QA/QC Review of Method 8260D Volatiles Data for
York Analytical Laboratories, Inc., SDG: 22I1653

22 Soil Samples
Collected September 30, 2022

Prepared by: Donald Anné
February 14, 2024

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for 2-butanone, 2-hexanone, and bromoform were below the method minimums for VOA No. 3 on 09-23-22. No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

The average RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

The %RSDs for 1,2-dibromo-3-dichloropropane, bromoform, and trans-1,3-dichloropropylene were above the allowable maximum (30%) for VOA No. 3 on 09-23-22. Positive results for methylene chloride should be considered estimated (J) in associated samples.

Continuing Calibration: The RRFs for 2-butanone and bromoform were below the method minimums on 10-03-22 (V3169427.D). The %D for bromomethane was above the method maximum on 10-03-22 (V3169427.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

The %Ds for acrolein, acrylonitrile, and TBA were above the allowable maximum (20%) on 10-03-22 (V2616179.D). The %Ds for bromomethane and TBA were above the allowable maximum (20%) on 10-03-22 (V3169427.D). Positive results for these compounds should be considered estimated (J) in associated samples.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Blanks: The analyses of the method blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the soil samples.

Laboratory Control Sample: The relative percent differences (RPDs) for target compounds were below the allowable maximum and the percent recoveries (%Rs) were within QC limits for soil samples BJ20012-BS1/BSD1.

The RPDs for target compounds were below the allowable maximum, but 2 of 2 %Rs for tetrachloroethylene were below QC limits for soil samples BJ20011-BS1/BSD1. Positive results for tetrachloroethylene should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

Compound ID: Checked compounds and surrogates were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

QA/QC Review of Method 8270D Semi-Volatiles Data
for York Analytical Laboratories, Inc., SDG: 22I1653

22 Soil Samples
Collected September 30, 2022

Prepared by: Donald Anné
February 14, 2024

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for applicable compounds were above the method minimums, as required.

The average RRFs for target compounds were above the allowable minimum (0.010), as required.

The %RSD for 4-nitrophenol and benzoic acid were above the allowable maximum (30%) for BNA#7 on 08-25-22. The %RSDs for 2,4-dinitirophenol, 4,6-dinitiro-2-methylphenol, and benzoic acid were above the allowable maximum (30%) for BNA#2 on 09-02-22. Positive results for these compounds should be considered estimated (J) in associated samples.

Continuing Calibration: The RRFs for applicable compounds were above the method minimums, as required. The %Ds for 10 compounds (highlighted yellow on attached FORM VII) were above the method maximum on 10-06-22 (E7033966.D). The %Ds for 7 compounds (highlighted yellow on attached FORM VII) were above the method maximum on 10-06-22 (E20010650.D). The %Ds for 8 compounds (highlighted yellow on attached FORM VII) were above the method maximum on 10-07-22 (E7033985.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for 10 compounds (highlighted yellow on attached FORM VII), benzidine, benzoic acid, and n-nitrosodimethylamine were above the allowable maximum (20%) on 10-06-22 (E7033966.D). The %Ds for 7 compounds (highlighted yellow on attached

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

FORM VII) were above the allowable maximum (20%) on 10-06-22 (E20010650.D). The %Ds for 8 compounds (highlighted yellow on attached FORM VII), benzoic acid, and n-nitrosodimethylamine were above the allowable maximum (20%) on 10-07-22 (E7033985.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the method and field blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits for reported soil samples.

Surrogate Recovery: One of three base/neutral surrogate recoveries for samples SB-2 (3-5 Ft) was above control limits. One of three acid extractable surrogate recoveries for samples SB-6 (0-2 Ft), SB-7 (0-2 Ft), SB-7 (3-5 Ft), SB-8 (0-2 Ft), SB-9 (3-5 Ft), and SB-10 (3-5 Ft) was above control limits. No action is taken on one surrogate recovery per fraction outside control limits, provided no recovery is less than 10%.

Three of three acid extractable surrogate recoveries for sample SB-6 (3-5 Ft) were below control limits and 2 below 10%. Two of three acid extractable surrogate recoveries for sample SB-10 (0-2 Ft) were below control limits and 1 below 10%. Positive results for acid extractable compounds should be considered estimated biased low (J-) and "not detected" results rejected, unusable (R) in samples SB-6 (3-5 Ft) and SB-10 (0-2 Ft).

Matrix Spike/Matrix Spike Duplicate: All compounds had either 1 or 2 percent recoveries outside QC limits primarily high. It appears these samples were double spike; therefore, this data is unusable and the samples should have been re-analyzed.

Laboratory Control Sample: The percent recoveries (%Rs) for target compounds were within QC limits for soil sample BJ20306-BS1.

The %Rs for 9 compounds (highlighted yellow on attached FORM III) were above QC limits for soil sample BJ20275-BS. Positive results for these compounds should be considered estimated, biased high (J+) in associated soil samples.

Compound ID: Checked compound and surrogate results were within quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

QA/QC Review of Method 8270D SIM 1,4-Dioxane Data
for York Analytical Laboratories, Inc., SDG: 22I1653

1 Soil Sample
Collected September 30, 2022

Prepared by: Donald Anné
February 14, 2024

Holding Times: The sample was extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRF for 1,4-dioxane was above the allowable minimum (0.010) and the %RSD was below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for 1,4-dioxane were above the allowable minimum (0.010) and the %Ds were below the allowable maximum (20%), as required.

Blanks: The analysis of the method blank reported 1,4-dioxane as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits for reported soil samples.

Surrogate Recovery: The surrogate recovery for sample SB-4 (3-5 Ft) was within QC limits.

Laboratory Control Sample: The percent recovery for 1,4-dioxane was within QC limits for soil sample BJ20247-BS1.

Compound ID: Checked surrogate result was within quantitation limits. The analysis of the sample SB-4 (3-5 Ft) reported 1,4-dioxane as not detected.

QA/QC Review of Method 8081B Pesticide Data for
York Analytical Laboratories, Inc., SDG: 22I1653

22 Soil Samples
Collected September 30, 2022

Prepared by: Donald Anné
February 14, 2024

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method blanks reported target pesticides as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the soil samples and field blank.

Matrix Spike/Matrix Spike Duplicate: The percent recoveries for target pesticides were within QC limits, but relative percent differences for all pesticides were above the allowable maximum on the primary column for soil MS/MSD sample SB-5 (0-2 Ft). Sample SB-5 (0-2 Ft) reported target compounds as "not detected"; therefore, no action is taken.

Laboratory Control Sample: The percent recoveries for target pesticides were within QC limits for soil samples BJ20350-BS1, BJ20353-BS1, and BJ20524-BS1 on both columns.

Initial Calibration: The %RSDs for target pesticides were below the allowable maximum (20%) or the Quad CODs were above the allowable minimum (0.99) for both columns, as required.

Continuing Calibration: The %Ds for target pesticides were below the allowable maximum (20%) on both columns, as required.

DDT/Endrin Breakdown Check: The percent breakdowns were below the allowable maximum (15%) for 4,4'-DDT and endrin, as required.

Pesticide Identification Summary for Single Component Analytes: Checked surrogates were within GC quantitation limits. The analyses of the soil samples reported target single component pesticides as not detected.

Pesticide Identification Summary for Multicomponent Analytes: The analyses of the soil samples reported target multi-component pesticides as not detected.

QA/QC Review of Method 8082A PCB Data for
York Analytical Laboratories, Inc., SDG: 22I1653

22 Soil Sample
Collected September 30, 2022

Prepared by: Donald Anné
February 14, 2024

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method blanks reported target aroclors as not detected.

Surrogate Recovery: One of two surrogate recoveries for samples SB-6 (0-2 Ft) and SB-8 (0-2 Ft) was above QC limits on one column. No action is taken on one surrogate recovery outside QC limits on one column, provided the recovery is not less than 10%.

One of two surrogate recoveries for sample SB-9 (3-5 Ft) were above QC limits on both columns. Positive results for aroclors should be considered estimated, biased high (J+) in sample SB-9 (3-5 Ft).

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for aroclor 1016 and aroclor 1260 were below the allowable maximum and the percent recoveries were within QC limits on the primary column for soil MS/MSD sample SB-5 (0-2 Ft).

Laboratory Control Sample: The percent recoveries for aroclor 1016 and aroclor 1260 were within QC limits on both columns for soil samples BJ20350-BS2, BJ20353-BS2, and BJ20524-BS2.

Initial Calibration: The %RSDs for target aroclors were below the allowable maximum (20%) or the Quad CODs were above the allowable minimum (0.99) for both columns, as required.

Continuing Calibration: The average %Ds for target aroclors were below the allowable maximum (20%), as required.

PCB Identification Summary: Checked surrogate results were within GC quantitation limits. The analyses of the soil samples reported target aroclors as not detected.

QA/QC Review of TAL Metals Data for
York Analytical Laboratories, Inc., SDG: 22I1653

22 Soil Samples
Collected September 30, 2022

Prepared by: Donald Anné
February 14, 2024

Holding Times: Samples were analyzed within the USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries (%Rs) for antimony were below control limits (90-110%), but not below 50% for Y2J0534-CCV7 and Y2J0626-CCVF. Positive results for antimony should be considered as estimated, biased low (J-) and "not detected" results estimated (UJ) in associated samples.

The %R for zinc was above control limits (90-110%), but not above 150% for Y2J0626-CCVE. Positive results for zinc should be considered as estimated, biased high (J+) in associated samples.

CRDL Standard: The percent recoveries for applicable metals were within laboratory QC limits for the CRDL samples.

Blanks: Soil preparation blank BJ20167-BLK1 contained calcium (7.91 mg/kg) above the MRL. Positive results for calcium that are less than 5 times the highest blank level should be considered not detected (U) in associated soil samples.

ICP Interference Check Sample: The percent recoveries (%Rs) for cadmium and thallium were below control limits (80-120%), but not below 50% for the interference check samples Y2J0534-IFB1 and Y2J0626-IFB1. Positive results for cadmium and thallium should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated samples.

Spike Sample Recovery: The percent recoveries (%Rs) for barium and manganese were above control limits (75-125%) for soil spike sample SB-6 (3-5 Ft). Positive results for barium and manganese should be considered estimated, biased high (J+) in associated soil samples.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

The %Rs for antimony and silver were below control limits (75-125%), but not below 10% for soil spike sample SB-6 (3-5 Ft). Positive results for antimony and silver should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

Laboratory Duplicate: The relative percent differences for magnesium and nickel were above the allowable maximum (35%) for soil duplicate sample SB-6 (3-5 Ft). Positive results for magnesium and nickel should be considered estimated (J) in associated soil samples.

Laboratory Control Sample: The percent recoveries (%Rs) for target metals were within QC limits for soil samples BJ20165-SRM1, BJ20288-SRM1, and BJ20289-SRM1.

The %R for copper was above QC limits for soil sample BJ20167-SRM1. Positive results for copper should be considered estimated, biased high (J+) in associate soil samples.

Serial Dilution: The %D for zinc was above the allowable maximum (15%) for soil serial dilution sample SB-6 (3-5 Ft). Positive results for zinc that are above the RLs should be considered estimated (J) in associated soil samples.

Detection Limits: The LODs were at or below POQs, as required.

Percent Solids: The percent solids for soil samples were above 50%.

QA/QC Review of Method 7196A Hexavalent Chromium (Cr6+)
Data for York Analytical Laboratories, Inc., SDG: 22I1653

22 Soil Samples
Collected September 30, 2022

Prepared by: Donald Anné
February 14, 2024

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method blanks reported Cr6+ as not detected.

Spike Sample Recovery: The percent recovery for Cr6+ was within QC limits (75-125%) for soil spike sample SB-11 (0-2 Ft).

Laboratory Duplicate: The analysis of soil duplicate sample SB-11 (0-2 Ft) was acceptable.

Laboratory Control Sample: The percent recoveries for Cr6+ were within QC limits for soil samples BJ20112-SRM1 and BJ20164-SRM1.

Data Usability Summary Report for
York Analytical Laboratories, Inc., SDG: 22I1655

1 Soil Sample
Collected September 30, 2022

Prepared by: Donald Anné
February 14, 2024

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contains the results of 1 soil sample analyzed PFAS.

The overall performances of the analyses are acceptable. York Analytical Laboratories, Inc. did fulfill the requirements of the analytical method.

The data are acceptable with no issues identified in the accompanying data validation review. There are no data were qualified as either estimated or rejected (R); therefore, all data considered usable. Detailed information on data quality is included in the data validation review.

QA/QC Review of Method 537m PFAS Data for
York Analytical Laboratories, Inc., SDG: 22I1655

1 Soil Sample
Collected September 30, 2022

Prepared by: Donald Anné
February 14, 2024

Holding Times: The sample was analyzed within USEPA holding times.

Initial Calibration (Internal Standard): The Quad COD for target PFAS were above the allowable minimum (0.995), as required.

Continuing Calibration: The %Ds for target PFAS were below the allowable maximum (30%), as required.

Blanks: The analysis of the method blank reported target PFAS as not detected.

Internal Standard Area Summary: The internal standard retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within QC limits for the soil sample.

Laboratory Control Sample: The percent recoveries for target PFAS were within QC limits for soil sample BJ20459-BS1.

Compound ID: Checked surrogate results were within LC quantitation limits. The analyses of soil samples reported target PFAS as not detected.

Alpha Geoscience: Acronyms and Definitions

Data Validation Acronyms

AA	Atomic absorption, flame technique
BHC	Hexachlorocyclohexane
BFB	Bromofluorobenzene
CCB	Continuing calibration blank
CCC	Calibration check compound
CCV	Continuing calibration verification
CN	Cyanide
CRDL	Contract required detection limit
CRQL	Contract required quantitation limit
CVAA	Atomic adsorption, cold vapor technique
DCAA	2,4-Dichlophenylacetic acid
DCB	Decachlorobiphenyl
DFTPP	Decafluorotriphenyl phosphine
ECD	Electron capture detector
FAA	Atomic absorption, furnace technique
FID	Flame ionization detector
FNP	1-Fluoronaphthalene
GC	Gas chromatography
GC/MS	Gas chromatography/mass spectrometry
GPC	Gel permeation chromatography
ICB	Initial calibration blank
ICP	Inductively coupled plasma-atomic emission spectrometer
ICV	Initial calibration verification
IDL	Instrument detection limit
IS	Internal standard
LCS	Laboratory control sample
LCS/LCSD	Laboratory control sample/laboratory control sample duplicate
MSA	Method of standard additions
MS/MSD	Matrix spike/matrix spike duplicate
PID	Photo ionization detector
PCB	Polychlorinated biphenyl
PCDD	Polychlorinated dibenzodioxins
PCDF	Polychlorinated dibenzofurans
QA	Quality assurance
QC	Quality control
RF	Response factor
RPD	Relative percent difference
RRF	Relative response factor
RRF(number)	Relative response factor at concentration of the number following
RT	Retention time
RRT	Relative retention time
SDG	Sample delivery group
SPCC	System performance check compound
TCX	Tetrachloro-m-xylene
%D	Percent difference
%R	Percent recovery
%RSD	Percent relative standard deviation

Data Validation Qualifiers Used in the QA/QC Reviews for USEPA Region II

U	=	Not detected. The associated number indicates the approximate sample concentration necessary to be detected significantly greater than the level of the highest associated blank.
R	=	Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sample. Supporting data or information is necessary to confirm the result.
N	=	Tentative identification. Analyte is considered present. Special methods may be needed to confirm its presence or absence during future sampling efforts.
J	=	Analyte is present. Reported value may be associated with a higher level of uncertainty than is normally expected with the analytical method.
J-	=	Analyte is present. Reported value may be biased low and associated with a higher level of uncertainty than is normally expected with the analytical method.
J+	=	Analyte is present. Reported value may be biased high andassociated with a higher level of uncertainty than is normally expected with the analytical method.
UJ	=	Not detected, quantitation limit may be inaccurate or imprecise.

Note: These qualifiers are used for data validation purposes. The data validation qualifiers may differ from the qualifiers that the laboratory assigns to the data. Refer to the laboratory analytical report for the definitions of the laboratory qualifiers.

Polyfluorinated Alkyl Substances (PFAS) Acronyms

PFBA	Perfluorobutanoic acid
PFPeA	Perfluoropentanoic acid
PFHxA	Perfluorohexanoic acid
PFHpA	Perfluoroheptanoic acid
PFOA	Perfluorooctanoic acid
PFNA	Perfluorononanoic acid
PFDA	Perfluorodecanoic acid
PFUnA	Perfluoroundecanoic acid
PFDoA	Perfluorododecanoic acid
PFTriA or PFTrDA	Perfluorotridecanoic acid
PFTeA or PFTA	Perfluorotetradecanoic acid
PFBS	Perfluorobutanesulfonic acid
PFPeS	Perfluoropentanesulfonic acid
PFHxS	Perfluorohexanesulfonic acid
PFHpS	Perfluoroheptanesulfonic acid
PFOS	Perfluorooctanesulfonic acid
PFNS	Perfluorononanesulfonic acid
PFDS	Perfluorodecanesulfonic acid
FOSA	Perfluorooctane Sulfonamide
NMeFOSAA	N-methyl perfluorooctane sulfonamidoacetic acid
NEtFOSAA	N-ethyl perfluorooctane sulfonamidoacetic acid
4:2 FTS or 4:2	1H, 1H, 2H, 2H-perfluorohexanesulfonic acid
6:2 FTS or 6:2	1H, 1H, 2H, 2H-perfluorooctanesulfonic acid or 6:2 Fluorotelomersulfonate
8:2 FTS or 8:2	1H, 1H, 2H, 2H-perfluorodecanesulfonic acid or 8:2 Fluorotelomersulfonate

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on February 27, 2024 and listed below. The project was identified as your project: **22030028 (3547 Webster Ave)**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24B1548

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By: **Date:** 03/07/2024

Cassie L. Mosher
Laboratory Manager

24B1548-07	MW-11	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

S-08	The recovery of this surrogate was outside of QC limits.
QR-03	The RPD value for the sample duplicate or MS/MSD was outside of QC acceptance limits due to matrix interference. QC batch accepted based on LCS and/or LCSD recovery and/or RPD values.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
PFSu-L	The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
PF-LCS-L	The LCS recovery was slightly below acceptable limits for the qualified compound. However, sample results are not biased low because results are corrected for isotope recovery.
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) was outside the 90-110% recovery criteria.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on February 28, 2024 and listed below. The project was identified as your project: **22030028 3547 Webster Ave**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24B1656

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

QR-02	The RPD result exceeded the QC control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
PFSu-L	The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
HT-PR	Sample was prepared outside of the recommended holding time.
HT-04	NON-COMPLIANT- Client requested analysis be conducted outside of holding times.
EXT-EM	The sample exhibited emulsion formation during the extraction process. This may affect surrogate recoveries.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Re: Data Validation Reports
3547 Webster Avenue, Bronx, NY
Ground Water Sampling Events

Dear Mr. Giordano,

The Data Usability Summary Reports are attached to this letter for the 3547 Webster Avenue site, February 2024 ground water sampling events. The data for York Analytical Laboratories, Inc. SDG numbers 24B1548 and 24B1656 are mostly acceptable, with issues that are identified in the QA/QV review summaries. There are data that are rejected, unusable (R) in both packs. The DUSR and QA/QC reviews outlines the reasons for rejecting the data. The data are rejected based solely on the validation guidance criteria. The rejected data may be determined to be acceptable to the user based on additional information that is not contained in the data validation criteria.

A list of data validation acronyms and qualifiers is attached to assist you in interpreting the data validation reviews. If you have any questions concerning the work performed, please contact me at (518) 348-6995. Thank you for providing us an opportunity with vEKtor consultants.

Sincerely,
Alpha Geoscience

Donald Anné

Alpha Geoscience: Acronyms and Definitions

Data Validation Acronyms

AA	Atomic absorption, flame technique
BHC	Hexachlorocyclohexane
BFB	Bromofluorobenzene
CCB	Continuing calibration blank
CCC	Calibration check compound
CCV	Continuing calibration verification
CN	Cyanide
CRDL	Contract required detection limit
CRQL	Contract required quantitation limit
CVAA	Atomic adsorption, cold vapor technique
DCAA	2,4-Dichlophenylacetic acid
DCB	Decachlorobiphenyl
DFTPP	Decafluorotriphenyl phosphine
ECD	Electron capture detector
FAA	Atomic absorption, furnace technique
FID	Flame ionization detector
FNP	1-Fluoronaphthalene
GC	Gas chromatography
GC/MS	Gas chromatography/mass spectrometry
GPC	Gel permeation chromatography
ICB	Initial calibration blank
ICP	Inductively coupled plasma-atomic emission spectrometer
ICV	Initial calibration verification
IDL	Instrument detection limit
IS	Internal standard
LCS	Laboratory control sample
LCS/LCSD	Laboratory control sample/laboratory control sample duplicate
MSA	Method of standard additions
MS/MSD	Matrix spike/matrix spike duplicate
PID	Photo ionization detector
PCB	Polychlorinated biphenyl
PCDD	Polychlorinated dibenzodioxins
PCDF	Polychlorinated dibenzofurans
QA	Quality assurance
QC	Quality control
RF	Response factor
RPD	Relative percent difference
RRF	Relative response factor
RRF(number)	Relative response factor at concentration of the number following
RT	Retention time
RRT	Relative retention time
SDG	Sample delivery group
SPCC	System performance check compound
TCX	Tetrachloro-m-xylene
%D	Percent difference
%R	Percent recovery
%RSD	Percent relative standard deviation

Data Validation Qualifiers Used in the QA/QC Reviews for USEPA Region II

U	=	Not detected. The associated number indicates the approximate sample concentration necessary to be detected significantly greater than the level of the highest associated blank.
R	=	Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sample. Supporting data or information is necessary to confirm the result.
N	=	Tentative identification. Analyte is considered present. Special methods may be needed to confirm its presence or absence during future sampling efforts.
J	=	Analyte is present. Reported value may be associated with a higher level of uncertainty than is normally expected with the analytical method.
J-	=	Analyte is present. Reported value may be biased low and associated with a higher level of uncertainty than is normally expected with the analytical method.
J+	=	Analyte is present. Reported value may be biased high andassociated with a higher level of uncertainty than is normally expected with the analytical method.
UJ	=	Not detected, quantitation limit may be inaccurate or imprecise.

Note: These qualifiers are used for data validation purposes. The data validation qualifiers may differ from the qualifiers that the laboratory assigns to the data. Refer to the laboratory analytical report for the definitions of the laboratory qualifiers.

Polyfluorinated Alkyl Substances (PFAS) Acronyms

PFBA	Perfluorobutanoic acid
PFPeA	Perfluoropentanoic acid
PFHxA	Perfluorohexanoic acid
PFHpA	Perfluoroheptanoic acid
PFOA	Perfluorooctanoic acid
PFNA	Perfluorononanoic acid
PFDA	Perfluorodecanoic acid
PFUnA	Perfluoroundecanoic acid
PFDoA	Perfluorododecanoic acid
PFTriA or PFTrDA	Perfluorotridecanoic acid
PFTeA or PFTA	Perfluorotetradecanoic acid
PFBS	Perfluorobutanesulfonic acid
PFPeS	Perfluoropentanesulfonic acid
PFHxS	Perfluorohexanesulfonic acid
PFHpS	Perfluoroheptanesulfonic acid
PFOS	Perfluorooctanesulfonic acid
PFNS	Perfluorononanesulfonic acid
PFDS	Perfluorodecanesulfonic acid
FOSA	Perfluorooctane Sulfonamide
NMeFOSAA	N-methyl perfluorooctane sulfonamidoacetic acid
NEtFOSAA	N-ethyl perfluorooctane sulfonamidoacetic acid
4:2 FTS or 4:2	1H, 1H, 2H, 2H-perfluorohexanesulfonic acid
6:2 FTS or 6:2	1H, 1H, 2H, 2H-perfluorooctanesulfonic acid or 6:2 Fluorotelomersulfonate
8:2 FTS or 8:2	1H, 1H, 2H, 2H-perfluorodecanesulfonic acid or 8:2 Fluorotelomersulfonate

Data Usability Summary Report for
York Analytical Laboratories, Inc., SDG: 24B1548

6 Ground Water Sample, 2 Field Blanks,
and 1 Trip Blank
Collected February 27, 2024

Prepared by: Donald Anné
May 13, 2024

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contains the results of 3 ground water samples, 1 field blank, and 1 trip blank analyzed for volatiles, and 3 ground water samples and 1 field blank analyzed for semi-volatiles, SIM-volatiles, PFAS, pesticides, PCBs, 1,4-dioxane, TAL metals, and total cyanide.

The overall performances of the analyses are acceptable. York Analytical Laboratories, Inc. did fulfill the requirements of the analytical methods except for ICP metals and semi-volatile analyses.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The positive volatile results for chloroform were qualified as "not detected" (U) for all 3 ground water samples because the level reported in the samples were not significantly greater than (more than 5 times) the highest associated blank level.

- The positive volatile results for acetone were qualified as "not detected" (U) for samples MW-07 and MW-11 because the level reported in the samples were not significantly greater than (more than 10 times) the highest associated blank level.

- The "not detected" volatile results for bromoform, bromomethane, dibromochloromethane, tetrachloroethylene, and trans-1,3-dichloropropylene were qualified as "estimated" (UJ) for all 3 ground water samples, FB-1, and TB-1 because 1 or 2 percent recoveries for these compounds were below QC limits, but not below 30% in the associated aqueous LCS/LCSD.

- The positive volatile results for 1,1,1-trichloroethane and trichloroethylene were qualified as "estimated" (J) for sample MW-07 because the relative percent differences for1,1,1-trichloroethane and trichloroethylene were above the allowable maximum in the aqueous MS/MSD.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

- The positive volatile results for 1,2,4-trimethylbenzene and n-butylbenzene were qualified as "estimated, biased low" (J-) for sample MW-07 because 1 or 2 percent recoveries for 1,2,4-trimethylbenzene and n-butylbenzene were below QC limits in the aqueous MS/MSD.

- The "not detected" volatile result for carbon tetrachloride was qualified as "estimated" (UJ) for sample MW-07 because 2 of 2 percent recoveries for carbon tetrachloride were below QC limits, but not below 30% in the aqueous MS/MSD.

- The "not detected" semi-volatile results for the following 7 compounds were qualified as "rejected, unusable" (R) for all 3 ground water samples and FB-1 because the percent recoveries for these 7 compounds were below QC limits and below 30% in the associated aqueous LCS.

2,4,5-trichlorophenol	2,4,6-trichlorophenol	2,4-dinitrophenol
4,6-dinitro-2-methylphenol	2-nitrophenol	4-nitrophenol
hexachlorocyclopentadiene		

- The "not detected" semi-volatile results for 3,3-dichlorobenzidine and pyridine were qualified as "rejected, unusable" (R) for sample MW-07 because 1 or 2 percent recoveries for 3,3-dichlorobenzidine and pyridine were below QC limits and below 30% in the aqueous MS/MSD.

- The positive SIM semi-volatile result for bis(2-ethylhexyl)phthalate was qualified as "rejected, unusable" (R) for sample MW-07 because the level reported in the sample was not significantly greater than (more than 10 times) the unacceptable level in the associated blank.

- The positive SIM semi-volatile results for benzo(a)anthracene, chrysene, fluoranthene, phenanthrene, and pyrene was qualified as "rejected, unusable" (R) for samples MW-08 and MW-11 because the levels reported in the samples were not significantly greater than (more than 10 times) the unacceptable level in the associated blank.

- The "not detected" SIM semi-volatile results for n-nitrosodimethylamine were qualified as "rejected, unusable" (R) for all 3 ground water samples and FB-1 because the percent recovery for n-nitrosodimethylamine was below QC limits and below 30% in the associated aqueous LCS.

- The "not detected" PFAS results for PFBA were qualified as "rejected, unusable" (R) for samples MW-11 PFAS and FB-01 PFAS because the percent recovery for the surrogate used to quantitate PFBA was below QC limits and below 10% in the samples.

- The positive PFAS result for PFBA was qualified as "estimated" (J) for sample MW-08 PFAS because the percent recovery for the surrogate used to quantitate PFBA was below QC limits and below 10% in the samples.

- The positive PFAS result for PFBA was qualified as "estimated, biased low" (J-) for sample MW-07 PFAS because 2 of 2 percent recoveries for PFBA were below QC limits in the aqueous MS/MSD.

- The positive dissolved metal result for selenium was qualified as estimated, biased high (J+) for sample MW-08 because the percent recovery for selenium was above QC limits in the associated CRDL sample and the result was below 4 times the CRDL sample spiking level.

- The positive total and dissolved metal results for calcium and sodium were qualified as estimated (J) for all 3 ground water samples and FB-1 because the %Ds for calcium and sodium were above the allowable maximum in the associated aqueous total and dissolved serial dilution samples and the results were above the RLs.

- The positive total metal results for potassium were qualified as estimated (J) for all 3 ground water samples and FB-1 because the %D for potassium was above the allowable maximum in the associated aqueous total serial dilution sample and the results were above the RLs.

- The positive dissolved metal results for potassium were qualified as estimated (J) for all 3 ground water samples because the %D for potassium was above the allowable maximum in the associated aqueous dissolved serial dilution sample and the results were above the RLs.

- The positive total and dissolved metal results for magnesium and manganese were qualified as estimated (J) for all 3 ground water samples because the %Ds for magnesium and manganese were above the allowable maximum in the associated aqueous total and dissolved serial dilution samples and the results were above the RLs.

- The positive total metal result for iron was qualified as estimated (J) for sample MW-07 because the %D for iron was above the allowable maximum in the associated aqueous total serial dilution sample and the result was above the RL.

- The positive total metal result for lead were qualified as "not detected" (U) for samples MW-07 and MW-08 because the level reported in the samples were not significantly greater than (more than 5 times) the highest associated blank level.

All data that are not qualified rejected (R) are considered usable with estimated (J-, J, J+, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

QA/QC Review of Method 8260D Volatiles Data for
York Analytical Laboratories, Inc., SDG: 24B1548

3 Ground Water Samples, 1 Field Blank,
and 1 Trip Blank
Collected February 27, 2024

Prepared by: Donald Anné
May 13, 2024

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRF for 2-butanone was below the method minimums for VOA No. 8 on 02-15-24. No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

The average RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

The %RSDs for 2-butanone and bromomethane were above the allowable maximum (30%) for VOA No. 8 on 02-15-24. Positive results for these compounds should be considered estimated (J) in associated samples.

Continuing Calibration: The RRFs for 2-butanone, 2-hexanone, and bromoform were below the method minimums on 02-28-24 (V843350.D). The %Ds for 1,2-dibromo-3-chloropropane, bromoform, bromomethane, and trichlorofluoromethane were above the method maximum on 02-28-24 (V843350.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

The %Ds for 1,2-dibromo-3-chloropropane, acrolein, bromoform, bromomethane, and trichlorofluoromethane were above the allowable maximum (20%) on 02-28-24 (V843350.D). Positive results for these compounds should be considered estimated (J) in associated samples.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Blanks: Field blank FB-1 contained traces of bromodichloromethane (0.660 ug/L), chloroform (6.65 ug/L), and trichloroethylene (0.540 ug/L). Trip blank TB-1 contained a trace of acetone (1.34 ug/L). Positive results for acetone that are less than 10 times the highest blank level should be reported as not detected (U) in associated samples. Positive results for bromodichloromethane, chloroform, and trichloroethylene these compounds that are less than 5 times the highest blank level should be reported as not detected (U) in associated samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples and field blank.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for 1,1,1-trichloroethane, carbon tetrachloride, MTBE, TBA, and trichloroethylene were above the allowable maximum and 1 or 2 percent recoveries for 13 compounds (highlighted yellow on attached FORM) were outside QC limits for aqueous MS/MSD sample MW-07. Positive results for 1,1,1-trichloroethane and trichloroethylene should be considered estimated (J); positive results for 1,2,4-trimethylbenzene and n-butylbenzene estimated, biased low (J-) and the "not detected" result for bromoform, carbon tetrachloride, and tetrachloroethylene estimated (UJ) in sample MW-07.

Laboratory Control Sample: The relative percent difference (RPD) for trichloroethylene was below the allowable maximum and the percent recoveries (%Rs) were within QC limits for aqueous samples BB41920-BS1/BSD1.

The RPDs for target compounds were below the allowable maximum, but 2 of 2 %Rs for acrolein were above QC limits for aqueous samples BB41856-BS1/BSD1. Positive results for acrolein should be considered estimated, biased high (J+) in associated aqueous samples.

Two of two %Rs for bromoform, dibromochloromethane, tetrachloroethylene, and trans-1,3-dichloropropylene and 1 of 2 %Rs for bromomethane were below QC limits, but not below 30% for aqueous samples BB41856-BS1/BSD1. Positive results for these compounds should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated aqueous samples.

Compound ID: Checked compounds and surrogates were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

QA/QC Review of Method 8270D Semi-Volatiles Data for York Analytical Laboratories, Inc., SDG: 24B1548

3 Ground Water Samples and 1 Field Blank Collected February 27, 2024

Prepared by: Donald Anné
May 13, 2024

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for applicable compounds were above the method minimums, as required.

The average RRFs for target compounds were above the allowable minimum (0.010), as required.

The %RSDs for 2,4-dinitrophenol and 4,6-dinitro-2-methylphenol were above the allowable maximum (30%) for BNA #7 on 02-22-24. Positive results for these compounds should be considered estimated (J) in associated samples.

Continuing Calibration: The RRFs for applicable compounds were above the method minimums, as required. The %Ds for 11 compounds (highlighted yellow on attached FORM VII) were above the method maximum on 03-03-24 (E70353411.D). The %Ds for 13 compounds (highlighted yellow on attached FORM VII) were above the method maximum on 03-06-24 (E70353484.D). There were greater than 20% of the compounds per calibration that do not meet either method %D or RRF criteria; therefore, samples should have been re-analyzed with a method compliant calibration.

The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for 11 compounds (highlighted yellow on attached FORM VII) were above the allowable maximum (20%) on 03-03-24 (E70353411.D). The %Ds for 13 compounds (highlighted yellow on attached FORM VII) and pyridine were above the allowable maximum (20%) on 03-06-24 (E70353484.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the method and field blanks reported target compounds as not detected.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Internal Standard Area Summary: The internal standard areas and retention times were within control limits for reported soil samples.

Surrogate Recovery: The surrogate recoveries were within control limit for the ground water samples and field blank.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for 2,4-dinitrophenol and 4,6-dinitro-2-methylphenol were above the allowable maximum; 1 of 2 percent recoveries (%Rs) for 2,4-dinitrotoluene was above QC limits; and 2 of 2 %Rs for 3,3-dichlorobenzidine and hexachlorocyclopentadiene and 1 of 2 %Rs for pyridine were below QC limits and below 30% for aqueous MS/MSD sample MW-07. The "not detected" results for 3,3-dichlrobenzidine, and hexachlorocyclopentadiene, and pyridine should be considered rejected, unusable (R) in sample MW-07.

Laboratory Control Sample: The percent recoveries for 7 compounds (highlighted yellow on attached FORM III) were below QC limits and below 30% for aqueous sample BC40013-BS1. Positive results for these compounds should be considered estimated biased low (J-) and "not detected" results rejected, unusable (R) in associated aqueous samples.

Compound ID: Checked surrogate results were within quantitation limits. The analyses of ground water samples reported target compounds as not detected.

QA/QC Review of Method 8270D SIM Semi-Volatiles Data for York Analytical Laboratories, Inc., SDG: 24B1548

3 Ground Water Samples and 1 Field Blank Collected February 27, 2024

Prepared by: Donald Anné
May 13, 2024

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010) and the %Ds were below the allowable maximum (20%), as required.

Blanks: Field blank FB-1 contained unacceptable levels (above the RLs) of benzo(a)anthracene (0.0800 ug/L), bis(2-ethylhexyl)phthalate (1.11 ug/L), chrysene (0.0700 ug/L), fluoranthene (0.180 ug/L), phenanthrene (0.120 ug/L), and pyrene (0.110 ug/L). Positive results for these compounds that are less than 10 times the field blank level should be reported as rejected, unusable (R) in associated samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Laboratory Control Sample: The percent recovery (%R) for n-nitrosodimethylamine was below QC limits and below 30% for aqueous sample BC40013-BS2. Positive results for n-nitrosodimethylamine should be considered estimated, biased low (J-) and "not detected" results rejected, unusable (R) in in the associated aqueous samples.

The %Rs for hexachloroethane were above QC limits for aqueous sample BC40013-BS2. Positive results for hexachloroethane should be considered estimated, biased high (J+) in in the associated aqueous samples.

Compound ID: Checked compound results were within quantitation limits.

QA/QC Review of Method 8270D SIM 1,4-Dioxane Data
for York Analytical Laboratories, Inc., SDG: 24B1548

3 Ground Water Samples and 1 Field Blank
Collected February 27, 2024

Prepared by: Donald Anné
May 13, 2024

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for 1,4-dioxane were above the allowable minimum (0.010) and the %RSD was below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for 1,4-dioxane were above the allowable minimum (0.010) and the %Ds were below the allowable maximum (20%), as required.

Blanks: The analyses of the method and field blanks reported 1,4-dioxane as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits for reported soil samples.

Surrogate Recovery: The surrogate recoveries were within QC limits for the ground water samples and field blank.

Matrix Spike/Matrix Spike Duplicate: The relative percent difference for 1,4-dioxane was below the allowable maximum and the percent recoveries were within QC limits for aqueous MS/MSD sample MW-07.

Laboratory Control Sample: The percent recovery for 1,4-dioxane was within QC limits for aqueous sample BC40153-BS1.

Compound ID: Checked surrogate results were within quantitation limits. The analyses of the aqueous samples reported 1,4-dioxane as not detected.

QA/QC Review of Method 8081B Pesticide Data for
York Analytical Laboratories, Inc., SDG: 24B1548

3 Ground Water Samples and 1 Field Blank
Collected February 27, 2024

Prepared by: Donald Anné
May 13, 2024

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses for the method and field blanks reported target pesticides as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the ground water samples and field blank.

Matrix Spike/Matrix Spike Duplicate: The percent recoveries for target pesticides were within QC limits, but the relative percent differences for 14 pesticides (highlighted yellow on the attached form) were above the allowable maximum on the primary column for aqueous MS/MSD sample MW-07. Sample MW-07 reported these pesticides as "not detected"; therefore, not action is taken.

Laboratory Control Sample: The percent recoveries (%Rs) for target pesticides were within QC limits for aqueous sample BB41853-BS1 on both columns.

Initial Calibration: The %RSDs for target pesticides were below the allowable maximum (20%) or the Quad CODs were above the allowable minimum (0.99) for both columns, as required.

Continuing Calibration: The %D for total chlordane was above the allowable maximum (20%) for secondary column on 03-01-24 (P600429055.D). The %D for toxaphene was above the allowable maximum (20%) for secondary column on 03-01-24 (P600429056.D). The %D for heptachlor was above the allowable maximum (20%) for secondary column on 03-02-24 (P600429094.D). The %D for heptachlor was above the allowable maximum (20%) for secondary column on 03-02-24 (P600429107.D). Positive results for these pesticides should be considered estimated (J) in associated samples.

www.alphageoscience.com

DDT/Endrin Breakdown Check: The percent breakdowns were below the allowable maximum (15%) for 4,4'-DDT and endrin, as required.

Pesticide Identification Summary for Single Component Analytes: Checked surrogates were within GC quantitation limits. The analyses of the ground water samples reported target single component pesticides as not detected.

Pesticide Identification Summary for Multicomponent Analytes: The analyses of the ground water samples reported target multi-component pesticides as not detected.

QA/QC Review of Method 8082A PCB Data for
York Analytical Laboratories, Inc., SDG: 24B1548

3 Ground Water Samples and 1 Field Blank
Collected February 27, 2024

Prepared by: Donald Anné
May 13, 2024

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method and field blanks reported target aroclors as not detected.

Surrogate Recovery: One of two surrogate recoveries for sample MW-11 was below QC limits, but not below 10% on one column. No action is taken on one surrogate recovery outside QC limits on one column, provided the recovery is less than 10%.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for aroclor 1016 and aroclor 1260 were below the allowable maximum and the percent recoveries were within QC limits on the both columns for aqueous MS/MSD sample MW-07.

Laboratory Control Sample: The percent recoveries for aroclor 1016 and aroclor 1260 were within QC limits on both columns for aqueous sample BB41853-BS2.

Initial Calibration: The %RSDs for aroclor 1016 and aroclor 1260 were below the allowable maximum (20%) or the Quad CODs were above the allowable minimum (0.99) for both columns, as required.

Continuing Calibration: The average %Ds for target aroclors were below the allowable maximum (20%), as required.

PCB Identification Summary: Checked surrogate results were within GC quantitation limits. The analyses of the ground water samples reported target aroclors as not detected.

QA/QC Review of Method 1633 PFAS Data for
York Analytical Laboratories, Inc., SDG: 24B1548

3 Ground Water Samples and 1 Field Blank
Collected February 27, 2024

Prepared by: Donald Anné
May 13, 2024

Holding Times: The samples were analyzed within USEPA holding times.

Initial Calibration (Internal Standard): The Quad COD for 8:2 FTS, 4:2 FTS, and 6:2 FTS were below the allowable minimum (0.995) for LCQQQ on 01-29-24. Positive results for these PFAS should be considered estimated (J) in associated samples.

Continuing Calibration: The %Ds for target PFAS were below the allowable maximum (30%), as required.

Blanks: The analyses of the method and field blanks reported target PFAS as not detected.

Internal Standard Area Summary: The internal standard retention times were within control limits.

Surrogate Recovery: One of twenty-four surrogate recoveries for samples MW-07 PFAS, FB-01 PFAS, MW-08 PFAS, and MW-11 PFAS was below QC limits and below 10%. Positive results associated with the surrogate below QC limits should be considered estimated (J) and "not detected" results rejected, unusable (R) in the samples.

Two of twenty-four surrogate recoveries for sample MW-11 PFAS were above QC limits. One of twenty-four surrogate recoveries for sample MW-07 PFAS was above QC limits. Positive results associated with the surrogate above QC limits should be considered estimated (J) in the samples.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for FPrPA and PFMPA were above the allowable maximum; 1 or 2 percent recoveries (%Rs) for ADONA and PFMBA were above QC limits; and 2 of 2 %Rs for PFMPA and PFBA were below QC limits and below 30% for aqueous MS/MSD sample MW-07. Positive result for PFBA should be considered estimated, biased low (J-) and the "not detected" result for PFMBA rejected, unusable (R) in sample MW-07.

QA/QC Review of TAL Metals Data for
York Analytical Laboratories, Inc., SDG: 24B1548

3 Ground Water Samples and 1 Field Blank
Collected February 27, 2024

Prepared by: Donald Anné
May 13, 2024

Holding Times: Samples were analyzed within the USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recovery (%R) for dissolved beryllium was above control limits (90-110%), but not above 150% for S4C060-CCV2. The %Rs for total cadmium was above control limits (90-110%), but not above 150% for S4C0604-CCV4. Positive results for beryllium and cadmium should be considered as estimated, biased high (J+) in associated aqueous samples.

CRDL Standard: The percent recovery for selenium was above laboratory QC limits (70-130%) for dissolved CRDL sample S4C0604-CRL1. Positive results for selenium that are above 4X the spiking level should be considered estimated, biased high (J+) in associate dissolved aqueous samples.

Blanks: Field blank FB-1 contained total calcium (0.295 mg/L), lead (0.00685 mg/L), potassium (0.0747 mg/L), and sodium (0.644 mg/L), and dissolved calcium (0.244 mg/L) and sodium (0.767 mg/L) above the MRLs. Positive results for these metals that are less than 5 times the highest blank level should be considered not detected (U) in associated total and dissolved aqueous samples.

ICP Interference Check Sample: The percent recoveries for applicable metals were within control limits (80-120%) for the interference check samples.

Spike Sample Recovery: The percent recoveries for applicable metals were within control limits (75-125%) for aqueous total and dissolved spike sample MW-07 and total and dissolved MS/MSD sample MW-07.

Laboratory Duplicate: The relative percent differences for applicable metals were below the allowable maximum (20%) for aqueous total and dissolved duplicate sample MW-07 and total and dissolved MS/MSD sample MW-07, as required.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Laboratory Control Sample: The percent recoveries for applicable metals were within control limits for aqueous total samples BC40147-BS1, BC40148-BS1, and BC40171-BS1, and dissolved samples BC40154-BS1, BC40151-BS1, and BC40278-BS1.

Serial Dilution: The %Ds for calcium, iron, magnesium, manganese, potassium, and sodium were above the allowable maximum (10%) for aqueous total serial dilution sample MW-07. The %Ds for calcium, magnesium, manganese, potassium, and sodium were above the allowable maximum (10%) for aqueous dissolved serial dilution sample MW-07. Positive results for these metals that are above the RLs should be considered estimated (J) in associated aqueous total and dissolved samples.

Detection Limits: The LODs were at or below POQs, as required.

Total vs Dissolved: The dissolved result for sodium was greater than the total result plus 10% for sample FB-1. Positive results for total and dissolved sodium for sample FB-1 should be considered estimated (J).

QA/QC Review of Total Cyanide Data for
York Analytical Laboratories, Inc., SDG: 24B1548

3 Ground Water Samples and 1 Field Blank
Collected February 27, 2024

Prepared by: Donald Anné
May 13, 2024

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method and field blanks reported total cyanide as not detected.

Spike Sample Recovery: The percent recoveries for total cyanide were within QC limits (79-105%) for aqueous MS/MSD samples MW-07 and MW-08.

Laboratory Duplicate: The relative percent differences for total cyanide were below the allowable maximum (20%) for aqueous MS/MSD samples MW-07 and MW-08, as required.

Laboratory Control Sample: The percent recoveries for total cyanide were within control limits (80-120%) for aqueous samples BB41868-BS1 and BB41953-BS1.

Data Usability Summary Report for
York Analytical Laboratories, Inc., SDG: 24B1656

5 Ground Water Sample, 1 Field Duplicate,
1 Field Blank, and 1 Trip Blank
Collected February 28, 2024

Prepared by: Donald Anné
May 13, 2024

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contains the results of 5 ground water samples and 1 field duplicate analyzed for volatiles, semi-volatiles, SIM-volatiles, PFAS, pesticides, PCBs, 1,4-dioxane, TAL metals, and total cyanide; 1 field blank analyzed for PFAS, and 1 trip blank analyzed for volatiles.

The overall performances of the analyses are acceptable. York Analytical Laboratories, Inc. did fulfill the requirements of the analytical methods except for ICP metals and semi-volatile analyses.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The positive volatile results for tetrachloroethylene were qualified as "estimated, biased low" (J-) for samples MW-13, MW-DUP-1 (16 Ft), MW-12, and MW-9 because 2 of 2 percent recoveries for tetrachloroethylene were below QC limits, but not below 30% in the associated aqueous LCS/LCSD.

- The "not detected" volatile results for methylcyclohexane were qualified as "estimated" (UJ) for all 5 ground water samples, field duplicate, and trip blank because 2 of 2 percent recoveries for methylcyclohexane were below QC limits, but not below 30% in the associated aqueous LCS/LCSD.

- The "not detected" volatile results for tetrachloroethylene were qualified as "estimated" (UJ) for samples MW-10, MW-6, and TB-2 because 2 of 2 percent recoveries for tetrachloroethylene were below QC limits, but not below 30% in the associated aqueous LCS/LCSD.

- The "not detected" volatile results for 1,4-dioxane were qualified as "rejected, unusable" (R) for all 5 ground water samples, field duplicate, and trip blank because the average RRF and RRF for 1,4-dioxane were below the allowable minimum in the associated initial and continuing calibration verification samples.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

- The "not detected" semi-volatile results for the following 9 compounds were qualified as "rejected, unusable" (R) for all 5 ground water samples and field duplicate because the percent recoveries for these 9 compounds were below QC limits and below 30% in the associated aqueous LCS.

2,3,4,6-tetrachlorophenol	2,4,5-trichlorophenol	2,4,6-trichlorophenol
2,4-dichlorophenol	2,4-dinitrophenol	2-nitrophenol
4,6-dinitro-2-methylphenol	hexachlorocyclopentadiene	4-nitroaniline

- The "not detected" SIM semi-volatile results for n-nitrosodimethylamine were qualified as "rejected, unusable" (R) for all 5 ground water samples and field duplicate because the percent recovery for n-nitrosodimethylamine was below QC limits and below 30% in the associated aqueous LCS.

- The "not detected" PFAS results for PFBA were qualified as "rejected, unusable" (R) for all 5 ground water samples because the percent recovery for the surrogate used to quantitate PFBA was below QC limits and below 10% in the samples.

- The "not detected" PFAS results for PFBA and N-EtFOSE were qualified as "rejected, unusable" (R) for sample FB-2 because the percent recoveries for the surrogates used to quantitate PFBA and N-EtFOSE were below QC limits and below 10% in the sample.

- The positive PFAS result for PFBA was qualified as "estimated" (J) for field duplicate sample MW-DUP-1 (16 Ft) because the percent recovery for the surrogate used to quantitate PFBA was below QC limits and below 10% in the sample.

- The positive PFAS result for PFOA was qualified as "estimated" (J) for sample MW-13 because the percent recovery for the surrogate used to quantitate PFOA was above QC limits in the sample.

- The "not detected" PFAS results for PFPeA, N-MeFOSE, and N-EtFOSA were qualified as "estimated" (UJ) for sample FB-2 because the percent recoveries for the surrogate used to quantitate PFPeA, N-MeFOSE, and N-EtFOSA were below QC limits, but not below 10% in the sample.

- The "not detected" PFAS results for PFDoS were qualified as "estimated" (UJ) for all 5 ground water sample, field duplicate, and field blank because the percent recovery for PFDoS was below QC limits, but not below 30% in the associated aqueous LCS.

- The "not detected" PFAS result for PFPeA was qualified as "estimated" (UJ) for sample MW-12 because the percent recovery for the surrogate used to quantitate PFPeA was below QC limits, but not below 10% in the sample.

- The positive PFAS results for PFPeA were qualified as "estimated" (J) for samples MW-10 and MW-9 because the percent recovery for the surrogate used to quantitate PFPeA was below QC limits, but not below 10% in the samples.

- The positive PFAS results for PFPeA and PFBS were qualified as estimated (J) for samples MW-13 and MW-DUP-1 (16 Ft) because the relative percent differences for PFPeA and PFBS were above the allowable maximum for the aqueous field duplicate pair MW-13/MW-DUP-1 (16 Ft).

- The positive total metal results for selenium were qualified as estimated, biased high (J+) for samples MW-13, MW-DUP-1 (16 Ft), MW-12, and MW-6 because the percent recovery for selenium was above QC limits in the associated CRDL sample and the results were below 4 times the CRDL sample spiking level.

- The positive dissolved metal results for selenium were qualified as estimated, biased high (J+) for samples MW-13 and MW-DUP-1 (16 Ft) because the percent recovery for selenium was above QC limits in the associated CRDL sample and the results were below 4 times the CRDL sample spiking level.

- The "not detected" dissolved metal results for antimony were qualified as estimated (UJ) for samples MW-12, MW-10, MW-9, and MW-6 because the percent recovery for antimony was below QC limits, but not below 30% in the associated CRDL sample.

- The positive dissolved metal result for selenium was qualified as "estimated" (J) for sample MW-12 because the dissolved concentration was greater than the total concentrations plus 10%.

- The positive total metal results for antimony were qualified as estimated (J) for samples MW-13 and MW-DUP-1 (16 Ft) because the relative percent difference for antimony was above the allowable maximum for the aqueous field duplicate pair MW-13/MW-DUP-1 (16 Ft).

- The positive total metal results for aluminum were qualified as estimated (J) for all 5 ground water samples and field duplicate because the %D for aluminum was above the allowable maximum in the associated aqueous total serial dilution samples and the results were above the RLs.

- The positive dissolved metal results for calcium, potassium, and sodium were qualified as estimated (J) for all 5 ground water samples and field duplicate because the %Ds for calcium, potassium, and sodium were above the allowable maximum in the associated aqueous serial dilution sample and the results were above the RLs.

- The positive dissolved metal results for magnesium and manganese were qualified as estimated (J) for samples MW-13, MW-DUP-1 (16 Ft), MW-10, MW-9, and MW-6 because the %Ds for magnesium and manganese were above the allowable maximum in the associated aqueous dissolved serial dilution sample and the results were above the RLs.

- The positive dissolved and "not detected" total metal results for zinc were qualified as estimated (J and UJ respectively) for samples MW-12, MW-10, MW-9, and MW-6 because the total results were reported as "not detected" and the dissolved results were above the RLs.

- The positive dissolved and "not detected" total metal results for lead were qualified as estimated (J and UJ respectively) for samples MW-12, MW-9, and MW-6 because the total results were reported as "not detected" and the dissolved results were above the RLs.

All data that are not qualified rejected (R) are considered usable with estimated (J-, J, J+, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.
