SUPPLEMENTAL SITE CHARACTERIZATION REPORT
3547 WEBSTER AVENUE
BRONX, NEW YORK

by
H & A of New York Engineering and Geology, LLP
New York, New York

for
New York State Department of Environmental Conservation
Albany, New York

File No. 0211776
September 2025

Certification

This report documents remedial investigation activities conducted at the Site at 3547 Webster Avenue, Bronx, New York.

I, Suzanne M. Bell, certify that I am currently a Qualified Environmental Professional as defined in 6 NYCRR Part 375 and that this Supplemental Site Characterization Work Plan was prepared in accordance with the applicable statutes and regulations and in substantial conformance with the Division of Environmental Remediation Technical Guidance for Site Investigation and Remediation (DER-10).

1. Introduction

This Supplemental Site Characterization (SSC) Report (SSCR) was developed by H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) on behalf of 3547 Webster Avenue LLC for the 3547 Webster Avenue Site, located at 3547 Webster Avenue, Bronx, New York (the Site).

The Site, identified as Block 3356, Lots 196 and 200 on the New York City tax map, is located in the Norwood/Bainbridge neighborhood of the Bronx, New York. It is comprised of two adjacent tax lots, totaling approximately 18,700 square feet (sq ft). The Site is bound by Woodlawn Cemetery to the north (4199 Webster Avenue); a two-story commercial building to the south (3525 Webster Avenue); Webster Avenue to the east; and a six-story residential building (3540 Decatur Avenue) and vacant land to the west. The project locus is shown on Figure 1, and the Site's Tax Block and Lot boundaries are shown in Figure 2.

The Site is zoned in a C4-4 zoning district which allows for commercial and residential use. The Site is located within an urban area characterized by low-/mid-rising commercial and multi-family residential buildings. The previous Site features have been demolished, and the Site is currently going through redevelopment.

Construction is ongoing; the planned project will consist of constructing a new, slab-on-grade, eight-story mixed commercial and residential use building with open-air parking along the western portion of the Site. The new development will not have a cellar which is consistent with current zoning.

The activities of this SSC were completed from March 10 through May 16, 2025, in conformance with the Division of Environmental Remediation Technical Guidance for Site Investigation and Remediation (DER-10) and the New York State Department of Environmental Conservation (NYSDEC)-approved Supplemental Site Characterization Work Plan (SSCWP), approved on March 7, 2025.

1.1 PURPOSE AND OBJECTIVES

Previous investigations conducted at the Site identified the presence of chlorinated volatile organic compounds (CVOCs) in groundwater and soil vapor at the Site. Trichloroethene (TCE) concentrations in groundwater were detected exceeding the New York Technical and Operational Guidance Series 1.1.1 (T.O.G.S. 1.1.1) Class GA Ambient Water Quality Standards (AWQS) with concentrations between 4.59 and 81.2 micrograms per liter (µg/L). Following the identification of elevated CVOC impacts in groundwater, additional investigation was required to understand the extent of contamination on the Site, evaluate potential on-site sources, and identify remedial options. A Site Characterization was conducted in February 2024, and a draft Site Characterization Report dated July 2024 was submitted by vEKtor Consultants (vEKtor) to the NYSDEC; a comment letter dated September 25, 2024, was provided by NYSDEC.

The SSC activities described in this report were designed to address the data gaps outlined in the comment letter received from the NYSDEC on September 25, 2024, and to provide a greater understanding of Site conditions. Sample locations and geologic cross sections are shown on Figures 3A, 3B, 3C and 4. The results of this SSC were used to evaluate the results of the historical site characterization activities, delineate the on-site source(s), and determine a course for appropriate Remedial Actions (RAs).

2. Site Background

2.1 SITE LOCATION AND DESCRIPTION

The Site, identified as Block 3356, Lots 196 and 200 on the New York City tax map, is in the Norwood/Bainbridge neighborhood of the Bronx, and comprises two contiguous lots, totaling approximately 18,663 sq ft. The Site is bound by Woodlawn Cemetery to the north (4199 Webster Avenue); a two-story commercial building to the south (3525 Webster Avenue); Webster Avenue to the east; and a six-story residential building (3540 Decatur Avenue) and vacant land to the west. Properties immediately surrounding the Site are zoned for residential and commercial use. No hospitals are located within a 500-foot (ft) radius of the Site.

The previous Site structures have been demolished, and the Site is currently going through redevelopment. With redevelopment ongoing, superstructure work is complete on the new eight-story mixed commercial and residential use building. The Site will include commercial space on the first floor with access to open-air parking along the western portion of the Site. The new development will be slab-on-grade, without a cellar, which is consistent with current zoning.

2.2 GEOLOGY AND HYDROGEOLOGY

The stratigraphy of the Site, from the surface down, consists of approximately 4 to 5 ft of native medium to fine brown to light brown sand, with varying degrees of silt and weathered bedrock. Bedrock, encountered consistently between 4 to 5 ft below ground surface (bgs), was identified as the Fordham Gneiss.

The Site topography is relatively flat and has a topographic elevation of approximately 103 ft above mean sea level (amsl).

Based on May 2025 monitoring well surveying completed by DPK Consulting LLC (DPK), a New York State-licensed surveyor, and monitoring well gauging events conducted by Haley & Aldrich of New York, the interpreted groundwater flow direction is approximately eastern. During April and May 2025 gauging events, groundwater was encountered at an average depth of approximately 3.75 ft bgs, with a range of 1.73 to 6.05 ft bgs.

2.3 SITE HISTORY

According to a Phase I Environmental Site Assessment (ESA), prepared by Partner Assessment Corporation, Inc. (Partner), the Site was reportedly undeveloped in the late 1800s and early 1900s. Between 1941 and 1947, both lots were depicted as developed on aerial photographs, topographic maps, and/or Sanborn maps. Block 3356, Lot 200 was depicted as developed with a two-story building with various historical tenants, including commercial garages, auto repair, manufacturing operations, and medical centers. Block 3356, Lot 196 was depicted as developed with a one-story building in the western portion of the lot and a parking area in the eastern portion of the lot that served as a commercial garage. The structures on both lots were demolished sometime between 2022 through 2024.

3. Summary of Previous Investigations

The following reports were prepared for the Site prior to submission of the SSCWP:

1. May 2019, Phase I ESA, prepared by Partner; and
2. July 2024, Site Characterization Report, prepared by vEKtor.

Full investigation findings are included in Appendix A. A summary of the environmental findings of these investigations is provided below.

May 2019 Phase I ESA Prepared by Partner

In May 2019, a Phase I ESA was completed by Partner for the purpose of identifying Recognized Environmental Concerns (RECs) in connection with a portion of the Site (Block 3356, Lot 200). The Phase I ESA identified the following RECs in connection with Block 3356, Lot 200:

- The historical use of the subject property for garage, auto repair, and manufacturing operations and its associated use of petroleum products and chlorinated solvents.
- The former presence of underground storage tanks (USTs) and fill ports/vent pipes at the subject property, without documentation of assessment and/or removal.
- An E-Designation listing at the Site was identified as E-249, issued March 23, 2011, for "Hazardous Materials Phase I and Phase II Testing Protocol" and "Window Wall Attenuation & Alternate Ventilation."

July 2024 Draft Site Characterization Report, Prepared by vEKtor

The Site Characterization was conducted in three stages: in September 2022, February 2023, and February 2024. The initial investigation was conducted in September 2022, under the New York City Office of Environmental Remediation (NYCOER) E-Designation Program and consisted of the following:

- Conducting a Site inspection.
- Performing a ground penetrating radar (GPR) survey to locate utilities in the vicinity of the proposed boring locations and any unidentified USTs.
- Installation of 11 soil borings across the Site and collection of 22 soil samples for laboratory analysis to evaluate soil conditions.
- Attempting installation of four 1-inch diameter permanent groundwater monitoring wells. Due to shallow bedrock and encountered refusal, groundwater monitoring wells could not be installed during the remedial investigation.
- Installation of nine soil vapor probes around the Site perimeter and collection of nine soil vapor samples for laboratory analysis to evaluate subsurface soil vapor.

The September 2022 Site characterization identified the following:

- Elevation of the property was identified as approximately 109 ft amsl.
- Depth to bedrock was identified as approximately 5 ft bgs at the Site.

- Groundwater was not encountered, and monitoring wells were not installed due to bedrock/refusal at approximately 5 ft bgs.
- Depth to groundwater was assumed to be between 20 to 40 ft bgs.
- The stratigraphy of the Site, from the surface down, consists of approximately 5 ft of brown to grey sand and varying degrees of silt and crushed rock.
- GPR survey indicated there were no subsurface anomalies consistent with USTs.
- Soil samples were compared to NYSDEC Title 6 of the New York Codes, Rules and Regulations (6 NYCRR) Part 375-6 Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Soil Cleanup Objectives (RRSCOs). Soil analytical results are summarized as follows:
  - No semi-volatile organic compounds (SVOCs), pesticides, polychlorinated biphenyls (PCBs), or per- and polyfluoroalkyl substances (PFAS) were detected above UUSCOs.
  - Methylene chloride was detected above UUSCOs but below RRSCOs in three soil samples.
  - Eight metals (barium, copper, lead, nickel, zinc, mercury, hexavalent chromium, and trivalent chromium) were detected above UUSCOs in 13 soil samples, and barium was detected above RRSCOs in three soil samples.
- Soil vapor sample results are summarized as follows:
  - Petroleum-related volatile organic compounds (VOCs; benzene, toluene, ethylbezene, and total xylenes [BTEX]) were detected at elevated concentrations in the sub-slab soil vapor samples collected beneath the Site.
  - Chlorinated solvents, including 1,1,1-trichloroethane (1,1,1-TCA), 1,1-dichloroethene, cis-1,2-dichloroethene (cis-1,2-DCE), and PCE, were detected in six soil vapor samples. Carbon tetrachloride and methylene chloride were detected at low concentrations in up to two soil vapor samples. TCE was present in all soil vapor samples, and vinyl chloride was detected in two soil vapor samples.
  - 1,1,1-TCA, carbon tetrachloride, PCE, and TCE were detected above the monitoring/mitigation range established by the New York State Department of Health (NYSDOH) soil vapor guidance matrix.

Based on the results of the September 2022 Site characterization, specifically the presence of CVOCs in soil vapor, a second mobilization for further groundwater investigation was completed by vEKtor between February 27, 2023, and March 21, 2023, as required by the NYSDEC. The investigation consisted of the following:

- Performance of a geophysical bedrock survey of monitoring well boreholes.
- Installation of five bedrock monitoring wells (MW-1 through MW-5) and collection of five groundwater samples for VOC analysis.
- Performance of monitoring well surveying.

The February 2023 investigation identified the following:

- Depth to bedrock ranges from approximately 1 to 5 ft bgs at the Site.
- The average depth to groundwater is approximately 5.99 ft bgs, and groundwater beneath the Site flows east towards the Bronx River. The groundwater elevation range was identified as 89.5 ft in MW-5 to 94.87 ft in MW-1 (North American Vertical Datum of 1988 [NAVD88]).

- The geophysical bedrock survey indicated that the MW-1, MW-2, MW-3, and MW-5 boreholes had little or no vertical flow of groundwater. The borehole at MW-4 could not be surveyed due to field conditions and bedrock collapse.
- Groundwater samples were compared to T.O.G.S 1.1.1 Class GA AWQS. Four CVOCs, 1,1,1-TCA, cis-1,2-DCE, TCE, and vinyl chloride, were detected above AWQS in groundwater samples collected from MW-1, MW-2, MW-3, and MW-5. These monitoring wells are in the southern and central portions of the Site.

In February 2024, an additional Site Characterization was completed by vEKtor and consisted of the following:

- Performance of a GPR survey.
- Performance of a geophysical bedrock survey of monitoring well boreholes to investigate lithology, fracture location and orientation, flow in the boreholes, and overall physical condition.
- Installation of eight bedrock monitoring wells (MW-6 through MW-13) and collection of eight groundwater samples for VOC analysis.
- Performance of monitoring well surveying.

The February 2024 characterization identified the following:

- GPR survey indicated there were no subsurface anomalies consistent with USTs.
- Geophysical bedrock survey results are summarized as follows:
  - Little to no flow of groundwater at the MW-6 through MW-13 boreholes was observed.
  - Up flow values of 0.03 gallons per minute (gpm) were observed at the following intervals and borehole locations:
    - MW-7, from 13 to 16.75 ft bgs
    - MW-13, from 14 to 17 ft bgs
  - Down flow values of 0.03 gpm were observed at the following intervals and borehole locations:
    - MW-7 from 16.75 to 20 ft bgs
    - MW-13 from 13.5 to 18 ft bgs
  - Fractures were identified at the following intervals and borehole locations:
    - MW-7 from 9.8 to 11.6 ft bgs
    - MW-8 from 9.8 to 12.8 ft bgs
    - MW-9 from 10.4 to 10.9 ft bgs
    - MW-12 from 8.7 to 9.1 ft bgs
    - MW-13 from 9.4 to 13.6 ft bgs
- Groundwater samples were compared to T.O.G.S 1.1.1 Class GA AWQS. Groundwater sample results are summarized as follows:
  - Fifteen VOCs (1,1,1-TCA, 1,1,2-trichloroethane, 1,1-dichloroethane, 1,1-dichloroethylene, 1,2-dichloroethane, 1,2,4-trimethylbenzene, cis-1,2-DCE, ethylbenzene, n-butylbenzene, n-propylbenzene, toluene, trans-1,2-dichloroethylene, TCE, vinyl chloride, and total xylenes) were detected above AWQS in groundwater samples collected from all eight

monitoring wells (MW-6 through MW-13). Most of the maximum concentrations were detected in MW-9, with the exception of 1,2,4-trimethylbenzene, n-butylbenzene, and n-propylbenzene, where maximum concentrations were detected in MW-7.

- Three naturally occurring total and dissolved metals, magnesium, manganese, and sodium, were detected above AWQS in groundwater samples collected from MW-6 through MW-13. Additionally, dissolved mercury was detected slightly above AWQS in a duplicate sample.
- Two SVOCs, chrysene and hexachlorobenzene, were detected above AWQS in groundwater samples collected from MW-8 and MW-10.
- Two PFAS compounds, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS), were detected above their respective AWQS in all groundwater samples collected from MW-6 through MW-13.
- No pesticides or PCBs were detected in any of the groundwater samples collected from MW-6 through MW-13.

4. Supplemental Site Characterization

4.1 IDENTIFIED DATA GAPS FROM THE DRAFT SITE CHARACTERIZATION REPORT (VEKTOR)

Following the submission of the July 2024 Site Characterization Report by vEKtor, the NYSDEC provided a comment letter on September 25, 2024. The comment letter outlined several data gaps and inconsistencies identified in the July 2024 Site Characterization Report and the NYSDEC's requests for modifications to the draft Interim Remedial Measure Work Plan (IRMWP). Additionally, Haley & Aldrich of New York identified additional data gaps during the review of previous investigations conducted by Partner, ProGea, and vEKtor. The data gaps are summarized in the following subsections.

It is noted that an IRMWP has not yet been submitted to the NYSDEC; however, an IRMWP that incorporates the results of this SSC will be prepared and submitted by Haley & Aldrich of New York under separate cover.

4.1.1 Soil Vapor

Soil vapor data gaps identified by the NYSDEC and during Haley & Aldrich of New York's review of previous investigations, that are summarized in the SSCWP, included:

- Sufficient soil vapor data have not been collected to delineate the vertical and horizontal distribution of contaminants. Additional soil vapor and soil vapor intrusion investigation is needed to determine whether soil vapor contamination is migrating off the Site, as noted by the NYSDEC.
  - It is noted that vertical delineation of soil vapor may be limited, as bedrock has been previously observed at approximately 3 ft bgs and groundwater has been previously observed at approximately 6 ft bgs.
- Soil vapor and sub-slab samples were not collected off the Site, nor were they collected along the property boundary in sufficient quantities. Delineation of potential off-site soil vapor contamination is warranted, as noted by the NYSDEC.
- Sub-slab soil vapor has not been investigated at nearby buildings. If access is granted, a vapor intrusion investigation will be conducted.

4.1.2 Groundwater

Groundwater data gaps identified by the NYSDEC and during Haley & Aldrich of New York's review of previous investigations, summarized in the SSCWP, included:

- Groundwater flow direction and velocity were not adequately investigated during previous characterization investigations. While groundwater is generally understood to flow towards the Bronx River, the specifics of groundwater flow beneath the Site are not well understood. In addition, hydraulic conductivity, hydraulic gradient, and groundwater flow paths have not been sufficiently characterized.
- Bedrock investigation has not been performed below 26.15 ft bgs (at MW-10). Additional exploration is needed to better understand bedrock geophysics and groundwater to depths of more than 30 ft bgs.

- Vertical and horizontal delineation of CVOCs and metals has not been completed. Additional monitoring wells and sampling are required to understand the fate and transport of CVOCs detected at the Site.
- Groundwater data from off-site properties has not been collected.

4.1.3 Bedrock Geophysical

Bedrock geophysical data gaps identified by the NYSDEC and during Haley & Aldrich of New York's review of previous investigations, summarized in the SSCWP, included:

- The July 2024 Site Characterization Report prepared by vEKtor does not contain a sufficient analysis of geophysical data to inform on the migration of contamination through the bedrock groundwater medium, as noted by the NYSDEC.
- Transmissive bedrock fractures were not adequately characterized, as noted by the NYSDEC. Additionally, the current analysis of geophysical data does not establish whether groundwater contamination is migrating horizontally off the Site or vertically into deeper bedrock fractures or formations. Any connectivity is not understood and needs to be further evaluated.
- Current geophysical analysis does not address the potential for vertical migration, the correlation between fractures, the general distribution and orientation (strike/dip) of transmissive fractures Site-wide, or the communication between fractures, as noted by the NYSDEC. This assessment is necessary to determine the feasibility of future groundwater treatment.

4.2 2025 BEDROCK BORING INSTALLATION

The purpose of the supplemental bedrock groundwater investigation, as completed by Haley & Aldrich of New York, was to delineate the source contamination of CVOCs in groundwater originally detected during the 2024 Site Characterization conducted by vEKtor. Between March 10 and April 11, 2025, bedrock boring installations were completed at six locations (Figures 3A to 3C), with three borings of varying depths (shallow, intermediate, and deep) at each location to address the data gaps described above. A total of 18 borings were installed to delineate both the horizontal and vertical extent of on-site contamination. Bedrock boring logs are provided in Appendix B.

Four deep bedrock borings (MW-09D, MW-14D, MW-16D, and MW-17D) were advanced to a depth of 45 ft bgs using a track-mounted sonic drill rig (Terra Sonic®) operated by a licensed operator provided by Aquifer Drilling and Testing (ADT). These four borings were continuously cored to boring terminus, subsequently flushed by ADT to remove turbid water from the borehole, then logged by Hager-Richter Geoscience, Inc. (HRGS) using downhole geophysical tools, in accordance with the SSCWP. Due to vertical clearance issues within the building, two deep bedrock borings (MW-15D and MW-18D) were advanced to a depth of 45 ft bgs using a track-mounted air rotary drill rig (Geoprobe®), operated by a licensed operator provided by ADT. Both borings were completed to boring terminus, subsequently flushed by ADT to remove turbid water from the borehole, then logged by HRGS using downhole geophysical tools, in accordance with the SSCWP. Due to the nature of on-site conditions and vertical building restrictions of these two locations, the air rotary drill rig was necessary to complete these borings and was unable to collect cores at these locations.

Upon review of geophysical interpretations from the six deep borings, four intermediate and four shallow bedrock borings were advanced using a track-mounted sonic drill rig by ADT (MW-09S, MW-09I, MW-14S,

MW-14I, MW-16S, MW-16I, MW-17S, and MW-17I). Four of these intermediate and shallow bedrock borings were advanced using a track-mounted air rotary drill rig by ADT (MW-15S, MW-15I, MW-18S, and MW-18I).

4.2.1 Geophysical Logging

Downhole geophysical logging was completed to identify water-bearing features (joints, fractures, etc.) at each of the deep bedrock boring locations, to aid in the selection of monitoring well screen intervals. The downhole geophysical logging was conducted in each of the six deep well locations installed during this SSC (MW-09D, MW-14D, MW-15D, MW-16D, MW-17D, and MW-18D), prior to the installation of the 18 bedrock groundwater monitoring wells.

Upon the completion of each deep bedrock boring, HRGS immediately completed downhole logging, which included the following parameters:

- Fluid temperature;
- Fluid conductivity/resistivity;
- Optical televiewer (OTV);
- Acoustic televiewer (ATV) and caliper;
- Heat pulse flowmeter (HPFM) under ambient conditions;
- HPFM under pumping conditions;
- Natural gamma; and
- Spontaneous potential.

These parameters were evaluated and interpreted in real time to identify water-bearing features at each borehole. Haley & Aldrich of New York personnel and HRGS, with input and approval from the NYSDEC, determined the appropriate screen intervals for each monitoring well. Correspondence and approvals from the NYSDEC are provided in Appendix C.

The geophysical interpretations for each deep boring are summarized below. In their report, HRGS ranked fracture features into three categories: minor fractures that are indistinct and may not be continuous around the borehole, intermediate fractures that are distinct and continuous but have little or no apparent aperture, and major fractures that are distinct and continuous with apparent aperture.

MW-09D

Major fractures were detected at approximately 38 and 42 ft bgs, with other intermediate and minor fractures noted throughout the borehole. Under ambient, non-pumping conditions, no upward or downward vertical flow was detected by HRGS in the borehole. Under pumping conditions, upward groundwater flow was detected between 4.8 to 9.5 ft bgs (0.2 gpm), 11.9 to 33.4 ft bgs (0.14 gpm), and 38.4 to 41.8 ft bgs (0.05 gpm), indicating the presence of water-bearing fractures. Groundwater was detected entering the borehole between 9.5 and 11.9 ft bgs, 33.4 to 38.4 ft bgs, and 41.8 and 42.5 ft bgs, with the fracture at 38 ft bgs likely contributing the greatest amount of flow. No other water-bearing features were identified within the borehole under pumping conditions.

MW-14D

A single major fracture was detected in the saturated portion of the borehole at approximately 41.5 ft bgs. Under ambient, non-pumping conditions, no upward or downward vertical flow was detected by HRGS in the borehole. Under pumping conditions, slight upward flow (0.04 gpm) was detected between 8.0 to 41.4 ft bgs, with groundwater entering the borehole between 41.4 and 42.0 ft bgs. No flow was detected below 43.8 ft bgs. While other minor and intermediate fractures were detected in the borehole, no other water-bearing features were identified within the borehole under pumping conditions.

MW-15D

No major fractures were detected within the borehole. Under ambient, non-pumping conditions, no upward or downward vertical flow was detected by HRGS in the borehole. Under pumping conditions, slight upward flow (0.02 gpm) was detected between 4.2 to 18.8 ft bgs, with groundwater entering the borehole between approximately 18.8 and 26.3 ft bgs. While minor and intermediate fractures were detected in the borehole, no other water-bearing features were identified within the borehole under pumping conditions.

MW-16D

Major fractures were observed at 12.5, 31.0, and 38.5 ft bgs. Under ambient conditions, slight flow (0.05 gpm) was detected entering the borehole near the bottom of the steel casing (approximately 4.8 ft bgs), flowing down the borehole, and exiting the borehole between 38.3 and 39.0 ft bgs, likely at the major fracture noted at 38.5 ft bgs. Similarly, under pumping conditions, inward flow was detected entering the borehole at approximately 4.8 ft bgs (0.07 gpm), continuing down the borehole at approximately 0.02 gpm (note that approximately 0.05 gpm was removed by the pump), and exiting the borehole between 38.3 and 39.0 ft bgs, likely at the major fracture noted at 38.5 ft bgs. Flow entering the borehole at approximately 4.8 ft bgs under ambient and pumping conditions is suspected to be due to leakage around the bottom of the steel casing. Aside from the feature at 38.5 ft bgs, no other water-bearing features were identified within the borehole under pumping conditions.

MW-17D

Near horizontal major fractures were observed at 24 and 36.5 ft bgs, and a high-angle major fracture was observed at approximately 40 ft bgs. Under ambient, non-pumping conditions, no upward or downward vertical flow was detected by HRGS in the borehole. Under pumping conditions, slight upward flow (0.02 gpm) was detected at approximately entering the borehole between 36.2 and 36.7 ft bgs, likely from the major fracture noted at 36.5 ft bgs. No other water-bearing features were identified within the borehole under pumping conditions. No flow was detected below 36.7 ft bgs.

MW-18D

A single major fracture was observed at 9.5 ft bgs, co-located with several intermediate fractures. Under ambient, non-pumping conditions, no upward or downward vertical flow was detected by HRGS in the borehole. Under pumping conditions, slight upward flow (0.11 gpm) was detected between 5.0 to 8.7 ft bgs. Similarly, under pumping conditions, upward flow (0.02 gpm) was detected between 9.7 to 20.8 ft bgs. Under pumping conditions, groundwater was detected entering the borehole between 8.7 and 9.7 ft bgs and 20.8 to 27.4 ft bgs. Based on the fluid conductivity data, groundwater was possibly entering the borehole between 33.1 and 43.2 ft bgs, although this flow could not be detected by the HPFM. No other water-bearing features were identified within the borehole under pumping conditions.

Based on the televiewer (OTV & ATV) data from the six logged boreholes, 374 bedrock fractures were detected. Of the 374 detected bedrock fractures, 277 (74 percent) are interpreted as Fracture Rank 1

(minor) fractures, 84 (22.5 percent) are interpreted as Fracture Rank 2 (intermediate) fractures, and only 13 (3.5 percent) are interpreted as Fracture Rank 3 (major) fractures. Approximately 70 percent of the bedrock fractures detected dip predominantly 60 degrees to 85 degrees from horizontal to the east-southeast (90 degrees to 120 degrees). A second, but significantly less prevalent, bedrock fracture set was also detected in the logged boreholes. The secondary fracture set is orthogonal to the primary fracture set and dips predominantly 10 degrees to 30 degrees from horizontal west to north (285 degrees to 30 degrees).

The final geophysical report, prepared by HRGS, is provided in Appendix D.

4.2.1.1 Transducer Study

While not included in the SSCWP, Haley & Aldrich of New York deployed transducers, Model 3001 Levelogger® 5 water level dataloggers, in four of the newly completed monitoring wells: MW-09S, MW-09D, MW-14D, and MW-16D. The purpose was to supplement the geophysical study completed by HRGS and develop a preliminary understanding of monitoring well hydraulic connectivity (i.e., well screened across the same or interconnected water-bearing fractures). The transducers measured variations in water level from March 20 to April 17, 2025, through the remainder of the drilling, well development, and groundwater sampling events. Drops in depth to water were noted across all four wells during the installation of MW-16I and MW-14I, and during the development of MW-16I, MW-14I, and MW-09I.

Transducer data from March 20 to April 17, 2025, is provided in Appendix E.

4.2.1.2 Permanent Monitoring Well Installation and Well Decommissioning

Eighteen 2-inch-diameter permanent monitoring wells were completed at the bedrock boring locations as described above, and installed with a 5-ft screen centered on the fractures as follows:

Table 1: Well Clusters and Screen Intervals

Well Cluster	Shallow Screen Interval	Intermediate Screen Interval	Deep Screen Interval
MW-09	8.5-13.5 ft bgs	20-25 ft bgs	35-40 ft bgs
MW-14	7-12 ft bgs	23-28 ft bgs	39-44 ft bgs
MW-15	6-11 ft bgs	19.5-24.5 ft bgs	34.5-39.5 ft bgs
MW-16	10-15 ft bgs	29-34 ft bgs	37-42 ft bgs
MW-17	8-13 ft bgs	20-25 ft bgs	35-40 ft bgs
MW-18	8-13 ft bgs	23-28 ft bgs	34-39 ft bgs

All newly constructed monitoring wells utilize 2-inch-diameter polyvinyl chloride (PVC) riser pipe with 10-ft-long, 10-slot (0.01-in.) slotted screens. Each well was constructed within a 2-inch annular space backfilled with #2 certified clean sand fill, followed by a bentonite plug, and sealed at grade with steel flush-mount covers, except for well clusters MW-15 and MW-18, which are inside the building and will be flush-mounted once the final slab is poured. Monitoring well screens were installed to capture single producing fractures observed during the downhole geophysical logging. The survey report for the newly installed monitoring wells during the SSC, completed by DPK, is provided in Appendix G. Well construction diagrams are provided in Appendix H.

While the SSCWP originally called for the installation of 17 wells and the utilization of MW-9, review of the 2024 Site Characterization Report revealed that MW-9 (previously installed by vEKtor) was screened across the soil/bedrock interface. This likely resulted in perched water infiltrating the well, causing bias in sampling results. With approval from NYSDEC, MW-9 was removed from the scope of this SSC and decommissioned in accordance with the NYSDEC CP-43: Groundwater Monitoring Well Decommissioning Policy, dated November 3, 2009 (CP-43). The stick-up well protection was removed, and the well was cut down to grade, followed by being grouted in-place to seal the well casing from the bottom of the well to grade; the surface was restored with concrete and was the same thickness as the surrounding area. This well was replaced by MW-09S, which was installed with a 5-ft screen centered around the shallow producing fracture at approximately 10 ft bgs.

Additional monitoring wells, previously installed by Vektor (MW-8, MW-10, MW-11, and MW-13), were decommissioned with the approval of NYSDEC, in accordance with CP-43, prior to IRM activities. Wells with stick-up well protection had the protectors removed, and the wells were cut down to grade prior to being grouted in-place. Similar to MW-9, decommissioned wells were grouted in-place to seal the well casings from the bottom of each well to grade; the surface of each well was restored with concrete and was the same thickness as the surrounding area. These monitoring wells were screened across the soil/bedrock interface, potentially creating vertical migration pathways, and were within the proposed building footprint. All well Decommissioning Records are provided in Appendix F.

Several 1-inch-diameter monitoring wells were indicated on previous maps at the Site. However, these wells were not observed by Haley & Aldrich of New York during Site Characterization, and no record of decommissioning is available.

4.2.1.3 Groundwater Development and Sampling

During a monitoring well gauging event on May 2, 2025, groundwater was encountered at depths ranging from 1.73 to 35.41 ft below top of casing. A groundwater contour map is provided on Figures 5A, 5B, and 5C, and the synoptic monitoring well gauging measurements are provided in Table I.

Following installation, monitoring wells were developed by surging a pump in the well several times to pull fine-grained material from the well. Development was completed when the water turbidity was 50 nephelometric turbidity units (NTUs) or less, or 10 well volumes were purged.

Haley & Aldrich of New York collected 16 groundwater samples (plus quality assurance/quality control [QA/QC] samples) from March 27 to April 18, 2025, for the following laboratory analysis:

- Target Compound List (TCL)VOCs by U.S. Environmental Protection Agency (EPA) Method 8260B;
- TCL SVOCs by EPA Method 8270C;
- Total and Dissolved Metals by EPA Method 6010/7471;
- PCBs by EPA Method 8082;
- Pesticides by EPA Method 8081;
- PFAS by EPA Method 1633; and
- 1,4-dioxane by EPA Method 8260BSIM.

Groundwater samples were collected for 1,4-dioxane and PFAS, in accordance with the protocols established in NYSDEC's April 2023 "Guidance for Sampling, Analysis, and Assessment of PFAS Under NYSDEC's Part 375 Remedial Programs" (April 2023 PFAS Guidance) and were transported under standard chain of custody to Alpha Analytical Laboratories, Inc. of Westborough, Massachusetts (Alpha). Alpha is an NYSDOH Environmental Laboratory Approval Program (ELAP)-certified laboratory (ELAP No. 11148) and was responsible for analyzing the samples as per the analyses and methods identified in this SSCR.

Groundwater monitoring wells were sampled utilizing low-flow sampling procedures. Prior to sampling, the water level was measured at each monitoring well using an electronic water level meter. Groundwater from each well was purged using low pumping rates (between 100 and 500 milliliters per minute) to limit drawdown of the water level. Dedicated disposable field equipment used at each well included high-density polyethylene and silicon tubing. Wells were purged until turbidity, pH, temperature, dissolved oxygen, and specific conductivity stabilized.

During sampling, MW-15S and MW-15D ran dry prior to stabilizing and were continuously monitored for recharge. Neither well recharged over the course of five days and were unable to be sampled during this sampling event between April 16 and April 21, 2025. Groundwater sampling logs are provided in Appendix I.

4.2.1.4 Assessment of Bedrock Fracture Connectivity

To better characterize the hydraulic connectivity between the bedrock fracture zones and assess the potential for lateral and vertical migration of contaminants prior to implementation of the IRM, pump and slug testing were conducted from May 14 to 16, 2025. The implementation techniques and results of the pump and slug tests are outlined below.

4.2.1.4.1. Short-Duration Pumping Test Implementation

Pumping tests were completed to evaluate monitoring well hydraulic connectivity by inducing a short-duration (approximately 15 minutes) drawdown at select monitoring well locations and observing the hydraulic response in surrounding wells. Short-duration pump testing was conducted at MW-14I and MW-16I, the two wells with the highest concentrations of CVOCs, which were identified as potential locations for the in-situ amendment injection program. Prior to testing, a synoptic round of water level measurements was collected from the monitoring well network installed under the SSC to establish baseline conditions. A cross-section, which includes the location of Level 3 fractures (identified through downhole geophysical logging), and TCE concentrations are presented in Figure 3C.

Solinist 3001 Levelogger® 5 datalogging pressure transducers were then installed in each of the newly installed monitoring wells, with the exception of MW-15S and MW-15D. After installing the transducers, a Solonist 3001 Barologger® 5 was deployed to record atmospheric pressure and allow for barometric compensation of the transducer data.

After installing the transducers and barologger, a submersible pump with an adjustable flow rate was lowered into MW-16I. Once the water level stabilized in the well following pump placement, a groundwater level measurement was taken prior to initiating pumping. The pump was then activated, and the flow rate was adjusted to approximately 0.30 gpm. Once a stable flow rate was achieved, pumping was conducted for a minimum of 15 minutes to induce approximately 15 ft of drawdown in each well.

Following pumping, the subject well was given enough time for the water level to recover at least 95 percent before pulling the pump. The pump was then decontaminated, and the same procedure was repeated at MW-14I.

4.2.1.4.2. Slug Test Implementation

Rising head slug tests were completed at select monitoring wells to estimate the bulk hydraulic conductivity in preparation for the in-situ amendment injection program. Slug testing was conducted at MW-14I, MW-16I, and MW-17D. MW-14I and MW-16I were selected, as they have the highest concentrations of CVOCs and were identified as potential injection locations for groundwater remediation. MW-17D was selected to collect hydraulic conductivity data upgradient of the suspected source area, where elevated CVOC concentrations were observed.

Prior to commencement of the slug test, a synoptic round of water level measurements was collected from the monitoring well network installed under the SSC to establish baseline, ambient groundwater elevation data. The transducers and barologger installed during pump testing at MW-14I and MW-16I remained in place during the slug testing program.

Immediately before removing a slug of water from each target well, a groundwater level measurement was recorded. A slug of water was then removed using a 2-inch disposable bailer. After each removal, the well was allowed to recover to at least 95 percent of its original water level before the next test was initiated. Three slug tests were performed at each well. Upon completion of the final test, transducers and barologgers were removed, and the data were downloaded for analysis.

4.2.1.4.3. Results

The objective of pump and slug testing was to better characterize the hydraulic connectivity between bedrock monitoring wells and assess the potential for lateral and vertical migration of CVOCs, and to collect data for designing the in-situ amendment injection program. Groundwater elevation hydrographs were developed using the transducer data collected during both pump and slug testing. These charts were used to evaluate hydraulic connectivity between the newly installed monitoring wells, specifically, whether wells are screened across the same or hydraulically connected water-bearing fractures. The groundwater elevation hydrographs from pump and slug testing are provided in Appendix J.

The charts from both testing methods indicate vertical connectivity between the intermediate and deep bedrock fracture zones within each well cluster. Rapid response times and pronounced drawdown/recovery curves were observed in the co-located deep wells during testing at MW-14I and MW-16I. Additionally, MW-17I exhibited rapid response during slug testing at MW-17D, suggesting vertical connectivity at that location as well.

During the MW-16I short-duration pumping test, a water level rise was recorded at monitoring well MW-17D. The reason for the water level rise is unknown, although instrument malfunction is suspected.

Limited response was observed in the other well clusters during pump and slug testing at MW-16I and slug testing at MW-17D. However, during pump testing at MW-14I, groundwater elevations in MW-09D dropped approximately 2.5 ft during pumping and began recovering immediately after the cessation of pumping. Additionally, MW-09D exhibited a response curve similar to MW-14I during slug testing.

The limited lateral response observed during testing may be attributed to the low yield of the wells, which restricted the ability to extract large volumes of groundwater at flow rates greater than 0.3 gpm, and the short duration of each test. Despite this, the low bulk hydraulic conductivity (K) values derived from slug test analyses at MW-16I (7.9 x 10^{-5} centimeters per second [cm/sec]) and MW-17D (9.4 x 10^{-5} cm/sec) suggest that horizontal off-site migration of CVOCs is not a significant concern. Slug test data were analyzed using the Bouwer-Rice solution, and the K values are shown in Table 2 below. The vertical connectivity between the intermediate and deep bedrock fracture zones observed at monitoring well clusters indicates that groundwater treatment in the zones with higher concentrations of CVOCs, e.g., the intermediate zones, could address elevated concentrations and the deep vertical zone within the same well cluster. While a strong vertical connectivity between the shallow and intermediate/deep bedrock fracture zones was not observed during the pump and slug testing, the vertical nature of the shallow fractures indicates the potential for connectivity and remains a viable zone for groundwater treatment. With a strong vertical connectivity, the deep monitoring zone can be used to confirm amendment distribution and evaluate effectiveness.

Table 2: Slug Test Results – Hydraulic Conductivity Values

Well ID	Slug Out 1	Slug Out 2	Slug Out 3	Overall Geometric Mean
MW-16I	7.3E-05	8.61E-05	7.7E-05	**7.9E-05**
MW-17D	1.2E-04	2.4E-05	2.7E-04	**9.4E-05**

Note:
Units are cm/sec

4.2.2 Soil Vapor Probe Installation

4.2.2.1 Soil Vapor Sampling Procedures

Soil vapor samples were collected in accordance with the NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (NYSDOH, October 2006, Revised 2017 and 2024). Three soil vapor probes (SV-10, SV-13, and SV-14) were installed on the Site to 3 ft bgs, approximately 2 ft above the water table, which was observed at approximately 4 to 6 ft bgs on April 21, 2025.

The temporary vapor implants were installed with a hammer drill to advance a stainless-steel probe to the desired sample depth. Due to on-site factors, specifically the foundation level of the building graded with recycled concrete aggregate, a tracer gas was not able to be used at locations SV-10, SV-13, and SV-14. One to three implant volumes were purged prior to the collection of the soil vapor samples. Sampling occurred for the duration of eight hours.

Haley & Aldrich of New York collected three soil vapor samples. Samples were collected in appropriately sized (6-liter) Summa® canisters that were batch-certified clean by Alpha. Samples were analyzed for VOCs using EPA Method TO-15. The flow rate for both purging and sampling did not exceed 0.2 liters per minute (L/min). Sampling occurred for a duration of approximately eight hours. The soil vapor purge log is provided as Appendix K. The soil vapor sample locations are shown in Figure 4.

4.2.2.2 Off-Site Soil Vapor Investigation

Two soil vapor probes (SV-11 and SV-12) were installed in the sidewalk on Webster Avenue along the Site's eastern property boundary, as shown in Figure 4. The soil vapor probes were installed to 2 ft bgs, approximately 3 ft above the water table, which was observed at approximately 4 to 6 ft bgs. A sidewalk

closure permit was obtained through the New York City Department of Transportation (NYCDOT) prior to performing soil vapor sampling. A tracer gas was used in accordance with NYSDOH protocols to serve as a QA/QC measure to verify the integrity of the soil vapor probe seal at locations SV-11 and SV-12. At the conclusion of the sampling round, tracer monitoring was performed a second time, at SV-11 and SV-12, to confirm the continued integrity of the probe seals.

Any remaining off-site soil vapor and indoor air sampling as described in the SSCWP will be conducted during the upcoming heating season, pending access approvals. The results of any additional sampling will be presented under separate cover.

4.2.3 Quality Assurance/Quality Control

The SSC and associated sampling were conducted in accordance with the Quality Assurance Project Plan (QAPP) provided in the SSCWP. The sampling program included several types of QA/QC samples and measures to ensure the usability of the data, as described in the SSCWP. QA/QC samples included equipment/field blanks, trip blanks, sample duplicates, and matrix spike/matrix spike duplicates (MS/MSDs).

When applicable, the sample result summary tables list the laboratory method detection limit (MDL) at which a compound was non-detectable. The laboratory results were reported to the sample-specific practical quantitation limit (PQL), equal to the sample-specific MDL, supported by the instrument calibrations.

The reliability of laboratory data is supported by compliance with sample holding times and laboratory MDLs below cleanup criteria. The accuracy and precision of the laboratory analytical methods were maintained by using calibration and calibration verification procedures, laboratory control samples, and surrogate, matrix, and analytical spikes. A review of the laboratory data packages indicates that holding times were met, except for nitrate analysis of groundwater sampled on April 18, 2025, due to a laboratory error. Nitrate analysis of groundwater will be used to aid in the implementation of the IRM and does not impact the findings of the SSC. Less than 1 percent of results, specifically SVOC compounds, were rejected due to low surrogate recovery and low laboratory control sample (LCS) recovery. No other significant non-conformance issues were reported. Analytical laboratory reports are provided in Appendix L. Data have been validated as detailed below in Section 6.4. Data Usability Summary Reports (DUSRs) are included in Appendix M.

4.2.4 Field Equipment Decontamination

Downhole drilling equipment was decontaminated between each boring by washing with an Alconox-based solution. Decontamination wastewater was contained in a wash pan and containerized in 55-gallon drums for disposal. Handheld sampling equipment was decontaminated by hand in an Alconox-based solution and triple-rinsed with deionized water. Decontamination liquids were temporarily contained in five-gallon buckets and then added to drums at the end of each workday.

4.2.5 Investigation-Derived Waste

Investigation-derived waste (IDW) generated during well installation and groundwater sampling consisted of soil and rock cuttings, development water, purge water, spent decontamination fluids, personal protective equipment (PPE), and disposable sampling equipment. Soil and rock cuttings from well

installation were containerized on the Site in New York State Department of Transportation (NYSDOT)-approved 55-gallon drums pending characterization and off-site disposal. Purge and development water from the monitoring wells and spent decontamination fluids were containerized on the Site in NYSDOT -approved 55-gallon drums pending characterization and off-site disposal. Personal PPE sampling equipment and other disposable products were discarded as solid waste.

4.2.6 Reporting

During the implementation of the NYSDEC-approved SSCWP, daily field reports (DFRs) were provided to the NYSDEC. DFRs included a summary of sampling and field activities, investigation progress updates, and photographs of field work. The daily reports are included in Appendix N.

5. Health and Safety

The work outlined above was completed under a Site-specific Health and Safety Plan (HASP), appended to the SSCWP as Appendix O. The HASP was prepared in accordance with Occupational Safety and Health Administration (OSHA) Hazardous Waste Operations and Emergency Response (HAZWOPER) regulations. Work was completed in Level D PPE.

5.1 COMMUNITY AIR MONITORING PLAN

The Community Air Monitoring Plan (CAMP) was run throughout the duration of all ground intrusive activities as outlined in the SSCWP. CAMP data were provided to the NYSDEC in the DFRs included in Appendix N. During the SSC, air monitoring was performed at one upwind and one downwind location. No visible dust was observed leaving the Site perimeter during intrusive SSC activities. In addition to CAMP running daily, Haley & Aldrich of New York personnel continually monitored for signs of odors or visible dust. Air monitoring logs are attached to the DFRs, provided in Appendix N.

6. Contaminants of Concern and Nature and Extent of Contamination

6.1 APPLICABLE STANDARDS

Groundwater analytical results were compared to 6 NYCRR Part 703.5 NYSDEC T.O.G.S. 1.1.1 AWQS and Guidance Values (GVs) for Class GA Water. Emerging contaminants PFOA and PFOS were compared to the GVs for PFOA and PFOS outlined in the NYSDEC April 2023 PFAS Guidance. The emerging contaminant 1,4-dioxane was compared to the GV as set by NYSDEC in March 2023.

No standard currently exists for soil vapor samples in New York State.

6.2 GROUNDWATER SAMPLING RESULTS

Tables II-A to II-F summarize the analytical results from the groundwater sampling event. Figures 3A to 3C provide the groundwater monitoring well locations. Figures 6A, 6B, and 6C provide summaries of the March and April 2025 groundwater data exceedances, including emerging contaminants detected in groundwater.

6.2.1 Volatile Organic Compounds

Fifteen of the 17 groundwater samples collected, including the duplicate sample from MW-16D, reported one or more VOCs detected above the AWQS: 1,1-dichloroethane (maximum concentration of 62 µg/L in MW-16I), chloroform (maximum concentration of 36 µg/L in MW-17D), PCE (maximum concentration of 5.9 µg/L in MW-17S), 1,1,1-trichloroethane (maximum concentration of 1,900 µg/L in MW-16I), toluene (maximum concentration of 40 µg/L in MW-16I), TCE (maximum concentration of 2,500 µg/L in MW-16I), cis-1,2-dichloroethene (maximum concentration of 13 µg/L in MW-17D), benzene (maximum concentration of 2.6 µg/L in MW-15I), and 1,1-dichloroethene (maximum concentration of 110 µg/L in MW-16I).

No other VOCs were detected above the AWQS standard in the groundwater samples analyzed.

6.2.2 Semi-Volatile Organic Compounds

Four of the 17 groundwater samples collected, including the duplicate sample from MW-16D, reported one or more SVOCs detected above the AWQS. The maximum concentrations were all observed in MW-17D: phenol (2.5 µg/L), benzo(a)anthracene (0.04 µg/L), benzo(b)fluoranthene (0.07 µg/L), benzo(k)fluoranthene (0.05 µg/L), chrysene (0.05 µg/L), and indeno(1,2,3-cd)pyrene (0.08 µg/L).

No other SVOCs were detected above the AWQS standard in the groundwater samples analyzed.

6.2.3 Polychlorinated Biphenyls

No PCBs were detected above the AWQS in the groundwater samples analyzed.

6.2.4 Dissolved Metals

All of the 17 groundwater samples collected, including the duplicate sample from MW-16D, reported one or more dissolved metals detected above the AWQS: chromium (maximum concentration of 481.3 µg/L in MW-15I), chromium VI hexavalent (maximum concentration of 488 µg/L in MW-15I), manganese (maximum concentration of 523.9 µg/L in MW-18I), selenium (maximum concentration of 19.1 µg/L in MW-15I), sodium (maximum concentration of 206,000 µg/L in MW-15I), and thallium (maximum concentration of 0.5 µg/L in MW-15I).

No other dissolved metals were detected above the AWQS in the groundwater samples analyzed.

6.2.5 Total Metals

All of the 17 groundwater samples collected, including the duplicate sample from MW-16D, reported one or more total metals detected above the AWQS, including chromium (maximum concentration of 519.4 µg/L in MW-15I), chromium VI hexavalent (maximum concentration of 493 µg/L in MW-15I), manganese (maximum concentration of 429 µg/L in MW-18I), selenium (maximum concentration of 17.4 µg/L in MW-15I), sodium (maximum concentration of 207,000 µg/L in MW-15I), thallium (maximum concentration 0.58 µg/L in MW-15I), and iron (maximum concentration 2,660 µg/L in MW-09D).

No other total metals were detected above the AWQS in the groundwater samples analyzed.

6.2.6 Pesticides

One of the 17 groundwater samples collected reported one pesticide, alpha-BHC (0.046 µg/L in MW-17D), above the AWQS.

No other pesticides were detected above the AWQS in the groundwater samples analyzed.

6.2.7 Emerging Contaminants

Concentrations of 1,4-dioxane were compared to the GV of 0.35 µg/L issued on March 15, 2023, by the NYSDEC. PFOA/PFOS compounds in groundwater are compared to the NYSDEC March 2023 GV of 6.7 nanograms per liter (ng/L) and 2.7 ng/L, respectively.

PFOS was detected above the GV of 2.7 ng/L in 15 of the 17 groundwater samples, including the two duplicates from MW-16S and MW-16D, at a maximum concentration of 70.4 ng/L in MW-14S. PFOA was detected above the GV of 6.7 ng/L in 14 of the 17 groundwater samples, including the two duplicates from MW-16S and MW-16D, at a maximum concentration of 67.9 ng/L in MW-15I.

The compound 1,4-dioxane was not detected above the GV of 0.35 µg/L in any groundwater sample.

6.3 SOIL VAPOR SAMPLING RESULTS

Table III provides a summary of the analytical results from the soil vapor and ambient air sampling event. Figure 4 provides the soil vapor and ambient air sampling locations, with a summary of soil vapor and ambient air data from the sampling event provided in Figure 7. The soil vapor purge log is provided in Appendix K.

Total VOC concentrations in soil vapor ranged from 132.97 micrograms per cubic meter (µg/m^3) in SV-10 to a maximum concentration of 349.38 µg/m^3 in SV-14. Total CVOC concentrations in soil vapor ranged from 30.20 µg/m^3 in SV-11 to a maximum concentration of 85.87 µg/m^3 in SV-14. Total BTEX concentrations in soil vapor ranged from 31.52 µg/m^3 in SV-12 to a maximum concentration of 46.72 µg/m^3 in SV-14.

One ambient air sample was taken during the April 21, 2025, sampling event. Total VOC concentrations were reported at a concentration of 76.36 µg/m^3. Total CVOC concentrations in the ambient air sample were below the laboratory detection limits. Total BTEX concentrations in the ambient air sample were reported at a concentration of 10.32 µg/m^3.

6.4 DATA VALIDATION

DUSRs were created to confirm the compliance of methods with the protocols described in the NYSDEC Analytical Services Protocol (ASP) and are provided in Appendix M.

6.5 DATA USE

Validated analytical data, supplied in ASP Category B Data Packages in Appendix M, is in the process of being submitted to the NYSDEC EQuIS database in an Electronic Data Deliverable (EDD) package. Correspondence with NYSDEC regarding the upload of the EDDs to the NYSDEC EQuIS database will be included in the final SSCR.

7. Conceptual Site Model

7.1 AREAS OF CONCERN

After the SSC as described above, the following Areas of Concern (AOCs) were identified at the Site:

7.1.1 AOC 1 – Impacts in Groundwater

VOCs, specifically CVOCs, were detected above the NYSDEC AWQS in groundwater at the Site and are likely the result of historical Site use and/or historical use of the adjoining properties, such as the service center and auto repair shop located south of the Site at 3521 Webster Avenue. CVOC AWQS exceedances were primarily detected around MW-16I and MW-14I, located in the western portion of the Site.

7.1.2 AOC 2 – Impacts in Soil Vapor

VOCs, including petroleum-related VOCs (BTEX) and CVOCs, are present in the vapor phase at the Site and are likely the result of historical Site use and/or historical use of the adjoining properties. BTEX and PCE were detected in soil vapor samples above laboratory detection limits across the Site. Additionally, TCE was detected along the southern portion of the Site.

7.2 CONSIDERATIONS REGARDING ON-SITE AND OFF-SITE SOURCES

Analytical results identified CVOCs, specifically TCE and 1,1,1-TCA, in groundwater samples in the western portion of the Site. CVOCs, specifically TCE and PCE, were also detected in soil vapor samples; concentrations of TCE were detected Site-wide, with concentrations relatively consistent across the Site. The CVOCs in groundwater and soil vapor can likely be attributed to the historic operations of the Site, including automotive repair and multiple manufacturing companies.

Additionally, elevated BTEX concentrations were detected in soil vapor samples with concentrations relatively consistent across the Site. The BTEX in soil vapor can likely be attributed to the historic operations of the Site and/or historical site use in the adjoining properties, such as the neighboring service center and/or auto repair shop located south of the Site.

8. Human Health and Environmental Risk Evaluation

8.1 HUMAN HEALTH RISK EVALUATION

A qualitative exposure assessment consists of characterizing the exposure setting (including the physical environment and potentially exposed human populations), identifying exposure pathways, and evaluating chemical fate and transport. An exposure pathway describes the means by which an individual may be exposed to contaminants originating from a site. An exposure pathway has the following five elements:

1. Receptor population;
2. Contaminant source;
3. Contaminant release and transport mechanism;
4. Point of exposure; and
5. Route of exposure.

An exposure pathway is complete when all five elements of an exposure pathway are documented; a potential exposure pathway exists when any one or more of the five elements comprising an exposure pathway is not documented but could reasonably occur. An exposure pathway may be eliminated from further evaluation when any one of the five elements comprising an exposure pathway does not exist in the present and will not exist in the future.

8.1.1 Receptor Population

The receptor population includes the people who are or may be exposed to contaminants at a point of exposure. The identification of potential human receptors is based on the characteristics of the site, the surrounding land uses, and the probable future land uses. Receptors would include the construction/maintenance workers who may be employed to perform work on the property. An additional receptor population may include occupants adjacent to the Site, who may be exposed to contaminants from potential migration in groundwater. Exposure routes would include direct contact activities and/or inhalation of soil vapor during ground-intrusive activities (i.e., installation of monitoring wells below the building sub-slab).

The Site owner plans to develop the first floor for commercial and/or office use, consistent with surrounding property use and zoning. Exposed receptors under the future use scenario may compromise residents of the building, indoor employees, outdoor employees (e.g., groundskeepers or maintenance staff), and construction workers who may be employed at or perform work on the property. Site visitors may also be considered receptors; however, their exposure would be similar to that of the indoor employees, but at a lesser frequency and duration.

8.1.2 Contaminant Sources

The source of contamination is defined as either the source of contaminant release to the environment (such as a waste disposal area or point of discharge) or the impacted environmental medium (soil, air, water) at the point of exposure. Sections 6 and 7 discuss the COCs present in the Site media at elevated concentrations above background levels. In general, these are CVOCs in groundwater and petroleum-related VOCs and CVOCs in sub-grade soil vapor.

8.1.3 Exposure Routes and Mechanisms

Contaminant release and transport mechanisms carry contaminants from the source to points where people may be exposed and are specific to the type of contaminant and Site use. This would include the indoor vapor intrusion pathway, also referred to as "soil vapor intrusion."

8.1.4 Exposure Assessment

Based on the above assessment, the potential exposure pathways for the current and future use conditions are listed below.

Current Use Scenario

Site contaminants of concern include CVOCs in groundwater and petroleum-related VOCs and CVOCs in soil vapor. Under current conditions, the likelihood of exposure to groundwater and soil vapor is limited for both on-site and off-site receptor populations. The Site is currently under development with no residents. In addition, the Site is secured and inaccessible to the public during construction activities.

Remediation Scenario

The exposure element exists for each pathway during the remediation phase. The overall risk will be minimized by the continued implementation of the Site-specific HASP; localized monitoring of organic vapors; community air monitoring on the Site perimeter for particulates and VOCs where work is completed outdoors, as applicable; vapor and dust suppression techniques; and use of appropriate PPE. Additionally, the Site will be remediated under an IRMWP. In addition, the Site will be secured and inaccessible to the public during remedial activities.

Future Use Scenario

Under the proposed future condition (after remediation), residual contaminants may remain on the Site. The remaining contaminants would include those listed in the current conditions. If contaminants remain on the Site after remediation, the route of exposure will be mitigated by proper installation/maintenance of engineering controls such as an active sub-slab depressurization system and implementation of institutional controls, such as land use and groundwater use restrictions.

8.2 FISH AND WILDLIFE IMPACT ANALYSIS

NYSDEC DER-10 requires an on-site and off-site Fish and Wildlife Resource Impact Analysis if the stipulated criteria are met. The Site, which was developed in the 1940s and operated with various commercial garages, auto repair, and manufacturing operations, is located in the Norwood neighborhood of Bronx, New York. The Site provides little or no wildlife habitat or food value and/or access to the detected subsurface contamination. No natural waterways are present on or directly adjacent to the Site. The proposed future use of the Site is for residential and commercial purposes. Based on the requirements stipulated in Section 3.10 and Appendix 3C of DER-10, there was no need to prepare a Fish and Wildlife Resource Impact Analysis for the Site.

9. Conclusions and Recommendations

9.1 CONCLUSIONS

9.1.1 Groundwater Characterization

Groundwater data gaps from the Draft SCR submitted by vEKtor, dated July 2024, have been addressed through the installation of 18 new permanent groundwater monitoring wells. The extent of contamination of CVOCs around MW-9 has been identified, as results indicate a likely source area around MW-16I, with additional high concentrations in MW-14I. The results from this SSC indicate less contamination than the original MW-9, which was abandoned during this scope of work. The new data collected in 2025 sufficiently detail the lateral and vertical extent of contamination from the source area. The data also suggest the possibility of an additional source area from neighboring, off-site properties, such as the service center and auto repair shop to the south at 3521 Webster Avenue, due to the presence of BTEX compounds.

Deep wells installed during this SSC generally show a significant downward trend in contamination levels compared to the intermediate wells. CVOCs, specifically 1,1,1-TCA and TCE, in MW-09I, MW-14I, and MW-15I were detected at elevated concentrations, while corresponding deep wells either ran dry during development (MW-15D) or were reported as non-detect (MW-09D and MW-14D). Concentrations of 1,1,1-TCA and TCE lowered by an order of magnitude from MW-16I to MW-16D. While MW-17D and MW-18D contained higher concentrations of 1,1,1-TCA and TCE than their corresponding intermediate wells, the highest concentrations remain in the original source area within the intermediate level and specifically MW-16I.

Geophysical logging indicated no upward or downward flow in the deep boreholes under ambient conditions, with the exception of MW-16D. At this location, downward flow observed under both ambient and pumping conditions is suspected to be due to leakage around the bottom of the steel casing, which was set at 4.8 ft bgs. Under pumping conditions, upward flow was detected in all boreholes except MW-16D, with rates reaching up to 0.2 gpm, though most were at or below 0.07 gpm. These minimal flow rates, relative to the upward pumping rate, suggest that the observed fractures are not highly transmissive.

The overall downward trend in contamination levels in deep wells relative to intermediate wells, the absence of flow under ambient conditions, and the limited flow under pumping conditions indicate that vertical migration of CVOCs is unlikely. Therefore, additional vertical delineation is not warranted.

9.1.2 Bedrock Fracture Connectivity

Baseline data collected using transducers qualitatively inferred hydraulic connectivity between the fracture zones, providing initial insights into potential migration pathways. This supplemental data helped establish an understanding of horizontal and vertical migration of contamination through the identified fracture zones.

As described above in Section 4.2.1.4, additional assessment of bedrock fracture connectivity, including pump and slug testing at select locations, was conducted in preparation for the IRM. Results from both testing methods indicate vertical connectivity between the intermediate and deep bedrock fracture zones

within each well cluster. Rapid response times and pronounced drawdown/recovery curves were observed in deep wells during testing at MW-14I and MW-16I. Additionally, MW-17I responded quickly during slug testing at MW-17D, further supporting vertical connectivity. Limited lateral response was observed in most clusters during testing, and slug test results yielded low hydraulic conductivity values. These findings suggest that horizontal migration of CVOCs is limited and that off-site migration is not a significant concern. Observations made regarding vertical and horizontal connectivity were used to inform the development of the groundwater remediation strategy presented in the IRMWP.

9.1.3 Soil Vapor Characterization

Soil vapor data gaps from the Draft SCR have been addressed through the installation and evaluation of on-site and Webster Avenue soil vapor points. The extent of soil vapor impacts on the Site indicates the need for an active sub-slab depressurization system, which will be presented in an IRMWP that will be submitted under separate cover. Soil vapor results indicate that impacts from off-site properties, such as the service center or auto repair shop, may be impacting on-site soil vapor as seen in the presence of BTEX compounds. Additional attempts will be made to obtain access for soil vapor intrusion sampling at nearby off-site properties during the IRM or during Site Management.

Except for the potential soil vapor sampling at nearby off-site properties, no additional data collection is proposed or necessary prior to implementation of the IRM.

ABBREVIATIONS AND NOTES:

µg/L: micrograms per liter

-: Not Analyzed

J: Value is estimated.

F: Results are considered to be an estimated maximum concentration

NA: Not Applicable

ND (2.5): Not detected, number in parentheses is the laboratory reporting limit

- For test methods used, see the laboratory data sheets.

- Groundwater analytical results are compared to NY-AWQS: NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGVs) for Class GA Water.

- Grey shading indicates an exceedance of the AWQS criteria.

Xylene (Total)	5	ND (2.5)	-	ND (10)	ND (2.5)	ND (6.2)	ND (6.2)	ND (2.5)	ND (2.5)

ABBREVIATIONS AND NOTES:

µg/L: micrograms per liter

-: Not Analyzed
J: Value is estimated.
F: Results are considered to be an estimated maximum concentration
NA: Not Applicable
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit

- For test methods used, see the laboratory data sheets.
- Groundwater analytical results are compared to NY-AWQS: NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGVs) for Class GA Water.
- Grey shading indicates an exceedance of the AWQS criteria.

ABBREVIATIONS AND NOTES:

µg/L: micrograms per liter

-: Not Analyzed
J: Value is estimated.
F: Results are considered to be an estimated maximum concentration
NA: Not Applicable
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit

- For test methods used, see the laboratory data sheets.
- Groundwater analytical results are compared to NY-AWQS: NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGVs) for Class GA Water.
- Grey shading indicates an exceedance of the AWQS criteria.

ABBREVIATIONS AND NOTES:

µg/L: micrograms per liter
-: Not Analyzed
J: Value is estimated.
F: Results are considered to be an estimated maximum concentration
NA: Not Applicable
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit

- For test methods used, see the laboratory data sheets.
- Groundwater analytical results are compared to NY-AWQS: NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGVs) for Class GA Water.
- Grey shading indicates an exceedance of the AWQS criteria.

ABBREVIATIONS AND NOTES:

µg/L: micrograms per liter

-: Not Analyzed
J: Value is estimated.
F: Results are considered to be an estimated maximum concentration
NA: Not Applicable
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit

- For test methods used, see the laboratory data sheets.
- Groundwater analytical results are compared to NY-AWQS: NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGVs) for Class GA Water.
- Grey shading indicates an exceedance of the AWQS criteria.

ABBREVIATIONS AND NOTES:

µg/L: micrograms per liter

-: Not Analyzed
J: Value is estimated.
F: Results are considered to be an estimated maximum concentration
NA: Not Applicable
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit

- For test methods used, see the laboratory data sheets.
- Groundwater analytical results are compared to NY-AWQS: NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGVs) for Class GA Water.
- Grey shading indicates an exceedance of the AWQS criteria.

ABBREVIATIONS AND NOTES:

µg/m^3 : micrograms per cubic meter

-: Not Analyzed
BTEX: Benzene, Toluene, Ethylbenzene, Xylenes
CVOCs: Chlorinated volatile organic compounds
NA: Not Applicable
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit
VOCs: Volatile Organic Compounds

- For test methods used, see the laboratory data sheets.
- SUM of CVOCs includes the following compounds: carbon tetrachloride, 1,1-dichloroethene, cis-1,2-dichloroethene, trichloroethene, methylene chloride, tetrachloroethene, 1,1,1-trichloroethane, vinyl chloride

San Diego, California 92122

PARTNER

May 20, 2019

Mr. Alejandro Pacheco
Axos Bank
4350 La Jolla Village Drive, Suite 140
San Diego, California 92122

Subject: Phase I Environmental Site Assessment
3547 Webster Ave, LLC
3547 Webster Avenue
Bronx, New York 10467
Partner Project No. 19-246135.1

Dear Mr. Pacheco:

Partner Assessment Corporation, Inc. (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in general conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (310) 615-4500.

Sincerely,

Jenny Redlin

Relationship Manager

EXECUTIVE SUMMARY

Partner Assessment Corporation, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in general accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by Axos Bank for the property located at 3547 Webster Avenue in the Borough of Bronx, Bronx County, New York (the "subject property"). The Phase I Environmental Site Assessment is designed to provide Axos Bank with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the west side of Webster Avenue within a mixed commercial and residential area of Bronx County. Please refer to the table below for further description of the subject property:

Subject Property Data	
Address:	3547 Webster Avenue, Bronx, New York
Additional Address:	3549 Webster Avenue
Property Use:	Commercial; Vacant
Land Acreage (Ac):	0.34 Ac
Number of Buildings:	One
Number of Floors:	Two with partial basement
Gross Building Area (SF):	30,000 SF
Net Rentable Area (SF):	30,000 SF
Date of Construction:	1927
Assessor's Parcel Number (APN):	Block 3356, Lot 200
Type of Construction:	Concrete and brick foundation / steel-framing / brick façade
Current Tenants:	Vacant
Site Assessment Performed By:	Melissa Marte of Partner
Site Assessment Conducted On:	May 7, 2019

The subject property is currently developed with one two-story building that encompasses the entire property parcel. The subject property is currently vacant with no ongoing business operations. No landscaping or additional site amenities are provided on the subject property. City sidewalk bounds the subject property to the east along Webster Avenue.

According to available historical sources, the subject property was formerly undeveloped as early as 1896; and developed with the current structure in 1927. Numerous tenants have occupied the subject property including Bernal Garage Inc. (1940), Garage & repair (1945), Super Metal Mfg Co Inc (1949), L & R Metal Prods Coro (1956), Astrospherics Inc (1971), Orion Electrnc Corp (1971, 1976, 1983), Panel-Maker Corp (1971, 1976, 1983), Fraass Surgical Mfg Co Inc (1976), Dialysis centers (1983-2005), Bronx Two (1993-2000), Spectra Inc. (2005) and medical offices/center (1981-2005).

The immediately surrounding properties consist of Commercial building occupied by Ultra Automotive Center to the north; commercial building occupied by LaSorsa Buick Service & Parts Center to the south;

Commercial Building Occupied by LaSorsa Buick Dealership and three residential buildings to the east across Webster Avenue; and a residential building to the west.

According to the United States Geological Society (USGS), the depth and direction of groundwater in the vicinity of the subject property is inferred to be approximately 20 to 40 feet below ground surface (bgs) and flow toward the southeast-east.

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- According to a review of the historical sources, the subject property was developed with the current structure in 1927. The subject property was occupied by numerous commercial tenants that included garage, auto repair, and manufacturing operations (metal products/electrical panels/surgical supplies) from at least the 1940s to the 1980s. These types of operations utilize various petroleum products as well as chlorinated solvents for metal cleaning operations. Chlorinated solvents are highly mobile and have the potential to impact the subject property through subsurface conduits, such as cracks in the floor or floor drains. Based on the duration of operations and absence of prior subsurface investigation reports, the historical use of the subject property for garage, auto repair, and manufacturing operations is considered to represent a REC.
- Partner's research and onsite observations identified the presence of an active and historical aboveground and underground storage tanks (ASTs/USTs). The subject property is registered (Facility ID 2-293466) with one 5,000-gallon #2 Fuel Oil AST that was installed in 1986, which was noted to be present during Partner's site reconnaissance. In addition, a vent pipe and fill ports characteristic of USTs were observed. Four fill ports and one vent pipe were observed at the subject property; three fill ports along the sidewalk located southeast of the building along with a fill port in this vicinity; and one fill port along the northeastern interior (area of dock). Partner traced the aforementioned registered/active AST pipe to the fill port located along the northeastern interior. In addition, Partner noted two petrometer gauges to be present; one on the exterior of onsite active/registered tested AST vault and one within the partial basement. Due to flooding within the basement, Partner was unable to trace the possible petrometer fill line to a potential tank. However, according to a review of the Sanborn Maps, the subject property was depicted with two 550-gallon gasoline buried tanks as early as 1945 to at least 2007. No additional information regarding the fill ports or former USTs was provided during the course of this assessment. Therefore, it is unknown if oil was stored within ASTs or USTs located at the subject property or if USTs were properly closed and/or removed. Based on the lack of information regarding UST removal, it is possible that a release from the USTs has resulted in an impact to the subsurface of the subject property. Based on this information, the former presence of USTs and fill ports/vent pipes on the subject property is considered to represent a REC.

- The subject property, identified as Lot 200, Taxblock 3356 at 3547 Webster Avenue is listed as an E Designation site in the regulatory database report. The E Designation listing is identified as E-249 and was issued March 23, 2011 for "Hazardous Materials Phase I and Phase II Testing Protocol" and "Window Wall Attenuation & Alternate Ventilation." An E-Designation is a zoning map designation in the City of New York that indicates the presence of an environmental requirement pertaining to potential Hazardous Materials Contamination, Window/Wall Noise Attenuation or Air Quality impacts on a particular tax lot. These designations are assigned to properties during rezoning events. A property can continue to be used as before, with no additional requirements. However, if a property is to be redeveloped with new construction or change of use, the environmental requirements of the E-Designation need to be satisfied prior to the issuance of building permits and Certificates of Occupancy. Partner contacted the New York City Department Office of Environmental Remediation to obtain the current status of the E Designation. According to Myrna (OER Project Manager), as of May 8, 2019 no documents have been submitted to the OER to satisfy the E Designation requirements. Based on the abovementioned details, the E Designation listing is considered to represent a REC.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Due to the age of the subject property building, there is a potential that asbestos-containing material (ACM) and lead based paint (LBP) are present. Several areas of the building materials were noted during the assessment to be broken, ripped, peeling and/or have signs of water damage. Should these materials be replaced, the identified suspect ACMs and LBP would need to be sampled to confirm the presence or absence of asbestos prior to any renovation or demolition activities to prevent potential exposure to workers and/or building occupants.

- Partner observed several areas of water damage throughout the buildings, as well as flooding in the basement of the subject property. Partner notes this property is currently vacant, which presumably resulted in significant water damage to the building. Should any evidence of microbial growth be uncovered during renovation and/or demolition activities, it should be addressed at that time.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 3547 Webster Avenue in the Borough of Bronx, Bronx County, New York (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

Professional Opinion Summary

Based on the findings of this assessment, the environmental risk at the subject property is classified by the following:

☐ **1: Low Risk**

☒ **2: Business Risk** (i.e. Asbestos, Lead-Based Paint or Mold Operations & Maintenance [O&M] Plan)

☐ **3: Additional Information Needed** (i.e. File Review/Freedom of Information Act [FOIA] Request, and/or Owner-Provided Information)

☒ **4: Further Investigation Warranted** (i.e. Phase II Limited Subsurface Investigation or Mitigation Activity)

This assessment has revealed evidence of RECs and environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- A limited subsurface investigation should be conducted in order to determine the presence or absence of soil, soil vapor and/or groundwater contamination due to the historical use of the subject property.
- In the event the subject property is redeveloped with new construction or change of use, the environmental requirements of the E-Designation should be satisfied.
- An Operations and Maintenance (O&M) Program should be implemented in order to safely manage the suspect ACMs and LBP located at the subject property.

1.0 INTRODUCTION

Partner Assessment Corporation, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in general conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 3547 Webster Avenue in the City of Bronx, Bronx County, New York (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in general accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the subject

property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

Axos Bank engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of Axos Bank. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of

this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

This report has been completed under specific Terms and Conditions relating to scope, relying parties, limitations of liability, indemnification, dispute resolution, and other factors relevant to any reliance on this report. Any parties relying on this report do so having accepted the Terms and Conditions for which this report was completed. A copy of Partner's standard Terms and Conditions can be found at http://www.partneresi.com/terms-and-conditions.php.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner requested information relative to deed restrictions and environmental liens, a title search, and completion of a pre-survey questionnaire from the Report User. This information was not provided at the time of the assessment.
- Partner submitted Freedom of Information Act (FOIA) requests to the New York Department of Environmental Conservation (NYSDEC), City of New York Department of Health and Mental Hygiene (NYCDOHMH), New York City Fire Department (FDNY), and New York City Department of Environmental Protection (NYCDEP) for information pertaining to hazardous substances, underground storage tanks, releases, inspection records, etc. for the subject property and/or adjacent properties. As of this writing, these agencies have not responded to Partner's requests. Based on information obtained from other historical sources, this limitation is not expected to alter the overall findings of this assessment.
- Due to flooding within the basement, the entire basement was not able to be observed.

Due to time constraints associated with this report, the Client has requested the report despite the above-listed limitations.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 3547 Webster Avenue in Bronx, New York is located on the west side of Webster Avenue. According to New York City Assessor, the subject property is legally described as Borough: Manhattan, Block: 3356, Lot: 200, and ownership is currently vested in Webster Residents LLC since 2016.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is currently developed with one two-story building that encompasses the entire property parcel. The subject property is currently vacant with no ongoing business operations. No landscaping or additional site amenities are provided on the subject property. City sidewalk bounds the subject property to the east along Webster Avenue.

The subject property is designated for commercial (C4-4) development by the City of New York.

The subject property was identified as an Aboveground Storage Tank (AST) and E Designation site in the regulatory database report, as further discussed in Section 4.2.

2.3 Current Use of Adjacent Properties

The subject property is located within a mixed commercial and residential area of Bronx County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties

North: Commercial building occupied by Ultra Automotive Center (3551 Webster Avenue)

South: Commercial building occupied by LaSorsa Buick Service & Parts Center (3525-3545 Webster Avenue)

East: Webster Avenue beyond which is a commercial building occupied by LaSorsa Buick Dealership (3522-3530 Webster Avenue) and three residential buildings (3536 to 3540 Webster Avenue)

West: Residential building (3540 Decatur Avenue)

The adjacent property to the south (3545 Webster Avenue) was identified as an Underground Storage Tank (UST) and E Designation site, the adjacent property to the east (3522 Webster Avenue) was identified as an Aboveground Storage Tank (AST) site, and the adjacent property to the west (3540 Decatur Avenue) was identified as an AST and Spills site in the regulatory database report of Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) *Mount Vernon, New York* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 109 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently towards the southeast-east. The

subject property is depicted on the 2013 map as situated within a developed area in which only structures typically associated with institutional, religious, and large commercial/industrial facilities are portrayed.

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

According to topographic map interpretation, the direction of groundwater in the vicinity of the subject property is inferred to flow toward the southeast-east. The nearest surface water in the vicinity of the subject property is the Bronx River located approximately 551-feet easte of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the New York Water and Sewer Department serves the subject property vicinity. According to the 2018 Water Quality Report, shallow groundwater beneath the subject property is not utilized for domestic purposes. The sources of public water for New York City are surface water from 19 reservoirs and three controlled lakes spread across a 2,000-square-mile watershed.

Information specific to the subject property regarding the depth to groundwater and direction of groundwater flow was not available for the subject area. However, according to information obtained from the United States Geological Society (USGS), depth to the high-water table is anticipated between 20 and 40 feet bgs.

2.4.3 Geology/Soils

The subject property is situated within the New England Uplands section of the New England physiographic province of the State of New York. According to the USGS, this province consists of a dissected plateau, which has been greatly modified by glaciation. Underlying bedrock within this region is composed of consolidated rocks of sedimentary, igneous, and metamorphic origin. It is specifically identified as Inwood Marble, which consists of dolomite marble, calc-schist, granulite, and quartzite of Early Cambrian to Lower Ordovician age. Extensive glaciation has resulted in the erosion and rounding off of the bedrock topography, as well as numerous rock basin lakes.

Based on information obtained from the USDA Natural Resources Conservation Service Web Soil Survey online database, the subject property is mapped as Urban land, outwash substratum. The Urban land, outwash substratum series is described as asphalt over top of cemented human-transported material. Gravelly sand is located between 20 and 72 inches bgs.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 3604970038F, dated September 5, 2007, the subject property appears to be located in Zone X, an area located outside of the 100-year and 500-year flood plains.

A copy of the reviewed flood map is not included in Appendix B of this report.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information		
Period/Date	**Source**	**Description/Use**
Circa 1896-*Circa* 1924	Aerial Photographs, Sanborn Maps, Topographic Maps	Undeveloped
1927-Present	Aerial Photographs, Building Records, City Directories, Interviews, Onsite Observations, Sanborn Maps, Topographic Maps	Commercial

The subject property was originally developed in 1927 for commercial use. Numerous tenants have occupied the subject property including Bernal Garage Inc. (1940), Garage & repair (1945), Super Metal Mfg Co Inc (1949), L & R Metal Prods Coro (1956), Astrospherics Inc (1971), Orion Electrnc Corp (1971, 1976, 1983), Panel-Maker Corp (1971, 1976, 1983), Fraass Surgical Mfg Co Inc (1976), Dialysis centers (1983-2005), Bronx Two (1993-2000), Spectra Inc. (2005) and medical offices (1981-2005).

Potential environmental concerns were identified in association with the current or former use of the subject property, as further discussed in Sections 4.2.2 and 6.2.2.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from Environmental Data Resources (EDR) on March 19, 2019. The following observations were noted to be visible on the subject property and adjacent properties during the aerial photograph review:

Date: 1924	***Scale: 1"=500'***
Subject Property:	Appears to be undeveloped
North:	Appears to be undeveloped
South:	Appears to be undeveloped
East:	Appears to be developed with existing buildings to the northeast across Webster Avenue
West:	Appears to be undeveloped

Date: 1941, 1951, 1954	***Scale: 1"=500'***
Subject Property:	Appears to be developed with the existing subject property building
North:	No significant changes visible
South:	Appears to be developed with the existing building
East:	Appears to be developed with an existing building to the southeast across Webster Avenue
West:	No significant changes visible

Date: 1962	***Scale: 1"=500'***
Subject Property:	Appears to be developed with the existing subject property building
North:	Appears to be developed with existing buildings
South:	Appears to be developed with the existing building

Date: 1962	*Scale: 1"=500'*
East:	Appears to be developed with an existing building to the immediate east across Webster Avenue
West:	No significant changes visible

Date: 1976, 1985, 1991, 1994, 2006, 2009, 2013, 2017	*Scale: 1"=500'*
Subject Property:	No significant changes visible
North:	No significant changes visible
South:	No significant changes visible
East:	Appears to be developed with the existing building
West:	No significant changes visible

Copies of select aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner reviewed the collection of Sanborn Fire insurance maps from EDR on April 30, 2019. The following observations were noted to be depicted on the subject property and adjacent properties during the fire insurance map review:

Date: 1896	
Subject Property:	Depicted as undeveloped
North:	Depicted as undeveloped
South:	Depicted as undeveloped
East:	Depicted as developed with a one-story building across Webster Avenue
West:	Depicted as undeveloped

Date: 1900	
Subject Property:	No significant changes noted
North:	No significant changes noted
South:	No significant changes noted
East:	Depicted as developed with a one-story building and a two-story building across Webster Avenue
West:	No significant changes noted

Date: 1914	
Subject Property:	No significant changes noted
North:	No significant changes noted
South:	No significant changes noted
East:	Depicted as developed with residential buildings (3536 to 3450 Webster Avenue) across Webster Avenue; The aforementioned structures are now depicted as residential associated with an accessory structure in the rear and a coop
West:	No significant changes noted

Date: 1945	
Subject Property:	Depicted as developed with a two-story **garage & repair** building with **two 550-gallon gasoline buried tanks** (3547 Webster Avenue)
North:	Depicted as developed with a one-story auto repair building and a one-story store/commercial building with three **550-gallon gasoline tanks** (3551 Webster Avenue)
South:	Depicted as developed with a two-story garage building with three **550-gallon gasoline buried tanks** (3325-3545 Webster Avenue)
East:	No significant changes noted, with the exception of the following; The aforementioned residential and coop structures are no longer depicted and are depicted as developed with a two-story warehouse building (3528 Webster Avenue) and undeveloped across Webster Avenue
West:	No significant changes noted

Date: 1950	
Subject Property:	No significant changes noted, with the exception of the following; Depicted as factory
North:	No significant changes noted
South:	Depicted as garage
East:	No significant changes noted, with the exception of the following; The aforementioned undeveloped property is depicted as developed with a one-story store building (3534 Webster Avenue); and Depicted as garage & repair (3528 Webster Avenue)
West:	No significant changes noted

Date: 1977, 1978, 1979, 1980, 1981, 1984, 1986, 1989	
Subject Property:	No significant changes noted, with the exception that an additional address is depicted (3549 Webster Avenue)
North:	No significant changes noted
South:	Depicted as factory (3545 Webster Avenue)
East:	No significant changes noted, with the exception of the following; Depicted as developed with a one-story building that is occupied by a gasoline filling station that is associated with (3530-3534 Webster Avenue); and Depicted as factory (3528 Webster Avenue)
West:	Depicted as developed with a six-story residential building (3540 Decatur Avenue)

Date: 1991	
Subject Property:	No significant changes noted
North:	The aforementioned auto repair building is depicted as expanded (3551 Webster Avenue)
South:	Depicted as factory (3545 Webster Avenue)
East:	No significant changes noted, with the exception of the following; Depicted as occupied by an auto repair & sales (3530-3534 Webster Avenue)

Date: 1991	
West:	No significant changes noted

Date: 1992, 1993, 1995,	
Subject Property:	No significant changes noted
North:	No significant changes noted
South:	Depicted as factory (3545 Webster Avenue)
East:	No significant changes noted, with the exception of the following; Depicted as occupied by loft (3528 Webster Avenue)
West:	No significant changes noted

Date: 1992, 1993, 1995, 1996, 1998, 2001-2003	
Subject Property:	No significant changes noted
North:	No significant changes noted
South:	Depicted as factory (3545 Webster Avenue)
East:	No significant changes noted, with the exception of the following; Use not depicted (3528 Webster Avenue)
West:	No significant changes noted

Date: 2004-2007	
Subject Property:	Depicted as occupied by a medical center (3547-3547 Webster Avenue)
North:	No significant changes noted
South:	Depicted as factory (3545 Webster Avenue)
East:	No significant changes noted
West:	No significant changes noted

According to a review of Sanborn maps, the subject property was historically occupied by an auto repair facility with two 550-gallon gasoline buried tanks. Please refer to Section 6.2.2 for further discussion.

Copies of reviewed Sanborn Maps are included in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from EDR on March 19, 2019 for past names and businesses that were listed for the subject property and adjacent properties. The findings are presented in the following table:

City Directory Search for 3547 Webster Avenue (Subject Property)	
Year(s)	**Occupant Listed**
1940	Bernal Garage Inc. (3547 Webster Avenue)
1949	Super Metal Mfg Co Inc (3547 Webster Avenue)
1956	L & R Metal Prods Coro (3547 Webster Avenue)
1971	Astrospherics Inc, Orion Electrnc Corp, Panel-Maker Corp (3547 Webster Avenue)
1976	Fraass Surgical Mfg Co Inc, Orion Electrne Corp, Panel-Maker Corp (3547 Webster Avenue)
1983	Dasgupta Manash Md, Dialysis Central Of The Bronx, Orion Electmc Corp., Panel Maker Corp.,

City Directory Search for 3547 Webster Avenue (Subject Property)	
Year(s)	**Occupant Listed**
	Soberman Robert J Md (3547 Webster Avenue)
1993	Bronx Two, Dasgupta Manash Md, Gunhill Dialysis Center Inc., Soberman Robert J Md (3547 Webster Avenue)
2000	Bronx Two, Dasgupta Manash, Mntfr Dlyss Ctr, Ny Dialysis Mgmt, Spectra Inc. (3547 Webster Avenue)
2005	Montefliore Dialysis Ctr (3549 Webster Avenue), Feingold Robert MD, New York Dialysis Svc Inc., Spectra Inc. (3547 Webster Avenue)

According to the city directory review, the subject property was occupied by numerous commercial tenants that included garage, auto repair, and manufacturing operations (metal products/electrical panels/surgical supplies) from at least the 1940s to the 1980s. Please refer to Section 6.2.2 for further discussion.

According to the city directory review, the adjacent properties have been occupied by several garages, auto dealership, auto services and supplies, commercial businesses, public institutions, and individual residents. Although hazardous substances and/or petroleum products were likely associated with the auto services operations conducted on the adjacent properties, no evidence of improper storage or handling of these materials was reported to the local regulatory agencies. In addition, the adjacent properties are not listed with spills or releases that would indicated that the subject property has been impacted in connection with the use or handling of these materials. Based on the above, the adjacent auto services and printing/press operations are not expected to represent a significant environmental concern at this time.

Copies of reviewed city directories are included in Appendix B of this report.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from EDR on April 30, 2019. The following observations were noted to be depicted on the subject property and adjacent properties during the topographic map review:

Date:	*1897, 1898, 1900*
Subject Property:	Depicted as undeveloped
North:	Depicted as undeveloped
South:	Depicted as undeveloped
East:	Depicted as undeveloped
West:	Depicted as undeveloped

Date:	*1947*
Subject Property:	Depicted as developed
North:	No significant changes noted
South:	Depicted as developed

Date:	***1947***
East:	Depicted as developed across a roadway
West:	Depicted as undeveloped

Date:	***1956, 1966, 1979, 1995***
Subject Property:	The subject property is shaded red indicating an area of urban development. No site-specific features are depicted.
North:	The property is shaded red indicating an area of urban development. No site-specific features are depicted.
South:	The property is shaded red indicating an area of urban development. No site-specific features are depicted.
East:	The properties are shaded red indicating an area of urban development across a roadway. No site-specific features are depicted.
West:	The property is shaded red indicating an area of urban development. No site-specific features are depicted.

Copies of reviewed topographic maps are included in Appendix B of this report.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 State Department

Regulatory Agency Data	
Name of Agency:	New York State Department of Environmental Conservation (NYSDEC)
Point of Contact:	Online Environmental Site Database
Agency Address:	https://www.dec.ny.gov/chemical/8437.html
Date of Contact:	May 2019
Method of Communication:	Online
Summary of Communication:	As of the date of this report, Partner has not received a response from the NYSDEC for inclusion in this report. The subject property was not identified in the Petroleum Bulk Storage (PBS), Remediation, or Spills databases available for review online.

A copy of pertinent documents is included in Appendix B of this report.

4.1.2 Health Department

Regulatory Agency Data	
Name of Agency:	City of New York Department of Health and Mental Hygiene (NYCDOHMH)
Point of Contact:	Record Services Unit Coordinator
Agency Address:	42-09 28th Street, 14th Floor, CN 31, Long Island City, New York 11101
Agency Phone Number:	(347) 396-6078
Date of Contact:	May 2019
Method of Communication:	Email
Summary of Communication:	As of the date of this report, Partner has not received a response from the NYCDOHMH for inclusion in this report.

4.1.3 Fire Department

Regulatory Agency Data	
Name of Agency:	New York City Fire Department (FDNY)
Point of Contact:	FOIL Officer
Agency Address:	9 MetroTech Center, Brooklyn, New York 11201
Agency Phone Number:	(718) 999-2442
Date of Contact:	May 2019
Method of Communication:	US Mail
Summary of Communication:	As of the date of this report, Partner has not received a response from the FDNY for inclusion in this report.

4.1.4 Building Department

Regulatory Agency Data	
Name of Agency:	New York City Department of Buildings (NYCDOB)
Point of Contact:	Online Database
Agency Address:	280 Broadway, 7th Floor, New York, New York 10007
Agency Phone Number:	(212) 566-5000
Date of Contact:	May 2019
Method of Communication:	Online
Summary of Communication:	Records were available for review. Environmental pertinent records are further discussed in the following table:

Building Records Reviewed for 3547 Webster Avenue (Subject Property)	
Year(s)	**Description**
1928	CO for a two-story building containing a boiler room in the cellar and factory on the first and second floors *Fire Department permit #46899 issued May 4, 1947 for a 5,000-gallon fuel oil installation*
1981	CO for a two-story building containing a boiler room in the cellar, medical offices/storage on the first floor, and factory on the second floor
1993	CO for a two-story building containing a boiler room in the cellar, medical offices/storage on the first floor, and factory/medical offices/community facility on the second floor
1993	Permit to convert existing second floor form factory to medical office with dialysis treatment facility with existing portion of second floor to remain as a factory

Please refer to Section 6.2.2 for further discussion pertaining to current and historic onsite fuel oil tanks.

A copy of pertinent documents is included in Appendix B of this report.

4.1.5 Planning Department

Regulatory Agency Data	
Name of Agency:	New York City Planning Department (NYCPD)
Point of Contact:	Online Zoning Map
Date of Contact:	May 2019
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is zoned "C4-4" for commercial development by the City of New York.

4.1.6 Oil & Gas Exploration

Regulatory Agency Data	
Name of Agency:	New York State Department of Environmental Conservation (NYSDEC) – Minerals Map
Point of Contact:	Online Mapping Application
Date of Contact:	May 2019
Method of Communication:	Online
Summary of Communication:	According to the NYSDEC – Minerals Map, no oil or gas wells are located on or adjacent to the subject property.

4.1.7 Assessor's Office

Regulatory Agency Data	
Name of Agency:	New York City Department of Finance (NYCDOF)
Point of Contact:	Open Accessible Space Information System (OASIS)
Date of Contact:	May 2019
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is identified by Bronx Borough Block 3356, Lot 200, and is currently owned by 3 Webster Residents LLC since 2016. The current building was constructed in 1927 and totals approximately 30,00 square feet on a 0.34-acre lot.

A copy of pertinent documents is included in Appendix B of this report.

4.1.8 New York City Department of Environmental Protection

Regulatory Agency Data	
Name of Agency:	New York City Department of Environmental Protection (NYCDEP)
Point of Contact:	FOIL Access Officer
Agency Address:	59-17 Junction Boulevard, 13th Floor, Flushing, New York 11373
Agency Phone Number:	(718) 595-7000
Date of Contact:	May 2019
Method of Communication:	Online
Summary of Communication:	As of the date of this report, Partner has not received a response from the NYCDEP for inclusion in this report. Additionally, Partner searched the NYCDEP Clean Air Tracking System (CATS) online database for boiler records which would indicate what type of fuel source was utilized for heating purposes at the subject property. An expired registration for a boiler owned by NY Dialysis Management for the use of No. 2 fuel oil.

A copy of pertinent documents is included in Appendix B of this report.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by EDR. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

Radius Report Data				
Database	**Search Radius (mile)**	**Subject Property**	**Adjacent Properties**	**Sites of Concern**
Federal NPL or Delisted NPL Site	1.00	N	N	N
Federal CERCLIS Site	0.50	N	N	N
Federal CERCLIS-NFRAP Site	0.50	N	N	N
Federal RCRA CORRACTS Facility	1.00	N	N	N
Federal RCRA TSDF Facility	0.50	N	N	N
Federal RCRA Generators Site (LQG, SQG, CESQG)	0.25	N	N	N
Federal IC/EC Registries	0.50	N	N	N
Federal ERNS Site	Subject Property	N	N/A	N/A
State/Tribal Equivalent NPL	1.00	N	N	N
State/Tribal Equivalent CERCLIS	1.00	N	N	N
State/Tribal Landfill/Solid Waste Disposal Site	0.50	N	N	N
State/Tribal Leaking Storage Tank Site	0.50	N	N	N
State/Tribal Registered Storage Tank Sites (UST/AST)	0.25	**Y**	**Y**	N
State/Tribal Voluntary Cleanup Sites (VCP)	0.50	N	N	N
State/Tribal Spills	0.50	N	**Y**	N
Federal Brownfield Sites	0.50	N	N	N
State Brownfield Sites	0.50	N	N	N
EDR MGP	Varies	N	N	N
EDR US Hist Auto Station	Varies	N	N	N
EDR US Hist Cleaners	Varies	N	N	N

4.2.2 Subject Property Listings

The subject property is identified as an AST and E Designation site in the regulatory database report, as discussed below:

- The subject property, identified as Webster Residence LLC and as Lot 200, TaxBlock 3356 at 3547 Webster Avenue. According to the site-specific database, the subject property (Facility ID 2-293466) is identified as an inactive AST site. The subject property is registered with one 5,000-gallon #2 Fuel Oil AST that was installed in 1986. The AST is vaulted without access as a form of secondary containment and is equipped with a product level gauge for overfill protection and product level gauge for leak detection. No associated spills, releases, or violations have been reported to NYSDEC in association with the aforementioned AST.

  Please refer to Section 6.2.2 for further discussion.

- The subject property, identified as Lot 200, Taxblock 3356 at 3547 Webster Avenue is listed as an E Designation site in the regulatory database report. The E Designation listing is identified as E-249 and was issued March 23, 2011 for "Hazardous Materials Phase I and Phase II Testing Protocol" and "Window Wall Attenuation & Alternate Ventilation." An E-Designation is a zoning

map designation in the City of New York that indicates the presence of an environmental requirement pertaining to potential Hazardous Materials Contamination, Window/Wall Noise Attenuation or Air Quality impacts on a particular tax lot. These designations are assigned to properties during rezoning events. A property can continue to be used as before, with no additional requirements. However, if a property is to be redeveloped with new construction or change of use, the environmental requirements of the E-Designation need to be satisfied prior to the issuance of building permits and Certificates of Occupancy. Partner contacted the New York City Department Office of Environmental Remediation to obtain the current status of the E Designation. According to Myrna (OER Project Manager), as of May 8, 2019 no documents have been submitted to the OER to satisfy the E Designation requirements. Based on the abovementioned details, the E Designation listing is considered to represent a REC.

4.2.3 Adjacent Property Listings

The adjacent property to the southeast (3522 Webster Avenue) was identified as an UST and E Designation site, as discussed below:

- The property, identified as Armand Coli/Joan Colu at 3522 Webster Avenue, is located adjacent to the southeast of the subject property. According to the site-specific database, this facility (2-602370) is listed as an unregulated/closed UST site. One 1,500-gallon No. 2 fuel oil UST was reportedly closed-in place at the facility in 1995. The UST has no form of secondary containment, is equipped with a vent whistle for overfill protection, and no leak detection. No associated spills, releases, or violations have been reported to NYSDEC. Based on the status of the USTs and lack of reported releases, this listing is not expected to represent a significant environmental concern and it is unlikely that a regulatory file review for this site would alter the findings of this assessment.
- The property, identified as Armand Coli/Joan Colu at 3522 Webster Avenue, is located adjacent to the southeast of the subject property. According to the site-specific database, the property is identified as an E-Designation (E-249) site due to "Hazardous Materials Phase I and Phase II Testing Protocol" and "Window Wall Attenuation & Alternate Ventilation." No additional details were provided. Based on the absence of a reported release, this listing is not expected to represent a significant environmental concern and it is unlikely that a regulatory file review for this site would alter the findings of this assessment.

The adjacent property to the south (3545 Webster Avenue) was identified as an AST site, as discussed below:

- The property, identified as Lasorsa Auto Group at 3545 Webster Avenue, is located adjacent to the south of the subject property. According to the site-specific database, this facility (2-612157) is listed as an active AST site. One 500-gallon waste oil AST was reportedly installed at the facility in 2012, one 500-gallon motor oil AST was reportedly installed at the facility in 2012, and one 500-gallon transmission fluid AST was reportedly installed at the facility in 2012. The ASTs are vaulted with access as a form of secondary containment, are equipped with a product level gauge

for overfill protection and impervious barrier/concrete pad for leak detection. No associated spills, releases, or violations have been reported to NYSDEC. Based on the aboveground nature of the ASTs, status of the ASTs, and lack of reported releases, this listing is not expected to represent a significant environmental concern and it is unlikely that a regulatory file review for this site would alter the findings of this assessment.

The adjacent property to the west (3540 Decatur Avenue) was identified as an AST and Spills site, as discussed below:

- The property, identified as Bob-Al Management at 3540 Decatur Avenue, is located adjacent to the west of the subject property. According to the site-specific database, this facility (2-247804) is listed as an active AST site. One 5,000-gallon #2 fuel oil AST was reportedly installed at the facility in 1963. The AST is vaulted with access as a form of secondary containment, is equipped with a product level gauge for overfill protection and interstitial-manual monitoring, and impervious barrier for leak detection.

  One spill (Spill No. 9904715) of approximately 15 gallons of #4 Fuel Oil was released onto the soil due to a defective gauge at the address on July 20, 1999. A responsible party was identified for the release and was remediated. Based on the regulatory closure and oversight, small quantity of material released, and details provided these listings are not expected to represent a significant environmental concern and it is unlikely that a regulatory file review for this site would alter the findings of this assessment.

Additionally, several Consolidated Edison (Con Edison), RCRA, and Manifest listings were identified within the vicinity of the subject property. These listings are associated with Con Edison-operated vaults or NYCTA sub-stations located beneath the streets or sidewalks in the public right of way. Con Ed owns all electrical utilities in the area, which includes the transformers and switchgears located in the public right-of-way of the sidewalks and roadways. Partner's experience is that when Con Ed conducts service work or cleans the vaults after storm water infiltration, they often find oil sheening floating on top of storm water from the vaults, which triggers the reporting of a RCRA listing and disposal of the wastes under manifests after cleanup. The nearest addresses to the right-of-way location are often utilized, although it is not indicative of issues or hazardous waste generation on the private land. Based on the nature of these listings, typically minor and small amounts of wastes, the cleanup and response actions taken by the utility company, and the responsible party identified, these listings are not expected to represent a significant environmental concern to the subject property.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.4 Sites of Concern Listings

No sites of concern are identified in the regulatory database report.

4.2.5 Orphan Listings

Eight orphan listings were identified in the regulatory database report. Based on a review of these listings, the sites are either outside of the ASTM radius or are not expected to represent a recognized environmental condition.

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from Axos Bank (User of this report).

User Responsibilities				
Item	**Provided By User**	**Not Provided By User**	**Discussed Below**	**Does Not Apply**
Environmental Pre-Survey Questionnaire			**X**	
Title Records, Environmental Liens, and AULs			**X**	
Specialized Knowledge			**X**	
Actual Knowledge			**X**	
Valuation Reduction for Environmental Issues			**X**	
Identification of Key Site Manager	**Section 5.1.3**			
Reason for Performing Phase I ESA	**Section 1.1**			
Prior Environmental Reports		**X**		
Other				**X**

5.1 Interviews

5.1.1 Interview with Owner

Mr. Zisha Twersky, subject property owner, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

Mr. Twersky stated that at the time he acquired the subject property it was occupied by a dialysis center. Mr. Twersky further stated that with the exception of the onsite registered AST there are no USTs, clarifiers, oil/water separators, groundwater monitoring wells, hazardous substance use/storage/generation, or additional ASTs on the subject property to the best of his knowledge.

5.1.2 Interview with Report User

Please refer to Section 5.2 below for information requested from the Report User. The information requested was not received prior to the issuance of this report. Because the Report User (Client) is a lender, it is understood that the Report User would not have knowledge of the property that would significantly impact our ability to satisfy the objectives of this assessment. The lack of this information is not considered to represent a significant data gap.

5.1.3 Interview with Key Site Manager

The key site manager is the subject property owner. Please refer to Section 5.1.1 for further discussion.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap.

5.1.5 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was not provided with title records or environmental lien and AUL information for review as part of this assessment.

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment.

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

No previous reports or other pertinent documentation was provided to Partner for review during the course of this assessment.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data	
Site Assessment Performed By:	Melissa Marte
Site Assessment Conducted On:	May 7, 2019

The table below provides the subject property personnel interviewed during the field reconnaissance:

Site Visit Personnel for 3547 Webster Avenue (Subject Property)			
Name	**Title/Role**	**Contact Number**	**Site Walk* Yes/No**
Mr. Zisha Twersky	Subject Property Owner	(845) 499-7894	Yes*

** Accompanied Partner during the field reconnaissance activities and provided information pertaining to the current operations and maintenance of the subject property*

No potential environmental concerns were identified during the onsite reconnaissance.

Environmental concerns were identified during the onsite reconnaissance related to historical operations and former tanks, as further discussed in Sections 6.2.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Due to the vacant nature of the subject property, solid waste is not presently generated onsite. No evidence of significant illegal dumping of solid waste was observed during the Partner site reconnaissance. However, miscellaneous debris, such as plastic bottles and soiled diapers, were noted on the roof of the subject building. These materials should be properly disposed of off-site.

6.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of New York services the subject property vicinity. No wastewater treatment facilities or septic systems are observed or reported on the subject property.

6.1.3 Surface Water Drainage

Storm water is removed from the subject property primarily by sheet flow action across the building rooftop towards storm water drains located in the public right of way. The subject property is connected to a municipal owned and maintained sewer system.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Fish & Wildlife Service; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface

impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

Heating and cooling systems as well as domestic hot water equipment are fueled by electricity, natural gas, and fuel oil provided by Con Edison (Con Ed) and a third party. The mechanical system is comprised rooftop-mounted packaged electric/natural gas split HVAC units. Of importance, evidence of two boilers were noted during Partner's site reconnaissance.

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

Domestic wastewater generated at the subject property is disposed by means of the sanitary sewer system. No industrial process is currently performed at the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

No evidence of the use of reportable quantities of hazardous substances was observed on the subject property.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

Partner's research and onsite observations identified the presence of an active and historical aboveground and underground storage tanks (ASTs/USTs). The subject property is registered (Facility ID 2-293466) with one 5,000-gallon #2 Fuel Oil AST that was installed in 1986, which was noted to be present during Partner's site reconnaissance. In addition, a vent pipe and fill ports characteristic of USTs were observed. Four fill ports and one vent pipe were observed at the subject property; three fill ports along the sidewalk located southeast of the building along with a fill port in this vicinity; and one fill port along the northeastern interior (area of dock). Partner traced the aforementioned registered/active AST pipe to the fill port located along the northeastern interior. In addition, Partner noted two petrometer gauges to be present; one on the exterior of onsite active/registered tested AST vault and one within the partial basement. Due to flooding within the basement, Partner was unable to trace the possible petrometer fill line to a potential tank. However, according to a review of the Sanborn Maps, the subject property was depicted with two 550-gallon gasoline buried tanks as early as 1945 to at least 2007. No additional information regarding the fill ports or former USTs was provided during the course of this assessment.

Therefore, it is unknown if oil was stored within ASTs or USTs located at the subject property or if USTs were properly closed and/or removed. Based on the lack of information regarding the UST(s) removal, it is possible that a release from the UST(s) has resulted in an impact to the subsurface of the subject property. Based on this information, the former presence of UST(s) and fill ports/vent pipes on the subject property represents a REC.

6.2.3 Evidence of Releases

No spills, stains or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)

No potential PCB-containing equipment (transformers, oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, etc) was observed on the subject property during Partner's reconnaissance.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

No drains, sumps, or clarifiers, other than those associated with storm water removal, were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be *presumed* to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property building was constructed in 1927 and may have asbestos containing materials (ACMs: materials containing >1% asbestiform components determined by the EPA 600/R-93/116 Method using Polarized Light Microscopy) present. The table below outlines suspect ACM that is generally found in buildings of this age:

Suspect ACM
Drywall Systems
Floor Tiles
Floor Tile Mastic

The limited visual survey consisted of noting observable materials (materials that were readily accessible and visible during the course of the site reconnaissance) that are commonly known to potentially contain asbestos. This activity was not designed to discover all sources of suspect ACM, PACM, or asbestos at the site; or to comply with any regulations and/or laws relative to planned disturbance of building materials such as renovation or demolition, or any other regulatory purpose. Rather, it is intended to give the User an indication if significant (significant due to quantity, accessibility, or condition) potential sources of ACM or PACM are present at the subject property. Additional sampling, assessment, and evaluation will be warranted for any other use.

Partner was not provided building plans or specifications for review, which may have been useful in determining areas likely to have used ACM.

According to the US EPA, ACM and PACM that is intact and in good condition can, in general, be managed safely in-place under an Operations and Maintenance (O&M) Program until removal is dictated by renovation, demolition, or deteriorating material condition. Prior to any disturbance of the construction materials within this facility, a comprehensive ACM survey is recommended.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm^2 (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X", to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

Based on the age of the subject property building (pre-1978), there is a potential that LBP is present. Overall, interior and exterior painted surfaces were observed to be in average condition and therefore are not expected to represent a "hazard". However, areas of peeling paint were observed on beams in the subject building. The condition of the paint should be monitored and maintained to ensure that it does not become deteriorated.

Actual material samples would need to be collected in order to determine if LBP is present.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones		
EPA Zones	**Average Predicted Radon Levels**	**Potential**
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 3. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.3.4 Lead in Drinking Water

A public water system operated by the New York City Department of Environmental Protection (NYCDEP) serves the subject property vicinity. According to the NYCDEP 2017 Annual Water Quality Report, shallow groundwater beneath the subject property is not utilized for domestic purposes. The sources of public water for the City of New York are surface water from a network of 19 reservoirs and three controlled lakes in a nearly 2,000-square-mile watershed that extends 125 miles north and west of New York City. Sources include the Catskill/Delaware supply located in Delaware, Greene, Schoharie, Sullivan, and Ulster counties; the Croton supply, which is composed of 12 reservoir basins in Putnam, Westchester and Dutchess counties; and a groundwater supply in southeastern Queens. According to the City of New York and the 2018 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

Partner observed accessible, interior areas for the subject property building for significant evidence of mold growth with the exceptions detailed in Section 1.5 of this report; however, this ESA should not be used as a mold survey or inspection. Additionally, this limited assessment was not designed to assess all

areas of potential mold growth that may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the subject property. This evaluation did not include a review of pipe chases, mechanical systems, or areas behind enclosed walls and ceilings.

The following indications of water damage were observed during Partner's visual assessment:

Observations	
Location of area affected	**Condition**
Throughout Interior	Water-staining observed

Partner observed water staining and water pooling throughout the interior of the subject building. No obvious indications of mold growth were observed.

6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises. No items of environmental concern were identified on the adjacent properties during the site assessment, including hazardous substances, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or any other potential environmental hazards.

7.0 FINDINGS AND CONCLUSIONS

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- According to a review of the historical sources, the subject property was developed with the current structure in 1927. The subject property was occupied by numerous commercial tenants that included garage, auto repair, and manufacturing operations (metal products/electrical panels/surgical supplies) from at least the 1940s to the 1980s. These types of operations utilize various petroleum products as well as chlorinated solvents for metal cleaning operations. Chlorinated solvents are highly mobile and have the potential to impact the subject property through subsurface conduits, such as cracks in the floor or floor drains. Based on the duration of operations and absence of prior subsurface investigation reports, the historical use of the subject property for garage, auto repair, and manufacturing operations is considered to represent a REC.
- Partner's research and onsite observations identified the presence of an active and historical aboveground and underground storage tanks (ASTs/USTs). The subject property is registered (Facility ID 2-293466) with one 5,000-gallon #2 Fuel Oil AST that was installed in 1986, which was noted to be present during Partner's site reconnaissance. In addition, a vent pipe and fill ports characteristic of USTs were observed. Four fill ports and one vent pipe were observed at the subject property; three fill ports along the sidewalk located southeast of the building along with a fill port in this vicinity; and one fill port along the northeastern interior (area of dock). Partner traced the aforementioned registered/active AST pipe to the fill port located along the northeastern interior. In addition, Partner noted two petrometer gauges to be present; one on the exterior of onsite active/registered tested AST vault and one within the partial basement. Due to flooding within the basement, Partner was unable to trace the possible petrometer fill line to a potential tank. However, according to a review of the Sanborn Maps, the subject property was depicted with two 550-gallon gasoline buried tanks as early as 1945 to at least 2007. No additional information regarding the fill ports or former USTs was provided during the course of this assessment. Therefore, it is unknown if oil was stored within ASTs or USTs located at the subject property or if USTs were properly closed and/or removed. Based on the lack of information regarding UST removal, it is possible that a release from the USTs has resulted in an impact to the subsurface of the subject property. Based on this information, the former presence of USTs and fill ports/vent pipes on the subject property is considered to represent a REC.
- The subject property, identified as Lot 200, Taxblock 3356 at 3547 Webster Avenue is listed as an E Designation site in the regulatory database report. The E Designation listing is identified as E-249 and was issued March 23, 2011 for "Hazardous Materials Phase I and Phase II Testing Protocol" and "Window Wall Attenuation & Alternate Ventilation." An E-Designation is a zoning

map designation in the City of New York that indicates the presence of an environmental requirement pertaining to potential Hazardous Materials Contamination, Window/Wall Noise Attenuation or Air Quality impacts on a particular tax lot. These designations are assigned to properties during rezoning events. A property can continue to be used as before, with no additional requirements. However, if a property is to be redeveloped with new construction or change of use, the environmental requirements of the E-Designation need to be satisfied prior to the issuance of building permits and Certificates of Occupancy. Partner contacted the New York City Department Office of Environmental Remediation to obtain the current status of the E Designation. According to Myrna (OER Project Manager), as of May 8, 2019 no documents have been submitted to the OER to satisfy the E Designation requirements. Based on the abovementioned details, the E Designation listing is considered to represent a REC.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Due to the age of the subject property building, there is a potential that asbestos-containing material (ACM) and lead based paint (LBP) are present. Several areas of the building materials were noted during the assessment to be broken, ripped, peeling and/or have signs of water damage. Should these materials be replaced, the identified suspect ACMs and LBP would need to be sampled to confirm the presence or absence of asbestos prior to any renovation or demolition activities to prevent potential exposure to workers and/or building occupants.
- Partner observed several areas of water damage throughout the buildings, as well as flooding in the basement of the subject property. Partner notes this property is currently vacant, which presumably resulted in significant water damage to the building. Should any evidence of

microbial growth be uncovered during renovation and/or demolition activities, it should be addressed at that time.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 3547 Webster Avenue in the Borough of Bronx, Bronx County, New York (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of RECs and environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- A limited subsurface investigation should be conducted in order to determine the presence or absence of soil, soil vapor and/or groundwater contamination due to the historical use of the subject property.
- In the event the subject property is redeveloped with new construction or change of use, the environmental requirements of the E-Designation should be satisfied.
- An Operations and Maintenance (O&M) Program should be implemented in order to safely manage the suspect ACMs and LBP located at the subject property.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at 3547 Webster Avenue in the Borough of Bronx, Bronx County, New York in general conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1927 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Form 15-30M-1564 114

DEPARTMENT OF HOUSING AND BUILDINGS

BOROUGH OF BRONX **, CITY OF NEW YORK** sk

No

Date

CERTIFICATE OF OCCUPANCY

(Standard form adopted by the Board of Standards and Appeals and issued pursuant to Section 646 of the New York Charter, and Sections C.26-181.0 to C26-187.0 inclusive Administrative Code 2.1.3.1. to 2.1.3.7. Building Code.)

This certificate supersedes C. O. No. N.B. 597/28

To the owner or owners of the building or premises:

THIS CERTIFIES that the ~~new~~—altered ~~existing~~—building—premises located at

3547 Webster Ave. N/E 378.09' N. of Van Hill Road

Block 3350 Lot 200

, conforms substantially to the approved plans and specifications, and to the requirements of the building code and all other laws and ordinances, and of the rules and regulations of the Board of Standards and Appeals, applicable to a building of its class and kind at the time the permit was issued; and

CERTIFIES FURTHER that, any provisions of Section 646F of the New York Charter have been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent.

~~New~~ Alt. No.—721/46 Construction classification—Non-Fireproof

Occupancy classification—Commercial . Height 2 stories, 30 feet.

Date of completion— November 15, 1947 . Located in Unrestricted Use District.

Area Class 1A . Height Zone at time of issuance of permit

This certificate is issued subject to the limitations hereinafter specified and to the following resolutions of the Board of Standards and Appeals: (Calendar numbers to be inserted here)

PERMISSIBLE USE AND OCCUPANCY

STORY	LIVE LOADS Lbs. per Sq. Ft.	PERSONS ACCOMMODATED MALE	FEMALE	TOTAL	USE
Cellar	on ground				boiler room
First	on ground	40	35	75	Factory
Second	120	60	45	105	Factory

NOTE: Fire Department permit #46699 issued 8/4/47 for a 5,000 gallon fuel oil installation.

NOTE: Fire Department approval of standpipe system received April 11, 1947.

NOTE: Fire Department approval of fire appliances received.

Edward J. Commins

Borough Superintendent.

(Page 1)

NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

Unless an approval for the same has been obtained from the Borough Superintendent, no change of rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there by any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance; that there are no notices of violations or orders pending in the Department of Housing and Buildings at this time; that Section 646F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 646 F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the borough Superintendent of the borough in which the installation has been made. Such approval shall be [illegible] the certificate of occupancy."

Additional copies of this certificate will be furnished to persons having an interest in the building or premises, upon payment of a fee of fifty cents per copy.

BARGAIN AND SALE DEED WITH COVENANT AGAINST GRANTOR'S ACTS (INDIVIDUAL OR CORPORATION)

STANDARD NYBTU FORM 8007

CAUTION: THIS AGREEMENT SHOULD BE PREPARED BY AN ATTORNEY AND REVIEWED BY ATTORNEYS FOR SELLER AND PURCHASER BEFORE SIGNING.

THIS INDENTURE, made as of the 9th day of November, 2016

Between **WEBSTER HILL REALTY CORP.,** having an address at 21040 95th Avenue South, Unit C214, Boca Raton, Florida 33428,

party of the first part,

and **WEBSTER RESIDENTS LLC**, having an address at 5014 16th Avenue, Suite 499, Brooklyn, New York 11204

party of the second part,

WITNESSETH, that the party of the first part, in consideration of Ten ($10.00) dollars, lawful money of the United States, paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

See Schedule A attached hereto and made a part hereof.

BEING AND INTENDED to be the same premises conveyed by deed dated August 6, 1971, and recorded October 15, 1971, in the Office of the City Register, Bronx County at Reel 167, Page 185.

SAID PREMISES known as and by the street address 3547 Webster Avenue, Bronx, New York 10467-4914.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof,

TOGETHER with the appurtenances, and also all the estate and rights of the party of the first part in and to said premises.

TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

Blk 3356, Lot 20

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the costs of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

Signature appears on the following page]

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the parties of the first part has duly executed this deed the day and year first above written.

Customer Registration Form for Water and Sewer Billing

Property and Owner Information:

(1) Property receiving service: BOROUGH: BRONX BLOCK: 3356 LOT: 200

(2) Property Address: 3547 WEBSTER AVENUE, BRONX, NY 10467

(3) Owner's Name: WEBSTER RESIDENTS LLC

Additional Name:

Affirmation:

☑ Your water & sewer bills will be sent to the property address shown above.

Customer Billing Information:

Please Note:

A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, the property being placed in a lien sale by the City or Service Termination.

B. Original bills for water and/or sewer service will be mailed to the owner, **at the property address or to an alternate mailing address**. DEP will provide a duplicate copy of bills to one other party (such as a managing agent), however, any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her liability to pay all outstanding water and sewer charges. Contact DEP at (718) 595-7000 during business hours or visit www.nyc.gov/dep to provide us with the other party's information.

Owner's Approval:

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A & B under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

NYC Environmental Protection

Vincent Sapienza, P.E.
Commissioner

Dear Friends:

On behalf of my nearly 6,000 colleagues at the Department of Environmental Protection (DEP), I am proud to report that New York City continues to enjoy some of the best tap water in the world. In 2018, we continued to deliver more than 1 billion gallons of clean and delicious drinking water to nearly 10 million people every day.

Many communities throughout the United States remain concerned about the safety of their public water supplies. Here in New York, we are fortunate to have a water supply that is well protected and operated by dedicated scientists, engineers and other professionals who have earned admiration among their colleagues throughout the world.

The evidence of New York City's high-quality drinking water is in the numbers and on your taste buds.

In this report, you will see that New York City's drinking water continued to meet or surpass every national and state standard for quality. These data are based on 53,200 samples that were collected by DEP scientists throughout our reservoir system, and at nearly 1,000 street-side sampling stations in every neighborhood across the City. Those samples were analyzed 654,000 times by scientists working in our four water quality laboratories. Robotic monitoring stations on our reservoirs provided another 1.3 million tests to ensure DEP was sending the best-quality water to New York City at all times.

The excellent scientific results were validated last summer by our customers and other New Yorkers. In 2018, New York City earned first place in the New York State Tap Water Taste Test competition. That honor was based on hundreds of people who lined up in New York City and at the state fair in Syracuse to taste water from dozens of cities, towns, and villages. In the end, New York City earned the blue ribbon for our great-tasting water.

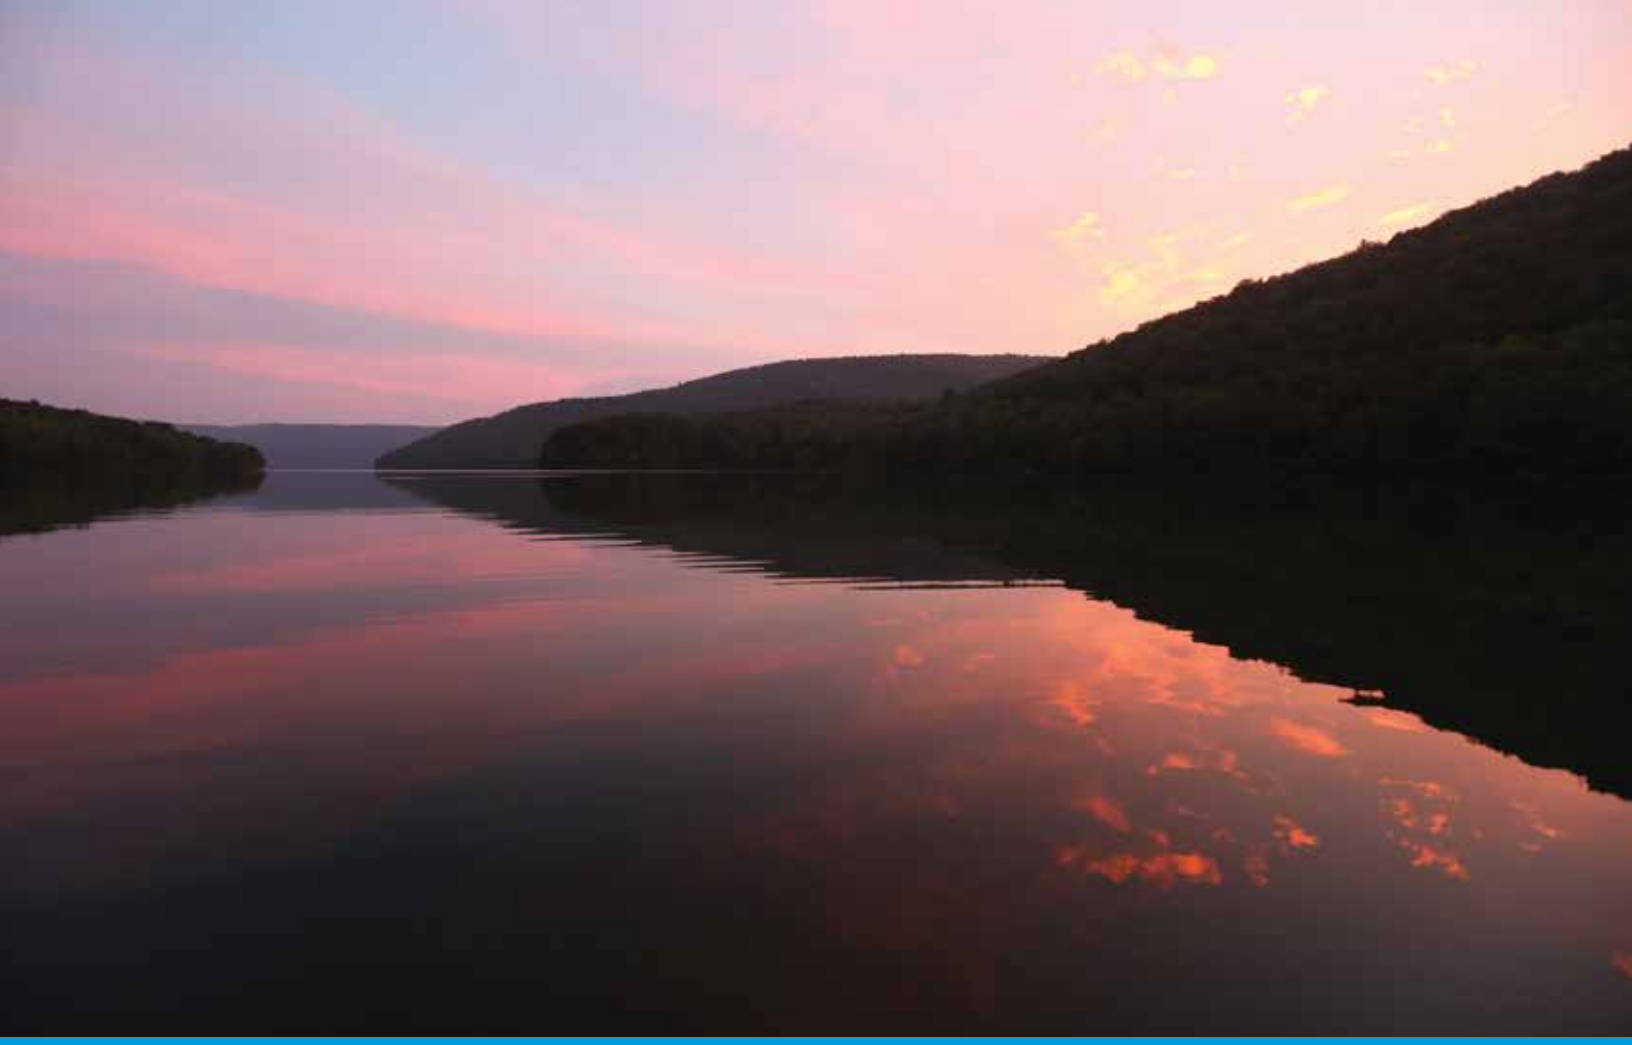
None of these good results happen by accident. Our drinking water system relies on vast reservoirs, large dams, hundreds of miles of aqueducts, and thousands of miles of water mains. Steady and focused investment in drinking water infrastructure is key to the future of New York City. That is why you will also find in this report news about a number of infrastructure investments DEP is making now and in the decades ahead. In 2018, we announced a $1.2 billion tunneling project in Westchester County to improve operational resiliency and flexibility between a key reservoir and treatment facility. The largest repair project in the history of our water supply system, the $1 billion Delaware Aqueduct Bypass Tunnel, continued to make steady progress last year as a tunneling machine excavated toward the Hudson River. You will find details about these and other projects in the pages that follow.

As we look forward to 2019 and beyond, I want to thank you for entrusting DEP with the operation, protection, and maintenance of your drinking water supply. We take great pride in delivering the best water to millions of New Yorkers every day.

Sincerely,

Vincent Sapienza, P.E.

Commissioner



Pepacton Reservoir

NEW YORK CITY'S WATER SUPPLY

The New York City Water Supply System provides approximately one billion gallons of safe drinking water daily to more than 8.6 million residents of New York City, and to the millions of tourists and commuters who visit the City throughout the year. The water supply system also provides about 105 million gallons a day to approximately one million people living in the counties of Westchester, Putnam, Orange, and Ulster. In all, the New York City Water Supply System provides nearly half the population of New York State with high-quality drinking water.

WHERE DOES NEW YORK CITY'S DRINKING WATER COME FROM?

New York City gets its drinking water from 19 reservoirs and three controlled lakes spread across a nearly 2,000-square-mile watershed. The watershed is not located in New York City, but rather upstate, in portions of the Hudson Valley and Catskill Mountains that are as far as 125 miles north of the City. A map of the watershed and reservoirs can be found on the inside of the front cover of this report. The New York City Water Supply System, Public Water System Identification Number (PWSID) NY7003493, consists of three individual water supplies called the Catskill/Delaware supply, located in Delaware, Greene, Schoharie, Sullivan, and Ulster counties; the Croton supply, New York City's original upstate supply, in Putnam, Westchester, and Dutchess counties; and a groundwater supply in southeastern Queens. Although the Department of Environmental Protection (DEP) has a permit to operate the groundwater supply, water from that system has not been delivered to customers in many years.

In 2018, New York City received a blend of drinking water from the Catskill/Delaware and Croton supplies. The Catskill/Delaware supply provided approximately 94 percent of the water, and approximately six percent was supplied by Croton.

HOW DOES NEW YORK CITY TREAT ITS WATER SUPPLIES?

Catskill/Delaware Supply located in Delaware, Greene, Schoharie, Sullivan, and Ulster counties

Due to the very high quality of our Catskill/Delaware supply, New York City is one of only five large cities in the country with a surface drinking water supply that does not utilize filtration as a form of treatment. Rather, the Catskill/Delaware supply operates under a Filtration Avoidance Determination (FAD), and the water from the supply is treated using two forms of disinfection to reduce microbial risk.

Disinfection

Chlorine
Water is disinfected with chlorine which is a common disinfectant added to kill germs and stop bacteria from growing on pipes.

UV Light
At the UV Disinfection Facility exposure to UV light inactivates potentially harmful microorganisms. UV treatment does not change the water chemically, as nothing is added except energy.

Catskill/Delaware Ultraviolet (UV) Disinfection Facility

It is the largest of its kind in the world located in Westchester County. The facility is designed to disinfect more than 2 billion gallons of water per day.

Fluoride*
Added to water to improve dental protection, it is effective in preventing cavities at a federally approved level of 0.7 mg/L.

Other Treatment

Sodium Hydroxide
Added to raise the pH, it reduces corrosion of household plumbing.

Food Grade Phosphoric Acid
Added because it creates a protective film on pipes that reduces the release of metals, such as lead, from service lines and household plumbing.

Croton Water Supply located in Putnam, Westchester, and Dutchess counties

The Croton supply is filtered by the Croton Water Filtration Plant, located underground in the Bronx. The plant has the ability to filter up to 290 million gallons of drinking water each day, which helps to ensure a sufficient supply of water for the City in the event of drought, and increases the flexibility of New York City's supply against the potential effects of climate change. The Croton Water Filtration Plant first began operating in May 2015. In 2018, it was in operation from May 17 to August 15, September 26 to October 14, and October 17 until December 31, 2018.

Filtration

Croton Water Filtration Plant

Coagulation — Chemicals are added to untreated water, causing particulates to bunch together and become larger particles called floc.

Dissolved Air Flotation — Injected air bubbles float the floc to the top where it is skimmed off.

Sand Filtration — The water flows through a bed of sand removing any remaining particles.

Fluoride**

Sodium Hydroxide

Other Treatment

Food Grade Phosphoric Acid

Chlorine

UV Light

Disinfection

NYC Distribution to the Customer

* During 2018, only 0.3 percent of the water produced by Catskill/Delaware supply was not fluoridated.
** During 2018, only 0.06 percent of the water produced by the Croton Water Filtration Plant was not fluoridated.

DEP scientists in the watershed

DRINKING WATER QUALITY

REGULATION OF DRINKING WATER

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activities. Contaminants that may be present in source water include: microbial contaminants, inorganic contaminants, pesticides and herbicides, organic chemical contaminants, and radioactive contaminants.

To ensure that tap water is safe to drink, the New York State Department of Health (NYSDOH) and the United States Environmental Protection Agency (EPA) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The NYSDOH and the federal Food and Drug Administration's (FDA) regulations establish limits for contaminants in bottled water, which must provide the same protection for public health. The presence of contaminants does not necessarily indicate that water poses a health risk. These regulations also establish the minimum amount of testing and monitoring that each system must undertake to ensure that the tap water is safe to drink.

DEP's water quality monitoring program – far more extensive than required by law – demonstrates that the quality of New York City's drinking water remains high and meets all state and federal drinking water standards. Additional information concerning drinking water can be found at: **www.epa.gov/safewater** or **www.health.ny.gov**.

DRINKING WATER SAMPLING AND MONITORING

DEP monitors the water in the distribution system, upstate reservoirs and feeder streams, and wells that are sources for New York City's drinking water supply. To accomplish this goal, throughout the watershed and as the water enters the distribution system, DEP continuously monitors and conducts analyses for certain water quality parameters, including microbiological, chemical, and physical measures. DEP also regularly tests water quality at nearly 1,000 water quality sampling stations throughout New York City. In 2018, DEP performed approximately 414,000 analyses on 37,500 samples from the distribution system, meeting all state and federal monitoring requirements. These data are summarized in tables starting on page 10. Additionally, DEP performed approximately 240,000 analyses on 15,700 samples from the upstate reservoir watersheds, and took close to 1.3 million robotic monitoring measurements to support Filtration Avoidance Determination (FAD) watershed protection programs and to optimize water quality.

LEAD IN DRINKING WATER

New York City's water is healthy and safe to drink. It is delivered virtually lead free from our upstate reservoir system to more than nine million New Yorkers. However, some older homes may contain lead plumbing that releases small amounts of lead into the water. Fortunately, residents can take simple steps to minimize their exposure.

What Are The Health Impacts of Lead?

Lead is a metal that can be harmful, especially to young children and pregnant women. It is a neurotoxin that can impact a young child's development, behavior, and ability to learn. Lead exposure during pregnancy may contribute to low birth weight and developmental delays in infants. There are many sources of lead in the environment, most notably peeling paint, and it is important to reduce exposure to lead as much as possible.

Can Lead Get In My Drinking Water?

Lead can be released when drinking water is in contact with older plumbing materials that contain lead, like pipes, solder, faucets, fittings, and valves. If water has not been used for several hours, such as overnight, more lead can be released into the water. DEP treats NYC's water supply to reduce this release, and our frequent testing confirms that it is effective. Nonetheless, that treatment cannot always reduce lead in every faucet to a safe level all of the time.

Monitoring Drinking Water for Lead

The federal Lead and Copper Rule was established in the 1990s to require all municipalities to regularly test drinking water for these two metals, and to take protective measures if standards are not met. DEP analyzes the drinking water from hundreds of homes each year, and these samples confirm that drinking water meets the federal standards. These results are presented in the table on page 13 of this report.

How Can I Limit My Lead Exposure?

DEP recommends you take the following steps when using drinking water for drinking or cooking to reduce lead exposure:

- Run your water for at least 30 seconds or until it gets cold. Once the water is cold, run it for 15 seconds more.
- Use cold water for cooking, drinking, or preparing infant formula. Hot water is more likely to contain lead and other metals.
- Remove and clean the faucet screen (also called an aerator) monthly, where small particles can get trapped.
- Hire a licensed plumber to identify and replace plumbing fixtures and/or service lines that contain lead.

How Do I Get My Water Tested for Lead?

If you are concerned about lead in your drinking water, you can have your home's water tested at no cost. DEP offers free testing kits, with prepaid postage, to all New York City residents. DEP's Free Residential Testing Program is the largest of its kind in the nation. DEP has distributed approximately 130,000 sample collection kits since the start of the program. Call 311 or visit www.nyc.gov/apps/311 to request a free lead test kit.

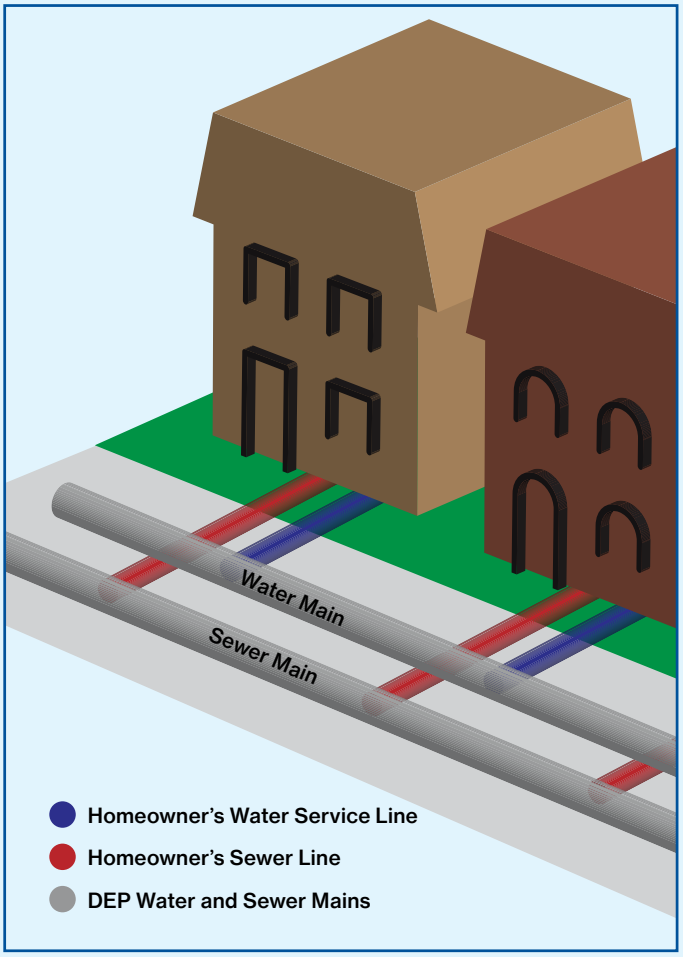
Who Can I Contact?

For health-related questions:

- Call NYC Health Department – Healthy Homes at (646) 632-6023
- Visit www.nyc.gov/health - Healthy Homes, Lead Poisoning Prevention
- Contact your health care provider if you need a blood test for you or your child

For questions about lead in drinking water:

- Call DEP Lead Unit at (718) 595-5364 or
- Email DEPLeadUnit@dep.nyc.gov
- Visit www.nyc.gov/dep/leadindrinkingwater
- Call the Safe Drinking Water Hotline (1-800-426-4791) or visit www.epa.gov/safewater/lead.



Fishing in the watershed

WATERSHED PROTECTION AND POLLUTION PREVENTION PROGRAMS

Source Water Assessment Program

Federal regulations require states to develop and implement source water assessment programs to identify the areas that supply public tap water, inventory contaminants, assess water system susceptibility to contamination, and inform the public of the results. The states are given a great deal of flexibility on how to implement source water assessment programs. These assessments are created using available information to help estimate the potential for source water contamination. Higher susceptibility ratings do not mean that source water contamination has occurred or will occur in the water supply; rather, they indicate the need for water suppliers to implement additional precautionary measures.

In 1993, New York City secured its first FAD for its Catskill/Delaware supply. That was followed in 1997 by the historic New York City Watershed Memorandum of Agreement, which was signed by the City, state, and federal regulators, watershed communities, and environmental advocates. Since that time, DEP has been implementing a series of programs to protect our reservoirs and the streams that feed them from a variety of contaminants. These ongoing programs operate under the close scrutiny of both the NYSDOH and EPA. Because of these efforts, which are reported in the Watershed Water Quality Annual Report, NYSDOH does not deem it necessary to perform a source water assessment on the New York City Water Supply. To view the *DEP Watershed Water Quality Annual Report*, visit **www1.nyc.gov/html/dep/pdf/reports/fad_5.1_watershed_monitoring_program-2017-watershed_water_quality_annual_report_07-18.pdf**.

MAINTAINING NEW YORK CITY'S WORLD-RENOWNED WATER SUPPLY

10-Year Filtration Avoidance Determination

DEP funds and administers a number of watershed protection and pollution prevention programs to maintain the high quality of our drinking water. These science-based strategies are designed to protect New York City's drinking water at its source by keeping pollution out of our reservoirs and the streams, creeks, and rivers that feed them.

In 2017, NYSDOH issued a new 10-year FAD that allows DEP to continue operating its Catskill/Delaware supply without filtration through at least 2027. DEP will commit an estimated $1 billion over the coming decade to comply with the FAD. That funding will go toward preserving watershed lands, upgrading wastewater infrastructure, implementing clean water strategies on watershed farms, and managing streams, forests, and other natural resources that affect water quality.

Including the new FAD, DEP has committed more than $2.7 billion toward its watershed protection programs since 1993, when the EPA first issued the City a waiver from the federal requirement to filter tap water that comes from surface sources such as reservoirs. DEP's watershed programs are based on the premise that it is most cost-effective and environmentally sound to protect the quality of drinking water at its source. The filtration waiver allows DEP to avoid construction of a large filtration plant

for the Catskill/Delaware supply. Such a facility is estimated to cost more than $10 billion to construct, which would make it the largest public works project in the City's history.

Over the past 25 years, DEP's programs in the watershed have become a national and international model for protecting water at its source. Each year, water utility managers and public health professionals come from around the globe to study DEP programs. DEP has welcomed visitors from Australia, Canada, Chile, China, Colombia, India, Singapore, the United Kingdom, and others who aimed to solve water-quality challenges by replicating part of New York City's protection efforts.

DEP's source water protection initiatives and achievements include:

- Land acquisition: DEP has preserved more than 152,000 acres of land since 1997, in addition to the nearly 45,000 acres of land surrounding its reservoirs previously owned by the City. The State of New York owns and permanently protects 210,000 acres as parkland or forestland, and other entities have preserved more than 27,000 acres in the watershed. In all, nearly 40 percent of the watershed is now preserved as open space.
- Agricultural program: The not-for-profit Watershed Agricultural Council, one of DEP's watershed partners, has completed more than 450 "whole farm" plans that incorporate pollution prevention into the business operations of local farms. Those plans are complemented by the installation of more than 7,800 best management practices that control runoff from farms and minimize the amount of nutrients or potential contaminants entering local streams.
- Wastewater treatment plant upgrades: DEP has completed upgrades on all private and public wastewater treatment plants in the Catskill/Delaware watershed.
- Septic system repair: The Catskill Watershed Corporation (CWC), another partner organization funded by the City, has invested in the repair of failing septic systems across the watershed, with more than 5,500 repairs completed through 2018.
- Stream management: DEP has implemented a comprehensive stream management program to restore the natural stability and flood resiliency of streams that feed the reservoir system. Through 2018, the program has funded more than 375 projects to restore stream stability and streamside vegetation along approximately 44 miles of waterways in the Catskills.
- Land management and recreation: DEP has developed a comprehensive plan to manage the forests on City-owned land, which naturally filter the water as it moves toward the reservoirs. DEP has also opened nearly 137,000 acres of City-owned property for fishing, hiking, and other types of low-impact recreation in the watershed.
- Regulatory program: While balancing the goals of watershed protection with the needs of the region, DEP administers a regulatory program to review and approve new development proposals in the watershed and works with local communities to identify and invest in projects that mitigate flooding.

The new FAD requires DEP to continue these core programs. It also requires DEP fund new efforts to collect and process wastewater, preserve streams and their buffer lands, and expand our work with watershed farmers. In addition, the FAD includes an expert review of the City's source water protection programs by the National Academies of Sciences, Engineering, and Medicine, which is expected to be complete in 2020.

More information about the FAD can be found on the NYSDOH website at: **www.health.ny.gov/environmental/water/drinking/nycfad**.

More information about New York City's watershed protection programs can be found at: **www.nyc.gov/watershed**.

KENSICO-EASTVIEW CONNECTION

DEP last year announced plans for a $1.2 billion tunneling project in Westchester County that will improve operational resiliency and flexibility between facilities that are vital to the treatment of New York City's drinking water.

The centerpiece of the project – known as the Kensico-Eastview Connection (KEC) – will be a 2-mile-long tunnel between Kensico Reservoir and the Catskill/Delaware UV Disinfection Facility. The new aqueduct will provide an additional conveyance between these vital components of the water supply, giving DEP the ability to take other facilities out of service for periodic maintenance or inspection.

The KEC project will include construction of the new tunnel, facilities to draw water from Kensico Reservoir and move water into the UV plant, and other infrastructure work. DEP has already begun to collect soil and bedrock samples from the area to support the design of the project. Construction on the first parts of the KEC project are expected to start in approximately five years; work on the tunnel itself will start around 2025. DEP expects to finish the project around 2035.

The finished tunnel will measure approximately 27 feet in diameter and run 400-500 feet below ground. It will be large enough to carry a maximum of 2.6 billion gallons of water each day. Its design accounts for future growth in New York City and Westchester County, the potential addition of treatment facilities in the future, and the need to periodically take other aqueducts out of service for maintenance or inspection.

NEW YORK CITY'S WATER ENERGY NEXUS – LINKING WATER SUSTAINABILITY TO GREENHOUSE GAS REDUCTIONS

To advance New York City's position as a global leader in sustainability, DEP continues to track and reduce greenhouse gas (GHG) emissions to meet citywide climate change objectives. DEP's water supply, stormwater, and wastewater management facilities currently account for 17 percent of total GHG emissions from New York City government buildings. To offset our emissions and provide indirect energy co-benefits, DEP has invested in a number of sustainability programs, including water demand management.

DEP's commitment to achieving the Mayor's OneNYC goal of reducing GHG emissions 80 percent by 2050 (relative to the 2005 baseline) is driving changes in the way DEP operates. DEP recently measured the amount of GHG emissions produced by several of our traditional facilities, including wastewater resource recovery facilities (WRRFs). However, DEP did not have a way to measure the influence water conservation and demand management has on the agency's overall GHG portfolio.

To improve our data, DEP began in 2016 a Water-Energy Nexus Study to calculate the relationship between decreasing water demand and reducing GHG emissions. The study was based on a simple premise – if New York City is using less drinking water, it must also be using less energy and chemicals to treat its water and wastewater. The goal was to figure out how these reductions affected our GHG emissions. As part of the study, experts developed a tool that accurately estimates the GHG emissions that are avoided as New Yorkers curtail their demand for water, allowing DEP to use less energy for treatment.

Utilizing the Water Energy Nexus Tool, DEP discovered that its water efficiency programs have also successfully reduced GHG emissions. As of May 2018, DEP's water efficiency programs have led to a reduction of 68 metric tons (MT) CO_2 equivalent (CO_2e) per year, resulting from retrofits of fixtures in 400 schools, replacing 400 spray showers in City parks, and replacing 12,637 toilets in multi-family residential buildings. Overall, DEP's sustainability programs have reduced carbon emissions by over 480 MT CO_2e per year, which is equivalent to 131 standard passenger cars (10,000 miles per year) or 6,406 60-watt lightbulbs (used for 8 hours per day, every day).

Water quality testing

THE NEW YORK CITY 2018 DRINKING WATER QUALITY TESTING RESULTS

HOW TO READ THE NEW YORK CITY DRINKING WATER QUALITY TESTING RESULTS

The following section of the *Drinking Water Supply and Quality Report* compares the quality of your tap water to federal and state standards for each parameter (if applicable). The monitoring results show that New York City's drinking water met all drinking water standards in 2018.

Table 1 reflects the compliance monitoring results for all regulated and non-regulated parameters, the number of samples collected, the range of values detected, the average of the values detected, and the possible sources of the parameters, unless otherwise footnoted. The monitoring frequency of each parameter varies and is parameter specific. Data presented are for the Catskill/Delaware and Croton supplies, which were the only sources of water in 2018. Table 2 represents those parameters monitored for, but not detected in any sample.

Most of our data are representative of 2018 testing; concentrations of parameters or contaminants do not change frequently. For previous years' results you can view our reports at: **www.nyc.gov/waterquality**.

DEFINITIONS

Action Level (AL):
The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements that a water system must follow. An exceedance occurs if more than 10 percent of the samples exceed the Action Level.

Maximum Contaminant Level (MCL):
The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible, using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG):
The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL):
The highest level of a disinfectant allowed in drinking water. The addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG):
The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contamination.

Treatment Technique (TT):
A required process intended to reduce the level of a contaminant in drinking water.

90Th Percentile Value:
The values reported for lead and copper represent the 90th percentile. A percentile is a value on a scale of 100 that indicates the percent of a distribution that is equal to or below the value. The 90th percentile is equal to or greater than 90 percent of the lead and copper values detected at your water system.

UNITS & ABBREVIATIONS

$CaCO_3$ = calcium carbonate
CFU/mL = colony forming units per milliliter
/cm = per centimeter
°F = degrees Fahrenheit
µg/L = micrograms per liter (10^{-6} grams per liter)
µS/cm = microsiemens per centimeter
mg/L = milligrams per liter (10^{-3} grams per liter)
MPN/100mL = most probable number per 100 milliliters
ND = lab analysis indicates parameter is not detected
NDL = no designated limits
NTU = nephelometric turbidity units
/50L = per 50 liters

Water sampling station

TABLE 1: DETECTED PARAMETERS

THIS TABLE SUMMARIZES MONITORING RESULTS FOR ALL DETECTED PARAMETERS IN 2018

CONVENTIONAL PHYSICAL AND CHEMICAL PARAMETERS

PARAMETER	NYSDOH MCL (Highest Level Allowed)	EPA MCLG (Ideal Goal)	# SAMPLES	RANGE	AVERAGE	MCL VIOLATION	LIKELY SOURCES IN DRINKING WATER
Alkalinity (mg/L $CaCO_3$)	-	-	309	14 - 80	21	No	Erosion of natural deposits
Aluminum (µg/L)	50 - 200 (1)	-	464	7 - 54	21	No	Erosion of natural deposits
Barium (mg/L)	2	2	464	0.01 - 0.05	0.02	No	Erosion of natural deposits
Bromide (µg/L)	- (2)	-	6	8 - 35	20.4	No	Naturally occurring
Calcium (mg/L)	-	-	464	5.4 - 29.8	7.6	No	Erosion of natural deposits
Chlorate (mg/L)	- (2)	-	32	ND - 0.2	0.06	No	By-product of drinking water chlorination using sodium hypochlorite
Chloride (mg/L)	250	-	309	12 - 101	20	No	Naturally occurring; road salt
Chlorine Residual, Free (mg/L)	4 (3)	-	16,033	0.0 - 1.3	0.6 (3)	No	Water additive for disinfection
Chromium (µg/L)	100	-	464	ND - 3	ND	No	Erosion of natural deposits
Chromium VI (µg/L)	- (2)	-	32	ND - 0.06	0.04	No	Erosion of natural deposits
Color - distribution system (color units - apparent)	-	-	14,700	3 - 35 (4)	6	No	Presence of iron, manganese, and organics in water
Color - entry points (color units - apparent)	15 (5)	-	1,333	3 - 14	6	No	Presence of iron, manganese, and organics in water
Copper (mg/L)	1.3 (6)	1.3	464	0.002 - 0.088	0.008	No	Corrosion of household plumbing; erosion of natural deposits
Corrosivity (Langelier index)	- (7)	-	308	-2.74 to - 0.96	-2.2	No	
Fluoride (mg/L)	2.2 (5)	4	2,103	ND - 0.9	0.7	No	Water additive which promotes strong teeth; erosion of natural deposits
Hardness (mg/L $CaCO_3$)	-	-	464	18 - 116	27	No	Erosion of natural deposits
Hardness (grains/gallon[US] $CaCO_3$) (8)	-	-	464	1.1 - 6.7	1.5	No	Erosion of natural deposits
Iron (µg/L)	300 (5) (9)	-	464	ND - 197	32	No	Naturally occurring
Lead (µg/L)	15 (6)	0	464	ND - 1	ND	No	Corrosion of household plumbing; erosion of natural deposits
Magnesium (mg/L)	-	-	464	1.1 - 10	1.9	No	Erosion of natural deposits
Manganese (µg/L)	300 (5) (9)	-	476	ND - 93	17	No	Naturally occurring

TABLE 1: DETECTED PARAMETERS (CONTINUED)

THIS TABLE SUMMARIZES MONITORING RESULTS FOR ALL DETECTED PARAMETERS IN 2018

MICROBIAL PARAMETERS

PARAMETER	NYSDOH MCL (Highest Level Allowed)	EPA MCLG (Ideal Goal)	# SAMPLES	RANGE	# SAMPLES POSITIVE	AVERAGE	HIGHEST MONTH % POSITIVE	MCL VIOLATION	LIKELY SOURCES IN DRINKING WATER
Total Coliform Bacteria (% of samples positive/ month)	5%	0	9,754	-	25	-	0.7%	No	Naturally present in the environment
E. coli (MPN/100mL)	- [20]	0	9,754	-	1	-	0.1%	No	Animal fecal waste
Heterotrophic Plate Count (CFU/mL)	TT	-	12,640	ND - 2,972	217	1	-	No	Naturally present in the environment

LEAD AND COPPER RULE SAMPLING AT RESIDENTIAL WATER TAPS

PARAMETER	NYSDOH AL	EPA MCLG (Ideal Goal)	90% OF YOUR LEVELS WERE LESS THAN	RANGE	# SAMPLES EXCEEDING AL	EXCEEDANCE	LIKELY SOURCES IN DRINKING WATER
Copper (mg/L)	1.3	1.3	0.185	0.004 - 0.483	0 out of 481	No	Corrosion of household plumbing
Lead (µg/L)	15	0	11	ND - 277	26 out of 481	No	Corrosion of household plumbing

CRYPTOSPORIDIUM AND *GIARDIA* SAMPLING FROM SOURCE WATER AND RESERVOIR OUTFLOWS [21]: JANUARY TO DECEMBER 2018

PARAMETER	RESERVOIR OUTFLOW	# SAMPLES	# SAMPLES POSITIVE	RANGE	LIKELY SOURCES IN DRINKING WATER
Cryptosporidium (oocysts/50L)	Kensico	53	5	0 - 1	Animal fecal waste
	Hillview	53	5	0 - 2	
	Jerome Park	2	0	0	
Giardia (cysts/50L)	Kensico	53	37	0 - 6	Animal fecal waste
	Hillview	53	9	0 - 4	
	Jerome Park	2	0	0	

TABLE 2: NOT-DETECTED PARAMETERS

THE FOLLOWING PARAMETERS WERE MONITORED FOR, BUT NOT DETECTED IN ANY SAMPLE IN 2018

CONVENTIONAL PHYSICAL AND CHEMICAL PARAMETERS

Antimony, Arsenic, Asbestos*, Beryllium, Bismuth-212*, Bismuth-214*, Cadmium, Cesium-134*, Cesium-137*, Cyanide, Gross Alpha*, Gross Beta*, Lead-212*, Lead-214*, Lithium, Mercury, Potassium-40*, Radium-226*, Radium-228*, Selenium, Silver, Thallium, Thallium-208*, Thorium-234*, Uranium*, Uranium-235*

ORGANIC PARAMETERS

Principal Organic Contaminants:

Benzene, Bromobenzene, Bromochloromethane, Bromomethane, n-Butylbenzene, sec-Butylbenzene, tert-Butylbenzene, Carbon tetrachloride, Chlorobenzene, Chloroethane, Chloromethane, 2-Chlorotoluene, 4-Chlorotoluene, Dibromomethane, 1,2-Dichlorobenzene, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, Dichlorodifluoromethane, 1,1-Dichloroethane, 1,2-Dichloroethane, 1,1-Dichloroethene, cis-1,2-Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane, 1,3-Dichloropropane, 2,2-Dichloropropane, 1,1-Dichloropropene, cis-1,3-Dichloropropene, trans-1,3-Dichloropropene, Ethylbenzene, Hexachlorobutadiene, Isopropylbenzene, p-Isopropyltoluene, Methylene chloride, n-Propylbenzene, Styrene, 1,1,1,2-Tetrachloroethane, 1,1,2,2-Tetrachloroethane, Tetrachloroethylene, Toluene, 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, 1,1,1-Trichloroethane, 1,1,2-Trichloroethane, Trichloroethene, Trichlorofluoromethane, 1,2,3-Trichloropropane, 1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene, m-Xylene, o-Xylene, p-Xylene

Specified Organic Contaminants:

Alachlor, Aldicarb (Temik), Aldicarb sulfone, Aldicarb sulfoxide, Aldrin, Atrazine, Benzo(a)pyrene, Butachlor, Carbaryl, Carbofuran (Furadan), Chlordane, 2,4-D,Dicamba, Dieldrin, Di(2-ethylhexyl)adipate, Di(2-ethylhexyl)phthalate, Dinoseb, Diquat, Endothall, Endrin, Ethylene dibromide (EDB), Glyphosate, Heptachlor, Heptachlor epoxide, Hexachlorobenzene, 3-Hydroxycarbofuran, Lindane, Methomyl, Methoxychlor, Methyl-tertiary-butyl-ether (MTBE), Metolachlor, Metribuzin, Oxamyl (Vydate), Pentachlorophenol, Picloram, Polychlorinated biphenyls (PCBs), Propachlor, Simazine, Toxaphene, 2,4,5-TP (Silvex), 2,3,7,8-TCDD (Dioxin), Vinyl chloride

Unspecified Organic Contaminants:

Acenaphthene, Acenaphthylene, Acetochlor, Acetone, Acifluorfen, Allyl chloride, Ametryn, tert-Amyl ethyl ether, tert-Amyl methyl ether, Anthracene, Bentazon, Benzo[a]anthracene, Benzo[a]pyrene, Benzo[b]fluoranthene, Benzo[k]fluoranthene, Benzo[g,h,i]perylene, alpha-BHC, beta-BHC, delta-BHC, Bromacil, 2-Butanone (MEK), Butylate, Butylbenzylphthalate, tert-Butyl alcohol, tert-Butyl ethyl ether, Caffeine, Carbon Disulfide, Carboxin, Chloramben, alpha-Chlordane, gama-Chlordane, Chlorobenzilate, 2-Chlorobiphenyl, 1-Chlorobutane, Chloroneb, Chlorothalonil (Draconil, Bravo), Chlorpropham, Chlorpyrifos (Dursban), Chrysene, Cycloate, 2,4-DB, DCPA(Dacthal), DCPA (total mono & diacid degradate), 4,4'-DDD, 4,4'-DDE, 4,4'-DDT, DEF(Merphos), Diazinon, Dibenz[a,h]anthracene, Di-n-Butylphthalate, 3,5-Dichlorobenzoic acid, 2,3-Dichlorobiphenyl, Dichlorprop, Dichlorvos (DDVP), Diethyl ether, Di-isopropyl ether, Dimethoate, Dimethylphthalate, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, Di-N-octylphthalate, Diphenamid, Disulfoton, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin aldehyde, EPTC, Ethoprop, Ethyl methacrylate, Etridiazole, Fenamiphos, Fenarimol, Fluoranthene, Fluorene, Fluridone, alpha-HCH, beta-HCH, delta-HCH, 2,2',3,3',4,4',6-Heptachlorobiphenyl, Heptachlor epoxide (isomer B), 2,2',4,4',5,6'-Hexachlorbiphenyl, Hexachloroethane, Hexazinone, Indeno[1,2,3-cd]pyrene, Isophorone, Malathion, Methiocarb, Methyl acetate, Methyl iodide, Methyl paraoxon, 4-Methyl-2-pentanone (MIBK), Mevinphos, MGK264-isomer a, MGK264-isomer b, Molinate, Naphthalene, Napropamide, 4-Nitrophenol, cis-Nonachlor, trans-Nonachlor, Norflurzon, 2,2',3,3',4,5',6,6'-Octachlorobiphenyl, Paraquat, Parathion, Pebulate, Pendimethalin, 2,2',3',4,6-Pentachlorobiphenyl, Pentachloroethane, Permethrin (cis- & trans-), Phenanthrene, Prometryn, Pronamide, Propazine, Propoxur (Baygon), Pyrene, 2,4,5-T, Simetryn, Stirofos, Tebuthiuron, Terbacil, Terbufos, Terbuthylazine, Terbutryn, 2,2',4,4'-Tetrachlorobiphenyl, Tetrahydrofuran, Thiobencarb, Trialemefon, 2,4,5-Trichlorobiphenyl, Trichlorotrifluoroethane (Freon 113), Tricyclazole, Trifluralin, Vernolate

Unregulated Contaminant Monitoring Rule (UCMR3) Parameters: [2]

Androstenedione, Bromochloromethane, Bromomethane, 1,3-Butadiene, Chlorodifluoromethane, Chloromethane, Cobalt, 1,1-Dichloroethane, Equilin, Estradiol, Estriol, Estrone, Ethynylestradiol, Molybdenum, Perfluorobutanesulfonic acid (PFBS), Perfluoroheptanoic acid (PFHpA), Perfluorohexanesulfonic acid (PFHxS), Perfluorononanoic acid (PFNA), Perfluorooctanesulfonic acid (PFOS), Perfluorooctanoic acid (PFOA), Testosterone, 1,2,3-Trichloropropane, Vanadium

Unregulated Contaminant Monitoring Rule (UCMR4) Parameters:[2]

Anatoxin-a, 1-Butanol, Butylated hydroxyanisole, Chlorpyrifos, Cylindrospermopsin, Dimethipin, Ethoprop, alpha-HCH, Germanium Total ICAP/MS, 2-Methoxyethanol, Monobromoacetic acid, Monochloroacetic acid, Oxyfluorfen, Profenofos, 2-Propen-1-ol, Quinoline, Tebuconazole, o-Toluidine, Total Microcystins, Total Permethrin (cis & trans), Tribromoacetic acid, Tribufos

FOOTNOTES

(1) EPA Secondary MCL: NYSDOH has not set an MCL for this parameter.

(2) Monitored for under the Unregulated Contaminant Monitoring Rule (UCMR), UCMR3 in 2013 to 2016 and UCMR4 in 2018. UCMR3 included chlorate and chromium VI, and UCMR4 included bromide and total organic carbon in source water. No MCL has been established for any of these parameters and the NYSDOH chromium MCL is for chromium (total).

(3) Value represents MRDL, which is a level of disinfectant added for water treatment that may not be exceeded at the consumer's tap without an unacceptable possibility of adverse health effects. The MRDL is enforceable in the same manner as an MCL and is the calculated running annual average. Data presented are the range of individual sampling results and the highest of the four quarterly running annual averages.

(4) An unusual maximum color value of 240 units was measured at site 52050 (Port Richmond, 10302) on 1/16/18 which was not believed to be representative of normal conditions. The next sample collected at this site on 1/29/18 had a value of 6 color units.

(5) Determination of MCL violation: If a sample exceeds the MCL, a second sample must be collected from the same location within two weeks, or as soon as practical. If the average of the two results exceeds the MCL, then an MCL violation has occurred.

(6) Action Level (not an MCL) applies to samples measured at-the-tap. The data presented in this table were collected from sampling stations at the street curb. For at-the-tap monitoring, see the Lead and Copper Rule Sampling at Residential Water Taps table.

(7) A Langelier Index of less than zero indicates corrosive tendencies.

(8) Hardness of up to 3 grains per gallon is considered soft water; between 3 and 9 is moderately hard water.

(9) If iron and manganese are present, the total concentration of both should not exceed 500 µg/L.

(10) Only detected in one sample: nitrite was detected from site 47550 (Seaside, 11694) on 10/3/18; dalapon was detected from site 37950 (East Village, 10003) on 11/7/18; diethylphthalate and hexachlorocyclopentadiene were detected from site 1S03A (Wakefield, 10466) on 5/21/18. The single detection of diethylphthalate by the contract laboratory was questionable due to the lab's inability to reproduce the analysis and an extensive historical record of non-detection by multiple labs, thus it is believed to be from sample contamination. The low level detection of hexachlorocyclopentadiene in the same sample was below the NYS required reporting limit of 0.1 µg/L. Resampling and split sampling between two labs on 8/20/18 produced non-detects for these parameters. 1,4-Dioxane was detected in only one sample collected for the UCMR3 on 12/8/15 from site 1SCL1 (Van Cortlandt Village, 10463). In all other samples the parameters were not detected.

(11) NYSDOH established Optimal Water Quality Parameters (OWQP) under the Lead and Copper Rule which includes a range for pH and ortho-phosphate which are presented here. The reported average value for pH is the median value. The pH was elevated in four samples collected from site 3ISL4 (Randalls Island, 10035) between 6/20/18 and 12/12/18; in two samples collected from site 51550 (Arden Heights, 10312) on 7/25/18 and 8/5/18; in two samples collected from site 23900 (Highland Park, 11207) on 10/24/18 and 11/15/18; in one sample collected from site 56000 (Prince's Bay, 10309) on 11/28/18; and in one sample collected from site 79450 (South Ozone Park, 11420) on 7/6/18. Ortho-phosphate was below range in one sample collected at site 3ISL4 (Randalls Island, 10035) on 12/12/18.

(12) Water containing more than 20 mg/L of sodium should not be used for drinking by people on severely restricted sodium diets. Water containing more than 270 mg/L of sodium should not be used for drinking by people on moderately restricted sodium diets.

(13) An unrealistically low value for TDS of 13 mg/L was measured from site 10250 (High Bridge, 10452) on 1/3/18; resample was 49 mg/L on 1/11/18.

(14) An unrealistically high value for TOC of 22.9 mg/L was measured from site 1S03A (Wakefield, 10466) on 1/16/18; resample was 1.56 mg/L on 2/6/18.

(15) Turbidity is a measure of cloudiness of the water. Turbidity is monitored because it is a good indicator of water quality, because high turbidity can hinder the effectiveness of disinfection, and because it is a good indicator of the effectiveness of our filtration system.

(16) This MCL for turbidity is the monthly average rounded off to the nearest whole number. Data presented are the range of individual sampling results and the highest monthly average from distribution sites.

(17) This MCL for turbidity is on individual readings taken every four hours at the unfiltered Catskill/Delaware source water entry point. Value presented is the highest individual sampling result.

(18) This is a Treatment Technique performance standard for the Croton Filtration Plant. The value presented is the highest single combined filter effluent turbidity measurement which occurred on 12/5/18. In 2018, 100% of turbidity results were <0.3 NTU while the Croton Filtration Plant was in operation.

(19) The MCLs for HAA5 and TTHMs are the calculated locational running annual average. The data in the Range column are the minimum and maximum values of all sample sites monitored in the distribution system whether for compliance purposes or not. The values in the Average column are the highest locational running annual averages under the Stage 2 Disinfectant and Disinfection By-Products Rule.

(20) If a sample and its repeat sample are both positive for coliform bacteria and one of the two samples is positive for *E. coli*, then an MCL violation has occurred.

(21) Samples are collected prior to final disinfection or filtration (Jerome Park). Positive results indicate (oo)cyst detection, not viability or infectivity.

* NYSDOH allows monitoring for these contaminants less frequently than once per year. These data, though representative, are from 2016.

New Croton Reservoir

CRYPTOSPORIDIUM AND GIARDIA

In 1992, DEP started a comprehensive program to monitor its source waters and watersheds for the presence of *Cryptosporidium* and *Giardia*, microscopic organisms (pathogens) that can cause disease. In 2018, DEP collected weekly samples from the outflow of the Kensico Reservoir, prior to chlorination and UV disinfection, and the outflow of Hillview Reservoir, prior to secondary disinfection with chlorine. The outflow of the Jerome Park Reservoir prior to filtration was also sampled twice in 2018 to complete sampling requirements under the Long Term 2 Enhanced Surface Water Treatment Rule. Samples were analyzed using EPA Method 1623.1. The *Cryptosporidium* and *Giardia* data for Kensico, Hillview, and Jerome Park Reservoir outflows are presented in the table on page 13 of this report.

The presence of low levels of *Cryptosporidium* and *Giardia* detected in the source water required no action on the part of DEP. DEP's *Cryptosporidium* and *Giardia* data from 1992 to the present can be viewed on the DEP website at **www.nyc.gov/waterquality**.

While there is no evidence that any cases of cryptosporidiosis or giardiasis have been caused by the New York City water supply, federal and state law requires all water suppliers to notify their customers about the potential risks from *Cryptosporidium* and *Giardia*. Cryptosporidiosis and giardiasis are intestinal illnesses caused by microscopic pathogens, which can be waterborne. Symptoms of infection include nausea, diarrhea, and abdominal cramps. Some people may be more vulnerable to disease causing microorganisms, or pathogens, in drinking water than the general population. Immuno-compromised persons, such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly individuals, and infants, can be particularly at risk from infections. These people should seek advice from their health care providers about their drinking water. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium*, *Giardia*, and other microbial contaminants are available from EPA's Safe Drinking Water Hotline at 1-800-426-4791.

DEP's Waterborne Disease Risk Assessment Program conducts disease surveillance for cryptosporidiosis and giardiasis to track the disease incidence, and syndromic surveillance for gastrointestinal illness to identify potential citywide gastrointestinal outbreaks. Persons diagnosed with cryptosporidiosis are interviewed concerning potential exposures, including tap water consumption. Disease and syndromic surveillance indicates that there were no outbreaks of cryptosporidiosis or giardiasis attributed to tap water consumption in New York City in 2018.

CROTON WATER

Did you know that even the cleanest waters can have different chemical and physical properties?

Water hardness is one such attribute that DEP receives many questions about when New Yorkers are installing dishwashers, water heaters, and other equipment that use water. Hardness is a measure of the natural minerals – specifically calcium and magnesium – that dissolve into water as it passes through soil and rocks. The more dissolved natural minerals, the harder the water.

Neighborhoods in New York City receive their drinking water from reservoirs in the Catskill/Delaware watershed, the Croton watershed, or a blend from both locations. Water from the Croton supply is considered "moderately hard," while the Catskill/Delaware supply is considered "soft" or "slightly hard." Citywide average hardness is about 1.5 grains/gallon ($CaCO_3$). In areas of the City where Catskill/Delaware and Croton water supplies are blended, the hardness can reach 6.8 grains/gallon ($CaCO_3$).

In 2018, DEP increased use of the Croton System because other parts of the water supply were temporarily shut down for infrastructure upgrades. As a result, water in several areas of the City may have become harder. The water is still of excellent quality and safe to drink. Water hardness, however, may affect the efficiency of some equipment. Consult the owner's manual for the device being operated. DEP has also compiled some additional information on water hardness and its effects at: **www.nyc.gov/dep/water-hardness**.

To help homeowners and building managers determine whether they are in an area of the City that could receive moderately hard water, DEP has posted maps of the water distribution system that can be found at: **www.nyc.gov/html/dep/html/drinking_water/croton-water-distribution-maps.shtml**.

ADMINISTRATIVE ORDERS

Hillview Reservoir is the final stop for drinking water from the Catskill/Delaware System before it enters the City's distribution system. On May 24, 2010, New York City and EPA entered into an Administrative Order on Consent that set forth a milestone schedule to install a cover over the Hillview Reservoir by mid-2028. The City has a parallel Administrative Order with NYSDOH. The EPA Administrative Order required the City to issue a notice to proceed to commence site preparation work by January 30, 2017 at the Hillview Reservoir Site. The City advised EPA and the NYSDOH that it was not undertaking that work pending EPA's review of the Long Term 2 Enhanced Surface Water Treatment Rule; thereafter EPA declined to revise that rule. EPA and the City are in discussions concerning revised milestones.

WATER CONSERVATION

DEP operates the largest combined water supply and wastewater utility in the United States. DEP employees work hard to ensure that a reliable supply of high-quality water is delivered to about 9.6 million customers each day, and that about 1.3 billion gallons of wastewater from the five boroughs is collected and treated every day. Although New York City has grown by more than 1.6 million people since 1980, its demand for water has dropped by approximately 35 percent during that time – making it one of the most water-efficient large cities in the country.

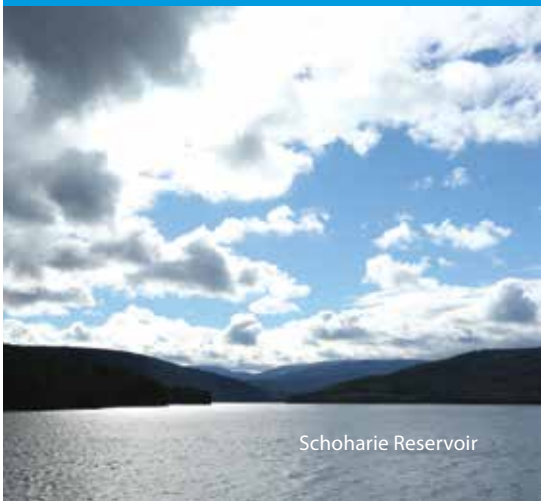
The average single-family household in New York City uses approximately 80,000 gallons of water each year at a cost of $3.90 per 100 cubic feet of water (748 gallons), or about $417 a year. Since nearly all customers receive wastewater collection and treatment services in addition to water service, the combined annual water and sewer charge for the typical New York City household using 80,000 gallons per

UPGRADES AT SCHOHARIE RESERVOIR

DEP continued to make steady progress on a $400 million program to upgrade infrastructure at Schoharie Reservoir, the northernmost reservoir in New York City's vast water supply system.

Workers this winter "holed through" on the final segment of a 2,118-foot-long tunnel that will give DEP the ability to release water downstream from the reservoir into Schoharie Creek. The new release works will help DEP facilitate dam maintenance, respond to potential emergencies, mitigate flood risk for downstream communities, and enhance downstream habitat for fish and wildlife. Construction of the valve chamber and other elements of the release works will continue for the next two years.

DEP also made considerable progress on its rehabilitation of the Shandaken Tunnel Intake Chamber, which draws the City's drinking water from Schoharie Reservoir. Work at the intake chamber includes the replacement of eight sluice gates that control the flow of water into the tunnel by opening and closing large waterways. Last year, skilled divers descended about 130 feet into a flooded shaft to take precise measurements of the gates and the grooves that guide them. The divers will begin to remove and replace those gates in 2019.



Schoharie Reservoir

Delaware Aqueduct Bypass Tunnel

year is $1,080, consisting of $417 for water service and $663 for wastewater services, calculated at fiscal year 2019 rates.

With the creation of an Automated Leak Notification Program, which sends alerts to property owners if there is an unusual spike in water consumption, more than 290,000 customers have signed up to quickly find and fix leaks on their property. To sign up, go to: **www.nyc.gov/dep/leak-notification**.

NYC Water Conservation Efforts

Did you know that the average New Yorker has reduced his or her water use by nearly half over the past 40 years? Thanks to strategic investments in our water delivery system and advances in technology, New York City is quickly becoming one of the most water-efficient large cities in the world.

The proof is in the numbers. The per-capita demand for water in New York City peaked in 1979 at 213 gallons per day. That per-capita demand by water consumers, however, has dropped steadily since the 1990s, falling all the way to the current level of 117 gallons per day.

So how did New York City shift from chugging water to sipping it? Two factors have been key to reducing our demand for water over time.

Advances in technology have played a key role. Low-flow fixtures that came onto the market starting in the 1990s helped the average New Yorker use less water. Toilets that flushed with four gallons of water were replaced by those that flushed with one gallon or fewer. Low-flow showerheads, washing machines and dishwashers also played a role.

DEP has also partnered with other City agencies, colleges and businesses to help conserve water. Recent investments have reduced overall demand for water by 10 million gallons per day, and DEP is working on plans to conserve another 10 million gallons per day over the next five years.

Drinking water conservation efforts benefit the City in many ways. For one, they have helped to reduce greenhouse gas emissions related to operating our water and wastewater systems by 68 metric tons annually, as well as limiting sewer overflows into local waterways during rain events. Reducing the demand for water also means that New York City is better protected against future droughts, as the water stored in our reservoirs will last longer during periods of dry weather. And it gives DEP the flexibility to shut down parts of our water supply system for repairs, including the 6-month shutdown of the Delaware Aqueduct that is planned for 2022-2023 to finish repairing a leak in the world's longest tunnel.

A comprehensive report on the City's water-conservation efforts, *One Water NYC: 2018 Water Demand Management Plan* can be found at: **www.nyc.gov/html/dep/pdf/conservation/2018-water-demand-management-plan.pdf**. Some highlights of our work in recent years include:

- The installation of timers on 400 spray showers in NYC Parks Department playgrounds, saving 1.1 million gallons per day in the summer.
- Upgrading 30,000 inefficient bathroom fixtures in New York City public schools, saving 3.3 million gallons per day.
- Capital upgrades and modifications of treatment procedures at DEP's 14 wastewater resource recovery facilities (WRRFs), saving 1.83 million gallons per day.
- The installation of 500 efficient toilets and 280 urinals in 10 City University of New York buildings, saving 40,000 gallons of water per day.
- Construction of a water reuse facility at the New York City Fire Department's Randall's Island Training Facility, saving 30,000 gallons of water per day.
- Replacement of more than 13,900 inefficient toilets in private residences, saving 560,000 gallons of water per day.
- Distribution of nearly 100,000 home water saving kits to promote conservation, saving 400,000 gallons per day.
- The installation of water meters and efficient toilets, urinals, showerheads, faucets, ice machines and dishwashers at NYC Health + Hospitals/Harlem, saving more than 90,000 gallons of water per day.
- Voluntary challenges with colleges, hotels, restaurants, and hospitals throughout the City, each with the goal of cutting their water use by 5 percent.
- Partnering with 10 of its largest wholesale customers, DEP is developing and implementing water demand management plans, under the Wholesale Customers Water Demand Management Program. Implementation of all plans will continue through October 2022, and achieve an estimated demand savings of 4.6 million gallons per day.

Spray showers in NYC park

DELAWARE AQUEDUCT BYPASS TUNNEL

DEP has now excavated more than 60 percent of a tunnel needed for the largest repair in the 177-year history of the New York City Water Supply System.

Workers made substantial progress on the Delaware Aqueduct Bypass Tunnel in 2018. The $1 billion project will repair two leaking sections of the 85-mile-long Delaware Aqueduct, the longest tunnel in the world. The Delaware Aqueduct delivers about 50 percent of New York City's drinking water each day.

The centerpiece of the repair is a 2.5-mile-long bypass tunnel that will carry water around the largest leak, which is located in Newburgh, N.Y. That tunnel is being constructed 600 feet below the Hudson River from Newburgh to Wappinger. Once finished, both ends of the bypass tunnel will be connected to structurally sound portions of the existing Delaware Aqueduct to carry water around the leaking section.

After tunneling began late in 2017, DEP successfully excavated more than two-thirds of the new tunnel last year. More than 7,000 linear feet of the tunnel has been driven through bedrock, and workers are on schedule to finish excavation by the end of 2019.

Once tunneling is completed, the bypass will be reinforced with 9,200 linear feet of steel. The steel liner is made from 230 individual sections that look like gigantic soup cans. Each section of the liner weighs 80,000 pounds and measures 40 feet long and 16 feet in diameter. Once tunneling is completed, segments of the liner will be moved into the tunnel and welded together one at a time.

The Delaware Aqueduct will be shut down for 5-8 months in 2022 to connect the bypass tunnel to structurally sound portions of the existing aqueduct. The City's other surface water supplies, Catskill and Croton, will meet the needs of water consumers in New York City during the shutdown. Repairs to the Delaware Aqueduct are planned to be finished in 2023.

FREQUENTLY ASKED QUESTIONS

MY WATER IS A RUSTY BROWN COLOR. WHAT CAUSES THIS?

Brown or discolored water is often related to plumbing corrosion problems inside buildings and from rusting water heaters. If you have an ongoing problem with brown water, it may be due to rusty pipes. You should run your cold water for 2-3 minutes if it has not been used for a long period of time. This will flush the line.

If your water suddenly looks discolored, it might be because of a disturbance to nearby water mains, including breaks or repairs. This can also happen if there is construction near your building. Additionally, the use of fire hydrants for firefighting can temporarily cause brown water. Because the water mains are pressurized, a disturbance may stir up or resuspend sediments, which causes the water to be discolored. Discoloration is a temporary condition most often from iron and manganese particles that have settled to the bottom of the water pipes buried under the roadways. Any sudden change in the flow of water within the pipes — or outside vibration — may loosen or resuspend the brownish/red/orange particles of iron into the water. This temporary problem is generally resolved or reduced when DEP flushes water from nearby hydrants.

SOMETIMES I THINK MY WATER HAS THE TASTE OR ODOR OF CHLORINE?

You may, at times, find your water tastes or smells like chlorine. DEP is required to maintain a chlorine residual in the distribution system to prevent the growth of microorganisms. Chlorine is a very effective disinfectant, and is not considered hazardous or harmful in the amounts used to treat the water supply.

Chlorine odors may be more noticeable when the weather is warmer. The following are ways you can remove the chlorine and its odor from your drinking water:

- ✔ *Fill a pitcher and let it stand in the refrigerator overnight. (This is the best way.)*
- ✔ *Fill a glass or jar with water and let it stand in sunlight for 30 minutes.*
- ✔ *Pour water from one container to another about 10 times.*
- ✔ *Heat the water to about 100 degrees Fahrenheit.*
- ✔ *Once you remove the chlorine, be sure to refrigerate the water to limit bacterial growth.*

WHY DOES MY DRINKING WATER LOOK CLOUDY SOMETIMES?

Air becomes trapped in the water as it makes its long trip from the upstate reservoirs to the City. As a result, bubbles of air can sometimes cause water to appear cloudy or milky. This condition is not a public health concern. The cloudiness is temporary and clears quickly after water is drawn from the tap and the excess air is released.

SHOULD I BUY BOTTLED WATER?

You do not need to buy bottled water for health reasons in New York City since our water meets all federal and state health-based drinking water standards. Also, bottled water costs up to 1,000 times more than the City's drinking water. When purchasing bottled water, consumers should look for the NYSHD CERT#. Consumers can access additional information on New York State certified bottled water facilities within the entire United States that can be sold within New York State at ***www.health.ny.gov/environmental/water/drinking/bulk_bottle/bottled.htm.***

WHERE TO GO FOR ADDITIONAL INFORMATION

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling EPA's Safe Drinking Water Hotline at 800-426-4791.

The DOs & DON'Ts of Water Conservation

BATHROOM

✔ Do take shorter showers and fill the tub halfway.

✖ Don't run water while washing your hands & brushing your teeth.

KITCHEN & LAUNDRY

✔ Do run the dishwasher & washing machine only when full.

✖ Don't let the water run while washing dishes. Kitchen faucets use 2 to 3 gallons a minute. Filling a basin only takes 10 gallons to wash and rinse.

EVERYWHERE

✔ Do install water-saving fixtures.

✖ Don't ignore water leaks. Turn taps off tightly.

OUTDOORS

✔ Do use a self-closing nozzle on your hose.

✖ Don't open fire hydrants.

REPORT LEAKS & WATER WASTE

NEW YORK CITY DRINKING WATER EARNS TOP PRIZE AT STATEWIDE TASTE TEST

New Yorkers have spoken – the Big Apple has the best tasting water in the entire state.

New York City earned first place in the 2018 New York State Tap Water Taste Test competition. The event began with 30 water suppliers competing in regional competitions. Winners from each region competed in August at the New York State Fair in Syracuse, where hundreds of fairgoers lined up to sample drinking water from each of the finalists.

The taste test competition is organized by the New York State Water and Wastewater Education and Outreach Committee, which aims to protect public health and the environment throughout the state by promoting the sound operation and maintenance of water and wastewater systems. New York City reached the finals after winning the metro-region competition at the American Museum of Natural History, which included water utilities from Nassau, Orange, Suffolk and Westchester counties.

The victory underscored the high quality and great taste of New York City's drinking water. That's good news for other cities, towns, and villages throughout the state. More than 70 communities in Orange, Putnam, Ulster and Westchester counties are connected to New York City's water supply system, and many use the City's supply as their primary source of water.

Subject: FOIL Request :: W052489-051519

Dear Melissa:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 5/15/2019 and given the reference number FOIL #W052489-051519 for tracking purposes. You may expect the Department's response to your request no later than **6/13/2019**.

Record Requested: **Address: 3547-3549 Webster Avenue Bronx, NY PBS No. 2-293466 Pursuant to the Freedom of Information Law, please forward available records regarding all Dry Cleaner records, Underground/Aboveground Storage Tanks (USTs/ ASTs), Spill Records, Remediation Sites, Previous Subsurface Investigations, Certi cate of Poisoning or Lead-Based Paint, Mold Growth or any other information that relates to the environmental condition regarding the above referenced property to us as soon as possible. Please let me know if there are any costs associated with this request prior to processing same. Your response can either be faxed or mailed or e- mailed to us at the fax number and/or location identified above. If you have any questions, please call me. Thank you for your attention to this matter. THANK YOU!**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

3547-3549 WEBSTER AVENUE
BRONX, NY 10467

COORDINATES

Latitude (North):	40.8800420 - 40˚ 52' 48.15''
Longitude (West):	73.8713410 - 73˚ 52' 16.82''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	595097.3
UTM Y (Meters):	4525842.0
Elevation:	109 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/12/2018 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 12/31/2018 has revealed that there is 1 NY SWF/LF site within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/12/2018 has revealed that there are 30 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 7 NY UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Facility Id: 2-605669

State and tribal institutional control / engineering control registries

NY RES DECL: A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

A review of the NY RES DECL list, as provided by EDR, has revealed that there is 1 NY RES DECL site within approximately 0.125 miles of the target property.

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, has revealed that there are 5 NY VCP sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: The EPA's listing of Brownfields properties from the Cleanups in My Community program, which provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A review of the US BROWNFIELDS list, as provided by EDR, and dated 12/17/2018 has revealed that there is 1 US BROWNFIELDS site within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/12/2018 has revealed that there are 24 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 40 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Tank Info:

Tank Number:	001
Tank Id:	10660
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
G02 - Tank Secondary Containment - Vault (w/access)
B00 - Tank External Protection - None
F00 - Pipe External Protection - None
H02 - Tank Leak Detection - Interstitial - Manual Monitoring
E00 - Piping Secondary Containment - None
C03 - Pipe Location - Aboveground/Underground Combination
J05 - Dispenser - On Site Heating System (Supply/Return)
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
L00 - Piping Leak Detection - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None

Tank Location:	Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	08/29/1963
Capacity Gallons:	5000
Tightness Test Method:	-
Date Test:	Not reported

BOB-AL MANAGEMENT CORP (Continued) **U003386767**

Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	ACDANIEL
Last Modified:	08/10/2017

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. This spill site cleanup has been consolidated under Spill No. 9416500. Bureau B, unassigned, due to low priority. Transferred from R-2 on April 27, 2005. Formerly R-2, unassigned. 6/8/07 - Haggerty - assumed managemnet of site 6/20/07 - Haggerty - Closure request submitted on 6/8/07. PM required Subsurface Investigation Work Plan before closure can be considered. Exxon agreed and a Subsurface Investigation Work Plan will be submitted in October. 11/5/07 - Haggerty - approved SIWP 2/4/08 - Haggerty - spoke with Shan Zuidema from Kleinfelder (845-567-6530). Drilling activities begin tomorrow 2/5/08 5/30/08: Haggerty - approved Subsurface Investigation Report dated 5/19/08. Soil contaminated encountered while installing MW-1 exceeding guidance. MW-1 installed in a former tank field. Also, MW-1 demonstated the greatest dissolved BTEX conc of 3400ppb. ExxonMobil proposed 3 quarters of Monitoring at this point. PM approved 10/13/09: Haggerty - approved Off-site investigation work plan consisting of 2 MW's across Webster Avenue 3/30/09 - Haggerty: rewiewed 3/27/09 Site Status Update Report. Groundwater contamination on-site ~2ppm BTEX. No vadose zone soil contamination (only within the smear zone). Off-site wells <50ppb BTEX. Spill closed "

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Update 1/23/06 Remediation completed - 12/21/05 report in eDocs link. Awaiting repairs.(SKA) NOTE: This is the Master Spill Number for PURS Unit 72N. It is to remain open until all repairs on this equipment and remediation are completed. (JHO, 3/23/06) ~~~~~~~~~~~~~~~~~~~~ e2mis no. 141-230 (master): 06-Feb-2002 11:40 Sub Station Operating Supervisor T. Whipple # 81477 reports multiple oil leaks from Foundation Tube, Pre-Cooler guage, 2 valves on North side of Precooler and the Inlet and Outlet flanges onto bluestone and concrete. Cleanup in progress. 19-JUN-2002. Dave Mocera, Supervisor, reports during inspection, historic contamination was found at PURs R2 unit 72N. The flooring consists of a diamond plate hatch cover leading to moat under equipment. By visual inspection the surface layer underneath the sub floor appears to be stained/discolored. The quantity released is unknown. This plant is known to have a concrete moat. The substance is unknown, however it is likely to be identified as dielectric fluid. The source of contamination is unknown. The cause of contamination is unknown. A station remediation plan will be prepared to determine the priority order for addressing this and

WEBSTER AVE PURS UNIT 72N (Continued) **S106000949**

other historic incidents as per SSO's letter to NYSDEC region II dated February 20, 2002. Housekeeping and maintenance activities, as required, will be documented. 23-MAY-2005 15:37 On May 26, 2004, Jacques Whitford and Allstate mobilized to the Webster Avenue P.U.R.S. to implement powerwashing and cleaning activities in P.U.R.S. 71N, 71S, 72N, and 72S. Each unit measures approximately 12 feet by 38 feet in dimensions. The units each consist of a steel floor set on a steel support structure, that is situated on concrete foundation walls which extend to the concrete foundation floor. The area below the steel floor is accessible through two hatchways covered by removable steel plates. In P.U.R.S. 71N, 71S, 72N, and 72S, the area below the steel floor was powerwashed using a non-citrus based cleaner. The concrete walls, steel support structures and pipes below the P.U.R.S. were powerwashed and the washwater was removed from the P.U.R.S. and containerized using a vacuum truck. Following the completion of work below the floor in the P.U.R.S. units, the surface of the steel floor plates and support beams were washed. In addition, several areas on the outside of the P.U.R.S. exhibited minor oil-staining. These areas were hand-washed using a non-citrus based cleaner. In general, the concrete foundations outside of the P.U.R.S. were stained in the areas below the compressor units and oil pumps. The bluestone and soil in place around the oil-stained areas of the foundations were evaluated and no impacts were observed. Excavations activities were not required around P.U.R.S. 71S, 72N and 72S. ~~~~~~~~~~~~~~~~~~ e2mis no 147089 (sub): 06-Feb-2003 14:00 hrs. Sr. Substation Operator M. McGroarty # 56376 reports finding ~ a total 1 ounce of dielectric fluid from various valves onto bluestone from Cooling Plant 72N while doing an inspection. In the process of wrapping the valves and will perform a cleanup when completed. 23-MAY-2005 15:54 The valves in question were still found to be leaking, and contained by C. Little during an inspection the week of 4/11. During this inspection the areas of previous impact were noted as being clean. The repairs require and outage. Maximo - 309786. ~~~~~~~~~~~~~~~~~~~ e2mis no 157964 (sub): 06-APR-2005 09:53 At 09:53 Environmental Specialist C. Little (96080) noted 4 spills of dielectric fluid to bluestone from a pressure gauge and valves on Precoolers # 1 and 2, associated with PURS 72N (R2). The total amount of dielectric fluid spilled was half a gallon. There was no smoke / fire or private property involved. No sewer or waterways were impacted by this spill. The leak rate is best described as a weep from the valve. Engineering controls have been installed to prevent further impact to the environment. Clean up is pending available resources. ~~~~~~~~~~~~~~~~~~~~~~~~ e2mis no 158963 (sub) 06-Jun-2005 09:35 SSO EH&S Sr. Spec. Craig Little 96080 discovered 1 gal of Non PCB dielectric fluid leaked from a outlet flange gasket on PURS 72 North to bluestone and concrete. No release to sewer or waters. Cleanup pending crew. ~~~~~~~~~~~~~~~~~~~~~~~~~~~~ e2mis no. 152973 (sub): 19-Apr.-2004 @ 11:36 hrs. Substation Operations EHS Rep. Craig Little, #81477 reports that 1 pint of dielectric fluid leaked from a flange onto concrete in the moat for fdr. R2. 10-SEP-2004 15:38 Clean up was conducted by All State Power Vacv as part of the DEC Consent Order requiring SSO to remediate PURS and Pumphouses. A report shall be submitted by Jaques Whitford detailing rhe clean-up. Reapirs are still pending. 6/21/10 - changed Lead DEC to JMOCONNE (JOC) 11/22/16 Austin This spill report is being transferred from Joe O Connell to Con Ed Unassigned - end 10/19/17 - Austin - Con Ed contained and cleaned up the spill in the following

WEBSTER AVE PURS UNIT 72N (Continued) **S106000949**

manner: 9-Sept-2005 - Jacques Whitford met Craig Little, and proceeded to hand dig to uncover bluestone and observe soil at locations around each of the 4 PURS Units (71S, 72S, 72N, 71N), to confirm presence or absence of contamination (visual, olfactory, staining, etc.) in either old bluestone (beneath newly placed bluestone), or subsurface soil beneath bluestone. Jacques Whitford excavated at 5 locations around each pump house, 3 on the East side(approximately 6 feet from each end, and at a central location approximately 18 feet from the North end (underneath the steel stairs/walkway, and near the aboveground piping), and 2 on the West side (approximately 10 feet from each end). There was more bluestone on the East side (typically at least 3 -4 , up to 12 or more) than on the West (typ. 2 -3). Jacques Whitford attempted to dig at least 12 in all locations (some soil was very hard, and could only get 8'-10 , in all but one case I was able to reach subsurface soil. In all cases there was no observation of impacts in the soil below the bluestone (no odor, no staining, appeared clean). See document files and the Second Quarter 2004 Remediation Summary Report... for further information - Spill closed - end "

WEBSTER AVE PURS (Continued) **S106010062**

while performing a routine inpection at the Webster Avenue PURS facility, in the Bronx, finding 1 pint of dielectric fluid leaked from a drain plug and a valve, valve V12, from PURS 72S and spilled onto bluestone. Mechanic on site to perform cleanup. Drain plug and valve to be wrapped to contain leak. Permenant repairs require equipment outage. 04-Aug-2005 14:30 Based on comments from the NYSDEC in the May 27, 2005 2nd Quarter Summary Report letter, the following UPDATES were requested. On May 26, 2004, Jacques Whitford and Allstate mobilized to the Webster Avenue PURS to implement power-washing and cleaning activities in PURS 72S. The area below the steel floor was power-washed using a non-citrus based cleaner. The concrete walls, steel support structures and pipes below the PURS were power-washed and the wash-water was removed from the PURS and containerized using a vacuum truck. The surface of the steel floor plates and support beams were then washed. The bluestone and soil in place around the oil-stained areas of the foundations were evaluated and no impacts were observed. Therefore, excavation activities and sampling were not required. ~~~~~~~~~~~~~~~~~~~~~~ e2mis no 157963 (sub) 06-APR-2005 09:52 At 09:52 Environmental Specialist C. Little (96080) noted 2 spill of dielectric fluid from valves on Precooler # 3, associated with PURS 72S (R3). The total amount of dielectric fluid spilled was 6 oz. to bluestone There was no smoke / fire or private property involved. No sewer or waterways were impacted by this spill. The leak rate is best described as a weep from the valve. Engineering controls have been installed to prevent further impact to the environment. Clean up is pending available resources. 6/21/10 - changed Lead DEC to JMOCONNE (JOC) 11/22/16 Austin This spill report is being transferred from Joe O Connell to Con Ed Unassigned - end"

DEC Memo:	"e2mis no. 141-229: 6-Feb-2002 @11:20 Sub-Station Operating supervisor T. Whipple # 81477 reports multiple cable oil leaks from Valve# 6, 11 and Inlet /Outlet flanges. Cleanup in progress. Cable oil spilled on bluestone and concrete. 19-JUN-2002. Dave Mocera, Supervisor, reports during inspection, historic contamination was found at PURs R1 unit 71N. The flooring consists of a diamond plate hatch cover leading to moat under equipment. By visual inspection the surface layer underneath the sub floor appears to be stained/discolored. The quantity released is unknown. This plant is known to have a concrete moat. The substance is unknown, however it is likely to be identified as dielectric fluid. The source of contamination is unknown. The cause of contamination is unknown. A station remediation plan will be prepared to determine the priority order for addressing this and other historic incidents as per SSO's letter to NYSDEC region II dated February 20, 2002. Housekeeping and maintenance activities, as required, will be documented. 23-MAY-2005 15:35 On May 26, 2004, Jacques Whitford and Allstate mobilized to the Webster Avenue P.U.R.S. to implement powerwashing and cleaning activities in P.U.R.S. 71N. Unit measures approximately 12 feet by 38 feet in dimensions. The unit consists of a steel floor set on a steel support structure, that is situated on concrete foundation walls which extend to the concrete foundation floor. The area below the steel floor is accessible through two hatchways covered by removable steel plates. In P.U.R.S. 71N, the area below the steel floor was powerwashed using a non-citrus based cleaner. The concrete walls, steel support structures and pipes below the P.U.R.S. were powerwashed and the washwater was removed from the P.U.R.S. and containerized using a vacuum truck. Following the completion of work below the floor in the P.U.R.S. units, the surface of the steel floor plates and support beams were washed. In addition, several areas on the outside of the P.U.R.S. exhibited minor oil-staining. These areas were hand-washed using a non-citrus based cleaner. In general, the concrete foundations outside of the P.U.R.S. were stained in the areas below the compressor units and oil pumps. The bluestone and soil in place around the oil-stained areas of the foundations were evaluated and no impacts were observed. ~~~~~~~~~~~~~~~~~~~~~~ e2mis no 157965 (SSO spill consolidation program) 06-APR-2005 09:53 At 09:53 Environmental Specialist C. Little (96080) noted 3 spills of dielectric fluid to bluestone from valves on Precoolers # 1 and 3,

WEBSTER AVE PURS (Continued) **S106010062**

associated with PURS 71N (R1). The total amount of dielectric fluid spilled was one pint. The leak rate is best described as a weep from the valve. Engineering controls have been installed to prevent further impact to the environment. Clean up is pending available resources. 6/21/10 - changed Lead DEC to JMOCONNE (JOC) 11/22/16 Austin This spill report is being transferred from Joe O Connell to Con Ed Unassigned - end 10/19/17 - Austin - On 5/28/04, Con Ed contractor went into the area of PURS 71N to excavate the contaminated soil around the oil pre-coolers - Con Ed removed the visibly contaminated soils and then took post ex samples to determine if they had met DEC guidelines for cleanup - The results showed that the samples were all below 10,000 ppm TPH, so no further work was needed - See document files for further information - Spill closed - end"

DEC Memo: "See spill # 0206588 for spill repair information. (JHO)
~~~~~~~~~~~~~~~~~~~~~~~~~~ Con Ed e2mis #141237 06 Feb 2002 12:15
Substation Operating Supervisor T. Whipple reports multiple cable oil leaks from valve 12, Inlet and Outlet flange, foundation tube and Bleeder plug on to bluestone and concrete. No fire, smoke or private property was or is affected. No sewers or waterways involved. ERT. S. Mahoney and DEC Jane O'Connell consulted on multiple entry. Cleanup in progress. 19-JUN-2002. Dave Mocera, Supervisor, reports during inspection, historic contamination was found at PURs R4 unit 71S. The flooring consists of a diamond plate hatch cover leading to moat under equipment. By visual inspection the surface layer underneath the sub floor appears to be stained/discolored. The quantity released is unknown. This plant is known to have a concrete moat. The substance is unknown, however it is likely to be identified as dielectric fluid. The source of contamination is unknown. The cause of contamination is unknown. A station remediation plan will be prepared to determine the priority order for addressing this and other historic incidents as per SSO's letter to NYSDEC region II dated February 20, 2002. Housekeeping and maintenance activities, as required, will be documented. On May 26, 2004, Jacques Whitford and Allstate mobilized to the Webster Avenue P.U.R.S. to implement powerwashing and cleaning activities in P.U.R.S. 71N, 71S, 72N, and 72S (Figure 1). Each unit measures approximately 12 feet by 38 feet in dimensions. The units each consist of a steel floor set on a steel support structure, that is situated on concrete foundation walls which extend to the concrete foundation floor. The area below the steel floor is accessible through two hatchways covered by removable steel plates. In P.U.R.S. 71N, 71S, 72N, and 72S, the area below the steel floor was powerwashed using a non-citrus based cleaner. The concrete walls, steel support structures and pipes below the P.U.R.S. were powerwashed and the washwater was removed from the P.U.R.S. and containerized using a vacuum truck. Following the completion of work below the floor in the P.U.R.S. units, the surface of the steel floor plates and support beams were washed. In addition, several areas on the outside of the P.U.R.S. exhibited minor oil-staining. These areas were hand-washed using a non-citrus based cleaner. In general, the concrete foundations outside of the P.U.R.S. were stained in the areas below the compressor units and oil pumps. The bluestone and soil in place around the oil-stained areas of the foundations were evaluated and no impacts were observed. Excavations activities were not required around P.U.R.S. 71S, 72N and 72S. 6/21/10 - changed Lead DEC to JMOCONNE (JOC) 11/22/16 Austin This spill report is being transferred from Joe O Connell to Con Ed Unassigned - end 10/19/17 - Austin - Con Ed contained and cleaned up the contamination, as described above - See document files and the Second Quarter 2004 Remediation Summary Report... for further information - See also spill #0206588 for information regarding subsequent spills at this location - Spill closed - end "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ 5/24/05: Reviewed excavation report and sampling results presented in 2Q 2004 Remediation Summary Report - area around unit 71N pre-coolers has been adequately remediated. Close out. (JHO) ~~~~~~~~~~~~~~~~~~~~~~~~~~~~ E2MIS NOTES 146370 14-DEC-2002 09:36 Substation Sr. Specialist T. Whipple 81477 reports finding 1/2 pint of Non-PCB dielectric fluid leaked from filter associated with Webster Ave PURS 71 North onto soil. Repairs and cleanup in progress. 23-MAY-2005 15:49 On May 28, 2004, Jacques Whitford and Allstate mobilized to the Webster Avenue P.U.R.S. to implement excavation activities around the oil precoolers adjacent to P.U.R.S. 71N. Excavation activities were carried out as part of clean-up efforts related to a release of dielectric fluid at the Site that occurred on October 22, 2002 (E2MIS Report No. 145666) [See spill # 0207550 - JHO]. An estimated 4,650 gallons of dielectric fluid was released from the oil precoolers adjacent to P.U.R.S. 71N. Following the

WEBSTER AVE PURS (Continued) **S106010062**

discovery of the release, Con Edison immediately implemented clean-up efforts, consisting of excavating oil impacted bluestone/ soil, and oil recovery activities at the Site. After the initial clean-up efforts, Con Edison completed additional excavation of oil impacted bluestone/soil in the area adjacent to the oil precoolers in December 2003. Post excavation samples were collected on December 23, 2003, and analyzed for TPH-DF. Following a review of the analytical results of the samples collected, it was determined by Con Edison and the NYSDEC that additional excavation activities were required around five (5) sample locations (N9, N11, N13, N17, and N19). Jacques Whitford provided oversight of the excavation activities around the five (5) locations. Oil impacted soil was removed using a vacuum truck connected to a soil dumpster. Areas of the greatest oil-impacted material were concentrated primarily around the concrete foundation of oil precoolers. Excavation activities around sample locations N9, N11, N13, N17, and N19 continued until no visual evidence of oil-impacts was observed. The excavations around sample locations N9, N11, and N13 each measured less than 10 square feet in dimensions and were advanced to a depth of approximately 1.5 feet below ground surface (ft bgs). The excavation around sample locations N17 and N19 measured approximately fifteen feet by four feet in dimension and advanced to a final depth of four ft bgs, at which depth excavation activities were halted due to structural concerns. A total of approximately 10 cubic yards of bluestone was removed from the areas around sample locations N9, N11, N13, N17, and N19. A total of five (5) post excavation grab soil samples were collected from within the excavations at the Webster Avenue P.U.R.S. on May 28, 2004. Soil sample locations were chosen to correlate with the sample locations associated with the December 23, 2003 sampling event. The soil samples collected were submitted to ChemLab for chemical analysis of PCBs by Method 8082, TPH-DF by modified Method 8100, and TCLP Benzene by Method 8021. PCB data from samples were non-detect (ND) for all Aroclors analyzed. TCLP Benzene data from the samples collected were also ND. Analytical results for TPH-DF showed detectable concentrations of Total Hydrocarbons (THC), Petroleum Contaminants, and Feeder 51/52 Oil. Analytical results for THC ranged from 138 parts per million (ppm) in Sample RN-17 to 5,540 ppm in Sample RN-9. Analytical results for Petroleum Contaminants ranged from ND to 942 ppm in Sample RN-13. Analytical results for Feeder 51/52 Oil ranged from ND to 5,540 ppm in Sample RN-9. [See 2Q 2004 Remediation Summary Report for tables and figures. - JHO] Following receipt of NYSDEC approval, Allstate completed backfilling activities in the excavations adjacent to P.U.R.S. 71N. The excavations were backfilled with clean bluestone up to the original grade. FYI - the filter unit has been removed from the site and therefore no repairs are necessary."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY [Initial incident report was 145664, entered fro Rainey Substation where pressure drop was noted. Leak found at Webster Ave. PURS, and entered as incident no 145666. - JHO] 10/21/02: Leak location found at Webster Ave PURS. About 1000 gallons spiled. Contactor is Clean Venture, and will be there in 2 hours. (JZ - off-hours duty officer) 10/22/02: Met with Tom Whipple, Stu Hannebuth at Wester Ave PURS. Contractor Clean Venture on site. 2 areas impacted: pre-cooler for Fdr. 71N & 71S. Rupture disk failed as it was designed to do when too much pressure applied to line. OIl is mostly contained to bluestone-covered concrete area. Some sections of soil affected. Hanebuth reports that discrepancy in tank reading says 5000 gallons. However, only 800 gallons has been pumped to vac truck, and they estimate 1000 gallons total released. They will not be sure of estimate until they can re-pressurize the system. It is possible that there is another leak on feeder at another location. (KMF) 10/25/02: e-mail from T. Whipple to K. Foley: Please find attached an updated revision to the 10/21 spill at the Webster Ave PURS. We have finalized the spill quantity - it looks like the final number is 4560 gallons. The contamination on the south unit was more extensive that we thought - it appears the oil tracked through the area under the pre-cooler. We are making pretty good progress on the cleanup - we

WEBSTER AVE PURS (Continued) **S106008593**

will probably be done some time next week. I will be sure to let you know so you can come out and look. 11/14/02: Met with Tom Whipple (Bx/West SSO EH&S). Agreed on sampling grid for TPH analysis. (KMF) 10/21/03: facility inspected by Sam Arakhan. He notes the following: Pre-Cooler 71S - This unit was the location of a 5,000-gallon dielectric oil spill in October 2002. A contractor, Allstate Power Vac, was scheduled to be on-site on October 23 to remove additional contaminated soil from under the unit. Pre-Cooler 71N - This unit was another location of the 5,000-gallon dielectric oil spill in October 2002. A contractor, Allstate Power Vac, was scheduled to be on-site on October 23 to remove additional contaminated soil from under the unit. There were visible areas of contamination. The unit had a Maximo tag for valve V-101 which was leaking and was provided with an absorbent pad. This information was sent to Joe Susco (Con Ed SSO) for response. (SKA) 11/14/03: E-mail from Joe Susco to Sam Arakhan: Regarding work associated with PURs 71S and 71N pre-coolers, AllState Power Vac mobilized on 10/23 and cleaned all visibly contaminated area on 10/23 and 10/24. We will schedule the Chem Lab in the next week or so to take post excavation samples in those areas that were cleaned. We will submit the results of these samples to you when they have been received. 1/9/04: e-mail from Susco to Arakhan: Sam, to confirm our conversation of yesterday regarding Webster Ave PURS. Soil was removed from around precoolers of feeders 71 South and 71 North and 15 post-excavation samples were taken in December. Five (5) of the 15 came back greater than 10,000 ppm for TPH. One of these 5 samples was from near Feeder 71 South and was at a concentration of 16,000 ppm. You agreed to allow us to backfill the entire area around feeder 71 South. Regarding 71 North, the TPH concentration range for the four samples that exceeded 10,000 ppm was 11,000 ppm to 45,000 ppm. We will remove additional soil in these areas when the weather conditions allow for soil excavation. 6/7/04: Results of post-remediation soil sampling submitted. All results <10,000 ppm TPH. OK to backfill. (SKA) ~~~~~~~~~~~~~~~~~~ Con Ed e2mis #145666: 21-October-2002 22:58 Hrs FIRST REPORTED IN RAINEY SITE AS e@MIS INCIDENT No. 145664. as follows: AT 2020 HRS 10-21-02 P. BILARDELLO # 74834 SHIFT MGR REPORTS HI- FDR.71 IN RAINEY SUB STA OA 1935 HRS. UNKNOWN AMOUNT OF OIL LEAKED AT UNKNOWN LOCATION AT THIS TIME. THEY WILL CALL BACK WHEN THEY FINE THE AMOUNT AND LOCATION OF LEAK ON THE HI-FEEDER. 21-October-2002 23:00 Hrs. Senior Substation Operator Michael T. Mcgroarty, No. 56376, reported at 22:40 hrs. that at 22:10 hrs. while performing an inspection of the Webster Avenue PURS, located at 3230 Webster Avenue, Bronx, NY, finding approximately 400 gallons of dielectric fluid spilled to bluestone (soil) from a failed rupture disk on manifold on the precooler for Feeder 71 North and Feeder 71 South. Manifold has been valved off and isolated and leak has been stopped. Crews are applying absorbent pads and booms to contain the spill. 10/22/02 - Update to initial entry. A total of 10 rupture discs blew due to a pressure event on the feeder and several safety valves did not re-set, causing oil to be discharged to bluestone around both the North and South pre-cooler units. The affected areas all appear to be approximately 6 of bluestone on top of concrete. A total of approximately 1000 s.f. of area is affected. The oil release is currently being estimated at at least 1000 gallons. This quantity may be increased when tank levels are checked and calculations done on the level readings that are obtained. Clean Venture has been on site throughout the night. Approx. 800 gallons of free liquid has been recovered so far. Approximately 300 s.f. of

WEBSTER AVE PURS (Continued) **S106008593**

bluestone has been taken up. 10/25/02 - Tank level readings, USI data and flow meter reading have all been reviewed and new spill quantity is being updated to 4650 gallons. Contamination in South pre-cooler area greater than initially expected--oil flowed beneath the bluestone and contaminated most of the area beneath the South pre-cooler. Approximately 80 yards of oily bluestone have been removed to date, as well as 800 gallons of free liquid. Cleanup is still in progress with Clean Venture on site. All bluestone beneath pre-coolers (on top of concrete pad) has been removed. Soil/bluestone in adjacent areas has also been removed--there are still some areas on visual contamination to be addressed. Concrete pad to be power washed when bluestone removal is complete. Free liquids are no longer being encountered in any areas within the yard. DEC (Kerry Foley) on site 10/22. Reviewed spill and cleanup plan at that time. DEC requested notification when cleanup is complete to perform a follow up visit to ensure cleanup is sufficient. 20-APR-2005 08:40 All State Power Vac completed the remediation and was brought back in to take care of a few hot spots. The following is an email regarding a communication between S. Arakhan (NYSDEC) and J. Susco- -----Original Message----- From: Susco, Joseph Sent: Friday, January 09, 2004 11:52 AM To: 'Sam Arakhan' Subject: Webster Av SS Inspection Sam, to confirm our conversation of yesterday regarding Webster Ave Purs. Soil was removed from around the precoolers of feeders 71 South and 71 North and 15 post excavation samples were taken in December. Five (5) of the 15 came back greater than 10,000 ppm for TPH. One of these 5 samples was from near Feeder 71 south and was at a concentration of about 16,000 ppm. You agreed to allow us to backfill the entire area around Feeder 71 South. Regarding 71 North, the TPH concentration range for the four samples that exceeded 10,000 ppm was 11,000 ppm to 45,000 ppm. We will remove additional soil in these areas when the weather conditions allow for soil excavation. C. Litlte 96080
==========
20-APR-2005 16:17 The following information is from a report by Jaques Whitford SECOND QUARTER 2004 REMEDIATION SUMMARY REPORTfor the PUMP HOUSE/P.U.R.S. LOCATIONS WESTCHESTER, BRONX AND QUEENS, NEW YORK 2.2 WEBSTER AVENUE P.U.R.S., BRONX, NEW YORK 2.2.2 Excavation Activities On May 28, 2004, Jacques Whitford and Allstate mobilized to the Webster Avenue P.U.R.S. to implement excavation activities around the oil precoolers adjacent to P.U.R.S. 71N (Figure 2). Excavation activities were carried out as part of clean-up efforts related to a release of dielectric fluid at the Site that occurred on October 22, 2002 (E2MIS Report No. 145666). An estimated 4,650 gallons of dielectric fluid was released from the oil precoolers adjacent to P.U.R.S. 71N. Following the discovery of the release, Con Edison immediately implemented clean-up efforts, consisting of excavating oil impacted bluestone/soil, and oil recovery activities at the Site. After the initial clean-up efforts, Con Edison completed additional excavation of oil impacted bluestone/soil in the area adjacent to the oil precoolers in December 2003. Post excavation samples were collected on December 23, 2003, and analyzed for TPH-DF. Jacques Whitford was not present on-site during these activities. Following a review of the analytical results of the samples collected, it was determined by Con Edison and the NYSDEC that additional excavation activities were required around five (5) sample locations (N9, N11, N13, N17, and N19). Jacques Whitford provided oversight of the excavation activities around the five (5) locations (Figure 3). Oil impacted soil was removed using a vacuum truck

WEBSTER AVE PURS (Continued) **S106008593**

connected to a soil dumpster. Areas of the greatest oil-impacted material were concentrated primarily around the concrete foundation of oil precoolers. Excavation activities around sample locations N9, N11, N13, N17, and N19 continued until no visual evidence of oil-impacts was observed. The excavations around sample locations N9, N11, and N13 each measured less than 10 square feet in dimensions and were advanced to a depth of approximately 1.5 feet below ground surface (ft bgs). The excavation around sample locations N17 and N19 measured approximately fifteen feet by four feet in dimension and advanced to a final depth of four ft bgs, at which depth excavation activities were halted due to structural concerns. A Con Edison EI was on-site during excavation activities to make decisions regarding excavation areas and depths. A total of approximately 10 cubic yards of bluestone was removed from the areas around sample locations N9, N11, N13, N17, and N19. Excavation activities were completed on May 2, 2004. A total of five (5) post excavation samples were collected. The sampling procedure and analytical results are provided below. 2.2.3 Post Excavation Sampling A total of five (5) post excavation grab soil samples were collected from within the excavations at the Webster Avenue P.U.R.S. on May 28, 2004. Soil sample locations were chosen to correlate with the sample locations associated with the December 23, 2003 sampling event. Soil sampling areas are shown on Figure 2. The soil samples collected were submitted to ChemLab for chemical analysis of PCBs by Method 8082, TPH-DF by modified Method 8100, and TCLP Benzene by Method 8021. 2.2.4 Post Excavation Sampling Analytical Results PCB data from samples collected on May 28, 2004 were non-detect (ND) for all Aroclors analyzed. TCLP Benzene data from the samples collected were also ND. Analytical results for TPH-DF showed detectable concentrations of Total Hydrocarbons (THC), Petroleum Contaminants, and Feeder 51/52 Oil. Analytical results for THC ranged from 138 parts per million (ppm) in Sample RN-17 to 5,540 ppm in Sample RN-9. Analytical results for Petroleum Contaminants ranged from ND to 942 ppm in Sample RN-13. Analytical results for Feeder 51/52 Oil ranged from ND to 5,540 ppm in Sample RN-9. The analytical results for samples collected at the Webster Avenue P.U.R.S. are shown on Table 1. The sampling areas are illustrated on Figure 3. Con Edison has updated E2MIS Report No. 145666 to include details of the additional excavation activities at the Site and the post excavation sample analytical results. Clean-up efforts related to the October 22, 2002, dielectric fluid release have been completed and Con Edison recommends that the NYSDEC spill file be updated and closed. (Repairs to ruptured discs?) 21-JUL-2005 16:51 Based on a follow up insepction by C. Litlte on 6/6/05, the unit is operational and there were no leaks noted on the rupture disks. Based on this inspection the repairs were made, but there is no evidence of a workorder. C. Litlte 96080 23-AUG-2005 16:34 Respons to DEC return - Based on workorders 183104 and 183711 the repairs to the rupture discs occurred on 10/30/02. C. Little 96080"

Remarks: "FEEDER FAULT / FEEDER LINE BETWEEN TWO SUBSTATIONS. UNKNOWN IF A LEAK HAS OCCURED. "

Tank Info:

Tank Number:	001
Tank Id:	24106
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

3525 DECATUR AVE (Continued) **U003392200**

Equipment Records:
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
L00 - Piping Leak Detection - None
B00 - Tank External Protection - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
K00 - Spill Prevention - None
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None

Tank Location: Partially buried tank (tank with 10% or more below ground).... Tank is less than 90% above grade, partially buried.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/01/1931
Capacity Gallons: 5000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: 10/11/2016
Date Tank Closed: Not reported
Register: True
Modified By: MXLAY
Last Modified: 04/14/2017
Material Name: #4 fuel oil (on-site consumption)

Tank Number: 001
Tank Id: 56160
Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:
B00 - Tank External Protection - None
F00 - Pipe External Protection - None
C01 - Pipe Location - Aboveground
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
J02 - Dispenser - Suction Dispenser
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
I05 - Overfill - Vent Whistle

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Tank Converted to Non-Regulated Use
Pipe Model: Not reported
Install Date: Not reported
Capacity Gallons: 5000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY On July 13, Con Ed monitor (Foley) responded to spill #0203887 at E. Gunhill Rd and Webster Ave in the Bronx. Spills staff(Krimgold, Zhao) were also on site. A 48 water main broke causing Con Ed's feeder 71 to leak dielectric fluid. Feeder 71 runs from Dunwoodie Substation to Rainey Substation. Sand was used to contain the oil on the street and booms were placed around the catch basins. Clean Harbors placed soft booms at the outfall and downstream. Two catch basins at the bottom of the southbound Bronx River Parkway exit ramp were identified to have been impacted by oily water. Miller Environmental was instructed to clean these out. At 1400hrs, DEP was reducing the pressure of the water main while tanker trucks continued to pump out the excavation. USCG was on scene, walked the Bronx River and were satisfied with progress. DEP welded a repair onto the water main and stopped the water leak. Con Ed was able to install a temporary clamp to the feeder and later a permanent barrel repair which stopped the leak. Media coverage included CBS, Bronx News 12, ABC, UPN, and NBC. Clean Harbors continued to clean the streets with speedi-dry. Foley and Zhao left location at 1700hrs leaving Krimgold on-site. Tim Demeo also responded. Amount of oil lost is estimated as 6,600gal. (KMF) On July 14, Foley received an update from Miller Environmental that two catch basins were cleaned out and Krimgold approved cleaning. Miller Environmental continued to clean sidewalks and streets with speedy-dry. Foley reviewed a drawing of the intersection which identified all possible structures which may have been affected. Clean Harbors was to identify all affected structures and clean them out. Multiple soft boom locations remained on the Bronx River with a sheen still appearing to migrate downstream. At 1200hrs, Foley responded to the Bronx New York Botanical Gardens(NYBG) (spill #0203905). Oily residue was collecting downstream of the leak site at the NYBG and the Bronx Zoo. Miller Environmental deployed 18 hard boom and soft booms at the NYBG and the Bronx Zoo. Hard booms were also deployed at two locations upstream, Gunhill Rd and Allerton Ave. (KMF) On July 15, Tri-State Bird Rescue arrived to assess any affected birds. Nine geese and one

EAST GUNHILL RD/WEBSTER (Continued) **S106005565**

mallard were captured and taken to Delaware for monitoring. At 1900hrs, Miller Environmental repositioned the booms so crews could easily and quickly collect the oil. Con Ed updated the amount of oil lost as 16,000gal. (KMF) On July 16, Miller Environmental brought out more supervisors and generated an Incident Action Plan (IAP) which was distributed at approx 1200hrs. Con Ed monitors (O'Connell, Foley, Rodriguez) were on-site. The IAP included a shoreline assessment in which Miller Env. crews would identify and clean pockets of oil along the shoreline. Five crews were stationed to change out absorbents, wick away oil and monitor the hard boom. Tri-state bird rescue collected 1 mallard, 1 Canada goose and 1 pigeon. Locating the outfall is the priority. (KMF) On July 17, Miller Environmental continued to monitor the boom locations. An as-built drawing was located and more receptors have been identified as oily. DOT permit was issued to shut down part of Bronx River Parkway from 11pm-5am and 10am-3pm tomorrow. Four of twelve affected receptors were cleaned out overnight. (KMF) On July 18, Miller Environmental continues to monitor boom locations. Con Ed hired AllState Power-Vac and Clean Harbors to provide tanker and vactor services for catch basin cleaning. Three additional catch basins have been identified as possibly containing oily water. Contractors continues to pump out oil from catch basins until DOT permit allows. Con Ed monitor (Rodriguez) on-site at 1300hrs. (KMF) On July 19, 2002, staff responded to location and discussed clean out of affected catch basins along the Bronx River Parkway with Con Ed and their contractors. 15,000-gal of oily water was pumped out from catch basin closest to the outfall. (KMF) On July 22, 2002, staff responded to location to oversee cleanup. All catch basins were cleaned out and power washed on July 20th. Booms remain in place. Requested placement of absorbent boom across outfall location as precaution during expected rainfall. Con Ed contractor to remain on-site to monitor outfall and booms during rain event. New product sheen devil attempted but also ineffective in collecting sheen. One affected mallard was brought to the Bronx Zoo by Con Ed's contractor. (KMF) On July 24, 2002, staff met with Bronx River Alliance representative and discussed cleanup. Bronx River Alliance requested that more booms be deployed at other locations downstream. River Park at 180th St. and the abandoned cement plant near Starlight Park were suggested locations. Con Ed contractor will deploy additional boom at 180th River Park location. (KMF) On July 29, 2002, staff directed Con Ed to remove all booms. Also directed deployment of absorbant booms at front and back of hard trash boom (maintained by DEP) at the abandoned cement plant located at 177th St. Notified Bronx Zoo, New York Botanical Garden, and Bronx River Alliance of situation. Boom to remain in place until DEC approves removal. (KMF) 8/2/02 1750hrs Update from ERT Bernard Pierre that amount lost during Gun Hill Rd was calculated as 23,425 gallons and amount lost during Dunwoodie leak was 10,342 gallons. (KMF) 8/7/02 Inspected boom location at 177th St. Asked Leon Paretsky to have Miller Environmental clean out trash and any residual oil. Also requested that the absorbant booms be changed out and maintained thereafter. (KMF) 8/13/02 Update from Leon Paretsky: MEG inspected the boom at The Bronx River 8/12/02 and replaced it 8/13/02. Isn't much, if any, oil in the boom. It is saturated with water and contaminated with garbage. There is a light sheen, but it could be from something other than our project. (KMF) Update: Oil ID returned as dielectric fluid. 8/22/02 Foley and O'Connell inspected excavation at intersection of Gunhill Rd. and Webster Ave. Directed Con Ed S&TO

EAST GUNHILL RD/WEBSTER (Continued) **S106005565**

(Gerry Materazo) to contact Clean Harbors to remove puddle of free product. S&TO expressed concern about undermining old 48 water main if any additional excavation work was done. Con Ed will contact drilling contractor to install monitoring well at intersection while they still have a DOT permit. Con Ed to take samples after Clean Harbors removes free product. Will discuss locations of additional monitoring wells at a later date. (KMF) 8/23/02 Clean Harbors on site removing addtional soil (approx 12). Chem Lab is coming today to take samples to be analyzed for TCLP benzene and TPH via modified EPA method 8100. Foley discussed sampling locations with Joe O'Connell of Transmission Operations. (KMF) 8/29/02 Article published in Norwood News regarding spill. Article incorrectly indicates that 16,500 gallons of oil reached the river. However, article does indicate that local river advocates are satisfied with the clean up. 9/9/02 Requested update from Leon Paretsky on Miller Environmental(MEG) cleanup of Bronx River. Said he would send me an email. Also will taken another oil ID sample at collection point. (KMF) 9/9/02 Email message received from Leon Paretsky of S&TO, Con Ed: MEG has inspected the sorbent boom out at the Bronx River location on Tuesday 9/3/02 and then again on Thursday 9/5/02. It was replaced Friday 9/6/02. The sorbent was waterlogged and dirty from garbage in the river. It also had some oil on it, but he states that the oil is just from the sheens in the river itself and not from the Bronx River site. We will be out there to inspect the boom again on Monday. MEG has swapped out the sorbent boom at the Bronx River again on Friday 8/23/02. We will inspect it again on Monday 8/26/02. (KMF) 9/30/02 Spoke with Brian Aucoin, Bronx River Alliance. He wanted an estimate of how much oil got into the river. Told him that it was in the range of 50 to 500 gallsons, but was bot sure due to the 23,000+ gallon release, the amount recovered and the amount remianing in the ground. Also mentioned article in Norwood News from Aug. 29 was inaccurate. He mentioned that they have had meetings regarding this spill with Gail McMillan of Con Ed Public Affairs. Also he mentioned that Dan Westphal (Moshulu Preservation Committee?) was concerned. He said they still see oil on river during kayaking trips. He requested that when I receive any information on ID sample from last week that I contact him. (KMF) 10/9/02 E-mail to Leon Paretsky: Leon - I received an e-mail from Brian Aucoin of Bronx River Alliance asking if another hydrocarbon scan of any other samples were going to be taken to determine what levels are still reamining in the river. Can you please arrange to take a TPH sample via modified EPA Method 8100 for dielectric fluid when the oil ID sample is taken? This would at least tell us a concentration at the collection point. (KMF) 10/10/02 Met with G. Materazo. Plans to dig test pits tomorrow to determine if MWs can go in. He will contact Jacques Whitford to drill. Will install wells next week. (KMF) 10/23/02 E-mail from Leon Paretsky: Kerry: Here are the results from Friday's (Oct. 18) sampling at the Bronx River boom. In all instances there was insufficient sample to perform an oil analysis. As you may recall, we attempted to schedule the event after a rain. Here are the precipitation records from October. As you can see, there was heavy rain earlier that week. LEft message with Brioan Aucoin - told him that I had forwarded the above results to him and was directing Con Ed to pull the boom. (KMF) 11/27/02 Phone call from G. Materazo. Indicated Jacques Whitford would be installing wells on 12/3/02. (KMF) 1/3/03 E-mail to John Tranchina: John - Could you please send me an update on the status of the wells at this location. Last we spoke about this, they were to be developed

EAST GUNHILL RD/WEBSTER (Continued) **S106005565**

on Dec. 11 and sampled thereafter. Have they been checked for free product? Will there be a report including well construction diagrams and sample results. If so, is there a time frame for its submittal? (KMF) Reply from Tranchina: We have set Monday 1/6 for the first samples to be taken. A complete report will be given. (KMF) 7/16/03 Received copy of JWC report (which is dated March 7, 2003) on well installation and monitoring. The report discusses results of soil sampling conducted by Con Ed in the excavation prior to installation of the monitorings wells, but no copies of or tabulated results. Two samples collected formt he borings for the wells showed either low concentrations of TPH (20.3 ppm) or non-detect. (JHO) 8/25/03 Received copy of JWC letter report (dated July 23, 2003) summarizinf gauging data for wells. Between well installation date (12/02) and 7/03, no product has been noted in either well. (JHO) 9/7/04 Sent e-mail to Mike Pillig, S&TO: Mike - I have reviewed our file for this site, including the 2 reports prepared by Jacques Whitford Corp. for the monitoring wells. I am missing some crucial data, specifically I don't have any record of the post-excavation soil samples that were taken prior to the installation of the monitoring wells. Please track the soil results down and send them to me when you get a chance. 4/28/05 Meeting with Mike Pillig on various feeder leaks. They cannot find any records of the soil sampling results. (JHO) 5/6/05 E-mail from Mike Pillig: To follow up our meeting on 4/28/05 here is an update on a spill that you inquired about. As we discussed, I have no post excavation sample results. The only information I have is that after the first set of post ex samples were taken, the decision was made to install monitoring wells based on those results. The attached e2mis report includes a summary report from Jacques Whitford. The well gauging events showed no measurable product. Their report also recommended the wells be abandoned. I also attached an email from JW that indicates J. Tranchina received the approval to stop the gauging in December of 2003. I have a call into JW to request the gauging info conducted through December of 2003. Hopefully we'll be able to close this one. Attached e-mail from Chad Pheiffer of JWC to his staff dated 12-19-03 states: John [Tranchina] called today and has gotten approval from Jane [O'Connell] to stop the gauging at Webster Ave. He'll need a final report for the site, including everything that was done through December 2003. Replied to Pillig: Mike - get the gauging data for July through December 2003 to me and I'll review for closure. (JHO) 2/31/05: Gauging data for Aug. 2003 through Dec. 2003 submitted - no product observed in either well. Based on gauging data, spill is closed. Wells to be removed/permanently closed. (JHO) ~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~ e2mis no. 143-928: 13-Jul-2002 06:45 Hrs Troubleshooter High Voltage Calvin M Brown #19532 reports at 05:50 Hrs a major release of oil of unknown quantity at the intersection of Webster Avenue and Gunhill Road in the Bronx which is impacting sewers, city streets, and the adjacent Bronx River Parkway. ERT Mike Kessler conference called into telephone call. NYFD is on location and started apply sand to dike oil at 05:15 Hs. UPDATE: John Gaughan on site and reports that oil and possibly water is coming out of the asphalt roadway on the North side of Gun Hill road in the middle Webster Ave. Webster Ave, Gun Hill Road and entrance ramp and exit ramp to Bronx River Parkway are closed. TO crew diverted from restoration of 38W02 to leak. Crews sent to respond to leak and to close valves in Clean out manhole or diffusion chamber. Safeway notified to respond to excavate. 06:24 Hrs. Bx/W Flush Truck on location and pumping oil and water out of storm drain. 08:24 Hrs. ERG

EAST GUNHILL RD/WEBSTER (Continued) **S106005565**

James Clarke reports NYFD Hazmat team bermed areas to prevent oily water from Bronx River Parkway and catch basins. Estimate 30,000 to 40,000 gallons of oily water involved. All 3 Bx/W Flush Trucks filled. Flush crews being transported to Queens to pickup Bk/Qu Flush Trucks. One Clean Harbors tanker on location. Incident appears to be caused by NYCDEP water main break. MCUT assumes White Hat position. 09:00 Hrs. ERG James Clarke confirms oil has entered Bronx River. Miller Environmental has been dispatched. 09:30 Hrs. Clean Harbors reports 7-frac tanks on route to location. 09:32 Hrs. S&TO EHS Manager L.Paretsky reports Clean Harbors is apply pads and boom to Bronx River. 09:41 Hrs. ERT David Duke requests Bx/W ECC EHS Desk fax MSDS for dielectric fluid to NYPD and Metro North Railroad. 10:13 Hrs. Lab results: Lab Sequence Number: 02-06480-001 Total PCB < 1.0 ppm Lab Sequence Number: 02-06484-001 Benzene 5.98 ppm Charlie Carrillo (TO superviosr on site) reports that at 15:45 temp clamp was on and holding. SSO and CSD notified. CNS notification to be sent. 48 water main under feeder pipe leaked and sandblasted hole in bottom of 10 feeder pipe. Feeder pipe is adjacent to water main. Feeder pipe will have to be excavted farther back to lift pipe for repair. 13-July-2002 17:32 Hrs. The following clean up vendors are on site: Clean Harbors, Clean Ventures and Allstate are concentrating on the land cleanup and Miller Environmental is concentrating on the clean up of the Bronx River. Danella is the excavation contractor. ETi is X-raying the leak location to see if there any indication of the fault at the same spot. USCG reps Estelle and Prince were also on site. They were satisfied with the cleanup progress and gave Leon Paretsky a Notice of Interest . 13-JUL-2002 22:52 S&TO EHS Manager Leon C. Paretsky, #44096, reports that contractors are power washing a 6' X100' area of the concrete sidewalk on the S/S of Gunhill Road E/O Webster, and a 9' X 200 foot area of concrete sidewalk on the N/S just also E/O Webster Ave. The southbound exit ramp on the Bronx River Parkway is being power washed, and the concrete bridge over Metro North portion of Gunhill road. The NYC Sanitation is going to sweep all applied sand in the asphalt roadway, and Con Edison will dispose of the debris. Miller Environmental Group (contractor) placed several booms in the Bronx River starting at the Gunhill road exit going down to the exit south of the Gunhill road exit. They will check the booms in the morning. Miller stopped at dusk. Mr. Paretesky is down grading this incident to a routine incident and stated he will notify CIG, he is also handing the White Hat over to Mr. J. Tranchina #79186. 14-July-2002 06:53 Hrs. Acting Incident Commander White Hat , Field Operations Planner John P. Tranchina, #79186, reports that at 04:00 Hrs today public access was restored to East Gunhill Road and Webster Ave, with the exception of single lane restrictions on both streets for construction access to feeder 71. Both ramps of the Bronx River Parkway were opened to traffic at 04:00 Hrs. All roadways were sanded and swept. Oil recovery continues with oily soil removal in the excavation around the feeder pipe. Additional x-rays will be performed on the feeder this morning to determine the exact location of the fault. Miller Environmental will return this morning to check, maintain, and replace, as necessary, oil absorbent boom deployed in the Bronx River. Environmental contractors Allstate Powervac and Clean Harbors remain on-site while cleanup operations are completed. Detective Torres from NYC OEM was on location from 11:00 Hrs on 7/13 to 04:00 Hrs. today, and a representative of the Mayor's Office was on location briefly at 06:30 today. 12:17 Hrs. S&TO EHS Manager Leon Paretsky, #44096, reports due

EAST GUNHILL RD/WEBSTER (Continued) **S106005565**

to traffic considerations, spot cleaning of sidewalk areas and cleaning of underground structures will be performed at night. Excavation will be extended. NYCDEP is presently making repairs to restore watermain. Miller Environmental continues to clean Bronx River areas, and recovery of oil contaminated soil will resume after watermain and feeder repairs are completed. Mr. Paretsky was also provided an update on the contact with Verison. 14-July-2002 14:01 Hrs 13:44 Hrs. S&TO EHS Manager Leon Paretsky, #44096, reports at 13:00 Hrs the Bronx Zoo contacted NYSDEC to report an oil sheen in the Bronx River has affected wildlife in the zoo. At 13:44 Hrs., Mr. Paretsky was at the Zoo with NYSDEC Representative Ms. Carry Folley and a representative from the Zoo and reported that it appeared oil from the feeder 71 incident has migrated down the Bronx River to the Zoo. Zoo representatives declined Con Ed wildlife cleaning vendor service stating due to the present warm weather and light nature of the oil that the birds affected would be ok and can handle this type and amount of oil. The Zoo is also providing off-hour access to Zoo property for Con Edison and Miller Environmental to install booms and oil absorbent materials to clean the impacted areas. Miller has also been requrested by Con Edison to place hard boom in the river to better contain any oil remaining in the Bronx River. ERT David Duke was included in the telephone report from Mr. Paretsky, via conference call, to simultaneously recieve the report. Bx/W Emergency Duty Public Affiars Rep. William G. White, #25485, was provided an update at 14:04 Hrs. ERT is notifying Media Relations and Law Department. 14-July-2002 17:30 Hrs. S&TO EHS Manager Leon Paretsky, #44096, reports that after finding oil in the Bronx River at the Bronx Zoo, he walked the Bronx River from East Gunhill Road down to Alerton Avenue where he observed approximately 1-dozen oil-coated waterfoul in what appeared to be stressed physical condition. Mr. Paretsky has been in contact with ERT David Duke, #88158. ERT Duke has been requested to contact the Maryland-based bird rescue service previously utilized by S&TO to decontaminate and rescue affect birds. 14-JUL-2002 21:10 S&TO EHS Manager Leon Paretsky, #44096, reports that he had a meeting with the DEC, and Miller Environmental. The out come of the meeting was a plan to place hard booms in four locations on the Bronx river: 1) GunHill Road 2) Allerton Ave 3) Botanical Garden 4) Bronx Zoo These booms will be maintained, and all portions of the river between the booms will be re-checked in the morning. 15-July-2002 06:22 Hrs. S&TO Field Operations Planner John P. Tranchina, #79186, reports 2 required freeze pits have been completed, excavation has been enlarged for NYCDEP to install a water main offset, foot-print for required excavation for feeder has been stripped of asphalt and concrete, 30 trench feet of feeder pipe have been exposed, fault still being pin-pointed, feeder pipe has been clamped and barrel is pending, and with refilling the feeder pipe with dielectric fluid some oil has been found leaking out of the clamp which Clean Harbors Inc. is recovering. Bx/W EDS Service Box has been cleaned. Verison's manhole has been pumped out and absorbent boom left in the structure to capture any possible residual oil. Bx/W EDS transformer vault cleaning still pending. All traffic lanes on Webster Avenue have been reopened with the exception of the area occupied by the excavation. Last night while Miller Environmental was installing hard boom in the Bronx River their crews were shot at by an unknown perpetrator, NYPD was notified and followed-up on the incident. As of 07:30 7/15/02, SSO reports that approx 16,000 gallons of fluid have been pumped into Feeder 71 since the leak started. VS

EAST GUNHILL RD/WEBSTER (Continued) **S106005565**

78367 08:56 7/15/02. At 09:25 7/15/02, Leon Partesky estimated that the total fluid loss into the Bronx River is estimated at 25 to 50 gallons not the 1000 gallons that was originally reported. 13:40 hours, Leon Paretsky environmental manager, 44096, of Transmission Operations reported that he walked the river with Kerry Foley environmental engineer of NYSDEC and three people from Tri-State bird rescuer. They found 15 birds, 2 Mallard ducks, 12 Canadian geese and 1 unknown species, the birds appeared to be impacted from the oil. The crew will continue looking for more birds. 15-July_2002 21:10hrs Transmission EH&S Manager L. Paretzky # 44096 reports, Tri-State Bird Rescue recovered 9 birds from the Bronx River and 1 bird from the Botanical Gardens all birds were alive and will be taken to the Bird Recovery Center in Delaware for treatment. Miller Environmental will work throughout the night maintaining the booms at the following four locations: 1) Gunhill Road 2) Allerton Ave 3) The Botanical Gardens 4) The Bronx Zoo. Any oil collecting at the booms will be removed by Miller Environmental. Additional material removed from site: 15 cubic yards of debris CTF0810681 Clean Harbors, 7 cubic yards of debris CTF1105093 Clean Harbors. Update: Tuesday July 16: 2130 hrs Souto & Paretsky (TO) and K.Foley (NYSDEC) inspected 4 boom locations in the AM. Expressed concern to MEG personnel (Cassese & Wallace) about need for more progress in removing sheen/film of fluid at boom locations and minimize pass-through of fluid - need for more equipment (waders and small boats) so fluid can be more quickly captured from boom locations. Second inspection conducted in PM with MEG (Cassese, Wallace) and NYSDEC (O'Connell, Foley, Rodriguez), and Con Edison (Paretsky, McQueen, Desiderio & others) noticed progress in removed sheen. Paretsky, McQueen (Con Edison) and Cassese (MEG) inspected hard boom location at Westchester Avenue (upstream of Bruckner Blvd) noticed some presence of oil. Instructed MEG to remove that oil from hard boom and soft boom at that location. Tri-State Bird Rescue reported they retrieved three birds for treatment. MEG will work overnight at the four boom locations, under oversight Construction Management. At NYSDEC's requested will inspect/flush Bx River Pkway drain into Bx River to ensure that no dielectric fluid remains in that drain. THIS INCIDENT IS CONTINUED IN NEW INCIDENT 143986. e2mis no. 143-986: On 7/16/02 Con Ed and DEC inspected catch basins on N/B entrance Bronx River Pkwy and saw evidence of oil in catch basin. It is believed that catch basins drain into Bronx River. DEC is attempting to contact DEP for sewer drawings to confirm outfall of these catch basins. Once this is confirmed Miller will clean the catch basins. 17-July-2002 19:30hrs. Transmission Operations Manager L. Paretsky # 44096 reports Tri-State Bird Rescue captured 2 birds and are taking them to their facility in Delaware for observation and treatment. Tri-State has now left the area as no additional birds require capture or treatment. Clean Harbors will be cleaning approximately 12 catch basins on the Bronx River Pkwy. that were impacted by the spill. These catch basins are all joined at a single point and discharge into the Bronx River. Miller Environmental is progressing satisfactorly in the cleaning of the Bronx River and will continue through the night. 07/18/02 Allstate Power Vac pumped out catch basins on Bronx River Parkway. Started at 07/17/02 - 11:00pm thru 07/18/01 - 5:00am 07/18/02 - 09:30am thru 07/18/01 - 03:30pm 07/18/02 - 08:00pm thru 07/19/02 Removed a lot of oil and water from catch basins approx. 5-6 tankers. Boom locations were maintained around the clock, quantity around booms is decreasing. Miller Environmental constructed a sand bag dam around the Bronx River

EAST GUNHILL RD/WEBSTER (Continued) **S106005565**

Parkway out fall structure for the Bronx River Parkway catch basin drainage. The purpose of this dam is to contain any oil that might be release during the cleaning of the catch basin on Bronx River Parkway. Update: July 19, 2002 Allstate inserted ballon in upstream side of Bronx River Parkway (BRPW)catchbasin that lead to Bronx River. Other BRPW catchbasin drain into this catchbasin prior to dicharge to River; plugging catchbasin prevents river water from flowing back into catchbasin system and facilitates cleanup. Additional catchbasin cleaned. DOT parkway stipulations prohibit constinous cleaning; have to stop during heavy traffic periods. Representatives from NYSDEC (K. Foley & A. Rodriguez) observed daytiime cleanup activities on parkway catchbasins. Update for July 20, 2002 Called DOT at 09:40 spoke with operator 38 and informed them that we were restoring the left 2 lanes and closing the right lane north bound on Bronx River Parkway. 09:45 catch basin on north side east of light pole BR244 was pumped out and double washed. Allstate entered catch basin to collect debris on floor. Completed 10:40. 10:50 began setup on catch basin east of light pole no. BR246. Catch basin was pumped and double washed. Allstate employee entered catch basin to wash down walls and collect debris on floor. Completed 11:40 11:55 began setup on catch basin east of light pole no. BR247. Catch basin was pumped and double washed. Allstate employee entered catch basin to wash down walls and collect debris on floor. Completed 12:10 11:55 another Allstate crew began setup on catch basin east of light pole no. BR251 and checked manhole approx. 3 feet from catch basin. Both were pumped and double washed. Allstate employee entered catch basin to wash down walls and collect debris on floor. Also, dam east of BR251 was checked, no signs of oil. Dam is still in place and will be checked periodically. New booms were placed in river. Plug was pulled out of manhole, it is back to normal operation. Manhole completed at 14:15. Cleanup around the work area and all trucks was directed off the Bronx River Parkway. Other locations checked were, Allerton Avenue, The New York Botanical Garden, The New York Bronx Zoo and Gun Hill Road, little to no signs of oil. Called DOT at approx. 15:00 spoke with operator 69, reported all lanes on Bronx River Parkway were reopened. Update for July 21, 2002 Locations Allerton Avenue, The New York Botanical Garden, The New York Bronx Zoo and Gun Hill site little to no signs of oil. Miller Environmental Group is still on site. They are replacing booms and cleaning Bronx River at the Gunhill Road of leaves and trash. No signs of oil. The booms will remain in place and will be checked on the locations above until DEC returns on Monday to give their instructions as to stay or close the work on these sites. 7/22/04 Kerry Foley environmental engineer of NYSDEC visited the site today. Her instructions were to maintain dam and booms until a major rain and re-check. July 24, 2002 Dennis Connelly met with the NYSDEC and the Bronx River Alliance this morning to review the necessity of maintaining the booms at the present locations. The regulators and or the alliance are considering the removal of booms at two locations but requesting additional boom be placed below the Bronx Zoo due to the presence of oil. This and the other booms would be maintained until this Friday or Saturday. He will keep us informed. Additionally D. Connelly has requested the Chem. Lab to take samples (if possible) to ascertain if the oil is ours. July 24, 2002 - At two locations, Gunhill Road and Allerton Avenue, the booms were demobilized. Two spread booms were placed at Bronx River Part, 180th Street, and Boston Road at the request of the Bronx River Alliance. Also agreed upon by the NYSDEC, representative

EAST GUNHILL RD/WEBSTER (Continued) **S106005565**

Kerry Foley. July 25, 2002 - Completed the removal of the dam on Bronx River Parkway. Maintain booms at The Botanical Gardens and The New York State Bronx Zoo. Added booms and 179th Street Park and school grounds at 177th Street requested by Mr. Bryan Aucoin of the Bronx River Alliance. Removed spread boom at 180th Street because it was vandalized. Down to day crew only. Miller has one truck and one roll off at Van Nest service center. July 27 and July 28 no crews, will check everything Monday. This is agreed upon with NYSDEC, representative Kerry Foley. On 7/26/02 SSO developed preliminary results for this leak. The estimates (which still need to be confirmed with Engineering) are as follows: (When final oil loss calculations, with contractions, are received, this report will be revised). It is estimated from tank level readings, that 27,872 gallons was lost from the leak site on Gun Hill Road and Webster Ave. THIS INCIDENT IS CONTINUED IN NEW INCIDENT 144215. e2mis no. 144-215: NYSDEC representative, Kerry Foley, approved the removal of the booms at the following locations: * Bronx Zoo * Botanical Garden * two locations in the vicinity of 177-180th street. The booms at these locations were removed today (Monday, July 29th) by Miller Environmental The sweep at the cement plant location (DEP fixed boom south of Westchester Avenue), which is the southernmost location, was replaced with two sausage type booms, which will be maintained by Miller Environmental at least until the next heavy rain. Miller Environmental currently maintains the DEP fixed boom and inspects it every three days, and the day after a rain, so the two new sauage booms will be inspected at the same frequency. 02-August-2002 18:06 Hrs Transmission Feeder Engineering and the Control Center have provided updated quantities of the amount of dielectric fluid released at Webster Avenue and Gun Hill Road. They estimate that a total of 33,767 gal was lost at BOTH Webster Avenue-Gun Hill Road location and at Dunwoodie Substation (incident 144148). The breakdown is as follows: Gun Hill Rd-Webster Ave: 23425 gal Dunwoodie 10342 gal Total 33767 gal The final report issued by S&TE and SSO show that the final calculated loss at Webster Ave and Gun Hill Road is as follows: 22,605 gallons was lost at the this location. Of this total loss 2650 gallons was drained/flushed from the feeder during the restoration of the feeders. Therefore the total loss to the environment is - 19955 gallons. 2650 GALS. CONTAINED * 22,605 - 2650 = 19,955 GALS. INTO ENVIRONMENT. Also see incidents Rainey PURS E2MIS INCIDENT # 143929. Dunwoodie PURS E2MIS INCIDENT # 143977. Dunwoodie Riser pipe E2MIS INCIDENT # 144148. For balance of other dielectric fluid loss on other leaks on feeder 71. Update - Tri-State Bird Rescue visited site on Wed July 31 to release the birds that were captured. On 08-15-02 three samples were taken of oil that collected down at the asbsorbent boom and analyized for the presence of dielectric fluid. The results are below. Lab Sequence Number: 02-07708-001 Date Approved: 8/19/2002 MATRIX: WATER GRAB DESCRIPTION: OUTSIDE BOOM-MID RIVER LOCATION: BRONX RIVER@WESTCHESTER AVE.+ EDGEWATER Analysis indicates the presence of a substance similar to a dielectric fluid. Lab Sequence Number: 02-07708-002 Date Approved: 8/19/2002 MATRIX: WATER GRAB DESCRIPTION: INSIDE BOOM-WEST SIDE LOCATION: BRONX RIVER@WESTCHESTER AVE.+ EDGEWATER Analysis indicates the presence of a substance similar to a dielectric fluid. Lab Sequence Number: 02-07708-003 Date Approved: 8/19/2002 MATRIX: WATER GRAB DESCRIPTION: OUTSIDE BOOM-SOUTH SIDE LOCATION: BRONX RIVER@WESTCHESTER AVE.+ EDGEWATER Analysis indicates the presence of a substance similar to a dielectric fluid. Update by Leon Paretsky (44096) 09/23/02 Miller

EAST GUNHILL RD/WEBSTER (Continued) **S106005565**

Environmental has been inspecting and changing the boom at the cement plant . The following are the emails that Miller Environmental has been providing. (a)-----Original Message----- From: MEG Brooklyn [mailto:vze2p4q8@verizon.net] Sent: Tuesday, August 06, 2002 3:45 PM To: Paretsky, Leon Subject: Bronx River Boom Leon- In response to your inquiry about the boom inspections and change outs MEG was out there Friday 8/1 and today 8/6. We will be out there to inspect and if necessary change out the boom every 3 days as per the DEC. VTY, Adam Libuser (b) -----Original Message----- From: MEG Brooklyn [mailto:vze2p4q8@verizon.net] Sent: Wednesday, August 07, 2002 1:36 PM To: Paretsky, Leon Cc: ecassese@millerenv.com Subject: Bronx River Boom Leon- MEG inspected the boom yesterday 8/6/02 and it was soiled with garbage and some oil and saturated with water. We are swapping out that boom this morning 8/7/02. VTY, Adam Libuser (c)-----Original Message----- From: MEG Brooklyn [mailto:vze2p4q8@verizon.net] Sent: Tuesday, August 13, 2002 3:31 PM To: Paretsky, Leon Cc: John Doerre; ecassese@millerenv.com Subject: Bronx River Boom Leon- MEG inspected the boom at The Bronx River yesterday 8/12/02 and replaced it today 8/13/02. From what my boat captain told me there isn't much, if any, oil in the boom. It is saturated with water and contaminated with garbage. He stated that there is a light sheen, but that he thought it could be from something other than our project. It might not be a bad idea to inform the DEP of this as they might reevaluate the situation. VTY, Adam Libuser (d)-----Original Message----- From: MEG Brooklyn [mailto:vze2p4q8@verizon.net] Sent: Wednesday, August 14, 2002 11:21 AM To: Paretsky, Leon Cc: John Doerre Subject: Re: Bronx River Boom Leon- We will be conducting another inspection of the boom at the Bronx River, tomorrow 08/15/02 between the hours of 0900-1300. (e) -----Original Message----- From: MEG Brooklyn [mailto:vze2p4q8@verizon.net] Sent: Friday, August 23, 2002 1:13 PM To: Paretsky, Leon Subject: Bronx River Sorbent Boom Leon- I wanted to let you know that MEG has swapped out the sorbent boom at the Bronx River again on Friday 8/23/02. We will inspect it again on Monday 8/26/02. VTY, Adam Libuser (f)-----Original Message----- From: MEG Brooklyn [mailto:vze2p4q8@verizon.net] Sent: Friday, September 06, 2002 2:44 PM To: Paretsky, Leon Cc: Jim Davey Subject: Bronx River Boom Leon- MEG has inspected the sorbent boom out at the Bronx River location on Tuesday 9/3/02 and then agian on Thursday 9/5/02. It was replaced today, Friday 9/6/02. The boat captain informed me that the sorbent was waterlogged and dirty from garbage in the river. It also had some oil on it, but he states that the oil is just from the sheens in the river itself and not from the Bronx River site. We will be out there to inspect the boom again on Monday. VTY, Adam Libuser (g)-----Original Message----- From: MEG Brooklyn [mailto:vze2p4q8@verizon.net] Sent: Wednesday, September 11, 2002 10:58 AM To: Paretsky, Leon Subject: Re: Bronx River Boom Leon- MEG was out to inspect the boom @ the Bronx River on Monday 9/9 and will be out to inspect it on Thursday 9/12, Sunday 9/15, Wednesday 9/18. According to the supervisor the boom looked good on Monday. Give me a call @ (718) 486-9109 in reference to setting up a time for doing your analysis. VTY, Adam Libuser On Friday L. Paretsky Transmission Operations spoke to NYSDEC Jane O'Connell regarding an estimate of amount of dielectric fluid released to the Bronx River. She remarked that she believed that is was more than 50 gal but less than 1000 gals. MEG, ChemLab, and myself (Eva M. McQueen) went out to inspect the boom at the Bronx River on Friday, 10/18/02. The boom was in place and look good. No visible signs of oil, but 3 samples were

EAST GUNHILL RD/WEBSTER (Continued) **S106005565**

taken. THIS INCIDENT IS CONTINUED IN NEW INCIDENT 153001. e2mis no. 153-001: Entry of Jacques Whitford Letter Reports/Data of March 2003 and July 2003. Following are Jacques Whitford reports on the monitoring wells that were installed at the incident location: [See file for copies of reports.- JHO]"

WEBSTER AVE PURS PLANT (Continued) **S106010469**

Spiller Company: 001
Contact Name: KEVIN MCARDLE
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ 1/3/03: Tom Whipple - SSO EH&S. A 6' x 6' area underneath oil processing that needs to be cleaned. Scheduled for tomorrow. They need to remove it. Cause of leak: hose on filtration unit (removes water from feeder). (ARS) 1/7/03: e-mail from Rodriguez to O'Connell: I met with Tom Whipple to discuss the spill 0210038 at the Webster Avenue PURS. The station installed a device that removes moisture from the dielectric fluid. This device consist of a heater that raises the temperature of the oil to the point that the moisture vaporizes and is removed from the oil. The purpose is to protect the feeder from failure caused by water moisture. One of the machine's fittings failed, releasing approximately 150 gallons in the unit's moat. Approximately 20 gallon overflowed and went into the same area of previous spills. Clean Ventures was hired to cleanup the unit's moat and remove the oil from the soil. Con Edison will move the unit today to clean the soil below it. The unit sits on top of horizontal wood piles over soil. In addition, samples of this new area are going to be collected. Eventually Con Edison will clean the PURS station and invite NYSDEC to inspect it before backfilling the affected areas. ~~~~~~~~~~~~~~~~~~~~~~~~ e2mis no. 146-561: 03-JAN-2003 21:44 Substation Mech A Vata Rukaj reports finding 100 gallons of dielectric fluid leaked into moat for south plant and 20 gallons leaked to soil. No smoke or fire is/was involved and no sewers, waterways or private property affected. The cause of the leak was a hose on a new filtration unit. Mr. Rukj isolated the filtration unit to stop the leak. Clean Ventures to be contacted to perform cleanup. Cleanup pending vendor arrival. Historical ChemLab results 9/26/02: Lab Sequence Number: 02-09057-002 PCB < 1.0 ppm. 1/6/03 - Clean Ventures mobilized to respond to spill. Celan Ventures called at approx. 22:00 on 1/3. Absorbent pads and booms deployed to ensure oil did not leave immediate spill area outside the oil processing unit skid. No oil noted leaving the immediate spill area. Oil processing unit removed from service and valved off of system. Vendor (Island Technologies) to replace fittings that failed, and check containment alarm devices. Clean Venture arrived on site approx 00:30 on 1/4. Cleanup commenced. Clean Venture removed all oil from the containment pad and all free liquids outside spill area, as well stained soil/bluestone. Area immediately around containment pan (approx. 6'X6' area) could not be vactored out, due to concerns about undermining the earth the containment pan sits on. Clean Venture demobilied approx 03:15 on 1/4. Crane/Boom scheduled on site for 1/7, Clean Venture to return to make final cleanup. 1/14/03 - Update to initial spill estimate. Calculation done via the leak detection system show that the amount of oil lost in this incident was 325 gallons. Calculation were made on the containment pan for the oil processing unit, it holds approx. 180 gallons. The revised quantity assumed to be spilled to bluestone is 145 gallons. 20-APR-2005 08:40 All State Power Vac completed the remediation and was brought back in to take care of a few hot spots. The following is an email regarding a communication between S. Arakhan (NYSDEC) and J. Susco- -----Original Message----- From: Susco, Joseph Sent: Friday, January 09, 2004 11:52 AM To: 'Sam Arakhan' Subject: Webster Av SS Inspection Sam, to confirm our conversation of yesterday regarding Webster Ave Purs. Soil was removed from around the precoolers of feeders 71 South and 71 North and 15 post excavation samples were taken in December.

WEBSTER AVE PURS PLANT (Continued) **S106010469**

Five (5) of the 15 came back greater than 10,000 ppm for TPH. One of these 5 samples was from near Feeder 71 south and was at a concentration of about 16,000 ppm. You agreed to allow us to backfill the entire area around Feeder 71 South. Regarding 71 North, the TPH concentration range for the four samples that exceeded 10,000 ppm was 11,000 ppm to 45,000 ppm. We will remove additional soil in these areas when the weather conditions allow for soil excavation. 23-MAY-2005 15:00 Clarifcation the spill was associated with 71S PURS. "

Remarks: "Caller states it is contained to a moat - 20 gallons went into the soil - clean up pending contractor arival - con ed # 146561"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY e2mis no. 143-931: 13-July-2002 08:17 hrs OS Chris Blaich, #87348 , reports while flush truck E60444 was pumping oil water while responding to the Feeder 71 cable leak (e2MIS No. 143928) and pumping oil from a catch basin into the truck had an equipment failure which spewed 50 gallons of oily water onto the truck and 15 cars parked in an adjacent car dealership. No fire/smoke is/was involved. No sewers or waterways affected. Private property affected - photographer on location. Cleanup to be performed by Environmental Contractor. Vehicle E60444 to remain quaranteened until decontaminated. No injuries involved. reffer to e2mis #143920 on the W345F site which has info on the non-haz oil that was spilled. 13-JUL-2002 21:00 Spoke with ERT M. Kessler who is on location with Leon Paretsky, to ask when the flush trucks will be released. I also told him that that major de-con on the trucks is not necessary due to the oil is less than one, and the trucks normally carry lead from manholes. 21:18 ERT M. Kessler reports Two flush trucks were released, and one is still pending cleaning. 21:20 Flush Mech N. Lopez 19018 report that two truck are in Van Nest, and he is in route to pick up the third. The truck has been de-coned as of 21:20. Vehicle 60444 is being turned into transportation by N. Lopez.. The area of asphalt the the oil affected was clean under S&TO operations directive via Clean Harbors. Clean up complete. All waste being transported by clean harbors."
Remarks:	"OIL WATER - FLUSH TK E644 WAS PUMPING OIL WHILE RESPONDING TO FEEDER 71 LEAK - EQUIP FAILURE WHICH CAUSED 50 GALLONS OF OILY WATER TO SPILL ONTO TK & 15 CARS FROM A CAR DEALERSHIP - CLEAN UP IN PROGRESS NOW - REF #143931"

DEC Memo:	"e2mis no. 150-754: 15-Oct.-2003 @ 11:35 hrs. while a crew was flushing TM.305 Webster Av. environmental tag was found. Approximately 1 gallon of oil on 500 gallons of water may have been picked up by flush truck before the tag was found and the oil was discovered. The vehicle is being placed under quarantine until lab sample results become available. Note: This tag is associated with a transmission leak on feeder 71 in 2002. At the time of the initial transmission leak sample results were <1.0 ppm and there were no traces of benzene. Clean up of the TM. and decon of the vehicle if needed is pending sample results. 16-Oct-2003 00:30 hrs Lab Sequence Number: 03-08503-001 Total PCb < 1.0 ppm 16-Oct-2003 19:25 Flush Mechanics E.Gafur 19528 and M. McDonnell 17152 report cleanup complete performing a double wash and rinse removing 1 cubic yard of flush solid debris and CFS tanker removing 75 gallons of liquid to be brought to Astoria WWTF. The solid debris will be brought to Hellgate Pit for temporary disposal. Env tag 30888 was removed and the source of the oil is unknown. 06-Nov-2003 07:50 hrs. The following email response is a result of an inquiry into a possible contaminated Flush Truck by the Environmental desk. -----Original Message----- From: Siesfeld, James Sent: Sunday, November 02, 2003 12:14 PM To: dl - BX/West EH&S C.C.; D'Alisera, Charles A Subject: Contaminated Flush Truck? Importance: High Please review the attached Event Detailed Description copied from e2MIS Incident 150754. The initial report states a flush truck may have removed free-phase oil from the structure. How/was the Flush truck decontaminated? The Opn Status of this incident will remain -CLEAN until the EHS Desk is informed of the how the vehicle was managed and e2MIS is updated. Thank you. Jim Siesfeld Sr. EHS Specialist Bx/W ECC EHS Desk (914) 925-6219 -----Original Message----- From: D'Alisera, Charles A Sent: Wed 11/05/2003 8:30 AM To: Siesfeld, James; dl - BX/West EH&S C.C. Subject: RE: Contaminated Flush Truck? The report is wrong. T. Brown and R. Amelio were assigned to flush the T.M. 305 While flushing and removing the solid debris the employees found a environmental tag under the debris. The environmental tag was a year old. The job was stopped and a sample of the T.M. was taken. There were no visible signs of oil and there was no water in the structure. The results came back less then 1ppm. The flush was then dumped at the Hell Gate pit and washed. "

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Company: 001
Contact Name: ROGER ROMANCE
DEC Memo: "10/28/04 TJD Sawyer responded to site. 10/28/04 - Sawyer - Arrived at site to find Roger Romance Appollo/Metro 718 383 1400 and Rene Lewis of AL Eastmond inspecting the damage and trying to find out the cause of the spill. There were about 20-30 gallons of #6 oil in the alley from the vent pipe and there were about 150-180 gallons of oil inthe basement. The oil gauge seemed to be working properly when I checked it. There was a 2 inch plug hole in top of the tank that was open to the vault and most of the interior oil seemed to come from that. The Appollo driver said he checked the gauge but I do not believe him. He only had 1800 gallons on his truck and the Super of the building had received 2000 on or around 10/20/04. He would have had to go through the building to check the gauge and he never mentioned that. The spill actually happened the night before and was not reported until 10:50 10/28/04. There could be a failure to notify violation. Paul the mechanic from Finklestein & Morgan 914 472 4900 assured me the gauge was working. Therefore, it is determined by the Department, that the driver due to his negligance, for not checking the tank, erroneously overfilled the tank. 06/14/05 - Haggerty - Spoke with Rene Lewis from AL Eastmond & Sons. He will get back to me with updated information. 09/28/05 - Quinn - Recevied fax from Steve Finklestein (name found on recent building permit application. 914-472-4900) documenting clean-up. 01/9/2006 - Haggerty - spill is to remain open until a site visit can be performed 04/17/08-Vought-Site visit by Vought and spill transferred from Unassigned to Vought as Vought in proximity to site for another site visit. Vought called and spoke to Scott at Management Company (914-472-4900) and arranged site visit with super (Caderon). Vought met Caderon on site who was super for past twenty years and remembered well location of oil spill. Tank is a 5000-gallon #6 fuel oil UST and as per Caderon, Eastmond removed bottom sections of tank vault (concrete block around UST) and no oil was observed below UST. Concrete in good condition and no staining and no odors. Vought also inspected sump and no soil contamination was noted via visual and olfactory evidence. No sewers or drains were affected as per super and as such spill closed by Vought due to no impact to soil or groundwater and no odors. NFA sent to: Scott Morgan Finklestein Morgan 111 Brook Street Scarsdale, NY 10583 Fax: (914)472-2121 "
Remarks: "SUOPER CALLED IN A DRY TANK, AND THE 5000 GALLON TANK, IT TOOK 1800 GALLONS AND THE TANK WAS FULL THE METER WAS BROKEN AND THIER IS A TANK PROBLEM AND THEY ARE FURTHER INVESTIGATING: EASTMAN ENVIR. ON WAY OVER TO CLEAN UP:"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number:	001
Tank Id:	65608
Material Code:	0003
Common Name of Substance:	#6 Fuel Oil (On-Site Consumption)

Equipment Records:

L09 - Piping Leak Detection - Exempt Suction Piping
A01 - Tank Internal Protection - Epoxy Liner
J02 - Dispenser - Suction Dispenser
F04 - Pipe External Protection - Fiberglass
G00 - Tank Secondary Containment - None
I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	Not reported
Capacity Gallons:	5000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	10/18/2006
Register:	True

DEC Memo:	"Sangesland spoke to Rene at Eastmond - He says it's under control 5/30/06- DEC Piper spoke w/ Isaac with Eastmond. As per him they are in the process of removing the tank. DEC will visit site to inspect for soil contamination. DEC Piper responded to site. Eastmond had 1/2 of tank cut out. Contmainated soil existed under tank however the tank is believed to be sitting in a solid concrete tub. A new tank will be installed thereafter. Rene Lewis to keep in touch. 9/28/06- DEC Piper contacted Isaac and left message requesting callback and info. 2-608760 DEC Piper contacted building to provide further documentation. No other information was available regarding the tank replacement. Three soil samples were collected from in front of the wrapped tank. Analytcial showed low level contamiantion. Based on work to date, inspection at time of spill and sample results, this spill is closed. See DEC DOCS for sample analytical. Closed. +"

NORWOOD TERRACE (Continued) **S112211619**

Town:	New York City
Record Added Date:	10/09/2012
Record Updated Date:	12/01/2014
Update By:	BXANDERS
Site Description:	Site Location: The site is located at 3349 Webster Avenue in the Norwood section of Bronx County. It is bordered by Webster Avenue to the east, commercial retail storefronts to the north, four-to-six story apartment complexes to the west, and a small one-story automotive service center to the south. Site Features: The site is undergoing redevelopment following completion of the Interim Remedial Measure. Current Zoning/Use(s): The site is zoned as commercial zone C4-4, which also allows for some residential use. The site is currently undergoing redevelopment as a multi-story affordable/assisted living residential property. Past Use of the Site: The site had been used as an automotive service center and filling station. It originally contained a one-story abandoned automotive service center constructed in 1958 on the southern portion of the property. Several underground storage tanks, hydraulic lifts and an oil/water separator were present. The northern portion of the site consisted of a mix of broken asphalt and gravel covered land that supported sparse vegetation. The remainder of the site was covered by more competent asphalt and concrete. Site Geology and Hydrogeology: Bedrock at the site exists at approximately five feet below grade. Soil beneath the site appeared to be at least partially urban fill. Groundwater was encountered at depths ranging from two to five feet below original ground surface. Groundwater flow at the site was shown to be to the east, with a general flow towards the Bronx River, located approximately 0.175 mile from the site at a significantly lower elevation.
Env Problem:	Soils - All site soils were removed down to the bedrock surface during the IRM, thereby removing all soil-related contamination. Groundwater - Groundwater on the periphery of the site contains dissolved petroleum contaminants, including: 1,2,4-trimethylbenzene at 710 ppb; 1,3,5-trimethylbenzene at 280 ppb; n-propylbenzene at 120 ppb; Naphthalene at 150 ppb; and xylenes (mixed) at 450 ppb. While these values show a slight increase from earlier samples, this increase is attributed to changes in groundwater mechanics from having the static water level elevated during rain events while the UST and lift excavations remained open, in essence, creating a flushing effect from the more heavily contaminated areas of the site. This contamination is expected to readily attenuate over time now that the sources have been removed. A bulk reduction in groundwater contamination on-site was demonstrated, with the observed presence of free petroleum product prior to the IRM resolving to water that yielded no contaminants exceeding standards following the IRM. Soil Vapor - Environmental sampling has indicated that soil vapor intrusion is not a concern at this site.
Health Problem:	The site is currently fenced and all soil has been removed from the site thereby eliminating potential human contact. People are not drinking contaminated groundwater associated with the site because the area is served by public water supply that is not affected by this contamination.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 173

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A

CVS PHARMACY #2591 (Continued) **1014958027**

CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 118

DEC Memo:	"02/10/06.Feroze talked with Mr. Adam Striker 212-736-6888. He informed that they hired Petrolium Tank Cleaners to solve the problem. If possible they will repair the tank or they will close the old tank and set a new tank, remove all contaminated soil if any. They will submit all those documents to DEC. Soil contamination letter is sent to: Adam Striker 225 West 34th Street, Room No: 2010 New York, NY 10122. 03/15/06. Spill is transferred from Feroze to Kumer Patel. 04/18/06-Hiralkumar Patel. REceived call from Mark from

300 RESERVOIR PLACE (Continued) **S107523613**

Petroleum. tank on location is concrete vaulted and oil seeping out from concrete. he has setup temporary tanks at location in Feb. 2006. after that he hasn't heard anything from property manager. haven't received bill payments also. the manager was on vacation. Left message for Adam Striker as he will be back by 12 noon today. Received call from Rene Louis from Eastmond. he told me that he has been hired by Mr. Ronnie from H&A Heating to remove any contaminated material from site. Rene has visited site and found two temporary tanks on site. as per Mr. Louis, they are planning to move old tank and remove any contaminated material from tank bottom and if tank is in good condition, they will put that same tank with required repair work done. Mr. Louis doesn't know anything about Petroleum is involved in this case. Mr. Ronnie's number is (917) 797-1101. Spoke with Mr. Ronnie and he has removing concrete around tank. he hasn't reach any contamination, as he removing from top. he will call me if he finds anything abnormal. 05/12/06-Hiralkumar Patel. Left message for Ronnie. Spoke to Rene at Eastmond. Ronnie has removed concrete jacket around tank and found that tank is sitting on solid concrete pad. concrete pad doesn't have any cracks on it. but it has oil stains and once Rene hear from Ronnie, they will go for powerwash. 05/17/06-Hiralkumar Patel. Received message from Ronnie. Left message for Ronnie. Received call from Ronnie. as per him, Eastmond did powerwash and cleaned that concrete pad. Ronnie suggest owner to install new tank of smaller size. will call once he get all required persmits for further work and get approval from owner. 06/05/06-Hiralkumar Patel. Left message for Ronnie. 06/06/06-Hiralkumar Patel. Received message from Ronnie. asked to call Rene at Eastmond. 06/06/06-Hiralkumar Patel. Received message from Ronnie (Cell: 347-538-3885). asked to call Rene at Eastmond. owner is still waiting for permit to install new tank. spoke to Rene. as per him, owner is still waiting for permit to remove old tank and as they remove it, Rene will powerwash the floor. as per Rene, there is solid floor around tank. Rene will call once tank will be removed. 08/10/06-Hiralkumar Patel. received closure letter from Rene. abstract: - tank was pumped out, squeegee cleaned and gas freed, - cement jacket was broken and removed from site - concrete floor below tank is solid with no cracks or holes - concrete floor is a load bearing floor with heavy concrete (6-8 in thick) - new tank was installed - 750 gal of liquid disposed (238 gal generated from pressure wash) - 25 bags of solid disposed - all pipings has been removed and the fill line filled and cemented over based on available information, case closed."

Remarks: "caller states that he is not doing clean up, but the people who are (the super's son) is washing it down a drain and caller is concernedd and thinks someone should check out, he states that the tank is about 5000 gallons"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: B004
. Waste name: PCB articles containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs, excluding small capacitors. This includes oil-filled electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

. Waste code: B007
. Waste name: Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

Violation Status: No violations found

FINDS:

Registry ID: 110056505848

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001
Tank Id: 16198

CON EDISON (Continued) **U003389227**

Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:
E00 - Piping Secondary Containment - None
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
J02 - Dispenser - Suction Dispenser
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
D02 - Pipe Type - Galvanized Steel
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
K00 - Spill Prevention - None
I04 - Overfill - Product Level Gauge (A/G)

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 06/12/1970
Capacity Gallons: 5000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True
Modified By: MSBAPTIS

Tank Info:

Tank Number:	001
Tank Id:	12320
Material Code:	0003
Common Name of Substance:	#6 Fuel Oil (On-Site Consumption)

Equipment Records:

J05 - Dispenser - On Site Heating System (Supply/Return)
C03 - Pipe Location - Aboveground/Underground Combination
K00 - Spill Prevention - None
L99 - Piping Leak Detection - Other
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
I04 - Overfill - Product Level Gauge (A/G)
E02 - Piping Secondary Containment - Vault (with Access)
F00 - Pipe External Protection - None
G02 - Tank Secondary Containment - Vault (w/access)
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	02/05/1982
Capacity Gallons:	5000
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD On 6/18//04 PTC was hired by Castle Oil to cleanup the tank and remove bottom sludge. After that Castle made a delivery and the tank started leaking. 6/22/04. J.Krimgold spoke to PTC (Mark). They completed the cleanup outside the tank , but feel that more oil inside the incasement. 6/22/04. J.Krimgold spoke to Mr. Finkelstein - homwowner. Informed him that more work should be done. He will probably contact PTC for tank replacement and additional cleanup. Response Env. 508-795-0110 Stefanie Wood a consultant for Morduc Claim Servises insurance carrier for Castl Oil. 03/01/05. CSL letter has been sent to: Steven Finkelstein Finkelstein-Morgan Real Estate 111 Brook Street Scarsdale, NY 10583 YK. 06/01/05. J.Krimgold reviewed a letter report submitted by PTC and dated May 26, 2005. Accordind to the report 50 gal of #6 oil spilled into the tank room on the concrete floor. All released oil was cleaned up and disposed off. NFA. "

Remarks: "LEAKING FUEL TANK IN BASEMENT OF APARTMENT BLDG - POSSIBLY A HOLE IN TANK (4000 GALLON TANK). CASTLE OIL CALLED TANK COMPANY - PETROLEUM TANK CLEANERS - THEY WILL EVACUATE THE TANK AND CLEAN THE SPILL AREA."

Spiller Company: 001
Contact Name: EDWARD
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO Results from soil testing shows contamination around the tank. Contaminated soil ltr sent. 9/21/2004 Sangesland received a call from Justin Williams at Triumvirate Environmental. They have just been hired to deal with the contamination problem. His company has been hired to pull the tank and excavate out all contaminated soil. Work is scheduled for Oct 18, 2004. 11/17/05 - L. Alden - Linked this spill to #0301446 and PBS #2-288683. Called Triumvirate Environmental at (718) 274-3339 and spoke with Mike Duckfield (Justin no longer works there). Mike indicated that they had hired Miller Environmental last year to do the tank pull of a 17,000-gallon tank. The file for spill 0301446 has analytical results collected 12/7/04. I requested any additional information related to the tank pull. He said he will look into it. 12/29/05 - L. Alden - Looked at analytical results from spill #0301446. Results show soil is not significantly contaminated. Three of the six samples had results marginally above the TAGM cleanup value for benzo(a)pyrene. 1/6/06 - L. Alden - Received package from Mike Duckfield with a map showing where post-excavation samples were collected. As stated above, soil contamination remaining after tank pull is insignificant. Close spill."
Remarks: "Thinks the soil is contaminated. They are waiting for the results to come back."

Update By: JHOCONNE
Site Description: Location: East 211th and 212th Street Site is located in an urban area in the Willamsbridge neighborhood of the Bronx. The property is

WILLIAMSBRIDGE GARDENS (Continued) **S122449230**

bounded by East 212th Street to the north, East 211th Street to the south, commercial and residential properties and Holland Avenue to the east, and commercial properties and White Plains Road to the west. Current Zoning and Land Use: The property is zoned R7A residential, and is surrounded by similarly zoned properties. Past Use of the Site: Lot 0042 (East 211th Street) has been vacant since at least 1897. Lots 0067, 0069, and 0071 were first developed in approximately 1918 as residential apartment buildings. The buildings on Lots 0067 and 0069 remained in place until approximately 1978, when there were demolished. The building on Lot 0071 was demolished at some point between 1950 and 1976. Lot 0072 was first developed in approximately 1918 with an auto repair shop. Between 1918 and 1935 it was redeveloped as a contractor storage garage/warehouse, and residential dwelling. These buildings were demolished in approximately 2004. Lots 0042, 0067, 0069, and 0071 have been used for carnival ride/equipment storage and maintenance from approximately 1981 to the present. Lot 0072 has been vacant from approximately 2004 to the present. Past site uses include residential (approx. 1918 to 1978), auto repair (approx. 1918) and contractor storage building (approx. 1935 to 2004). The historic use of the property and presence of historic urban fill observed through the property is the likely cause of the metals, SVOC and VOC impact observed in the soils and at the Site. To the best of PWGC s knowledge, no remedial activities are known to have previously taken place at the site. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface down, consists of primarily of silty and clayey sand with some gravel that extended from grade to the bedrock surface. Evidence of historic urban fill material, such as brick fragments, was observed at depths up to eight feet below grade at several locations across the site. Bedrock was encountered at depths ranging from five to 12 feet below grade across the site. Groundwater was not encountered above the bedrock surface at the site.

Env Problem: Based on investigations performed at the site to date, the primary contaminants of concern for the site are SVOCs, metals, and pesticides. Soil SVOCs, metals and pesticides exceeding UUSCOs and/or RRSCOs were detected in soils throughout the site. With the exception of location SB004, compounds exceeding RRSCOs were limited to the 0 to 2-foot sampling interval; compounds exceeding UUSCOs extended to the bedrock surface throughout the central and western portions of the site. The source of the elevated concentrations is likely related to the current/historical usage of the site for equipment storage, as well as the likely presence of historic urban fill material. Based on analytes detected above UUSCOs and RRSCOs, the identified impact will require remediation. It should be noted that, due to access limitations during the Phase II ESA, no samples were collected from Lot 0071. However, with the exception of one sample location at near the western property boundary, all sample locations at the site contained SVOC and metals impact exceeding UUSCOs. As such, there is no reason to believe that samples collected from Lot 0071 would not contain impact above UUSCOs. Groundwater to date, groundwater sampling has not been performed at the site. Soil Vapor elevated VOCs were not detected in soil vapor samples collected from the site.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo:	"05/07/15-Hiralkumar Patel. alternate address: 160 East 211th Street no other spills found. PBS #: 2-400483. as per PBS record, the site has one (1) 4,500 gal #6 oil AST in contact with soil, in-service, installed in Jun. 1960. 1:29 PM:- spoke with Mr. Levie, property manager. he mentioned that prior to converting fuel grade from #6 to #4 oil, the tank was cleaned out and tested. the tank system failed the test. they will do an isolation test by early next week. currently, they are using a temporary tank. 305 Realty Co. **property owner** 3153 Perry Avenue Bronx, NY 10467 Attn.: Warren Levie Ph. (718) 798-9050 sent TTF letter to Mr. Levie requiring report submission by the end of 06/30/2015. case assigned to DEC Piper. 8/31/15- left message for warren. 12/23/2015: Rashad Spill reassigned from Piper to Omar as per DeMeo. 12/24/2015: Rashad 3530 Bainbridge avenue has an alternate address of 160 East 211 Street. No additional spills found for site, PBS#2-400483 found for site. There is a 4500 gallon #6 fuel oil AST. Two TTF letters were found in D2. 3/22/2016: Rashad As per DOB permit records on 10/8/2015, two temporary 330 gallon above ground oil tanks were installed. On 3/18/2016 a gas meter was installed as well as 80 feet of 3 inch gas piping. 11/8/2016: Rashad Called for Warren Levie, he does not get in until 2:30pm. 1/17/2017 Austin This spill report is being transferred from

RESIDENCE (Continued) **S117853864**

Rashad Omar to Kumar Patel end. 06/26/17-Hiralkumar Patel. 10:15 AM:- visited site and met Mr. Levie. Mr. Levie mentioned that the 4,500 gal AST in boiler room was being used to store #6 oil. prior to converting to #4 oil, contractor cleaned out the tank and tested it. the 4,500 gal AST is out of service since it failed a tightness test. contractor installed two (2) 275 gal #2 oil temporary ASTs in backyard. the faulty tank was disconnected and rolled over for inspection, when deterioration noted on the tank. based on tank's condition, property owner decided to remove the 4,500 gal AST and install a dual-phase burner with a new natural gas line. gas conversion was completed recently and now boiler company will remove the 4,500 gal AST and all associated contamination. the two temporary ASTs will be installed at the former tank location as back-up tanks. during inspection, no signs of oil spill noted in visible areas around the 4,500 gal tank or in sump located in other corner of the boiler room. no petroleum odors noted in the tank/boiler room. asked Mr. Levie to submit tank/spill closure report. 11/10/17-Hiralkumar Patel. 12:47 PM:- left message for Mr. Levie. 01/30/18-Hiralkumar Patel. 1:47 PM:- spoke with Mr. Levie. he mentioned that the tank was removed by the boiler company. asked him to submit report. Warren Levie email: wml.wel@gmail.com Jose **building super** Ph. (347) 863-2207 01/31/18-Hiralkumar Patel. 10:05 AM:- visited site and met Jose. inspected former tank area in boiler room. no signs of oil staining were noted on concrete floor where 4,500 gal tank was located. no odors noted in boiler room. case closed based on available information."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 2/20/2003 - Sangesland sent a tank test failure letter to: Richard Goodman Goodman Management 2736 Independence Ave. Suite A Bronx, NY 10463 PBS # 2-187054 3/14/2003 Sangesland received a letter from Mr. Jerry Williams of Controlled Combustion (718-367-9800). Letter states that after the initial tank test failure, the fill and vent piping were isolated and the tank retested and passed. A temp oil fill line was installed. Contaminated soil was found around the former oil fill line. Another submittal will be made after all repair/remediation work is complete. 4/24/03 TJD Tom Columbia (Clean

277 EAST 207TH ST APTS (Continued) **S105998196**

Harbors) called regarding sampling requirements. Excavation is 8 ft x 20 ft x 4 ft deep. Demeo instructed Tom to collect 2 samples from each 20 ft sidewall and 1 sample from each 8 ft sidewall. Bottom endpoint samples will not be collected as soils were removed until top of tank was encountered. Tom was instructed to take digital photograph of excavation and provide a statement as to why bottom samples were not collected in the closure report. 5/12/2003 Sangesland reviewed a faxed message from Tom Columbia requesting permission to backfill an open pit. Attachment shows a crude site sketch showing 4 sides to the excavation. 4 soil samples were taken (one per wall) and listed as A, B, C, and D. All VOC's appear within limits. SVOC's show some exceedences. Aside from the lab data sheets, there is no written text discussing the site. No comment on why bottom samples were not taken, no comparison of lab data to Rec. Soil Cleanup Objectives, no photographs, no formal request for closure. 7/16/2003 Jerry Williams of Controlled Combustion submitted a report from Clean Harbors along with photos which outline the excavation, new fill line, end point sampling and a new (passed) tant test done on the site. Spill Closed"

Tank Info:

Tank Number:	01
Tank Id:	25912
Material Code:	0003
Common Name of Substance:	#6 Fuel Oil (On-Site Consumption)

Equipment Records:

E00 - Piping Secondary Containment - None
F00 - Pipe External Protection - None
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
L00 - Piping Leak Detection - None
G02 - Tank Secondary Containment - Vault (w/access)

3595 BAINBRIDGE AVE (Continued) **S102143261**

J02 - Dispenser - Suction Dispenser
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
G10 - Tank Secondary Containment - Impervious Underlayment
K00 - Spill Prevention - None

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/15/1999
Capacity Gallons:	5000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported

. Waste name: POLYCHLORINATED BIPHENOLS (PCBs)

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 42002

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 851

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND TTF letter sent Called PHIL FAZIN. March 9, 2006. Asked him to recall this site / repairs done. Followed with emailed him. - Phil1313@aol.com - His Reply: Hi Dennis, I did these tanks for ABC tank 718 272 2800 I'm showing tank #4 retested 9/10/2003 passed and tank 5 retested 10/06/2003 passed .... ABC should have all the paperwork and what they fixed... Phil Fazin. Will Foloow with a call to ABC. DMP 9/5/06 bf takes over as lead. 9/5/06 Called ABC Tanks and spoke w/Patricia. She will send test results and repair invoice or get back to me. Test was from 2003, so copy of results and repairs are not readily available. bf 9/11/06 I spoke with Donna of ABC Tanks. She faxed invoice. A description of repairs made and any contamination is needed to close this case. bf 1/7/08 PBS inspection scheduled for 1/8/09 at 10 am. bf 1/8/09 PBS Inspection. Onme unregistered AST, tank not properly labeled, no secondary containment(AST), no monthly inspection records(AST. bf 1/26/09 Received message from Donna of ABC Tank regarding this spill. Called back and she was not in. Left message that I was returning her call. bf (Brian Falvey) 9/29/09 - Austin - Transferred from Albany assignment to Patel, for further investigation. - end 10/07/09-Hiralkumar Patel. TTF letter was sent on 08/21/2003.

MONTEFIORE MEDICAL CTR-111 E 210TH ST (Continued) **1000399630**

<---------- PBS #: 2-601987. according to PBS record, site has/had following tanks: - one 20,000 gal diesel AST on legs in service - two 30,000 gal #2 oil USTs (tank # 4 & 5) in service <--- which reported failed - one 3,000 gal diesel UST in service - two 500 gal diesel ASTs on legs in service - five 275 gal diesel ASTs on legs in service - two 50 gal diesel ASTs in contact with surface/soil in service - one 2,000 gal diesel AST on legs in service - two 100 gal diesel ASTs on legs in service - one 20,000 gal #6 oil AST on legs removed on 09/22/03 - one 14,000 gal #6 oil UST removed on 09/01/94 - one 3,000 gal diesel UST closed-in-place in May 1999 alternate addresses: 3415-3449 Bainbridge Ave, 130-150 E Gun Hill Rd, 3450-3480 Dekalb Ave, 50-100 E Gun Hill Rd, 3401-3403 Bainbridge Ave, 3444 Kossuth Ave other spill #: 9703759 3:30 PM:- visited site. spoke with person in engineering department who asked to contact Tim Smith or Brian Reily at (718) 920-4455. 12/01/09-Hiralkumar Patel. 1:09 PM:- spoke with Mr. Smyth. as per Mr. Smyth, gaskets were changed on both tanks. asked Mr. Smyth to send information about cause of test failure and action taken to correct the problem. Montefiore Medical Center 111 E 210th Street Bronx, NY 10467 Attn.: Tim Smyth CoGeneration Plant Manager Engineering Department Ph. (718) 920-2763 (718) 920-2476 Fax (718) 920-5066 email: TSMYTH@montefiore.org another spill reported at the site as found leak in supply line for one 30,000 gal tank. spill #: 0908842. 12/03/09-Hiralkumar Patel. 9:44 AM:- received email from Mr. Smyth with copy of letter dated 01/27/09 and copy of logbook record. according to letter from Mr. Smyth date 01/27/09, only manhole gasket cover was replaced on both tanks and both tanks passed test on 10/06/03. based on available information, case closed."

Remarks: "TWO TANKS THAT FAILED BOTH WITHIN 1 HR REEVALUATE UNCOVER AND RETEST POSSIBLY BAD VALVE 04/06/06 D Pokrzywka - Montefiore Medical Center, 718 231-9785 Phil1313@aol.com Called ABC Tank 718 272 2800 - they will fax a report that the tightness test passed. Waiting for Fax."

Spiller Name:	PAT LAMB
Spiller Company:	MONTEFIORE MEDICAL CENTER
Spiller Address:	111 EAST 210TH ST
Spiller Company:	999
Contact Name:	PAT LAMB
DEC Memo:	"11/30/10-Hiralkumar Patel. 5:30 PM:- visited site. met Patricia Lamb from Montefiore and Quitin Seely from Triumvirate Environmental. Ms. Lamb mentioned that a 20 year old transformer (2 ft x 2 ft x 2 ft in size) was removed from a building which is under renovation. transformer was transported into a dumpster located along side of nearby building. lateron when Triumvirate came to remove the transformer, they found oil in the dumpster and some contaminated debris near the transformer. some oil also found on parking asphalt. two sewer manholes located near the dumpster area. Ms. Lamb doesn't know if any oil got into sewer system. Triumvirate did on-site quick test and found transformer oil contains more than 50 ppm of PCB. Triumvirate has put impacted material inside drums and were cleaning up parking asphalt during site visit. due to rainy weather, Triumvirate will cover dumpster and sewer manholes to prevent further damage. Triumvirate has collected three samples and will return tomorrow to triple rinse the dumpster and parking asphalt. suggested

MONTEFIORE MEDICAL CTR-111 E 210TH ST (Continued) **1000399630**

Ms. Lamb to remove all debris in the dumpster as a contaminated material. also asked her to report spill to NYC DEP (as suspect oil in sewer). Ms. Lamb mentioned that no contamination or sign of leak found along the way from the transfomer location inside building and the dumpster. Triumvirate has pumped out about 15-20 gals of oil/water mix from dumpster. Triumvirate will submit lab result and disposal manifests. Patricia Lamb Director Environmental Health & Safety Montefiore Medical Center 111 E 210th Street Bronx, NY 10467-2490 Ph. (718) 920-5104 (O) (347) 882-2014 (C) email: palamb@montefiore.org Quitin Seely Triumvirate Environmental Ph. (516) 403-3193 Tom Goss Triumvirate Environmental Ph. (617) 839-9280 12/03/10-Hiralkumar Patel. received email from Ms. Lamb (at 7:50 PM on 12/02/10) including proposed corrective action plan and sample results. as per the corrective action plan, two transformer were found. one approx. 40 gal transformer was cut and release oiil inside the building and second approx. 30 gal transformer release oil outside in dumpster. PCB analysis shows 560 ppm of PCB in one samplea and 13 ppm in second sample. Ms. Lamb has reported spill to EPA region 2 and using EPA guidance to clean the PCB spill. 8:33 AM:- received email from Ms. Lamb. EPA recommended to follow PCB Spill Cleanup Policy at 40 CFR 761.120. James Haklar EPA Ph. (732) 906-6817 email: haklar.james@epamail.epa.gov S Antony NYC DEP email: santony@dep.nyc.gov 3:16 PM:- spoke with Ms. Lamb regarding spill inside building and inquired about result of sample from inside the building. Ms. Lamb mentioned that she didn't noticed second transformer spill until she inspected area in the morning on 12/01/10. she also mentioned that triumvirate crew collected leaking oil into bucket from transformer that was inside the building and then use same bucket to collect free product from roll-off container outside the building. so results of 560 ppm of PCB is actually mixture of oil from both locations. the second sample was collected from asphalt surface near the dumpster area and due to rain, that sample was mixture of oil and water and that could be reason of low PCBs in sample. currently, the area inside the building where spill noticed is secured and no access. Triumvirate is doing cleanup of outside area today and will return on 12/06/10 to clean inside the building. 12/10/10-Hiralkumar Patel. 2:59 PM:- received email from Ms. Lamb including site map, sample results and disposal manifests. 12/13/10-Hiralkumar Patel. 2:45 PM:- left message for Mr. Haklar at EPA. 12/14/10-Hiralkumar Patel. 10:48 AM:- spoke with Mr. Haklar. he asked to contact Vickie Pane, project manager in EPA. 10:50 AM:- left message for Ms. Pane. Vickie Pane PH. (732) 321-6798 email: pane.vickie@epa.gov 01/04/11-Hiralkumar Patel. 4:00 PM:- spoke with Ms. Pane at EPA. she reviewed data and found that some area inside building needs further cleanup. she will talk to Ms. Lamb and will send updates. 01/05/11-Hiralkumar Patel. received email from Ms. Pane (at 5:05 PM on 01/04/11). she has left message for Ms. Lamb. Ms. Pane mentioned that PCB concentration levles are still high in some areas inside the building. 01/18/11-Hiralkumar Patel. 11:41 AM:- left message for Ms. Pane. after discussing with DEC Austin, case closed as EPA is monitoring the cleanup. 01/26/11-Hiralkumar Patel. 9:54 AM:- received call from Ms. Pane. she received futher sampling results that she will forward to the department. informed her that as EPA is monitoring the site, spill number has been closed. 10:00 AM:- received email from Ms. Pane with additional report."

Remarks: "Transformer was placed into a dumpster from a construction site in facility. TriUmforant Environmental was scheduled to remove

MONTEFIORE MEDICAL CTR-111 E 210TH ST (Continued) **1000399630**

transformer from location and discoverted it was leaking into dumpster. Unkown how much leaked from dumpster into strom sewer. Transformer oil is PCB. Cleanup is underway at this time."

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in

MONTEFIORE MEDICAL CTR-111 E 210TH ST (Continued) **1000399630**

regions and states with cooperative agreements, enforcement actions, and settlements.

COMPLIANCE AND EMISSIONS REPORTING

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ELECTRIC GENERATOR

AIR MAJOR

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Region:	2
DER Facility ID:	300190
DEC Memo:	"11/3/05-Vought-Daytime duty responder. Performed site visit with DEC Piper. Onsite was Atlas Fuel Oil (Joe) and site owner (Emma Harper). Spill caused by rotting of leg of 275-gallon #2 fuel oil UST causing UST to fall to ground which severed supply line to boiler causing contents of tank to spill to finished basement. No spill out of vent, fill or top of tank. No sewers or drains affected. At time of spill approximately 30 gallons of oil still on basement floor but outline of former puddle indicated that loss of product was occurring

POLE #6465 (Continued) **S107409088**

(possibly seepage through basement floor). Vought spoke to homeowners insurance company (Liberty Mutual Kim 800-225-2467x4138). Liberty unable to send out adjustor until next day. Petroleum Tank Cleaners (Anthony 718-624-4842) was contacted and came out to site and applied adsorbent material and recovered remaining product on top of floor. Vought called Emma Harper to find status of adjustor visit and visit scheduled for 5:30pm today. DEC requires: 1)removal of floor tile and impacted baseboard and 2)inspection of concrete and subsurface due to loss of product. 11/4/05-Vought-Received message from Craig Gendron (adjustor called Liberty Mutual 603-498-0226). Vought returned call and spoke to Gendron. Gendron performed site visit and PTC removed on drum of saturated adsorbent and one drum still onsite. Vought required debris removal and soil borings/excavation depending on condition of concrete. Gendron will send recommendations to Liberty and note that spill should be addressed quickly due to vapor concerns. Vought called Harper and she left a message with Kevin from Liberty Mutual. 11/7/05-Vought-Called Craig and left message to return call with Liberty Mutual contact person to find out status of spill. Vought spoke to Gendron and contact info is Kevin Bougie (603-749-2600x30164 fax 603-334-8088). Vought called Bougie and left message to return call. Vought faxed and sent soil contamination letter to Bougie requiring: 1)excavation of soil and collection of endpoint samples 2)removal of oil contaminated debris including the bases of walls and floor tiles and 3)sealing of basement floor. 11/9/05-Vought-Received call from Emma Harper that tank was not replaced as of yet. Vought explained that the DEC cannot be involved in tank replacement as tank was rotted due to rust and replacement is responsibility of homeowner. Vought called Bougie to find out status of debris removal and left message to return call. Vought received call from Bougie that debris removal inside residence will not be covered however one soil boring into basement floor will be covered. Vought received message from Emma Harper (718-944-4263) and returned call and line was busy. Vought spoke to Harper and she thinks her insurance should cover removal of debris. Harper will replace tank. 11/14/05-Vought-Received message from Craig Gendron and returned call. Borings may be scheduled for tommorrow (approximately 4 borings) and samples will be obtained for 8260/8270 from each borings. Vought required boring be placed between two rooms. Report will be sent to DEC. 11/16/05-Vought-Received message from Emma Harper. Vought returned call and spoke to her. Soil borings were performed yesterday (approximately three borings). Boring locations will be filled in today. New tank will be installed today. Tiles not removed from floor as of yet and odors decreasing in household. 11/28/05-Vought-Received email results from Craig Gendron. Depth of borings was 2 feet below grade via hand auger. Installation of four soil borings. No groundwater encountered. Soil was made of coalash/clinkers/sand . The soil retreived from SB1 and SB2 had a strong oily odor . PID readings up to 556ppm. Soil analyticals show: 12600ppb n-butylbenzene (SB1 4), 9510ppb sec-butylbenzene(SB1 4), 9610ppb ethylbenzene(SB1 4), 5260ppb isopropylbenzene(SB1 4), 40700ppb napthalene(SB1 4), 12900ppb n-propylbenzene(SB1 4), 81700ppb 1,2,4-trimethylbenzene(SB1 4), 23700ppb 1,3,5-trimethylbenzene, 44700ppb xylene(SB1 4), 22300ppb n-butylbenzene(SB1 20), 15600ppb sec-butylbenzene(SB1 20), 21600ppb ethylbenzene(SB1 20), 9540ppb isopropylbenzene(SB1 20), 12500ppb 4-isopropyltoluene(SB1 20), 67200ppb napthalene(SB1 20), 23900ppb n-propylbenzene(SB1 20), 20600ppb toluene(SB1 20), 141000ppb

POLE #6465 (Continued) **S107409088**

1,2,4-trimethylbenzene(SB1 20), 39000ppb 1,3,,5-trimethylbenzene(SB1 20), 87900ppb xylene(SB1 20). 11/29/05-Vought-Called Craig Gendron (603-431-4899x331 fax 603-431-5982) for further action. Craig will contact Liberty Mutual and call back DEC with further action. 12/1/05-Vought-Spoke to Craig and as per Liberty and no more work will be done by Liberty Mutual. Vought spoke with DEC Austin, DEC Legal Urda and AG Banan to confirm that as per Nav Law 190 insurer could also be held liable for spill cleanup. Banan advised that new letter be sent reflecting such. Vought also spoke to DEC Urda and received his approval for letter. Vought will send letter to insurance company. 12/05/05-Vought-Sent letter to insurance company and cc'd AG Banan and DEC Urda. Vought called Kevin Bougie for address of insurance company and sent letter with address of Harper and Bougie: Mr. Kevin Bougie Liberty Mutual 100 Liberty Way Dover, NH 03820 Fax: (603-334-8088) Vought received call from Emma Harper and returned call. Vought spoke to Harper and received letter from Liberty Mutual that he coverage is denied. Vought informed her of letter and told her to call back to DEC with spill status. 1/6/06-Vought-Received call from Harper and she sent a letter to manager at Liberty Mutual and she has received no response. Odors are gone from house. Vought contacted Kevin Bougie with Liberty with DEC Urda and Kevin will return call with further investigation of groundwater. Vought called Harper and informed her of phone call with Liberty Mutual. If groundwater sample comes back clean, site visit will be performed by DEC to inspect and confirm no vapors. 1/9/06-Vought-Received message from Kevin Bougie that groundwater sample was being scheduled. 1/26/06-Vought-Received call from Emma Harper. Vought returned call and left message to return call. 2/3/06-Vought-Received message from Emma Harper and returned call and spoke to Emma. Emma has changed insurance companies. New insurance will review file and possible seek action against old insurance company. As per Emma, borings have not been performed yet. No odors are present but smell of sweet air still present. Vought called Bougie for update and left message to return call to DEC. 2/6/05-Vought-Received message from Bougie that further investigation was not feasible and as a result insurance company has decided to go ahead with cleanup. Insurance company awaiting two proposals for cleanup. Vought called Harper to inform her of possible cleanup by insurance and no answer on phone. Vought called Bougie and left message to return call with possible remedial methods. 2/9/06-Vought-Received call from Gendron (603-498-0226). Vought returned call and left message to return call to DEC. 3/7/06-Vought-Received call from Gendron. Vought returned call and spoke to Gendron and Liberty approved soil excavation. Scope of work will include remove impacted tile and concrete floor, remove impacted soil by hand or vactor, collect endpoints, backfill and seal concrete. Anticipated time of work start is 2-3 weeks (so bids can be put out for contractor). Vought received call from Harper and spoke to daughter and informed her of impending cleanup. As per daughter there were no odors at site. 04/17/06-Vought-Received message from Gendron on 4/12/06. Initial contractor selected for work cancelled contract at last minute. New contractor being looked for. Anticipated work start in 2-3 weeks. 05/02/06-Vought-Received message from Gendron that work was going to start soon. Vought returned call and spoke to Gendron. Excavation plan formatted by engineer will be forwarded to DEC for review. Work will be performed by Clean Harbors. 05/03/06-Vought-Received and reviewed Scope of Work via email. Vought

POLE #6465 (Continued) **S107409088**

sent email approving of scope to Gendron. 05/17/06-Vought-Spill transferred from DEC Vought to DEC Piper as per DEC Austin. 5/19/06- DEC Piper spoke w/ Craig Gendron 603-498-0226 of Jaques Witfird regardiong site. Excavation began yesterday and endpoint samples will be collected. Jaques Witfird contracted clean harbors. 5/23/06- DEC Piper met Clean harbors on site. The excavation was open and soils were field screened. South sidewall exhibited highest concentrations of 190 ppm and north sidewall exhibited 100ppm. DEC instructed to remove as much soil as possible and submit 3 endpoint samples for analysis. Due to structural concerns, all cont soil may not be able to be excavated. Therefore a vapor barrier may need to be installed and the restored concrete be sealed w/ an epoxy paint. 8/31/06- DEC Piper reveiwed closure request dated Aug 22, 2006. AS per report approx 10 tons of contamianted soil and debris were removed from the basement of the site. Three endpoints were collected that exhibited two exceedances of VOC's in one sample. The area was backfilled and a new concrete floor was poured. Afterwards, an epoxy paint was applied to the slab to ensure no residual vapors could enter the basement. This cas is closed. See e-docs if warranted."

Remarks: "CALLER STATES THAT THEY FILLED HE TANK WITH 140 GALLONS AND THEN THE WHISTLE BLEW SO THEY STOPPED PUMPING OIL. ONCE THEY LEFT, THE RESIDENT CALLED BACK SAYING THAT THE BOTTOM OF THEIR TANK FELL OUT. THE HOLE TANK WAS LOST TO THE BSAEMENT, CONCRETE, NORTHEASTERN ENVIRONMENTAL WAS REFERRED FOR CLEAN UP. TECH IS ON SITE RIGHT NOW."

DEC Memo:	"****NO PBS Found for 375 east 205th St, Bronx**** Maybe other address??? Sangesland spoke to Neil Tomasetti at Eastmond. Eastmond was hired by a potential purchaser to do a tank test. Tank failed. Neil will try to get Owner info (Sangesland could not find PBS) Tank is buried under front courtyard adjacent to the basement wall. Eastmond suggested taking a horizontal soil boring through the basement wall and another vertical boring in the front courtyard to see if the tank is leaking. Owner and purchaser are discussing options. 9/21/09. J.Krimgold reviewed the letter report submitted by Eastmond and dated Sept 14, 2009. Based on the report the tank failed the test due to the excessive rusting of the top of the tank. The tank was pumped out cleaned and closed in place. Five soil samples were collected. All samples show no contamination in the soil surrounding the tank. Case closed."

Site Description: Location: The site is located at 3200 Jerome Ave. in an urban section of the Bronx. It is located at the northeast corner of the intersection of Jerome Avenue and Van Cortlandt Avenue East. The site is identified as Block 3323, Lot 36 on the Bronx County Tax Map. Site Features: The site consists of a triangular-shaped, approximately 11,500-square foot property that is fully occupied by an approximately 18,200 sf, 2-story building. Current Zoning/Use(s): Until recently, the building had been occupied by PS 51X (The Bronx New School), an elementary school serving Kindergarten through 5th

NESSEN LAMPS INC (Continued) **1000379735**

grade. The site has been leased by the New York City School Construction Authority for this use since 1993. Historical Use(s): The on-site building was constructed in 1928. The building was occupied by an auto garage from 1928 until approximately 1950, when it was converted for manufacturing use. The building was occupied by Nessen Lamps, Inc. from circa 1950s until approximately 1993, when it was converted for academic use. Waste manifest data indicate that Nessen Lamps Inc. used trichloroethylene (TCE) in its manufacturing process, and generated waste TCE from 1982 through 1987. Site Geology and Hydrogeology: No site specific geological or hydrogeological data has been collected. Regional geology (based on USGS data) consists of glacial deposits and fill overlying bedrock (typically Manhattan Schist). Bedrock in the vicinity of the site has been reported at a depth of 15 to 20 feet below grade. Groundwater has been reported at 12 to 16 feet below grade in the vicinity of the site. This site is being investigated and remediated under the Brownfield Cleanup Program as site no. C203061.

Env Problem: Nature and Extent of Contamination: Currently, data has only been collected for indoor air and sub-slab soil vapor. In January 2011, indoor air samples collected at 2 locations inside the building detected TCE at concentrations up to 53 ug/m3. Subsequent indoor air samples collected in April 2011 at 3 locations in the building detected TCE at concentrations up to 310 ug/m3. (This maximum concentration was collected from an unoccupied partial basement, however these samples were also collected after ventilating the building for 3 hours then sealing the building for 24 hours.) Indoor air samples were also collected in May 2011 as part of a pilot study of enhanced building ventilation, which consisted of (1) opening windows in all first and second floor classrooms, (2) operating the HVAC system in ?summer mode?, and (3) activating a roof-mounted 8,000 CFM ventilation fan for approximately 9 hours prior to the sampling event. The indoor air results indicated maximum TCE concentration of 607 ug/m3 in the partial basement. Sub-slab samples collected in March (no concurrent indoor air samples collected) detected TCE at a maximum concentration of 53,300 ug/m3. Subsequent sampling in April, which coincided with concurrent indoor air samples, detected maximum sub-slab concentrations of 31,000 ug/m3. A Site Characterization is planned to determine if an on-site source of TCE is present. Significant Threat: Evaluation of significant threat will be made when the Site Characterization is completed. This site is being investigated and remediated under the Brownfield Cleanup Program as site no. C203061.

Site Description:	Location: The Former Nessen Lamps Site is located at 3200 Jerome Avenue in the Bronx. It is located at the northeast corner of Jerome Avenue and Van Cortlandt Avenue East. The site is identified as Block 3323, Lot 36 on the Bronx County Tax Map. The site is surrounded by a garage and other commercial uses to the north/northeast; residential buildings to the east along Van Cortlandt Ave.; commercial and residential buildings to the south across Van Cortlandt Ave.; and a New York City Department of Environmental Protection (NYCDEP) facility and NYC Transit Authority train yard to the west. Site Features: The site consists of a triangular-shaped, approximately 11,500-square foot property that is fully occupied by an approximately 18,200 sf, 2-story building. The building is currently vacant. Current Zoning: The site is currently zoned C8-2 (commercial district). Past Use of the Site: The site was historically used as a garage (approximately 1928 to 1956); a drug company (1956 to 1965); Nessen Lamps, Inc. for lamp manufacturing (1971 through 1988); and most recently by the NYC Departement of Education for the Bronx New School (PS51X) from 1993 through June 2011. It has since been vacant. Four 550-gallon buried gasoline tanks were noted at the site between 1945 and 1992 prior to its use as a school. Nessen Lamps, Inc. is known to have generated hazardous waste (trichloroethene) at the site between 1982 and 1987, based on hazardous waste documentation available from that time period. Site Geology and Hydrogeology: Overburden soil beneath the Site is characterized by fill material, consisting of sand, with silt, gravel, brick, glass, coal, and ash present to depths of approximately 4 to 9 feet below surface grade. The overburden beneath the fill material was documented as a generally brown glacial till consisting of fine to medium sand with varying amounts of silt, clay, gravel, cobbles, and weathered rock. The till material is underlain by bedrock that slopes downward in elevation from a high point in the southwestern portion of the Site at approximately 16 feet below sidewalk grade to a low point in the

NESSEN LAMPS INC (Continued) **1000379735**

northeastern portion of the Site at approximately 32 feet below sidewalk grade. The topography of the Site slopes gently from the east to the west. The overburden groundwater aquifer is present at a depth of approximately 22 feet below the exterior sidewalk grade. Groundwater flow direction in the overburden groundwater aquifer is generally to the west and west-southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and associated breakdown products of TCE. Remedial actions have successfully achieved a cleanup for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor will be managed under a Site Management Plan. Significant Threat: The Site no longer represents a significant threat to public health with the completion of the cleanup, provided the Site Management Plan continues to be properly implemented.

Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. Soil vapor intrusion sampling had identified impacts in indoor air quality in the on-site building. A sub-slab depressurization system has been installed to prevent soil vapor intrusion in the future. Sampling of the neighboring apartment building indicates soil vapor intrusion is not a concern.

Site Code: 458527
Site Description: Location: The Former Nessen Lamps Site is located at 3200 Jerome Avenue in the Bronx. It is located at the northeast corner of Jerome Avenue and Van Cortlandt Avenue East. The site is identified as Block 3323, Lot 36 on the Bronx County Tax Map. The site is surrounded by a garage and other commercial uses to the north/northeast; residential buildings to the east along Van Cortlandt Ave.; commercial and residential buildings to the south across Van Cortlandt Ave.; and a New York City Department of Environmental Protection (NYCDEP) facility and NYC Transit Authority train yard to the west. Site Features: The site consists of a triangular-shaped, approximately 11,500-square foot property that is fully occupied by an approximately 18,200 sf, 2-story building. The building is currently vacant. Current Zoning: The site is currently zoned C8-2 (commercial district). Past Use of the Site: The site was historically used as a garage (approximately 1928 to 1956); a drug company (1956 to 1965); Nessen Lamps, Inc. for lamp manufacturing (1971 through 1988); and most recently by the NYC Departement of Education for the Bronx New School (PS51X) from 1993 through June 2011. It has since been vacant. Four 550-gallon buried gasoline tanks were noted at the site between 1945 and 1992 prior to its use as a school. Nessen Lamps, Inc. is known to have generated hazardous waste (trichloroethene) at the site between 1982 and 1987, based on hazardous waste documentation available from that time period. Site Geology and Hydrogeology: Overburden soil beneath the Site is characterized by fill material, consisting of sand, with silt, gravel, brick, glass, coal, and ash present to depths of approximately 4 to 9 feet below surface grade. The overburden beneath the fill material was documented as a

NESSEN LAMPS INC (Continued) **1000379735**

generally brown glacial till consisting of fine to medium sand with varying amounts of silt, clay, gravel, cobbles, and weathered rock. The till material is underlain by bedrock that slopes downward in elevation from a high point in the southwestern portion of the Site at approximately 16 feet below sidewalk grade to a low point in the northeastern portion of the Site at approximately 32 feet below sidewalk grade. The topography of the Site slopes gently from the east to the west. The overburden groundwater aquifer is present at a depth of approximately 22 feet below the exterior sidewalk grade. Groundwater flow direction in the overburden groundwater aquifer is generally to the west and west-southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and associated breakdown products of TCE. Remedial actions have successfully achieved a cleanup for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor will be managed under a Site Management Plan. Significant Threat: The Site no longer represents a significant threat to public health with the completion of the cleanup, provided the Site Management Plan continues to be properly implemented.

Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. Soil vapor intrusion sampling had identified impacts in indoor air quality in the on-site building. A sub-slab depressurization system has been installed to prevent soil vapor intrusion in the future. Sampling of the neighboring apartment building indicates soil vapor intrusion is not a concern.

The building is currently vacant. Current Zoning: The site is currently zoned C8-2 (commercial district). Past Use of the Site: The site was historically used as a garage (approximately 1928 to 1956); a drug company (1956 to 1965); Nessen Lamps, Inc. for lamp manufacturing (1971 through 1988); and most recently by the NYC Departement of Education for the Bronx New School (PS51X) from 1993 through June 2011. It has since been vacant.

NESSEN LAMPS INC (Continued) **1000379735**

Four 550-gallon buried gasoline tanks were noted at the site between 1945 and 1992 prior to its use as a school. Nessen Lamps, Inc. is known to have generated hazardous waste (trichloroethene) at the site between 1982 and 1987, based on hazardous waste documentation available from that time period. Site Geology and Hydrogeology: Overburden soil beneath the Site is characterized by fill material, consisting of sand, with silt, gravel, brick, glass, coal, and ash present to depths of approximately 4 to 9 feet below surface grade. The overburden beneath the fill material was documented as a generally brown glacial till consisting of fine to medium sand with varying amounts of silt, clay, gravel, cobbles, and weathered rock. The till material is underlain by bedrock that slopes downward in elevation from a high point in the southwestern portion of the Site at approximately 16 feet below sidewalk grade to a low point in the northeastern portion of the Site at approximately 32 feet below sidewalk grade. The topography of the Site slopes gently from the east to the west. The overburden groundwater aquifer is present at a depth of approximately 22 feet below the exterior sidewalk grade. Groundwater flow direction in the overburden groundwater aquifer is generally to the west and west-southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and associated breakdown products of TCE. Remedial actions have successfully achieved a cleanup for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor will be managed under a Site Management Plan. Significant Threat: The Site no longer represents a significant threat to public health with the completion of the cleanup, provided the Site Management Plan continues to be properly implemented.

Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. Soil vapor intrusion sampling had identified impacts in indoor air quality in the on-site building. A sub-slab depressurization system has been installed to prevent soil vapor intrusion in the future. Sampling of the neighboring apartment building indicates soil vapor intrusion is not a concern.

Site Code: 458527
Site Description: Location: The Former Nessen Lamps Site is located at 3200 Jerome Avenue in the Bronx. It is located at the northeast corner of Jerome Avenue and Van Cortlandt Avenue East. The site is identified as Block 3323, Lot 36 on the Bronx County Tax Map. The site is surrounded by a garage and other commercial uses to the north/northeast; residential buildings to the east along Van Cortlandt Ave.; commercial and residential buildings to the south across Van Cortlandt Ave.; and a New York City Department of Environmental Protection (NYCDEP) facility and NYC Transit Authority train yard to the west. Site Features: The site consists of a triangular-shaped, approximately 11,500-square foot property that is fully occupied by an approximately 18,200 sf, 2-story building. The building is currently vacant. Current Zoning: The site is currently zoned C8-2 (commercial district). Past Use of the Site: The site was historically used as a garage (approximately 1928 to 1956); a drug company (1956 to 1965); Nessen Lamps, Inc. for lamp manufacturing (1971 through 1988); and most recently by the NYC Departement of Education for the Bronx New School (PS51X) from 1993 through June 2011. It has since been vacant. Four 550-gallon buried gasoline tanks were noted at the site between 1945 and 1992 prior to its use as a school. Nessen Lamps, Inc. is known to have generated hazardous waste (trichloroethene) at the site between 1982 and 1987, based on hazardous waste documentation available from that time period. Site Geology and Hydrogeology: Overburden soil beneath the Site is characterized by fill material, consisting of sand, with silt, gravel, brick, glass, coal, and ash present to depths of approximately 4 to 9 feet below surface grade. The overburden beneath the fill material was documented as a generally brown glacial till consisting of fine to medium sand with varying amounts of silt, clay, gravel, cobbles, and weathered rock. The till material is underlain by bedrock that slopes downward in elevation from a high point in the southwestern portion of the Site at approximately 16 feet below sidewalk grade to a low point in the northeastern portion of the Site at approximately 32 feet below sidewalk grade. The topography of the Site slopes gently from the east to the west. The overburden groundwater aquifer is present at a depth of approximately 22 feet below the exterior sidewalk grade. Groundwater flow direction in the overburden groundwater aquifer is generally to the west and west-southwest.
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and associated breakdown products of TCE. Remedial actions have successfully achieved a cleanup for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor will be managed under a Site Management Plan. Significant Threat: The Site no longer represents a significant threat to public health with the completion of the cleanup, provided the Site Management Plan continues to be properly implemented.
Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into

NESSEN LAMPS INC (Continued) **1000379735**

overlying buildings and affect the indoor air quality. Soil vapor intrusion sampling had identified impacts in indoor air quality in the on-site building. A sub-slab depressurization system has been installed to prevent soil vapor intrusion in the future. Sampling of the neighboring apartment building indicates soil vapor intrusion is not a concern.

Site Description: Location: The Former Nessen Lamps Site is located at 3200 Jerome Avenue in the Bronx. It is located at the northeast corner of Jerome Avenue and Van Cortlandt Avenue East. The site is identified as Block 3323, Lot 36 on the Bronx County Tax Map. The site is surrounded by a garage and other commercial uses to the north/northeast; residential buildings to the east along Van Cortlandt Ave.; commercial and residential buildings to the south across Van Cortlandt Ave.; and a New York City Department of Environmental Protection (NYCDEP) facility and NYC Transit Authority train yard to the west. Site Features: The site consists of a triangular-shaped, approximately 11,500-square foot property that is fully occupied by an approximately 18,200 sf, 2-story building. The building is currently vacant. Current Zoning: The site is currently zoned C8-2 (commercial district). Past Use of the Site: The site was historically used as a garage (approximately 1928 to 1956); a drug company (1956 to 1965); Nessen Lamps, Inc. for lamp manufacturing (1971 through 1988); and most recently by the NYC Departement of Education for the Bronx New School (PS51X) from 1993 through June 2011. It has since been vacant. Four 550-gallon buried gasoline tanks were noted at the site between 1945 and 1992 prior to its use as a school. Nessen Lamps, Inc. is known to have generated hazardous waste (trichloroethene) at the site between 1982 and 1987, based on hazardous waste documentation available from that time period. Site Geology and Hydrogeology: Overburden soil beneath the Site is characterized by fill material, consisting of sand, with silt, gravel, brick, glass, coal, and ash present to depths of approximately 4 to 9 feet below surface grade. The overburden beneath the fill material was documented as a generally brown glacial till consisting of fine to medium sand with varying amounts of silt, clay, gravel, cobbles, and weathered rock. The till material is underlain by bedrock that slopes downward in elevation from a high point in the southwestern portion of the Site at approximately 16 feet below sidewalk grade to a low point in the northeastern portion of the Site at approximately 32 feet below sidewalk grade. The topography of the Site slopes gently from the east to the west. The overburden groundwater aquifer is present at a depth of approximately 22 feet below the exterior sidewalk grade. Groundwater flow direction in the overburden groundwater aquifer is generally to the west and west-southwest.
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) and associated breakdown products of TCE. Remedial actions have successfully achieved a cleanup for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor will be managed under a Site Management Plan. Significant Threat: The Site

NESSEN LAMPS INC (Continued) **1000379735**

no longer represents a significant threat to public health with the completion of the cleanup, provided the Site Management Plan continues to be properly implemented.

Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. Soil vapor intrusion sampling had identified impacts in indoor air quality in the on-site building. A sub-slab depressurization system has been installed to prevent soil vapor intrusion in the future. Sampling of the neighboring apartment building indicates soil vapor intrusion is not a concern.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

COOLING TOWERS: Registered Cooling Towers

This data includes the location of cooling towers registered with New York State. The data is self-reported by owners/property managers of cooling towers in service in New York State. In August 2015, the New York State Department of Health released emergency regulations requiring the owners of cooling towers to register them with New York State.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 02/11/2019

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

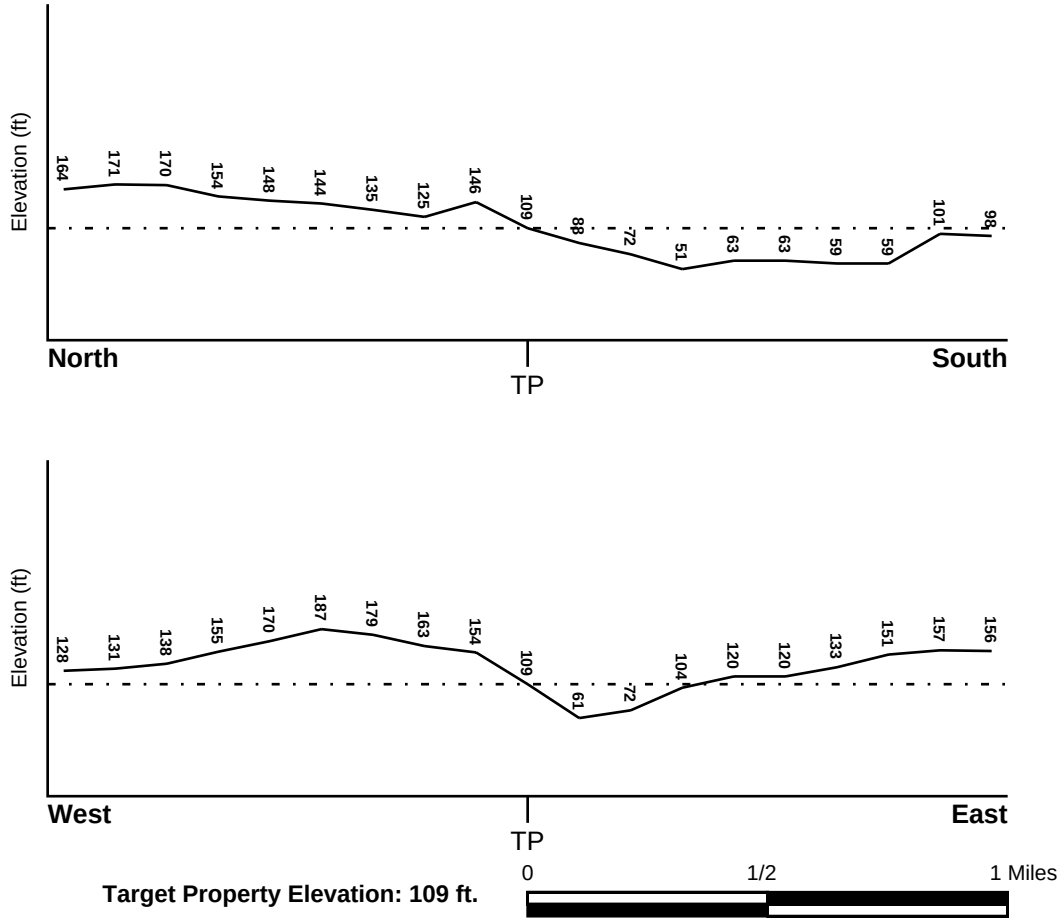
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
36119C0338F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
34003C0220G	FEMA FIRM Flood data
3604970006B	FEMA Q3 Flood data
3604970082F	FEMA FIRM Flood data
3604970101F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MOUNT VERNON	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT **GEOLOGIC AGE IDENTIFICATION**

Era:	Paleozoic	Category:	Stratified Sequence
System:	Ordovician		
Series:	Middle Ordovician (Mohawkian)		
Code:	O2 *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam

Surficial Soil Types: loam

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: gravelly - sandy loam
unweathered bedrock
gravelly - fine sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PARTNER

Melissa Marte
Project Assessor

Education

BS Environmental Science, William Paterson University, 2013

Registrations

New York State Asbestos Inspector

Training

Phase I Environmental Site Assessments
Transaction Screen Assessments
Environmental Desktop Reports

Highlights

Phase I Environmental Site Assessments
Transaction Screen Assessments
Environmental Desktop Reports

Experience Summary

Ms. Marte currently holds the role of a Project Assessor with responsibilities including thorough site assessments and technical report writing for Phase I Environmental Site Assessments in line with the American Society of Testing and Materials (ASTM) standard and US Environmental Protection Agency's All Appropriate Inquiry (AAI) as well as customized client formats. In addition, Ms. Marte is certified to perform limited asbestos surveys as required per scope of work.

Ms. Marte has worked on numerous large scope projects in the northeast region with a focus in the greater New York City with of variable scopes and complexities including vacant lots, apartment buildings, hotels, office buildings, healthcare facilities, automotive service facilities, gasoline stations, dry cleaners, industrial/warehouse facilities, and shopping centers to identify potential environmental concerns on or near a property, such as dry cleaning operations, hazardous material releases, and leaking underground storage tanks. Ms. Marte also conducts assessments on out-of-scope concerns including asbestos containing materials, lead-based paint, radon, and mold.

Registrations

EPA/AHERA Accredited Asbestos Building Inspector
State of Colorado Certified Asbestos Building Inspector

Training

40-Hr Hazardous Waste Operations HAZWOPER
EPA/AHERA Accredited Asbestos Building Inspector
SafeLand, Environmental Health & Safety Training for Onshore Energy & Production
Basic First Aid (CPR Inclusive)

Highlights

10 years of experience in real estate due diligence and environmental consulting including:

- Phase I/II Environmental Site Assessments
- Property Condition Assessments (PCAs)
- Asbestos-Containing Material (ACM) Survey and Abatement Oversight
- Indoor Air Quality (IAQ) Inspection and Mitigation

Experienced in development and submittal of Voluntary Cleanup Plans (VCP), Materials Management Plans, Transaction Screen Reports, Spill Prevention Control and Countermeasure (SPCC) plans, Colorado Oil and Gas Conservation Commission (COGCC) remediation oversight, stormwater management plans and air emissions inventories

Experience Summary

Mr. Livermore serves as a Project Manager for Partner Engineering and Science, Inc. (Partner) with ten years of comprehensive strategic consulting experience focused on industrial and commercial real estate transactional due diligence, regulatory compliance and subsurface characterization. Mr. Livermore's job responsibilities include project oversight, staff supervision and training, report review and client management. He is responsible for ensuring consistency and quality of due diligence services, providing senior review expertise to ensure conformance with most recent American Society of Testing and Materials (ASTM) standards and U.S. Environmental Protection Agency's (EPA's) All Appropriate Inquiry (AAI), and the satisfaction of client requirements for Phase I Environmental Site Assessments (ESA), Transaction Screen Assessments (TSA) and other environmental services.

Mr. Livermore began his career as an Environmental Scientist, conducting Phase I ESA, TSAs, PCAs and Phase II Subsurface Investigations throughout the Western United States. His due diligence resume includes experience in soil and groundwater contamination investigations, radon measurement and mitigation, and the identification of underground storage tanks (USTs), asbestos, lead-based paint, and PCB contamination. Mr. Livermore has also performed remediation oversight and worked closely with regulators to develop voluntary cleanup plans, contingency plans and contamination management plans for developers. Mr. Livermore previously was retained by a national due diligence firm to perform technical report reviews, project management and support technical relationship management. Mr. Livermore joined Partner in 2015 and has operated as a Project Manager for both environmental and building science services. Over the past

nine years, Mr. Livermore has successfully performed, reviewed or managed due diligence projects on thousands of properties throughout the country.

Project Experience

Phase I/II Due Diligence

Phase I/II Environmental Site Assessments (ESAs), Local Commercial Real Estate Developers, Colorado. Directly assisted the environmental consulting services associated with a large-scale mixed-use redevelopment project at a downtown Denver infill property with extensive petroleum and volatile organic compound soil and groundwater impacts. Environmental due diligence services included preparation and coordination of a Phase I Environmental Site Assessment, Phase II Limited Subsurface Investigation and ground penetrating radar investigation. Mr. Livermore prepared and oversaw the execution of a Voluntary Cleanup Plan (VCUP) Application and Materials Management Plan (MMP) outlining site specific remediation objectives based on investigation findings in accordance with the Colorado Department of Public Health & Environment to facilitate site redevelopment and petition for no further action. Long-term project work included direct oversight of construction earthwork activities focused on management of soil impacts, coordination of environmental subcontractors, effective client/owner communication and preparation of a completion closeout report.

Phase I/II Environmental Site Assessments (ESAs), ACM Pre-Demolition Surveys, Fortune 500 Multifamily Real Estate Developer, Colorado and Arizona. Mr. Livermore managed the execution of environmental due diligence projects including Phase I Environmental Site Assessments, Phase II Limited Subsurface Investigations, asbestos pre-demolition surveys and/or development of Materials Management Plans for 10+ projects located in the Greater Denver, Colorado and Phoenix, Arizona areas for a Fortune 500 multifamily developer. Project sites ranged from vacant land with historical retail gasoline station uses to developed retail strip centers with dry-cleaner uses and commercial/industrial facilities purchased for residential redevelopment.

Phase I Environmental Site Assessment (ESA), Gypsum Surface Mine, Western Colorado. Mr. Livermore managed the execution of a Phase I ESA on an expansive surfacing mining site spanning over 700 acres in western Colorado as part of due diligence services for a potential buyer. In addition to reviewing applicable mining inspection records dating back to the early 1900s, which identified historic environmental concerns, Mr. Livermore successfully contracted third party associates to identify safety and health violations that resulted in fines potentially inherited by the buyer of the property. By anticipating client's needs, Mr. Livermore was able to communicate the results to the client several days before the agreed upon project deadline.

Asbestos and Indoor Air Quality (IAQ)

Indoor Air Quality Investigation and Emergency Response, Fortune 100 Financial Services Company, Colorado. Mr. Livermore provided emergency response oversight and guidance to contractors at a facility with significant building material damage from a moisture intrusion event. Performed an asbestos survey and moisture mapped interior of 12,000 square foot building to determine materials to remove. Following material removal, performed bio-aerosol sampling for viable and non-viable microbial spore counts within the facility before re-occupancy.

Indoor Air Quality Investigations, Commercial and Multifamily REITs, Colorado. Mr. Livermore provided IAQ services to include visual damage assessment, moisture mapping, asbestos surveys and project oversight for multiple commercial and multifamily properties on behalf of REIT clients. Multiple assessments were completed in response to Occupational Safety and Health Association (OSHA) violations or complaints brought against site facilities. Assessment activities included collection of moisture meter readings, bio-aerosol samples, surface mold samples and bulk asbestos samples.

Property Condition Assessment (PCA)

Property Condition Assessment, National Hospitality REIT, Hawaii. Retained by a national hospitality REIT to provide expedited due diligence services for a high-rise hotel in Honolulu, Hawaii, constructed in the early 1970s. As the client was provided reliance on recently competed ESA and PCA reports, consultant was engaged to conduct third party reviews of the reports and to conduct a site inspection to independently evaluate environmental and engineering concerns and cost implications associated with proposed large-scale hotel renovations. Mr. Livermore mobilized from US mainland to the site three days following authorization to proceed, provided preliminary findings within 48 hours of the two-day site inspection, and issued written reports three days later. The scope included collection of asbestos and lead paint samples and evaluation of water intrusion issues.

Property Condition Assessments, National Hospitality REIT, California and Washington State. Retained by a national hospitality REIT to provide ESA and PCA services for portfolio of high-rise hotel properties located in California and Washington. Mr. Livermore conducted PCAs for multiple hotel properties in collaboration with client's specialist teams and project management staff. Provided immediate need and deferred term costs along with observed visual deficiencies associated with the current layout and condition of each property within client's expedited turnaround time.

Property Condition Assessments, National Retail REIT, Colorado, California, New Mexico and Montana. Mr. Livermore conducted PCAs on large (10+ acre) retail shopping center properties for a national REIT throughout Colorado with various properties located in California, New Mexico and Montana. Provided specialized scope PCAs including HVAC inventories for client specializing in under-performing, grocery-anchored properties throughout the United States. Projects often included coordination and subcontracting outside specialists to provide follow-up investigation for structural and geotechnical issues.

Highlights

Over 16 years in the environmental and engineering consulting industry
Founding member of Partner Engineering and Science, Inc.
Executive Board Member of Partner Engineering and Science, Inc.

Experience Summary

Ms. Redlin has more than 16 years of experience in the environmental and engineering consulting industry. Her background in environmental science, in addition to her knowledge of current commercial real estate due diligence standards, allows her to offer the most efficient and cost-effective means of regulatory compliance. Ms. Redlin has extensive experience managing all aspects of due diligence, specializing in environmental due diligence, for nationwide and local clients such as:

- Residential Developers
- Commercial Developers
- Mortgage Brokers
- Real Estate Brokers
- Individual Property Owners and Buyers
- Financial Institutions including:
- Portfolio Lenders
- SBA Lenders
- HUD Lenders
- Fannie Mae Lenders
- Freddie Mac Lenders
- Private Equity Funds
- Insurance Lenders

Ms. Redlin has gained valuable knowledge and know-how from having been personally involved in the details of thousands of real estate transactions for various client types, and therefore understands the specific needs and scopes of work required for all parties involved in a transaction.

Ms. Redlin has served as an environmental scientist, project manager, or executive senior author on over 15,000 real estate transactions. Ms. Redlin's due diligence resume includes experience at all levels, advising lenders and real estate investors through the following product types:

- Phase I Environmental Site Assessments

- Phase II Subsurface Investigations
- Phase III Site Characterizations
- Remedial Cost Estimates
- Remediation Design and Implementation
- Environmental Transaction Screens
- Property Condition Assessments
- Probable Maximum Loss Assessments
- Property Condition Evaluations

Real estate investors, redevelopment agencies, financial institutions, insurance lenders, and real estate equity funds have come to rely on her advice and judgment to help them with their real estate business decisions. Ms. Redlin is a dedicated professional who takes pride and pleasure in meeting her client's needs and spearheading and assembling the team with the expertise to handle any issue that may come up during the transaction.

Project Experience

Ms. Redlin has extensive experience in testing soil, soil gas, and groundwater in the context of a real estate transaction, as well as under the supervision of state and federal regulators. Among her specialties is guiding landowners and prospective purchasers through the process of selling or acquiring an environmentally challenged site.

Ms. Redlin has participated in the characterization of groundwater and soil contamination; quarterly groundwater monitoring; implementation of various systems such as soil vapor extraction systems, dual phase extraction systems, ozone sparging, air sparging, pump and treat; and soil excavation projects such as tank removals at several clean-up sites in Los Angeles and Orange County.
