05.00 – 013.008

The Site is approximately 4.357 acres. Improvements to the Site include a main firehouse building, firehouse annex building, Quonset-style garage/storage building, wireless communications facility, concrete and asphalt-paving, and landscaped/lawn areas.

The topography of the Site and surrounding area was reviewed using the United States Geological Survey (USGS) 7.5-minute series topographic map for the Orient, New York quadrangle and indicates the property's elevation is approximately 17 feet above mean sea level (AMSL). Four permanent groundwater monitoring wells were installed during the investigation and surveyed by H2M. According to these data, the grades at monitoring wells MW001 through MW004 range between 15.12 feet and 15.79 feet above the North American Vertical Datum of 1988 (NAVD 88).

2.2 Site History

Aerial photographs beginning in 1938 indicate that the Site was historically utilized as farmland. No structures, or commercial or residential uses were observed through 1986 on the historic aerial photographs.

According to the Suffolk County Clerk's records, Orient Fire District acquired the Site from Dwight and Barbara Schriever in 1985; Deed Liber 9919, Page 570, recorded 11/21/1985. This information is consistent with the Town of Southold's Tax Assessment information that indicates the parcel was "split" (a.k.a., subdivided) from a larger parcel owned by the Schrievers.

According to the Town's Tax Assessor, on August 3, 1989, Building Permit No. 18340 was issued to construct a firehouse. This information was confirmed by the Town of Southold's Building Department where Certificate of Occupancy No. Z19608 was issued for the completed structure on December 21, 1990.

The main firehouse and the firehouse annex building are visible on the 1994 aerial photograph for the Site. Google Earth imagery shows that the wireless communications facility (i.e., monopole and equipment cabinets) has been constructed and installed by 2007, which is confirmed by 2006 information maintained by the Town Assessor. By 2011, the Quonset-style storage/garage building is also visible on the historic aerial photographs.

Based upon the above, the site was historically farmed land and first developed between 1986 and 1989 for its current use as a firehouse. The Site was later improved with a firehouse annex building, wireless communications facility and Quonset-style garage/storage building circa 1994, 2006 and 2011, respectively.

2.3 Current and Future Site Use

The Site is currently developed for use as a firehouse. There are no plans to change the current Site use. The Site is currently zoned R-80 for residential development.

2.4 Previous Environmental Investigations

This section summarizes the initial investigative activities performed on and off-site.

2.4.1 NYSDEC Investigation

No formal NYSDEC Investigation has been conducted with respect to the Site at this point in time. The NYSDEC has indicated that a groundwater study conducted by the Suffolk County Department of Health Services (SCDHS) has prompted a preliminary ("P") classification for the Site (Site Code 152273).

A Freedom of Information Law (FOIL) application was submitted to the NYSDEC on January 15, 2024 requesting records as follows: "*Site Code 152273; H2M is the Environmental Consultant for the Orient Point*

Fire District located at 23300 Main Road, Orient, NY and is seeking to review the NYSDEC file in preparation for the Site Characterization Work Plan."

On February 5, 2024, the NYSDEC Project Manager responded that… *"there is very little publicly available documentation on this site, since we are still in the first steps of establishing an investigation plan.*

The site in question is located at 23300 Main Road, Orient, 11957. This location was made a 'P' (Potential) Site in relation to Spill # 2104060. This spill detected PFAS contamination in drinking water throughout the residential area. As the fire department is located in the upgradient area, it is the suspected source through the use of Aqueous Film Forming Foam (AFFF) for fire fighting activities."

An electronic copy of the spill report (i.e., Spill No. 2104060) was downloaded and reviewed by H2M. According to the NYSDEC's database, Spill No. 2104060 was reported on July 22, 2021.

2.4.2 Records Search Report

No formal reports have been located for this Site. However, H2M submitted a FOIL request for records to the SCDHS on January 15, 2024. The SCDHS responded on March 12, 2024 by providing groundwater sampling data summaries and figures of a PFAS groundwater sampling study in the vicinity of the Site in 2023. A total of 12 temporary groundwater well locations were installed in the inferred groundwater flow direction of the Site: one upgradient to the northeast, one crossgradient adjacent to the northwest, two downgradient adjacent to the southwest, and potentially eight downgradient further to the southwest. The temporary wells were advanced with five-foot long well screens via Geoprobe® and between five and six sample collection depths for PFAS were taken at each of the 12 sample locations. Based upon these data, elevated PFAS compounds in groundwater have been identified. This information was shared by the SCDHS with the NYSDEC.

No additional documentation was provided by the SCDHS in response to H2M's January 15, 2024 FOIL application. However, H2M notes that permanent groundwater monitoring wells were observed at the western Site boundary along Tabor Road during H2M's subsurface investigation and are assumed to have been installed by the SCDHS.

Additional FOIL requests and property record history research was conducted by H2M in preparation of H2M's SCWP. Requests and reviews of documentation were conducted at the Suffolk County Clerk's database, and the Town of Southold's Building Department and Tax Assessor's office.

The Site is improved with an onsite groundwater well providing water to the main firehouse building and firehouse annex building. The onsite groundwater well is located at the southwest exterior of the main firehouse building. The Orient Fire District contracts with Goldman Water Testing (GWT) to collect drinking water samples on a quarterly basis. The two most recent laboratory reports prepared by Long Island Analytical Laboratories, Inc. dated April 11, 2025 and April July 15, 2025 are provided as **Appendix I**.

According to both laboratory reports, the drinking water provided to the onsite buildings is not contaminated with e. coli or total coliform bacteria and total residual chlorine is non-detectable.

The Orient Fire District has also provided a copy of the SCDHS' analysis of private drinking water issued on February 17, 2023 (see **Appendix I**). According to the SCDHS, at the time of the sampling (i.e., October 17, 2022) *"…all parameters tested were within the Maximum Contaminant Levels (MCLs) or drinking water standards established by the New York State Department of Health."* It should be noted that the concentrations of PFOA and PFOS were identified at 4.2 and 2.2 nanograms per liter (ng/L; a.k.a., parts per trillion) respectively by the SCDHS' subcontracted laboratory for PFAS analysis (i.e., Pace Analytical). The remaining analyses (i.e., standard inorganics, volatile organics, semi-volatile organics, metals, herbicide metabolics, chlorinated pesticides, dacthal pesticides, aldicarb pesticides, and dioxane) were analyzed by the SCDHS.

2.4.3 Site Walkthrough

On January 31, 2024, H2M representatives Stephen I. Kaplan, P.G. and Kevin M. Taylor, P.E., P.G., were accompanied by an Orient Fire District Board member and provided access to the Site. The facility was well maintained and there was no evidence of spills or releases. The buildings are heated via natural gas-fired systems and there were no indications of petroleum storage tanks (underground or aboveground) installed at the Site. Furthermore, no AFFF materials were reported by the District to be maintained onsite and no evidence of AFFF materials was observed by H2M during the site walkthrough.

The Site is improved with a main firehouse building, firehouse annex building, Quonset-style garage/storage building, wireless communications facility, concrete and asphalt-paving, and landscaped/lawn areas. The District representative identified the area of the Site where typical fire training activities historically occurred on the property. These activities may have included discharges from fire trucks. The area is located in an unpaved portion of the Site adjacent to the south of the asphalt pavement south of the main firehouse building and east of the telecommunications equipment shelter.

No publicly supplied water is available in the hamlet of Orient. The Site is improved with a groundwater well located at the southwest section of the parcel that provides water to the main firehouse and firehouse annex buildings, and is utilized to fill water storage tanks on fire trucks.

The main firehouse and firehouse annex buildings are each equipped with on-site sanitary systems (i.e., cesspools) located at the northern exteriors of both structures. In addition, stormwater drywells are located on the parcel to facilitate drainage from impervious surfaces (i.e., pavement and roof drains). The locations of these sanitary and stormwater drainage structures were identified through a combination of the site walkthrough and through Building Department records. H2M's January 2025 subsurface investigation

confirmed the locations of these drainage structures and collected bottom sediment/sludge samples from each accessible structure.

Additional records research conducted by H2M prior to preparation of the SCWP included obtaining and reviewing the following standard environmental resources from EDR®:

- EDR Radius Map™ Report with GeoCheck®
- EDR Historical Topo Map Report with QuadMatch™
- EDR Aerial Photo Decade Package
- EDR-City Directory Image Report
- Certified Sanborn® Map Report

Based upon H2M's records reviews, NYSDEC meetings and site walkthrough, sampling locations were selected to characterize the Site and were included in the NYSDEC-approved SCWP. The sample locations, depths and media were collected in accordance with the SCWP and are further explained in the following sections

3.0 STANDARDS, CRITERIA, AND GUIDANCE (SCGS)

The primary chemicals of potential concern (COPC) encountered at the Site are PFAS and are related to the historical use of firefighting foam. In addition, other COPCs present from the historical use and storage of petroleum liquids, use of on-site sanitary and storm water systems, or the presence of upgradient off-site sources of VOCs or PFAS in groundwater were factored into the SCWP and included in the subsurface investigation.

The SCGs considered during this Site Characterization included:

- NYSDEC, Division of Environmental Restoration, 6 NYCRR Part 375 Environmental Remediation Programs, Subparts 1, 2 and 6, December 2006
- NYSDEC, Division of Environmental Remediation, DER-10, Technical Guidance for Site Investigation and Remediation, May 2012
- NYSDEC, Class GA Ambient Water Quality Standards (AWQS) as specified in the Technical Operation; Guidance Series (TOGS 1.1.1) Ambient Water Quality Standards and Guidance Values, June 1998
- NYSDEC, Sampling, Analysis, and Assessment of PFAS Under NYSDEC's Part 375 Remedial Programs, April 2023

The April 2023 NYSDEC PFAS guidance includes the following guidance values for soil:

Soil Guidance Values forAnticipated Site Use	PFOA (µg/kg)[1]	PFOS (µg/kg)
Unrestricted	0.66	0.88
Residential	6.6	8.8
Restricted Residential	33	44
Commercial	500	440
Industrial	600	440
Protection of Groundwater[2]	0.8	1.0

On March 15, 2023, the NYSDEC released Final Ambient Water Quality Guidance Values for PFOA, PFOS, and 1,4-Dioxane, and followed with the April 2023 NYSDEC PFAS guidance which includes the following values:

NYSDEC Guidance Values	PFOA (ng/L)[3]	PFOS (ng/L)
Groundwater Human Health Criteria	6.7	2.7
Freshwater Aquatic Life (chronic)	NA	160,000
Freshwater Aquatic Life (acute)	NA	710,000
Saltwater Aquatic Life (chronic)	NA	41,000
Saltwater Aquatic Life (acute)	NA	190,000

[1] µg/kg: micrograms per kilogram (a.k.a.; parts per billion [ppb]).
[2] The Protection of Groundwater values are based on the above referenced ambient groundwater guidance values. Details on that calculation are available in the following document, prepared for the February 2022 proposed changes to Part 375 (https://www.dec.ny.gov/docs/remediation_hudson_pdf/part375techsupport.pdf). The movement of PFAS in the environment is being aggressively researched at this time; that research will eventually result in more accurate models for the behaviors of these chemicals. In the meantime, NYSDEC has calculated the guidance value for the protection of groundwater using the same procedure used for all other chemicals, as described in Section 7.7 of the Technical Support Document (http://www.dec.ny.gov/docs/remediation_hudson_pdf/techsuppdoc.pdf).
[3] ng/L: nanograms per liter (a.k.a.; parts per trillion [ppt]).

4.0 SITE CHARACTERIZATION

The primary objectives of the work detailed in this SCR were to identify potential source areas of impact in on-site soil and groundwater at the Site associated with potential historical use of AFFF. The Scope of Work included the following tasks:

- Geophysical investigation – focused on the areas of concern identified in the records search
- Characterization of on-site PFAS soil impacts
- Characterization of on-site PFAS groundwater impacts
- Collection of Site specific hydrogeologic data
- Qualitative human health exposure evaluation
- Fish and Wildlife Resource Impact Analysis (Part 1)
- QA/QC and Data Validation

4.1 Geophysical Investigation

To determine if subsurface anomalies were present at the Site and identify Site utilities at proposed drilling locations, a geophysical investigation was performed. The geophysical survey included onsite buildings, onsite sanitary systems, stormwater drywells, and proposed boring locations. The geophysical survey was completed in the areas proximate to each boring location identified on **Figure 2**.

4.1.1 Electromagnetic Survey

The electromagnetic (EM) method uses the principle of electromagnetic induction to measure the variability of electrical conductivity of subsurface materials and the presence of buried metal objects. Significant contrasts in the electrical properties between non-indigenous materials and surrounding soil enable accurate delineation of buried waste materials, fill, and air spaces. The large EM response to metal makes this technique particularly well suited to identifying buried metal objects such as underground storage tanks (USTs), metallic wastes, buried drums, pipelines, reinforced building foundations, or other metal components of buried structures.

The EM-31 (or equivalent) is an electromagnetic surveying instrument where the direct readout of the instrument is the bulk electrical conductivity of an equivalent homogeneous earth at that position referred to as “terrain conductivity.” Terrain conductivity is commonly used to detect lateral variations in electrical conductivity along a traverse or over a broad region. These variations can be due to disturbed filled-in areas such as buried trenches, or buried metallic objects such as drums, tanks, or utility lines.

A survey of the area was also performed using a hand-held split-box metal detector (Fisher Model TW- 6, or equivalent). The TW-6 is a split-box electromagnetic metal detector that is very sensitive to near surface ferrous metal objects and is very useful in detecting the surface expression of subsurface ferrous objects. This instrument is commonly used to identify buried storage tanks and other metallic objects. Anomalies detected during the EM survey were marked on the ground and further investigated using ground-penetrating radar (GPR).

4.1.2 Ground Penetrating Radar Survey Methodology

The GPR survey was performed in areas of anomalies detected by the EM survey and at structures observed at grade that may have below grade components. The GPR method is based upon the transmission of repetitive, radio-frequency electromagnetic (EM) pulses into the subsurface. When the transmitted energy of down-going wave contacts an interface of dissimilar electrical character, part of the energy is returned to the surface in the form of a reflected signal. This reflected signal is detected by a receiving transducer and is displayed on the screen of the GPR unit as well as being recorded on the internal hard-drive.

The received GPR response remains constant as long as the electrical contrast between media is present and constant. Lateral or vertical changes in the electrical properties of the subsurface result in equivalent changes in the GPR responses. The system records a continuous image of the subsurface by plotting two-way travel time of the reflected EM pulse versus distance traveled along the ground surface. Two-way travel time values are then converted to depth using known soil velocity functions. Each radar profile was examined for characteristic GPR signatures that may indicate the presence of buried targets.

4.1.3 Ground Penetrating Radar Survey Findings

Following the geophysical survey, concrete manhole covers related to two subgrade onsite sanitary structures (i.e., UIC011 and UIC012)[4] were exposed by H2M's subcontractor Lakewood Environmental Services, Corp. (hereinafter "Lakewood"). The geophysical survey results pertinent to the site characterization are further described below:

- No evidence of existing or previous USTs were identified.
- Subsurface utilities related to electric, fiber/telecommunications, and natural gas were identified and marked in order to clear areas for sampling.

[4] The acronym "UIC" was denoted on the stormwater and sanitary samples because of the United State Environmental Protection Agency's (USEPA's) Underground Injection Control (UIC) Program which outlines protocols for bottom sediment sampling of drainage structures.

- Two onsite sanitary systems were confirmed present; Sanitary System #1 is located at the north side of the main firehouse building, and Sanitary System #2 is located at the north side of the annex firehouse building.
    - Sanitary System #1:
        - Four at-grade sanitary structures denoted by H2M as UIC008, UIC009, UIC010 and UIC013.
        - UIC013 was inaccessible during site characterization and is a potential septic tank.
    - Sanitary System #2:
        - Two subgrade sanitary structures denoted by H2M as UIC011 and UIC012
        - UIC012 is a solid-bottomed septic tank.
        - UIC011 is an open bottomed cesspool.
- One floor drain present; denoted by H2M as UIC015.
    - Located within annex building
    - Solid-bottomed and hard-piped
    - Discharges to stormwater structure UIC007 at western building exterior.
- Eight at-grade stormwater abatement structures confirmed.
    - Open bottom stormwater drywells denoted by H2M as UIC001 through UIC007, and UIC014.

Following the geophysical survey, accessible leaching structures containing bottom sediments were sampled, and soil borings and groundwater monitoring wells were installed. No USTs or other anomalies indicative of an environmental condition or threat warranting additional investigation were identified as part of the geophysical survey.

All sample locations are depicted in **Figure 2** and a summary of H2M's observations of the sanitary and stormwater structures are provided as **Table 1**.

4.2 Characterization of Potential Areas of Concern

The Previous Environmental Investigations section of this SCR has identified one potential area of concern (AOC), the unpaved area located adjacent to the south of the asphalt pavement south of the main firehouse building and east of the telecommunications equipment shelter. This AOC (i.e., AOC1) was investigated

through collection of soil and groundwater samples. Sampling focused on potential areas of concern in addition to collecting an adequate number of samples to perform a sufficient characterization of the entire Site. Areas with historical site uses that were unlikely to have contributed to soil or groundwater impacts (administrative use) had a lower sampling frequency than those areas that have a use with a higher potential (fire training, sanitary and stormwater systems) to have resulted in soil or groundwater impacts at the Site.

Sampling was performed in accordance with the Division of Environmental Remediation (DER) DER-10 Technical Guidance for Site Investigation and Remediation, April 9, 2019, and the NYSDEC Sampling, Analysis, and Assessment of PFAS Under NYSDEC's Part 375 Remedial Programs, April 2023.

4.3 Soil Sampling

To characterize subsurface conditions, soil borings were installed throughout the Site. Soil boring locations are shown on **Figure 4**.

Surface soil samples were collected from zero to two inches bgs (beneath the vegetative cover or impervious surface [if applicable]). Surface soil samples were primarily collected with a Geoprobe® acetate macro-core sampling liner; however, hand augers and shovels were also implemented.

Shallow sub-surface soil samples were collected from two inches to two feet bgs. Shallow sub-subsurface soil samples were collected with a Geoprobe® acetate macro-core sampling liner; however, hand augers and shovels were also implemented.

Deep soil borings were installed utilizing a Geoprobe® direct-push drill rig outfitted with a macro-core sampler and dedicated acetate liners. Soils were collected continuously from ground surface to 15 feet bgs or the top of the water table, whichever was shallower. Soil samples were to be biased towards areas of suspected contamination; however, no contamination was observed. As contamination was not observed, samples were collected from six to eight feet bgs. The samples collected for analysis were based on field observations and professional judgement. Soil samples were not collected from below the water table.

All soil samples were field screened for the presence of volatile organic compounds (VOCs) using a photoionization detector (PID). Soil samples were classified using the Unified Soil Classification System. Boring logs were prepared for each boring location.

Soil samples were analyzed for PFAS using United States Environmental Protection Agency (USEPA) Method 1633. As per NYSDEC DER-10 criteria and NYSDEC's direction, a full site characterization was required at the Site in addition to PFAS sampling. Thus, each soil sample was also analyzed for the compounds and analytes listed below:

- TCL Target Compound List (TCL) VOCs + 10 Tentatively Identified Compounds (TICs)
    - USEPA Method 8260D

- Semi-Volatile Organic Compounds (SVOCs) + 20 TICs
    - USEPA Method 8270D
- Target Analyte List (TAL) Metals + Hexavalent Chromium (Cr6)
    - USEPA Methods 6010D, 7473 and 7196A
- Polychlorinated biphenyls (PCBs)
    - USEPA Method 8082A
- TCL Pesticides
    - USEPA Method 8081B
- TCL Herbicides
    - USEPA Method 8151A
- Cyanide (Cn)
    - USEPA Method 9014/9010C

Furthermore, emerging contaminant 1,4-dioxane was also submitted for analysis using low-level detection USEPA Method 8270D selected ion monitoring (SIM).

Additional soil borings and soil samples or relocation of proposed soil borings were not necessary based on field observations and the results of the geophysical survey. Soil boring logs are provided as **Appendix B**.

4.3.1 Soil Analytical Results

Soil data for the Site inclusive of AOC 1 were compared to the NYSDEC's Part 375 Soil Cleanup Objectives (SCOs) and are summarized as **Tables 2 through 5**, and laboratory data reports are included in **Appendix G**. The NYSDEC's SCOs are defined in this SCR as follows:

- Unrestricted Use SCO (USCO)
- Residential Use SCO (RSCO)
- Restricted Residential Use SCO (RRSCO)
- Commercial Use SCO (CSCO)
- Industrial Use SCO (ISCO)
- Protection of Groundwater SCO (PGW SCO)

For comparison purposes in this SCR, H2M shall summarize exceedances of USCOs, RSCOs, CSCOs and PGW SCOs. These data comparisons are most relevant to the Site with respect to its location, site usage and absence of public drinking water in vicinity.

No exceedances of NYSDEC SCOs were reported in the seven soil boring locations (i.e., SB001 through SB007) for analyzed lists of SVOCs, herbicides or PCBs. Soil data reported at concentrations above any of the above-referenced NYSDEC SCOs are depicted on **Figures 7 through 11**.

Figure 7 shows the following exceedances of heavy metals in the surface (zero to two inches bgs) soil samples only:

- SB003 (0-2in):
    - Arsenic exceeding USCO, RSCO, CSCO and PGW SCO = 22.70 mg/kg and 27.1 (SB00X [duplicate])
    - Copper exceeding USCO = 62.4 mg/kg
    - Mercury exceeding USCO = 0.192 mg/kg
- SB004 (0-2in):
    - Hexavalent Chromium exceeding USCO = 1.89 mg/kg
- SB005 (0-2in):
    - Arsenic exceeding USCO, RSCO, CSCO and PGW SCO = 19.1 mg/kg
- SB006 (0-2in):
    - Arsenic exceeding USCO, RSCO, CSCO and PGW SCO = 64.8 mg/kg
    - Copper exceeding USCO = 102mg/kg
    - Lead exceeding USCO = 89.4 mg/kg
    - Mercury exceeding USCO = 0.583 mg/kg

Figure 8 shows the following exceedances of pesticides in the surface (zero to two inches bgs) soil samples only:

- SB005 (0-2in):
    - 4,4’DDE exceeding USCO = 0.00471 mg/kg
- SB006 (0-2in):
    - 4,4’DDE exceeding USCO = 0.03860 mg/kg

- 4,4'DDT exceeding USCO = 0.0452 mg/kg

Figure 9 shows the following exceedances of VOCs in the surface (zero to two inches bgs) soil samples only:

- SB005 (0-2in):
  - Acetone exceeding USCO and PGW SCO = 0.11 mg/kg

Figures 10 and 11 show the following exceedances of PFAS in the surface (zero to two inches bgs) and shallow subsurface (two inches to two feet bgs) soil samples only:

- **SB001**
  - SB001 (0-2in):
    - PFOS exceeding USCO, RSCO, and PGW SCO = 21.3 µg/kg
  - SB001 (2-24in):
    - PFOS exceeding USCO and PGW SCO = 3.01 µg/kg
- **SB002**
  - SB002 (0-2in):
    - PFOS exceeding USCO and PGW SCO = 6.48 µg/kg
  - SB002 (2-24in):
    - PFOS exceeding USCO and PGW SCO = 2.33 µg/kg
- **SB003**
  - SB003 (0-2in):
    - PFOS exceeding USCO and PGW SCO = 8.18 µg/kg and 6.64 µg/kg (SB00X [duplicate])
  - SB003 (2-24in):
    - PFOS exceeding USCO and PGW SCO = 1.96 µg/kg
- **SB004**
  - SB004 (0-2in):
    - PFOS exceeding USCO, RSCO, and PGW SCO = 9.93 µg/kg
    - PFOA exceeding USCO and PGW SCO = 1.94 µg/kg

- **SB005**
    - SB005 (0-2in):
        - PFOS exceeding USCO and PGW SCO = 3.98 µg/kg
    - SB005 (2-24in):
        - PFOS exceeding USCO and PGW SCO = 1.42 µg/kg
- **SB006**
    - SB006 (0-2in):
        - PFOS exceeding USCO and PGW SCO = 4.26 µg/kg
    - SB006 (2-24in):
        - PFOS exceeding USCO and PGW SCO = 1.10 µg/kg

4.4 On-Site Sanitary and Stormwater Sampling

As described earlier, a geophysical survey was conducted to determine the configurations of the on-site sanitary and stormwater leaching structures (i.e., septic tanks, distribution pools, cesspools and drywells). Based upon the site walkthrough and a plumbing site plan on file with the Town of Southold Building Department, two sanitary systems and approximately 12 stormwater drywells and one in situ floor drain were considered likely present at the Site. Based upon aforementioned site plan and H2M's observations during the geophysical survey, the following on-site sanitary and stormwater leaching structures were confirmed:

- One sanitary system associated with the annex firehouse building is located beneath a lawn area and not at grade surface (i.e., Sanitary System #2). This subgrade sanitary system is comprised of a septic tank and primary cesspool (UIC012 and UIC011, respectively) that were uncovered, accessed and sampled during the site characterization field activities.
- The annex firehouse was initially suspected to contain an in situ floor drain. However, the geophysical survey confirmed this floor drain to be present (UIC015), but hard-bottomed, hard-piped and discharging to a stormwater drywell located at the western building exterior (UIC007). Thus, no bottom sediment sample was required from interior floor drain UIC015.
- The main firehouse is improved with an onsite sanitary system at the north exterior of the building (i.e., Sanitary System #1). The onsite sanitary system is comprised of four structures (i.e., UIC008, UIC009, UIC010 and UIC013). H2M accessed and sampled bottom sediments from three of these

structures (i.e., UIC008, UIC009 and UIC010). Due to landscaping improvements related to a retaining wall/planting bed, sanitary structure UIC013 could not be accessed during the site characterization for bottom sediment sampling.

- Seven additional at-grade stormwater drywells were confirmed present during the geophysical survey and site characterization activities (i.e., UIC001 through UIC006 and UIC014). Each of these stormwater drywells were accessed by H2M and bottom sediment samples were collected and submitted for laboratory analyses.

The confirmed locations of the aforementioned UIC Program structures are depicted on **Figure 5**.

Sediments in the accessible structures were sampled using stainless steel hand augers. Sediment samples were analyzed for PFAS using USEPA Method 1633. As per NYSDEC DER-10 criteria and NYSDEC's direction, a full site characterization was required at the Site in addition to PFAS sampling. Thus, each sediment sample was also analyzed for the compounds and analytes listed below:

- TCL VOCs + 10 TICs (USEPA Method 8260D)
- TCL SVOCs + 20 TICs (USEPA Method 8270D)
- TAL Metals + Cr6 (USEPA Methods 6010D, 7473 and 7196A)
- PCBs (USEPA Method 8082A)
- TCL Pesticides (USEPA Method 8081B)
- TCL Herbicides (USEPA Method 8151A)
- Cn (USEPA Method 9014/9010C)

Furthermore, emerging contaminant 1,4-dioxane was also submitted for analysis using low-level detection USEPA Method 8270D SIM.

4.3.1 Sanitary and Stormwater Leaching Structures Sediment Analytical Results

Sanitary and stormwater sediment data for the Site were compared to the NYSDEC's Part 375 Soil Cleanup Objectives (SCOs) and are summarized as **Tables 6 through 8**, and laboratory data reports are included in **Appendix G**. The NYSDEC's SCOs are again defined in this SCR as: USCO, RSCO, RRSCO, CSCO, ISCO, and PGW SCO. For comparison purposes in this SCR, H2M has summarized exceedances of USCOs, RSCOs, CSCOs and PGW SCOs. As previously noted, these data comparisons are most relevant to the Site with respect to its location, site usage and absence of public drinking water in the vicinity.

No exceedances of NYSDEC SCOs were reported in Sanitary System #'s 1 or 2 in the five structures that were sampled for analyzed lists of VOCs, SVOCs, metals, pesticides, PCBs, or herbicides.

No exceedances of NYSDEC SCOs were reported in the eight stormwater drywell structures that were sampled for analyzed lists of VOCs, SVOCs, pesticides, PCBs, or herbicides. However, heavy metals exceedances were identified.

Figure 12 shows the following exceedances of heavy metals in the bottom sediments collected from stormwater drywells:

- UIC002:
    - Copper exceeding USCO = 115 mg/kg
    - Lead exceeding USCO = 83.7 mg/kg
    - Selenium exceeding USCO = 4.82 mg/kg
    - Zinc exceeding USCO = 596 mg/kg
    - Mercury exceeding USCO = 0.346 mg/kg
    - Hexavalent Chromium exceeding USCO = 1.16 mg/kg
- UIC004:
    - Copper exceeding USCO = 68.3 mg/kg and 58.1 mg/kg (UIC00X [duplicate])
    - Lead exceeding USCO = 84.7 mg/kg (UIC00X [duplicate])
    - Zinc exceeding USCO = 746 mg/kg and 434 mg/kg (UIC00X [duplicate])
    - Mercury exceeding USCO = 0.207 mg/kg
- UIC005:
    - Copper exceeding USCO = 135 mg/kg
    - Zinc exceeding USCO = 267 mg/kg
- UIC006:
    - Mercury exceeding USCO = 0.193 mg/kg
- UIC007:
    - Zinc exceeding USCO = 140 mg/kg

Figure 13 shows the following exceedances of PFAS in one onsite sanitary cesspool (UIC010) and four stormwater drywells sediment samples (UIC002 through UIC005):

- **Sanitary Cesspool**
    - UIC010:
        - PFOS exceeding USCO and PGW SCO = 1.33 µg/kg
- **Stormwater Drywell**
    - UIC002:
        - PFOS exceeding USCO and PGW SCO = 2.11 µg/kg
    - UIC003:
        - PFOS exceeding USCO, RSCO, and PGW SCO = 14.50 µg/kg
    - UIC004:
        - PFOS exceeding USCO, RSCO, and PGW SCO = 21.70 µg/kg and 17.80 µg/kg (UIC00X [duplicate])
    - UIC005:
        - PFOS exceeding USOC and PGW SCO = 2.4 µg/kg

4.5 Temporary Vertical Profile Well Installation

Based upon the anticipated shallow depth to groundwater at the Site through analysis of the prior SCDHS groundwater investigation, no temporary vertical profile groundwater well installations were proposed or conducted. Instead, permanent groundwater monitoring wells were installed at the Site (see next Section).

4.6 Groundwater Monitoring Well Installation

To characterize groundwater quality beneath the Site, provide hydrogeologic data (i.e. groundwater flow direction), and provide locations for continued groundwater monitoring, permanent groundwater monitoring wells were installed. Four shallow monitoring wells (water table wells) were installed. Permanent groundwater monitoring well locations are identified in **Figure 3**.

A Geoprobe® direct push drill rig outfitted for rotary drilling was used to install the wells with hollow-stem augers using standard drilling methods. The wells were constructed of two-inch diameter, schedule 40 PVC casing and screen with 0.010-inch slot.

4.6.1 Shallow Well Installation

Shallow groundwater wells were constructed with a 10-foot screen section and riser to grade. The well annulus was filled with #2 morie sand, to two feet above the well screen. The shallow well screens were set seven feet into and three feet above the water table at the time of installation. A two-foot fine sand layer

was installed above the screen followed by a two-foot bentonite seal. Above the bentonite layer, the annulus around the well was filled with a cement/bentonite grout. A concrete surface pad (two-feet by two-feet by six-inches) was installed. The wells were finished with lockable test plugs and flush mount curb boxes. Monitoring well construction diagrams were developed for each of the monitoring wells and are provided in **Appendix C.**

4.6.2 Monitoring Well Development and Sampling

No less than 48 hours after installation, newly installed monitoring wells were developed by overpumping to restore the hydraulic properties of the aquifer. Well development continued until the turbidity of the groundwater was less than or equal to 50 Nephelometric Turbidity Units (NTUs) or when pH, temperature, and conductivity measurements stabilized. Monitoring well development water was containerized for off-site disposal. Stabilization was considered achieved as described below:

Turbidity (10% for values greater than 5 Nephelometric Turbidity Units (NTUs) or three consecutive turbidity readings less than 5 NTU).

- Dissolved oxygen (DO) (10% for values greater than 0.5 milligrams per liter [mg/L] or three consecutive DO readings less than 0.5 mg/L)
- Conductivity (3%)
- Temperature (3%)
- pH (±0.1 unit)
- Oxidation/reduction potential (ORP) (± 10 millivolts)

Low-flow groundwater sampling logs are provided in **Appendix D**.

4.6.3 Monitoring Well Sampling

Groundwater samples were collected in compliance with the USEPA Low-flow Groundwater Purging and Sampling Procedure (USEPA, Sep 2017) and NYSDEC Sampling, Analysis, and Assessment of PFAS Under NYSDEC's Part 375 Remedial Programs (NYSDEC, April 2023). Monitoring wells were measured for depth to water and depth to bottom with an electronic interface probe capable of measuring to the hundredth of a foot. No light non-aqueous phase liquid (LNAPL) was present in any of the onsite groundwater monitoring wells installed by H2M during this site characterization.

A Geotech bladder pump was utilized to draw water from the groundwater monitoring wells. Low-flow groundwater sampling readings of turbidity, DO, conductivity, temperature, pH and ORP were logged and sampling was conducted after stabilization was considered achieved. Factory-new dedicated high-density

polyethylene (HDPE) tubing was used within each groundwater monitoring well. Laboratory-supplied glassware appropriate for the requisite analyses was utilized.

Groundwater samples were analyzed for PFAS by USEPA Method 1633. As per NYSDEC DER-10 criteria and NYSDEC's direction, a full site characterization was required at the Site in addition to PFAS sampling. Thus, each groundwater sample was also analyzed for the compounds and analytes listed below:

- TCL VOCs + 10 TICs (USEPA Method 8260D)
- TCL SVOCs + 20 TICs (USEPA Method 8270D)
- TAL Metals + Cr6 (USEPA Methods 6010D, 7473 and 7196A)
- PCBs (USEPA Method 8082A)
- TCL Pesticides (USEPA Method 8081B)
- TCL Herbicides (USEPA Method 8151A)
- Cn (USEPA Method 9014/9010C)

Furthermore, emerging contaminant 1,4-dioxane was also submitted for analysis using low-level detection USEPA Method 8270D SIM.

4.6.4 Groundwater Analytical Results

Groundwater data for the Site were compared to the NYSDEC's Division of Water Technical and Operation Guidance Series (1.1.1) (TOGS 1.1.1) AWQS and the NYSDEC's AWQS for PFAS issued in April 2023. These data and comparisons are summarized as **Tables 9 through 11**, and laboratory data reports are included in **Appendix G**.

No exceedances of NYSDEC AWQS were reported in the four onsite groundwater monitoring well locations (i.e., MW001 through MW004) for analyzed lists of VOCs, SVOCs, herbicides or PCBs. Groundwater data reported at concentrations above any of the NYSDEC AWQS are depicted in **Figures 14 through 17**.

Figure 14 shows the following exceedances of heavy metals in the groundwater samples only:

- MW001:
    - Manganese exceeding AWQS = 892 µg/L
    - Sodium exceeding AWQS = 31,600 µg/L
- MW002:
    - Sodium exceeding AWQS = 73,600 µg/L

- MW004:
    - Manganese exceeding AWQS = 630 µg/L

Figure 15 shows the following pesticide exceedance in the groundwater samples only:

- MW002:
    - Dieldrin exceeding AWQS = 0.00582 µg/L

Figures 16 and 17 show the following exceedances of PFAS in the groundwater samples only:

- MW001:
    - PFOS exceeding AWQS = 34.5 ng/L
- MW002:
    - PFOS exceeding AWQS = 5,700 ng/L
    - PFOA exceeding AWQS = 181 ng/L
- MW003:
    - PFOS exceeding AWQS = 3,850 ng/L and 3,970 ng/L (MW00X [duplicate])
    - PFOA exceeding AWQS = 48.4 ng/L and 46.6 ng/L (MW00X [duplicate])
- MW004:
    - PFOS exceeding AWQS = 14.6 ng/L
    - PFOA exceeding AWQS = 24.8 ng/L

4.7 Soil Vapor Sampling

The NYSDEC indicated that a full site characterization was required for this Site, inclusive of a representative soil vapor sample. As the Site is already developed, H2M collected one representative sub-slab soil vapor sample, and concurrent indoor air and outdoor air samples associated with the main firehouse building. The sub-slab soil vapor sample was collected by installing a permanent soil vapor pin into the floor slab.

The investigation was conducted in conformance with the New York State Department of Health (NYSDOH) *Guidance for Evaluating Soil Vapor Intrusion in the State of New York, 2006* and guidance document

updates.[5] The sub-slab soil vapor and concurrent air samples were collected using six-liter Summa cannisters with flow rates set at 0.2 liters per minute (LPM) or less by the laboratory. The sub-slab soil vapor and concurrent indoor air samples were collected during the heating season (which is approximately November 15th until March 31st). Samples were collected over a 24-hour period, and were analyzed for VOCs using USEPA Method TO-15. Analytical results were compared with the decision matrices contained within the NYSDOH guidance document.

4.7.1 Soil Vapor Analytical Results

Sampling locations under this investigation are depicted in **Figure 6**. These sampling locations are denoted as follows:

1. Sub-slab soil vapor sample: SV001
2. Indoor air sample: IA001
3. Outdoor air sample: OA001

According to **Table 2**, no exceedances of the NYSDOH matrix screening values were reported. Dichlorodifluoromethane (Freon-12) was detected at elevated concentrations of 44,000 µg/m^3 and 100,000 µg/m^3 in the sub-slab soil vapor sample and its associated blind duplicate sample, respectively. Although also detected in the concurrent indoor and outdoor air samples, dichlorodifluoromethane (Freon-12) was reported at concentrations of 6.9 µg/m^3 and 11 µg/m^3, respectively. A copy of the laboratory analytical report is provided as **Appendix G**.

4.8 Survey

Soil boring locations, UIC locations sampled, other items of interest relating to this investigation, and permanent monitoring wells (top of casings and top of manways) were surveyed (vertical and horizontal, precision of 0.01 feet) for the purposes of determining accurate sample locations and site-specific groundwater flow direction. This information was utilized on groundwater contour maps generated for this SCR. Furthermore, sanitary and stormwater structures, as well as soil boring locations and monitoring wells are accurately depicted on figures included in this SCR based upon survey and GPS data accumulated during the investigation.

[5] The 2006 NYSDOH guidance document has been updated multiple times since issuance, but PFAS has yet to be included in the guidance and updates. Two significant updates to the 2006 NYSDOH guidance document are the soil vapor/indoor air decision matrices A through F issued in May 2017 and February 2024, and were consulted during H2M's review of the data.

4.9 Petroleum Bulk Storage Survey

H2M conducted a survey of on-site petroleum bulk storage (PBS). H2M determined that no PBS is maintained onsite; thus, H2M makes no recommendations with respect to PBS regulations in this SCR.

5.0 QUALITY ASSURANCE/QUALITY CONTROL

A quality assurance project plan (QAPP) presents the objectives, functional activities, methods, and quality assurance / quality control (QA/QC) requirements associated with sample collection and laboratory analysis for characterization activities. The QAPP follows requirements detailed in NYSDEC Sampling, Analysis, and Assessment of PFAS under NYSDEC's Part 375 Remedial Programs (April 2023), DER-10, Section 2, and the Uniform Federal Policy for Quality Assurance Project Plans (EPA-505-B-04-900A, B&C, March 2005). A QAPP was prepared and provided in the NYSDEC-approved SCWP for this project. The QAPP was followed by H2M during the conduct of this Site Characterization.

All analytical data was analyzed by York Analytical Laboratories, Inc. (York), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory. Data were generated using NYSDEC Analytical Services Protocol (ASP) Category B data deliverables. Electronic Data Deliverables (EDD) were submitted at the completion of the investigation to the NYSDEC.

5.1 Sample Identification

Each sample was identified with a set of information relating individual sample characteristics. Required information consists of Sample Designation, Depth, Date, Time, and Matrix. Examples of sample IDs are shown below.

- SB001 (2-4') (soil sample, boring 001 from 2 to 4 feet bgs)
- VP001 (17-22') (groundwater sample, Vertical Profile 001 from 17 to 22 feet bgs)
- MW004 (groundwater sample, permanent monitoring well 004)

Sample frequency, locations, depths, and nomenclature may change subject to field decisions and professional judgment.

5.2 Special Sampling Considerations for PFAS

There are several potential sources of PFAS that could contribute to the cross-contamination of environmental samples collected during the Site Characterization. Weatherproof clothing, pens, logbooks, cosmetics, personal hygiene products, insect repellents, and sampling equipment could contain PFAS that could lead to false positive sampling results.

To ensure that the analytical results obtained during the Site Characterization were representative of the actual site conditions, several measures were taken:

- Collection of appropriate field QA/QC samples (blanks, duplicates, equipment rinsate samples, etc.) as detailed in the QAPP;
- Collection of samples using the sample guidelines contained in **SCWP**; and
- Analysis by the analytical laboratory using established laboratory QA/QC procedures and methods as detailed in the QAPP.

During the investigation, a total of four blind duplicates, three equipment blanks, three field blanks, and three trip blanks were submitted to the laboratory and analyzed. Specific to PFAS and in conformance with the QAPP, a total of three blind duplicates, three equipment blanks, and three field blanks were analyzed for PFAS.

The results of the QA/QC sampling indicate that sample collection procedures and/or ambient conditions are unlikely to have significantly impacted environmental samples collected from the Site during implementation of the investigation.

5.3 Equipment Decontamination

To minimize the potential for cross-contamination, non-dedicated drilling and sampling equipment were properly decontaminated prior to and between sampling/drilling locations.

5.3.1 General Procedures

Drilling equipment was decontaminated in a designated area. Sampling equipment and probes were decontaminated in an area covered with plastic sheeting near the sampling location. Waste material generated during decontamination activities was containerized and stored in accordance with the procedures detailed in Section 5.4. Decontamination of sampling equipment was kept to a minimum, and wherever possible, dedicated sampling equipment was used. Personnel directly involved in equipment decontamination wore appropriate personal protective equipment (PPE).

5.3.2 Drilling Equipment

Drilling equipment was decontaminated prior to performance of the first boring/excavation and between all subsequent borings/excavations. This included hand tools, casing, augers, drill rods, temporary well material, and other related tools and equipment. Water used during drilling and/or steam cleaning operations was from a potable source and brought onto the Site.

5.3.3 Sampling Equipment

Sampling equipment (e.g., trowels, knives, split-spoons, bowls, hand augers, etc.) were decontaminated prior to each use as follows:

- Laboratory-grade glassware detergent and tap water[6] scrub to remove visual contamination
- Generous tap water rinse
- Distilled water rinse

5.3.4 Meters and Probes

All meters and probes that were used in the field (other than those used solely for air monitoring purposes [e.g., PID]) were decontaminated between uses as follows:

- Laboratory-grade detergent and tap water solution wash
- Tap water rinse
- Distilled water rinse (triple rinse)

5.4 Management of Investigation Derived Waste

Waste materials generated from field operations consisted of soil cuttings, purge water, and miscellaneous solid materials such as PPE and supplies. Investigative derived waste (IDW) generated during field operations will be disposed of in accordance with applicable regulations.

Soil cuttings generated from soil boring and well installation activities were stored in one 55-gallon drum. The drum was labeled to indicate the source of the soil and stored in a designated area onsite. Soil cores and soil cuttings were field screened using a PID while performing drilling operations. Drummed soils will be disposed of at an off-site disposal facility.

Development and purge water generated during the field activities were stored in one 55-gallon drum. The drum was labeled to indicate the source of the fluid and was stored in a designated area onsite. Drummed groundwater will be disposed off-site.

[6] "Tap water" was imported onto the Site from offsite public water supply sources in containers. No onsite water was used during the conduct of this investigation.

5.5 Field Documentation

Documentation took place on appropriate forms. Permanent black or blue ink was used to record information. Errors in field documentation was lined through, initialed, dated, and corrected. Forms were kept by the H2M Field Team Leader during the field activities.

The primary purpose of the field forms was to document the daily field activities and to provide descriptions of each activity. All field activity entries were recorded and dated by the person making the entry.

5.6 Data Usability

Data usability and validation was performed as described below.

5.6.1 Data Usability and Validation Requirements

Data usability and validation were performed on analytical data sets, primarily to confirm that sampling and chain-of-custody documentation were complete, sample IDs can be tied to specific sampling locations, samples were analyzed within the required holding times, temperature ranges were met, and analyses were reported in conformance with NYSDEC ASP, Category B data deliverable requirements as applicable to the method utilized.

5.6.2 Data Usability and Validation Methods

Independent third-party data validation was performed by Vali-data of WNY, LLC (Vali-data). Vali-data completed a data usability evaluation for the data collected during the SC and data usability summary reports (DUSRs) were prepared. The DUSRs were prepared in accordance with NYSDEC DER-10, Appendix 2B. Copies of the Vali-data DUSRs are included as **Appendix H**.

Data were deemed acceptable by the data validator, with minor qualifications due to sample matrix or laboratory quality control outliers.

6.0 HEALTH AND SAFETY

Field operations were performed in accordance with the health and safety requirements provided in the site-specific Health and Safety Plan (HASP) submitted and approved by the NYSDEC as part of the SCWP. The HASP outlined the requirements for training, medical surveillance, daily tailgate meetings, emergency response, and accident and injury reporting.

The H2M Field Team Leader was responsible for implementing the HASP, completing the daily tailgate safety meetings and performing necessary Industrial Hygiene (IH) monitoring as specified in the HASP.

7.0 COMMUNITY AIR MONITORING

A site-specific Community Air Monitoring Plan (CAMP) was prepared to provide measures for protection for on-site workers and the downwind community from potential airborne contaminants as a direct result of the Site Chazaracterization. The CAMP was included in the NYSDEC-approved SCWP.

The CAMP was implemented and executed for all ground intrusive activities in accordance with 29 CFR 1910.120(h), the NYSDOH's Generic Community Air Monitoring Plan, and NYSDEC DER-10, Appendix 1A and 1B.

No CAMP action level exceedances occurred and no corrective measures were necessary. The action level of greater than 150 micrograms per cubic meter ($\mu g/m^3$) for dust and 5 parts per million (ppm) for volatile organic vapors in the breathing zone were enforced during work.

On January 10, 2025, the NYSDEC Project Manager was contacted by H2M. H2M reported that all field activities were conducted between January 6 and 10, 2025 and were concluded within the same week that work had commenced. Furthermore, no CAMP action level exceedances occurred during this one-week long field activity. H2M was instructed to include the air monitoring logs in the final SCR to the NYSDEC. Air monitoring logs for the community air monitoring are included in **Appendix F**.

9.0 HYDROGEOLOGICAL ASSESSMENT AND PHYSICAL SETTINGS

The following section describes topography, surrounding Site use and regional and Site geology/hydrogeology.

9.1 Site Topography

The topography of the Site and surrounding area was reviewed using the United States Geological Survey (USGS) 7.5-minute series topographic map for the Orient, New York quadrangle and indicates the property's elevation is approximately 17 feet AMSL. Four permanent groundwater monitoring wells were installed during the investigation and surveyed by H2M. According to these data, the grades at monitoring wells MW001 through MW004 range between 15.12 feet and 15.79 feet above the NAVD 88.

9.2 Surrounding Land Use

The site is located in a sparsely developed mixed-use area. Main Road abuts the property to the north and is commercial corridor for the area. However, properties in close proximity/adjacent to the Site along Main Road are improved/utilized as a public elementary school (north), cemetery (west), and single-family residential (east). Further east, but adjacent to the southeast is undeveloped wooded land. South and southeast adjacent properties are cemetery, single-family residential, and farmland uses. West/southwest of the Site on the west side of Tabor Road are former agricultural-use properties that are utilized as commercial and single-family residential properties.

9.3 Regional Geology/Hydrogeology

The geologic setting of Long Island is well documented and consists of crystalline bedrock composed of schist and gneiss overlain by layers of unconsolidated deposits. Immediately overlying the bedrock is the Raritan Formation, consisting of the Lloyd sand member confined by the Raritan clay member. The Lloyd sand is an aquifer and consists of discontinuous layers of gravel, sand, sandy and silty clay, and solid clay. The Raritan clay consists of gray, red, or white solid and silty clay with few lenses of sand and gravel and abundant lignite and pyrite.

Above the Raritan clay lies the Magothy Formation. The Magothy Aquifer consists of layers of fine to coarse sand of moderate to high permeability, with inter-bedded lenses of silt and clay of low permeability resulting in areas of preferential horizontal flow. Therefore, this aquifer generally becomes more confined with depth. The Magothy Aquifer is overlain by the Upper Glacial Aquifer. The Upper Glacial Aquifer is the shallowest water-table aquifer at this location and is comprised of medium to coarse sand and gravel with occasional thin lenses of fine sand and brown clay. This aquifer extends from the water table to the top of the Magothy and, therefore, is hydraulically connected to the Magothy Aquifer.

9.4 Local Hydrogeology

The depth to groundwater beneath the Site is approximately 13.5 feet bgs according to a comparison of the USGS topographical map information and the *Water-Table and Potentiometric-Surface Altitudes in the Upper Glacial, Magothy, and Lloyd Aquifers of Long Island, New York, April–May 2013* data. In preparation of the Site Characterization Work Plan (SCWP) for this Site, H2M estimated the regional groundwater flow to be to the southwest toward Orient Harbor. As shown on **Figure 3**, groundwater measurements collected by H2M during this subsurface investigation confirmed groundwater flow direction is to the southwest, but that a southern onsite component to groundwater flow direction is present.

The nearest permanent surface water body is Orient Harbor, located approximately 2,300 southwest of the Site. However, the Long Island Sound is present approximately 2,500 feet north of the Site.

9.5 Public & Private Well Search

Based upon information contained within the EDR report, there is one public water supply well within a one-mile radius of the Site. The well is identified as “Oysterponds Elementary School” and is located adjacently to the north of the Site across Main Road and according to the NYSDEC the well is active. The hamlet of Orient is not provided public water and private water wells are present on most developed properties.

10.0 NATURE AND EXTENT OF CONTAMINATION

The following section describes the nature and extent of contamination identified at the Site.

10.1 Identification of Source Areas

Based on past studies, reviews of records for the Site, and findings of this investigation, H2M has identified the following potential source areas for PFAS:

1. AOC1 was potentially utilized in the past as a fire training area in which AFFF was dispersed. This conclusion is supported by the elevated concentrations of PFOS, and to a lesser extent PFOA in this section of the Site in soil borings SB001 through SB005. Groundwater samples collected within and downgradient of AOC1 in groundwater monitoring wells MW003 and MW004 further support this conclusion.
2. Although PFAS was identified in soil samples collected at the northeast portion of the Site in soil boring SB006, based upon the historical site usage it appears unlikely to have been used in fire training.
3. Elevated PFOS concentrations exceeding PGW SCOs were detected in four stormwater drywells (UIC002 through UIC005) and one sanitary cesspool (UIC010).
    a. Stormwater drywells UIC002 and UIC004 are located adjacent to AOC1 and contain the highest concentrations of PFOS. This is consistent with H2M's conclusion that AFFF was potentially historically used in this area in fire training.
    b. Stormwater drywells UIC003 and UIC005 are each located approximately 100 feet north of AOC1. The concentrations of PFOS are significantly lower. Both drywells are located proximate to the vehicle bays of the main firehouse. It is unlikely that the elevated PFOS is related to AOC1 and is more likely related to car wash detergents used in routine maintenance of the rescue vehicles parked and cleaned in these two areas of the Site.
    c. Cesspool UIC010 contains a concentration of PFOS slightly exceeding the PGW SCO and is likely associated with soaps, cleansers and/or detergents used internally within the main firehouse.

Site-specific groundwater flow direction has been established to be southwest, but that a southern onsite component to groundwater flow direction is present. PFAS impacts related primarily to PFOS, but also containing PFOA are present onsite. The greatest impacts are located downgradient of AOC1 in MW004. Significant, but lesser impacts are present within AOC1 in MW003. Concentrations of PFOS and PFOA significantly decrease upgradient of AOC1 in MW001 and MW002; thus, indicating that AOC1 is a source area.

In addition to the PFAS investigation, the Site was required to be fully characterized under this scope of work. Based on past studies, reviews of records for the Site, and findings of this investigation, H2M has identified the following additional potential source areas for contamination:

1. The northeast section of the Site at soil boring SB006 identified an elevated concentration of arsenic above its PGW SCO. In addition, the following were also identified at concentrations above their respective USCOs, but below PGW SCOs: 4,4'-DDE, 4,4'-DDT, copper, lead and mercury. These are metals and compounds are indicative of former agricultural usage at the Site.
2. Arsenic concentrations exceeding PGW SCOs were again identified in soil borings SB003 and SB005.

3. The VOC acetone was reported at a concentration exceeding its PGW SCO in one soil boring sample only. This was located at SB005 and is proximate to the Fire District's staging area for vehicles and Quonset-style structure proximate to the edge of pavement. Acetone is a typical lab contaminant, but as there were no acetone detections reported in laboratory blanks or other acetone exceedances, there is a potential for a small release of acetone in this location to be present within surface soil.

10.2 Extent of Contamination in Soil Vapor

One representative sub-slab soil vapor sample was collected with concurrent indoor and outdoor air samples. Consistent with the 2006 NYSDOH guidance document and subsequent updates, the samples were analyzed for USEPA Method TO-15 and compared to the NYSDOH decision matrices.

No exceedances were reported in the laboratory data. A total of nine VOC detections were reported in the sub-slab sample, but at concentrations well below the NYSDOH thresholds for these VOCs as compared to the NYSDOH decision matrices.

A total of 21 VOCs were detected in the sub-slab soil vapor and concurrent indoor and outdoor air samples collected from the Site. Dichlorodifluoromethane (Freon-12) was detected at elevated concentrations of 44,000 µg/m^3 and 100,000 µg/m^3 in the sub-slab soil vapor sample and its associated blind duplicate sample, respectively. Although also detected in the concurrent indoor and outdoor air samples, dichlorodifluoromethane (Freon-12) was reported at concentrations of 6.9 µg/m^3 and 11 µg/m^3, respectively. The concentration of 6.9 µg/m^3 in indoor air places the Site between the 75th and 90th percentile for indoor air based upon the NYSDOH's 2006 Final Study's *Table C1. NYSDOH 2003: Study of volatile organic chemicals in air of fuel oil heated homes*.

The following VOCs were also detected in the sub-slab soil vapor and indoor and outdoor air samples: 2,2,4-trimethylpentane, 2-butanone, acetone, acrylonitrile, benzene, isopropanol, methylene chloride, toluene, and trichlorofluoromethane. The following VOCs were detected in sub-slab soil vapor only: 1,2-dichlorobenzene, ethyl benzene, o-xylene,p- & m-xylenes, styrene, and trichloroethylene. The VOC 4-methyl-2-pentanone was detected in the sub-slab soil vapor and indoor air samples. The VOC n-heptane was detected in the indoor air sample only. The VOCs carbon tetrachloride, chloromethane, and ethyl acetate were detected in the indoor and outdoor air samples only.

10.3 Extent of Contamination in Soil

Seven soil borings were performed at the Site. Surface soil samples were collected from zero to two inches bgs (beneath the vegetative cover). Shallow sub-surface soil samples were collected from two inches to two feet bgs. As contamination was not observed, deep soil samples were collected from six to eight feet bgs.

Three soil samples (one from the aforementioned depths as described above) were collected for analysis from each of the seven soil borings for a total of 21 soil samples analyzed for the full suite of PFAS, VOCs, SVOCs, metals, pesticides, herbicides and PCBs proposed in the SCWP.

PFAS was primarily detected in the surface, and to a lesser extent in the shallow sub-surface soil samples. Concentrations of PFAS were highest within AOC 1 with surface soil samples reported at concentrations of PFOS at 21.30 µg/kg (SB001), 8.18 µg/kg (SB003) and 9.93 µg/kg (SB004). surface soil boring SB004 also reported a PFOA concentration of 1.94 µg/kg. PFOS concentrations exceeding the PGW SCO were also reported in shallow sub-subsurface soil borings SB001 at 3.01 µg/kg and SB003 at 1.96 µg/kg. Other PFOS exceedances of the PGW SCO of 1 µg/kg, but within the RSCO of 8.8 µg/kg were identified in soil borings SB002, SB005 and SB006.

The only VOC exceedance identified in the 21 soil samples was an acetone detection at a concentration of 0.11 mg/kg in the surface soil sample collected at soil boring SB005. This was located at SB005 and is proximate to the Fire District's staging area for vehicles and Quonset-style structure proximate to the edge of pavement. Acetone is a typical lab contaminant, but as there were no acetone detections reported in laboratory blanks or other acetone exceedances, there is a potential for a small release of acetone in this location to be present within surface soil.

Historically, combinations of heavy metals and organochlorine (man-made) pesticides have been used on agricultural properties to control unwanted pests (e.g., insects and rodents). The northeast section of the Site at soil boring SB006 identified an elevated concentration of arsenic above its PGW SCO in the surface soil sample at a concentration of 64.8 mg/kg. In addition, the following were also identified at concentrations above their respective USCOs, but below PGW SCOs in the same surface soil sample: 4,4'-DDE at 0.03860 mg/kg, 4,4'-DDT at 0.0452 mg/kg, copper at 102 mg/kg, lead at 89.4 mg/kg, and mercury at 0.583 mg/kg. Arsenic concentrations exceeding PGW SCOs were again identified in soil borings SB003 at 22.7 mg/kg and SB005 at 19.1 mg/kg in the surface soil samples only.

No NYSDEC SCO exceedances of PCBs or herbicides were detected in the 21 soil samples collected from the seven boring locations at the Site.

10.4 Extent of Contamination in Sanitary and Stormwater Structure Sediments

Two sanitary systems (i.e., Sanitary System #1 and #2) totaling six structures are present at the Site, of which bottom sediment samples were collected and analyzed from four accessible cesspools (i.e., UIC008, UIC009, UIC010, and UIC011). One hard-bottomed and hard-piped interior floor drain determined to be free of any bottom sediments (i.e., UIC015) and eight at-grade exterior stormwater drywells (i.e., UIC001 through UIC007 and UIC014) were accessed by H2M and bottom sediment samples were collected and submitted for laboratory analyses.

In total, 12 bottom sediment samples (four sanitary and eight stormwater) were collected and analyzed from the Site. One bottom sediment sample (one from each structure noted above) for a total of 12 bottom sediment soil samples analyzed for the full suite of PFAS, VOCs, SVOCs, metals, pesticides, herbicides and PCBs proposed in the SCWP.

PFOS was detected at concentrations above the PGW SCO of 1 µg/kg in five of the 12 structures as follows: UIC002, UIC003, UIC004, UIC005, and UIC010. Stormwater drywells UIC003 and UIC004 in the asphalt-paved driveway adjacent to the north of AOC 1 contained the highest concentrations of PFOS of the sanitary and stormwater drywells with concentrations of 14.5 µg/kg and 21.7 µg/kg, respectively. Further northward from AOC 1, stormwater drywells UIC002 and UIC005 reported lower PFOS concentrations within bottom sediments of 2.11 µg/kg and 2.40 µg/kg, respectively. Finally, sanitary cesspool within Sanitary System #1 contained a lower concentration of PFOS within bottom sediments of 1.33 µg/kg.

No NYSDEC SCOs exceedances were reported in bottom sediment samples collected from within Sanitary System #1 or #2. USCOs were exceeded in five stormwater drywells (i.e., UIC002, and UIC004 through UIC007); however, no RSCOs or PGW SCOs were exceeded. The metals detected above USCOs were mercury, copper, zinc, lead, selenium and hexavalent chromium.

No NYSDEC SCO exceedances of VOCs, SVOCs, PCBs or herbicides were detected in the bottom sediment samples collected from the 12 accessible sanitary and stormwater structures at the Site.

10.5 Extent of Contamination in Groundwater

Four permanent groundwater monitoring wells were installed and sampled at the Site via low-flow sampling procedures. The wells were constructed of two-inch diameter, schedule 40 PVC casing and screen with 0.010-inch slot to collect samples within the upper glacial aquifer ranging between 13.82 feet bgs and 14.51 feet bgs.

Each of the four groundwater samples from monitoring wells MW001 through MW004 were collected for analysis of the full suite of PFAS, VOCs, SVOCs, metals, pesticides, herbicides and PCBs proposed in the SCWP.

The greatest concentrations of PFOS and PFOA were detected in the furthest downgradient monitoring well (i.e., MW004), which is approximately 35 feet south of AOC 1. PFOS and PFOA concentrations collected from monitoring well MW004 were reported at 5,700 ng/L and 181 ng/L, respectively. Monitoring well MW003 was installed in a central location of AOC 1 and PFOS and PFOA were detected at concentrations of 3,850 ng/L and 48.4 ng/L, respectively. Upgradient groundwater sample MW001 collected north of the main firehouse reported a PFOS concentration of 34.5 ng/L. The northernmost groundwater monitoring well installed at the Site, located approximately 35 feet south of Main Road, reported elevated concentrations of PFOS and PFOA at 14.6 ng/L and 24.8 ng/L, respectively.

Metals exceedances above the NYSDEC TOGS 1.1.1 AWQS were identified in three of the four groundwater monitoring wells (i.e., MW001, MW002 and MW004). These exceedances were related to two metals only: manganese and sodium. The AWQS for manganese is 300 µg/L and the AWQS for sodium is 20,000 µg/L. Manganese was reported in groundwater monitoring wells MW001 and MW004 at concentrations of 892 µg/L and 630 µg/L, respectively. Sodium was reported in groundwater monitoring wells MW001 and MW002 at concentrations of 31,600 µg/L and 73,600 µg/L, respectively.

The only pesticide at a concentration above the NYSDEC TOGS 1.1.1 AWQS was identified in the northernmost and upgradient groundwater monitoring well MW002. Dieldrin was reported at a concentration of 0.00582 µg/L, which exceeds it AWQS of 0.004 µg/L.

No NYSDEC TOGS 1.1.1 AWQS exceedances of VOCs, SVOCs, PCBs or herbicides were detected in the four groundwater samples collected from the four permanent groundwater monitoring well locations at the Site.

10.6 Fish and Wildlife Resources

H2M evaluated potential impact to fish and wildlife resources in accordance with DER-10 Section 3.10, Fish and Wildlife Resources Impact Analysis (FWRIA), and DER-10 Appendix 3C, FWRIA Decision Key. A summary of the FWRIA is detailed below; a copy of the Decision Key is included in **Appendix J**.

Section 1: *Is the site or area of concern a discharge or spill event?* **NO**. *If "NO" Go to Section 2.*

Section 2: *Is the site or area of concern a point source of contamination to the groundwater which will be prevented from discharging to surface water? Soil contamination is not widespread, or if widespread, is confined under buildings and paved areas?* **NO**. *If "NO" Go to Section 3.*

Section 3: *Is the site and all adjacent property a developed area with buildings, paved surfaces and little or no vegetation?* **NO**. *If "NO" Go to Section 9.*

Section 9: *Does the site or any adjacent or downgradient property contain any of the following resources?*

i. Any endangered, threatened or special concern species or rare plants or their habitat
ii. Any DEC designated significant habitats or rare NYS Ecological Communities
iii. Tidal or freshwater wetlands
iv. Stream, creek or river
v. Pond, lake, lagoon
vi. Drainage ditch or channel
vii. Other surface water feature
viii. Other marine or freshwater habitat
ix. Forest
x. Grassland or grassy field
xi. Parkland or woodland
xii. Shrubby area
xiii. Urban wildlife habitat
xiv. Other terrestrial habitat

NO. *If "NO" Go to Section 10.*

Section 10: *Is the lack of resources due to the contamination?* **NO**. *If "NO" Go to Section 14.*

Section 14: *No Fish and Wildlife Resources Impact Analysis needed.*

11.0 QUALITATIVE HUMAN EXPOSURE ASSESSMENT

The overall purpose of the Qualitative Human Exposure Assessment is to evaluate and document how people might be exposed to contaminants on-site and to identify and characterize the potentially exposed population(s) now and under reasonably anticipated future use of the Site. To evaluate if an exposure pathway exists, the exposure assessment should assess the quality, representativeness, and adequacy of the available data. In addition, the qualitative exposure assessment should consider the nature of populations currently exposed or that have the potential to be exposed to Site contaminants both on-site and off-site and describe the reasonably anticipated future land use of the Site and affected areas off-site.

11.1 Contaminant Source

The Site is under an Order on Consent for investigation of the presence of PFAS; thus, that is the primary source of contamination relevant to this SCR. However, as part of the site characterization, multiple analyses of media were conducted to investigate for other contamination sources if present.

Surface and shallow sub-surface soil data from AOC 1 (SB001, SB003 and SB004), as well as groundwater data collected from within and downgradient of AOC 1 (MW003 and MW004, respectively), support the premise that onsite fire training activities with dispersal of AFFF occurred within AOC 1. This is based upon the elevated concentrations of PFOS and PFOA within and proximate to AOC 1 in onsite soils and groundwater. Furthermore, the two adjacent stormwater drywells within the asphalt-paved driveway (UIC003 and UIC004) also contain significantly elevated PFOS concentrations in bottom sediments.

Based upon additional bottom sediment data reporting concentrations of PFOS that are within the RSCOs, but above PGW SCOs in stormwater drywells UIC002 and UIC005, an alternative source is possible. Both stormwater drywells are located in the asphalt pavement adjacent to the fire truck bays of the main firehouse. Therefore, it is possible that the elevated concentrations of PFOS within UIC002 and UIC005 are accumulations from routine car wash detergents associated with maintenance of the rescue vehicles at the Site.

A third location of PFOS was detected in Sanitary System #1 cesspool UIC010 with bottom sediment data reporting a concentration of PFOS that is within the RSCO, but above PGW SCO. Based upon the concentration of PFOS detected and the physical location and usage of UIC010, it appears possible that this source of PFOS is from routine usage of cleansers and soaps utilized within the main firehouse building.

No source has been established for the PFOS concentrations detected in the northeast section of the Site from soil boring SB006 that are within the RSCO but above the PGW SCO.

Detections of 4,4' DDE and 4,4' DDT at concentrations above USCOs, but below both RSCOs and PGW SCOs for these pesticides in two surface soil boring locations (SB005 and SB006) are indicative of a background condition that is possibly related to the historical agricultural usage of the Site. Furthermore, elevated heavy metals concentrations in surface soil samples collected at soil boring locations SB003, SB005, SB006, and SB007 further support this historic agricultural usage premise and the dispersion of pesticides. Concentrations of detected heavy metals copper, lead and mercury exceeded USCOs, but below both RSCOs and PGW SCOs. However, the concentrations of arsenic did exceed both the RSCO and PGW SCO in three of these four surface soil samples (SB003, SB005, and SB006).

Soil boring SB004 reported a hexavalent chromium concentration that exceeded its USCO, but was below both the RSCO and PGW SCO. The presence of hexavalent chromium within this surface soil sample is possibly the result of firehouse-related operations, storage or importation of recycled concrete aggregate (RCA) to stabilize exposed soils.

11.1.1 Contaminant Release and Transport

Transport mechanisms for identified soil impacts above PGW SCOs include airborne transportation as dust or suspended in stormwater runoff. Soil impacted with PFAS was confirmed within AOC 1 and adjacent to the south of AOC 1. In addition, PFAS-impacted bottom sediments were confirmed present within stormwater drywells located adjacent to AOC 1 and to a lesser extent further northward within two additional drywells, and lastly to a further lesser extent within one sanitary cesspool. Furthermore, concentrations of PFOS above the PGW SCO were detected in a landscaped area at the northeast portion of the Site and significantly distant from AOC 1.

PFOS and PFOA contamination is present at the soil/water table interface at the Site.

Surface and shallow sub-surface soil data from AOC 1 (SB001, SB003 and SB004), as well as groundwater data collected from within and downgradient of AOC 1 (MW003 and MW004, respectively), support the premise that onsite fire training activities with dispersal of AFFF occurred within AOC 1. This is based upon the elevated concentrations of PFOS and PFOA within and proximate to AOC 1 in onsite soils and groundwater. Furthermore, the two adjacent stormwater drywells within the asphalt-paved driveway (UIC003 and UIC004) also contain significantly elevated PFOS concentrations in bottom sediments. The suspected dispersal of AFFF likely reached the water table via downward migration through the exposed soils in the unpaved area of AOC 1, as well as the unpaved area immediately adjacent to the south of AOC 1, and the two open bottom stormwater drywells located adjacently to the north in the asphalt-paved driveway.

Soils impacts related to the heavy metal arsenic exceeding the RSCO and PGW SCO were identified and are likely related to historical agricultural usage of the Site. Heavy metals typically bind to the organic-rich uppermost soils and do not readily migrate to groundwater. Although elevated concentrations of manganese and sodium were detected in groundwater samples analyzed during the conduct of this site characterization, no elevated concentrations of arsenic were reported. Furthermore, no SCO exceedances of manganese or sodium were reported in the 21 soil samples collected and analyzed during the conduct of this site characterization.

11.2 Points and Routes of Exposure

When compared to RSCOs and PGW SCOs only, soils at the Site are impacted to varying concentrations with PFOS, PFOA, arsenic, and acetone. Exposure pathways are inhalation and ingestion from fugitive dust and impacted groundwater. Based upon the available data, groundwater has been impacted with PFOS and PFOA, but not arsenic or acetone.

When compared to RSCOs and PGW SCOs only, bottom sediments within four drywells and one sanitary cesspool at the Site are impacted to varying concentrations with PFOS only. As these bottom sediments are subgrade, the only exposure pathway is ingestion of impacted groundwater resulting from vertical migration of PFOS into the water table. Based upon the available data, groundwater has been impacted with PFOS.

Additional groundwater impacts detected at concentrations exceeding AWQS are manganese, sodium and dieldrin. As no RSCO or PGW SCO exceedances were identified during the site characterization for these metals and pesticide, the exposure pathway for these contaminants is limited to ingestion of impacted groundwater.

As previously indicated in this SCR, the hamlet of Orient is not serviced by a public potable water supplier. Thus, developed properties in Orient utilize private water supply wells. Due to the pumping capacity and site use, the one supply well within a one-mile radius of the Site categorized as a public water supply well is associated with the Oysterponds Elementary School. The elementary school is located adjacently to the north at the north side of Main Road and hydrogeologically upgradient to the Site.

11.3 Characterization of Potential Receptor Populations

The site is located in a sparsely developed mixed-use area. Main Road abuts the property to the north and is a commercial corridor for the area. However, properties in close proximity/adjacent to the Site along Main Road are improved/utilized as a public elementary school (north), cemetery (west), and single-family residential (east). Further east, but adjacent to the southeast is undeveloped wooded land. South and southeast adjacent properties are cemetery, single-family residential, and farmland uses. West/southwest

of the Site on the west side of Tabor Road are former agricultural-use properties that are utilized as commercial and single-family residential properties.

Based upon Google Earth imagery, two mixed-use properties located adjacent to the west along the west side of Tabor Road likely utilize onsite private wells and are within 500 feet of the Site and downgradient. Six developed properties utilized for religious and residential purposes were identified 500 feet west of the Site at downgradient locations and likely utilized onsite private wells. Eleven residences and one public school were identified north and east of the Site, and upgradient and/or crossgradient of the Site. One residence was identified within 500 feet of the Site to the south and downgradient. In addition, firefighters and other occupants of the Site are potential receptor populations.

11.4 Qualitative Human Health Exposure Assessment Summary Table

The following table provides a summary of the routes of exposure.

Qualitative Human Health Exposure Assessment Summary Table

Environmental Media & Exposure Route	Human Assessment
Direct contact with surface soils/inhalation of dust/ingestion of soil	• The Site is improved with an active firehouse, well maintained and manned on a 24/7 basis. • PFOS concentrations in drywell and sanitary cesspool bottom sediments exceeding RSCO and PGW SCO are limited to the subsurface and not considered a surface soils/inhalation of dust/ingestion of soil exposure route. • PFOS, PFAS, arsenic and acetone at concentrations exceeding RSCOs and PGW SCOs are present in surface and/or shallow subsurface soils. The majority of the Site that is unimproved by impermeable surfaces (i.e., asphalt, concrete, buildings, etc.) is covered in well-maintained grass lawns and field. The remainder is covered with mulch and RCA to stabilize exposed soils. There is limited access to direct contact with surface soils, inhalation of dust and ingestion of soil.
Direct contact with groundwater	• Groundwater is located greater than 13 feet bgs and there is no concern for direct contact with onsite groundwater. The exceptions being where downgradient wells are not improved with Point of Entry Treatment (POET) systems. • SCDHS has sampled several private wells in the vicinity of the Site and Alternate Water Supplies have been provided by the State to properties in which drinking water exceeded New York State Maximum Contaminant Levels (MCLs) for PFOA and/or PFOS. • Water filters being installed at Site.
Ingestion of groundwater	• Groundwater is located greater than 13 feet bgs and there is no concern for direct contact with groundwater. The exceptions being where downgradient wells are not improved with Point of Entry Treatment (POET) systems. • SCDHS has sampled several private wells in the vicinity of the Site and Alternate Water Supplies have been provided by the State to properties in which drinking water exceeded New York State MCLs for PFOA and/or PFOS. • Water filters being installed at Site.

12.0 CONCLUSIONS

The investigation was initiated due to elevated PFAS concentrations in groundwater identified by the SCDHS in the hamlet of Orient. The hamlet relies upon private water supply wells since no public water is currently available. The purpose of the investigation was to determine if PFAS contamination is present at levels that pose a threat to public health and/or the environment and require further investigation. The SCWP identified AOC 1 as the potential area for previous fire training activity and use of AFFF. The Site is under an Order on Consent for investigation of the presence of PFAS; thus, that is the primary source of contamination relevant to this SCR. However, as part of the site characterization, multiple analyses of media were conducted to investigate for other contamination sources if present. To perform this work, the following tasks were completed:

- To determine if subsurface anomalies were present at the Site and identify Site utilities at proposed drilling locations, a geophysical investigation was performed. The geophysical survey included onsite buildings, onsite sanitary systems, stormwater drywells, and proposed boring locations. Bottom sediments from within identified drainage structures were collected and submitted for laboratory analyses.
    - Two onsite sanitary systems were confirmed present; Sanitary System #1 is located at the north side of the main firehouse building, and Sanitary System #2 is located at the north side of the annex firehouse building.
        - Sanitary System #1:
            - Four at-grade sanitary structures denoted by H2M as UIC008, UIC009, UIC010 and UIC013.
            - UIC013 was inaccessible during site characterization and is a potential septic tank.
            - Bottom sediments collected from UIC010 contained a PFOS concentration of 1.33 µg/kg.
        - Sanitary System #2:
            - Two subgrade sanitary structures denoted by H2M as UIC011 and UIC012
            - UIC012 is a solid-bottomed septic tank.
            - UIC011 is an open bottomed cesspool.
            - No impacts identified.

- One floor drain present; denoted by H2M as UIC015:
  - Located within annex building.
  - Solid-bottomed and hard-piped.
  - Discharges to stormwater structure UIC007 at western building exterior.
  - No impacts identified.
- Eight at-grade stormwater abatement structures confirmed:

  Open bottom stormwater drywells denoted by H2M as UIC001 through UIC007, and UIC014.
  - Bottom sediments collected from UIC002, UIC003, UIC004, and UIC005 contained PFOS concentrations of 2.11 µg/kg, 14.50 µg/kg, 21.70 µg/kg, and 2.40 µg/kg, respectively.

- No petroleum bulk storage tanks or anomalies of concern were identified during the geophysical survey.
- Seven soil borings were performed at the Site. Surface soil samples were collected from zero to two inches bgs. Shallow sub-surface soil samples were collected from two inches to two feet bgs. As contamination was not observed, deep soil samples were collected from six to eight feet bgs. Three soil samples (one from the aforementioned depths as described above) were collected for analysis from each of the seven soil borings for a total of 21 soil samples analyzed for the full suite of PFAS, VOCs, SVOCs, metals, pesticides, herbicides and PCBs proposed in the SCWP.
  - When compared to RSCOs and PGW SCOs only, soils at the Site are impacted to varying concentrations with PFOS, PFOA, arsenic, and acetone.
    - <u>SB001</u>:
      - SB001 (0-2in): PFOS = 21.30 µg/kg, and
      - SB001 (2-24in): PFOS = 3.01 µg/kg
    - <u>SB002</u>:
      - SB002 (0-2in): PFOS = 6.48 µg/kg, and
      - SB002 (2-24in): PFOS = 2.33 µg/kg

- SB003:
  - SB003 (0-2in): PFOS = 8.18 µg/kg, arsenic = 22.7 mg/kg, and
  - SB003 (2-24in): PFOS = 1.96 µg/kg
- SB004:
  - SB004 (0-2in): PFOS = 9.93 µg/kg, and PFOA = 1.94 µg/kg
- SB005:
  - SB005 (0-2in): PFOS = 3.98 µg/kg, acetone = 0.11 mg/kg, arsenic = 19.1 mg/kg, and
  - SB005 (2-24in): PFOS = 1.42 µg/kg
- SB006:
  - SB006 (0-2in): PFOS = 4.26 µg/kg, arsenic = 64.8 mg/kg, and
  - SB006 (2-24in): PFOS = 1.1 µg/kg

- Four permanent groundwater monitoring wells were installed during the investigation and surveyed by H2M. According to these data, the grades at monitoring wells MW001 through MW004 range between 15.12 feet and 15.79 feet above NAVD 88. Site-specific groundwater flow direction has been established to be southwest, but that a southern onsite component to groundwater flow direction is present. The nearest permanent surface water body is Orient Harbor, located approximately 2,300 southwest of the Site. However, the Long Island Sound is present approximately 2,500 feet north of the Site. The following is a summary of NYSDEC TOGS 1.1.1 and Part 375 AWQS in the groundwater samples collected at the Site:
  - MW001: PFOS = 34.5 ng/L, manganese = 892 µg/L, and sodium = 31,600 µg/L
  - MW002: PFOS = 5,700 ng/L, PFOA 181 ng/L, and sodium = 73,600 µg/L
  - MW003: PFOS = 3,850 ng/L and 3,970 ng/L (MW00X [duplicate]), and PFOA = 48.4 ng/L and 46.6 ng/L (MW00X [duplicate])
  - MW004: PFOS = 14.6 ng/L, PFOA = 24.8 ng/L, and manganese = 630 µg/L.
- As the Site is already developed, H2M collected one representative sub-slab soil vapor sample, and concurrent indoor air and outdoor air samples associated with the main firehouse building. No exceedances of the NYSDOH matrix screening values were reported. Dichlorodifluoromethane (Freon-12) was detected at elevated concentrations of 44,000 µg/m^3 and 100,000 µg/m^3 in the sub-

slab soil vapor sample and its associated blind duplicate sample, respectively. Although also detected in the concurrent indoor and outdoor air samples, dichlorodifluoromethane (Freon-12) was reported at concentrations of 6.9 µg/m^3 and 11 µg/m^3, respectively. The concentration of 6.9 µg/m^3 in indoor air places the Site between the 75th and 90th percentile for indoor air based upon the NYSDOH's 2006 Final Study's *Table C1. NYSDOH 2003: Study of volatile organic chemicals in air of fuel oil heated homes*.

- Transport mechanisms for identified soil impacts above PGW SCOs include airborne transportation as dust or suspended in stormwater runoff. Soil impacted with PFAS was confirmed within AOC 1 and adjacent to the south of AOC 1. In addition, PFAS-impacted bottom sediments were confirmed present within stormwater drywells located adjacent to AOC 1 and to a lesser extent further northward within two additional drywells, and lastly to a further lesser extent within one sanitary cesspool. Furthermore, concentrations of PFOS above the PGW SCO were detected in a landscaped area at the northeast portion of the Site and significantly distant from AOC 1.

  PFOS and PFOA contamination is present at the soil/water table interface at the Site.

  Surface and shallow sub-surface soil data from AOC 1 (SB001, SB003 and SB004), as well as groundwater data collected from within and downgradient of AOC 1 (MW003 and MW004, respectively), support the premise that onsite fire training activities with dispersal of AFFF occurred within AOC 1. This is based upon the elevated concentrations of PFOS and PFOA within and proximate to AOC 1 in onsite soils and groundwater. Furthermore, the two adjacent stormwater drywells within the asphalt-paved driveway (UIC003 and UIC004) also contain significantly elevated PFOS concentrations in bottom sediments. The suspected dispersal of AFFF likely reached the water table via downward migration through the exposed soils in the unpaved area of AOC 1, as well as the unpaved area immediately adjacent to the south of AOC 1, and the two open bottom stormwater drywells located adjacently to the north in the asphalt-paved driveway.

  Soils impacts related to the heavy metal arsenic exceeding the RSCO and PGW SCO were identified and are likely related to historical agricultural usage of the Site. Heavy metals typically bind to the organic-rich uppermost soils and not readily migrate to groundwater. Although elevated concentrations of manganese and sodium were detected in groundwater samples analyzed during the conduct of this site characterization, no elevated concentrations of arsenic were reported. Furthermore, no SCO exceedances of manganese or sodium were reported in the 21 soil samples collected and analyzed during the conduct of this site characterization.

Transport mechanisms for identified impact include soil transportation as dust or suspended in storm runoff and migration of groundwater. As the Site is currently secured with vegetation, RCA, mulch, various buildings, pavement and concrete, impacted shallow soils at the Site are contained. There are currently no excavations onsite that would allow exposure to soil or groundwater.

Possible Site exposure pathways are by ingestion, inhalation, or dermal exposure by direct contact. The Site is currently secured with vegetation, RCA, mulch, various buildings, asphalt and/or concrete which largely negates these exposure pathways. There is a private supply well onsite and the Orient Fire District has posted signs that water is not potable. Site occupants currently utilize bottled water for consumption. A complete exposure pathway via ingestion has been identified in several private wells by the SCDHS, and Alternate Water Supplies have been provided by the State.

H2M has been conferring with the NYSDEC's Region 1 Division of Water as it pertains to interior drainage structures within Fire District buildings. Based upon feedback from the NYSDEC's Region 1 Division of Water and SCDHS' Office of Pollution Control, the absence of sediments and standing water within floor drain UIC 015, and the absence of bottom sediment impacts within discharge point open-grate stormwater drywell UIC 007, no State Pollution Discharge Elimination System (SPDES) permit is required for floor drain UIC 015 which is utilized to capture and redirect de minimis quantities of stormwater dripping off of emergency services vehicles that are parked within the firehouse annex building.

Based upon the above findings, an interim remedial measure (IRM) to conduct "hot spot" remediation of surface and shallow subsurface soils in the unpaved area defined as AOC 1 is warranted. The PFAS impacts can be excavated and disposed offsite with AOC 1 extended southward to further remediate the area based upon indications of impacts to adjacent to the south from fire training activity. The IRM Work Plan (IRMWP) should include endpoint and delineation sampling for PFAS, VOCs and heavy metals to document the effectiveness of the removals of PFOS, PFOA, arsenic and acetone in this location of the property.

An IRMWP may also include remediation of bottom sediments within stormwater drywells UIC002 through UIC005 and sanitary cesspool UIC010. As only PFOS concentrations exceeding the RSCO and PGW SCO were identified, post-remediation endpoint sampling for PFAS should be incorporated in the IRMWP for these five drainage structures. In addition, during the drainage structure remediation, UIC013 should be accessed, bottom sediments sampled and submitted to the laboratory for the full suite of site characterization analyses.

Due to the significant concentration of arsenic reported in soil boring SB006, an IRMWP may also include a second "hot spot" remediation, post-remediation endpoint sampling, and delineation sampling plan for the northeast section of the Site surface and shallow subsurface soils.

In addition, the reported elevated concentrations of dichlorodifluoromethane (Freon-12) represent a potential soil vapor intrusion condition. Thus, the IRM should also include a repeated co-located sub-slab vapor, indoor air, and outdoor air sampling during the 2025-2026 heating season.

Table 1
Characteristics of Investigated UIC Structures
Orient Fire District
NYSDEC Site: 152273
23300 Main Road
Orient, New York 11957

UIC Structure Designation	Diameter	Construction	Depth to Water	Depth to Sediment	Vertical Measurement of Standing Water	Depth To Bottom	PID Reading (initial sampling)	Notes
UIC001	8ft	Pre-cast concrete	NA	14ft	NA	14ft	0	Open grate at-grade parking lot stormwater drywell. Bottom sediment sample noted with black coarse sand & silt with organic material. No unusual odors detected. Connected to UIC002.
UIC002	8ft	Pre-cast concrete	NA	14ft	NA	14ft	0	Open grate at-grade parking lot stormwater drywell. Bottom sediment sample noted with black/dark brown coarse sand & silt. No unusual odors detected. Connected to UIC001 and UIC003.
UIC003	8ft	Pre-cast concrete	NA	12ft	NA	12ft	0.3	Open grate at-grade parking lot stormwater drywell. Bottom sediment sample noted with dark brown silty sand, and sheen on darker sediment. No unusual odors detected. Connected to UIC002 and UIC004.
UIC004	8ft	Pre-cast concrete	10ft	12.5ft	2.5ft	12.5ft	0	Open grate at-grade parking lot stormwater drywell. Bottom sediment sample noted with dark gray medium sand, hydrocarbon-like odor and slight sheen. Connected to UIC003 and UIC005.
UIC005	8ft	Pre-cast concrete	11ft	12ft	1ft	12ft	0	Open grate at-grade parking lot stormwater drywell. Bottom sediment sample noted with dark brown medium sand and silt, with slight sheen and odor. Connected to UIC004 and UIC006.
UIC006	8ft	Pre-cast concrete	NA	14ft	NA	14ft	0	Open grate at-grade parking lot stormwater drywell. Bottom sediment sample noted with gray silt. No unusual odors detected. Connected to UIC005.
UIC007	8ft	Pre-cast concrete	NA	10ft	NA	10ft	0	Open grate at-grade parking lot stormwater drywell. Bottom sediment sample noted with brown medium grain sand. No unusual odors detected. Receives influent from UIC014 and UIC015.
UIC008	8ft	Pre-cast concrete	12ft	12.5ft	0.5ft	12.5ft	0	At grade solid steel cover sanitary cesspool for main firehouse building. Based upon visual inspection, appeared to be receiving effluent from septic tank. Bottom sediment noted with black/dark gray medium grain sand. Slight septic odor noted.
UIC009	8ft	Pre-cast concrete	NA	13.5ft	NA	13.5ft	0	At grade solid steel cover sanitary cesspool for main firehouse building. Light brown medium grain sand; no standing water and no sanitary/septic odor observed.
UIC010	8ft	Pre-cast concrete	NA	13ft	NA	13ft	0	At grade solid steel cover sanitary cesspool for main firehouse building. Light brown medium grain sand with rocks; no standing water and no sanitary/septic odor observed.
UIC011	8ft	Pre-cast concrete	NA	11ft	NA	11ft	0	Primary cesspool connected to sanitary septic tank at north side of annex building. No secondary cesspool noted on site plans or identified during geophysical survey. Reddish black medium grain sand with strong septic odor. Concrete cover buried approximately 18 inches bgs.
UIC012	8ft	Pre-cast concrete	3ft	7.3ft	4.3ft	7.3ft	0	Septic tank for annex building. No sludges present at time of sampling. Concrete cover buried approximately 12 inches bgs.
UIC013	UNK	UNK	UNK	UNK	UNK	UNK	UNK	Sanitary structure with at-grade solid cover partially covered by a planter and access was not available. Based on geophysical survey and site plans reviewed, structure likely installed as sanitary septic tank for main firehouse building.
UIC014	3ft	Pre-cast concrete	NA	NA	NA	3ft	NA	At-grade open grate solid bottom stormwater catch basin. Connected to UIC007. No sediment present at time of sampling.
UIC015	3ft	Pre-cast concrete	NA	NA	NA	3ft	NA	At-grade open grate solid bottom stormwater catch basin installed for use as large interior floor drain within annex building fire department vehicle parking garage. Connected to UIC007. No sediment present at time of sampling.

Notes:
NA - Not Applicable / Not Available
ft - feet
in - inches
PID (ppm) - Photoionization detector reading of bottom sediment/sludge sample in parts per million
Unk - Unknown

NOTES:
Any Regulatory Exceedences are highlighted and bolded
[1]Sample SV00X is a duplicate of SV001
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:

Any Regulatory Exceedences are highlighted and bolded

[1]Sample SB00X is a duplicate of SB003 (0-2in)

Q is the Qualifier Column with definitions as follows:

D=result is from an analysis that required a dilution

J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

U=analyte not detected at or above the level indicated

B=analyte found in the analysis batch blank

E=result is estimated and cannot be accurately reported due to levels encountered or interferences

P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis

NT=this indicates the analyte was not a target for this sample

~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are highlighted & bolded
[1]Sample SB00X is a duplicate of SB003 (0-2in)
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are highlighted & bolded
[1]Sample SB00X is a duplicate of SB003 (0-2in)
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are highlighted & bolded
[1]Sample SB00X is a duplicate of SB003 (0-2in)
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used fo
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are highlighted & bolded
[1]Sample SB00X is a duplicate of SB003 (0-2in)
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used fo
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are highlighted & bolded
[1]Sample SB00X is a duplicate of SB003 (0-2in)
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are highlighted & bolded
[1]Sample SB00X is a duplicate of SB003 (0-2in)
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used fo
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are highlighted & bolded
[1]Sample SB00X is a duplicate of SB003 (0-2in)
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used fo
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are highlighted and bolded
[1]Sample SB00X is a duplicate of SB003 (0-2in)
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are highlighted and bolded
[1]Sample SB00X is a duplicate of SB003 (0-2in)
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are highlighted and bolded
[1]Sample SB00X is a duplicate of SB003 (0-2in)
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are highlighted and bolded
[1]UIC00X is a duplicate of UIC004
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are highlighted and bolded
[1]UIC00X is a duplicate of UIC004
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are color coded by Regulation
[1]UIC00X is a duplicate of UIC004
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are highlighted and bolded
[1]UIC00X is a duplicate of UIC004
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are color coded by Regulation
[1]UIC00X is a duplicate of UIC004
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are highlighted and bolded
[1]UIC00X is a duplicate of UIC004
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are color coded by Regulation
[1]MW00X is a duplicate of MW003
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are color coded by Regulation
[1]MW00X is a duplicate of MW003
Q is the Qualifier Column with definitions as follows:
D=result is from an analysis that required a dilution
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
U=analyte not detected at or above the level indicated
B=analyte found in the analysis batch blank
E=result is estimated and cannot be accurately reported due to levels encountered or interferences
P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NEW YORK STATE DEPARTMENT OF HEALTH
INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY
CENTER FOR ENVIRONMENTAL HEALTH

This form must be completed for each residence involved in indoor air testing.

Preparer's Name Thomas Brown Date/Time Prepared 1/10/25 10:15

Preparer's Affiliation H2M Phone No._____

Purpose of Investigation_____

1. OCCUPANT:

Interviewed: Y / N

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

Number of Occupants/persons at this location _____ Age of Occupants _____

2. OWNER OR LANDLORD: (Check if same as occupant ___)

Interviewed: Y / N

Last Name: _____First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential	School	Commercial/Multi-use
Industrial	Church	Other: Fire department

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other:_____

If multiple units, how many? 3

If the property is commercial, type?

Business Type(s) _____

Does it include residences (i.e., multi-use)? Y / N If yes, how many? _____

Other characteristics:

Number of floors 1 Building age_____

Is the building insulated? (Y) / N How air tight? Tight / (Average) / Not Tight

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

_____

_____

_____

Airflow near source

_____

_____

_____

Outdoor air infiltration

_____

_____

_____

Infiltration into air ducts

_____

_____

_____

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

a. Above grade construction:	wood frame	concrete	stone	brick
b. Basement type:	full	crawlspace	slab	other _____
c. Basement floor:	concrete	dirt	stone	other _____
d. Basement floor:	uncovered	covered	covered with _____	
e. Concrete floor:	unsealed	sealed	sealed with _____	
f. Foundation walls:	poured	block	stone	other _____
g. Foundation walls:	unsealed	sealed	sealed with _____	
h. The basement is:	wet	damp	dry	moldy
i. The basement is:	finished	unfinished	partially finished	
j. Sump present?	Y / N			
k. Water in sump?	Y / N / not applicable			

Basement/Lowest level depth below grade: 0 (feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Garage Bay Doors

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

Hot air circulation *	Heat pump	Hot water baseboard	
Space Heaters	Stream radiation	Radiant floor	
Electric baseboard	Wood stove	Outdoor wood boiler	Other _____

The primary type of fuel used is:

Natural Gas *	Fuel Oil	Kerosene
Electric	Propane	Solar
Wood	Coal	

Domestic hot water tank fueled by: _____

Boiler/furnace located in:	Basement	Outdoors	Main Floor	Other_____
Air conditioning:	Central Air	Window units	Open Windows	None

Ductless

Are there air distribution ducts present? Y / (N)

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

7. OCCUPANCY

Is basement/lowest level occupied? Full-time (Occasionally) Seldom Almost Never

Level	**General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**
Basement	NA
1st Floor	Fire Truck Storage, Conference Room, Offices
2nd Floor	NA
3rd Floor	NA
4th Floor	NA

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? (Y) / N

b. Does the garage have a separate heating unit? Y / N / NA

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) (Y) / N / NA Please specify Fire Trucks

d. Has the building ever had a fire? Y / N When?_____

e. Is a kerosene or unvented gas space heater present? Y / (N) Where?_____

f. Is there a workshop or hobby/craft area? Y / N Where & Type?_____

g. Is there smoking in the building? Y / (N) How frequently?_____

h. Have cleaning products been used recently? (Y) / N When & Type? Cleaning lady comes daily

i. Have cosmetic products been used recently? Y / (N) When & Type?_____

j. Has painting/staining been done in the last 6 months? Y / N Where & When? _____

k. Is there new carpet, drapes or other textiles? Y / N Where & When? _____

l. Have air fresheners been used recently? Y / N When & Type? _____

m. Is there a kitchen exhaust fan? Y / N If yes, where vented? Roof

n. Is there a bathroom exhaust fan? Y / N If yes, where vented? _____

o. Is there a clothes dryer? Y / N If yes, is it vented outside? Y / N

p. Has there been a pesticide application? Y / N When & Type? _____

Are there odors in the building? Y / N
If yes, please describe: _____

Do any of the building occupants use solvents at work? Y / N
(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist

If yes, what types of solvents are used? _____

If yes, are their clothes washed at work? Y / N

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly) No
Yes, use dry-cleaning infrequently (monthly or less) Unknown
Yes, work at a dry-cleaning service

Is there a radon mitigation system for the building/structure? Y / N Date of Installation: _____
Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: Public Water Drilled Well Driven Well Dug Well Other: _____

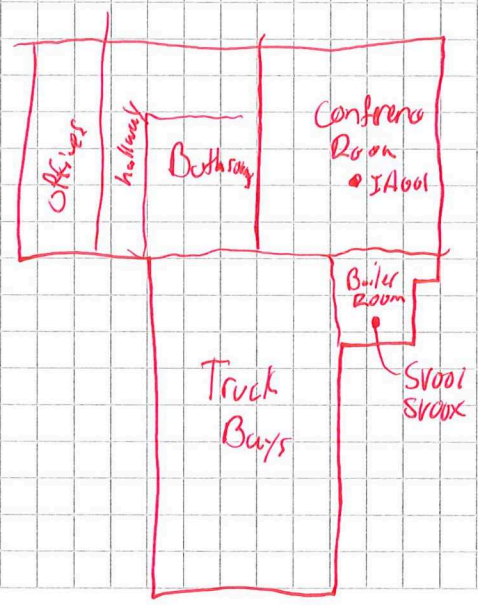
Sewage Disposal: Public Sewer Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: _____

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

c. Responsibility for costs associated with reimbursement explained? Y / N

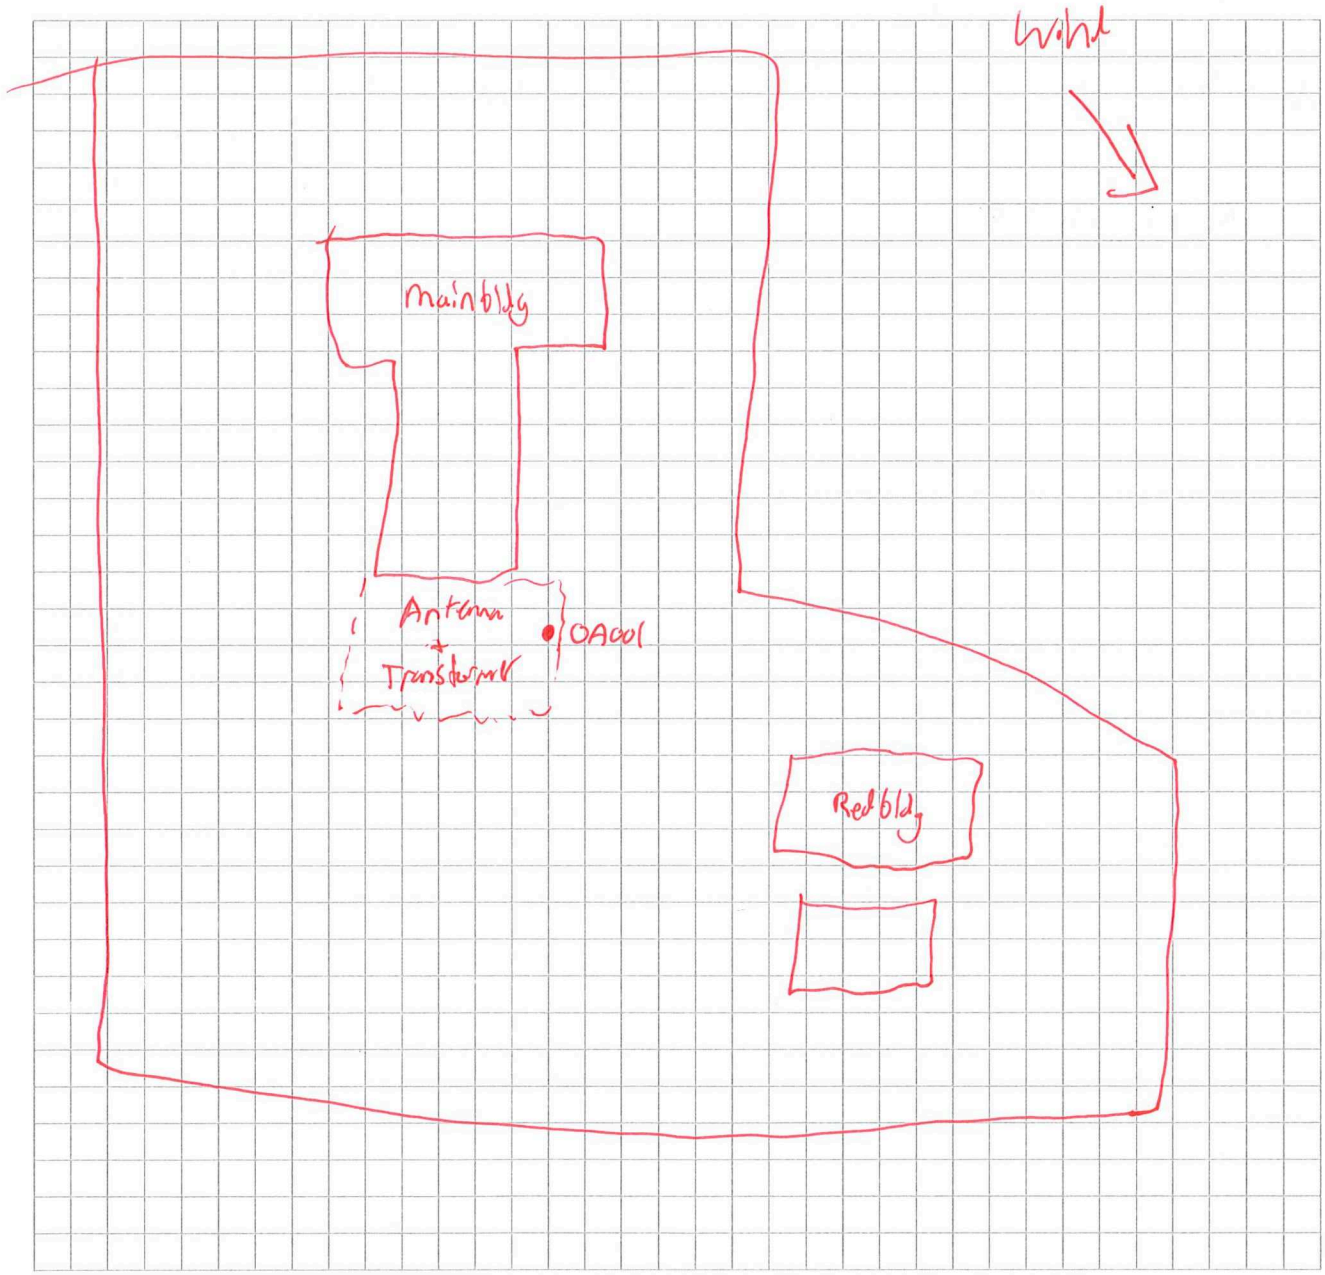


d. Relocation package provided and explained to residents? Y / N

11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:



First Floor:

12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.

13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: _____

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo ** Y / N
Entrance	Hand Sanitizer	18 fl oz	U	Ethyl Alcohol 80%	2.0	N
	Id Air Cleaning machine					

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on January 08, 2025 and listed below. The project was identified as your project: **ORFD2301**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 25A0380

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

25A0380-01	SB001 (O-2 IN)	40mL Vial with Stir Bar-Cool 4° C
25A0380-02	SB001(2 IN-24IN)	40mL Vial with Stir Bar-Cool 4° C
25A0380-03	SB001 (6-8 FT)	40mL Vial with Stir Bar-Cool 4° C
25A0380-04	SB002 (0-2IN)	40mL Vial with Stir Bar-Cool 4° C
25A0380-05	SB002 (2 IN -24 IN)	40mL Vial with Stir Bar-Cool 4° C
25A0380-06	SB002 (6 - 8 FT)	40mL Vial with Stir Bar-Cool 4° C
25A0380-07	SB003 (0- 2IN)	40mL Vial with Stir Bar-Cool 4° C
25A0380-08	SB003 (2 IN- 24IN)	40mL Vial with Stir Bar-Cool 4° C
25A0380-09	SB003 (6 - 8FT)	40mL Vial with Stir Bar-Cool 4° C
25A0380-10	SB00X	40mL Vial with Stir Bar-Cool 4° C
25A0380-11	SB004 (0- 2IN)	40mL Vial with Stir Bar-Cool 4° C
25A0380-12	SB004 (2 IN-24 IN)	40mL Vial with Stir Bar-Cool 4° C
25A0380-13	SB004 (6- 8 FT)	40mL Vial with Stir Bar-Cool 4° C
25A0380-14	SB005 (0- 2IN)	40mL Vial with Stir Bar-Cool 4° C
25A0380-15	SB005 (2 IN-24 IN)	40mL Vial with Stir Bar-Cool 4° C
25A0380-16	SB005 (6- 8FT)	40mL Vial with Stir Bar-Cool 4° C
25A0380-17	Field Blank 1/7/25	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C
25A0380-18	Equipment Blank 1/7/25	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C
25A0380-19	Trip Blank 1/7/25	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

PF-LCS-L	The LCS recovery for this PFAS compound was below control limits.
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CCVH	The value reported is estimated due to its behavior during continuing calibration verification (>20% difference for average RF or >20% drift for linear or quadratic fit.) This value may be biased high.
HT-02	NON-COMPLIANT-This sample was received outside the EPA recommended holding time.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) was outside the 90-110% recovery criteria.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.
PF-CCV-L	The CCV recovery for this PFAS compound was below control limits.
S-HI	Surrogate recovery is above acceptance limits. No target compound is detected in sample.
PFSu-L	The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
QC-LCS	LCS/LCS Dup recovery was above laboratory control limits. Sample does not contain any target compounds; therefore sample results are acceptable.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data are acceptable.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
S-08	The recovery of this surrogate was outside of QC limits.
S-GC	Two surrogates are used for this analysis. One surrogate recovered within control limits therefore the analysis is acceptable.
M-DUPS	The RPD between the native sample and the duplicate is outside of limits due to sample non-homogeneity

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.

MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Corrective Action: Received samples 25A0380-17 and 25A0380-18 Field and Equipment blank out of hold for Chromium,Hexavalent. Reached out to the Project Manager and anaylst to inform them. Was then told to create a Corrective Order. -ME 1/10/25

Revision Description: This data package has been revised to include 1,2,4,5-Tetrachlorobenzene data for SVOA MS/MSD and LCS QC.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on January 09, 2025 and listed below. The project was identified as your project: **ORFD2301**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 25A0469

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.
