York Analytical Laboratories, Inc., SDG: 24B1656

5 Ground Water Samples, 1 Field Duplicate,
and 1 Trip Blank
Collected February 28, 2024

Prepared by: Donald Anné
May 13, 2024

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for 1,1,2,2-tetrachloroethane, 1,2-dibromo-3-chloropropane, 2-butanone, 2-hexanone, 4-methyl-2-pentanone, and bromoform were below the method minimums, but not below 0.010 for VOA No. 10 on 02-09-24. No action is taken when fewer than 20% of the compounds per calibration do not meet either method %RSD or average RRF criteria, provided the average RRFs are not below 0.010.

The average RRF for 1,4-dioxane was below the allowable minimum (0.001) for VOA No. 10 on 02-09-24. Positive results for 1,4-dioxane should be considered estimated (J), and "not detected" results rejected, unusable (R) in associated samples.

The %RSD for acrolein was above the allowable maximum (30%) for VOA No. 10 on 02-09-24. Positive results for acrolein should be considered estimated (J) in associated samples.

Continuing Calibration: The RRFs for 1,1,2,2-tetrachloroethane, 1,2-dibromo-3-chloropropane, 2-butanone, 2-hexanone, 4-methyl-2-pentanone, and bromoform were below the method minimums, but not below 0.010 on 02-09-24 (V10C02686.D). The %Ds for 1,2-dibromo-3-chloropropane, bromomethane, MTBE, and tetrachloroethylene were above the method maximum on 02-09-24 (V10C02686.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

The RRF for 1,4-dioxane was below the allowable minimum (0.001) on 02-12-24 (V10C02369.D). Positive results for 1,4-dioxane should be considered estimated (J), and "not detected" results rejected, unusable (R) in associated samples.

The %Ds for 1,2-dibromo-3-chloropropane, bromomethane, MTBE, TBA, and tetrachloroethylene were above the allowable maximum (20%) on 02-09-24 (V10C02686.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of method and trip blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples and field blank.

Laboratory Control Sample: The percent recoveries (%Rs) for applicable compounds were within QC limits for aqueous sample BC40041-BS1.

The relative percent differences for target compounds were below the allowable maximum, but 2 of 2 %Rs for TBA and 1 of 2 %Rs for acrolein were above QC limits for aqueous samples BB41921-BS1/BSD1. Positive results for acrolein andTBA should be considered estimated, biased high (J+) in associated aqueous samples.

Two of two %Rs for methylcyclohexane and tetrachloroethylene were below QC limits, but not below 30% for aqueous samples BB41921-BS1/BSD1. Positive results for these compounds should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated aqueous samples.

Field Duplicates: The relative percent differences for applicable compounds were below the allowable maximum (20%) for aqueous field duplicate pair MW-13/MW-DUP-1 (16Ft) (attached table), as required.

Compound ID: Checked compounds and surrogates were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

QA/QC Review of Method 8270D Semi-Volatiles Data for York Analytical Laboratories, Inc., SDG: 24B1656

5 Ground Water Samples and 1 Field Duplicate Collected February 28, 2024

Prepared by: Donald Anné
May 13, 2024

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for applicable compounds were above the method minimums, as required.

The average RRFs for target compounds were above the allowable minimum (0.010), as required.

The %RSDs for 2,4-dinitrophenol and 4,6-dinitro-2-methylphenol were above the allowable maximum (30%) for BNA #7 on 02-22-24. Positive results for these compounds should be considered estimated (J) in associated samples.

Continuing Calibration: The RRFs for applicable compounds were above the method minimums, as required. The %Ds for 15 compounds (highlighted yellow on attached FORM VII) were above the method maximum on 03-04-24 (E70353440.D). There were greater than 20% of the compounds per calibration that do not meet either method %D or RRF criteria; therefore, samples should have been re-analyzed with a method compliant calibration.

The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for 15 compounds (highlighted yellow on attached FORM VII) were above the allowable maximum (20%) on 03-04-24 (E70353440.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analysis of the method blank reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits for reported soil samples.

Surrogate Recovery: The surrogate recoveries were within control limit for the ground water samples and field blank.

Laboratory Control Sample: The percent recoveries for 9 compounds (highlighted yellow on attached FORM III) were below QC limits and below 30% for aqueous sample BC40013-BS1. Positive results for these 9 compounds should be considered estimated biased low (J-) and "not detected" results rejected, unusable (R) in associated aqueous samples.

Field Duplicates: The analyses of aqueous field duplicate pair MW-13/MW-DUP-1 (16 Ft) reported target compounds as not detected; therefore, valid relative percent differences could not be calculated. The analyses for the field duplicate pair were acceptable.

Compound ID: Checked surrogate results were within quantitation limits. The analyses of ground water samples reported target compounds as not detected.

QA/QC Review of Method 8270D SIM Semi-Volatiles Data for York Analytical Laboratories, Inc., SDG: 24B1656

5 Ground Water Samples and 1 Field Duplicate Collected February 28, 2024

Prepared by: Donald Anné
May 13, 2024

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010) and the %Ds were below the allowable maximum (20%), as required.

Blanks: The analysis of the method blank reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Laboratory Control Sample: The percent recovery (%R) for n-nitrosodimethylamine was below QC limits and below 30% for aqueous sample BC40013-BS2. Positive results for n-nitrosodimethylamine should be considered estimated, biased low (J-) and "not detected" results rejected, unusable (R) in in the associated aqueous samples.

The %Rs for hexachloroethane were above QC limits for aqueous sample BC40013-BS2. Positive results for hexachloroethane should be considered estimated, biased high (J+) in in the associated aqueous samples.

Field Duplicates: The relative percent differences for applicable compounds were below the allowable maximum (20%) for aqueous field duplicate pair MW-13/MW-DUP-1 (16Ft) (attached table), as required.

Compound ID: Checked compound results were within quantitation limits.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for 1,4-dioxane were above the allowable minimum (0.010) and the %RSD was below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for 1,4-dioxane were above the allowable minimum (0.010) and the %Ds were below the allowable maximum (20%), as required.

Blanks: The analyses of the method blanks reported 1,4-dioxane as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits for reported soil samples.

Surrogate Recovery: The surrogate recoveries were within QC limits for the ground water samples and field blank.

Laboratory Control Sample: The percent recovery for 1,4-dioxane was within QC limits for aqueous sample BC40253-BS1.

Field Duplicates: The analyses of aqueous field duplicate pair MW-13/MW-DUP-1 (16 Ft) reported 1,4-dioxane as not detected; therefore, a valid relative percent difference could not be calculated. The analyses for the field duplicate pair were acceptable.

Compound ID: Checked surrogate and 1,4-dioxane results were within quantitation limits.

QA/QC Review of Method 8081B Pesticide Data for
York Analytical Laboratories, Inc., SDG: 24B1656

5 Ground Water Samples and 1 Field Duplicate
Collected February 28, 2024

Prepared by: Donald Anné
May 13, 2024

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses for the method blanks reported target pesticides as not detected.

Surrogate Recovery: One of two surrogate recoveries for samples MW-DUP-1 (16 Ft) and MW-12 was below QC limits, but not below 10% on one column. No action is taken on one surrogate recovery per column outside QC limits, provided the recovery is not less than 10%.

Laboratory Control Sample: The percent recoveries (%Rs) for target pesticides were within QC limits, but the relative percent differences (RPDs) for 6 pesticides on the primary and 2 on the secondary column (highlighted yellow on the attached FORM III) were above the allowable maximum for aqueous LCS/LCSD sample BC40108-BS1. The %Rs for target pesticides were within QC limits, but the RPD for aldrin on the secondary column were above the allowable maximum for aqueous LCS/LCSD sample BC40441-BS1.

Field Duplicates: The analyses of aqueous field duplicate pair MW-13/MW-DUP-1 (16 Ft) reported target pesticides as not detected; therefore, valid relative percent differences could not be calculated. The analyses for the field duplicate pair were acceptable.

Initial Calibration: The %RSDs for target pesticides were below the allowable maximum (20%) or the Quad CODs were above the allowable minimum (0.99) for both columns, as required.

Continuing Calibration: The %D for total chlordane was above the allowable maximum (20%) for secondary column on 03-06-24 (P7023469.D). The %D for total chlordane was above the allowable maximum (20%) for secondary column on 03-07-24 (P600429370.D). The %D for toxaphene was above the allowable maximum (20%) for secondary column on 03-07-24 (P600429371.D). Positive results for these pesticides should be considered estimated (J) in associated samples.

DDT/Endrin Breakdown Check: The percent breakdowns were below the allowable maximum (15%) for 4,4'-DDT and endrin, as required.

Pesticide Identification Summary for Single Component Analytes: Checked surrogates were within GC quantitation limits. The analyses of the ground water samples reported target single component pesticides as not detected.

Pesticide Identification Summary for Multicomponent Analytes: The analyses of the ground water samples reported target multi-component pesticides as not detected.

QA/QC Review of Method 8082A PCB Data for
York Analytical Laboratories, Inc., SDG: 24B1656

5 Ground Water Samples and 1 Field Duplicate
Collected February 28, 2024

Prepared by: Donald Anné
May 13, 2024

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method blanks reported target aroclors as not detected.

Surrogate Recovery: One of two surrogate recoveries for sample MW-DUP-1 (16 Ft) was below QC limits, but not below 10% on one column. No action is taken on one surrogate recovery outside QC limits on one column, provided the recovery is less than 10%.

Laboratory Control Sample: The relative percent differences for aroclor 1016 and aroclor 1260 were below the allowable maximum and the percent recoveries were within QC limits on the both columns for aqueous samples BC40108-BS2/BSD2 and BC40441-BS2/BSD2.

Field Duplicates: The analyses of aqueous field duplicate pair MW-13/MW-DUP-1 (16 Ft) reported target aroclors as not detected; therefore, valid relative percent differences could not be calculated. The analyses for the field duplicate pair were acceptable.

Initial Calibration: The %RSDs for aroclor 1016 and aroclor 1260 were below the allowable maximum (20%) or the Quad CODs were above the allowable minimum (0.99) for both columns, as required.

Continuing Calibration: The average %Ds for target aroclors were below the allowable maximum (20%), as required.

PCB Identification Summary: Checked surrogate results were within GC quantitation limits. The analyses of the ground water samples reported target aroclors as not detected.

QA/QC Review of Method 1633 PFAS Data for
York Analytical Laboratories, Inc., SDG: 24B1656

5 Ground Water Samples, 1 Field Duplicate,
and 1 Field Blank
Collected February 28, 2024

Prepared by: Donald Anné
May 13, 2024

Holding Times: The samples were analyzed within USEPA holding times.

Initial Calibration (Internal Standard): The Quad COD for 8:2 FTS, 4:2 FTS, and 6:2 FTS were below the allowable minimum (0.995) for LCQQQ on 01-29-24. Positive results for these PFAS should be considered estimated (J) in associated samples.

Continuing Calibration: The %Ds for target PFAS were below the allowable maximum (30%), as required.

Blanks: The analyses of the method blanks reported target PFAS as not detected.

Internal Standard Area Summary: The internal standard retention times were within control limits.

Surrogate Recovery: Three of twenty-four surrogate recoveries for sample FB-2 were below QC limits, but not below 10%. One of twenty-four surrogate recoveries for samples MW-10 and MW-9 was below QC limits, but not below 10%. Positive and "not detected" results associated with the surrogate below QC limits should be considered estimated (J or UJ) in the samples.

Two of twenty-four surrogate recoveries for sample MW-13 were above QC limits. One of twenty-four surrogate recoveries for sample MW-10, MW-9, MW-6, and MW-12 was above QC limits. Positive and "not detected" results associated with the surrogate below QC limits should be considered estimated (J or UJ) in the samples.

Two of twenty-four surrogate recoveries for sample FB-2 were below QC limits and below 10%. One of twenty-four surrogate recoveries for samples MW-13, MW-DUP-1 (16 Ft), MW-10, MW-9, MW-6, and MW-12 was below QC limits and below 10%. Positive results associated with the surrogate below QC limits should be considered estimated (J) and "not detected" results rejected, unusable (R) in the samples.

Laboratory Control Sample: The percent recovery for PFDoS was below QC limits, but not below 30% for aqueous sample BC40061-BS2. Positive results for PFDoS should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated aqueous samples.

Field Duplicates: The relative percent differences for PFBS and PFPeS were above the allowable maximum (20%) for aqueous field duplicate pair MW-13/MW-DUP-1 (16 Ft) (attached table). Positive results for PFBS and PFPeS should be considered estimated (J) should be considered estimated (J) in samples MW-13 and MW-DUP-1 (16 Ft).

Compound ID: Checked PFAS results and surrogates were within LC quantitation limits.

QA/QC Review of TAL Metals Data for
York Analytical Laboratories, Inc., SDG: 24B1656

5 Ground Water Samples and 1 Field Duplicate
Collected February 28, 2024

Prepared by: Donald Anné
May 13, 2024

Holding Times: Samples were analyzed within the USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recovery (%R) for dissolved beryllium was above control limits (90-110%), but not above 150% for S4C0602-CCV2. Positive results for beryllium should be considered as estimated, biased high (J+) in associated aqueous samples.

CRDL Standard: The percent recovery (%R) for selenium was above laboratory QC limits (70-130%) for dissolved CRDL sample S4C0602-CRL1. The %R for selenium was above laboratory QC limits (70-130%) for total CRDL sample S4C0731-CRL1. Positive results for selenium that are above 4X the spiking level should be considered estimated, biased high (J+) in associate aqueous samples.

The %R for antimony was below laboratory QC limits (70-130%), but not below 30% for dissolved CRDL sample S4C0709-CRL1. Positive results for selenium that are above 4X the spiking level should be considered estimated, biased high (J+) in associate aqueous samples.

Blanks: The analyses of the method blanks reported target metals as below the MRLs, as required.

ICP Interference Check Sample: The percent recoveries for applicable metals were within control limits (80-120%) for the interference check samples.

Spike Sample Recovery: The percent recoveries for applicable metals were within control limits (75-125%) for aqueous total spike samples MW-6 and MW-7* and dissolved spike sample MW-07* and total and dissolved MS/MSD sample MW-07*.

Laboratory Duplicate: The relative percent differences for applicable metals were below the allowable maximum (20%) for aqueous total duplicate samples MW-6 and MW-7*, and dissolved duplicate sample MW-07* and total and dissolved MS/MSD sample MW-07*, as required.

Laboratory Control Sample: The percent recoveries (%Rs) for applicable metals were within control limits for aqueous total samples BC40338-BS1, BC40151-BS1, and BC40173-BS1, and dissolved samples BC40154-BS1, BC40343-BS1, BC40257-BS1, and BC40278-BS1.

The %R for zinc was above control limits for aqueous dissolved sample BC40340-BS1. Positive results for dissolved zinc should be considered estimated, biased high (J+) in associated aqueous samples.

Field Duplicates: The relative percent differences (RPDs) for aluminum, antimony, and selenium were above the allowable maximum (20%) for total aqueous field duplicate pair MW-13/MW-DUP-1 (16 Ft) (attached table). Positive total results for aluminum, antimony, and selenium should be considered estimated (J) in samples MW-13 and MW-DUP-1 (16 Ft).

The RPD for applicable metals were below the allowable maximum (20%) for dissolved aqueous field duplicate pair MW-13/MW-DUP-1 (16 Ft) (attached table), as required.

Serial Dilution: The %Ds for aluminum was above the allowable maximum (10%) for aqueous total serial dilution sample MW-6. The %Ds for calcium, magnesium, manganese, potassium, and sodium were above the allowable maximum (10%) for aqueous dissolved serial dilution sample MW-07*. Positive results for these metals that are above the RLs should be considered estimated (J) in associated aqueous total and dissolved samples.

Detection Limits: The LODs were at or below POQs, as required.

Total vs Dissolved: The dissolved results for selenium were greater than the total results plus 10% for samples MW-13, MW-DUP-1 (16 Ft), and MW-12. Positive results for total and dissolved selenium for samples MW-13, MW-DUP-1 (16 Ft), and MW-12 should be considered estimated (J) in sample sodium.

Samples MW-12, MW-9, and MW-6 reported lead above the RL in the dissolved sample and “not detected” in the total sample. Total (J) and “not detected” (UJ) for lead should be considered estimated in these samples.

Samples MW-12, MW-10, MW-9, and MW-6 reported zinc above the RL in the dissolved sample and “not detected” in the total sample. Total (J) and “not detected” (UJ) for zinc should be considered estimated in these samples.

QA/QC Review of Total Cyanide Data for
York Analytical Laboratories, Inc., SDG: 24B1656

5 Ground Water Samples and 1 Field Duplicate
Collected February 28, 2024

Prepared by: Donald Anné
May 13, 2024

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

Blanks: The analysis of the method blank reported total cyanide as not detected.

Spike Sample Recovery: The percent recoveries for total cyanide were within QC limits (79-105%) for aqueous batch MS/MSD sample BB41953-MS1/MSD1.

Laboratory Duplicate: The relative percent differences for total cyanide were below the allowable maximum (20%) for aqueous batch MS/MSD sample BB41953-MSD1, as required.

Field Duplicates: The analyses of aqueous field duplicate pair MW-13/MW-DUP-1 (16 Ft) reported total cyanide as not detected; therefore, a valid relative percent difference could not be calculated. The analyses for the field duplicate pair were acceptable.

Laboratory Control Sample: The percent recoveries for total cyanide were within control limits (80-120%) for aqueous samples BB41953-BS1 and BC40073-BS1.

Sample and Data Qualifiers Relating to This Work Order

TO-VAC	The final vacuum in the canister was less than -2 inches Hg vacuum. The time integrated sampling may be affected and not reflect proper sampling over the time period. The data user should take note.
TO-LCS-H	The result reported for this compound may be biased high due to its behavior in the analysis batch LCS where it recovered greater than 130% of the expected value.
TO-CCV	The value reported is ESTIMATED for this compound due to its behavior during continuing calibration verification (>30% Difference from initial calibration).
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Data Validation Qualifiers Used in the QA/QC Reviews for USEPA Region II

U	=	Not detected. The associated number indicates the approximate sample concentration necessary to be detected significantly greater than the level of the highest associated blank.
R	=	Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sample. Supporting data or information is necessary to confirm the result.
N	=	Tentative identification. Analyte is considered present. Special methods may be needed to confirm its presence or absence during future sampling efforts.
J	=	Analyte is present. Reported value may be associated with a higher level of uncertainty than is normally expected with the analytical method.
J-	=	Analyte is present. Reported value may be biased low and associated with a higher level of uncertainty than is normally expected with the analytical method.
J+	=	Analyte is present. Reported value may be biased high andassociated with a higher level of uncertainty than is normally expected with the analytical method.
UJ	=	Not detected, quantitation limit may be inaccurate or imprecise.

Note: These qualifiers are used for data validation purposes. The data validation qualifiers may differ from the qualifiers that the laboratory assigns to the data. Refer to the laboratory analytical report for the definitions of the laboratory qualifiers.

Data Usability Summary Report for
York Analytical Laboratories, Inc., SDG: 22I1654

9 Soil Vapor/Air Samples
Collected September 30, 2022

Prepared by: Donald Anné
March 4, 2024

The data packages contain the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results for 9 soil vapor/air samples.

The overall performances of the analyses are acceptable. York Analytical Laboratories, Inc. did fulfill the requirements of the method for TO-15 volatiles.

The data are mostly acceptable with some issues that are identified in the accompanying data validation review. The following data were qualified:

- The positive volatile results for acetone were qualified as "estimated" (J) in samples SV-1, SV-6, SV-7, and SV-8 because %RSD for acetone was above the allowable maximums in the associated initial calibration.

- The positive volatile results for 2-hexanone were qualified as "estimated" (J) in samples SV-6 and SV-8 because %RSD for 2-hexanone were above the allowable maximums in the associated initial calibration.

- The positive volatile results for vinyl chloride were qualified as "estimated, biased high" (J+) in samples SV-6 and SV-8 because percent recovery for vinyl chloride was above QC limits the associated air/vapor LCS.

- The positive volatile results for 1,1-dichloroethylene and cis-1,2-dichloroethylene were qualified as estimated (J) for samples SV-2, SV-3, SV-4, SV-5 because the %RSDs for 1,1-dichloroethylene and cis-1,2-dichloroethylene were above the allowable maximums in the associated initial calibration.

- The positive volatile results for isopropanol were qualified as estimated (J) for samples SV-2, SV-3, SV-4, SV-5, and SV-9 because the %RSD for isopropanol was above the allowable maximums in the associated initial calibration.

- The positive volatile results for carbon tetrachloride were qualified as estimated (J) for samples SV-2, SV-3, and SV-9 because the %RSD for carbon tetrachloride was above the allowable maximums in the associated initial calibration.

- The positive volatile results for trichloroethylene were qualified as estimated (J) for samples SV-2, SV-3, SV-5, and SV-9 because the %RSD for trichloroethylene was above the allowable maximums in the associated initial calibration.

- The "not detected" volatile results for 22 compounds were qualified as "estimated" (UJ) for sample SV-4 because areas for the internal standards used to quantitate these compounds were below control limits, but not below 25% in the sample.

- The positive volatile results for 10 compounds were qualified as "estimated, biased high" (J+) for sample SV-4 because areas for the internal standards used to quantitate these compounds were below control limits, but not below 25% in the sample.

All data are considered usable, with estimated (J, J+, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation review.

QA/QC Review of Method TO-15 Volatiles Data
for York Analytical Laboratories, Inc., SDG: 22I1654

9 Soil Vapor/Air Samples
Collected September 30, 2022

Prepared by: Donald Anné
March 4, 2024

Holding Times: Samples were analyzed within recommended USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010), as required.

The %RSDs for 1,4-dioxane, 2-hexanone, acetone, and vinyl chloride were above the allowable maximum (30%) for TO15 AIR2 on 07-26-22. The %RSDs for 9 compounds (highlighted yellow on attached FORM VI) were above the allowable maximum (30%) for 5975C on 09-10-22. Positive results for isopropanol should be considered estimated (J) in associated samples.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for 1,3-butadiene, dibromochloromethane, and vinyl chloride were above the allowable maximum (30%) on 10-03-22 (TQ222318.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: Method blank BJ20024-BLK1 contained traces of acetone (0.48 ug/m3), methylene chloride (0.69 ug/m3), and propylene (0.17 ug/m3). Method blank BJ20107-BLK1 contained a trace of methylene chloride (0.69 ug/m3). Positive results for these compounds that are less than five times the method blank level should be reported as not detected (U) in associated samples.

Internal Standard Area Summary: The internal standard retention times were within control limits. One of three internal standard areas for sample SV-4RE1 was below control limits, but not below 25%. Two of three internal standard areas for sample SV-4 were below control limits, but not below 25%. Positive results for compounds using internal standard with areas outside control limits should be considered estimated, biased high (J+) and "not detected" results estimated (UJ) in samples SV-4 and SV-4RE1.

Laboratory Control Sample: The percent recoveries (%Rs) for target compounds were within QC limits for air/vapor sample BJ20107-BS1.

The %Rs for 1,3-butadiene and vinyl chloride were above QC limits for air/vapor sample BJ20024-BS1. The positive results for 1,3-butadiene and vinyl chloride should be considered estimated, biased high (J+) in associated air/soil vapor samples.

Compound ID: Checked compounds were within quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Canister Pressure: The laboratory reported "received" pressure for samples below zero (residual vacuum), as required.

Good day,

NYSDEC has reviewed your memo regarding proposed modifications to the well installation plan. Upon evaluation with our geophysics experts, we have decided to reject your proposal to omit the monitoring wells previously proposed to be installed in the shallow and intermediate depth intervals.

Given the geophysical data that has been collected, the consultant should be able to select appropriate screen intervals at each well location. With properly designed and installed wells, cross-contamination is unlikely to be an issue. As for the possibility of wells running dry during development or sampling, this is always a risk at any site – even when installing wells in the overburden. This does not eliminate the necessity of data from the proposed wells. Note that the data from these wells will inform the required scope of any potential groundwater treatment (or other future remedial action), and these wells would also be used to gauge the effectiveness of any such treatment. Therefore, please proceed with the installation of monitoring wells in the shallow and intermediate depth intervals, as per the original workplan.

Thank you,
Erick Bower

Erick,

Good morning. While we understand the State's position, we still believe that it is in the Site's best interest to revise the scope in the SSCWP. Please see the attached Memo detailing our reasoning for the requested scope change. Please reach out with any questions or concerns.

Hi Matt,

After some discussion with my superiors and our geophysics specialists, we have come to the decision that we would prefer to stick to the existing workplan regarding the installation of monitoring wells at the shallow and intermediate depth intervals. We need analytical groundwater data from these intervals to assess the extent of contamination within the bedrock groundwater, especially in the vertical dimension. Obviously, reasonable adjustments to the design of each well should be made according to the geophysical data, in order to minimize the likelihood of spreading contamination. However, ultimately we need groundwater data from these intervals to inform our site conceptual model.

As for MW-9, we agree that it would likely be a good idea to decommission this well to prevent unnecessary contaminant migration, especially considering that MW-09S should be a sufficient replacement. You may proceed with your plans to decommission the original MW-9 well (which was previously installed by Vektor).

Thanks,
Erick

Erick,

Good afternoon. As we discussed earlier today, we have completed the deep borings at locations 09, 14, 16 and 17. We have conducted rocking coring and geophysical logging at those locations, and used that information to install wells: MW-09S, MW-09D, MW-14D, MW-16D and MW-17D. The screen intervals for the four deep wells are based on producing fractures between 35-40 ft bgs. The only other producing fracture observed was at MW-09D at approximately 9.5 ft bgs.

While not originally in the scope, due to the presence of MW-09 from the original Site characterization, we installed MW-09S with a screen interval from 8.5-13.5 to isolate that producing fracture. The geophysical report from the original Site characterization shows only 3.5 ft of water column in the MW-09 boring that was advance to approximately 20 ft

bgs. The well was set with a screen from 5-20 ft bgs. We believe that MW-09, from the original Site characterization, should be abandoned to prevent the potential for vertical migration of CVOCs in groundwater.

In addition, based on geophysical data and observations of the rock cores, there are no other producing fractures at locations 09, 14, 16 and 17. Setting wells at shallow and intermediate levels where there are non-producing fractures could introduce preferential pathways for contaminant migration and therefore we propose removing MW-09I, MW-14S, MW-14I, MW-16S, MW-16I, MW-17S, and MW-17I from the scope.

We will be moving to locations 15 and 18 to conduct the rock coring and geophysical logging of the deep borings while the reduction of scope is considered. Please see the attached draft geophysical logs for the completed locations for your reference. Please reach out with any questions.

Thank you,
Matthew Levy

Subject: RE: Geophysical Logs and Well Screen Placements - 3547 Webster Ave - 203165

CAUTION: External Email

Hi Matt,

The proposed screen depths seem acceptable. There are only two well screens that we would recommend adjusting:

- **MW-09I:** The current proposal is to install the screen at 22-27'. We noticed a spike in the Specific Potential log that seems to coincide with an ATV feature at around 19.5'. We would prefer that the well screen partially cover this feature (while retaining coverage of the fracture at 24'). Therefore, we recommend that the MW-09I screen be adjusted to 20-25'.

- **MW-15S:** The current proposal is to install the screen at 6-11'. Given 2' of sand pack above the screen, we are concerned that the sand pack will traverse the boundary where the steel casing ends, which may allow overburden groundwater to seep into this well. Therefore, we recommend moving the screen interval lower (possibly 7-12') to allow the bentonite seal to cover the depth where the steel casing ends, eliminating the potential risk of overburden groundwater infiltration.

Feel free to reach out if you have any questions regarding these recommendations.

Thanks,

Erick

Erick,

We do not currently have finalized logs from Hager-Richter. We expect those as part of the geophysical report. I have attached the preliminary log for MW-18D.

Well installations completed to date have targeted the water-bearing features identified in each borehole, based on the outcome of the geophysical logging and heat pulse flow meter testing (ambient and pumping). The following wells have been installed at the Site:

Well ID	Screen Interval
MW-09S	8.5-13.5
MW-09D	35-40
MW-14D	39-44
MW-15I	19.5-24.5
MW-16D	37-42
MW-17D	35-40
MW-18D	34-39

Heat pulse flow meter testing, under ambient and pumping conditions, did not identify other water-bearing features. The calibrated range of the heat pulse flow meter is 1 to 0.03 gallons per minute (gpm) with a minimum flow detection level of 0.01 gpm. As indicated in my email sent on 18 March 2025 and follow up memo on 27 March 2025, we are concerned that completing wells across very low yielding fractures may create hydraulic gradients, horizontal or vertical, which are not present at the Site under ambient conditions and may contribute to contaminant migration, if

present. However, at the request of NYSDEC via emails on 20 March 2025 and 28 March 2025, we plan on installing the following wells with associated screen intervals, based on the preliminary geophysical data:

Well ID	Screen Interval
MW-09I	22-27

The locations will be installed where potential fractures may be present based on OTV and ATV results, caliper logging, and fluid temperature/conductivity logging, but did not exhibit detectable groundwater flow under ambient or pumping conditions. Unless NYSDEC has further input or recommendations, we will move forward with this planned well completions.

Subject: Geophysical Logs and Well Screen Placements - 3547 Webster Ave - 203165

CAUTION: External Email

Hi Matt,

Bill was asking - have any of the Geophysical logs have been finalized yet (with features picked)? If so, could we see those?

Also, we wanted to ask if your team would like to meet to discuss the well screen placements. Let us know your thoughts on this.

Thanks,
Erick

Tadpole	Structure Category (Symbol Color)	Description
	Fracture Rank 1 (Light Blue)	Minor Fracture - not distinct and may not be continuous around the borehole
	Fracture Rank 2 (Blue)	Intermediate Fracture - distinct and continuous around the borehole with little or no apparent aperture
	Fracture Rank 3 (Red)	Major Fracture - distinct and continuous around the borehole with apparent aperture

Figure 1. Key to bedrock structure categories.

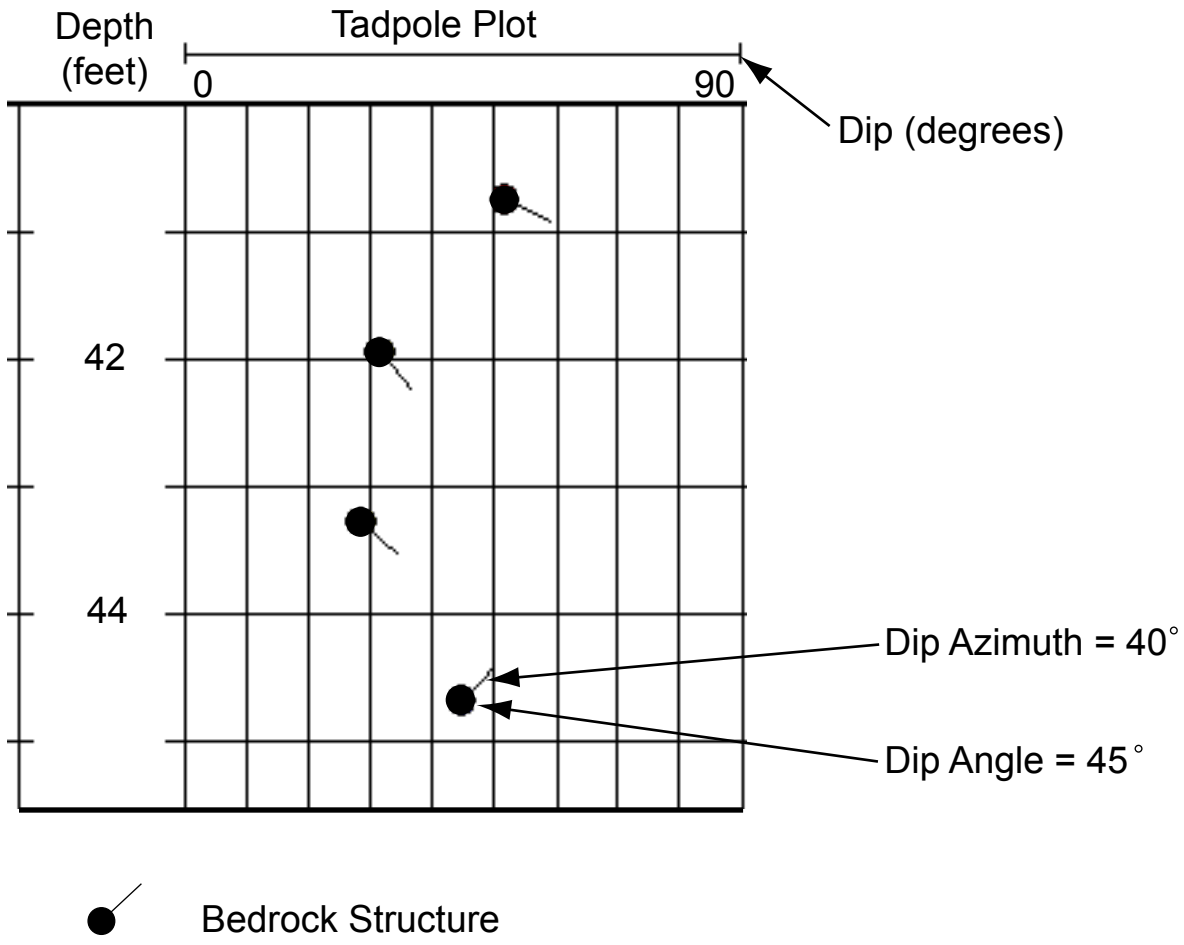

Figure 2. Tadpole plot explanation. The orientation of the bedrock structures is graphically displayed by a tadpole consisting of a circle, the head, and a line, the tail. The position of the head, left to right on the tadpole plot, gives the dip angle of the structure. The left side of the track indicates a dip angle of 0°, and the right side of the track indicates a dip angle of 90° from horizontal. The orientation of the tail gives the dip azimuth of the structure and can be read like a compass. The tail pointing directly up is 0°, north.

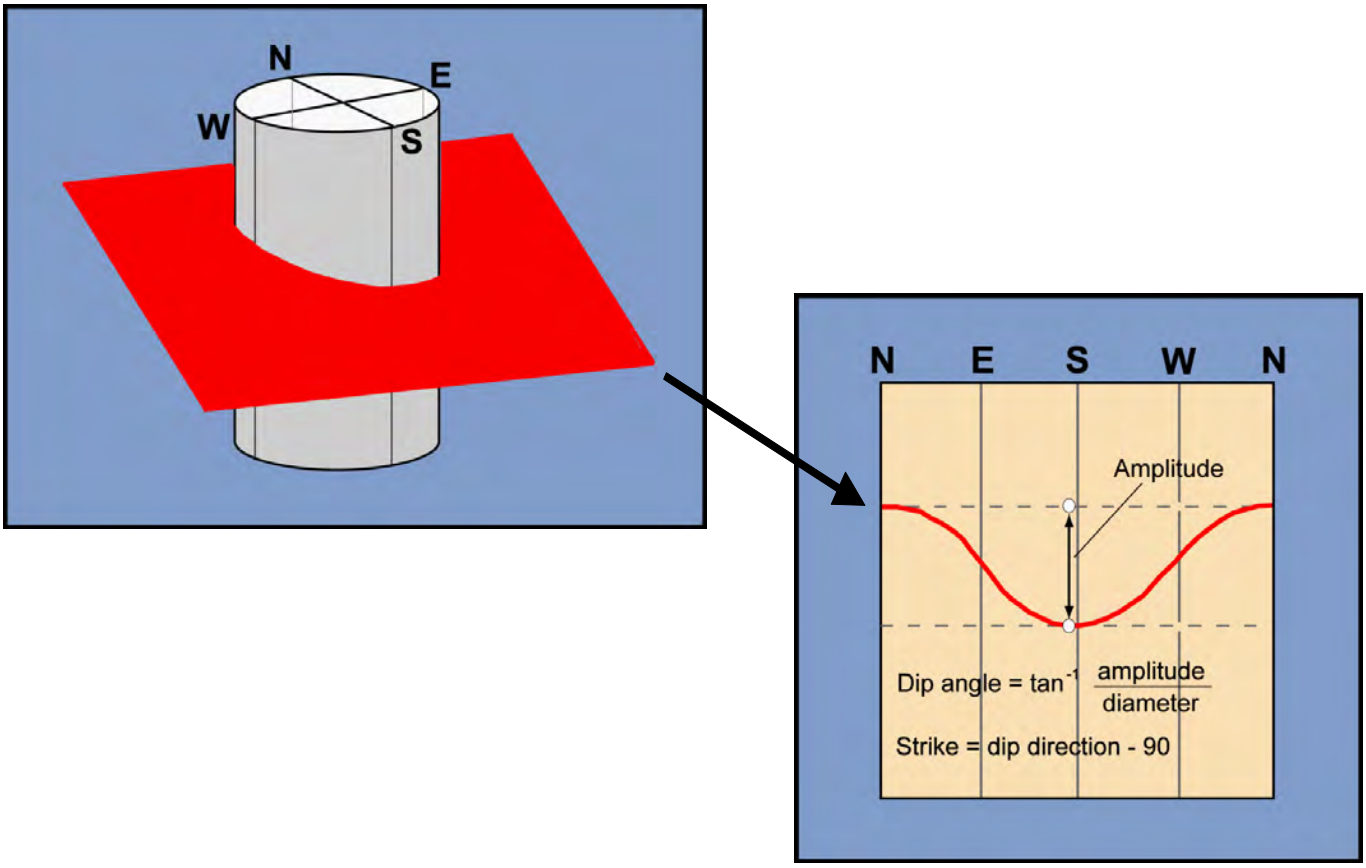

Figure 3. Televiewer explanation. The image on the left depicts a planar structure in red, such as a fracture or bedding plane, intersected by a borehole. The image on the right depicts the same structure unwrapped as it would be displayed in an optical televiewer (OTV) or acoustic televiewer (ATV) log.

NOTES: Please note that drill rods were pulled from the borehole and the borehole was flushed from the bottom up with clear water immediately prior to the borehole geophysical logging reported herein. The fluid temperature and fluid conductivity data are likely not representative of natural/ambient conditions due to the recent pulling of the drill rods and flushing of the borehole, however, the borehole flushing provided excellent water clarity for the OTV logging. Additionally, HRGS waited for the water level in the borehole to stabilize, return to ambient conditions, prior to conducting the HPFM logging to ensure true ambient borehole flow measurements were achieved as well as HRGS-controlled stressed borehole flow measurements.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Pace Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments and solids are reported on a dry weight basis unless otherwise noted. Tissues are reported "as received" or on a wet weight basis, unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Pace's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Pace Project Manager and made arrangements for Pace to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

April 07, 2025: This final report includes the results of all requested analyses.

April 04, 2025: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Perfluorinated Alkyl Acids by 1633

L2518285-02 and -03: The sample was centrifuged and decanted prior to extraction due to sample matrix.

L2518285-03: The Extracted Internal Standard recovery was above the acceptance criteria for 1h,1h,2h,2h-perfluoro[1,2-13c2]octanesulfonic acid (m2-6:2fts) (217%). Since the sample was non-detect to the RL for all associated target analytes, re-analysis was not required.

Semivolatile Organics by SIM

The WG2046768-1 Method Blank associated with L2518285-04 has a concentration above the reporting limit for naphthalene. Since the associated sample concentrations are either greater than 10x the blank concentration or non-detect to the RL for this target analyte, no corrective action is required. Any results detected below the reporting limit are qualified with a "B".

Anions by Ion Chromatography

The WG2046662-3 MS recovery performed on L2518285-01 is outside the acceptance criteria for sulfate (66%); however, the associated LCS recovery is within criteria. No further action was taken.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Pace Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments and solids are reported on a dry weight basis unless otherwise noted. Tissues are reported "as received" or on a wet weight basis, unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Pace's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Pace Project Manager and made arrangements for Pace to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Report Submission
April 16, 2025: This final report includes the results of all requested analyses.
April 08, 2025: This is a preliminary report.
April 07, 2025: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics
The WG2047935-4/-5 MS/MSD recoveries performed on L2518995-01 are below the acceptance criteria for 3,3'-dichlorobenzidine (0%/0%) due to the concentration of this compound in the MS/MSD falling below the reported detection limit.

Dissolved Metals
The WG2048678-3/-4 MS/MSD recoveries performed on L2518995-01 do not apply for calcium (173%/182%) and sodium (MS 47%) because the sample concentrations are greater than four times the spike amounts added.

Total Metals
The WG2049708-3 MS recovery performed on L2518995-01 is outside the acceptance criteria for sodium (62%). A post digestion spike was performed and was within acceptance criteria.
The WG2049708-4 MSD recovery performed on L2518995-01 does not apply for calcium (168%) because the sample concentration is greater than four times the spike amount added.Report Submission

Case Narrative (continued)

The WG2047935-2 LCS recovery associated with L2518995-01 through -03 is below the acceptance criteria for benzidine (0%); however, it has been identified as a "difficult" analyte. The results of the associated samples are reported.
The WG2047935-3 LCS recovery associated with L2518995-01 through -03 is below the acceptance criteria for benzidine (1%); however, it has been identified as a "difficult" analyte. The results of the associated samples are reported.

Perfluorinated Alkyl Acids by 1633
L2518995-05: The sample was received in an inappropriate 1L container. The sample was poured off into 500mL container per client request.
The Extracted Internal Standard recovery for the WG2053575-2 LCS associated with L2518995-01, -02, -03, and -05 is outside the acceptance criteria for n-deuteriomethylperfluoro-1-octanesulfonamidoacetic acid (d3-nmefosaa) (180%); however, all associated target analytes are within overall LCS criteria; therefore, no further action was taken.
The WG2053575-7 MSD recovery performed on L2518995-01 is outside the acceptance criteria for perfluorooctanesulfonic acid (pfos) (54%).

Total Metals
Lab Note: L2518995-01 through -03: Total v Dissolved results are within RPD criteria.
The WG2049708-3 MS recovery performed on L2518995-01 is outside the acceptance criteria for sodium (62%). A post digestion spike was performed and was within acceptance criteria.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Pace Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments and solids are reported on a dry weight basis unless otherwise noted. Tissues are reported "as received" or on a wet weight basis, unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Pace's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Pace Project Manager and made arrangements for Pace to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

April 29, 2025: This final report includes the results of all requested analyses.

April 25, 2025: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2523897-02 and -04: The analyses were cancelled at the client's request.

Perfluorinated Alkyl Acids by 1633

L2523897-03: The Extracted Internal Standard recovery was above the acceptance criteria for 1h,1h,2h,2h-perfluoro[1,2-13c2]octanesulfonic acid (m2-6:2fts) (243%). Since the sample was non-detect to the RL for all associated target analytes, re-analysis was not required.

Semivolatile Organics

The WG2055540-3 LCSD recovery associated with L2523897-03, -05, -06, and -07 is below the acceptance criteria for benzoic acid (0%); however, it has been identified as a "difficult" analyte. The results of the associated samples are reported.

Dissolved Metals

L2523897-03: The sample has an elevated detection limit for arsenic due to the dilution required by matrix interferences encountered during analysis.

Anions by Ion Chromatography

L2523897-03 and -06: The sample has an elevated detection limit for nitrate due to the dilution required by the sample matrix.

Case Narrative (continued)

WG2055937: A Matrix Spike and Laboratory Duplicate were prepared with the sample batch, however, the native sample was not available for reporting and the QC results could not be reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Pace Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments and solids are reported on a dry weight basis unless otherwise noted. Tissues are reported "as received" or on a wet weight basis, unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Pace's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Pace Project Manager and made arrangements for Pace to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

April 29, 2025: This final report includes the results of all requested analyses.

April 28, 2025: This is a preliminary report.

April 25, 2025: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2524078-06: The sample identified as "EB_20250418" on the chain of custody was identified as "FIELD BLANK" on the container label. At the client's request, the sample is reported as "EB_20250418".

Perfluorinated Alkyl Acids by 1633

The WG2058795-4 MS recovery performed on L2524078-03 is outside the acceptance criteria for 3-perfluoropropyl propanoic acid (3:3ftca) (131%).

The WG2058795-4/-5 MS/MSD RPDs performed on L2524078-03 are outside the acceptance criteria for perfluorononanesulfonic acid (pfns) (32%), perfluorodecanesulfonic acid (pfds) (49%), perfluorotridecanoic acid (pftrda) (33%), perfluorotetradecanoic acid (pfta) (33%), perfluorododecane sulfonic acid (pfdods) (51%), 11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11cl-pf3ouds) (50%), and n-ethyl perfluorooctanesulfonamido ethanol (netfose) (33%).

The Extracted Internal Standard recovery for the WG2058795-5 MSD performed on L2524078-03 is outside the acceptance criteria for perfluoro[13c8]octanoic acid (m8pfoa) (37%). The associated MSD spike compounds are within criteria; therefore, no further action was taken.

Anions by Ion Chromatography

L2524078-02 through -05: Nitrate was analyzed with the method required holding time exceeded.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Data Qualifiers

Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Pace Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments and solids are reported on a dry weight basis unless otherwise noted. Tissues are reported "as received" or on a wet weight basis, unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Pace's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Pace Project Manager and made arrangements for Pace to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

April 30, 2025: This final report includes the results of all requested analyses.

April 24, 2025: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Perfluorinated Alkyl Acids by 1633

L2524502-02: The Extracted Internal Standard recovery was above the acceptance criteria for 1h,1h,2h,2h-perfluoro[1,2-13c2]octanesulfonic acid (m2-6:2fts) (250%). Since the sample was non-detect to the RL for all associated target analytes, re-analysis was not required.

Anions by Ion Chromatography

The WG2057031-3 MS recoveries performed on L2524502-03 are outside the acceptance criteria for nitrogen, nitrate (88%) and sulfate (71%); however, the associated LCS recoveries are within criteria. No further action was taken.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Haley & Aldrich, Inc. prepared this Data Usability Summary Report (DUSR) to summarize the review and validation of the analytical results for the Sample Delivery Groups (SDGs) listed. This DUSR is organized into the following sections:

1. **Sample Delivery Group Number L2517461, L2517462, L2518285, L2518995, L2523897, L2524078, L2524502, L2524503, and L2525787**
2. **Explanations**
3. **Glossary**
4. **Abbreviations**
5. **Qualifiers**

References

This data validation and usability assessment was performed per the guidance and requirements established by the United States Environmental Protection Agency (USEPA) using the following reference materials:

- National Functional Guidelines (NFG) for Inorganic Data Review.
- NFG for Organic Data Review.
- Analysis of Volatile Organic Compounds (VOCs) in Air Contained in Canisters by Method TO-15.
- Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under New York State Department of Environmental Conservation's (NYSDEC's) Part 375 Remedial Programs.

Data reported in this sampling event were reported to the laboratory method detection limit (MDL). Results found between the MDL and reporting limit (RL) are flagged "J" as estimated.

Sample data were qualified in accordance with the laboratory's standard operating procedures (SOPs). The results presented in each laboratory report were found to be compliant with the data quality objectives (DQOs) for the project and are therefore usable; any exceptions are noted in the following pages and listed below.

A subset of data was qualified as estimated due to holding time exceedances, high/low surrogate recoveries, high/low laboratory control sample (LCS)/laboratory control sample duplicate (LCSD) recoveries and relative percent difference (RPD) exceedances, high/low matrix spike (MS)/matrix spike duplicate (MSD) recoveries and RPD exceedances, high/low extraction internal standard recoveries, field and method blank contamination, ion ratio exceedances, and low percent total solids. All results are usable except for less than 1 percent of results that were rejected due to low surrogate recovery and low LCS recovery. A summary of qualifications is provided in Table VII.

1. Sample Delivery Group Number L2517461, L2517462, L2518285, L2518995, L2523897, L2524078, L2524502, L2524503, and L2525787

1.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG numbers:

- L2517461, dated April 2, 2025;
- L2517462, dated April 1, 2025;
- L2518285, dated April 7, 2025;
- L2518995, dated April 16, 2025;
- L2523897, dated April 29, 2025;

Samples were collected, preserved, and shipped following standard chain of custody (COC) protocols.

Samples were also received appropriately, identified correctly, and analyzed according to the COC. Issues noted with sample management are listed below:

- All SDGs: Custody seals were not used on the sample containers for all samples.
- SDGs L2517461, L2517462, L2518285, and L2518995: The sample dates and times are missing from the COC for all Trip Blank samples (TB-01_20250325, TB-02_20250325, TB-01_20250327, and TB-02_20250331).
- SDG L2524503: Sample dates are missing for samples SV-11_20250421, SV-12_20250421, SV-13_20250421, SV-14_20250421, and AA_20250421.
- SDG L2517462: A sample identified as “UNLABELED SAMPLE” was received by the laboratory but not listed on the COC. The laboratory did not analyze this per client request.
- SDG L2517462: Only method SW8270E was requested on the COC for samples -01 through -04, but SW8270E SIM was also performed.
- SDG L2518285: Only method SW8270E was requested on the COC for samples -01 through -04, but SW8270E SIM was also performed.
- SDG L2518995: Only method SW8270E was requested on the COC for samples -01 through -03, but SW8270E SIM was also performed.
- SDG L2523897: Only method SW8270E was requested on the COC for samples -02 through -07, but SW8270E SIM was also performed on samples -03, -05, -06, and -07.
- SDG L2523897: Samples -02 (MW-15S_20250417) and -04 (MW-15D_20250417) are listed on the COC, but analyses were cancelled by the client, so results are not listed in the report.

- SDG L2524078: Only method SW8270E was requested on the COC for samples -02 through -05, but SW8270E SIM was also performed.
- SDG L2524078: Sample L2524078-06 was identified as "EB_20250418" on the COC but as "FIELD BLANK" on the container label. The laboratory labeled as the former.
- SDG L2524502: Only method SW8270E was requested on the COC for samples -02 through -04, but SW8270E SIM was also performed.
- SDG L2525787: Sample containers were received by the laboratory for sample analysis of -02 by SW9012B, SW8151A, SW8081B, pH, and Flashpoint, but were not listed on the COC. The laboratory did not perform these analyses.
- SDG L2525787: Only method SW8270E was requested on the COC for samples -02 through -05, but SW8270E SIM was also performed.
- SDG L2525787: Sample -07 is identified by the laboratory as "TRIP BLANK" but is noted on the COC as being the same sample as -01 ("TB_20250425").

Analyses were performed on the samples listed in Table I using the methods listed in Table II.

1.2 MULTIPLE SAMPLE RESULTS

The laboratory reported multiple results for the samples listed below. The validator chose the results that best met the DQOs of the project.

Lab ID	Analysis Date/Time	Method	Analyte	Qualification
L2517461-01	3/27/2025 10:12:00	SW8270E	All SVOCs[1]	The laboratory reanalyzed the sample due to low surrogate recovery. The original results are marked nonreportable, and the reanalysis results are accepted.

[1]*SVOCs = semi-volatile organic compounds*

1.3 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol, with the following exceptions:

Method	Matrix	Holding Time	Preservation	Sample ID, Violation, Qualification
E300.0	Water	48 hours for liquid, unpreserved	None	The following were analyzed outside the holding time and qualified J+/UJ: L2524078-02 through -05.

1.4 REPORTING LIMITS AND SAMPLE DILUTIONS

All sample dilutions were reviewed and found to be justified. Dilution of the project samples was required to bring calibration of target analytes within calibration range, matrix interference, foaming at the time of purging, or abundance of non-target analytes.

The following samples have elevated detection limits:

- L2517461-01 and L2525787-06, for all total metals (except mercury); and
- L2523897-03 through -06, for nitrate

1.5 REPORTING BASIS (WET/DRY)

Refer to Section E 1.1. Soil data in this SDG were reported on a dry weight basis and "As Received" basis.

Where reported, percent solid results were reviewed and found to be within limits, with the following exceptions:

Sample ID	Lab ID	%Solids Result	Qualification
DC-01_20250325	L2517461-01	22%	All data qualified J-/UJ.

1.6 SURROGATE RECOVERY COMPLIANCE

Refer to Section E 1.2. The percent recovery (%R) for each surrogate compound added to each project sample was determined to be within the laboratory-specified quality control (QC) limits, with the following exceptions:

Method	Sample ID	Lab ID	Surrogate	Dilution	%R	Qualification
SW8260D	DC-01_20250325	L2517461-01	Dibromomethane	1	66%	J-/UJ target compounds*

1.11 PRECISION AND ACCURACY

Refer to Section E 1.7. Where required by the method, some measurement of analytical accuracy and precision was reported for each method with the site samples.

1.12 CONFIRMATION COLUMN REVIEW

Refer to Section E 1.8. Confirmation for Pesticides and polychlorinated biphenyls (PCBs) analysis was achieved qualitatively, and the retention time was confirmed (within ±0.02 minutes).

1.13 ESTIMATED MAXIMUM POSSIBLE CONCENTRATION (EMPC)

Refer to Section E 1.9. The laboratory did not report any EMPC flags; therefore, no action is required.

1.14 CLEAN CANISTER CERTIFICATION

The canisters used for the TO-15 sample collection were certified clean by batch can analysis prior to sampling to ensure that no target analytes were present. These analysis sheets were reviewed, and no target analytes were detected in the laboratory-provided canisters.

1.15 CANISTER PRESSURE CHECK

Analysis of canister integrity during sampling, including verification that initial canister pressure is less than absolute vacuum (at standard temperature [0°C], absolute vacuum is measured at -29.92 in-Hg), to determine potential for bias in the sample result in the event that either constituents of concern may be present within the sample canister prior to sample collection, or that soil vapor results may be diluted if a portion of the sample canister volume contains vapor without the specified constituents of concern. Percent relative error should be less than 10%. The canister pressure was within specified limits.

1.16 PFAS SAMPLE PREPARATION

Refer to Section E 1.10. The laboratory's SOP was reviewed, and the reviewer confirmed it is the laboratory's procedure to use solid-phase extraction (SPE) for sample preparation. For water, the entire sample plus sample bottle rinsate was extracted. No data qualification required.

1.17 PFAS IDENTIFICATION

Refer to Section E 1.11. Ion ratios could not be reviewed because the laboratory did not provide an ion ratio summary. However, the lab qualified the following samples with "F" flag:

Sample ID	Analyte	Qualifier	Affected Samples
MW-09S_20250331	Perfluoroheptanoic acid (PFHpA)	J	L2518995-03
MW-15I_20250417	Perfluoroundecanoic acid (PFUnDA)		L2523897-03
	Perfluorooctane sulfonamide (PFOSA)		
MW-18I_20250417	Perfluorooctane sulfonamide (PFOSA)		L2523897-06

1.18 EXTRACTION INTERNAL STANDARDS

Refer to Section E 1.12. Recoveries were reviewed and found to be within the limits of 50 to 150 percent of the initial calibration (ICAL) midpoint standard/ initial continuing calibration verification (CCV), with the exceptions listed in Table VI.

Extraction Internal Standards Recoveries were out of limits for method blanks (MBs), LCS, MS, and MSD, but did not affect the data.

1.19 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the DQOs for the project and the guidelines specified by the analytical method. Based on the review of this report, the data are useable and acceptable, except for rejected data noted. A summary of qualifiers applied to this data set is shown in Table VII.

2. Explanations

The following explanations include more detailed information regarding each of the sections in the DUSR above. Not all sections in the Explanations are represented:

- E 1.1 Reporting Basis (Wet/Dry)
  - Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations were made to compensate for the moisture content of the soil sample.
  - Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have greater than or equal to 30 percent solids to be appropriately quantified.
- E 1.2 Surrogate Recovery Compliance
  - Surrogates, also known as system monitoring compounds, are compounds added to each sample prior to sample preparation to determine the efficiency of the extraction procedure by evaluating the %R of the compounds.
- E 1.3 Laboratory Control Samples
  - The LCS/LCSD analyses are used to assess the precision and accuracy of the analytical method independent of matrix interferences.
- E 1.4 Matrix Spike Samples
  - MS/MSD data are used to assess the precision and accuracy of the analytical method and evaluate the effects of the sample matrix on the sample preparation procedures and measurement methodologies.
  - For inorganic methods, when a matrix spike recovery falls outside of the control limits and the sample result is less than four times the spike added, a post-digestion spike (PDS) is performed.
- E 1.5 Blank Sample Analysis
  - Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination.
  - Analysis of PFAS compliant with QSM 5.3 Table B-15 requires instrument blanks that are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess contamination that could occur in the LC/MS/MS instrument.
  - Field blanks are prepared to identify contamination that may have been introduced during field activity. Equipment blanks are prepared to identify contamination that may have been introduced while decontaminating sampling equipment. Trip blanks are prepared when volatile analysis is requested to identify contamination that may have been introduced during transport.
- E 1.6 Laboratory and Field Duplicate Sample Analysis

- The laboratory duplicate sample analysis is used by the laboratory at the time of the analysis to demonstrate acceptable method precision. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
- The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.

- E 1.7 Precision and Accuracy
  - Precision measures the reproducibility of repetitive measurements. In a laboratory environment, this will be measured by determining the RPD found between a primary and a duplicate sample. This can be an LCS/LCSD pair, an MS/MSD pair, a laboratory duplicate performed on a site sample, or a field duplicate collected and analyzed concurrently with a site sample.
  - Accuracy is a statistical measurement of the correctness of a measured value and includes components of random error (variability caused by imprecision) and systematic error. In a laboratory environment, this will be measured by determining the %R of certain spiked compounds. This can be assessed using LCS, blank spike (BS), MS, and/or surrogate recoveries.
- E 1.8 Confirmation Column Review
  - When analyzing for pesticides and PCBs, compound identification based on single-column analysis should be confirmed on a second column or supported by at least one other qualitative technique. When confirmed on a second column, the RPD should not exceed 40 percent.
- E 1.9 Estimated Maximum Possible Concentration
  - An EMPC is a worst-case estimate of the concentration for a dioxin/furan or PCB based on all identification criteria being met except the ion abundance ratio criteria, or if a peak representing a chlorinated diphenyl ether was detected.
- E 1.10 PFAS Sample Preparation
  - Analysis of PFAS requires specific sample preparation. Aqueous samples must be prepared using SPE, unless samples are known to contain high PFAS concentrations or the samples are injected directly into the LC/MS/MS instrument. Samples with greater than 1 percent solids may require centrifugation prior to SPE. The entire sample plus bottle rinsate must be extracted using SPE. If high PFAS concentrations are known, the samples may alternatively be prepared using serial dilution performed in duplicate. If prepared by serial dilution, there must be documented project approval for this deviation.
- E 1.11 PFAS Identification
  - Identification of PFAS requires dual confirmation. The chemical derivation of the ion transitions must be documented. A minimum of two ion transitions per analyte are required (except for PFBA and PFPeA). Ratios of the quantitation ion to the confirmation ion should be calculated for samples and be within 50 to 150 percent of the ratios of the quantitation ion to the confirmation ion for standards.
  - Identification of PFAS also requires the proper assessment of branched and linear peaks. Standards for both isomers are not currently available for every PFAS compound,

resulting in the common error of quantifying the area of only the branched or the linear isomers, which results in erroneous concentrations.

- E 1.12 Extraction Internal Standards
  - Analysis of PFAS by isotope dilution includes the use of extracted internal standards, which are stable isotope analogs of the PFAS compounds of interest added to each sample prior to extraction of the sample matrix. Matrix interferences that affect the quantification of the internal standard will affect the calculated target compound concentrations.

5. Qualifiers

The qualifiers below are from the USEPA NFG and the data in the DUSR may contain these qualifiers:

- Concentration (C) Qualifiers:

  U The compound was analyzed for but not detected. The associated value is either the compound quantitation limit if not detected by the analytical instrument or could be the reported or blank concentration if qualified by blank contamination. This can also be displayed as less than the associated compound quantitation limit (<RL or <MDL), or "ND".

  B The compound was found in the sample and its associated blank. Its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers:

  E The compound was quantitated above the calibration range.

  D The concentration is based on a diluted sample analysis.

- Validation Qualifiers:

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  J+ The result is an estimated quantity, but the result may be biased high.

  J- The result is an estimated quantity, but the result may be biased low.

  J/UJ as listed in exception tables J applies to detected data and UJ applies to non-detected data as reported by the laboratory.

  UJ The compound was not detected. The reported sample quantitation limit is approximate.

  NJ The analysis indicated the presence of a compound for which there is presumptive evidence to make a tentative identification; the associated numerical value is an estimated concentration only.

  R The sample results were rejected as unusable; the compound may or may not be present in the sample.

  S Result is suspect. See DUSR for details.

Haley & Aldrich of New York (Haley & Aldrich) was present to document implementation of the NYSDEC conditionally approved March 2023 Supplemental Site Characterization Work Plan (SSCWP) prepared by Haley & Aldrich. Site Observations are summarized below.

Daily Observations:

- ADT mobilized to the Site and completed setup of their equipment and supplies for drilling.
- ADT mobilized to MW-14D and installed the borehole to the target depth of 45 feet below ground surface (ft bgs) utilizing a Terra Sonic International drill rig.
- ADT's sonic casing was left in the borehole to completion depth to prevent vertical migration overnight. The casing will be flushed and removed prior to geophysical analysis on 3/11/2025.
- Haley & Aldrich logged the MW-14D borehole to completion depth, characterizing the soil and rock encountered.
- B Contractors continued above grade superstructure installation work.

Samples Collected:

- None

CAMP Activities:

- Community air monitoring was performed at one upwind and one downwind location during ground intrusive activities on-Site from 11:00am to 5:00pm. No 15-minute average concentrations of volatile organic compounds (VOCs) or particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels during community air monitoring. No visible dust or odors were observed leaving the Site perimeter.

Activities Planned for Coming Week:

- HR Geological Services in New York (HRGS) will mobilize to the Site on 3/11/2025 to begin downhole geophysical analysis at the deep bedrock borehole
- ADT will begin setting bedrock monitoring wells based on Haley & Aldrich's core observations and review of geophysical analysis data
- ADT will continue installing the deep bedrock boreholes to allow for downhole geophysical analysis.
- Haley & Aldrich will continue to log bedrock borings, communicate with the construction supervisor, and lead field activities. Haley & Aldrich will also determine where to set the screen intervals for the shallow, intermediate, and deep wells.

DAILY FIELD REPORT

Project	3547 Webster Avenue Supplemental Site Characterization	**Report No.**	4
NYSDEC Site No.	203165	**Date**	03/13/2025
Location	3547 Webster Ave, Bronx, NY	**File No.**	0211776
Client	3547 Webster Avenue LLC	**Temperature**	36-47°F
Contractor	Haley & Aldrich, Aquifer Drilling & Testing (ADT), HR Geological Services in New York (HRGS), B Contractors	**Wind Direction**	From S to N up to 5 mph
Weather	Sunny	**Personnel on Site**	J. Mastro

Haley & Aldrich of New York (Haley & Aldrich) was present to document implementation of the NYSDEC conditionally approved March 2025 Supplemental Site Characterization Work Plan (SSCWP) prepared by Haley & Aldrich. Site Observations are summarized below.

Daily Observations:

- ADT removed their sonic casing from MW-9D and MW-16D and flushed the boreholes with potable water immediately prior to geophysical analysis at each location.
- HRGS remobilized to the Site and completed downhole geophysical logging of MW-9D and MW-16D. HRGS demobilized from the Site after completing downhole geophysical logging at both locations.
- Haley & Aldrich reviewed the core observations and geophysical data to determine where to set the screen in MW-9D and MW-16D.
- Following geophysical logging, ADT was unable to set MW-9D and MW-16D before the end of the day. As a result, ADT cased off the boreholes to completion depth to prevent vertical migration overnight. MW-9D and MW-16D will be set on 14 March 2025.
- B Contractors continued above grade superstructure installation work.

Samples Collected:

- None

CAMP Activities:

- Community air monitoring was performed at one upwind and one downwind location during ground intrusive activities on-Site from 7:15 to 17:00. Due to technical issues with the CAMP stations, data was not relayed to the cloud. The issue is currently being troubleshot with technical support. If the CAMP stations continue to have reporting issues, manual logs will be kept until the CAMP stations can be replaced. While data is not available at this time for 13 March 2025, no odors were observed, and no visible dust were observed leaving the Site perimeter.

Activities Planned for Coming Week:

- ADT will continue setting bedrock monitoring wells based on Haley & Aldrich's core observations and review of geophysical data
- ADT will continue installing the deep bedrock boreholes to allow for downhole geophysical analysis.
- Haley & Aldrich will continue to log bedrock borings, communicate with the construction supervisor, and lead field activities. Haley & Aldrich will also determine where to set the screen intervals for the shallow, intermediate, and deep wells.

Haley & Aldrich of New York (Haley & Aldrich) was present to document implementation of the NYSDEC conditionally approved March 2025 Supplemental Site Characterization Work Plan (SSCWP) prepared by Haley & Aldrich. Site Observations are summarized below.

Daily Observations:

- ADT removed the casing from both boreholes and set MW-9D and MW-16D.
- ADT advanced MW-17D to 40 feet below ground surface (ft bgs). The borehole was completely cased off at the end of the day to prevent vertical migration over the weekend. ADT will advance the borehole the remaining five feet to reach the target depth of 45 ft bgs on Monday morning.
- Haley & Aldrich logged the MW-17D borehole to 40 ft bgs, characterizing the soil and rock encountered. No elevated PID readings, staining, or odors were observed.
- B Contractors continued above grade superstructure installation work.

Samples Collected:

- None

CAMP Activities:

- Community air monitoring was performed at one upwind and one downwind location during ground intrusive activities on-Site from 7:15 to 14:30. No 15-minute average concentrations of volatile organic compounds (VOCs) or particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels during community air monitoring. No visible dust or odors were observed leaving the Site perimeter.

Activities Planned for Coming Week:

- HR Geological Services in New York (HRGS) will remobilize to the Site on 3/17/2025 to continue downhole geophysical analysis in the deep bedrock boreholes.
- ADT will install MW-17D based on Haley & Aldrich's core observations and review of geophysical data.
- ADT will begin installing the shallow and intermediate bedrock boreholes and setting the monitoring wells based on Haley & Aldrich's core observations and review of geophysical data.
- Haley & Aldrich will continue to log bedrock borings, communicate with the construction supervisor, and lead field activities. Haley & Aldrich will also determine where to set the screen intervals for the shallow, intermediate, and deep wells.

Haley & Aldrich of New York (Haley & Aldrich) was present to document implementation of the NYSDEC conditionally approved March 2025 Supplemental Site Characterization Work Plan (SSCWP) prepared by Haley & Aldrich. Site Observations are summarized below.

Daily Observations:

- ADT advanced MW-09S to 15 feet below ground surface (ft bgs) and immediately set the well with a screen interval from 8.5 to 13.5 ft bgs.
- Haley & Aldrich logged the MW-09S borehole to 15 ft bgs, characterizing the soil and rock encountered. No elevated PID readings, staining, or odors were observed.
- B Contractors continued above grade superstructure installation work.

Samples Collected:

- None

CAMP Activities:

- Community air monitoring was performed at one upwind and one downwind location during ground intrusive activities on-Site from 7:15 to 15:15. Due to technical issues with the downwind CAMP station, data was not uploaded to the cloud from 7:15 to 12:15. However, the issues were resolved with technical support, and the CAMP station continued uploading data as normal after 12:15. No 15-minute average concentrations of volatile organic compounds (VOCs) or particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels during community air monitoring. No visible dust or odors were observed leaving the Site perimeter.

Activities Planned for Coming Week:

- ADT will continue installing the deep bedrock boreholes to allow for downhole geophysical analysis.
- Haley & Aldrich will continue to log bedrock borings, communicate with the construction supervisor, and lead field activities. Haley & Aldrich will also determine where to set the screen intervals for the bedrock wells.

Project	3547 Webster Avenue Supplemental Site Characterization	**Report No.**	9
NYSDEC Site No.	203165	**Date**	03/20/2025
Location	3547 Webster Ave, Bronx, NY	**File No.**	0211776
Client	3547 Webster Avenue LLC	**Temperature**	42-52°F
Contractor	Haley & Aldrich, Aquifer Drilling & Testing (ADT), B Contractors	**Wind Direction**	From NE to SW up to 6 mph
Weather	Overcast/Light Rain	**Personnel on Site**	J. Mastro
Humidity	93%	**Time on Site**	6:45am to 4:30pm

Haley & Aldrich of New York (Haley & Aldrich) was present to document implementation of the NYSDEC conditionally approved March 2025 Supplemental Site Characterization Work Plan (SSCWP) prepared by Haley & Aldrich. Site Observations are summarized below.

Daily Observations:

- ADT set casing through the overburden at MW-18D to prepare for rock coring activities.
- Haley & Aldrich performed well development at MW-16D and MW-17D.
- B Contractors continued above grade superstructure installation work.

Samples Collected:

- None

CAMP Activities:

- Community air monitoring was performed at one upwind and one downwind location during ground intrusive activities on-Site from 6:45 to 15:30. No 15-minute average concentrations of volatile organic compounds (VOCs) or particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels during community air monitoring. No visible dust or odors were observed leaving the Site perimeter.

Activities Planned for Coming Week:

- ADT will continue installing the deep bedrock boreholes to allow for downhole geophysical analysis.
- Haley & Aldrich will continue to log bedrock borings, communicate with the construction supervisor, and lead field activities. Haley & Aldrich will also determine where to set the screen intervals for the bedrock wells.

Haley & Aldrich of New York (Haley & Aldrich) was present to document implementation of the NYSDEC conditionally approved March 2025 Supplemental Site Characterization Work Plan (SSCWP) prepared by Haley & Aldrich. Site Observations are summarized below.

Daily Observations:

- ADT advanced MW-15D to 45 feet below ground surface (ft bgs). The borehole was completely cased off to completion depth to prevent vertical migration overnight. The casing will be flushed and removed prior to geophysical analysis on 3/27/2025.
- B Contractors continued above grade superstructure installation work.

Samples Collected:

- None

CAMP Activities:

- Community air monitoring was performed at one upwind and one downwind location during ground intrusive activities on-Site from 7:15 to 14:30. No 15-minute average concentrations of volatile organic compounds (VOCs) or particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels during community air monitoring. No visible dust or odors were observed leaving the Site perimeter.
    - Station 2 did not report from 7:15 to 8:30. After troubleshooting with a technician, the modem for the station was rewired by H&A and it resumed reporting.

Activities Planned for Coming Week:

- ADT will continue installing the deep bedrock boreholes to allow for downhole geophysical analysis.
- HRGS will remobilize to the Site to continue downhole geophysical analysis in the deep bedrock boreholes.
- Haley & Aldrich will continue to log bedrock borings, communicate with the construction supervisor, and lead field activities. Haley & Aldrich will also determine where to set the screen intervals for the bedrock wells.

Haley & Aldrich of New York (Haley & Aldrich) was present to document implementation of the NYSDEC conditionally approved March 2025 Supplemental Site Characterization Work Plan (SSCWP) prepared by Haley & Aldrich. Site Observations are summarized below.

Daily Observations:

- ADT removed the casing from MW-15D and flushed the borehole with potable water to prepare for geophysical analysis.
- HRGS mobilized to the Site and completed downhole geophysical logging of MW-15D.
- ADT was unable to set MW-15D before the end of the day. As a result, ADT cased off the borehole to completion depth to prevent vertical migration overnight.
- B Contractors continued above grade superstructure installation work.

Samples Collected:

- Completed groundwater sampling of MW-16D and MW-17D.
    - MW-16D_20250327

CAMP Activities:

- Community air monitoring was performed at one upwind and one downwind location during ground intrusive activities on-Site from 7:00 to 15:00. No 15-minute average concentrations of volatile organic compounds (VOCs) or particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels during community air monitoring. No visible dust or odors were observed leaving the Site perimeter.

Haley & Aldrich of New York (Haley & Aldrich) was present to document implementation of the NYSDEC conditionally approved March 2025 Supplemental Site Characterization Work Plan (SSCWP) prepared by Haley & Aldrich. Site Observations are summarized below.

Daily Observations:

- ADT advanced MW-18D to 45 feet below ground surface (ft bgs) and cased off the borehole to completion depth to prevent vertical migration overnight.
    - No elevated PID readings, staining, or odors were observed at this location.
- The MW-15D borehole was grouted from 27 to 45 ft bgs to prepare for well installation. This borehole will be completed as MW-15I, with a screened interval from 19.5 to 24.5 ft bgs.
    - The grout will be allowed to set overnight, and the borehole was cased off from grade to the grout mixture to prevent vertical migration.
- B Contractors continued above grade superstructure installation work.

Samples Collected:

- None

CAMP Activities:

- Community air monitoring was performed at one upwind and one downwind location during ground intrusive activities on-Site from 7:00 to 14:00. With the exception of one dust exceedance at Station 1 at 9:15, no 15-minute average concentrations of volatile organic compounds (VOCs) or particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels during community air monitoring. No visible dust or odors were observed leaving the Site perimeter.
    - A dust exceedance was observed at Station 1 at 9:15. Work was immediately paused, and the work area was sprayed with water as a form of dust suppression. Work resumed once particulate concentrations dropped below its action level. No other exceedances were reported.

Activities Planned for Coming Week:

- Hager-Richter will remobilize to the Site to perform geophysical analysis at MW-18D.
- ADT will continue drilling and setting bedrock monitoring wells based on Haley & Aldrich's core observations and review of geophysical data.
- Haley & Aldrich will continue to log bedrock borings, communicate with the construction supervisor, and lead field activities. Haley & Aldrich will also determine where to set the screen intervals for the bedrock wells.
- Haley & Aldrich will continue groundwater sampling at completed bedrock monitoring wells.

Haley & Aldrich of New York (Haley & Aldrich) was present to document implementation of the NYSDEC conditionally approved March 2025 Supplemental Site Characterization Work Plan (SSCWP) prepared by Haley & Aldrich. Site Observations are summarized below.

Daily Observations:

- ADT conducted drill rig maintenance. No drilling was conducted.
- B Contractors continued above grade superstructure installation work.

Samples Collected:

- None

CAMP Activities:

- Community air monitoring was performed at one upwind and one downwind location during ground intrusive activities on-Site from 7:15 to 16:45. No 15-minute average concentrations of volatile organic compounds (VOCs) or particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels during community air monitoring. No visible dust or odors were observed leaving the Site perimeter.

Activities Planned for Coming Week:

- ADT will continue drilling and setting bedrock monitoring wells based on Haley & Aldrich's core observations and review of geophysical data.
- Haley & Aldrich will continue to log bedrock borings, communicate with the construction supervisor, and lead field activities. Haley & Aldrich will also determine where to set the screen intervals for the bedrock wells.
- Haley & Aldrich will continue well development and groundwater sampling as bedrock monitoring wells are completed and become available.

Particulate matter smaller than 10 microns in diameter (PM10), exceeded action levels at 8:00, 8:15 and 8:30, however this was due to sanding activities within the vicinity of CAMP Station 1. Sanding activities were related to the construction of the new building and not Supplemental Site Characterization activities. Once sanding activities completed, PM10 concentrations returned to background levels. No visible dust or odors were observed leaving the Site perimeter.

Haley & Aldrich of New York (Haley & Aldrich) was present to document implementation of the NYSDEC conditionally approved March 2025 Supplemental Site Characterization Work Plan (SSCWP) prepared by Haley & Aldrich. Site Observations are summarized below.

Daily Observations:

- ADT advanced and installed MW-14S.
- Haley & Aldrich performed well development at MW-18D, MW-18I, and MW-18S.
- B Contractors continued above grade superstructure installation work.

Samples Collected:

- None

CAMP Activities:

- Community air monitoring was performed at one upwind and one downwind location during ground intrusive activities on-Site from 6:40 to 15:00. No 15-minute average concentrations of volatile organic compounds (VOCs) or particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels during community air monitoring. CAMP Station 1 experienced technical difficulties. The team conducted troubleshooting with technical support. Technical issues were resolved at the end of the work day. While CAMP Station 1 was down, Haley & Aldrich conducted visual and olfactory monitoring within the vicinity of CAMP Station 1. No visible dust or odors were observed leaving the Site perimeter.

Activities Planned for Coming Week:

- ADT will continue drilling and setting bedrock monitoring wells based on Haley & Aldrich's core observations and review of geophysical data.
- Haley & Aldrich will continue to log bedrock borings, communicate with the construction supervisor, and lead field activities. Haley & Aldrich will also determine where to set the screen intervals for the bedrock wells.

STOP WORK AUTHORITY

In accordance with Haley & Aldrich (Haley & Aldrich) Stop Work Authority Operating Procedure (OP1035), any individual has the right to refuse to perform work that he or she believes to be unsafe without fear of retaliation. He or she also has the authority, obligation, and responsibility to stop others from working in an unsafe manner.

STOP Work Authority is the stop work policy for all personnel and subcontractors on the Site. When work has been stopped due to an unsafe condition, Haley & Aldrich site management (e.g., Project Manager [PM], Site Health & Safety Officer [SHSO], etc.) and the Haley & Aldrich Senior Project Manager (SPM) will be notified immediately.

Reasons for issuing a stop work order include, but are not limited to:

- The belief/perception that injury to personnel or accident-causing significant damage to property or equipment is imminent.
- An Haley & Aldrich subcontractor is in breach of site safety requirements and/or their own site HASP.
- Identifying a substandard condition (e.g., severe weather) or activity that creates an unacceptable safety risk as determined by a qualified person.

Work will not resume until the unsafe act has been stopped OR sufficient safety precautions have been taken to remove or mitigate the risk to an acceptable degree. Stop work orders will be documented as part of an on-site stop work log, on daily field reports to include the activity/activities stopped, the duration, person stopping work, person in-charge of stopped activity/activities, and the corrective action agreed to and/or taken. Once work has been stopped, only the Haley & Aldrich SPM or SHSO can give the order to resume work. Haley & Aldrich senior management is committed to support anyone who exercises his or her “Stop Work” authority.

Note: This HASP has been developed for Haley & Aldrich purposes only and is not for use by others.

ISSUANCE AND COMPLIANCE

This HASP has been prepared in accordance with Occupational Safety and Health Administration (OSHA) regulations (CFR 29, Parts 1904, 1910, and 1926) if such are applicable.

The specific requirements of this HASP include precautions for hazards that exist during this project and may be revised as new information is received or as site conditions change.

- This HASP must be signed by all Haley & Aldrich personnel involved in implementation of the SOW (Section 2 of this HASP).
- This HASP, or a current signed copy, must be retained at all times when Haley & Aldrich staff are present.
- Revisions to this HASP must be outlined within the contents of the HASP. If immediate or minor changes are necessary, the Field Safety Manager (FSM), Haley & Aldrich, SSO and/or Project Manager (PM) may use Attachment 1 (HASP Amendment Form), presented at the end of this HASP. Any revision to the HASP requires employees and subcontractors to be informed of the changes so that they understand the requirements of the change.
- Deviations from this HASP are permitted with approval from the Haley & Aldrich FSM, PM, or Senior Health & Safety Manager (SHSM). Unauthorized deviations may constitute a violation of Haley & Aldrich company procedures/policies and may result in disciplinary action.
- This HASP will be relied upon by Haley & Aldrich's subcontractors and visitors to the site. Haley & Aldrich's subcontractors must have their own HASP which will address hazards specific to their trade that is not included in this HASP. This HASP will be made available for review to Haley & Aldrich's subcontractors and other interested parties (e.g. Facility personnel and regulatory agencies) to ensure that Haley & Aldrich has properly informed our subcontractors and others of the potential hazards associated with the implementation of the SOW to the extent that Haley &Aldrich is aware.

This site-specific HASP provides only site-specific descriptions and work procedures. General safety and health compliance programs in support of this HASP (e.g., injury reporting, medical surveillance, personal protective equipment (PPE) selection, etc.) are described in detail in the Haley &Aldrich Corporate Health and Safety Program Manual and within Haley & Aldrich's Standard Operating Procedures Both the manual and SOPs can be located on the Haley & Aldrich's Company Intranet. When appropriate, users of this HASP should always refer to these resources and incorporate to the extent possible. The manual and SOPs are available to clients and regulators upon request.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

1. WORK SCOPE

This Site-Specific Health and Safety Plan addresses the health and safety practices and procedures that will be exercised by all Haley & Aldrich employees participating in all work on the Project Site. This plan is based on an assessment of the site-specific health and safety risks available to Haley & Aldrich and Haley & Aldrich's experience with other similar project sites. The scope of work includes the following:

Haley & Aldrich will be responsible for conducting oversight of a variety of on-site activities, including but not limited to, utility clearance, drilling activities, and geophysical bedrock surveying. Additionally, Haley & Aldrich will be responsible for the collection of groundwater and soil vapor samples.

Subcontractors will be retained by Haley & Aldrich to perform utility clearance, drilling activities, and geophysical bedrock surveying. Utility clearance includes the use of ground penetrating radar (GPR) to locate and clear utilities prior to intrusive activities. Drilling activities include the installation of groundwater monitoring wells and soil vapor monitoring points. Geophysical bedrock surveying includes the use of downhole geophysical techniques to obtain bedrock data and fill in data gaps.

Groundwater samples will be collected utilizing low-flow sampling techniques in accordance with NYSDEC guidance. Sub-slab/soil vapor samples will be collected in accordance with NYSDOH guidance using appropriately sized summa canisters.

2. SITE OVERVIEW / DESCRIPTION

Site Classification

Residential and Commercial

Site Description

The Site, identified as Block 3356, Lots 196 and 200 on the New York City tax map, is located in the Norwood neighborhood of the Bronx. It's comprised of two adjacent tax lots, totaling 18,663 square feet (sq ft). The Site is currently under active construction. The building foundation has been completed and work continues on the building superstructure.

Background and Historic Site Usage

According to available historical records**,** the Site was reportedly undeveloped in the late 1800s and early 1900s. In 1926, both lots were developed. Block 3356 Lot 200 was developed with a two-story building with various tenants including commercial garages, auto repair, manufacturing operations and medical centers. Block 3356 Lot 196 was developed with a one-story building in the western portion of the lot and a parking area in the eastern portion of the lot that served as a commercial garage. Both buildings were demolished between 2022 and 2024.

1,2-Dichloroethane (Ethylene Dichloride): 1, 2, Dichloroethane, commonly known as ethylene dichloride, is a clear, colorless liquid with a pleasant odor. It is used to make Vinyl Chloride and other

Note: This HASP has been developed for Haley & Aldrich purposes only and is not for use by others.

chemicals, and as a solvent, degrease, and wetting agent. Typically used in the production of Poly Vinyl Chloride products. While the odor threshold varies greatly it is known to be approximately 88 ppm.

1,1,2 – Trichloroethane: is a clear light-colored liquid that is slightly denser than that of water and is water insoluble and has a sweet chloroform like odor. It is utilized in adhesives, with the production of Teflon tubing and as a solvent for certain oils and fats. It is also used in the process of making vinylidene chloride.

1,1-Dichloroethane (1,1-DCA): 1,1-Dichloroethane is a colorless, oily liquid with a sweet odor. It evaporates easily at room temperature and burns easily. It does not occur naturally in the environment. 1,1-Dichloroethane is used mostly as an intermediate in the manufacture of 1,1,1-trichloroethane (1,1,1-TCE). It is also used in limited amount as a solvent for cleaning and degreasing, and in the manufacture of plastic wrap, adhesives, and synthetic fiber

1,1-Dichloroethylene (1,1-DCE): Industrial chemical that is not found naturally in the environment. It is a colorless liquid with a mild, sweet smell. It is also called vinylidene chloride. 1,1-Dichloroethylene is used to make certain plastics, such as flexible films like food wrap, and in packaging materials. It is also used to make flame retardant coatings for fiber and carpet backings, and in piping, coating for steel pipes, and in adhesive applications.

Cis- 1,2-Dichloroethylene: is a clear, colorless liquid and has an ether like odor. It is utilized to produce many types of pharmaceuticals, solvents, resins and has been used to help extract oils and fats from fish and other meat. Cis-1,2-Dichloroethylene has also been utilized as a refrigerant.

Trichloroethylene: is a nonflammable colorless liquid with a sweet odor. Trichloroethylene vapor is heavier than air and is found in low lying areas.

Vinyl Chloride: is a colorless, flammable gas that evaporates very quickly. Vinyl chloride can be formed in the environment when soil organisms break down "chlorinated" solvents. In the environment, the highest levels of vinyl chloride are found in air around factories producing vinyl products. Vinyl chloride that is released by industries or formed by the breakdown of other chlorinated chemicals can enter the air and drinking water supplies. It is a common contaminant found near landfills.

Most exposure occurs when people breathe contaminated air. If a water supply is contaminated, vinyl chloride can enter household air when the water is used. It can be absorbed through the skin if handling vinyl products, contaminated soil, or bathing in contaminated water. Skin absorption is probably a minor route of exposure.

Vinyl chloride is very toxic and contact with this chemical should be avoided. Health effects can occur after several years of exposure such as damage to the nervous system, changes in the immune system and decrease in bone strength in fingers, arms, and joints. It can also increase a person’s risk of developing cancer.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Benzene: Benzene is a colorless liquid with a sweet odor. It evaporates into the air very quickly and dissolves slightly in water. It is highly flammable and is formed from both natural processes and human activities

Breathing very high levels of benzene can result in death, while high levels can cause drowsiness, dizziness, rapid heart rate, headaches, tremors, confusion, and unconsciousness. Eating or drinking foods containing high levels of benzene can cause vomiting, irritation of the stomach, dizziness, sleepiness, convulsions, rapid heart rate, and death. The major effect of benzene from long-term (365 days or longer) exposure is on the blood. Benzene causes harmful effects on the bone marrow and can cause a decrease in red blood cells leading to anemia. It can also cause excessive bleeding and can affect the immune system, increasing the chance for infection. Some women who breathed high levels of benzene for many months had irregular menstrual periods and a decrease in the size of their ovaries. It is not known whether benzene exposure affects the developing fetus in pregnant women or fertility in men. Animal studies have shown low birth weights, delayed bone formation, and bone marrow damage when pregnant animals breathed benzene.

n-Hexane: is a colorless liquid with a similar odor to gasoline. This is a highly flammable chemical and can react vigorously with oxidizing materials. Vapor and air mixtures are explosive. Can be harmful if absorbed through the skin, causing burning or redness to eyes and skin. Inhalation may lead to headache, nausea, vomiting, dizziness or passing out. May also damage nervous system causing numbness or blurred vision. Causes extreme reproductive damage. The PEL is 500 ppm averaged over an 8 hour shift.

VOCs: include all organic compounds (substances made up of predominantly carbon and hydrogen) with boiling temperatures in the range of 50-260 degrees C, excluding pesticides. This means that they are likely to be present as a vapor or gas in normal ambient temperatures. Substances which are included in the VOC category include aliphatic hydrocarbons (such as hexane), aldehydes, aromatic hydrocarbons (such as benzene, toluene, and the xylenes or BTEX), and oxygenated compounds (such as acetone and similar ketones). The term VOC often is used in a legal or regulatory context and in such cases the precise definition is a matter of law.

VOCs are released from oil and gasoline refining, storage and combustion as well as from a wide range of industrial processes. Processes involving fuels, solvents, paints or the use of chemicals are the most significant sources. VOCs may also be emitted from cleaning products, degreasing products, fabrics, carpets, plastic products, glues, printed material, varnishes, wax, disinfectants, and cosmetics.

Typically, VOCs are present in gas or vapor and will enter the body by breathing contaminated air. Higher concentrations of VOCs may occur in areas of poor ventilation.

Site Hazards Checklist			
Weather			
Cold Temperatures	Hot Temperatures	High Winds	Lightning Storms

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Cold Temperatures

Cold stress may occur at any time work is being performed at low ambient temperatures and high velocity winds. Because cold stress is common and has potentially serious illnesses associated with outdoor work during cold seasons, regular monitoring and other preventative measures are vital.

Refer to OP1003-Cold Stress for additional information and mitigation controls.

Hot Temperatures

Heat stress may occur at any time work is being performed at elevated ambient temperatures. Because heat stress is one of the most common and potentially serious illnesses associated with outdoor work during hot seasons, regular monitoring and other preventative measures are vital. Site workers must learn to recognize and treat the various forms of heat stress. The best approach is preventative heat stress management.

H&A employees and their subcontractors should be aware of potential health effects and/or physical hazards of working when there are hot temperatures or a high heat index. Refer OP1015-Heat Stress for a discussion on hot weather hazards.

High Winds

While high winds are commonly associated with severe thunderstorms and hurricanes they may also occur as a result of differences in air pressures, such as when a cold front passes across the area. They can cause downed trees and power lines, and flying debris (such as dust or larger debris), which adds additional risks and could lead to power outages, transportation disruptions, damage to buildings and vehicles, and serious injury.

Wind Advisory are issued for sustained winds 25 to 39 mph and/or gusts to 57 mph. High Wind warnings are issued by the National Weather Service when high wind speeds may pose a hazard or is life threatening. The criteria for this warning will varies by state. The Beaufort Wind Scale is a helpful tool to when dealing with high winds.

Lightning Storms

Where the threat of electrical storms and the hazard of lightning exist staff shall ensure site procedures exist to: (1) detect when lightning is in the near vicinity and when there is a potential for lightning and (2) to notify appropriate site personnel of these conditions and (3) implement protocols to stop work and seek shelter.

The 30-30 Rule states that if time between seeing the lightning and hearing the thunder is less than 30 seconds, you are in danger and must seek shelter. You must also stay indoors for more than 30 minutes after hearing the last clap of thunder.

Biological			
Stinging Insects	Large/Small Mammals	Mosquitoes	Choose an item.

Stinging Insects

Stinging Insects fall into two major groups: Apidae (honeybees and bumblebees) and vespids (wasps, yellow jackets, and hornets). Apidae are docile and usually do not sting unless provoked. The stinger of the honeybee has multiple barbs, which usually detach after a sting. Vespids have few barbs and can inflict multiple stings.

There are several kinds of stinging insects that might be encountered on the project site. Most stings will only result in a temporary injury. However, sometimes the effects can be more severe, even life-threatening depending on where you are stung and what allergies you have. Being stung in the throat area of the neck may cause edema (swelling caused by fluid build-up in the tissues) around the throat and may make breathing difficult.

In rare cases, a severe allergic reaction can occur. This can cause "anaphylaxis" or anaphylactic shock with symptoms appearing immediately or up to 30 minutes later. Symptoms include; Hives, itching and swelling in areas other than the sting site, swollen eyes/eyelids, wheezing, chest tightness, difficulty breathing, hoarse voice, swelling of the tongue, dizziness or sharp drop in blood pressure, shock, unconsciousness or cardiac arrest. Reactions can occur the first time you are stung or with subsequent stings. If you see any signs of reaction, or are unsure, call or have a co-worker call emergency medical services (e.g., 911) right away. Get medical help for stings near the eyes, nose or throat. Stay with the person who has been stung to monitor their reaction.

Staff who are allergic to bee stings are encouraged to inform their staff/project manager. If staff member carries an Epi-pen (i.e., epinephrine autoinjector) they are encouraged to inform their colleagues in case they are stung and are incapable of administering the injection. Examine site for any signs of activity or a hive/nest. If you see several insects flying around, see if they are entering/exiting from the same place. Most will not sting unless startled or attacked. Do not swat, let insects fly away on their own. If you must, walk away slowly or gently "blow" them away. If a nest is disturbed and you hear "wild" buzzing, protect your face with your hands and run from the area immediately. Wear long sleeves, long pants, and closed-toed boots. Wear light colored clothes such as khakis. Avoid brightly colored, patterned, or black clothing. Tie back long hair to avoid bees or wasps from entanglement. Do not wear perfumes, colognes or scented soaps as they contain fragrances that are attractive. If bee or wasp is found in your car, stop and leave windows open.

Small Mammals

Rodents, are the most abundant order of mammals. There are hundreds of species of rats; the most common are the black and brown rat. Other rodents you may encounter are mice, beavers, squirrels, guinea pigs, capybaras and coypu.

The Brown Rat has small ears, blunt nose, and short hair. It is approximately 14-18” long (with tail).

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

They frequently infest garbage/rubbish, slaughterhouses, domestic dwellings, warehouses, and supermarkets. They also frequent any space with an easy meal and potential nesting sites. The Black Rat is identified by its tail, that is always longer than the length from the head to the body. It is also slimmer and more agile than the Brown rat. Its size varies according to its environment and food supply.

The House Mouse has the amazing ability to adapt and can frequently be found in human dwellings. In buildings, mice will live anywhere and difficult to keep out. Mice are omnivorous, they will eat anything. Rats and mice often become a serious problem in cold winter months when they seek food and warmth inside buildings. They may suddenly appear in large numbers when excavation work disturbs their in-ground nesting locations or their food source is changed.

Some major problems caused by rats and mice are contaminating the food they eat with urine and excrement. Gnawing into materials such as paper, wood, or upholstery, to use as nest material. Also gnawing plastic, cement, soft metals such as lead and aluminum, and wiring, which may cause a fire hazard. Occasionally biting people and may kill small animals. They, or the parasites they carry, like fleas, mites and worms, spread many diseases such as salmonella, trichinosis, rat bite fever, hantavirus, Weil's disease, and bubonic plague. They damage ornamental plants by burrowing among the roots or feeding on new growth. They also eat garden vegetables, such as corn and squash. These rodents have been a problem for centuries, because of their incredible ability to survive and are so difficult to eliminate. In addition, they are extremely compatible with human behavior and needs.

Avoid contact with rodents, if possible. Avoid contact with rodent excrement. Do not eat food or water that may have encountered rodent excrement. If exposed, wash hands and avoid touching your face with your hands.

Mosquitos

Work outdoors with temperatures above freezing will likely bring staff into contact with mosquitos. There are a variety of mosquito species that can transmit a range of diseases. Birds act as reservoirs for the viruses that can be collected by the mosquito and transmitted to a person. Majority of mosquitos are mainly a nuisance but staff need to take appropriate precautions to minimize the potential transmission of a virus that can result in one of the following diseases: West Nile, Eastern Equine Encephalitides and Western Encephalitides. Knowing some key steps that can minimize the risk of mosquito bites is, therefore, important in reducing the risks. Workers working outdoors should be aware that the use of PPE techniques is essential to preventing mosquito bites especially when working at sites where mosquitoes may be active and biting.

Use repellents containing DEET, picaridin, IR3535, and some oil of lemon eucalyptus and para-menthane-diol products provide longer-lasting protection. To optimize safety and effectiveness, repellents should be used according to the label instructions. Cover as much of your skin as possible by wearing shirts with long-sleeves, long pants, and socks whenever possible. Avoid use of perfumes and colognes when working outdoors during peak times when mosquitoes may be active; mosquitoes may be more attracted to individuals wearing perfumes and colognes.

Location/Terrain			
Slip/Trip/Falls	Economically Depressed	SIMOPS	Public Rd/Right of Way

Slips, Trips & Falls

Slip and trip injuries are the most frequent injuries to workers. Statistics show most falls happen on the same level resulting from slips and trips. Both slips and trips result from unintended or unexpected change in the contact between the feet and the ground or walking surface. Good housekeeping, quality of walking surfaces (flooring), awareness of surroundings, selection of proper footwear, and appropriate pace of walking are critical for preventing fall accidents.

Site workers will be walking on a variety of irregular surfaces, that may affect their balance. Extra care must be taken to walk cautiously near rivers because the bottom of the riverbed maybe slick and may not be visible. Rocks, gradient changes, sandy bottoms, and debris may be present but not observable.

Take your time and pay attention to where you are going. Adjust your stride to a pace that is suitable for the walking surface and the tasks you are doing. Check the work area to identify hazards - beware of trip hazards such as wet floors, slippery floors, and uneven surfaces or terrain. Establish and utilize a pathway free of slip and trip hazards. Choose a safer walking route. Carry loads you can see over. Keep work areas clean and free of clutter. Communicate hazards to on-site personnel and remove hazards as appropriate.

Economically Depressed Areas

Economically depressed areas may have high crime rates. Projects involving work in and around inactive industrial sites may bring staff into contact with indigent and homeless persons. Staff could be subjected to crime that includes but may not be limited to thievery, vandalism, and violence. Prior to the start of work staff need to understand the work locations and the potential for exposure to low level crime.

Staff members should never work alone in these areas. A buddy system is required. Conduct during daylight hours. Secure equipment and vehicles. If warranted, contact the local police department for a security detail. Leave the work area immediately and contact the local authorities if staff members feel threatened or are threatened.

SIMOPS

SIMOPS are described as the potential class of activities which could bring about an undesired event or set of circumstances, e.g., safety, environment, damage to assets, schedule, commercial, financial, etc. SIMOPS are defined as performing two or more operations concurrently.

SIMOPS should be identified at an early stage before operations commence to understand issues such as schedule and physical clashes, maintenance activities, failure impacts, interferences between vessels, contracts and third part interfaces and environmental impacts.

Coordinate project with site activities. Identify and understand the hazards associated with the host and client's activities. Integrate site emergency response protocols where appropriate and

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

communicate to all project staff. Integrate site communication protocols and communicate to all project staff.

Public Right of Way

H&A staff and their subcontractors conducting work on public roads and/or right of ways can be exposed to vehicular traffic and expose the public to the hazards of the job site. Where a hazard exists to site workers because of traffic or haulage conditions at work sites that encroach public streets or highways, a system of traffic controls in conformance with the Manual on Uniform Traffic Control Devices for Streets and Highways (MUTCD), or state program, is required. A Temporary Traffic Control Plan (TCP) describes traffic controls to be used for facilitating vehicle and pedestrian traffic through a temporary traffic control zone TCPs are required to provide for worker protection and safe passage of traffic through and around job sites with as little inconvenience and delay as possible.

The plan may range in scope from being very detailed, to merely referencing typical drawings contained in the MUTCD. The degree of detail in the TCP depends entirely on the complexity of the situation, and TCP's should be prepared by persons knowledgeable about the fundamental principles of temporary traffic control and the work activities to be performed.

H&A Project Managers or their subcontractors need to establish appropriate control measures and obtain any permits when project work is on or encroaches public roadways. You may need flaggers or police details. Cease work and notify the field supervisor immediately if any conditions are such that safety is jeopardized. Utilize protective vehicles whenever appropriate or position equipment so in between the work and oncoming traffic.

Task Hazard Summary

Task 1 - Underground Utility Clearance

Ground disturbance activities such as excavating or drilling have the potential to contact underground utilities and may be considered a hazardous activity and a permit to work may be required. Once the H&A Project Manager has identified the work zone and the areas designated for ground disturbance the PM or designee is required to delineate the area with either white paint or flags so that the appropriate agencies know which area to check for their respective utilities. Haley & Aldrich staff members must ensure that permission has been gained from the property owner to access the property prior to site entry and before marking any proposed exploration or drilling locations.

The Project Manager shall verify that the proposed dig or drill zones are adequately marked or staked prior to the locators site visit, and that the appropriate Line Location Organization/ Contractor has been notified (a minimum of 72 business hours in advance) of all planned ground disturbance activities and a request for line location has been registered with the applicable One Call or dial Before You Dig organization when applicable. Personnel that are required to mark the area need to identify and understand the hazards associated with the project area which can range from a public roadway to a greenspace in a remote location.

See OP1020 Work Near Utilities.

Task 2 – Drilling

Drilling is conducted for a range of services that can include but are not limited to: soil characterization, environmental investigation, well installation, and ore exploration. Familiarity with basic drilling safety is an essential component of all drilling projects. Potential hazards related to drilling operations include, but are not limited to encountering underground or overhead utilities, traffic and heavy equipment, hoisting heavy tools, steel impacts, open rotation entanglement, and the planned or unexpected encountering of toxic or hazardous substances. While staff members do not operate drilling equipment, they may work in close proximity to operating drilling equipment and may be exposed to many of the same hazards as the drilling subcontractor. It is imperative that staff are aware of emergency stops and establish communication protocols with the drillers prior to the start of work.

See OP 1002 Drilling Safety for more information.

Task 3 – Geophysical Bedrock Surveying

Geophysical bedrock surveying will include the collection of the following data using downhole geophysical methods: fluid temperature, fluid conductivity, caliper, optical televiewer (OTV), acoustic televiewer (ATV), heat pulse flow meter (HPFM) under ambient conditions, and HPMF under pumping conditions.

To safely acquire borehole geophysical data, casing must be installed through the overburden and weathered bedrock and into competent bedrock. Additionally, the inner diameter of the casing must be

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

at least as large as the diameter of the open bedrock. Pumps, cables, tubing, FLUTe liners, and any other obstructions must be removed from the borehole prior to logging. Newly drilled boreholes should be flushed with clean water from the bottom up and left undisturbed overnight or longer after drilling or other disturbances (packer testing, groundwater sampling, well development, etc.). A water level meter should be used to check total depths and verify that boreholes are not obstructed prior to downhole geophysical logging.

Potential hazards related to geophysical bedrock surveying include but are not limited to traffic control, SIMOPS, hoisting heavy tools/sondes, ergonomics, slips/trips/falls, and exposure to groundwater containing COCs.

Task 4 – Water Sampling

Environmental water sampling could include activities such as groundwater sampling from permanent or temporary wells, or surface water sampling from streams, rivers, lakes, ponds, lagoons, and surface impoundments.

Sampling tasks could involve uncapping, purging (pumping water out of the well), and sampling, and/or monitoring, new or existing monitoring wells. A mechanical pump may be used to purge the wells and can be hand-, gas-, or electric-operated. Water samples taken from the wells are then placed in containers and shipped to an analytical laboratory for analysis. The physical hazards of these operations are primarily associated with the collection methods and procedures used.

When sampling bodies of water containing known or suspected hazardous substances, adequate precautions must be taken to ensure the safety of sampling personnel. The sampling team member collecting the sample should not get too close to the edge, where ground failure or slips, trips or falls may cause him/her to lose his/her balance. The person performing the sampling should have fall restraint or protection for the task. When conducting sampling from a boat in an impoundment or flowing waters, appropriate vessel safety procedures should be followed. Avoid lifting heavy coolers with back muscles; instead, use ergonomic lifting techniques, team lift or mechanical lifts. Wear proper gloves, such as when handling sample containers to avoid contacting any materials that may have spilled out of the sample containers.

Inhalation and absorption of COCs are the primary routes of entry associated with water sampling, due to the manipulation of sample media and equipment, manual transfer of media into sample containers, and proximity of operations to the breathing zone. During this project, several different groundwater sampling methodologies may be used based on equipment accessibility and the types of materials to be sampled. These sampling methods may include hand or mechanical bailing. The primary hazards associated with these specific sampling procedures are not potentially serious; however, other operations in the area or the conditions under which samples must be collected may present chemical and physical hazards. The hazards directly associated with groundwater sampling procedures are generally limited to strains or sprains from hand bailing, and potential eye hazards. Exposure to water containing COCs is also possible. All tools and equipment that will be used at the site must be intrinsically safe (electronics and electrical equipment) and non-sparking or explosion-proof (hand tools).

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Task 4 – Soil Vapor

Soil gas sampling is employed as an indirect indicator of contamination in soil or groundwater particularly over and around landfill waste sites, or groundwater plumes. Soil gas sampling points can be installed manually using a slam bar or power driven mechanical devices (e.g., demolition hammer or Geoprobe) may be used based on site conditions (i.e., pavement, frozen ground, very dense clays, etc.). Soil gas samples can be drawn through the probe itself, or through Teflon tubing inserted through the probe and attached to the probe point. Samples are collected and analyzed as described below. Other field air monitoring devices, such as the Combustible Gas Indicator (CGI) and the Organic Vapor Analyzer (OVA), can also be used, depending on specific site conditions.

Because the sample is being drawn from underground, and no contamination is introduced into the breathing zone, soil gas sampling usually occurs in Level D. Nevertheless, ambient air should be constantly monitored to obtain background and breathing zone readings during the sampling procedure in the event the seal around the sampling point is breached. As long as the levels in ambient air do not rise above background, no upgrade of the level of protection is needed. Also, an underground utility search must be performed prior to sampling.

Summary of Physical Hazards & Controls

Hand and Power Tools

Hand and power tools can expose staff to a wide range of hazards depending upon the tool used. Hazards can include but are not limited to: falling, flying, abrasive, and splashing objects, or harmful dusts, fumes, mists, vapors, or gases.

Serious accidents often occur before steps are taken to evaluate and avoid or eliminate tool-related hazards. Staff must recognize the hazards associated with the different types of tools and the safety precautions necessary to prevent those hazards.

See OP 1026 Hand and Power Tools for more information.

Controls

- Keep all tools in good condition with regular maintenance.
- Use the right tool for the job. Do not use a tool for a task which it was not designed for.
- Examine each tool for damage before use and do not use damaged tools.
- For tools that are damaged or defective, red tag the tool and take out of service.
- Operate tools per the manufacturers' instructions.
- Use the appropriate personal protective equipment.
- All electrically powered tools will be connected through a ground fault circuit interrupter (GFCI).
- All personnel must be trained on the use of the tool they are utilizing.

Heavy Equipment

Staff must be careful and alert when working around heavy equipment, failure or breakage and limited visibility can lead to accidents and worker injury. Heavy equipment such as cranes, drills, haul trucks, or other can fail during operation increasing chances of worker injury. Equipment of this nature shall be visually inspected and checked for proper working order prior to commencement of field work. Those operating heavy equipment must meet all requirements to operate the equipment. Haley & Aldrich, Inc. staff that supervise projects or are associated with high risk projects that involve digging or drilling should use due diligence when working with a construction firm.

See OP1052 Heavy Equipment for additional information.

Controls

- Only approach equipment once you have confirmed contact with the operator (e.g., operator places the bucket on the ground).

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

- Always maintain visual contact with operators and keep out of the strike zone whenever possible.
- Always be alert to the position of the equipment around you.
- Always approach heavy equipment with an awareness of the swing radius and traffic routes of all equipment and never go beneath a hoisted load.
- Avoid fumes created by heavy equipment exhaust.

Underground Utilities

Various forms of underground/overhead utility lines or conveyance pipes may be encountered during site activities. Prior to the start of intrusive operations, utility clearance is mandated, as well as obtaining authorization from all concerned public utility department offices. Should intrusive operations cause equipment to come into contact with utility lines, the SHSO, Project Manager, and Regional H&S Manager shall be notified immediately. Work will be suspended until the client and applicable utility agency is contacted and the appropriate actions for the situation can be addressed.

See OP1020 Work Near Utilities for complete information.

Controls

- Obtain as-built drawings for the areas being investigated from the property owner;
- Visually review each proposed soil boring locations with the property owner or knowledgeable site representative;
- Perform a geophysical survey to locate utilities;
- Hire a private line locating firm to determine location of utility lines that are present at the property;
- Identifying a no-drill or dig zone;
- Hand dig or use vacuum excavation in the proposed ground disturbance locations if insufficient data is unavailable to accurately determine the location of the utility lines.

Overhead Utilities

When work is undertaken near overhead electrical lines, the distance maintained from those lines shall also meet the minimum distances for electrical hazards as defined in Table 1 below. Note: utilities other than overhead electrical utilities need to be considered when performing work.

Table 1 Minimal Radial Clearance Distances *

Normal System Voltage Kilovolts (kV)	Required Minimal Radial Clearance Distance (feet/meters)
0 – 50	10/3.05
51 – 100	12/3.66
101 – 200	15/4.57
201 – 300	10/6.1
301 – 500	25/7.62
501 – 750	35/10.67
750 - 1000	45/13.72

* For those locations where the utility has specified more stringent safe distances, those distances shall be observed.

Controls

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

- To prevent damage, guy wires shall be visibly marked and work barriers or spotters provided in those areas where work is being conducted.
    - When working around guy wires, the minimum radial clearance distances for electrical power shall be observed.
- The PM shall research and determine if the local, responsible utility or client has more restrictive requirements than those stated in Table 1.
- If equipment cannot be positioned in accordance with the requirements established in Table 1 the lines need to be de-energized.

Noise

Working around heavy equipment (drill rigs, excavators, etc.) often creates excessive noise. The effects of noise include physical damage to the ear, pain, and temporary and/or permanent hearing loss. Workers can also be startled, annoyed, or distracted by noise during critical activities. Noise monitoring data that indicates that working within 25 feet of operating heavy equipment result in exposure to hazardous levels of noise (levels greater than 85 dBA).

See OP 1031 Hearing Conservation for additional information.

Controls

- Personnel are required to use hearing protection (earplugs or earmuffs) within 25 feet of any operating piece of heavy equipment.
- Limit the amount of time spent at a noise source.
- Move to a quiet area to gain relief from hazardous noise sources.
- Increase the distance from the noise source to reduce exposure.

Ground Disturbance

Ground disturbance is defined as any activity disturbing the ground. Ground disturbance activities include, but are not limited to, excavating, trenching, drilling (either mechanically or by hand), digging, plowing, grading, tunneling and pounding posts or stakes.

Because of the potential hazards associated with striking an underground utility or structure, the operating procedure for underground utility clearance shall be followed prior to performing any ground disturbance activities.

See OP1020 Working Near Utilities

Controls

Prior to performing ground disturbance activities, the following requirements should be applied:

- Confirm all approvals and agreements (as applicable) either verbal or written have been obtained.
- Request for line location has been registered with the applicable One-Call or Dial Before You Dig organization, when applicable.
    - Whenever possible, ground disturbance areas should be adequately marked or staked prior to the utility locators site visit.
- Notification to underground facility operator/owner(s) that may not be associated with any known public notification systems such as the One-Call Program regarding the intent to cause ground disturbance within the search zone.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

- Notifications to landowners and/or tenant, where deemed reasonable and practicable.
- Proximity and Common Right of Way Agreements shall be checked if the line locator information is inconclusive.

Line of Fire

Line of fire refers to the path an object will travel. Examples of line of fire situations typically observed on project sites include lifting/hoisting, lines under tension, objects that can fall or roll, pressurized objects or lines, springs or stored energy, work overhead, vehicles and heavy equipment.

Controls

- Never walk under a suspended load.
- Be aware and stay clear of tensioned lines such as cable, chain and rope.
- Be cautious of torque stresses that drilling equipment and truck augers can generate. Equipment can rotate unexpectedly long after applied torque force has been stopped.
- Springs and other items can release tremendous energy if compressed and suddenly released
- Items under tension and pressure can release tremendous energy if it is suddenly released.
- Not all objects may be overhead; be especially mindful of top-heavy items and items being transported by forklift or flatbed.
- Secure objects that can roll such as tools, cylinders, and pipes.
- Stay clear of soil cuttings or soil stockpiles generated during drilling operations and excavations, be aware that chunks of soil, rocks, and debris can fall or roll.

Manual Lifting/Moving

Most materials associated with investigation, remedial, or construction-related activities are moved by hand. The human body is subject to damage in the forms of back injury, muscle strains, and hernia if caution is not observed in the handling process.

Controls

- Under no circumstances should any one person lift more than 49 pounds unassisted.
- Always push, not pull, the object when possible.
- Size up the load before lifting. If it is heavy or clumsy, get a mechanical aid or help from a worker.
- Bend the knees; it is the single most important aspect of lifting.
- When performing the lift:
    - Place your feet close to the object and center yourself over the load.
    - Get a good handhold.
    - Lift straight up, smoothly and let your legs do the work, not your back!
    - Avoid overreaching or stretching to pick up or set down a load.
    - Do not twist or turn your body once you have made the lift.
    - Make sure beforehand that you have a clear path to carry the load.
    - Set the load down properly.

Sharp Objects

Workers who handle sharp edged objects like sheets of steel or glass are at risk of cuts. Workers who handle sharp edged objects are also at risk of cuts. Injuries may occur to hands, fingers, or legs when they are in the way of the blade, when the blade slips, or if an open blade is handled unexpectedly.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Other hazards at job sites include stepping on sharp objects (e.g. wooden boards with protruding nails, sharp work-tools, chisels, etc.) and colliding with sharp and/or protruding objects.

Controls
Always be alert when handling sharps. Never look away or become distracted while handling sharp objects. Use caution when working with tools; use right tool for the job. Keep tools sharp, dull blades are a safety hazard, requiring more force to make cuts which can lead to tool slippage. Wear appropriate PPE and do not handle sharp objects (i.e., broken glass) with bare hands. Use mechanical devices, when possible. Stay away from building debris; avoid handling site debris or placing your hand where you cannot see. Watch out for barbed wire and electrical fences; cover with a car mat or equivalent to cross or walk around; use the buddy system to avoid entanglement; wear gloves. Do not leave unprotected sharps unattended. Use protective shields, cases, styrofoam blocks, etc. Pass a sharp by handing it over carefully by the handle with the blade down or retracted. Fixed open blades are prohibited. Always cut away from the body, making several passes when cutting thicker materials. Make sure blades are fitted properly into the knife. Never cut items with a blade or other sharp object on your lap. Never try to catch a blade or cutting tool that is falling.

Slippery Surfaces

Both slips and trips result from unintended or unexpected change in the contact between the feet and ground or walking surface. Good housekeeping, quality of walking surfaces, selection of proper footwear, and appropriate pace of walking are critical for preventing fall accidents. Slips happen where there is too little friction or traction between the footwear and walking surface.

Common causes of slips are wet or oily surfaces, spills, weather hazards, loose unanchored rugs or mats and flooring or other walking surfaces that do not have same degree of traction in all areas.

Weather-related slips and falls become a serious hazard as winter conditions often make for wet or icy surfaces outdoors. Even wet organic material or mud can create hazardous walking conditions. Spills and leaks can also lead to slips and falls.

Controls
- Evaluate the work area to identify any conditions that may pose a slip hazard.
- Address any spills, drips or leaks immediately.
- Mark areas where slippery conditions exist.
- Select proper footwear or enhance traction with additional PPE.
- Where conditions are uncertain or environmental conditions result in slippery surfaces walk slowly, take small steps, and slide feet on wet or slippery surfaces.

Rotating Equipment

Exposure to rotating parts can occur when working near a drilling rig, or other similar equipment. All rotating parts should be covered with guards to prevent access by workers. When performing maintenance activities that require the rotating parts to be exposed, workers should not allow loose clothing, hands, or tools to approach the rotating parts. Energy isolation procedures must be followed, and guards must be replaced as soon as possible after completing the maintenance task.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Operation of drilling equipment also creates hazards associated with pinch points and rotating equipment. These are hazards where the body and extremities, especially the hands, can be caught in moving equipment and crushed.

Controls

- Evaluate work procedures to avoid placing the body and extremities in the path of rotating equipment and tools to avoid being struck by moving equipment, tools and machinery.
- Evaluate equipment and tool use to identify pinch points and develop procedures to avoid placing body parts in a position where they can be caught in moving equipment, tools and machinery.
- Follow energy isolation procedures if required
- Do not work near rotating equipment with long loose hair, loose clothing or jewelry.

Ergonomics

Most Work-related Musculoskeletal Disorders (WMSDs) are caused by Ergonomic Stressors. Ergonomic Stressors are caused by poor workplace practices and/or insufficient design, which may present ergonomic risk factors. These stressors include, but not limited to, repetition, force, extreme postures, static postures, quick motions, contact pressure, vibration, and cold temperatures.

WMSDs are injuries to the musculoskeletal system, which involves bones, muscles, tendons, ligaments, and other tissues in the system. Symptoms may include numbness, tightness, tingling, swelling, pain, stiffness, fatigue, and/or redness. WMSD are usually caused by one or more Ergonomic Stressors. There may be individual differences in susceptibility and symptoms among employees performing similar tasks. Any symptoms are to be taken seriously and reported immediately.

See OP1053 Ergonomics for more information.

Controls

- Ensure workstations are ergonomically correct so bad posture is not required to complete tasks.
- Take periodic breaks over the course of the day.
- Stretch during break times.
- Break up tasks that require repetitive motion.
- Contact Corporate H&S with any ergonomic concerns

Congested Areas

Working in congested areas can expose both workers and the public to a wide range of hazards depending upon the specific activities taking place. Staff Members need to understand the work scope, work areas, equipment on-site, and internal traffic patterns to minimize or eliminate exposure potential.

Controls

- Provide barricades, fencing, warning signs/signals and adequate lighting to protect people while working in or around congested areas.
- Vehicles and heavy equipment with restricted views to the rear should have functioning back-up alarms that are audible above the surrounding noise levels. Whenever possible, use a signaler to assist heavy equipment operators and/or drivers in backing up or maneuvering in congested areas.
- Lay out traffic control patterns to eliminate excessive congestion.
- Workers in congested areas should always wear high visibility clothing.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

- Be aware of Line of Fire hazards when performing work activities in congested areas.
- Hazards associated with SIMOPs should be discussed daily at Tailgate Safety Meetings.

Generated Waste

Activities on environmental sites may generate waste that requires regulated handling and disposal. Excess sample solids, decontamination materials, poly sheeting, used PPE, etc. that are determined to be free of contamination through field or laboratory screening can usually be disposed into client-approved, on-site trash receptacles. Uncontaminated wash water may be discarded onto the ground surface away from surface water bodies in areas where infiltration can occur. Contaminated materials must be segregated into liquids or solids and drummed separately for off-site disposal.

Controls

- Manage waste properly through good work practices.
- Collect, store, containerize waste, and dispose of it properly.
- All wastes generated shall be containerized in an appropriate container (i.e. open or closed top 55-gallon drum, roll-off container, poly tote, cardboard box, etc.) as directed by the PM.
- Containers should be inspected for damages or defects
- Waste containers should be appropriately labeled indicating the contents, date the container was filled, owner of the material (including address) and any unique identification number, if necessary.
- Upon completion of filling the waste container, the container should be inspected for leaks and an appropriate seal.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

7. DECONTAMINATION & DISPOSAL METHODS

All possible and necessary steps shall be taken to reduce or minimize contact with chemicals and contaminated/impacted materials while performing field activities (e.g., avoid sitting or leaning on, walking through, dragging equipment through or over, tracking, or splashing potential or known contaminated/impacted materials.)

Personal Hygiene Safeguards

The following minimum personal hygiene safeguards shall be adhered to:

1. No smoking or tobacco products in any project work areas.
2. No eating or drinking in the exclusion zone.
3. It is required that personnel present on site wash hands before eating, smoking, taking medication, chewing gum/tobacco, using the restroom, or applying cosmetics and before leaving the site for the day.

It is recommended that personnel present on site shower or bathe at home at the end of each day of working on the site.

Decontamination Supplies

All decontamination should be conducted at the project site in designated zones or as dictated by Client requirements. Decontamination should not be performed on Haley & Aldrich owned or leased premises.

Location of Decontamination Station

Decontamination will occur at each drilling location or well/vapor point location for sampling.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Standard Personal Decontamination Procedures

Outer gloves and boots should be decontaminated periodically as necessary and at the end of the day. Brush off solids with a hard brush and clean with soap and water or other appropriate cleaner whenever possible. Remove inner gloves carefully by turning them inside out during removal. Wash hands and forearms frequently. It is good practice to wear work-designated clothing while on-site which can be removed as soon as possible. Non-disposable overalls and outer work clothing should be bagged onsite prior to laundering. If gross contamination is encountered on-site contact the Project Manager and Field Safety Manager to discuss proper decontamination procedures.

The steps required for decontamination will depend upon the degree and type of contamination but will generally follow the sequence below.

1. Remove and wipe clean hard hat
2. Rinse boots and gloves of gross contamination
3. Scrub boots and gloves clean
4. Rinse boots and gloves
5. Remove outer boots (if applicable)
6. Remove outer gloves (if applicable)
7. Remove Tyvek coverall (if applicable)
8. Remove respirator, wipe clean and store (if applicable)
9. Remove inner gloves (if outer gloves were used)

PPE that is not grossly contaminated can be bagged and disposed in regular trash receptacles.

Small Equipment Decontamination

Pretreatment of heavily contaminated equipment may be conducted as necessary:

1. Remove gross contamination using a brush or wiping with a paper towel
2. Soak in a solution of Alconox and water (if possible)
3. Wipe off excess contamination with a paper towel

Standard decontamination procedure:

4. Wash using a solution of Alconox and water
5. Rinse with potable water
6. Rinse with methanol (or equivalent)
7. Rinse with distilled/deionized water

Inspect the equipment for any remaining contamination and repeat as necessary.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Disposal Methods

Procedures for disposal of contaminated materials, decontamination waste, and single use personal protective equipment shall meet applicable client, locate, State, and Federal requirements.

Disposal of Single Use Personal Protective Equipment

PPE that is not grossly contaminated can be bagged and disposed in regular trash receptacles. PPE that is grossly contaminated must be bagged (sealed and field personnel should communicate with the Project Manager to determine proper disposal.

Standard Disposal Methods for Contaminated Materials

- Excess sample solids, decontamination materials, rags, brushes, poly-sheeting, etc. that are determined to be free of contamination through field screening can usually be disposed into client-approved, on-site trash receptacles.
- Uncontaminated wash water may be discarded onto the ground surface away from surface water bodies in areas where infiltration can occur.
- Contaminated materials must be segregated into liquids or solids and containerized separately for offsite disposal.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

8. SITE CONTROL

The overall purpose of site control is to minimize potential contamination of workers, protect the public from the site's hazards, and prevent vandalism. Site control is especially important in emergency situations. The degree of site control necessary depends on site characteristics, site size, and the surrounding community. The following information identifies the elements used to control the activities and movements of people and equipment at the project site.

Communication

Internal
Haley & Aldrich site personnel will communicate with other Haley & Aldrich staff member and/or subcontractors or contractors with:

Face to Face Communication

External
H&S site personnel will use the following means to communicate with off-site personnel or emergency services.

Cellular Phones

Visitors

Project Site
Will visitors be required to check-in prior to accessing the project site?

Yes

Visitor Access
Authorized visitors that require access to the project site need to be provided with known information with respect to the site operations and hazards as applicable to the purpose of their site visit. Authorized visitors must have the required PPE and appropriate training to access the project site.

Site Safety Officer is responsible for facilitating authorized visitor access.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

9. SITE SPECIFIC EMERGENCY RESPONSE PLAN

The Emergency Response Plan addresses potential emergencies at this site, procedures for responding to these emergencies, roles, responsibilities during emergency response, and training. This section also describes the provisions this project has made to coordinate its emergency response with other contractors onsite and with offsite emergency response organizations (as applicable).

During the development of this emergency response plan, local, state, and federal agency disaster, fire, and emergency response organizations were consulted (if required) to ensure that this plan is compatible and integrated with plans of those organizations. Documentation of the dates of these consultations are the names of individuals contacted is kept on file and available upon request.

The site has been evaluated for potential emergency occurrences, based on site hazards, and the major categories of emergencies that could occur during project work are:

- Fire(s)/Combustion
- Hazardous Material Event
- Medical Emergency
- Natural Disaster

A detailed list of emergency types and response actions are summarized in Table X below. Prior to the start of work, the SSO will update the table with any additional site-specific information regarding evacuations, muster points, or additional emergency procedures. The SSO will establish evacuation routes and assembly areas for the Site. All personnel entering the Site will be informed of these routes and assembly areas.

Pre-Emergency Planning

Before the start of field activities, the Project Manager will ensure preparation has been made in anticipation of emergencies. Preparatory actions include the following:

Meeting with the subcontractor/and or client concerning the emergency procedures in the event a person is injured. Appropriate actions for specific scenarios will be reviewed. These scenarios will be discussed, and responses determined before the sampling event commences. A form of emergency communication (i.e.; Cell phone, Air horn, etc.) between the Project Manager and subcontractor and/or client will be agreed on before the work commences.

A training session (i.e., “safety meeting”) given by the Project Manager or their designee informing all field personnel of emergency procedures, locations of emergency equipment and their use, and proper evacuation procedures.

Ensuring field personnel are aware of the existence of the emergency response HASP and ensuring a copy of the HASP accompanies the field team(s).

8-Hour Supervisor Training

On-site managers and supervisors directly responsible for, or who supervise staff members engaged in hazardous waste operations, should have eight additional hours of Supervisor training in accordance with 29 CFR 1910.120. Supervisor Training includes, but is not limited to, accident reporting/investigation, regulatory compliance, work practice observations, auditing, and emergency response procedures.

Additional Training for Specific Projects

Haley & Aldrich personnel will ensure their personnel have received additional training on specific instrumentation, equipment, confined space entry, construction hazards, etc., as necessary to perform their duties. This specialized training will be provided to personnel before engaging in the specific work activities including:

requirements at all times. Unauthorized visitors, and visitors not meeting the specified qualifications, will not be permitted within established controlled work areas.

SUBCONTRACTOR PERSONNEL

Subcontractor Site Representative

Each contractor and subcontractor shall designate a Contractor Site Representative. The Contractor Site Representative will interface directly with Insert Staff Name Here, the Subcontractor Site Safety Manager, with regards to all areas that relate to this safety plan and safety performance of work conducted by the contractor and/or subcontractor workforce. Contractor Site Representatives for this site are listed in the Contact Summary Table at the beginning of the Safety Plan.

Subcontractor Site Safety Manager

Each contractor / subcontractor will provide a qualified representative who will act as their Site Safety Manager (Sub-SSM). This person will be responsible for the planning, coordination, and safe execution of subcontractor tasks, including preparation of job hazard analyses (JHA), performing daily safety planning, and coordinating directly with the Haley & Aldrich SHSO for other site safety activities. This person will play a lead role in safety planning for Subcontractor tasks, and in ensuring that all their employees and lower tier subcontractors are in adherence with applicable local, state, and/or federal regulations, and/or industry and project specific safety standards or best management practices.

General contractors / subcontractors are responsible for preparing a site-specific HASP and/or other task specific safety documents (e.g., JHAs), which are, at a minimum, in compliance with local, state, and/or federal other regulations, and/or industry and project specific safety standards or best management practices. The contractor(s)/subcontractor(s) safety documentation will be at least as stringent as the health and safety requirements of the Haley & Aldrich Project specific HASP.

Safety requirements include, but are not limited to: legal requirements, contractual obligations and industry best practices. Contractors/subcontractors will identify a site safety representative during times when contractor/subcontractor personnel are on the Site. All contractor/subcontractor personnel will undergo a field safety orientation conducted by the Haley & Aldrich SHSO and/or PM prior to commencing site work activities. All contractors / subcontractors will participate in Haley & Aldrich site safety meetings and their personnel will be subject to training and monitoring requirements identified in this Safety Plan. Conditions for safe storage, including any incompatibilities: Store in a tightly-closed container when not in use. Store in a cool, dry, well-ventilated area away from incompatible substances. Keep away from sources of ignition.

8. Exposure Controls/Personal Protection

Exposure limits:

OSHA PEL: TWA 350 ppm (1900 mg/m3)
NIOSH REL: C 350 ppm (1900 mg/m3) [15-minute]. See Appendix C (Chloroethanes).
ACGIH TLV: Not available.

Appropriate engineering controls: Avoid contact with skin, eyes, and clothing. Wash hands before breaks and immediately after handling the product. Facilities storing or utilizing this material should be equipped with an eyewash fountain. Use adequate general and local exhaust ventilation to keep airborne concentrations low.

Personal protection

Eyes: Based on an evaluation of the eye or face hazards present, wear chemical splash-resistant safety glasses or goggles with side protection. A face shield may be appropriate in some workplaces. Use eyewear tested and approved under appropriate government standards such as OSHA 29 CFR 1910.133 or EU EN166.

Hands: Wear gloves selected based on an evaluation of the possible hazards to hands and skin, the duration of use, the physical conditions of the workplace, and the chemical resistance and physical properties of the glove material.

Skin and body: Protective clothing must be selected based on the hazards present in the workplace, the physical environment, the duration of exposure, and other factors. No fabric can provide protection against all potential hazards; therefore it is important to select the appropriate protective clothing for each specific hazard. At the minimum, wear a laboratory coat and close-toed footwear.

Respiratory: Respirators are not a substitute for accepted engineering control measures such as enclosure or confinement of the operation, general and local ventilation, and substitution of less toxic materials. When respiratory personal protective equipment is appropriate based on an assessment of respiratory hazards in the workplace, use a NIOSH- or CEN-certified respirator.

SECTION 4: First aid measures

Description of first aid measures

If inhaled

Fresh air, rest. Refer for medical attention.

Following skin contact

ON FROSTBITE: rinse with plenty of water, do NOT remove clothes.

Following eye contact

First rinse with plenty of water for several minutes (remove contact lenses if easily possible), then refer for medical attention.

Following ingestion

Rinse mouth with water. Do not induce vomiting. Never give anything by mouth to an unconscious person. Call a doctor or Poison Control Center immediately.

Most important symptoms and effects, both acute and delayed

INHALATION: high concentrations cause dizziness, anesthesia, lung irritation. SKIN: may cause frostbite; phenol inhibitor may be absorbed through skin if large amounts of liquid evaporate. (USCG, 1999)

Indication of any immediate medical attention and special treatment needed

Immediate first aid: Ensure that adequate decontamination has been carried out. If patient is not breathing, start artificial respiration, preferably with a demand-valve resuscitator, bag-valve-mask device, or pocket mask, as trained. Perform CPR as necessary. Immediately flush contaminated eyes with gently flowing water. Do not induce vomiting. If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain an open airway and prevent aspiration. Keep patient quiet and maintain normal body temperature. Obtain medical attention. Carbon tetrachloride and related compounds

SECTION 5: Firefighting measures

Extinguishing media

If material on fire or involved in fire: Do not extinguish fire unless flow can be stopped. Use water in flooding quantities as fog. Cool all affected containers with flooding quantities of water. Apply water from as far a distance as possible.

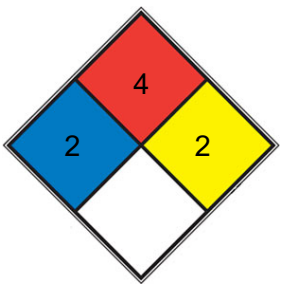
Specific Hazards Arising from the Chemical

Special Hazards of Combustion Products: Forms highly toxic combustion products such as hydrogen chloride, phosgenic, and carbon monoxide. Behavior in Fire: Container may explode in fire. Gas is heavier than air and may travel considerable distance to a source of ignition and flash back. (USCG, 1999)

Advice for firefighters

Shut off supply; if not possible and no risk to surroundings, let the fire burn itself out. In other cases extinguish with powder, carbon dioxide, water spray. See Notes. In case of fire: keep cylinder cool by spraying with water. Combat fire from a sheltered position.

NFPA 704



HEALTH 2 Intense or continued but not chronic exposure could cause temporary incapacitation or possible residual injury (e.g. diethyl

			ether, ammonium phosphate, iodine)
■	FIRE	4	Will rapidly or completely vaporize at normal atmospheric pressure and temperature, or is readily dispersed in air and will burn readily. Includes pyrophoric substances. Flash point below room temperature at 22.8 °C (73 °F). (e.g. acetylene, propane, hydrogen gas)
■	REACT	2	Undergoes violent chemical change at elevated temperatures and pressures, reacts violently with water, or may form explosive mixtures with water (e.g. white phosphorus, potassium, sodium)
□	SPEC. HAZ.

SECTION 10: Stability and reactivity

Reactivity

NIOSH considers vinyl chloride to be a potential occupational carcinogen.
The substance can form explosive peroxides under specific circumstances. The substance readily polymerizes due to heating and under the influence of air, light and on contact with a catalyst, strong oxidizing agents and metals such as copper and aluminium. This generates fire or explosion hazard. Decomposes on burning. This produces toxic and corrosive fumes of hydrogen chloride and phosgene. Attacks iron and steel in the presence of moisture.
Decomposes on heating. This produces toxic fumes including hydrogen chloride and phosgene. Reacts violently with fluorine.

Chemical stability

May produce peroxides.

Possibility of hazardous reactions

Dangerous, when exposed to heat or flame, or oxidizers. Large fires of this material are practically inextinguishable.The gas is heavier than air and may travel along the ground; distant ignition possible. Vapours are uninhibited and may polymerize, causing blockage of vents.,Dust explosion possible if in powder or granular form, mixed with air.VINYL CHLORIDE is peroxidizable. Forms explosive polymeric peroxides in contact with air (in the presence of any of a variety of catalysts) [Bretherick 1979. p. 164]. Long storage in contact with air increases the concentration of the polyperoxides to hazardous levels [MCA Case History 1551. 1969]. The peroxides may initiate exothermic polymerization of the remaining material [Handling Chemicals Safely 1980.p. 958; Bretherick 1979. p. 160]. Light-sensitive. Many oxidizing agents apparently initiate polymerization (oxides of nitrogen, O2, etc.). May react with very hot water or steam to produce toxic fumes.

Conditions to avoid

no data available

Incompatible materials

On treatment with strong alkalis at high temperatures it loses hydrogen chloride.

Hazardous decomposition products

Decomposes on burning. This produces toxic and corrosive fumes of hydrogen chloride and phosgene.

SECTION 11: Toxicological information

Acute toxicity

- Oral: LD50 Rat oral 500 mg/kg
- Inhalation: LC50 Rabbit inhalation 295 mg/L/ 2hr
- Dermal: no data available

Skin corrosion/irritation

no data available

Serious eye damage/irritation

no data available

Respiratory or skin sensitization

no data available

Germ cell mutagenicity

no data available

Carcinogenicity

EPA: Known human carcinogen. IARC: Carcinogenic to humans . NTP: Known to be a human carcinogen

Reproductive toxicity

Several case reports suggest that male sexual performance may be affected by vinyl chloride. However, these studies are limited by lack of quantitative exposure information and possible co-occurring exposure to other chemicals. Several epidemiological studies have reported an association between vinyl chloride exposure in pregnant women and an increased incidence of birth defects, while other studies have not reported similar findings. Epidemiological studies have suggested an association between men occupationally exposed to vinyl chloride and miscarriages in their wives' pregnancies although other studies have not supported these findings. Testicular damage and decreased male fertility have been reported in rats exposed to low levels for up to 12 months. Animal studies have reported decreased fetal weight and birth defects at levels that are also toxic to maternal animals in the offspring of rats exposed to vinyl chloride through inhalation.

STOT-single exposure

The liquid may cause frostbite. The substance is irritating to the eyes. The substance may cause effects on the central nervous system. This may result in lowering of consciousness, convulsions and seizures. Medical observation is indicated.

STOT-repeated exposure

The substance may have effects on the liver, spleen, blood, peripheral blood vessels and tissue and bones of the fingers. Animal tests show that this substance possibly causes toxicity to human reproduction or development. This substance is carcinogenic to humans.

Aspiration hazard

A harmful concentration of this gas in the air will be reached very quickly on loss of containment.

SECTION 12: Ecological information

Toxicity

Toxicity to fish: no data available

Toxicity to daphnia and other aquatic invertebrates: no data available

Toxicity to algae: no data available

Toxicity to microorganisms: no data available

Persistence and degradability

AEROBIC: Limited existing data indicate that vinyl chloride is resistant to biodegradation in aerobic systems(1,2). Vinyl chloride, present at 2.04 and 10.2 mg/L, reached 16 and 3% of its theoretical BOD, respectively, in 28 days using an activated sludge inoculum at 1 drop/L in the Japanese MITI test(3). Aerobic biodegradation of vinyl chloride was measured in sediment at two sites in Denmark; >99% was removed in 204 and 274 days(4). The biodegradation half-life of vinyl chloride in aerobic waters was reported as 28 days(5). Vinyl chloride had a biodegradation rate of 1.456 ug/g soil/hr in soil from Skellingsted landfill in Holback, Denmark, incubated with methane(6).

Bioaccumulative potential

The BCF value of vinyl chloride in golden ide fish was reported as <10(1). The BCF value of vinyl chloride in green algae was reported as

40(2). According to a classification scheme(3), these BCFs suggest that bioconcentration in aquatic organisms is low(SRC).

Mobility in soil

The Koc of vinyl chloride has been reported to be 57(1). According to a classification scheme(2), this Koc value suggests that vinyl chloride is expected to have high mobility in soil.

Toxics Screening Level

The initial risk screening level (IRSL) for VINYL CHLORIDE is 0.11 µg/m3 (annual averaging time).

Other adverse effects

no data available

SECTION 13: Disposal considerations

Disposal methods

Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.

Flammable. Containers may explode when heated. Vapors may form explosive mixtures with air. Vapors may travel to source of ignition and flash back. Keep product and empty container away from heat and sources of ignition. Thermal decomposition can lead to release of irritating gases and vapors.

Hazardous Combustion Products
Carbon monoxide (CO). Carbon dioxide (CO_2).
Protective Equipment and Precautions for Firefighters
As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear.

Environmental Precautions Should not be released into the environment. Do not flush into surface water or sanitary sewer system. See Section 12 for additional Ecological Information. Collect spillage.

Methods for Containment and Clean Up Soak up with inert absorbent material. Keep in suitable, closed containers for disposal. Remove all sources of ignition. Use spark-proof tools and explosion-proof equipment.

7. Handling and storage

Handling Wear personal protective equipment/face protection. Do not get in eyes, on skin, or on clothing. Avoid ingestion and inhalation. Ensure adequate ventilation. Keep away from open flames, hot surfaces and sources of ignition. Use only non-sparking tools. To avoid ignition of vapors by static electricity discharge, all metal parts of the equipment must be grounded. Take precautionary measures against static discharges.

Storage. Keep containers tightly closed in a dry, cool and well-ventilated place. Keep away from heat, sparks and flame. Flammables area. Incompatible Materials. Strong oxidizing agents.

4. First-aid measures

Eye Contact Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Obtain medical attention.

Skin Contact Wash off immediately with plenty of water for at least 15 minutes. Obtain medical attention.

Inhalation Move to fresh air. If breathing is difficult, give oxygen. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Obtain medical attention. Risk of serious damage to the lungs.

Ingestion Do not induce vomiting. Call a physician or Poison Control Center immediately. If vomiting occurs naturally, have victim lean forward.

Most important symptoms/effects Breathing difficulties. Inhalation of high vapor concentrations may cause symptoms like headache, dizziness, tiredness, nausea and vomiting

Notes to Physician Treat symptomatically

Specific Hazards Arising from the Chemical
Flammable. Risk of ignition. Vapors may form explosive mixtures with air. Vapors may travel to source of ignition and flash back. Containers may explode when heated. Do not allow run-off from fire fighting to enter drains or water courses.

Hazardous Combustion Products
Carbon monoxide (CO) Carbon dioxide (CO_2)
Protective Equipment and Precautions for Firefighters
As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear. Thermal decomposition can lead to release of irritating gases and vapors.

6. Accidental release measures

Personal Precautions Use personal protective equipment. Remove all sources of ignition. Take precautionary measures against static discharges. Avoid contact with skin, eyes and clothing. Ensure adequate ventilation.

Environmental Precautions Do not flush into surface water or sanitary sewer system. Do not allow material to contaminate ground water system. Prevent product from entering drains. Local authorities should be advised if significant spillages cannot be contained.

Methods for Containment and Clean Up Remove all sources of ignition. Soak up with inert absorbent material. Use spark-proof tools and explosion-proof equipment. Take precautionary measures against static discharges. Keep in suitable, closed containers for disposal.

7. Handling and storage

Handling Use only under a chemical fume hood. Wear personal protective equipment. Do not get in eyes, on skin, or on clothing. Do not breathe vapors or spray mist. Keep away from open flames, hot surfaces and sources of ignition. Use only non-sparking tools. Use

explosion-proof equipment. Take precautionary measures against static discharges. Wash hands before breaks and immediately after handling the product. To avoid ignition of vapors by static electricity discharge, all metal parts of the equipment must be grounded.

Storage Keep containers tightly closed in a dry, cool and well-ventilated place. Keep away from heat and sources of ignition. Flammables area.

4. First-aid measures

Eye Contact Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Obtain medical attention.

Skin Contact Wash off immediately with plenty of water for at least 15 minutes. Obtain medical attention.

Inhalation Move to fresh air. If breathing is difficult, give oxygen. Do not use mouth-to-mouth resuscitation if victim ingested or inhaled the substance; induce artificial respiration with a respiratory medical device. Obtain medical attention. Aspiration into lungs can produce severe lung damage.

Ingestion Do not induce vomiting. Call a physician or Poison Control Center immediately. If vomiting occurs, lean victim forward to reduce the risk of aspiration.

Most important symptoms/effects Breathing difficulties. . Symptoms of overexposure may be headache, dizziness, tiredness, nausea and vomiting. Inhalation of high vapor concentrations may cause symptoms like headache, dizziness, tiredness, nausea and vomiting.

Notes to Physician Treat symptomatically.

5. Fire-fighting measures

Suitable Extinguishing Media CO_2, dry chemical, dry sand, alcohol-resistant foam. Cool closed containers exposed to fire with water spray.

Unsuitable Extinguishing Media Water may be ineffective, This material is lighter than water and insoluble in water. The fire could easily be spread by the use of water in an area where the water cannot be contained.

Specific Hazards Arising from the Chemical

Flammable. Risk of ignition. Vapors may form explosive mixtures with air. Vapors may travel to source of ignition and flash back. Containers may explode when heated.

Hazardous Combustion Products Carbon monoxide (CO), Carbon dioxide (CO_2).

Protective Equipment and Precautions for Firefighters

As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear. Thermal decomposition can lead to release of irritating gases and vapors.

6. Accidental release measures

Personal Precautions Use personal protective equipment. Ensure adequate ventilation. Evacuate personnel to safe areas. Remove all sources of ignition. Take precautionary measures against static discharges.

Environmental Precautions Do not flush into surface water or sanitary sewer system. Avoid release to the environment. Collect spillage.

Methods for Containment and Clean Up Soak up with inert absorbent material. Keep in suitable, closed containers for disposal. Remove all sources of ignition. Use spark-proof tools and explosion-proof equipment. Take precautionary measures against static discharges.

7. Handling and storage

Handling Wear personal protective equipment. Do not get in eyes, on skin, or on clothing. Do not breathe vapors or spray mist. Keep away from open flames, hot surfaces and sources of ignition. Use only non-sparking tools. Use explosion-proof equipment. Take precautionary measures against static discharges. To avoid ignition of vapors by static electricity discharge, all metal parts of the equipment must be grounded.

Storage Keep containers tightly closed in a dry, cool and well-ventilated place. Keep away from heat and sources of ignition. Flammables area.
