1.0 INTRODUCTION

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) prepared this Notice of Intrusive Activity as a formal notification for the proposed redevelopment of a portion of the Former Brooklyn Borough (Coney Island) Gas Works Site located in Brooklyn, New York (the remediation site), which has been remediated to the satisfaction of the New York State Department of Environmental Conservation (NYSDEC). The remediation site is registered in the New York State (NYS) Inactive Hazardous Waste Disposal Site Remedial Program as Site No. 224026. Brooklyn Union (hereinafter referred to as “National Grid”) entered an Order on Consent, Index #D2-001-94-12, on 12 May 1995, with the NYSDEC to remediate Manufactured Gas Plant (MGP)-related impacts at the remediation site (the Order).

The remediation site is comprised of Block 7247, Lots 13, 106, and 218 on the Brooklyn Borough Tax Map. Lot 106 is currently owned by 2731 W 12th Street LLC (W12th Street Owner), and Lots 13 and 218 are currently owned by the New York City (NYC) Department of Sanitation (NYC Sanitation; collectively, with W12th Street Owner, the Property Owners). This notification is being delivered on behalf of W12th Street Owner.

In March 2001, the NYSDEC issued a Record of Decision (ROD) for the remediation of the upland portion of the remediation site, designated as Operable Unit 1 (OU-1). In March 2002, the NYSDEC issued a ROD for the remediation of Coney Island Creek, designated Operable Unit 2 (OU-2). A portion of the remedial work for OU-1, including installing a sealed-seam sheet pile barrier wall and piezometers around the perimeter of the sheet pile wall, was completed between November 2003 and April 2004. Based on the phasing of the remediation, the construction of the sheet pile barrier wall was prioritized over the other remedial elements of OU-1; and as such, the remaining OU-1 remedial elements were designated as Operable Unit 3 (OU-3). The remaining remedial work for OU-2 and OU-3 was completed between January 2007 and October 2008.

As documented in the April 2013 Final Engineering Report (FER), the remediation site is subject to ongoing environmental requirements outlined in an Environmental Notice, Site Management Plan (SMP), and Excavation Work Plan (EWP) due to remaining MGP-related impacts in soil, sediment, and groundwater. Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) performed a limited Phase II Environmental Site Investigation (ESI) across the remediation site in September 2022. Remaining impacts, including petroleum-, MGP-, and solvent-like odors; black staining; coal tar; and a sheen were apparent in soil samples collected from across the site between 3 and 16 feet below grade surface (bgs), and are anticipated to be encountered during redevelopment of a portion of the site. A copy of Langan’s 6 November 2023 Phase II ESI Report is included as Attachment 1. Two subsurface profiles showing MGP-related impacts (e.g., sheen, staining, odors, coal tar-like material) observed in soil borings during the Phase II ESI are included as Attachment 2.

Lot 106 is about 16.8 acres in area, is currently owned by 2731 W 12th Street LLC, and is proposed for redevelopment. The proposed redevelopment will include constructing a parking lot designed for fleet vehicle storage with electric vehicle charging stations. The redevelopment project will result in disturbance of the previously constructed low-permeability multi-component environmental cap (LPMEC or engineered cap), and underlying impacted material within an

approximately 466,115-square-foot portion of the site. All work that will result in disturbance of the LPMEC and underlying impacted material will be completed in accordance with the NYSDEC-approved 10 June 2019 SMP, Revision No. 4 (the "SMP"), and its appended EWP, as well as the other requirements specified in this Notice of Intrusive Activity (NOIA). Should revisions to the existing SMP be submitted to and approved by the NYSDEC, the revised SMP will take precedence over the 10 June 2019 SMP.

Please note that the redevelopment activities proposed under this notification are specifically for Block 7247, Lot 106 (hereinafter referred to as the "Site"); construction is not proposed on Lots 13 or 218, which comprise the balance of the remediation site No. 224026.

2.0 Proposed Redevelopment Project

Based on the 3 September 2024 Site Plans prepared by Langan, the latest development scheme consists of installing an asphalt-paved parking lot for fleet vehicle storage with electric charging stations. The parking lot will occupy approximately 466,115 square feet of the site footprint. Where hardscape is not installed, the engineered cap will be restored in a manner that complies with the SMP (See Section 2.11). A Site Location Map and Site Plan are included in Attachment 3.

The redevelopment project will include regrading the engineered cap and underlying impacted fill to achieve development grade; excavation and trenching for the installation of sub-grade drainage infrastructure, utilities, and foundation elements; off-site disposal of disturbed impacted soil/fill; restoration of the engineered cap; and import of soil/fill in accordance with the sampling and analytical requirements of the SMP, EWP, and Quality Assurance Project Plan (QAPP) for engineered cap restoration. The above-detailed earthwork areas, including drainage, utility, and electrical conduit trench areas, are shown on Attachment 4.

As indicated in the Site Plans, about 6.26 acres of tidal wetland adjacent area (TWAA) will be disturbed as part of this redevelopment project. Disturbance of Coney Island Creek (OU-2) is not expected as part of the redevelopment. A joint permit application for the work within the TWAA will be submitted at least 90 days prior to the start of the redevelopment project.

According to the 26 January 2024 ALTA/NSPS Land Title Survey prepared by Langan, the site elevations vary between -2.0 feet and 17 feet relative to the North American Vertical Datum of 1988 (NAVD88). The site slopes from the north-central portion generally to the south, towards Coney Island Creek.

Within the proposed asphalt-paved fleet vehicle storage areas, all regraded material will be placed beneath the proposed asphalt surface, which will act as an alternative cover system. As detailed in the EWP, when the type of cover system changes from that which exists prior to the excavation (i.e., a soil cover is replaced by asphalt), this will constitute a modification of the cover element of the remedy and the upper surface of the remaining impacted soil. The alternative surface cover will consist of a 2-inch-thick asphalt surface cover underlain by a 4-inch-thick base course, 10 inches of NYSDEC-approved crushed stone, and a geotextile demarcation layer (See Attachment 5, C-502, Detail 1). A geotextile demarcation layer will also be installed in excavated and trenched areas where drainage and utility infrastructure are to be installed (See Attachment 5, C-506). Bioretention basins are proposed to be installed along the southwestern and northeastern perimeters of the asphalt-paved areas and will be underlain by an impermeable high-density polyethylene liner (See Attachment 5, C-504, Detail 1). In areas where hardscape will not be installed, the engineered cap will be restored to consist of at least 12 inches of NYSDEC-approved topsoil or clean backfill, a geosynthetic clay liner (GCL), a gravel venting layer (12-inches of stone), and three layers of geotextile fabric overlying remaining impacted soil (See Attachment 5, C-506, Detail 5).

While the export of significant quantities of impacted fill is not anticipated, some off-site disposal is anticipated and will be performed in compliance with the requirements of the SMP, EWP and this NOIA. All excavated material that will not be placed as backfill under the engineered cap or alternative cover system will be stockpiled, characterized in accordance with disposal facility

requirements, and disposed of off-site at a National Grid- and NYSDEC-approved facility permitted to accept the material in accordance with the EWP. All material will be handled in accordance with the SMP, EWP, and this NOIA.

Any stockpiles generated during redevelopment will be placed within specified stockpile staging areas and constructed in accordance with the SMP, EWP and this NOIA. All imported fill will be approved by National Grid's Qualified Environmental Professional (QEP) and the NYSDEC prior to receipt at the Site and (if necessary) stockpiled on and covered with a minimum 10-mil layer of polyethylene sheeting prior to use in accordance with the SMP, EWP, QAPP, and this NOIA, as discussed in further detail below.

Following completion of the redevelopment project, all equipment will be decontaminated prior to demobilization from the Site in accordance with the SMP, EWP, and this NOIA.

2.1 Schedule and Reporting

The redevelopment project is anticipated to take place from September 2025 through August 2026; however, the schedule will be confirmed with National Grid and the NYSDEC at least 60 days in advance, per the EWP.¹ Redevelopment progress and oversight activities will be presented in daily reports as indicated below. Additionally, an updated SMP to reflect changes to the cover system will be prepared for submission to the NYSDEC following completion of intrusive activities and Site cover restoration.

¹ The NYSDEC was previously notified of the proposed intrusive activities on 12 June 2024, and determined the proposed work to be in accordance with the EWP and required a 60-day notice prior to the start of excavation.

3.0 Conformance of the Proposed Redevelopment Project with SMP/EWP Requirements

Based on the requirements of the SMP, EWP, and QAPP, as well as this NOIA, the following soil handling and Site restoration procedures will be completed for the disturbance of the engineered cap (an engineering control [EC]) and underlying soil impacts at the Site.

3.1 Notification

At least 60 days prior to the start of excavation that is anticipated to breach or alter the Site's engineered cap, the W12th Street Owner/operator or their representative will notify the NYSDEC contacts (provided in the table below) in writing, with copy to National Grid. The W12th Street Owner/operator will also provide a 60-day notice to National Grid for the intrusive work pursuant to the EWP to review and comment on the planned work. This NOIA shall serve as the required notification and work plan for ground-intrusive activities to both National Grid and NYSDEC. All notifications regarding this NOIA and schedule updates will be provided to the below National Grid, NYSDEC, and New York State Department of Health (NYSDOH) contacts:

Oliver Wolfe NYSDEC Project Manager	(518) 402-9732 Oliver.Wolfe@dec.ny.gov
Kiera Thompson Project Manager's Supervisor	(518) 402-9662 Kiera.Thompson@dec.ny.gov
Kelly Lewandowski Chief, NYSDEC Site Control	(518) 402-9569 Kelly.Lewandowski@dec.ny.gov
Michael Quinlan National Grid Project Manager	(516) 220-4363 Michael.Quinlan@nationalgrid.com
Kari Pollard NYSDOH Project Manager	(518) 486-1443 Beei@health.ny.gov

3.2 Mobilization

Prior to commencing the redevelopment project, the contractor will mobilize to the Site. Mobilization and Site preparation will include the following:

- Identifying the location of aboveground and underground utilities (e.g., power, gas, water, sewer, communications), equipment, and structures (as necessary to implement construction related to redevelopment);
- Mobilizing necessary construction personnel, equipment, and materials to the Site;
- Constructing one or more stabilized construction entrances consisting of non-hazardous material capped with a gravel roadway at or near the Site exit, which takes into consideration the Site setting and Site perimeter;
- Constructing an equipment decontamination pad for trucks, equipment, and personnel that come into contact with impacted materials during redevelopment activities;

- Installing erosion and sedimentation control measures, as necessary; and
- Installing temporary fencing or other temporary barriers to limit unauthorized access to the Site.

3.2.1 *Equipment and Material Staging*

During mobilization, construction equipment will be delivered to the Site, temporary facilities will be constructed, and temporary utilities will be installed. The contractor will place and maintain temporary toilet facilities within the work areas for use by all Site personnel. The contractor will provide drinking water for all Site personnel.

3.2.2 *Site Fencing*

The Site perimeter will be secured with gated fencing that includes project signage. The purpose of the fencing is to limit Site access to authorized personnel, protect pedestrians from Site activities and impacted soil/fill that may be exposed during redevelopment, and maintain Site security.

During redevelopment, signs will be displayed at the site entrance detailing the proposed work. Signage will follow the NYSDEC specifications for design and content.

3.2.3 *Erosion and Sedimentation Controls*

Erosion and sediment controls for the Site will be designed and documented in a Stormwater Pollution Prevention Plan (SWPPP) in conformance with requirements presented in the NYS Standards and Specifications for Erosion and Sediment Control. A SWPPP was prepared in accordance with all applicable requirements of the NYSDEC State Pollutant Discharge Elimination System (SPDES) General Permit for Stormwater Discharges from Construction Activity. Since the stormwater runoff will discharge directly to the Coney Island Creek, the SWPPP was submitted to the NYSDEC for review and approval. The 20 December 2024 SWPPP and a NYSDEC Acknowledgement of a Notice of Intent (NOI) are included as Attachment 6. Best Management Practices (BMP) will be employed to mitigate erosion and prevent the migration of sediment off-site throughout redevelopment. Limited localized dewatering may be required during construction of drainage structures and will be performed as discussed in Section 2.10. Discharge of water generated during redevelopment to surface waters (e.g., Coney Island Creek) is prohibited without a SPDES permit. The NOI and SWPPP were filed with the NYSDEC for permit coverage under the SPDES General Permitting program.

3.2.4 *Utility Marker and Easements Layout*

The W12th Street Owner and its contractor are responsible for safe execution of all intrusive and other work performed during redevelopment. The W12th Street Owner and its contractors must obtain any local, state, or federal permits or approvals pertinent to such work that may be required during redevelopment. A Site utility stakeout will be completed for all utilities prior to any ground-intrusive activities at the Site. The contractor will contact the appropriate utility mark-out authority and make available to their staff the verification number and effective dates. Langan will record the verification number and effective dates from the contractor. Langan will note the location of

the marked-out utilities on the Site plan, review the contractor work plans, and provide environmental oversight during invasive work to ensure compliance with environmental requirements in the SMP and EWP on behalf of the W12th Street Owner.

3.2.5 Temporary Gravel Construction Egress Point(s)

A temporary gravel construction entrance and exit will be installed on-site at locations that align with the NYS Department of Transportation (NYSDOT)-approved truck transport route provided as Figure 13 of the SMP. The entrances will be covered with NYSDEC-approved gravel or recycled concrete aggregate, and truck wash waters will be collected for off-site disposal in accordance with the EWP. Egress points for truck and equipment transport from the Site will be kept clean of Site soil and other materials during Site redevelopment.

3.3 Excavation and Screening Methods

3.3.1 Approximate Excavation Extents

Disturbance of remaining impacted soil/fill is anticipated during regrading and excavation for the installation of drainage infrastructure and utilities. Excavation will extend from about 0.5 to 10 feet below existing grade surface.

A figure showing the proposed excavation extents is provided as Attachment 7.

3.3.2 Preliminary Waste Characterization Study

A waste characterization study will be performed for soil/fill intended for off-site disposal in a manner acceptable to the receiving facilities and in conformance with applicable permits. Waste characterization will be performed prior to invasive redevelopment work to characterize the soil/fill using suitable sampling parameters established by the disposal facility. All excavated material that will not be placed as backfill under the engineered environmental cap or alternative cover system will be stockpiled, characterized in accordance with disposal facility requirements, and disposed of off-site at a National Grid- and NYSDEC-approved facility permitted to accept the material in accordance with the EWP. A list of National Grid-approved facilities is provided as Attachment 8. Waste characterization data will be issued by the laboratory as a Category A deliverable and will not require a Data Usability Summary Report (DUSR). The waste characterization report will be provided to the NYSDEC for record.

3.3.3 Soil Screening

Langan field personnel will monitor ground-intrusive work that will result in disturbance of the EC and impacted soil/fill. Visual, olfactory, and instrument-based (e.g., photoionization detector [PID]) soil screening methods will be used during all invasive work.

Based on previous environmental data and screening results, soil will be segregated into material above the GCL (topsoil and clean backfill) that does not require special handling (described below in Section 2.4.1), material that requires off-site disposal, and material proposed for on-site reuse that requires testing prior to on-site reuse. Soil screening will be performed regardless of the time of year that invasive work is conducted and will be conducted (during working hours for the

redevelopment project, not continuously) beginning with the initiation of ground disturbance and will continue until either a satisfactory temporary Site cap has been established, until the permanent cover system has been constructed and/or all proposed Site work that will result in disturbance of the impacted fill is complete.

3.4 Soil Staging Methods

During construction activities, all stockpiling will be conducted in accordance with the SMP, EWP, and this NOIA to separate and stage excavated material pending on-site reuse, characterization sampling, or loading for off-site disposal. Temporary stockpiles will be constructed, as necessary, on-site to separate and stage excavated material based on the soil/material type and proposed use.

Stockpile areas will meet the following minimum requirements:

- Excavated material will be placed plastic sheeting with a minimum thickness of 10 mils.
- Soil stockpiles will be encircled with a berm and/or silt fence. Hay bales will be used as needed near catch basins, surface water, and other discharge points.
- Stockpiles will be located and sized to minimize potential for material or run-off to enter discharge points.
- Stockpiles will be kept covered when not in use with appropriately anchored tarps. Stockpiles will be routinely inspected and damaged tarp covers will be promptly replaced.
- Stockpiles will be inspected at a minimum once each week and after every storm event. Results of inspections will be recorded in a logbook and maintained at the Site and available for inspection by the NYSDEC.

3.4.1 Topsoil and Clean Backfill

The existing cover system was initially constructed during site-wide remediation and, at the time, was comprised of a 38-inch-thick LPMEC consisting of 6 inches of topsoil, 20 inches of clean backfill, a GCL overlying a geotextile membrane, a gravel venting layer (12 inches of stone), and three layers of geotextile fabric overlying remaining impacted material. Per the SMP, the topsoil and clean backfill above the GCL do not require special handling requirements and can be reused and/or disposed of without National Grid or NYSDEC approval. Topsoil and clean backfill must be segregated during redevelopment to be reused on-site as general backfill to reach final development grades.

3.4.2 Impacted Material

Impacted soil/fill will be encountered during Site grading and excavation for utility installation. Based on the available data, contaminants in soil include volatile organic compounds (VOC); semivolatile organic compounds (SVOC), including polycyclic aromatic hydrocarbons (PAH); and metals. During Langan's September 2022 Phase II ESI, petroleum-, MGP-, and solvent-like odors; black staining; coal tar; and a sheen were apparent in soil samples collected from across the site

between 3 and 16 feet bgs. MGP- and petroleum-impacted soil is anticipated to be encountered during utility-related excavations within a portion of the site. Impacted soil will be stockpiled and segregated for characterization sampling and off-site disposal at a National Grid- and NYSDEC-approved disposal facility. Two subsurface profiles showing MGP-related impacts observed in soil borings during the Phase II ESI are included as Attachment 2.

3.4.3 Imported Material

Upon meeting the criteria identified in Section 2.9, NYSDEC-approved clean fill will be transported to the Site and segregated from impacted soil/fill and soil/fill proposed for on-site reuse. A Request to Import/Reuse Fill or Soil form, provided as Attachment 9 of this NOIA, will be prepared and submitted for review by National Grid and the NYSDEC for all material proposed for import. Approval by both the NYSDEC and National Grid will be required prior to import of clean fill to the Site.

3.5 Material Transport and Disposal Off-Site

3.5.1 Materials Load Out

Loaded vehicles leaving the Site will be appropriately lined, tarped with a solid (e.g., non-mesh) cover, securely covered, manifested, and placarded in accordance with appropriate federal, state, local, and NYSDOT requirements (and all other applicable transportation requirements). Loose-fitting mesh truck covers are prohibited. If loads contain wet material capable of producing free liquid, truck liners will be used.

3.5.2 Transport

Transport of soil, fill, and any dewatering fluids that are not discharged to the New York City sewer system or surface water under applicable permits, will be performed by licensed haulers in accordance with appropriate federal, state, and local regulations, including Title 6 of the New York Codes, Rules and Regulations (6 NYCRR) Part 364. Haulers will be appropriately licensed and trucks properly placarded. All trucks loaded with Site soil and fill will exit the vicinity of the Site using only NYSDOT-approved truck routes, as shown on Figure 13 of the SMP.

These routes are the most appropriate routes to and from the Site and take into account:

- Limiting transport through residential areas and past sensitive sites
- Use of city mapped truck routes
- Prohibiting to the extent practical off-site queuing of trucks entering the facility
- Limiting total distance to major highways
- Promoting safety in access to highways
- Overall safety in transport
- Community input (where necessary)

Trucks will be prohibited from stopping and idling unnecessarily in the neighborhood outside the Site.

Egress points for truck and equipment transport from the Site will be kept clean of soil, fill and other materials during Site remediation and redevelopment.

Queuing of trucks will be performed on-site to the extent possible to minimize off-site disturbance. Off-site queuing will be prohibited to the extent practical.

3.5.3 Disposal

Excavated soil and fill that is segregated as material requiring off-site disposal will be treated as regulated material and will be transported and disposed of off-site at a permitted facility in accordance with all federal, state, and local regulations. If disposal of soil and fill from this Site is proposed for unregulated off-site disposal (i.e., clean soil removed for redevelopment purposes), a formal request with an associated plan will be made to the NYSDEC.

All excavated soil and fill intended for off-site disposal will be stockpiled, characterized in accordance with disposal facility requirements, and disposed of off-site at a National Grid- and NYSDEC-approved facility permitted to accept it in accordance with the EWP. Soil disposal facilities have not yet been determined. Off-site disposal locations for excavated soil/fill will be identified in a pre-excitation notification prepared by the W12th Street Owner/operator and provided to National Grid for review prior to submittal to the NYSDEC. This will include estimated quantities and a breakdown by class of disposal facility, if appropriate.

Non-hazardous fill and impacted soil taken off-site will be handled consistent with 6 NYCRR Parts 360, 361, 362, 363, 364 and 365. Soil and fill that does not meet Unrestricted Use Soil Cleanup Objectives (SCO) is prohibited from being taken to a NYS construction and demolition debris recovery facility (6 NYCRR Subpart 360-5 registered or permitted facility).

An environmental professional under the supervision of a NYS-licensed Professional Engineer will document the load-out of excavated soil for off-site disposal. Soil transport and disposal documentation, including facility-countersigned disposal manifests, Part 364 transporter permits, and facility acceptance letters will be provided in the annual Periodic Review Report (PRR).

3.5.4 Truck Wash and Inspection Station

A truck wash will be operated on the Site, as appropriate. Outbound trucks will be washed at the truck wash before leaving the Site until the activities performed under this section are complete. Truck wash waters will be collected and disposed of off-site in accordance with the SMP and EWP.

Locations where vehicles enter or exit the Site shall be inspected daily for evidence of off-site soil tracking. Cleaning of the adjacent streets will be performed as needed to maintain a clean condition with respect to Site-derived soil and fill. Material accumulated from the street cleaning and egress cleaning activities will be disposed of off-site at a permitted disposal facility in accordance with all applicable federal, state, and local regulations.

3.6 Material Reuse On-Site

The soil/fill comprising the existing engineered cap and located above the GCL (topsoil and clean backfill) does not require special handling per the SMP. The material can be reused on-site or disposed of without National Grid or NYSDEC approval.

Material excavated from below the GCL that meets the Restricted Use Commercial (RUC) SCOs listed in Table 375-6.8(b) of 6 NYCRR Part 375 meet the criteria for on-site reuse. Prior to reuse, samples will be collected and analyzed by an Environmental Laboratory Approval Program-certified laboratory for:

- Total VOCs via United States Environmental Protection Agency (USEPA) Method 8260
- Total SVOCs via USEPA Method 8270C
- Polychlorinated biphenyls (PCB) via USEPA Method 8082/8082A/8080
- Total cyanide via USEPA Method 9010/9014
- Total Metals (Resource Conservation and Recovery Act metals, copper, nickel, zinc, vanadium, cyanide, and hexavalent chromium) via USEPA Method 6010B and 6010
- Total mercury via USEPA Method 7471
- Per- and polyfluoroalkyl substances (PFAS) via USEPA method 1633

The sampling frequency will be in accordance with Division of Environmental Remediation (DER)-10 Table 5.4(e)10 unless prior approval is obtained from NYSDEC for modification of the sampling frequency. The analytical results of soil/fill testing must meet the site use criteria presented in NYSDEC DER-10 Appendix 5, Allowable Constituent Levels for Imported Fill or Soil for all constituents listed, and the NYSDEC Sampling, Analysis, and Assessment of PFAS (April 2023) guidance values. Approvals for modifications to the analytical parameters must be obtained from NYSDEC prior to the sampling event. A Request to Reuse Fill or Soil form, provided as Attachment 9 of this NOIA, will be prepared and submitted for review and approval by National Grid and the NYSDEC, allowing for a minimum of 5 business days for review. Approval by both the NYSDEC and National Grid will be required prior to on-site reuse of material, except for topsoil and clean fill above the GCL.

Impacted soil that is deemed unacceptable for on-site reuse will be transported off-site for disposal. Soil deemed acceptable for on-site reuse will be placed below the GCL or alternate cover system and will not be reused within a cover soil layer, within landscaping berms, or as backfill for subsurface utility lines.

3.7 Backfill from Off-Site Sources

All backfill proposed for import to the Site will be approved by National Grid's QEP and the NYSDEC and will be compliant with provisions in the EWP prior to receipt at the Site. A Request to Import/Reuse Fill or Soil form, provided as Attachment 9 of this NOIA, will be prepared by the W12th Street Owner/operator and submitted for review by National Grid and the NYSDEC,

allowing a minimum of 5 business days for review. The form will include analytical sampling of the borrow source or existing documentation of agency source approval (e.g., NYSDOT virgin source certification and latest analytical sampling results). Approval by both the NYSDEC and National Grid will be required prior to material import to the Site. Material from industrial sites, spill sites, or other environmental remediation sites or potentially impacted sites will not be imported to the Site.

All imported soil will meet the backfill and cover soil quality standards established in 6 NYCRR 375-6.7(d) and DER-10 Appendix 5 for commercial use. Based on an evaluation of the land use, protection of groundwater and protection of ecological resources criteria, the resulting soil quality standards are listed in Table 375-6.8(a) of 6 NYCRR Part 375. Soil that meets 'general' fill requirements under 6 NYCRR Part 360.13, but does not meet backfill or cover soil objectives for this Site, will not be imported to the Site without prior approval by NYSDEC. Solid waste will not be imported onto the Site.

Samples will be collected from proposed imported fill in accordance with the analytical sampling requirements of DER-10 and the frequency requirements in NYSDEC's Soil Cleanup Guidance, Commissioner's Policy (CP)-51. At a minimum, samples will be analyzed for inorganics, pesticides, PCBs, VOCs, SVOCs, PFAS, and 1,4-dioxane in accordance with the analytes for the RUC SCOs listed in Table 375-6.8(a) of 6 NYCRR Part 375. The frequency and type of the sampling (e.g., discrete or composite) will be based on the quantity of material imported in accordance with Table 4 of CP-51.

Trucks entering the Site with imported soil will be securely covered with tight-fitting covers. Imported soil will be stockpiled separately from excavated material and covered to prevent dust releases.

3.8 Fluids Management

All impacted liquids to be removed from the Site, including but not limited to, excavation dewatering and decontamination water, will be handled, transported, and disposed of off-site at a permitted facility in accordance with applicable federal, state, and local regulations. Impacted liquids removed from the Site will be disposed of at a NYSDEC- and National Grid-approved disposal facility (See Attachment 8). Dewatering, purge, and redevelopment fluids will not be recharged back to the land surface or subsurface of the Site, and will be managed off-site, unless prior approval is obtained from the NYSDEC and the NYCDEP.

Discharge of water generated during redevelopment activities to surface waters (e.g., a local pond, stream, or river), if needed, will be performed under a SPDES permit.

3.9 Cover System Restoration

After the completion of soil removal and any other invasive activities, including utility installation, the cover system will be restored in a manner that complies with the SMP. The existing cover system was initially constructed during site-wide remediation and, at the time, consisted of a 38-inch-thick LPMEC consisting of 6 inches of topsoil, 20 inches of clean backfill, a GCL overlying a

geotextile membrane, a gravel venting layer (12 inches of stone), and three layers of geotextile fabric overlying remaining impacted soil.

Within the proposed asphalt-paved fleet vehicle storage areas, regraded material will be placed beneath the proposed asphalt surface, which will act as an alternative cover system. Regraded material will be sampled and submitted for review by National Grid and the NYSDEC prior to on-site reuse, unless it consists of topsoil and clean fill above the GCL. The alternative cover system will consist of a 2-inch-thick asphalt surface cover underlain by a 4-inch-thick base course, 10 inches of NYSDEC-approved crushed stone, and a geotextile demarcation layer. A geotextile demarcation layer will also be installed in excavated and trenched areas where drainage and utility infrastructure are to be installed (See Attachment 5, C-506). The as-built elevation and locations of the geotextile demarcation layer will be surveyed by a NYS-licensed surveyor to represent the horizon of the remaining impact zone for inclusion in a revised SMP. In areas where hardscape is proposed, all components of the LPMEC will be replaced with the hardscape and the hardscape will serve as the new cap.

In areas where hardscape will not be installed, the engineered cap will be restored to consist of at least 12 inches of NYSDEC-approved topsoil or clean backfill, a GCL, gravel venting layer (12-inches of stone), and three layers of geotextile fabric overlying remaining contaminated soil. The demarcation layer, consisting of three layers of geotextile fabric overlying remaining contaminated soil, will be replaced to provide a visual reference to the top of the remaining impact zone, the zone that requires adherence to special conditions for disturbance of impacted soil, as defined in the EWP. The as-built elevation and locations of the demarcation layer will be surveyed by a NYS-licensed surveyor to document the horizon of the remaining impact zone for inclusion in a revised SMP. The SMP must be adhered to for demarcation layer. Refer to Detail 5 of Drawing C-506, provided in Attachment 5, for engineered cap restoration details.

Intrusive activities will be performed in a manner that minimizes damage to the ECs (e.g., engineered cap, monitoring and recovery wells, non-aqueous phase liquid collection trench). If damaged, controls will be properly restored in accordance with Detail 5 of Detail Drawing C-506, provided in Attachment 5. Minimum guidelines to perform intrusive activities that breach the engineered cap are identified below.

- The contractor shall remove each layer of the engineered cap in a careful manner to avoid intermixing of the various components. Careful segregation of the various cap component materials will allow for reuse of the materials during the engineered cap reconstruction.
- Upon exposing the geotextile fabric layers or the GCL, the contractor shall carefully cut the material on three sides along the perimeter of the excavation. This cut will allow for the fabric or the GCL to be folded out beyond the limits of the excavation. Once folded, the contractor shall protect the materials during redevelopment activities so as to avoid damage and allow for reuse of the materials during the engineered cap reconstruction.

- After the geotextiles/GCL have been removed from the excavation area, excavation activities may continue in accordance with this requirement of the SMP. Materials located beneath the GCL are considered to be contaminated and shall be handled accordingly.
- After intrusive activities have been completed, ECs shall be restored in accordance with the requirements of the SMP and the details provided in this NOIA for continued function as intended. Where restored in kind, each layer of the engineered cap shall be restored by returning the material back into the excavation in reverse order of removal. The edges of the geotextiles shall be repaired by adding additional like materials, in an overlapping pattern (minimum of 2 feet), along the excavation perimeters. The overlap seams formed in the GCL shall be repaired in the same manner as which the GCL was installed with the addition of powdered bentonite in accordance with the manufacturer's specifications.
- The excavation must be extended a suitable distance to allow for additional geotextile/GCL material to overlap the existing material within the excavation. Overlaps shall be a minimum of 2 feet.
- Cap materials overlying the geotextiles may be reused if properly segregated and protected during removal and staging/stockpiling. If additional material is required to be imported to the Site, the material shall meet the requirements of the SMP. Material utilized to restore the ECs shall be similar to those utilized to construct the ECs as described in the SMP. Where the type of cover system changes from that which exists prior to the excavation (i.e., a soil cover is replaced by asphalt for fleet vehicle storage), this will constitute a modification of the cover element of the remedy and the upper surface of the remaining impacted soil. A figure showing the modified surface will be included in the subsequent PRR and in an updated SMP.

3.10 Monitoring Well Restoration

Monitoring and NAPL recovery wells that were installed as part of previous investigations and recovery wells associated with the NAPL collection trench are located throughout the site. The following twelve monitoring and NAPL recovery wells will remain in place throughout redevelopment: MW-1, MW-13, MW-14, RW-1, RW-1A, RW-1B, RW-2B, DRW-4, DRW-10 through DRW-12, and DRW-16. The locations of the twelve monitoring and/or NAPL recovery wells that will remain in place are shown on the Site Plan provided in Attachment 2. Monitoring and NAPL recovery wells that will remain in place during redevelopment will be protected during excavation, grading, and installation of the site cover. If any monitoring or recovery wells are damaged during redevelopment, the wells be replaced in-kind and in accordance with the SMP in coordination with National Grid and NYSDEC.

3.11 Excavation Contingency Plan

Any previously unknown or unexpected potentially MGP-impacted media identified by screening (i.e., visual, olfactory, and/or instrumental [PID]) during invasive Site work will be promptly

communicated by phone to National Grid, and National Grid will notify the NYSDEC. Reportable quantities of petroleum product will also be reported to the NYSDEC Spill Hotline. These findings will be also included in the PRR. If underground storage tanks (UST) or other previously unidentified contaminant sources are found during subsurface excavations, excavation activities will be suspended until sufficient equipment is mobilized to address the condition. The NYSDEC will be promptly notified of the discovery. If potential MGP-related impacts are encountered at unexpected depth or locations, Site activities will be suspended, and National Grid will be notified and will evaluate the observed conditions in a manner and timeframe that does not interfere with the W12th Street Owner/operator's construction schedule, to the extent reasonably feasible. National Grid may determine that laboratory testing is required to evaluate the observed conditions for concentrations and characteristics. If the encountered materials are determined to be MGP-impacted, then the encountered materials will be segregated and stockpiled for disposal at a NYSDEC- and National Grid-approved facility. If the encountered materials are determined to not be MGP-impacted but exhibit evidence of impacts (e.g., petroleum- or solvent-like impacts) then the encountered materials will be segregated and stockpiled for disposal at a NYSDEC- and National Grid-approved facility. Non-impacted materials will be segregated as either material requiring off-site disposal or material requiring analytical testing prior to on-site reuse, per the conditions detailed in Section 2.8.

Sampling will be performed on product, sediment, and surrounding soil, etc., as necessary to determine the nature of the material and proper disposal method. Chemical analysis will be performed for a full list of analytes (Target Analyte List metals; Target Compound List VOCs, SVOCs [including 1,4-dioxane], pesticides, PCBs, PFAS, and free cyanide). If future sampling results provide a sufficient justification to limit the list of analytes, a reduced list of analytes will be proposed to the NYSDEC for approval prior to sampling. Any tanks will be closed in accordance with NYSDEC regulations and guidance.

3.11.1 UST Removal

USTs may be encountered during excavation. If USTs or other previously unidentified contaminant sources are discovered during redevelopment, activities shall be suspended until sufficient equipment is mobilized to address the condition and the NYSDEC Project Manager will be promptly notified by phone. USTs and/or associated appurtenances encountered during redevelopment excavation would be decommissioned, disposed of off-site, and registered with the NYSDEC Petroleum Bulk Storage unit in accordance with the SMP, EWP, 6 NYCRR Part 613.9, NYSDEC CP-51, DER-10 Section 5.5, and other applicable NYSDEC tank closure requirements. Response measures to prevent the release of hazardous substances or petroleum products to the environment shall be conducted by the contractor as appropriate. Reportable quantities of petroleum product will also be reported by the W12th Street Owner's QEP to the NYSDEC Spill Hotline. If the above conditions are identified during redevelopment, the NYSDEC will be notified according to requirements set forth in the SMP, EWP, and this NOIA.

3.12 Demobilization

After redevelopment activities are completed, the contractor will be responsible for demobilizing labor, equipment, and materials not designated for off-site disposal. Langan will document that the contractor performs follow-up coordination and maintenance for the following activities:

- Removal of sediment and erosion control measures and disposal of materials in accordance with applicable rules and regulations;
- Removal of remaining impacted material or waste;
- Equipment decontamination; and
- General refuse disposal.

3.13 Community Air Monitoring Program

A site-specific Community Air Monitoring Program (CAMP) was developed to be consistent with NYSDOH guidance and NYSDEC DER-10 Appendices 1A and 1B and is included as Appendix E of the SMP. A copy of the NYSDOH Generic CAMP, as described in Appendix 1A of NYSDEC DER-10 is included as Attachment 11. The CAMP will be conducted during all ground-intrusive activity on the Site. Air sampling station locations will be chosen based on generally prevailing wind conditions and automatically adjusted based on actual wind directions to provide an upwind and at least two downwind monitoring stations.

Exceedances of action levels listed in the CAMP will be reported in the daily reports provided to National Grid, and the NYSDEC and NYSDOH Project Managers by the end of each day following the reporting period (or at a frequency acceptable to them). The W12th Street Owner's QEP will implement the CAMP during intrusive work. The W12th Street Owner is responsible for work zone and any other health and safety monitoring, as described in the Construction Health and Safety Plan (CHASP). Air monitoring results will be provided in Daily and Monthly reports.

Daily deliverables will include preparation of daily tables, as listed in Section 2.5.2 of the Site CAMP, and will include the following:

- Daily maximum instantaneous and averaged total VOC (TVOC) concentrations compared to the TVOC Action Level
- Daily maximum instantaneous and averaged particulate matter less than 10 microns in diameter (PM-10) concentrations compared to the PM-10 Action Level
- Supplemental perimeter walk-around PM-10 concentrations compared to the Action Level (if any)
- Supplemental perimeter walk-around TVOC concentrations compared to the TVOC Action Level (if any)
- Maps showing air monitoring station locations

The following weekly tables will be prepared:

- Maximum 15-minute average of TVOC and PM-10 concentrations

- Upwind and downwind comparison of Response Level and Action Level reached during the week if the daily maximum 15-minute average concentrations of TVOC and PM-10 exceeded a Response Level or Action Levels
- Summary of site activities
- Maps showing air monitoring station locations

Air monitoring results will include concentrations of particulate matter smaller than 10 microns in diameter (PM-10) and VOCs detected in the air during ground-intrusive activities. Concentrations attributable to on-site ground-intrusive activities will be shown on a graph. Any exceedances of PM-10 or VOC levels above regulated levels in a 15-minute period and any interferences with air monitoring will be reported in the Daily Reports.

3.13.1 Adjoining Parcels

The adjoining parcels are used for commercial and industrial purposes, with the surrounding area generally consisting of residential, commercial, industrial, and institutional (e.g., schools and churches) uses. No schools or day care facilities are located on the site. Sensitive receptors, as defined in the Division of Environmental Remediation (DER) Technical Guidance for Site Investigation and Remediation (DER-10), within a half-mile of the site include those listed below:

Number	Name (Approximate distance from site)	Address
1	P.S. 90 – The Magnet School for Environmental Studies and Community Wellness (about 0.15 miles south of the site)	2840 West 12 th Street Brooklyn, NY 11224
2	Public School 303K/ I.S. 303 Herbert S. Eisenberg/ Coney Island Preparatory Middle School (about 0.15-mile east of the site)	501 West Avenue Brooklyn, NY 11224
3	Rachel Carson High School for Coastal Studies (about 0.15-mile east of the site)	521 West Avenue Brooklyn, NY 11224
4	John Dewey High School (about 0.31-mile northeast of the site)	50 Avenue X Brooklyn, NY 11223
5	Liberation Diploma Plus (0.38-mile southwest of the site)	2865 West 19 th Street Brooklyn, NY 11224
6	K410 Abraham Lincoln High School/ P.S. K053 (0.38-mile east of the site)	2800 Ocean Parkway Brooklyn, NY 11235
7	Little Scholars at Neptune Avenue (0.38-mile southeast of the site)	448 Neptune Avenue Brooklyn, NY 11224
8	P.S. 100 The Coney Island School (0.39-mile southeast of the site)	2951 West 3 rd Street Brooklyn, NY 11224
9	YDE Girls Elementary School (0.41-mile northeast of the site)	325 Avenue Y Brooklyn, NY 11223
10	P.S. 212 The Lady Deborah Moody School (0.42-mile northeast of the site)	87 Bay 49 th Street Brooklyn, NY 11214
11	P.S. 370 (0.44-mile southeast of the site)	3000 West 1 st Street Brooklyn, NY 11224

No adjoining properties are considered sensitive receptors, and the nearest sensitive receptor is over 750 feet (about 0.15 miles) south of the site across Coney Island Creek. As such, special CAMP requirements are not required during implementation of the redevelopment.

3.14 Dust Control Plan

Particulate monitoring must be conducted according to the CAMP provided as Appendix E of the SMP. If particulate levels at the Site exceed the thresholds listed in the CAMP or if airborne dust is observed on the Site or leaving the Site, the dust suppression techniques listed below will be employed by the contractor. A dust suppression plan that addresses dust management during invasive on-site work will include, at a minimum, the items listed below:

- Dust suppression will be achieved through the use of an on-site water truck for road wetting. The truck will be equipped with a water cannon capable of spraying water directly onto off-road areas including excavations and stockpiles.
- Clearing and grubbing of larger areas will be done in stages to limit the area of exposed, unvegetated soil vulnerable to dust production.
- Gravel approved for import by the NYSDEC and National Grid's QEP will be used for on-site roadways to provide a clean and dust-free road surface.
- On-site roads will be limited in total area to minimize the area required for water truck sprinkling.
- In the event that complaints are received for dust or airborne dust is observed on or leaving the site, the contractor will take the appropriate response actions for dust suppression.

3.15 Odor Control Plan

Odors deriving from Site impacts may cause a nuisance to some Site workers and the surrounding community. Specific odor control methods to be used on a routine basis will include all reasonable and necessary means as described in the following paragraph. If nuisance odors are identified at the Site boundary, or if odor complaints are received, work will be halted, and the source of odors will be identified and corrected. Work will not resume until all nuisance odors have been abated. The NYSDEC and NYSDOH will be notified by the W12th Street Owner's QEP of all odor events and of any other complaints about the project. Implementation of all odor controls, including the halt of work, is the responsibility of the contractor, and any measures that are implemented will be discussed in the PRR.

All necessary means will be employed to prevent on- and off-site nuisances. At a minimum, these measures will include: (a) limiting the area of open excavations and size of soil stockpiles; (b) shrouding open excavations with tarps and other covers; and (c) using foams to cover exposed odorous soil. If odors develop and cannot be otherwise controlled, additional means to eliminate odor nuisances will include: (d) direct load-out of soil to trucks for off-site disposal; (e) use of chemical odorants in spray or misting systems; and (f) use of staff to monitor odors in surrounding neighborhoods.

If nuisance odors develop during intrusive work that cannot be corrected, or where the control of nuisance odors cannot otherwise be achieved due to on-site conditions or close proximity to

sensitive receptors, odor control will be achieved by sheltering the excavation and handling areas in a temporary containment structure equipped with appropriate air venting/filtering systems.

3.15.1 Other Nuisances

The following items may be necessary depending on the type of wastes present, the location of the Site and other site-specific concerns. These plans are generally not required for submission to the NYSDEC but are generally required as part of redevelopment.

A plan for rodent control will be developed and utilized by the contractor prior to and during Site clearing and Site grubbing, and during all remedial and redevelopment work.

A plan will be developed and utilized by the contractor for all remedial and redevelopment work to ensure compliance with local noise control ordinances.

3.16 Green and Sustainable Remediation (GSR) Practices

The green and sustainable remediation (GSR) components that will be considered during redevelopment are as follows:

- Environmental impacts of the redevelopment over the long term
- Reducing direct and indirect greenhouse gases (GHG) and other emissions
- Increasing energy efficiency and minimizing use of non-renewable energy
- Conserving and efficiently managing resources and materials
- Reducing waste, increasing recycling, and increasing reuse of materials that would otherwise be considered a waste
- Maximizing habitat value and creating habitat when possible, including maximizing the planting of trees, shrubs, and other carbon dioxide sinks in redevelopment
- Fostering green and healthy communities and working landscapes which balance ecological, economic, and social goals
- Encouraging green and sustainable redevelopment
- Incorporating the GSR principles and techniques to the extent feasible in the future development at this site (i.e., future on-site buildings shall be constructed, at a minimum, to meet the 2020 Energy Conservation Construction Code of New York [or most recent edition] to improve energy efficiency as an element of construction)

BMPs for the project related to these GSR metrics, and BMPs for minimizing community impacts, protecting habitats and natural and cultural resources, and promoting environmental justice, would be incorporated into the redevelopment, as appropriate. The project design specifications would include detailed requirements, including implementation of the BMPs described in Section

2.19.1. A BMP assessment and an environmental footprint analysis would be conducted at the completion of the redevelopment. As practicable, water consumption, GHG emissions, renewable and non-renewable energy use, waste reduction, and material use would be estimated at the end of the redevelopment. Progress with respect to GSR metrics would be tracked during implementation of the redevelopment and reported in an updated SMP, to be prepared by National Grid in coordination with the Property Owners.

3.16.1 Green Remediation Principals and BMPs

The NYSDEC DER-31: Green Remediation Policy (DER-31) requires that green remediation concepts and techniques be considered during all stages of the redevelopment, with the goal of improving the sustainability of the work and summarizing the net environmental benefit of any implemented green technology.

Green remediation principles and techniques will be implemented to the extent feasible during redevelopment, in accordance with DER-31. The green remediation components that will be evaluated are as follows:

- Waste Generation
- Energy Usage
- Emissions
- Water Usage
- Land and/or Ecosystems

The redevelopment will include the implementation of several BMPs related to these green remediation components. The BMPs are outlined below.

Waste Generation

Waste generation considers the management of waste associated with redevelopment activities and any waste reduction projects including, but not limited to, material reuse and recycling. Several waste streams will be generated during redevelopment (e.g., dewatering fluids, soil, polyethylene sheets used for stockpile coverage and separating types of contamination, and decontamination materials). When possible, an effort will be made to minimize consumption/generation of such materials. If possible, decontamination and reuse of applicable materials will be considered. Electronic methods of data collection (e.g., tablets) will also be used to reduce paper consumption when possible.

Electrical Energy Use

Energy usage considers the electricity usage needed for redevelopment activities. Energy will be required for charging equipment (e.g., PIDs, air monitoring equipment). Battery-powered equipment will be turned off when not in use to limit charging activities.

Emissions

Emissions tracking considers fuel usage for transportation of personnel to and from the site, trucks used for export of contaminated material or import of backfill material, equipment and laboratory sample couriers, and construction equipment.

To reduce fuel usage, trucks and heavy machinery operators will be encouraged to reduce idling time and shut down vehicles or equipment when not in use. Ultra-low sulfur diesel (ULSD) fuel and the best available technology (BAT) for reducing emissions will be used for construction vehicles. The Contractor will also be encouraged to perform routine, on-time maintenance such as oil changes to improve fuel efficiency.

When possible, personnel will be encouraged to take public transport and equipment/sample deliveries and pickups will be consolidated to reduce transport needs.

Water Usage

Water usage considers sources of water for tasks such as decontamination, irrigation, etc. The public water supply will be used when water is required for decontamination activities or dust suppression. This will be required for effective implementation of the redevelopment and the protection of human health. Water will only be consumed when necessary, and consumption will be in accordance with local regulations.

Land and/or Ecosystems

The site is within a commercial and industrial area of the Coney Island neighborhood of Brooklyn, New York. As indicated in the Site Plans, about 6.26 acres of TWAA will be disturbed as part of this redevelopment project. Disturbance of Coney Island Creek (OU-2) is not expected as part of the redevelopment.

4.0 CHASP

A CHASP that meets all Occupational Safety and Health Administration Hazardous Waste Operations and Emergency Response requirements has been developed and will be implemented during the Site work to protect worker safety. A copy of the site-specific CHASP is provided as Attachment 10 of this NOIA. The Site Safety Coordinator will document full compliance with the CHASP in accordance with applicable health and safety laws and regulations. Emergency telephone numbers will be posted at the Site location before any work begins. A safety meeting will be conducted before each shift begins. Topics to be discussed include task hazards and protective measures (physical, chemical, environmental); emergency procedures; personal protection equipment levels; and other relevant safety topics including a highlighted route map to the nearest hospital/emergency room. Meetings will be documented in a log book or specific form. Potential on-site chemicals of concern include PAHs, VOCs, and metals. Information fact sheets and/or summary tables for each contaminant group are included in the CHASP. A copy of this CHASP will be available at the Site during redevelopment.

5.0 REPORTING

The following sections describe reports that will be prepared during and after the redevelopment of the Site as a fleet vehicle storage lot.

5.1 Daily Reports

Daily reports will be submitted to National Grid and the NYSDEC and NYSDOH Project Managers during on-site redevelopment activities by the end of each day following the reporting period (or at a frequency acceptable to them). These reports will include the following items:

- A summary of odor and dust problems and corrective actions, if any;
- An update of redevelopment progress made during the reporting day;
- A figure showing the location and type of work performed during the reporting day and previously on the Site;
- Photographs showing the Site conditions and examples of work conducted;
- Locations of work and quantities of material imported and exported from the Site;
- References to a map showing Site activities, work locations, CAMP station locations, and daily wind direction;
- A summary of complaints with relevant details (names, phone numbers);
- A summary of CAMP findings, including any exceedances, including trigger action levels; and
- An explanation of notable Site conditions.

Daily reports are not intended to be the mode of communication for notification to the NYSDEC of emergencies (accident, spill), requests for changes to this NOIA, or other sensitive or time critical information; however, such conditions must also be included in the daily reports. Emergency conditions and changes to this NOIA will be addressed directly to NYSDEC via personal communication.

Daily Reports will reference the NYSDEC-assigned project number and include a description of daily activities keyed to a map that identifies site activities, work locations, CAMP station locations, and daily wind direction.

5.2 Deviations

Necessary deviations from this NOIA, the SMP, or the EWP will be coordinated with National Grid and the NYSDEC in advance. Notification will be provided to National Grid and the NYSDEC by telephone/email for conditions requiring immediate action (e.g., conditions judged to be a

danger to the surrounding community). Based on the significance of the deviation, an addendum to this NOIA may be necessary and will include:

- Reasons for deviating from this NOIA
- Approval process to be followed for changes/editions to this NOIA

5.3 SMP Update

The redevelopment will include installation of an alternative cover system from that which existed prior to the excavation activities and will constitute a modification of the cover element of the remedy and the upper surface of the remaining impacted soil. A figure showing the modified surface will be included in the subsequent PRR and in an updated SMP, to be prepared by National Grid.

6.0 CERTIFICATION

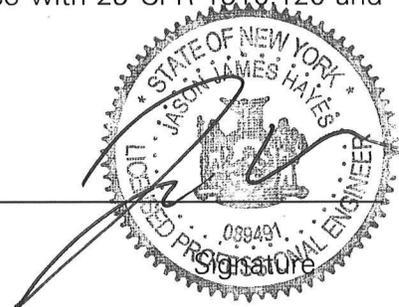

I, Jason Hayes, certify that I am currently a NYS registered professional engineer as in defined in 6 NYCRR Part 375 and that this NOIA was prepared in accordance with 29 CFR 1910.120 and the NYSDEC-approved SMP.

Brooklyn, New York
Langan Project: 170697301**

Dear Mr. Simmons:

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) is submitting this Phase II Environmental Site Investigation (ESI) Report for the property at 2731 West 12th Street in Brooklyn, New York.

We appreciate the opportunity to assist you with this project. If you have questions or need information clarified, please call Mimi Raygorodetsky at 212.479.5441.

Sincerely yours,

**Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology,
D.P.C.**

1.0 INTRODUCTION

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) completed a Phase II Environmental Site Investigation (ESI) on behalf of Prologis, L.P. for the property located at 2731 West 12th Street in Brooklyn, New York (the 'site'). The objectives of the Phase II ESI were to 1) investigate potential areas of concern identified at the site in the Langan's September 30, 2022 Phase II ESI Work Plan; 2) supplement existing data collected during previous investigations performed by others; and 3) identify subsurface conditions that may impact future construction/development and associated costs.

The Phase II ESI was implemented between March 27 and 31, 2023. The investigation included completion of a geophysical survey, advancement of soil borings, installation of soil vapor probes, and collection of soil and soil vapor samples for laboratory analysis.

The report is organized as follows:

- Section 2.0: Describes the site background
- Section 3.0: Presents the Phase II ESI methodology
- Section 4.0: Presents the findings of the Phase II ESI
- Section 5.0: Presents conclusions based on the findings

2.0 BACKGROUND

2.1 Site Location and Description

The site is located at 2731 West 12th Street and is identified as Block 7247, Lot 106 on the Brooklyn Borough Tax Map. The site is about 16.8 acres in area and is currently a vacant, vegetated lot that includes remnant concrete foundation elements and out-of-service electrical equipment associated with historical site operations.

The site is bound to the north by an elevated highway and at-grade access road (Shore Parkway) followed by a Metropolitan Transit Authority (MTA) rail yard; to the east and south by Coney Island Creek; and to the west by at-grade MTA rail lines followed by industrial and commercial properties. According to the May 4, 2023 draft ALTA/NSPS Land Title Survey prepared by Langan, the elevation of the site ranges from about elevation¹ (el.) +16 in the northern part of the site to el. -1 in the southern part of the site. The surrounding area slopes to the south towards Coney Island Creek, which adjoins the site to the east and south. A Site Location Map is included as **Figure 1**, and the site plan is presented on **Figure 2**.

2.2 Environmental History

The site is currently owned by National Grid (NatGrid) and was historically used by the Brooklyn Borough Gas Company (BBGC) as a manufactured gas plant (MGP) from 1908 to 1951. In 1951, MGP operations at the site ceased and BBGC converted the gas delivery operations to a natural gas-based system. In 1959, BBGC was acquired by the Brooklyn Union Gas Company (later became KeySpan Corporation), and between 1960 and 1966 multiple buildings associated with the MGP operations at the site were decommissioned and demolished. In the early 1970s, a gate regulator station and two gas holders remained operational providing natural gas service, and were subsequently demolished by the 1980s. The eastern part of the site was filled with material of an unidentified origin in the early 1970s and baseball fields were constructed in the late 1980s. By the mid-1990s, the baseball fields were abandoned and the site has generally remained vacant through present day.

The site, along with two adjoining tax lots (Block 7247, Tax Lots 13 and 218), was previously remediated pursuant to an Order on Consent and Administrative Settlement, Index No. D2-001-94-12, and a subsequent Order on Consent and Administrative Settlement, Index No. A2-0552-0606 (the "Orders") to the satisfaction of the New York State Department of Environmental Conservation (NYSDEC). Remedial actions were described in a March 2001 Record of Decision (ROD) and March 2002 ROD, prepared by the NYSDEC (collectively, the "ROD"). The site, along with Lots 13 and 218, is currently listed as a Class '4' site² in the New York State Inactive Hazardous Waste Disposal Site (SHWS) Remedial Program as the Former Brooklyn Borough Gas Works Site (NYSDEC Site No. C224026). The site, along with Lots 13 and 218, is now subject

¹ Elevations herein are presented in feet relative to the North American Vertical Datum of 1988 (NAVD88).

² This classification is assigned to a site that has been properly closed but that requires continued site management consisting of operation, maintenance and/or monitoring. Class 4 is appropriate for a site where remedial construction actions have been completed for all operable units, but the site has not necessarily been brought into compliance with standards, criteria, or guidance (e.g., a groundwater extraction and treatment system has been installed and is operating properly but groundwater standards have not been achieved yet).

to ongoing site management in accordance with a June 10, 2019 NYSDEC-approved Site Management Plan (SMP), prepared by GEI Consultants, Inc., P.C. (GEI).

2.3 Phase I ESA Findings

The December 23, 2022 Draft Phase I ESA prepared by Langan identified the following recognized environmental condition (REC):

1. Current and Historical Use of Adjoining Properties: As early as 1924, the MTA operated a rail yard on the western-adjoining property. As early as 1950, the Shore Parkway was constructed with steel viaducts over the northern-adjoining roadway. Both the western- and northern-adjoining structures are still in operation. Based on the approximate construction dates, paint applied to these structures as part of historical maintenance may contain lead. During the site reconnaissance, paint on the support structures of Shore Parkway was observed to be in poor condition, as evidenced by chipped and peeling paint. Although the site was previously remediated, lead from deteriorating paint on structures in the adjoining rail yard and highway likely impacted surficial soil at the site. The likely presence of lead in surficial soil from deteriorating paint on adjoining structures is a REC.

The following controlled REC (CREC) was identified:

1. Documented Contamination at the Site: The site was the subject of previous investigations that identified soil and groundwater containing various chemicals (polyaromatic hydrocarbons [PAH]; benzene, toluene, ethylbenzene, and xylenes; styrene; polychlorinated biphenyls (PCB); total cyanide; arsenic; chromium; copper; lead; manganese; mercury; nickel; and zinc) that relate to the former site use as an MGP. To remediate the site, NatGrid entered into Orders with the NYSDEC.

In March 2001 and March 2002, RODs were issued by the NYSDEC identifying the selected site remedies. The site was divided into three operable units (OU) to address remediation at the upland portion of the SHWS (OU-1 and OU-3) and the surrounding Coney Island Creek (OU-2). According to the November 2009 Final Engineering Report (FER) prepared by Paulus, Sokolowski and Sartor Engineering, PC (PS&S PC) (revised April 2013), the remediation of OU-1 through OU-3 has been completed. The remediation was conducted in two phases between November 2003 and October 2008 and primarily consisted of contaminated soil and sediment removal, construction of a site cap and a steel sheet pile barrier wall, installation and monitoring of a non-aqueous phase liquid (NAPL) collection trench, and installation and monitoring of groundwater and NAPL monitoring wells across the site.

The site is subject to post-remedial management and requirements under a NYSDEC-approved SMP. The SMP outlines the Institutional and Engineering Controls (ICs and ECs) required at the site to protect human health and the environment. The ICs include an environmental notice, which establishes the following: the SHWS site can only be used for commercial or industrial uses; groundwater use is prohibited without further treatment; ground-intrusive work must be performed in accordance with the SMP; and engineering controls must be implemented, maintained, inspected, and monitored. ECs

include a sealed sheet pile barrier wall, 50-foot ecological buffer zone, NAPL collection trench, dense NAPL recovery wells, low-permeability multi-component environmental cap (LPMEC) with passive venting system, and perimeter fencing. As part of the SMP, an annual Periodic Review Report (PRR) must be prepared and submitted to the NYSDEC.

2.4 Geology

According to the FER, the site is underlain by an about 3-foot-thick LPMEC, which consists of at least 6 inches of topsoil underlain by 2 feet of imported soil and a geosynthetic clay liner (Bentofix EC 1000), followed by historic fill to about 10 feet below grade surface (bgs). The historic fill is underlain by unconsolidated Pleistocene deposits from about 10 to 172 feet bgs and consists primarily of fine- to coarse-grained sand with a clay and silt layer from 59 to 60 feet bgs and clay from 170 to 172 feet bgs. Bedrock was not encountered during previous environmental investigations.

During the Phase II ESI, the subsurface stratigraphy was generally observed to consist of the LPMEC—including an about 6- to 12-inch layer of topsoil, 1- to 2-foot layer of fine sand with trace silt and gravel, geotextile fabric³, and 3- to 30-inch layer of gravel—underlain by a fill layer and, in some cases, native sand. The fill layer was comprised of sand, gravel, and clay, with varying amounts of wood, brick, metal fragments, slag, and concrete extending to depths from about 6 to 16 feet bgs. In borings where the fill layer did not extend to the boring termination depth, the fill was underlain by native soil consisting of varying amounts of sand, clay, silt, and gravel with organic matter. Bedrock was not encountered during the Phase II ESI (maximum boring depth was 19 feet bgs).

2.5 Hydrology and Hydrogeology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeological network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeological and anthropogenic variables such as precipitation, evaporation, extent of vegetative cover, and coverage by impervious surfaces. Other factors influencing groundwater include depth to bedrock, artificial fill, and variability in local geology and groundwater sources or sinks. Potable water is provided by the City of New York and is derived from surface impoundments in the Croton, Catskill, and Delaware watersheds.

As detailed in the FER, following construction completion of the perimeter subsurface sheet pile barrier wall and site-wide LPMEC, the upper 30 feet of groundwater beneath the site is generally isolated from the surrounding hydrogeologic environment, including Coney Island Creek and its tidal influence. During a monitoring well gauging event implemented by GEI between August 8 and 9, 2022, groundwater was encountered between about 7 and 13 feet bgs, corresponding to between el. 0.17 and 6.73, as summarized on Table 3 of GEI's December 2022 PRR.

³ The geotextile fabric component of the LPMEC was not identified in soil borings SB03_A, SB07, SB09, and SB11.

During the Phase II ESI, groundwater was encountered from about 7 to 12 feet bgs. Groundwater in New York City is not used as a potable water source.

3.0 FIELD INVESTIGATION

The Phase II ESI was implemented between March 27 and 31, 2023 and consisted of a geophysical survey; installation of 15 soil borings and 4 soil vapor points; and collection and laboratory analysis of 24 grab soil samples, 4 soil vapor samples, and 1 ambient air sample. Quality assurance/quality control (QA/QC) samples were collected for soil and soil vapor samples. A sample summary is provided in **Table 1**.

3.1 Geophysical Survey

Nova Geophysical Services, Inc. (NOVA) conducted a geophysical survey under Langan observation on March 27 and 28, 2023 using ground-penetrating radar and electromagnetic detection equipment across the entire site to clear proposed sample locations and attempt to identify underground storage tanks (UST), utilities, and/or subsurface anomalies at the site. A copy of the geophysical survey report is included in **Appendix A**.

3.2 Soil Investigation and Sampling Methodology

The soil investigation included advancement of 15 soil borings (SB01 through SB14) by Lakewood Environmental Services Corp. of Smithtown, New York (Lakewood) under observation by Langan field personnel. The borings were located to avoid utilities, obstructions, and subsurface anomalies. Soil boring locations are shown on **Figure 2**.

The soil borings were advanced using a Geoprobe 6610DT drill rig to between about 12 and 19 feet bgs. Soil samples were collected into MacroCore samplers lined with 4-foot-long dedicated acetate sleeves. Extracted soil was screened with a photoionization detector (PID) equipped with a 10.6 electron volt lamp, inspected for visual and olfactory evidence of contamination, and classified by Langan field personnel. The soil boring logs are provided in **Appendix B**.

Up to two grab soil samples were collected from 13 of the 15 borings for laboratory analysis. Borings SB03_B and SB14 were advanced to install soil vapor installation points and soil samples were not collected. Soil samples were collected from the upper two feet of exposed soil, the two-foot interval immediately below the LPMEC, the interval of greatest degree of petroleum- or chemical-like impacts (if observed), and/or within the historic fill. TerraCore sampling kits were used to collect soil samples for volatile organic compound (VOC) analysis. Two duplicate soil samples, two matrix spike/matrix spike duplicate (MS/MSD) soil sample sets, two field blanks, and two trip blanks were also collected for QA/QC purposes.

Soil samples were collected into laboratory-supplied batch-certified clean glassware and TerraCore samplers (VOC samples only) and submitted to a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory (Alpha Analytical, Inc. [Alpha] of Westborough, MA [ELAP ID #11148]) via courier service under standard chain-of-custody protocol. New York Analytical Services Protocols Category B laboratory reports were provided by Alpha. Soil samples were analyzed for one or more of the following parameters (see **Table 1** for analysis by sample ID):

- Target Compound List (TCL) VOCs by United States Environmental Protection Agency (USEPA) Method 8260D

- TCL semivolatile organic compounds (SVOC) by USEPA Method 8270E
- Herbicides by USEPA Method 8151A
- PCBs by USEPA Method 8082A
- Pesticides by USEPA Method 8081B
- Target analyte list (TAL) metals by USEPA Method 6010D and 7471B
- Total cyanide by USEPA 9012B
- Hexavalent chromium by USEPA Method 7196A

3.3 Soil Vapor Investigation and Sampling Methodology

Lakewood installed four soil vapor sampling points (SV01, SV02, SV03, and SV04) under the observation of Langan field personnel. Soil vapor points were installed using a Geoprobe 6610DT drill rig to depths from about 2.5 to 7 feet bgs. Soil vapor sampling point SV03 was installed to 2.5 feet bgs to evaluate soil vapor conditions within the gravel vapor collection layer of the LPMEC. All other soil vapor sampling points were installed at least 5 feet bgs and 2 feet above the observed groundwater table. Soil vapor sampling locations are shown on **Figure 2**.

The soil vapor points were installed in accordance with the NYSDOH Soil Vapor Guidance and consisted of 2-inch polyethylene implants threaded into 3/16-inch-diameter polyethylene tubing. The annulus of each soil vapor point was filled with No. 2 sand above the top of the implant, followed by a hydrated bentonite seal to surface grade. Before collecting the soil vapor sample, a minimum of three implant volumes (i.e., the volume of the sample probe and tubing) were purged from the sample port at a rate of less than 0.2 liters per minute using a RAE Systems MultiRAE meter. The purged soil vapor was monitored for VOCs with the MultiRAE during purging.

As a QA/QC measure, a helium tracer gas was introduced into an above-grade sampling chamber to verify that the soil vapor points were properly sealed above the target sampling depth, thereby preventing subsurface infiltration of ambient air before sampling. Concentrations of less than 10 percent helium in the sampling tube were considered sufficient to verify a tight seal at each sample point.

After the integrity of each seal was confirmed, vapor samples were collected for a 2-hour sampling period into laboratory-supplied batch-certified clean 6-liter Summa canisters calibrated with flow controllers. An ambient air sample was collected simultaneously from about 3 to 5 feet above ground (breathing height).

Soil vapor and ambient air samples were submitted to Alpha via courier service under standard chain-of-custody protocols and analyzed for VOCs by USEPA Method TO-15. Vapor sampling logs are provided in **Appendix C**.

3.4 Quality Assurance/Quality Control Sampling

During the Phase II ESI, the following quality control samples were collected:

Soil QA/QC Samples

- Two field duplicate samples
- Two MS/MSD sample sets

- Two field blanks
- Two trip blanks

Soil Vapor QA/QC Samples

- One ambient air sample

The field duplicate samples were collected to assess the precision of the analytical methods relative to the sample matrix. The duplicates were collected from the same material as the primary sample by splitting the volume of a homogenized sample collected in the field into two sample containers.

The MS/MSD sample sets were collected to assess the effect of the sample matrix on the recovery of target compounds or target analytes.

The field blanks were collected to determine the effectiveness of the decontamination procedures for the down-hole soil sampling equipment and the cleanliness of unused neoprene gloves and acetate liners. Field blank samples consisted of deionized, distilled water provided by the laboratory passed through the sampling apparatus. Field blank samples were analyzed for the same list of analytes as the soil samples.

The trip blank samples were collected to assess the potential for contamination of the sample containers and samples during transport from the laboratory, to the field, and back to the laboratory for analysis. Trip blanks contain about 40 milliliters of acidic water (doped with hydrochloric acid) that is prepared and sealed by the laboratory when the empty sample containers are shipped to the field, and then unsealed and analyzed for VOCs by the laboratory when the sample shipment is received from the field.

An ambient air sample was collected to assess ambient air conditions and determine whether conditions during soil vapor sampling could have potentially interfered with sampling results. The ambient air sample was analyzed for the same parameter list as the soil vapor samples.

3.5 Data Validation

Laboratory analyses were conducted by Alpha in accordance with USEPA SW-846 and USEPA TO-15 methods, respectively. Analytical data was reported consistent with the NYSDEC Analytical Services Protocol Category B deliverable format. Environmental data will be reported electronically using the database software application Environmental Quality Information Systems as part of the NYSDEC's Environmental Information Management System.

The Phase II ESI data was validated by a Langan data validator in accordance with USEPA and NYSDEC validation protocols. A copy of the data usability summary report (DUSR) and the data validator's credentials are included in **Appendix D**.

A DUSR was prepared for each laboratory delivery group following data validation. The DUSRs present the results of the data validation, including a summary assessment of laboratory data packages, sample preservation and chain-of-custody procedures, and a summary assessment of precision, accuracy, representativeness, comparability, and completeness for each analytical method.

Based on the results of data validation, the following qualifiers were assigned to the data in accordance with the USEPA's guidelines and best professional judgment:

- "U" - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the reporting limit or the sample concentration for results impacted by blank contamination;
- "UJ" - The analyte was not detected at a level greater than or equal to the reporting limit; however, the reported reporting limit is approximate and may be inaccurate or imprecise;
- "J" - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample;
- No Flag - Result accepted without qualification.

No major deficiencies were identified for this data set and data was judged to be 100% valid, as qualified. After data validation was completed, validated data was used to prepare the tables and figures included in this report. Copies of the DUSRs are provided in **Appendix D**.

4.0 OBSERVATIONS AND RESULTS

4.1 Geophysical Survey

A geophysical survey was conducted across the entirety of the site. Anomalous findings, as interpreted by NOVA, are summarized below:

- Subsurface anomalies resembling various utilities (e.g., electric and water) were identified on-site.
- Subsurface anomalies resembling concrete slabs likely associated with former gas holders were detected in the southwestern part of the site.
- A subsurface anomaly resembling a steel plate was detected in the western part of the site.
- An about 7-foot-wide by 13-foot-long subsurface anomaly resembling a potential UST was detected at about 6.5 feet bgs in the southern part of the site.

The geophysical survey report is included in **Appendix A**.

4.2 Subsurface Observations

Soil borings were advanced to between 12 and 19 feet bgs. During the Phase II ESI, the subsurface stratigraphy was generally observed to consist of the LPMEC—including an about 6- to 12-inch layer of topsoil, 1- to 2-foot layer of fine sand with trace silt and gravel, geotextile fabric⁴, and 3- to 30-inch layer of gravel—underlain by a fill layer and, in some cases, native sand. The fill layer was comprised of sand, gravel, and clay, with varying amounts of wood, brick, metal fragments, slag, and concrete extending to depths from about 6 to 16 feet bgs. In borings where the fill layer did not extend to the boring termination depth, the fill was underlain by native soil consisting of varying amounts of sand, clay, silt, and gravel with organic matter. Bedrock was not encountered during the Phase II ESI (maximum boring depth was 19 feet bgs).

Visual, olfactory, and/or PID evidence of impacts identified in the borings is summarized in the below table:

Boring ID	Location	Evidence of impacts	Depth of impacts (feet bgs)	Maximum PID reading (ppm)
SB01	Western part of the site	Petroleum-like odor	8.5 to 9.25	0.0
			14 to 15	0.0
SB02	Western part of the site	Petroleum-like odor	8.5 to 9	0.9
		Black staining; solvent-like odor; PID readings above background	9.75 to 11	120
		Coal tar-like odor; PID readings above background	14 to 16	19.5
SB03_A	Central part of the site	Coal tar	3 to 5	0.0
		Black staining; solvent-like odor	12 to 12.25	0.1
SB03_B	Central part of the site	Petroleum-like odor	14.5 to 16	1.8

⁴ The geotextile fabric component of the LPMEC was not identified in soil borings SB03_A, SB07, SB09, and SB11.

Boring ID	Location	Evidence of impacts	Depth of impacts (feet bgs)	Maximum PID reading (ppm)
SB04	Southern part of the site	Petroleum-like odor	8 to 10	0.1
		Petroleum-like odor; PID readings above background; sheen	13 to 16	30.9
SB05	Southwestern part of the site	Solvent-like odor; PID readings above background; sheen	7 to 15	693.3
SB06	Northwestern part of the site	Coal tar; petroleum-like odor; PID readings above background	10 to 13	18.9
SB08	Northern part of the site	Coal tar	8 to 9	6.7
		PID readings above background; sheen	11	15.4
SB09	Eastern part of the site	Sheen	13 to 13.5	3.5
SB10	Eastern part of the site	Sheen	13	2.5
SB11	Eastern part of the site	Coal tar; PID readings above background	9.5 to 10.5	42.2
		PID readings above background	12 to 14	131.1
SB12	Northeastern part of the site	Petroleum-like odor; sheen	13 to 15	0.1
SB13	Central part of the site, proximate to potential UST anomaly	Petroleum-like odor; sheen	9	0.0
SB14	Central part of the site	Sheen	9	3.9

ppm = parts per million

4.3 Soil Sample Analytical Results

Twenty-four soil samples were collected from 13 soil borings (SB01, SB02, SB03_A, SB04 through SB13) for laboratory analysis (plus QA/QC samples). Soil sample analytical results were compared to Title 6 of the New York Codes, Rules and Regulations (NYCRR) Part 375 Unrestricted Use (UU), Restricted Use Commercial (RUC), and Restricted Use Industrial (RUI) Soil Cleanup Objectives (SCO).

Soil sample analytical results are provided in **Table 2** and are presented on **Figures 3A and 3B**. Laboratory analytical reports for soil are provided in **Appendix E**.

VOCs

One or more of four VOCs were detected at concentrations exceeding the RUC and/or RUI SCOs in four soil samples collected from 6 to 15 feet bgs in three borings (SB02, SB04, and SB05). The following table summarizes concentrations of VOCs detected in soil samples above the RUC and RUI SCOs. VOC concentrations above the RUI SCOs are shown in **bold**.

Analyte	RUC SCOs	RUI SCOs	Unit	Minimum Detected Concentration above SCOs		Maximum Detected Concentration above SCOs	
1,2,4-Trimethylbenzene	190	380	mg/kg	390	SB05_8-10	520	SB05_6-8
Ethylbenzene	390	780	mg/kg	490	SB05_8-10	570	SB05_6-8

Analyte	RUC SCOs	RUI SCOs	Unit	Minimum Detected Concentration above SCOs		Maximum Detected Concentration above SCOs	
Naphthalene	500	1,000	mg/kg	630	SB04_13-15	4,500	SB05_6-8
Total Xylenes	500	1,000	mg/kg	1,300	SB05_8-10	1,500	SB05_6-8

mg/kg = milligram per kilogram

SVOCs

One or more of seven SVOCs were detected at concentrations exceeding the RUC and/or RUI SCOs in twelve soil samples collected from 2 to 15 feet bgs in ten borings (SB01, SB02, SB03_A, SB04, SB05, SB06, SB07, SB08, SB10, and SB11). The following table summarizes concentrations of SVOCs detected in soil samples above the RUC and RUI SCOs. SVOC concentrations above the RUI SCOs are shown in **bold**.

Analyte	RUC SCOs	RUI SCOs	Unit	Minimum Detected Concentration above SCOs		Maximum Detected Concentration above SCOs	
Benzo(a)anthracene	5.6	11	mg/kg	12	SB04_13-15	120	SB11_12-14
Benzo(a)pyrene	1	1.1	mg/kg	1.1	SB07_5-6.5 SODUP01_032723	59	SB11_12-14
Benzo(b)fluoranthene	5.6	11	mg/kg	8.9	SB04_13-15	45	SB11_12-14
Chrysene	56	110	mg/kg	57	SB06_12-14	76	SB11_12-14
Dibenz(a,h)anthracene	0.56	1.1	mg/kg	1.2	SB04_13-15	7.2	SB06_12-14
Indeno(1,2,3-cd)pyrene	5.6	11	mg/kg	19	SB06_12-14	22	SB11_12-14
Naphthalene	500	1,000	mg/kg	820	SB06_12-14	3,400	SB05_6-8

Metals

One or more of six metals (trivalent chromium, copper, lead, mercury, nickel, and zinc) were detected at concentrations above the UU SCOs in thirteen soil samples collected from 0 to 14 feet bgs in eight borings (SB02, SB03_A, SB04, SB07, SB09, SB10, SB11, and SB12). Metals were not detected at concentrations exceeding the RUC or RUI SCOs.

Pesticides

One or more of three pesticides (4,4'-DDD, 4,4'-DDE, and 4,4-DDT') were detected at concentrations above the UU SCOs in three soil samples collected from 2 to 4 feet bgs in two borings (SB09 and SB10). Pesticides were not detected at concentrations exceeding the RUC or RUI SCOs.

Herbicides and PCBs

Herbicides and PCBs were not detected above the UU SCOs in any of the samples collected.

4.4 Soil Vapor Sample Results

Four soil vapor samples (SV01_033023, SV02_033023, SV03_033023, and SV04_033023) were collected for laboratory analysis.

Soil vapor sample results were evaluated using the NYSDOH Decision Matrices contained in the October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York Decision Matrices for Sub-Slab Vapor and Indoor Air and subsequent updates (2017). The NYSDOH Decision Matrices (Matrices A, B, and C) address the compounds tetrachloroethene (PCE), trichloroethene (TCE), 1,1,1-trichloroethane (1,1,1-TCA), 1,1-dichloroethene, cis-1,2-dichloroethene, vinyl chloride, methylene chloride and carbon tetrachloride. The matrix evaluation requires soil vapor and indoor air data. In the absence of indoor air sampling data, soil vapor results were evaluated using the lowest concentration for which monitoring or mitigation is recommended in the NYSDOH Decision Matrices.

Six of the eight VOCs (1,1-dichloroethene, carbon tetrachloride, cis-1,2-dichloroethene, methylene chloride, TCE, and vinyl chloride) listed in the NYSDOH Soil Vapor Guidance Decision Matrices were not detected in soil vapor. Two of the eight VOCs listed in the NYSDOH Soil Vapor Guidance Decision Matrices were detected in soil vapor samples, as summarized below:

- 1,1,1-TCA was detected in one soil vapor sample (SV01_033023) at a concentration of 3.42 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$). An evaluation of 1,1,1-TCA concentrations using the NYSDOH decision matrices yields a recommendation of “no further action”.
- PCE was detected in two soil vapor samples at 1.74 $\mu\text{g}/\text{m}^3$ in SV01_033023 and 2.54 $\mu\text{g}/\text{m}^3$ in SV04_033023. An evaluation of PCE concentrations using the NYSDOH decision matrices yields a recommendation of “no further action”.

The soil vapor analytical results are summarized in **Table 3**. Laboratory analytical reports for soil vapor are provided in **Appendix F**.

4.5 Quality Assurance/Quality Control Results

QA/QC sample analytical results are provided in the laboratory reports and a QA/QC sample summary table is included as **Table 4**.

5.0 CONCLUSIONS

Findings and conclusions of the Phase II ESI are summarized below:

- Geophysical Survey: Subsurface anomalies, interpreted as various utility lines (e.g., electric and water), were detected across the site. Subsurface anomalies resembling concrete slabs likely associated with former gas holders were identified in the southwestern part of the site. A geophysical anomaly indicative of a potential UST was identified in the southern part of the site. Field evidence of petroleum impacts and benzene in soil were identified in samples collected from one boring advanced proximate to the potential UST.
- Stratigraphy: The subsurface stratigraphy was generally observed to consist of the LPMEC—including an about 6- to 12-inch layer of topsoil, 1- to 2-foot layer of fine sand with trace silt and gravel, geotextile fabric, and 3- to 30-inch layer of gravel—underlain by a fill layer and, in some cases, native sand. The fill layer was comprised of sand, gravel, and clay, with varying amounts of wood, brick, metal fragments, slag, and concrete extending to depths from about 6 to 16 feet bgs. In borings where the fill layer did not extend to the boring termination depth, the fill was underlain by native soil consisting of varying amounts of sand, clay, silt, and gravel with organic matter. Bedrock was not encountered during the Phase II ESI (maximum boring depth was 19 feet bgs).
- Hydrogeology: Groundwater was encountered in soil borings from about 7 to 12 feet bgs; these depths are generally consistent with groundwater depths identified in prior environmental studies. Groundwater was not evaluated as part of the Phase II ESI; however, prior studies indicate that regional groundwater flows to the south towards Coney Island Creek. Previous reports indicate that a sealed sheet-pile wall was previously installed surrounding the site, and on-site groundwater is isolated from the surrounding hydrogeologic environment.
- Soil Analytical Results:
 - The fill layer contains SVOCs at concentrations above the RUC and/or RUI SCOs. The presence of SVOCs is attributed to fill quality and historical site use. The presence of naphthalene is attributed to historical MGP operations at the site.
 - Native soil contains VOCs and SVOCs at concentrations above the RUC and/or RUI SCOs. The presence of petroleum-related VOCs and SVOCs is attributed to former MGP operations, including petroleum bulk storage, and at the site.
- Soil Vapor Analytical Results:
 - 1,1,1-TCA and PCE were detected in soil vapor at concentrations that yield NYSDOH decision matrix recommendations of “no further action”.
 - The presence of 1,1,1-TCA and PCE in soil vapor is attributed historical use of surrounding properties and former MGP operations at the site.

6.0 LIMITATIONS

This Phase II ESI Report was prepared expressly for Prologis, L.P. for the 2731 West 12th Street site and for the objectives defined herein. Langan shall not be responsible for interpretations by others of the information it develops or provides to Prologis, L.P. without specific written authorization from Langan.

- NOTES:**
- BASE MAP REFERENCED FROM MAY 4, 2023 DRAFT ALTA/NSPS LAND TITLE SURVEY PREPARED BY LANGAN.
 - ALL FEATURES, SITE BOUNDARY, AND SAMPLE LOCATIONS ARE APPROXIMATE.
 - SAMPLE LOCATIONS BASED ON IN-FIELD NORTHING/EASTING GLOBAL POSITIONING SYSTEM DATA COLLECTED BY LANGAN DURING THE PHASE II ENVIRONMENTAL SITE INVESTIGATION (ESI) (MARCH 2023).
 - SOIL SAMPLE ANALYTICAL RESULTS ARE COMPARED TO THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION (NYSDEC) YORK 6 OF THE OFFICIAL COMPILATION OF NEW YORK CODES, RULES, AND REGULATIONS PART 375 UNRESTRICTED USE (UU), RESTRICTED USE COMMERCIAL (RUC), AND RESTRICTED USE INDUSTRIAL (RUI) SOIL CLEANUP OBJECTIVES (SCO).
 - DETECTED ANALYTICAL RESULTS ABOVE UU SCOs ARE BOLDED.
 - DETECTED ANALYTICAL RESULTS ABOVE RUC SCOs ARE SHADED.
 - DETECTED ANALYTICAL RESULTS ABOVE RUI SCOs ARE UNDERLINED.
 - SAMPLE SODUP01_032723 IS A DUPLICATE SAMPLE OF SB10_2-4; SAMPLE SODUP02_033123 IS A DUPLICATE SAMPLE OF SB01_9-11.
 - MGP = MANUFACTURED GAS PLANT
 - UST = UNDERGROUND STORAGE TANK
 - bgc = BELOW GRADE SURFACE
 - NA = NOT ANALYZED
 - VOC = VOLATILE ORGANIC COMPOUND
 - SVOC = SEMI-VOLATILE ORGANIC COMPOUND
 - APPROXIMATE LOCATION AND DIMENSION OF ANOMALY RESEMBLING A POTENTIAL UST WERE TAKEN FROM IN-FIELD MEASUREMENTS COLLECTED BY LANGAN DURING THE PHASE II ESI (MARCH 2023) AND THE GEOPHYSICAL ENGINEERING SURVEY REPORT PREPARED BY NOVA GEOPHYSICAL ENGINEERING SERVICES, DATED MARCH 31, 2023.
 - APPROXIMATE FORMER MGP GAS HOLDER LOCATIONS TAKEN FROM THE SITE MANAGEMENT PLAN PREPARED BY GEI CONSULTANTS, INC., P.C., DATED JUNE 2019.

QUALIFIERS:

J = THE ANALYTE WAS POSITIVELY IDENTIFIED AND THE ASSOCIATED NUMERICAL VALUE IS THE APPROXIMATE CONCENTRATION OF THE ANALYTE IN THE SAMPLE.

UJ = THE ANALYTE WAS NOT DETECTED AT A LEVEL GREATER THAN OR EQUAL TO THE REPORTING LIMIT (RL); HOWEVER, THE REPORTED RL IS APPROXIMATE AND MAY BE INACCURATE OR IMPRECISE.

U = THE ANALYTE WAS ANALYZED FOR, BUT WAS NOT DETECTED AT A LEVEL GREATER THAN OR EQUAL TO THE LEVEL OF THE RL OR THE SAMPLE CONCENTRATION FOR RESULTS WAS IMPACTED BY BLANK CONTAMINATION.

WARNING:
VIOLATION OF THE NYS EDUCATION LAW ARTICLE 145 FOR ANY PERSON, UNLESS HE IS ACTING UNDER THE DIRECTION OF A LICENSED PROFESSIONAL ENGINEER, TO ALTER THIS ITEM IN ANY WAY.

Table 2
Phase II Environmental Site Investigation Report
Soil Sample Analytical Results

2731 West 12th Street
Brooklyn, New York

Notes:

CAS - Chemical Abstract Service

NS - No standard

mg/kg - milligram per kilogram

NA - Not analyzed

RL - Reporting limit

<RL - Not detected

Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Unrestricted Use, Restricted Use Commercial, and Restricted Use Industrial Soil Cleanup Objectives (SCO).

Criterion comparisons for 3- & 4-methylphenol (m&p cresol) are provided for reference. Promulgated SCOs are for 3-methylphenol (m-cresol) and 4-methylphenol (p-cresol).

Qualifiers:

J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.

UJ - The analyte was not detected at a level greater than or equal to the RL; however, the reported RL is approximate and may be inaccurate or imprecise.

U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

Exceedance Summary:

- 10** - Result exceeds Unrestricted Use SCOs
- 10** - Result exceeds Restricted Use Commercial SCOs
- 10** - Result exceeds Restricted Use Industrial SCOs

Notes:

AA - Ambient Air
SV - Soil Vapor
CAS - Chemical Abstract Service
NS - No standard
ug/m3 - microgram per cubic meter
RL - Reporting limit
<RL - Not detected
ND - Not detected

Soil vapor sample analytical results are compared to the minimum soil vapor concentrations at which mitigation is recommended as set forth in the New York State Department
Ambient air sample analytical results are shown for reference only.

Qualifiers:

U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank

Exceedance Summary:

10 - Result exceeds minimum soil vapor concentrations recommending mitigation

<RL - Not detected

Qualifiers:

J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

Re: Geophysical Engineering Survey (GES) Report
Industrial Property
2731 West 12th Street,
Brooklyn, New York 11224
Langan Project# 170697301

Dear Ms. Grose,

Nova Geophysical Services (NOVA) is pleased to provide the findings of the geophysical engineering survey (GES) at the above referenced project site: 2731 West 12th Street, New York, New York (the "Site"). The Site is located within the Brooklyn Borough with Block 7247, Lot 106 and approximately 16-acre vacant lot.

INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY (GES)

NOVA performed a geophysical engineering survey (GES) consisting of a Ground Penetrating Radar (GPR) and Electromagnetic (EM) survey at the site. The purpose of this survey is to locate and identify utilities, underground storage tanks (USTs) and other substructures on March 27th & 28th, 2023.

The equipment selected for this investigation was a Sensors and Software NOGGIN 250 MHz ground penetrating radar (GPR) with a shielded antenna and a RadioDetection RD7100 Electromagnetic utility locator. A GPR system consists of a radar control unit, control cable, and transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250 MHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronics amplify the trigger

pulse into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

A typical electromagnetic (EM) utility locating system consists of a transmitter unit and a receiver unit. The receiver unit can be used independently of the transmitter unit in order to detect utility lines with an inherent EM signature (electric utility lines, water lines, etc.). If needed a current at a specific frequency can also be placed on a utility that is being located. This can be done via the transmitter unit by either direct connection or induction via an EM field varying at specific frequency. The receiver unit is then set to the selected frequency and the electromagnetic field created by the current running through the utility can be located allowing the utility to be marked.

GEOPHYSICAL METHODS

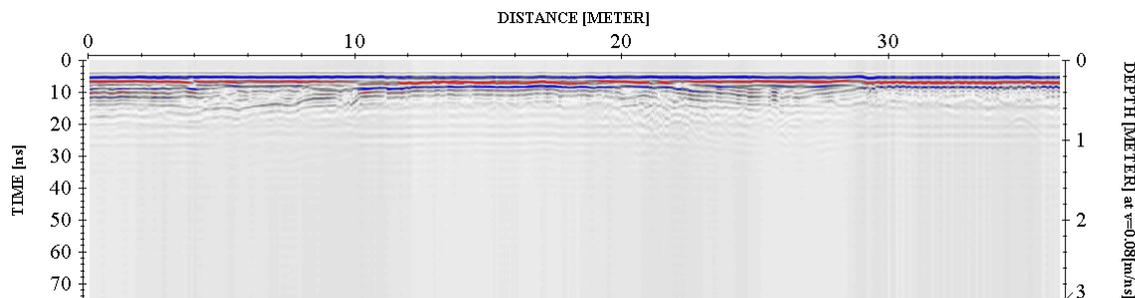

The project site was screened using GPR to search the specified area and inspected for reflections, which could be indicative of substructures and utilities within the subsurface. An EM utility locator was used to help determine the locations of utilities within the survey area.

EM data was collected and interpreted on site and suspected utilities marked as needed. GPR data profiles were collected for the areas of the Site specified by the client and processed as specified below.

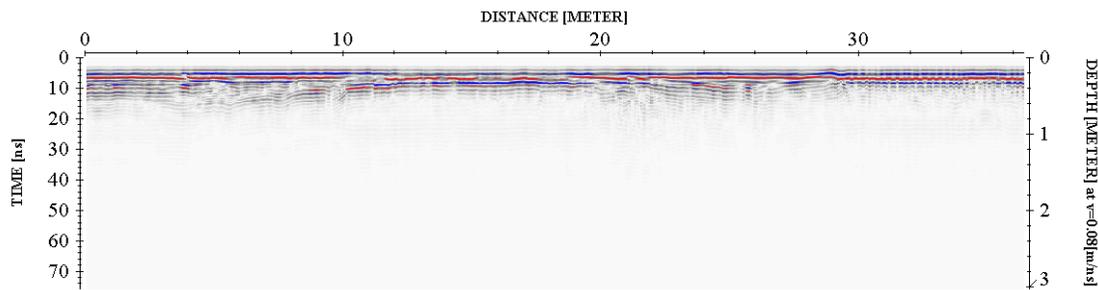

DATA PROCESSING

To improve the quality of the results and to better identify anomalies NOVA processed the collected data. The processing workflow is briefly described in this section.

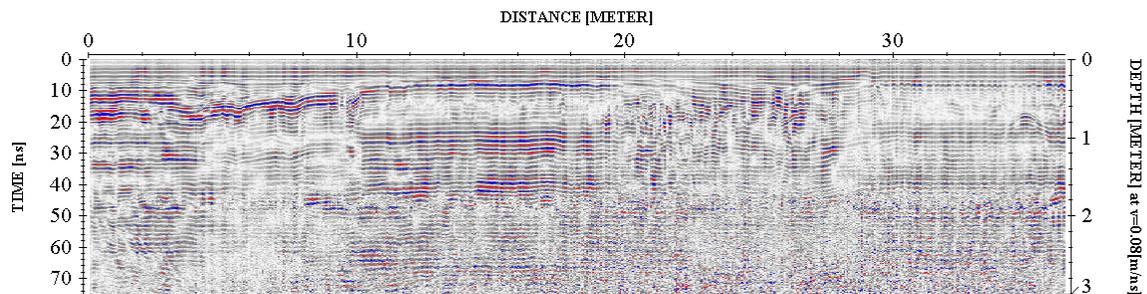

Step 1. Import Raw RAMAC data to standard processing format

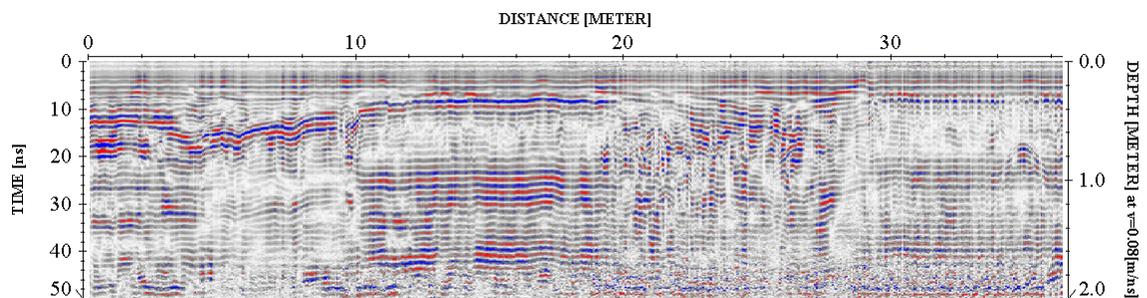

Step 2. Remove instrument noise (*dewow*)

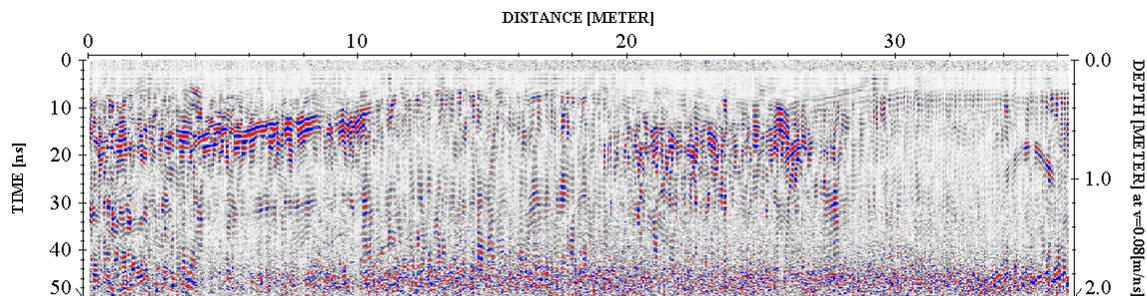

Step 3. Correct for attenuation losses (*energy decay function*)

Step 4. Remove static from bottom of profile (*time cut*)

Step 5. Mute horizontal ringing/noise (*subtracting average*)

The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and represents the subsurface anomalies much more accurately.

PHYSICAL SETTINGS

NOVA observed the following physical conditions at the time of the survey.

Weather: Clear, Rain, Overcast

Temperature: 50° F

Surface: Fill, Vegetation, Gravel

Survey Parameters: A ground penetrating radar (GPR) grid scan was conducted within the survey area as shown in the survey plan. The line spacing of the grid survey was approximately 6'. Additional GPR data was collected over features of interest and proposed boring locations. A utility locator was used in conjunction with GPR throughout the survey area.

Limitations: The geophysical noise level (GNL) at the site was high due to being in an urban environment and other unknown anthropogenic noise sources. The site appears to have been covered with approximately 4 feet of fill prior to the GES, significantly reducing the ability to identify historical structures beneath the fill layer.

RESULTS

The results of the geophysical engineering survey (GES) identified the following at the project site:

- Anomalies resembling potential subsurface utilities (such as electric and water) were identified within the surveyed areas. Anomalies resembling subsurface utilities were identified but could not be connected to known utilities at the site. Additional surface structures were identified related to the subsurface utilities during the GES. The approximate locations are shown in the survey plan.
- Multiple large flat anomalies resembling a reinforced concrete slab were identified during the GES. NOVA suspects these anomalies could be related to former above ground gas storage tanks. The edges of the anomaly are shown in the survey plan where identifiable.
- A large geophysical anomaly resembling an underground storage tank (UST) was identified during the GES. NOVA suspects this to be a ferrous structure and to be approximately 6.5 feet below ground surface (BGS). Shown in the survey plan.
- An anomaly resembling a buried steel plate was identified during the GES and is shown in the survey plan.
- Two surface structures with a vent pipe and two associated manholes were identified during the GES. NOVA was unable to open the associated manholes and is cannot further classify these structures.

- NOVA cleared and marked all proposed boring locations shown in the survey plan.

If you have any questions, please do not hesitate to contact the undersigned.

Sincerely,

NOVA Geophysical Services

Levent Eskicakit, P.G., E.P.

Project Manager

Re: Data Usability Summary Report
For 2731 West 12th Street
March 2023 Soil Samples
Langan Project No.: 170697301

This memorandum presents the findings of an analytical data validation from the analysis of soil samples collected in March 2023 by Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C (Langan) at 2731 West 12th Street. The samples were analyzed by Alpha Analytical Laboratories, Inc. (New York State Department of Health [NYSDOH] Environmental Laboratory Approval Program [ELAP] registration # 11148) for volatile organic compounds (VOC), semivolatile organic compounds (SVOC), herbicides, polychlorinated biphenyls (PCB), pesticides, metals, cyanide (CN), hexavalent chromium (CrVI), and trivalent chromium (CrIII) by the methods specified below.

- VOCs by SW-846 Method 8260D
- SVOCs by SW-846 Method 8270E
- Herbicides by SW-846 Method 8151A
- PCBs by SW-846 Method 8082A
- Pesticides by SW-846 Method 8081B
- Metals by SW-846 Methods 6010D/7471B
- Cyanide by SW-846 Method 9012B
- Hexavalent Chromium by SW-846 Method 7196A
- Trivalent Chromium (calculated)

Table 1, attached, summarizes the laboratory and client sample identification numbers, sample collection dates, level of data validation, and analytical parameters subject to review.

Validation Overview

This data validation was performed in accordance with the following guidelines, where applicable:

- United States Environmental Protection Agency (USEPA) Region II Standard Operating Procedures (SOP) for Data Validation

Technical Memorandum

- USEPA Contract Laboratory Program “National Functional Guidelines for Organic Superfund Methods Data Review” (EPA 540- R-20-005, November 2020)
- USEPA Contract Laboratory Program “National Functional Guidelines for Inorganic Superfund Methods Data Review” (EPA 540- R-20-005, November 2020), and
- published analytical methodologies.

The following acronyms may be used in the discussion of data-quality issues:

%D	Percent Difference	MB	Method Blank
CCV	Continuing Calibration Verification	MDL	Method Detection Limit
FB	Field Blank	MS	Matrix Spike
FD	Field Duplicate	MSD	Matrix Spike Duplicate
ICAL	Initial Calibration	RF	Response Factor
ICV	Initial Calibration Verification	RL	Reporting Limit
ISTD	Internal Standard	RPD	Relative Percent Difference
LCL	Lower Control Limit	RSD	Relative Standard Deviation
LCS	Laboratory Control Sample	TB	Trip Blank
LCSD	Laboratory Control Sample Duplicate	UCL	Upper Control Limit

Tier 1 data validation is based on completeness and compliance checks of sample-related QC results including: sample receipt documentation; analytical holding times; sample preservation; blank results (method, field, and trip); surrogate recoveries; MS/MSD recoveries and RPDs values; field duplicate RPDs, laboratory duplicate RPDs, and LCS/LCSD recoveries and RPDs. All 5 SDGs underwent Tier 1 validation review.

As a result of the review process, the following qualifiers may be assigned to the data in accordance with the USEPA guidelines and our best professional judgment:

- R** – The sample results are unusable because certain criteria were not met when generating the data. The analyte may or may not be present in the sample.
- J** – The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
- UJ** – The analyte was not detected at a level greater than or equal to the reporting limit; however, the reported reporting limit is approximate and may be inaccurate or imprecise.
- U** – The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.
- NJ** – The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

Technical Memorandum

If any validation qualifiers are assigned, these qualifiers should supersede any laboratory-applied qualifiers. Data that is not qualified as a result of this data validation is considered acceptable on the basis of the items specified for review. Data that is qualified as "R" are considered invalid and are not technically usable for data interpretation. Data that is otherwise qualified because of minor data-quality anomalies are usable, as qualified in Table 2 (attached).

MAJOR DEFICIENCIES:

Major deficiencies include those that grossly impact data quality and necessitate the rejection of results. No major deficiencies were identified.

MINOR DEFICIENCIES:

Minor deficiencies include anomalies that directly impact data quality and necessitate qualification, but do not result in unusable data. The section below describes the minor deficiencies that were identified.

VOCs by SW-846 Method 8260D

L2316244

The sample SB09_12-13.5 exhibited a percent recovery above the UCL for the surrogate 4-bromofluorobenzene (278%). The associated detected results are qualified as J because of potential high bias.

The sample SB12_0-2 exhibited a percent recovery above the UCL for the surrogate dibromofluoromethane (143%). The associated detected results are qualified as J because of potential high bias.

The LCS and/or LCSD for batch WG1762102 exhibited percent recoveries above the UCL for carbon disulfide (171%, 167%) and 1,2,4,5-tetramethylbenzene (133%). The associated detected results in samples SB09_12-13.5 and SB12_0-2 are qualified as J because of potential high bias.

The LCS/LCSD for batch WG1762102 exhibited RPDs above the control limit for 1,2-dibromo-3-chloropropane (32%), naphthalene (35%), 1,2,3-trichlorobenzene (31%), and 1,2,4,5-tetramethylbenzene (31%). The associated results in samples SB09_12-13.5 and SB12_0-2 are qualified as J or UJ because of potential indeterminate bias.

The LCS/LCSD for batch WG1762105 exhibited RPDs above the control limit for 1,2-dibromo-3-chloropropane (32%), naphthalene (35%), 1,2,3-trichlorobenzene (31%), and 1,2,4,5-tetramethylbenzene (31%). The associated results in sample SB12_13.5-15 are qualified as J or UJ because of potential indeterminate bias.

Technical Memorandum

L2316548

The MB for batch WG1762473 exhibited detections of 1,2,4,5-tetramethylbenzene (0.51 ug/kg), cymene (0.28 ug/kg), and naphthalene (1.6 ug/kg). The associated results in samples SB04_2-4, SB06_0-2, and SB07_0-2 are qualified as U at the reporting limit or as J because of potential blank contamination.

The LCS/LCSD for batch WG1762469 exhibited RPDs above the control limit for hexachlorobutadiene (32%) and 1,2,4-trichlorobenzene (35%). The associated results in sample SB06_12-14 are qualified as UJ because of potential indeterminate bias.

The LCS/LCSD for batch WG1762469 exhibited RPDs above the control limit for hexachlorobutadiene (32%) and 1,2,4-trichlorobenzene (35%). The associated results in samples SB04_2-4, SB06_0-2, and SB07_0-2 are qualified as UJ because of potential indeterminate bias.

L2316797

The MB for batch WG1762473 exhibited detections of cymene (0.28 ug/kg), naphthalene (1.6 ug/kg), n-butylbenzene (0.4 ug/kg), sec-butylbenzene (0.25 ug/kg), and t-butylbenzene (0.15 ug/kg). The associated results in sample SB03_A_12-14 are qualified as U at the reporting limit or as J because of potential blank contamination.

The MB for batch WG1763422 exhibited detections of ethylbenzene (7.6 ug/kg), styrene (17 ug/kg), and naphthalene (160 ug/kg). The associated results in sample SB02_9.75-11 (4/6/23 analysis) are qualified as U at the reporting limit because of potential blank contamination.

The LCS for batch WG1763422 exhibited a percent recovery below the LCL for trans-1,4-dichloro-2-butene (69%). The associated results in sample SB02_9.75-11 (4/6/23 analysis) are qualified as UJ because of potential low bias.

The LCS/LCSD for batch WG1762473 exhibited percent recoveries above the UCL for carbon disulfide (141%, 139%). The associated results in sample SB03_A_12-14 are qualified as J because of potential high bias.

The LCS/LCSD for batch WG1762473 exhibited RPDs above the control limit for 1,2,4-trichlorobenzene (35%) and hexachlorobutadiene (32%). The associated results in sample SB03_A_12-14 are qualified as UJ because of potential indeterminate bias.

L2317033

The MB for batch WG1763422 exhibited a detection of ethylbenzene (7.6 ug/kg), naphthalene (160 ug/kg), and styrene (17 ug/kg). The associated results in samples SB01_9-11, SB05_6-8

Technical Memorandum

(4/6/23 00:15 analysis), SB05_8-10 (4/6/23 00:35 analysis), and SB13_12-14 (4/6/23 01:34 analysis) are qualified as J because of potential blank contamination.

The MB for batch WG1763657 exhibited a detection of naphthalene (0.99 ug/kg). The associated results in sample SB01_0-2 are qualified as U at the reporting limit because of potential blank contamination.

The sample SB05_6-8 exhibited a percent recovery above the UCL for the surrogate 4-bromofluorobenzene (4/5/23 12:23 analysis) (205%). The associated results are qualified as J because of potential high bias.

The sample SB05_8-10 exhibited a percent recovery above the UCL for the surrogate 4-bromofluorobenzene (133%). The associated results are qualified as J because of potential high bias.

The LCS for batch WG1763422 exhibited a percent recovery below the LCL for trans-1,4-dichloro-2-butene (69%). The associated results in samples SB01_9-11 and SB13_12-14 are qualified as UJ because of potential low bias.

SVOCs by SW-846 Method 8270E

L2315966

The LCS/LCSD for batch WG1760464 exhibited a percent recovery below the LCL for 4-chloroaniline (30%, 26%). The associated results in samples SB10_12-13.5, SB10_2-4, SB11_12-14, SB11_2-4, and SODUP01_032723 are qualified as UJ because of potential low bias.

L2316548

The LCS/LCSD for batch WG1761490 exhibited a percent recovery below the LCL for 4-chloroaniline (34%, 35%). The associated results in sample SB04_13-15, SB06_0-2, SB06_12-14, and SB07_5-6.5 are qualified as UJ because of potential low bias.

The LCS/LCSD for batch WG1761604 exhibited a RPD above the control limit for phenol (50%). The associated results in sample SB07_0-2 are qualified as UJ because of potential indeterminate bias.

The LCS for batch WG1762302 exhibited a percent recovery below the LCL for 1,4-dioxane (38%). The associated results in sample SB04_2-4 are qualified as UJ because of potential low bias.

Technical Memorandum

Data Usability Summary Report
For 2731 West 12th Street
March 2023 Soil Samples
Langan Project No.: 170697301
April 19, 2023 Page 6 of 14

L2316797

The sample SB03_A_2-4 (4/6/23 analysis) exhibited percent recoveries below the LCL for the surrogates 2,4,6-tribromophenol (0%) and 2-fluorophenol (0%). The associated acid fraction results are qualified as UJ because of potential low bias.

The sample SB03_A_2-4 (4/5/23 analysis) exhibited percent recoveries below the LCL for the surrogates 2-fluorophenol (3%) and 2,4,6-tribromophenol (0%). The associated acid fraction results are qualified as J or UJ because of potential low bias.

The LCSD for batch WG1761604 exhibited a percent recovery above the UCL for phenol (92%). The associated detected results in samples SB02_9.75-11, SB03_A_12-14, and SB03_A_2-4 are qualified as J because of potential high bias.

L2317033

The MB for batch WG1762302 exhibited a detection of naphthalene (44 ug/kg). The associated results in samples SB01_0-2, SB01_9-11, SB05_6-8, SB05_8-10, SB13_12-14, and SODUP02_033123 are qualified as U at the reporting limit or as J because of potential blank contamination.

The LCS for batch WG1762302 exhibited a percent recovery below the LCL for 1,4-dioxane (38%). The associated results in samples SB01_0-2, SB01_9-11, SB05_6-8, SB05_8-10, SB13_12-14, and SODUP02_033123 are qualified as UJ because of potential low bias.

Pesticides by SW-846 Method 8081B

L2315966

The sample SB10_2-4 exhibited RPDs above the control limit between the primary and secondary GC columns for 4,4'-DDT, alpha chlordane, and heptachlor epoxide. The associated results are qualified as J because of potential indeterminate bias.

The sample SB11_2-4 exhibited a RPD above the control limit between the primary and secondary GC columns for 4,4'-DDT. The associated results are qualified as J because of potential indeterminate bias.

The sample SODUP01_032723 exhibited RPDs above the control limit between the primary and secondary GC columns for 4,4'-DDD, 4,4'-DDE, 4,4'-DDT, alpha chlordane, endosulfan sulfate, and gamma chlordane (trans). The associated results are qualified as J because of potential indeterminate bias.

Technical Memorandum

Data Usability Summary Report
For 2731 West 12th Street
March 2023 Soil Samples
Langan Project No.: 170697301
April 19, 2023 Page 7 of 14

L2316244

The LCS/LCSD for batch WG1761056 exhibited a RPD above the control limit for numerous compounds (ranging from 31% - 35%). The associated results in samples SB08_0-2, SB09_2-4, and SB12_0-2 are qualified as J or UJ because of potential indeterminate bias.

Metals by SW-846 Method 6010D

L2316548

The MB for batch WG1760842 exhibited a detection of selenium (0.154 mg/kg). The associated results in samples SB04_2-4, SB04_13-15, SB07_0-2, SB07_5-6.5, SB06_0-2, and SB06_12-14 are qualified as U at the reporting limit because of potential blank contamination.

The MS and/or MSD performed on sample SB06_0-2 exhibited percent recoveries outside of control limits for calcium (405%, 5%) and manganese (67%). The associated results in sample SB06_0-2 are qualified as J because of potential low or indeterminate bias.

The MS/MSD performed on sample SB06_0-2 exhibited RPDs above the control limit for calcium (83%). The associated results in sample SB06_0-2 are qualified as J because of potential indeterminate bias.

L2316797

The MB for batch WG1761364 exhibited detections of iron (2.11%), sodium (2.85%), and thallium (0.157%). The associated thallium results in samples SB02_9.75-11, SB03_A_2-4, and SB03_A_12-14 are qualified as U at the reporting limit because of potential blank contamination.

L2317033

The MS/MSD performed on sample SB01_0-2 exhibited a percent recovery below the LCL for manganese (48%, 72%). The associated results in samples SB01_0-2, SB01_9-11, SB05_6-8, SB05_8-10, and SODUP02_033123 are qualified as J because of potential low bias.

Cyanide by SW-846 Method 9012B

L2316797

The LCS for batch WG1762406 exhibited a percent recovery below the LCL for cyanide (79%). The associated results in sample SB02_9.75-11 are qualified as UJ because of potential low bias.

The LCS for batch WG1762751 exhibited a percent recovery below the LCL for cyanide (71%). The associated results in samples SB03_A_2-4 and SB03_A_12-14 are qualified as J or UJ because of potential low bias.

Technical Memorandum

L2317033

The LCS for batch WG1763456 exhibited a percent recovery below the LCL for cyanide (79%). The associated results in samples SB01_9-11 and SODUP02_033123 are qualified as J or UJ because of potential low bias.

The LCS for batch WG1763459 exhibited a percent recovery below the LCL for cyanide (79%). The associated results in samples SB01_0-2, SB05_6-8, and SB05_8-10 are qualified as UJ because of potential low bias.

Hexavalent Chromium by SW-846 Method 7196A

L2315966

The MB for batch WG1760922 exhibited a detection of hexavalent chromium (0.22 mg/kg). The associated detected results in samples SB10_12-13.5, SB10_2-4, SB11_12-14, SB11_2-4, and SODUP01_032723 are qualified as U at the reporting limit because of potential blank contamination.

The LCS for batch WG1760922 exhibited a percent recovery below the LCL for hexavalent chromium (70%). The associated results in samples SB10_12-13.5, SB10_2-4, SB11_12-14, SB11_2-4, and SODUP01_032723 are qualified as UJ because of potential low bias.

L2316244

The MB for batch WG1760922 exhibited a detection of hexavalent chromium (0.220 mg/kg). The associated detected results in samples SB08_0-2, SB08_12-14, SB09_12-13.5, SB09_2-4, and SB12_0-2 are qualified as U at the reporting limit because of potential blank contamination.

The LCS for batch WG1760922 exhibited a percent recovery below the LCL for hexavalent chromium (70%). The associated results in samples SB08_0-2, SB08_12-14, SB09_12-13.5, SB09_2-4, and SB12_0-2 are qualified as J or UJ because of potential low bias.

The LCS for batch WG1761993 exhibited a percent recovery below the LCL for hexavalent chromium (79%). The associated results in sample SB12_13.5-15 are qualified as UJ because of potential low bias.

The MS performed on sample SB12_13.5-15 exhibited a percent recovery below the LCL for hexavalent chromium (50%). The associated results in sample SB12_13.5-15 are qualified as UJ because of potential low bias.

Technical Memorandum

L2316548

The LCS for batch WG1762488 exhibited a percent recovery below the LCL for hexavalent chromium (75%). The associated results in samples SB04_2-4, SB04_13-15, SB07_0-2, SB07_5-6.5, SB06_0-2, and SB06_12-14 are qualified as UJ because of potential low bias.

L2316797

The LCS for batch WG1762784 exhibited a percent recovery below the LCL for hexavalent chromium (74%). The associated results in samples SB02_9.75-11, SB03_A_2-4, and SB03_A_12-14 are qualified as J because of potential low bias.

OTHER DEFICIENCIES:

Other deficiencies include anomalies that do not directly impact data quality and do not necessitate qualification. The section below describes the other deficiencies that were identified.

VOCs by SW-846 Method 8260D

L2316244

The MB for batch WG1761028-5 exhibited detections of 1,2,3-trichlorobenzene (0.33 ug/kg), and cymene (0.18 ug/kg). The associated results are non-detect. No qualification is necessary.

The MB for batch WG1762102-5 exhibited a detection of bromomethane (0.83 ug/kg). The associated results are non-detect. No qualification is necessary.

The MB for batch WG1762105-5 exhibited a detection of bromomethane (41 ug/kg). The associated results are non-detect. No qualification is necessary.

The LCS/LCSD for batch WG1761028 exhibited a percent recovery above the UCL for carbon disulfide (143%, 147%). The associated results are non-detect. No qualification is necessary.

The LCS/LCSD for batch WG1762105 exhibited percent recoveries above the UCL for carbon disulfide (171%, 167%) and 1,2,4,5-tetramethylbenzene (133%). The associated results are non-detect. No qualification is necessary.

L2316548

The MB for batch WG1762469 exhibited detections of 1,2,3-trichlorobenzene (16 ug/kg) and bromomethane (39 ug/kg). The associated results are non-detect. No qualification is necessary.

The MB for batch WG1762473 exhibited detections of 1,1,2,2-tetrachloroethane (0.23 ug/kg), 1,2,3-trichlorobenzene (1.2 ug/kg), 1,2,4-trichlorobenzene (0.96 ug/kg), 1,2-dichlorobenzene (0.3

Technical Memorandum

ug/kg), 1,3-dichlorobenzene (0.34 ug/kg), 1,4-dichlorobenzene (0.4 ug/kg), 1,4-diethyl benzene (0.35 ug/kg), 2-chlorotoluene (0.21 ug/kg), 4-chlorotoluene (0.23 ug/kg), bromobenzene (0.16 ug/kg), hexachlorobutadiene (0.35 ug/kg), n-butylbenzene (0.4 ug/kg), n-propylbenzene (0.19 ug/kg), sec-butylbenzene (0.25 ug/kg), styrene (0.44 ug/kg), and t-butylbenzene (0.15 ug/kg). The associated results are non-detect. No qualification is necessary.

The LCS/LCSD for batch WG1762469 exhibited a percent recovery above the UCL for carbon disulfide (141%, 139%). The associated results are non-detect. No qualification is necessary.

The LCS/LCSD for batch WG1762473 exhibited a percent recovery above the UCL for carbon disulfide (141%, 139%). The associated results are non-detect. No qualification is necessary.

The MS and/or MSD performed on sample SB06_0-2 exhibited a percent recovery below the LCL for vinyl acetate (68%). Organic results are not qualified on the basis of MS/MSD recoveries alone. No qualification is necessary.

The MS/MSD performed on sample SB06_0-2 exhibited a RPD above the control limit for hexachlorobutadiene (31%). Organic results are not qualified on the basis of MS/MSD recoveries alone. No qualification is necessary.

The MS performed on sample SB06_0-2 exhibited a percent recovery below the LCL for 4-chloroaniline (33%). Organic results are not qualified on the basis of MS recoveries alone. No qualification is necessary.

L2316797

The MB for batch WG1762473 exhibited detections of 1,1,2,2-tetrachloroethane (0.23 ug/kg), 1,2,3-trichlorobenzene (1.2 ug/kg), 1,2,4,5-tetramethylbenzene (0.51 ug/kg), 1,2,4-trichlorobenzene (0.96 ug/kg), 1,2-dichlorobenzene (0.3 ug/kg), 1,3-dichlorobenzene (0.34 ug/kg), 1,4-dichlorobenzene (0.4 ug/kg), 1,4-diethyl benzene (0.35 ug/kg), 2-chlorotoluene (0.21 ug/kg), 4-chlorotoluene (0.23 ug/kg), bromobenzene (0.16 ug/kg), hexachlorobutadiene (0.35 ug/kg), n-propylbenzene (0.19 ug/kg), and styrene (0.44 ug/kg). The associated results are 10X the blank concentration or non-detect. No qualification is necessary.

L2317033

The MB for batch WG1763653 exhibited a detection of naphthalene (50 ug/kg). The associated results are >10X the contamination. No qualification is necessary.

The LCS/LCSD for batch WG1763945 exhibited a percent recovery above the UCL for vinyl chloride (138%, 131%). The associated results are non-detect. No qualification is necessary.

Technical Memorandum

The MS/MSD performed on sample SB01_0-2 exhibited percent recoveries outside of control limits for numerous compounds (ranging from 31% - 141%) and RPDs outside of control limits (ranging from 33% - 77%). Organic results are not qualified on the basis of MS/MSD recoveries alone. No qualification is necessary.

SVOCs by SW-846 Method 8270E

L2316548

The MB for batch WG1762302-1 exhibited a detection of naphthalene (44 ug/kg). The associated results are >10X the contamination. No qualification is necessary.

The sample SB04_13-15 exhibited percent recoveries below the LCL for the surrogates 2,4,6-tribromophenol (0%), 2-fluorobiphenyl (0%), 2-fluorophenol (0%), p-terphenyl-d14 (0%), nitrobenzene-d5 (0%), and phenol-d6 (0%). The sample was diluted >10X. No qualification is necessary.

The LCS/LCSD for batch WG1761490 exhibited a percent recovery above the UCL for hexachlorocyclopentadiene (192%, 188%). The associated results are non-detect. No qualification is necessary.

The LCS/LCSD for batch WG1761490 exhibited a percent recovery above the UCL for pentachlorophenol (120%, 120%). The associated results are non-detect. No qualification is necessary.

The MS/MSD performed on sample SB06_0-2 exhibited a percent recovery above the UCL for pentachlorophenol (120%, 120%). Organic results are not qualified on the basis of MS/MSD recoveries alone. No qualification is necessary.

L2317033

The sample SB05_6-8 exhibited percent recoveries below the LCL for the surrogates 2,4,6-tribromophenol (0%), 2-fluorobiphenyl (0%), 2-fluorophenol (0%), p-terphenyl-d14 (0%), nitrobenzene-d5 (0%), and phenol-d6 (0%). The sample was diluted >10X. No qualification is necessary.

The MS or MSD performed on sample SB01_0-2 exhibited percent recoveries outside of control limits for pentachlorophenol (120%), phenol (97%), 1,4-dioxane (39%), and 4-chloroaniline (38%), and exhibited RPDs above the control limit for benzoic acid (65%) and bis(2-chloroethyl) ether (52%). Organic results are not qualified on the basis of MS recoveries alone. No qualification is necessary.

Data Usability Summary Report
For 2731 West 12th Street
March 2023 Soil Samples
Langan Project No.: 170697301
April 19, 2023 Page 12 of 14

PCBs by SW-846 Method 8082A

L2316548

The laboratory case narrative noted that sample SB06_12-14 exhibited a response above the UCL for the internal standard 1-bromo-2-nitrobenzene (column 2C) (247%). No associated results are reported from the corresponding column. No qualification is necessary.

The sample SB06_12-14 exhibited percent recoveries below the LCL for the surrogates tetrachloro-m-xylene (23%) and decachlorobiphenyl (PCB 209) (25%). No associated results are reported from the corresponding column. No qualification is necessary.

Metals by SW-846 Method 6010D

L2315966

The MB for batch WG1759741 exhibited detections of iron (0.442 mg/kg) and zinc (0.256 mg/kg). The associated results are >10X the contamination. No qualification is necessary.

L2316244

The FB (SOFB01_032823) exhibited a detection of thallium (0.00019 mg/l). The associated results are >10X the contamination. No qualification is necessary.

The MB for batch WG1760336 exhibited a detection of iron (0.47 mg/kg). The associated results are >10X the contamination. No qualification is necessary.

L2316548

The MB for batch WG1760842 exhibited detections of iron (0.578 mg/kg) and zinc (0.2 mg/kg). The associated results are >10X the contamination. No qualification is necessary.

The MS and/or MSD performed on sample SB06_0-2 exhibited percent recoveries outside of control limits for aluminum (0%), iron (0%), potassium (42%). The associated results in the parent sample are >4X the spiked amount. No qualification is necessary.

The MS/MSD performed on sample SB06_0-2 exhibited a RPD above the control limit for magnesium (24%). The associated results in the parent sample are >4X the spiked amount. No qualification is necessary.

L2317033

The MB for batch WG1762100 exhibited detections of chromium (0.119 mg/kg) and iron (0.519 mg/kg). The associated results are >10X the contamination. No qualification is necessary.

Technical Memorandum

The MS/MSD performed on sample SB01_0-2 exhibited percent recoveries below the LCL for aluminum (0%), calcium (0%), iron (0%), magnesium (0%), and potassium (46%, 60%) and an RPD above the UCL for calcium (39%). The associated results in the parent sample are >4X the spiked amount. No qualification is necessary.

FIELD DUPLICATE:

Two field duplicate and parent sample pairs were collected and analyzed for all parameters. For results less than 5X the RL, analytes meet the precision criteria if the absolute difference is less than $\pm 2X$ the RL. For results greater than 5X the RL, analytes meet the precision criteria if the RPD is less than or equal to 50% for soil. The following field duplicate and parent sample pairs were compared to the precision criteria:

- SODUP01_032723 and SB10_2-4
- SODUP02_033123 and SB01_9-11

The field duplicate and parent sample (SODUP01_032723 and SB10_2-4) exhibited absolute differences above the RL for fluoranthene (700 ug/kg) and chlordane (alpha and gamma) (43.2 ug/kg). The associated results are qualified as J or UJ because of potential indeterminate bias.

The field duplicate and parent sample (SODUP02_033123 and SB01_9-11) exhibited RPDs above the control limit for aluminum (94.7%), benzo(b)fluoranthene (83.8%), calcium (67.4%), chromium, total (64.9%), chromium, trivalent (64.9%), copper (55.4%), magnesium (66.2%), naphthalene (111%), pyrene (89.4%), and vanadium (87%). The associated results are qualified as J because of potential indeterminate bias.

The field duplicate and parent sample (SODUP02_033123 and SB01_9-11) exhibited absolute differences above the RL for acenaphthene (470 ug/kg), acenaphthylene (560 ug/kg), benzo(a)anthracene (940 ug/kg), benzo(a)pyrene (1520 ug/kg), benzo(g,h,i)perylene (630 ug/kg), benzo(k)fluoranthene (420 ug/kg), chrysene (1090 ug/kg), fluoranthene (1120 ug/kg), fluorene (630 ug/kg), indeno(1,2,3-cd)pyrene (720 ug/kg), lead (14.3 mg/kg), phenanthrene (880 ug/kg), and potassium (755 mg/kg). The associated results are qualified as J because of potential indeterminate bias.

CONCLUSION:

On the basis of this evaluation, the laboratory appears to have followed the specified analytical methods with the exception of errors discussed above. If a given fraction is not mentioned

Technical Memorandum

above, that means that all specified criteria were met for that parameter. All of the data packages met ASP Category B requirements.

All data are considered usable, as qualified. In addition, completeness, defined as the percentage of analytical results that are judged to be valid, is 100%.

JOSEPH CONBOY

SENIOR STAFF CHEMIST

ENVIRONMENTAL

Mr. Conboy has eight years of environmental chemistry, quality assurance, and environmental database management experience, with a current emphasis on validation of laboratory data for submittal to NJDEP via the New Jersey Data of Known Quality Protocols and to NYSDEC. Previous work experience includes performing validation of data for projects in USEPA Regions 2 and 3 while employing appropriate validation guidelines for each region, managing large data sets, updating appropriate regulatory limits, performing statistical evaluations, and preparing electronic data deliverables and report deliverables using the Earthsoft EQuIS database program, and acted as an intermediary between project managers, field staff, and laboratories. Mr. Conboy also has experience in field sampling techniques and maintains current OSHA HAZWOPER certification.

SELECTED PROJECTS

- 1400 Ferris, Bronx, NY – Completed validation of soil and groundwater data and prepared the Data Usability Summary Report for submittal to NYSDEC. USEPA Region II guidelines, with aide from National Functional Guidelines, were employed to perform validation of VOCs and SVOCs including 1,4-dioxane, and tangentially used based on professional judgment to perform validation of PFAS data.
- Broome Street Parking Lot, NY - Completed validation of waste characterization data and prepared the Data Usability Summary Report for submittal to NYSDEC. USEPA Region II guidelines, with aide from National Functional Guidelines, were employed to perform validation of VOCs, SVOCs, herbicides, PCBs, pesticides, metals including mercury, ignitability temperature, pH, reactive cyanide, reactive sulfide, cyanide, and hexavalent chromium. Toxicity characteristic leachate procedure extraction data for VOCs, SVOCs, herbicides, pesticides, metals, and mercury were also validated.
- 215 North 10th Street, Brooklyn, NY - Completed validation of soil and groundwater data and prepared the Data Usability Summary Report for submittal to NYSDEC. USEPA Region II guidelines, with aide from National Functional Guidelines, were employed to perform validation of VOC, SVOC, SVOC SIM, herbicide, PCB, pesticide, metals, mercury, cyanide, hexavalent chromium, trivalent chromium data.
- 35 Commercial Street, Brooklyn, NY - Completed validation of soil data and prepared the Data Usability Summary Report for submittal to NYSDEC. USEPA Region II guidelines, with aide from National Functional Guidelines, were employed to perform validation of VOC, SVOC, SVOC SIM, herbicide, PCB, pesticide, metals, mercury, cyanide, hexavalent chromium, trivalent chromium data, and tangentially used based on professional judgment to perform validation of PFAS data.
- Suffolk Street, Lower East Side, NY- Completed validation of soil, groundwater, and soil vapor data and prepared the Data Usability Summary Report for submittal to NYSDEC. USEPA Region II

guidelines, with aide from National Functional Guidelines, were employed to perform validation of VOC, VOCs by USEPA TO-15, SVOC, SVOC SIM, herbicide, PCB, pesticide, metals, mercury, cyanide, hexavalent chromium, trivalent chromium data, and tangentially used based on professional judgment to perform validation of PFAS data.

- Managed a database for a confidential client containing 10+ years of environmental chemical data from multiple laboratories, requiring select data validation in accordance with New Jersey Data of Known Quality Protocols and identifying areas of delineation from historic field information. Once identified, NJDEP designated groundwater, surface water, soil, sediment, soil vapor, and custom screening criteria were researched and applied to each area, requiring individualized flagging for reporting.*
- Prepared the New Jersey Data of Known Quality Protocol Data Usability Evaluation and managed the database for a confidential client for a data set greater than 20 years old. A DUE or any validation effort was not prepared in the 20 years prior to current. This included data from variations of methods for volatile organic compounds, semivolatile organic compounds, total and dissolved metals, pesticides, herbicides, natural attenuation parameters, and per- and polyfluoroalkyl substances in multiple media.*
- Performed 200+ Stage 2a validations for a combined 87-acre USEPA designated Corrective Action site under the Resource Conservation and Recovery Act, including a quick-turn USEPA required PCB by soxhlet extraction investigation across multiple plants. Once a former train car painting facility, USEPA required a quick-turn PCB by soxhlet extraction soil investigation.
- Preparation of a quality assurance program for a confidential client in West Virginia. A quick turn QAPP was prepared in a service location new to the consultant, resulting in research into state requirements for data usability and auditing newly employed laboratories. The QAPP was understood to be prepared for groundwater only, but the client did not reveal the need for sediment and soil. Two QAPPs were submitted for review to governing agencies.*
- Used statistical software to determine a localized background upper confidence limit of chromium for a confidential client's sand and gravel site. Validation was used to confirm laboratory procedures, and data was used in ProUCL calculations to compare to researched background chromium levels for Pennsylvania soils. *
- Prepared daily perimeter dust and air monitoring summaries and validation of low level mirex data for a confidential client's superfund site. Low level mirex data was generated by university laboratories and subject to validation following national functional guidelines to aide in river clean-up, including sediment, surface water, and treatment system water matrices.*

Re: Data Usability Summary Report
For 2731 West 12th Street
March 2023 Soil Vapor and Ambient Air Samples
Langan Project No.: 170697301

This memorandum presents the findings of an analytical data validation of the data generated from the analysis of air samples collected in March 2023 Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C (Langan) at the 2731 West 12th Street site. The samples were analyzed by Alpha Analytical Laboratories, Inc. (New York State Department of Health [NYSDOH] Environmental Laboratory Approval Program [ELAP] registration # 11148) for volatile organic compounds (VOC) by the methods specified below.

- VOCs by United States Environmental Protection Agency (USEPA) Method TO-15

Table 1, attached, summarizes the laboratory and client sample identification numbers, sample collection dates, and analytical parameters subject to review.

Validation Overview

This data validation was performed in accordance with the following guidelines, where applicable:

- USEPA Region II Standard Operating Procedure (SOP) #HW-31, "Analysis of Volatile Organic Compounds in Air Contained in Canisters by Method TO-15" (September 2016, Revision 6),
- USEPA Contract Laboratory Program "National Functional Guidelines for Organic Superfund Methods Data Review" (EPA 540- R-20-005, November 2020), and
- published analytical methodologies.

Validation includes review of the analytical data to verify that data are easily traceable and sufficiently complete to permit logical reconstruction by a qualified individual other than the originator.

Tier 1 data validation is based on completeness and compliance checks of sample-related QC results including: sample receipt documentation; analytical holding times; sample preservation;

Technical Memorandum

blank results (method, field, and trip); surrogate recoveries; MS/MSD recoveries and RPDs values; field duplicate RPDs, laboratory duplicate RPDs, and LCS/LCSD recoveries and RPDs. SDG L2316799 underwent Tier 1 validation review.

As a result of the review process, the following qualifiers may be assigned to the data in accordance with the USEPA's guidelines and best professional judgment:

- R** – The sample results are unusable because certain criteria were not met when generating the data. The analyte may or may not be present in the sample.
- J** – The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
- UJ** – The analyte was not detected at a level greater than or equal to the reporting limit; however, the reported reporting limit is approximate and may be inaccurate or imprecise.
- U** – The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.
- NJ** – The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

If any validation qualifiers are assigned these qualifiers should supersede any laboratory-applied qualifiers. Data that is not qualified as a result of this data validation is considered acceptable on the basis of the items specified for review. Data that is qualified as "R" are considered invalid and are not technically usable for data interpretation. Data that is otherwise qualified due to minor data quality anomalies are usable, as qualified in Table 2 (attached).

The following acronyms may be used in the discussion of data-quality issues:

%D	Percent Difference	MB	Method Blank
CCV	Continuing Calibration Verification	MDL	Method Detection Limit
FB	Field Blank	MS	Matrix Spike
FD	Field Duplicate	MSD	Matrix Spike Duplicate
ICAL	Initial Calibration	RF	Response Factor
ICV	Initial Calibration Verification	RL	Reporting Limit
ISTD	Internal Standard	RPD	Relative Percent Difference
LCL	Lower Control Limit	RSD	Relative Standard Deviation
LCS	Laboratory Control Sample	TB	Trip Blank
LCSD	Laboratory Control Sample Duplicate	UCL	Upper Control Limit

MAJOR DEFICIENCIES:

Major deficiencies include those that grossly impact data quality and necessitate the rejection of results. No major deficiencies were identified.

MINOR DEFICIENCIES:

Minor deficiencies include anomalies that directly impact data quality and necessitate qualification, but do not result in unusable data. No minor deficiencies were identified.

OTHER DEFICIENCIES:

Other deficiencies include anomalies that do not directly impact data quality and do not necessitate qualification. The section below describes the other deficiencies that were identified.

VOCs by USEPA Method TO-15:

L2316799

The LCS for batch WG1763188 exhibited percent recoveries above the UCL for bromoform (146%), carbon tetrachloride (135%), and dibromochloromethane (136%). The associated results are non-detect. No qualification is necessary.

CONCLUSION:

On the basis of this evaluation, the laboratory appears to have followed the specified analytical methods with the exception of errors discussed above. If a given fraction is not mentioned above, that means that all specified criteria were met for that parameter. All of the data packages met ASP Category B requirements.

All data are considered usable, as qualified. In addition, completeness, defined as the percentage of analytical results that are judged to be valid, is 100%.

Signed:

Joe Conboy
Senior Staff Chemist

JOSEPH CONBOY

SENIOR STAFF CHEMIST

ENVIRONMENTAL

Mr. Conboy has eight years of environmental chemistry, quality assurance, and environmental database management experience, with a current emphasis on validation of laboratory data for submittal to NJDEP via the New Jersey Data of Known Quality Protocols and to NYSDEC. Previous work experience includes performing validation of data for projects in USEPA Regions 2 and 3 while employing appropriate validation guidelines for each region, managing large data sets, updating appropriate regulatory limits, performing statistical evaluations, and preparing electronic data deliverables and report deliverables using the Earthsoft EQuIS database program, and acted as an intermediary between project managers, field staff, and laboratories. Mr. Conboy also has experience in field sampling techniques and maintains current OSHA HAZWOPER certification.

SELECTED PROJECTS

- 1400 Ferris, Bronx, NY – Completed validation of soil and groundwater data and prepared the Data Usability Summary Report for submittal to NYSDEC. USEPA Region II guidelines, with aide from National Functional Guidelines, were employed to perform validation of VOCs and SVOCs including 1,4-dioxane, and tangentially used based on professional judgment to perform validation of PFAS data.
- Broome Street Parking Lot, NY - Completed validation of waste characterization data and prepared the Data Usability Summary Report for submittal to NYSDEC. USEPA Region II guidelines, with aide from National Functional Guidelines, were employed to perform validation of VOCs, SVOCs, herbicides, PCBs, pesticides, metals including mercury, ignitability temperature, pH, reactive cyanide, reactive sulfide, cyanide, and hexavalent chromium. Toxicity characteristic leachate procedure extraction data for VOCs, SVOCs, herbicides, pesticides, metals, and mercury were also validated.
- 215 North 10th Street, Brooklyn, NY - Completed validation of soil and groundwater data and prepared the Data Usability Summary Report for submittal to NYSDEC. USEPA Region II guidelines, with aide from National Functional Guidelines, were employed to perform validation of VOC, SVOC, SVOC SIM, herbicide, PCB, pesticide, metals, mercury, cyanide, hexavalent chromium, trivalent chromium data.
- 35 Commercial Street, Brooklyn, NY - Completed validation of soil data and prepared the Data Usability Summary Report for submittal to NYSDEC. USEPA Region II guidelines, with aide from National Functional Guidelines, were employed to perform validation of VOC, SVOC, SVOC SIM, herbicide, PCB, pesticide, metals, mercury, cyanide, hexavalent chromium, trivalent chromium data, and tangentially used based on professional judgment to perform validation of PFAS data.
- Suffolk Street, Lower East Side, NY- Completed validation of soil, groundwater, and soil vapor data and prepared the Data Usability Summary Report for submittal to NYSDEC. USEPA Region II

guidelines, with aide from National Functional Guidelines, were employed to perform validation of VOC, VOCs by USEPA TO-15, SVOC, SVOC SIM, herbicide, PCB, pesticide, metals, mercury, cyanide, hexavalent chromium, trivalent chromium data, and tangentially used based on professional judgment to perform validation of PFAS data.

- Managed a database for a confidential client containing 10+ years of environmental chemical data from multiple laboratories, requiring select data validation in accordance with New Jersey Data of Known Quality Protocols and identifying areas of delineation from historic field information. Once identified, NJDEP designated groundwater, surface water, soil, sediment, soil vapor, and custom screening criteria were researched and applied to each area, requiring individualized flagging for reporting.*
- Prepared the New Jersey Data of Known Quality Protocol Data Usability Evaluation and managed the database for a confidential client for a data set greater than 20 years old. A DUE or any validation effort was not prepared in the 20 years prior to current. This included data from variations of methods for volatile organic compounds, semivolatile organic compounds, total and dissolved metals, pesticides, herbicides, natural attenuation parameters, and per- and polyfluoroalkyl substances in multiple media.*
- Performed 200+ Stage 2a validations for a combined 87-acre USEPA designated Corrective Action site under the Resource Conservation and Recovery Act, including a quick-turn USEPA required PCB by soxhlet extraction investigation across multiple plants. Once a former train car painting facility, USEPA required a quick-turn PCB by soxhlet extraction soil investigation.
- Preparation of a quality assurance program for a confidential client in West Virginia. A quick turn QAPP was prepared in a service location new to the consultant, resulting in research into state requirements for data usability and auditing newly employed laboratories. The QAPP was understood to be prepared for groundwater only, but the client did not reveal the need for sediment and soil. Two QAPPs were submitted for review to governing agencies.*
- Used statistical software to determine a localized background upper confidence limit of chromium for a confidential client's sand and gravel site. Validation was used to confirm laboratory procedures, and data was used in ProUCL calculations to compare to researched background chromium levels for Pennsylvania soils. *
- Prepared daily perimeter dust and air monitoring summaries and validation of low level mirex data for a confidential client's superfund site. Low level mirex data was generated by university laboratories and subject to validation following national functional guidelines to aide in river clean-up, including sediment, surface water, and treatment system water matrices.*

**Project completed prior to employment at LANGAN.*

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics

L2315966-01 and -05: The sample has elevated detection limits due to limited sample volume available for analysis.

Total Metals

L2315966-01 through -05: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

Hexavalent Chromium

The WG1760922-2 LCS recovery for chromium, hexavalent (70%), associated with L2315966-01 through -05, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name: 2731 W 12TH STREET
Project Number: 170697301

Lab Number: L2315966
Report Date: 04/03/23

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Number: 170697301

Lab Number: L2315966
Report Date: 04/03/23

Data Qualifiers

Identified Compounds (TICs).

- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- V** - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)
- Z** - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene

EPA 625/625.1: alpha-Terpineol

EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D/8270E: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene,

3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

Project Name: 2731 W 12TH STREET
Project Number: 170697301

Lab Number: L2316244
Report Date: 04/04/23

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Lab Number: L2316244
Report Date: 04/04/23

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2316244-06: Sample containers for Volatile Organics were received for the "SB12_13.5-15" sample, but were not listed on the chain of custody. At the client's request, the analysis was performed.

L2316244-10: A sample identified as "SB11_2-4" was received, but not listed on the Chain of Custody. At the client's request, this sample was not analyzed.

L2316244-11: A sample identified as "SB12-12-13.5" was received, but not listed on the Chain of Custody. At the client's request, this sample was not analyzed.

Volatile Organics

L2316244-04: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (278%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

Semivolatile Organics

The WG1761640-3 LCS recoveries, associated with L2316244-07, are below the acceptance criteria for benzidine (5%); however, it has been identified as a "difficult" analyte. The results of the associated samples are reported.

Semivolatile Organics by SIM

The WG1761642-1 Method Blank, associated with L2316244-07, has concentrations above the reporting limits for acenaphthene, naphthalene, acenaphthylene, fluorene, phenanthrene, and 2-methylnaphthalene. Since the associated sample concentrations are non-detect to the RL for these target analytes, no corrective action is required.

Project Name: 2731 W 12TH STREET
Project Number: 170697301

Lab Number: L2316244
Report Date: 04/04/23

Case Narrative (continued)

Total Metals

L2316244-01 through 06: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

Hexavalent Chromium

The WG1760922-2 LCS recovery for chromium, hexavalent (70%), associated with L2316244-01 through -05, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

The WG1761993-2 LCS recovery for chromium, hexavalent (79%), associated with L2316244-06, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

The WG1761993-4 Insoluble MS recovery for chromium, hexavalent (50%), performed on L2316244-06, is outside the acceptance criteria. The Soluble MS recovery for chromium, hexavalent (64%) was also outside criteria. This has been attributed to matrix interference. A post-spike was performed with a recovery of 96%.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name: 2731 W 12TH STREET
Project Number: 170697301

Lab Number: L2316244
Report Date: 04/04/23

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Lab Number: L2316244
Report Date: 04/04/23

Data Qualifiers

Identified Compounds (TICs).

- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- V** - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)
- Z** - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene

EPA 625/625.1: alpha-Terpineol

EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D/8270E: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene,

3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

Project Number: 170697301

Lab Number: L2316548
Report Date: 04/12/23

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Report Date: 04/12/23

Case Narrative (continued)

Report Submission

April 12, 2023: This final report includes the results of all requested analyses.

April 05, 2023: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2316548-03 and -04: The Client IDs were changed at the client's request.

Volatile Organics

L2316548-06: The sample was analyzed as a High Level Methanol based upon screen results. The sample was then analyzed as a Low Level in order to achieve lower reporting limits. The results of both analyses are reported. Differences were noted between the results of the analyses which have been attributed to vial discrepancies.

Semivolatile Organics

L2316548-02D: The surrogate recoveries are below the acceptance criteria for 2-fluorophenol (0%), phenol-d6 (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), 2,4,6-tribromophenol (0%), and 4-terphenyl-d14 (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

PCBs

L2316548-08: The internal standard (IS) response for 1-bromo-2-nitrobenzene (247%) was above the acceptance criteria on column B; however, the sample was not re-analyzed due to obvious interferences. The surrogate recoveries are outside the method acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (23%) and decachlorobiphenyl (25%) due to interference with the Internal Standard.

Project Name: 2731 W 12TH ST
Project Number: 170697301

Lab Number: L2316548
Report Date: 04/12/23

Case Narrative (continued)

Total Metals

L2316548-01, -02, and -05 through -08: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

The WG1760842-3/-4 MS/MSD recoveries for aluminum (0%/0%), iron (0%/0%), magnesium (227%/20%), and potassium (42%/70%), performed on L2316548-07, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1760842-3/-4 MS/MSD recoveries, performed on L2316548-07, are outside the acceptance criteria for calcium (405%/5%) and manganese (MSD 67%). A post digestion spike was performed and was within acceptance criteria.

The WG1760842-3/-4 MS/MSD RPDs for calcium (83%) and magnesium (24%), performed on L2316548-07, are above the acceptance criteria.

Hexavalent Chromium

The WG1762488-2 LCS recovery for chromium, hexavalent (75%), associated with L2316548-01, -02, -05, -06, -07, and -08, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

The WG1762488-6 Soluble MS recovery for chromium, hexavalent (68%), performed on L2316548-07, was outside the acceptance criteria. This has been attributed to matrix interference. A post-spike was performed with a recovery of 91%.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name: 2731 W 12TH ST
Project Number: 170697301

Lab Number: L2316548
Report Date: 04/12/23

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name: 2731 W 12TH ST
Project Number: 170697301

Lab Number: L2316548
Report Date: 04/12/23

Data Qualifiers

Identified Compounds (TICs).

- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- V** - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)
- Z** - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene

EPA 625/625.1: alpha-Terpineol

EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D/8270E: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene,

3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Number: 170697301

Lab Number: L2316797
Report Date: 04/06/23

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2316797-02 and -03: The Client ID was specified by the client.

Volatile Organics

L2316797-01D and -01D2: The sample was received in the appropriate containers (vials) for the Volatile Organics by EPA Method 5035/8260 analysis; however, they could not be used for analysis. With the client's authorization, a sample aliquot was taken from an unpreserved container (jar) and preserved appropriately. Any reported concentrations that are below 200 ug/kg may be biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

L2316797-02: The sample was analyzed as a High Level Methanol in order to quantitate results within the calibration range. The result should be considered estimated, and is qualified with an E flag, for any compound that exceeded the calibration on the initial Low Level analysis. The results of both analyses are reported. Differences were noted between the results of the analyses which have been attributed to vial discrepancies.

Semivolatile Organics

L2316797-02D and -02RE\ID: The sample has elevated detection limits due to the dilution required by the sample matrix.

L2316797-02D: The surrogate recoveries were outside the acceptance criteria for 2-fluorophenol (3%) and 2,4,6-tribromophenol (0%); however, re-extraction achieved similar results: 2-fluorophenol (0%) and 2,4,6-tribromophenol (0%). The results of both extractions are reported; however, all associated compounds are considered to have a potential bias.

Project Name: 2731 W 12TH ST
Project Number: 170697301

Lab Number: L2316797
Report Date: 04/06/23

Case Narrative (continued)

Total Metals

L2316797-01 through -03: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

The WG1761364-1 Method Blank, associated with L2316797-01 through -03, has a concentration above the reporting limit for iron. Since the associated sample concentrations are either greater than 10x the blank concentration or non-detect to the RL for this target analyte, no corrective action is required. Any results detected below the reporting limit are qualified with a "B".

Cyanide, Total

The WG1762406-2 LCS recovery for cyanide, total (79%), associated with L2316797-01, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analysis are reported.

The WG1762751-2 LCS recovery for cyanide, total (71%), associated with L2316797-02 and -03, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

Hexavalent Chromium

The WG1762784-2 LCS recovery for chromium, hexavalent (79%), associated with L2316797-01 through -03, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

The WG1762784-4 Insoluble MS recovery for chromium, hexavalent (71%), performed on L2316797-01, is outside the acceptance criteria. The Soluble MS recovery for chromium, hexavalent (5%) was also outside criteria. This has been attributed to matrix interference. A post-spike was performed with a recovery of 85%.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name: 2731 W 12TH ST
Project Number: 170697301

Lab Number: L2316797
Report Date: 04/06/23

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name: 2731 W 12TH ST
Project Number: 170697301

Lab Number: L2316797
Report Date: 04/06/23

Data Qualifiers

Identified Compounds (TICs).

- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- V** - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)
- Z** - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene

EPA 625/625.1: alpha-Terpineol

EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D/8270E: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene,

3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

April 10, 2023: This final report includes the results of all requested analyses.

April 07, 2023: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2317033-09: A sample identified as "SB03_2-4" was received, but not listed on the Chain of Custody. At the client's request, this sample was not analyzed.

Volatile Organics

L2317033-01: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (205%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2317033-02: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (133%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2317033-05: The sample was analyzed as a High Level Methanol in order to quantitate results within the calibration range. The result should be considered estimated, and is qualified with an E flag, for any compound that exceeded the calibration on the initial Low Level analysis. The results of both analyses are reported.

Semivolatile Organics

L2317033-01D: The surrogate recoveries are below the acceptance criteria for 2-fluorophenol (0%), phenol-d6 (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), 2,4,6-tribromophenol (0%), and 4-terphenyl-d14 (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

Project Name: 2731 W 12TH ST
Project Number: 170697301

Lab Number: L2317033
Report Date: 04/10/23

Case Narrative (continued)

Total Metals

L2317033-01 through -04 and -06: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

The WG1762100-3/-4 MS/MSD recoveries for aluminum (0%/0%), calcium (0%/0%), iron (0%/0%), magnesium (0%/0%), and potassium (46%/60%), performed on L2317033-03, do not apply because the sample concentrations are greater than four times the spike amounts added. The MS/MSD RPD for calcium (39%) is above the acceptance criteria.

The WG1762100-3/-4 MS/MSD recoveries, performed on L2317033-03, are outside the acceptance criteria for manganese (48%/72%). A post digestion spike was performed and was within acceptance criteria.

Cyanide, Total

The WG1763456-2 LCS recovery for cyanide, total (79%), associated with L2317033-04 and -06, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

The WG1763459-2 LCS recovery for cyanide, total (79%), associated with L2317033-01 through -03, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name: 2731 W 12TH ST
Project Number: 170697301

Lab Number: L2317033
Report Date: 04/10/23

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Lab Number: L2317033
Report Date: 04/10/23

Data Qualifiers

Identified Compounds (TICs).

- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- V** - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)
- Z** - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene

EPA 625/625.1: alpha-Terpineol

EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D/8270E: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene,

3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE,**

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on March 30, 2023. The canister certification results are provided as an addendum.

L2316799-01D: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

L2316799-02D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

The WG1763188-3 LCS recoveries for carbon tetrachloride (135%), dibromochloromethane (136%) and bromoform (146%) are above the upper 130% acceptance limit. All samples associated with this LCS do not have reportable amounts of these analytes.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature:  Christopher J. Anderson

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Project Name: 2731 12TH ST
Project Number: 170697301

Lab Number: L2316799
Report Date: 04/06/23

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

Report Format: Data Usability Report

Project Name: 2731 12TH ST
Project Number: 170697301

Lab Number: L2316799
Report Date: 04/06/23

Data Qualifiers

- ND** - Not detected at the reporting limit (RL) for the sample.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- V** - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)
- Z** - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene

EPA 625/625.1: alpha-Terpineol

EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D/8270E: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene,

3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE,**

EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B

APPROXIMATE LOCATION OF ACTIVE MONITORING/RECOVERY WELLS	⊕

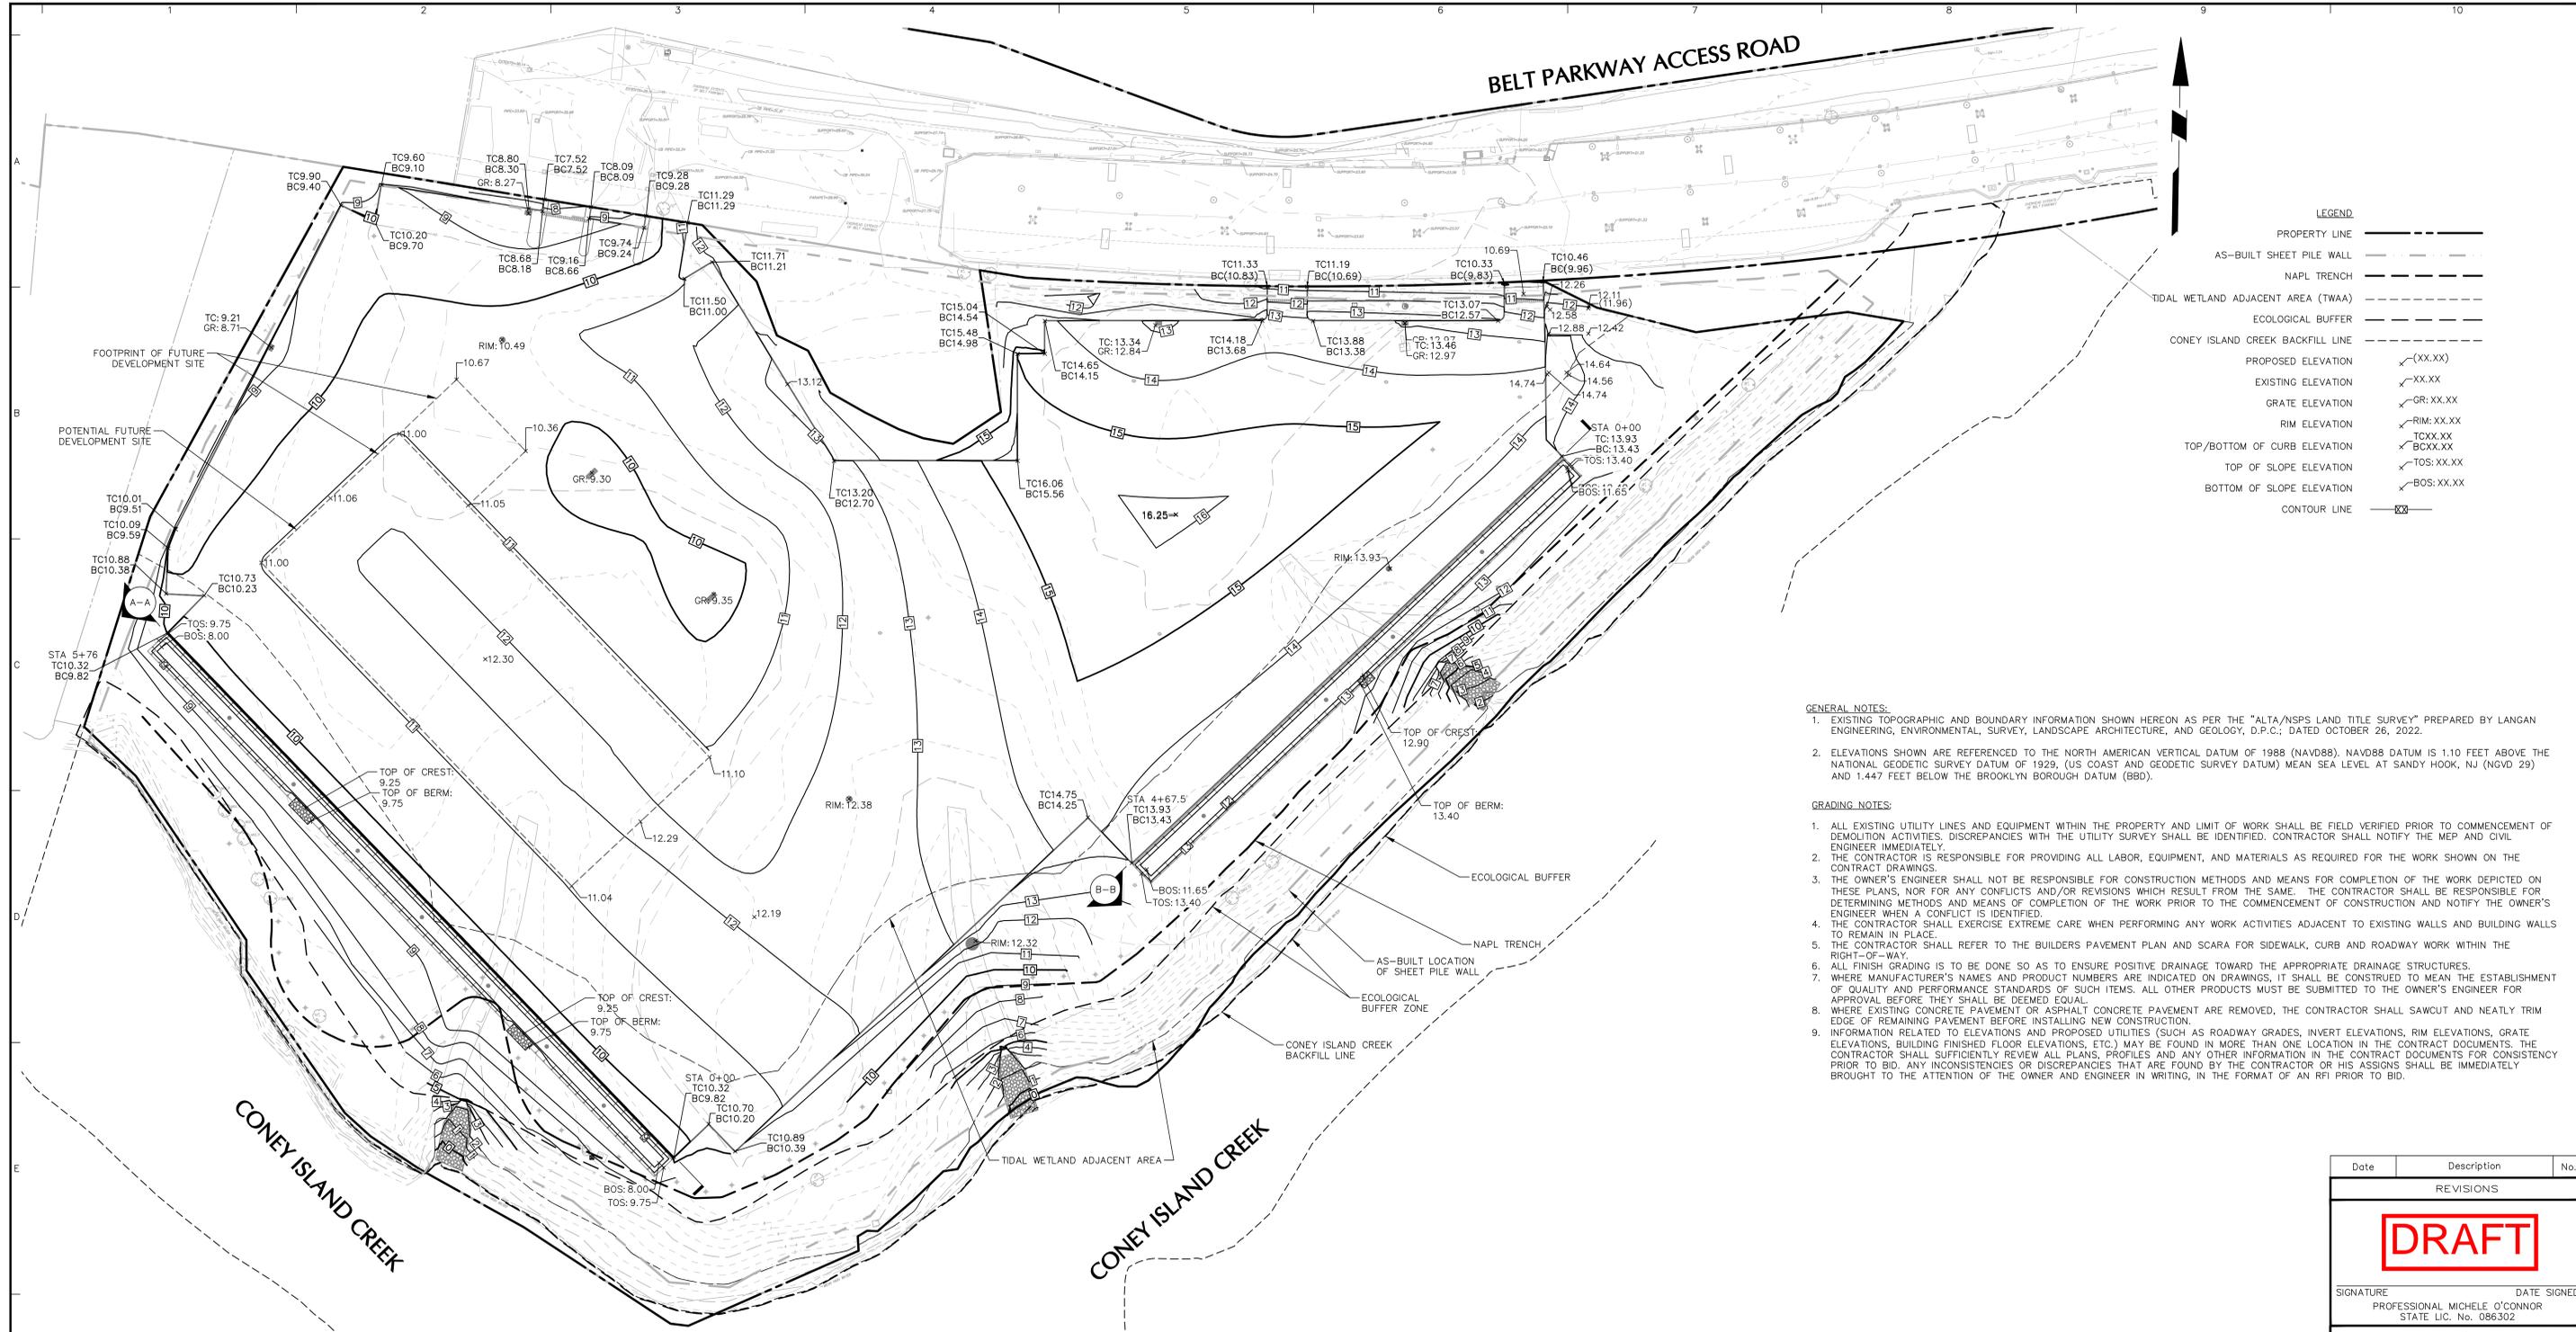

- GENERAL NOTES:**
- EXISTING TOPOGRAPHIC AND BOUNDARY INFORMATION SHOWN HEREON PER THE "ALTA/NSPS LAND TITLE SURVEY" PREPARED BY LANGAN ENGINEERING, ENVIRONMENTAL, SURVEY, LANDSCAPE ARCHITECTURE, AND GEOLOGY, D.P.C.; DATED DECEMBER 20, 2023.
 - ELEVATIONS SHOWN ARE REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88). NAVD88 DATUM IS 1.10 FEET ABOVE THE NATIONAL GEODETIC SURVEY DATUM OF 1929, (US COAST AND GEODETIC SURVEY DATUM) MEAN SEA LEVEL AT SANDY HOOK, NJ (NGVD 29) AND 1.447 FEET BELOW THE BROOKLYN BOROUGH DATUM (BBD).
 - ECOLOGICAL BUFFER ZONE AND SHEET PILE BARRIER WALL LOCATIONS EXTRACTED FROM "FIGURE 11 - ENGINEERING CONTROLS LOCATIONS" FROM THE JUNE 2023 SITE MANAGEMENT PLAN, PREPARED BY GEI CONSULTANTS FOR THE FORMER BROOKLYN BOROUGH (CONEY ISLAND) GAS WORKS SITE.
 - FIRE FIGHTER AISLES HAVE BEEN PROVIDED THROUGHOUT, IN ACCORDANCE WITH SECTION 406.9.7.4, ENSURING GENERAL COMPLIANCE WITH SECTION 406.9.7 OF THE NYC DOB BUILDING CODE.
 - ASPHALT PAVEMENT SURFACE HAS BEEN PROVIDED IN COMPLIANCE WITH SECTION 406.9.4 OF THE NYC DOB BUILDING CODE.

- DRAINAGE NOTES:**
- ALL EXISTING UTILITY LINES AND EQUIPMENT WITHIN THE PROPERTY AND LIMIT OF WORK SHALL BE FIELD VERIFIED PRIOR TO COMMENCEMENT OF DEMOLITION ACTIVITIES. DISCREPANCIES WITH THE UTILITY SURVEY SHALL BE IDENTIFIED. CONTRACTOR SHALL NOTIFY THE MEP AND CIVIL ENGINEER IMMEDIATELY.
 - THE CONTRACTOR IS RESPONSIBLE FOR PROVIDING ALL LABOR, EQUIPMENT, AND MATERIALS AS REQUIRED FOR THE WORK SHOWN ON THE CONTRACT DRAWINGS.
 - THE OWNER'S ENGINEER SHALL NOT BE RESPONSIBLE FOR CONSTRUCTION METHODS AND MEANS FOR COMPLETION OF THE WORK DEPICTED ON THESE PLANS, NOR FOR ANY CONFLICTS AND/OR REVISIONS WHICH RESULT FROM THE SAME. THE CONTRACTOR SHALL BE RESPONSIBLE FOR DETERMINING METHODS AND MEANS OF COMPLETION OF THE WORK PRIOR TO THE COMMENCEMENT OF CONSTRUCTION AND NOTIFY THE OWNER'S ENGINEER WHEN A CONFLICT IS IDENTIFIED.
 - THE CONTRACTOR SHALL EXERCISE EXTREME CARE WHEN PERFORMING ANY WORK ACTIVITIES ADJACENT TO EXISTING WALLS AND BUILDING WALLS TO REMAIN IN PLACE.
 - COVERS AND INLET GRATES SHALL BE PROVIDED FLUSH AT ALL LOCATIONS AS SHOWN ON THE PLAN.
 - STORM DRAINAGE PIPING SHALL BE TEMPORARILY PROTECTED WITH A MINIMUM OF TWO FEET OF COVER DURING CONSTRUCTION.
 - ALL FINISH GRADING IS TO BE DONE SO AS TO ENSURE POSITIVE DRAINAGE TOWARD THE APPROPRIATE DRAINAGE STRUCTURES.
 - THE CONTRACTOR SHALL SUBMIT SHOP DRAWINGS FOR ALL PRODUCTS (I.E. PIPES, STRUCTURES, ETC.) INCLUDING MATERIAL SPECIFICATIONS FOR FILL MATERIAL AND PAVEMENT SECTION. ALL SITE-RELATED SHOP DRAWINGS SUBMITTED TO THE OWNER'S ENGINEER SHALL BEAR THE APPROVAL STAMP OF GENERAL CONTRACTOR.
 - WHERE MANUFACTURER'S NAMES AND PRODUCT NUMBERS ARE INDICATED ON DRAWINGS, IT SHALL BE CONSTRUED TO MEAN THE ESTABLISHMENT OF QUALITY AND PERFORMANCE STANDARDS OF SUCH ITEMS. ALL OTHER PRODUCTS MUST BE SUBMITTED TO THE OWNER'S ENGINEER FOR APPROVAL BEFORE THEY SHALL BE DEEMED EQUAL.
 - ALL DAMAGED MANHOLES CAUSED BY THE CONTRACTOR'S WORK SHALL BE REPAIRED OR REPLACED BY THE CONTRACTOR, AS DIRECTED BY THE OWNER'S ENGINEER, AT NO COST TO THE CITY.
 - PRIOR TO INSTALLATION OF THE DRAINAGE FACILITIES PROPOSED UNDER THIS PLAN, PERMITS ARE TO BE OBTAINED FROM THE LOCAL SEWER RECORDS OFFICE OF THE DEPARTMENT OF ENVIRONMENTAL PROTECTION (D.E.P.). CONSTRUCTION INSPECTION IS TO BE REQUESTED AT LEAST 24 HOURS IN ADVANCE FROM THE HOUSE CONNECTION INSPECTION UNIT OF THE D.E.P. DIVISION OF SEWER REGULATION AND CONTROL.
 - CONTRACTOR TO OBTAIN CONSTRUCTION PERMITS AS NEEDED FOR THE NEW UTILITY CONNECTIONS.
 - INFORMATION RELATED TO ELEVATIONS AND PROPOSED UTILITIES (SUCH AS ROADWAY GRADES, INVERT ELEVATIONS, RIM ELEVATIONS, GRATE ELEVATIONS, ETC.) MAY BE FOUND IN MORE THAN ONE LOCATION IN THE CONTRACT DOCUMENTS. THE CONTRACTOR SHALL SUFFICIENTLY REVIEW ALL PLANS AND ANY OTHER INFORMATION IN THE CONTRACT DOCUMENTS FOR CONSISTENCY PRIOR TO BID. ANY INCONSISTENCIES OR DISCREPANCIES THAT ARE FOUND BY THE CONTRACTOR OR HIS ASSIGNS SHALL BE IMMEDIATELY BROUGHT TO THE ATTENTION OF THE OWNER AND ENGINEER IN WRITING, IN THE FORMAT OF AN RFI PRIOR TO BID.

DETAIL DRAWINGS

LIGHTING NOTES:

GENERAL

- POINT-BY-POINT CALCULATIONS PROVIDED WITHIN HAVE BEEN PREPARED IN ACCORDANCE TO IESNA STANDARDS AND IN CONSIDERATION OF THE VARIABLES WITHIN THESE NOTES AND SITE LIGHTING SCHEDULE. THE VALUES SHOWN ON THE PLANS ARE NOT AN INDICATION OF THE INITIAL LIGHT INTENSITIES OF THE LAMPS. THESE VALUES ARE AN APPROXIMATION OF THE MAINTAINED INTENSITIES DELIVERED TO THE GROUND PLANE USING INDUSTRY STANDARD LIGHT LOSS FACTORS (LLF) WHICH COVER LAMP DEGRADATION AND NATURAL BUILDUP / DIRT DEGRADATION ON THE FIXTURE LENS. THE LIGHTING PLAN IS DESIGNED WITH AN INDUSTRY STANDARD LLF IN ACCORDANCE WITH GUIDANCE AS PROVIDED BY IESNA. MINOR VARIATIONS IN TOPOGRAPHY, PHYSICAL OBSTRUCTIONS, AMBIENT OR ADJACENT LIGHT SOURCES AND/OR OTHER POTENTIAL IMPACTS HAVE NOT BEEN INCLUDED IN THESE CALCULATIONS. THEREFORE, AS-BUILT LIGHT INTENSITIES MAY VARY, IN EITHER DIRECTION, FROM WHAT IS EXPLICITLY PORTRAYED WITHIN THESE DRAWINGS. NO GUARANTEE OF LIGHT LEVELS IS EXPRESSED OR IMPLIED BY THE POINT BY POINT CALCULATIONS SHOWN ON THESE PLANS.
- LIGHT LEVEL POINT SPACING IS 10 FT. LEFT TO RIGHT AND 20 FT. TOP TO BOTTOM. POINT BY POINT CALCULATIONS ARE BASED ON THE LIGHT LOSS FACTOR AS STATED IN THE LIGHTING SCHEDULE.

COMPLIANCE

- ALL SITE LIGHTING RELATED WORK AND MATERIALS SHALL COMPLY WITH CITY, COUNTY, AND OTHER APPLICABLE GOVERNING AUTHORITY REQUIREMENTS.
- LIGHTING LAYOUT COMPLIES WITH THE ILLUMINATING ENGINEERING SOCIETY OF NORTH AMERICA (IESNA) SAFETY STANDARDS FOR LIGHT LEVELS.

COORDINATION

- CONTRACTOR TO COORDINATE POWER SOURCE WITH LIGHT FIXTURES TO ENSURE ALL SITE LIGHTING IS OPERATING EFFECTIVELY, EFFICIENTLY AND SAFELY.
- REFER TO ELECTRIFICATION PLAN FOR PROVIDING ADEQUATE POWER FOR SITE LIGHTING.
- CONTRACTOR TO COORDINATE LOCATION OF EASEMENTS, UNDERGROUND UTILITIES AND DRAINAGE BEFORE DRILLING POLE BASES.
- INSTALLATION OF ALL LIGHTING FIXTURES, POLES, FOOTINGS, AND FEEDER CABLE TO BE COORDINATED WITH ALL SITE WORK TRADES TO AVOID CONFLICT WITH FINISHED AND PROPOSED WORK.
- CONTRACTOR TO COORDINATE INSTALLATION OF UNDERGROUND FEEDER CABLE FOR EXTERIOR LIGHTING WITH EXISTING AND PROPOSED UTILITIES, SITE DRAINAGE SYSTEMS, AND PAVING. CONTRACTOR SHALL PROMPTLY NOTIFY THE OWNER'S REPRESENTATIVE SHOULD ANY UTILITIES, NOT SHOWN ON THE PLANS, BE FOUND DURING EXCAVATIONS.

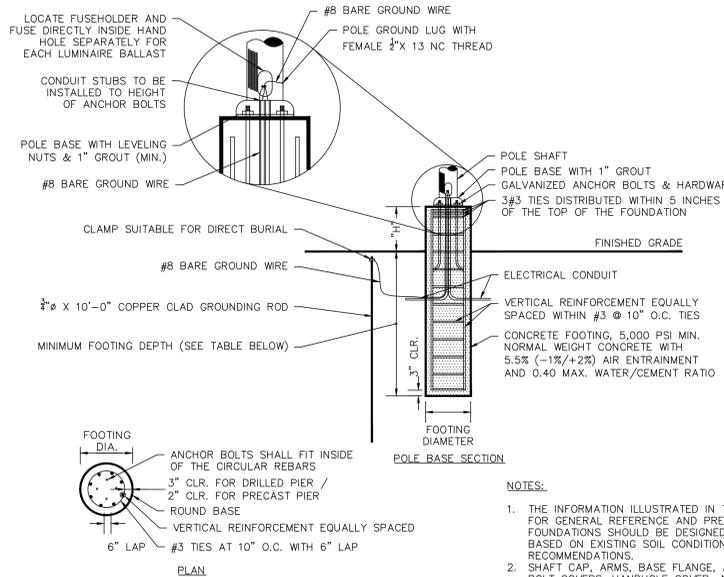

POLES AND FOOTINGS

- PROVIDE A CONCRETE BASE FOR EACH LIGHT POLE AT THE LOCATIONS INDICATED ON THE CONSTRUCTION DRAWINGS AND/OR IN ACCORDANCE WITH PROJECT PLANS AND SPECIFICATIONS RELATING DIRECTLY TO CAST-IN-PLACE CONCRETE. THE USE OF ALTERNATE LIGHTING FOUNDATIONS, SUCH AS PRECAST, MAY CHANGE THE SIZING AND REINFORCEMENT REQUIREMENTS FROM THOSE SHOWN ON THESE PLANS. CONTRACTOR TO SUBMIT SHOP DRAWINGS FOR REVIEW PRIOR TO ORDERING ANY SUBSTITUTED PRODUCTS.
- CONTRACTOR SHALL EXAMINE AND VERIFY THAT SOIL CONDITIONS ARE SUITABLE TO SUPPORT LOADS EXERTED UPON THE FOUNDATIONS DURING EXCAVATION. CONTRACTOR SHALL NOTIFY ENGINEER OF ANY UNSATISFACTORY CONDITIONS.
- POLE FOUNDATIONS SHALL NOT BE POURED IF FREE STANDING WATER IS PRESENT IN EXCAVATED AREA.
- ALL POLES SHALL BE EQUIPPED WITH FACTORY INSTALLED VIBRATION DAMPENERS.

ADJUSTMENT AND INSPECTION

- CONTRACTOR TO OPERATE EACH LUMINAIRE AFTER INSTALLATION AND CONNECTION. INSPECT FOR IMPROPER CONNECTIONS AND OPERATION.
- CONTRACTOR TO AIM AND ADJUST ALL LUMINAIRES TO PROVIDE ILLUMINATION LEVELS AND DISTRIBUTION AS INDICATED ON THE CONSTRUCTION DRAWINGS OR AS DIRECTED BY THE LANDSCAPE ARCHITECT AND/OR OWNER.
- CONTRACTOR TO CONFIRM THAT LIGHT FIXTURES, TILT ANGLE AND AIMING MATCH SPECIFICATIONS ON THE PLANS.

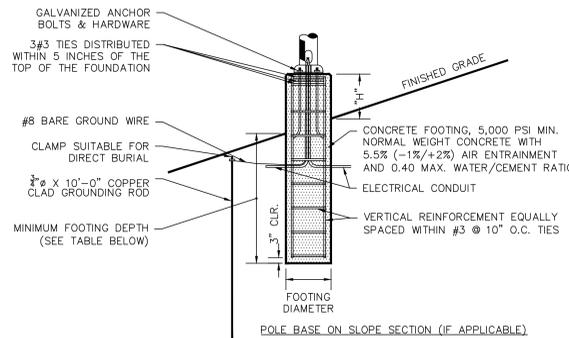

NO ALTERNATES WILL BE ACCEPTED

MOUNTING HEIGHT	FOOTING DEPTH	FOOTING DIAMETER	EXPOSED HEIGHT "H"	VERTICAL REINFORCEMENT
40'-0"	6'-8"	2'-6"	2'-6"	8#6 BARS

NOTES:

EXPOSED HEIGHT OF POLE BASE (H) SHALL BE MEASURED ON THE UPHILL SIDE OF A SLOPE. FOOTING DEPTH (D) SHALL BE MEASURED ON THE DOWNHILL SIDE OF A SLOPE. AN ADDITIONAL VARIABLE HEIGHT (V) WILL BE BASED ON THE SLOPE ON WHICH THE POLE BASE IS LOCATED. CONTRACTOR TO CALCULATE FULL LENGTH OF EACH POLE BASE REQUIRED ON SLOPES (H+D+V = TOTAL BASE LENGTH)

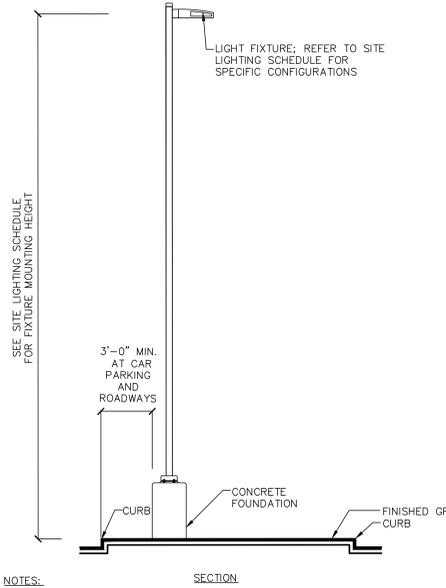

NOTES:

- THE INFORMATION ILLUSTRATED IN THE LIGHT POLE FOUNDATION DETAIL HAS BEEN PROVIDED FOR GENERAL REFERENCE AND PRELIMINARY COST ESTIMATE PURPOSES. LIGHT POLE FOUNDATIONS SHOULD BE DESIGNED AND DETAILED BY A LICENSED STRUCTURAL ENGINEER BASED ON EXISTING SOIL CONDITIONS, LOCAL DESIGN STANDARDS AND MANUFACTURERS RECOMMENDATIONS.
- SHAFT CAP, ARMS, BASE FLANGE, ANCHOR BOLTS, LEVELING NUTS, CONNECTION HARDWARE, BOLT COVERS, HANDHOLE COVER, AND BOLT CIRCLE TEMPLATE SHALL BE FURNISHED BY POLE MANUFACTURER.
- EACH STANDARD TO BE PROTECTED AGAINST LIGHTNING WITH AN INTERCONNECTED GROUND ROD. THIS ROD SHALL BE BONDED PER SECTION NUMBER 250-86, N.E.C.
- CONCRETE WORK SHALL COMPLY WITH THE REQUIREMENT OF ACI 318. CAST-IN-PLACE SHALL HAVE UNCONFINED COMPRESSIVE STRENGTH OF AT LEAST 5,000 PSI AT 28-DAYS. DEFORMED REINFORCEMENT BARS SHALL CONFORM TO ASTM A615, GRADE 60.
- CONTRACTOR TO ENSURE CONCRETE POLE BASES ARE POURED / PLACED ABSOLUTELY VERTICAL & LEVEL.
- IF POLE BASE IS CAST-IN-PLACE POLE BASE SHALL BE ONE CONTINUOUS POUR. EXPOSED PORTION OF BASE SHALL BE HAND-RUBBED SMOOTH.
- CONTRACTOR TO COMPACT SUBGRADE AROUND POLE BASE PER EARTHWORK SPECIFICATIONS / GEOTECH REPORT.
- CONTRACTOR TO CONFIRM GROUNDING DESIGN WITH MEP.

THE INFORMATION ILLUSTRATED IN THE LIGHT POLE FOUNDATION DETAIL HAS BEEN PROVIDED FOR GENERAL REFERENCE AND PRELIMINARY COST ESTIMATE PURPOSES. LIGHT POLE FOUNDATIONS SHOULD BE DESIGNED AND DETAILED BY A LICENSED STRUCTURAL ENGINEER BASED ON EXISTING SOIL CONDITIONS, LOCAL DESIGN STANDARDS AND MANUFACTURERS RECOMMENDATIONS.

1 LIGHT POLE FOUNDATION NOTES

- ALL LIGHT POLES SHALL BE EQUIPPED WITH FACTORY INSTALLED VIBRATION DAMPENERS.
- CURB LOCATION IS SHOWN FOR SCHEMATIC PURPOSE. LIGHT POLES SHALL BE LOCATED PER THE LIGHTING PLANS.

D-Series Size 1 LED Area Luminaire

Specifications:

- EPA: 0.69 ft (0.69 ft)
- Length: 32.71" (33.14")
- Width: 14.26" (14.26")
- Height H1: 7.88" (7.88")
- Height H2: 2.22" (2.22")
- Weight: 36 lbs (16.3 kg)

Introduction

The modern styling of the D-Series features a highly refined aesthetic that blends seamlessly with its environment. The D-Series offers the benefits of the latest in LED technology into a high performance, high efficiency, long-life luminaire.

The photometric performance results in sites with excellent uniformity, greater pole spacing and lower power density. D-Series outstanding photometry aids in reducing the number of poles required in area lighting applications with typical energy savings of 65% and expected service life of over 100,000 hours.

Series	LEDs	Color Temperature	Color Rendering Index	Applications	Voltage	Shipping
DS1 LED	Forward optics P1, P6, P9, P11, P13	3000K, 4000K, 5000K	90, 95	Area, Ambient, Accent, Task, Signage, etc.	120V, 277V	Shipped included

D-Series Size 2 LED Area Luminaire

Specifications:

- EPA: 1.36 ft (1.36 ft)
- Length: 40.59" (40.59")
- Width: 16.76" (16.76")
- Height H1: 8.11" (8.11")
- Height H2: 3.96" (3.96")
- Weight: 46 lbs (20.9 kg)

Introduction

The modern styling of the D-Series features a highly refined aesthetic that blends seamlessly with its environment. The D-Series offers the benefits of the latest in LED technology into a high performance, high efficiency, long-life luminaire.

The outstanding photometric performance results in sites with excellent uniformity, greater pole spacing and lower power density. D-Series outstanding photometry aids in reducing the number of poles required in area lighting applications with typical energy savings of up to 80% vs. 100W HID and expected service life of over 100,000 hours.

Series	LEDs	Color Temperature	Color Rendering Index	Applications	Voltage	Shipping
DS2 LED	Forward optics P2, P4, P6, P8, P10, P12, P14	3000K, 4000K, 5000K	90, 95	Area, Ambient, Accent, Task, Signage, etc.	120V, 277V	Shipped included

LITHONIA LIGHTING

FEATURES & SPECIFICATIONS

RETIRED — Based upon our general purpose pole for up to 50-foot mounting heights.

CONSTRUCTION — Pole shaft: Hot-dip galvanized steel, minimum yield of 50,000 psi. Minimum wall thickness of 1/8" (3.18 mm) for 120V and 277V. Double end cap construction with a full length longitudinal high frequency electric resistance weld. Found in cross section having a uniform taper of approximately 1/8" per foot.

Base Cap — One-piece, hot-dip galvanized steel, minimum yield of 50,000 psi. Double end cap construction with a full length longitudinal high frequency electric resistance weld. Found in cross section having a uniform taper of approximately 1/8" per foot.

Base Cover — One-piece, hot-dip galvanized steel, minimum yield of 50,000 psi. Double end cap construction with a full length longitudinal high frequency electric resistance weld. Found in cross section having a uniform taper of approximately 1/8" per foot.

Anchor Bolt — One-piece, hot-dip galvanized steel, minimum yield of 50,000 psi. Double end cap construction with a full length longitudinal high frequency electric resistance weld. Found in cross section having a uniform taper of approximately 1/8" per foot.

- NOTES:**
1. ALL MANHOLES SECTIONS SHALL CONFORM TO ASTM C-478, LATEST REVISION STANDARD SPECIFICATIONS FOR PRECAST REINFORCED MANHOLE SECTIONS.
 2. MANHOLE RISER SECTIONS TO BE FURNISHED IN 1, 2, 3 OR 4-FT HEIGHTS AS REQUIRED.
 3. PRECAST DRAINAGE STRUCTURES SHALL COMPLY WITH THE FOLLOWING:
 - A. CONCRETE STRENGTH: 4,000 PSI @ 28 DAYS
 - B. REINFORCING STEEL: ASTM A496-A615, GRADE 60 (F_y = 60,000 PSI)
 - C. ENTRAINED AIR: 5.0 - 9.0 PERCENT
 - D. DESIGN LOAD: AASHTO H-20-44 WITH 30% IMPACT AND 130 PSF EQUIVALENT SOIL PRESSURE
 - E. INSTALLATION OF PRECAST CONCRETE DRAINAGE STRUCTURES SHALL COMPLY WITH ASTM C 891.
 4. FLAT SLAB TOPS (NO JOINT) MUST HAVE TOP AND BOTTOM STEEL.
 5. MANHOLE STEPS TO BE S.S. OR STEEL REINFORCED COPOLYMER POLYPROPYLENE.
 6. THE DEPTH OF THE CAST-IN-PLACE BENCH SHALL BE EQUAL TO 1/3 OF THE DIAMETER OF THE SEWER.
 7. THE BENCH SHALL SLOPE TOWARD THE INVERT CHANNEL AT A RATE OF 1" PER FOOT.
 8. PIPE CONNECTIONS SHALL BE GROUTED FIRMLY AND NEATLY IN PLACE WITH NON-SHRINK GROUT.
 9. STEPS TO BE STAINLESS STEEL OR STEEL REINFORCED CO-POLYMER PROPYLENE. STEPS SHALL BE PROVIDED WHEN THE DEPTH FROM GRADE TO INVERT EXCEEDS 4-FT. THE TOP STEP SHALL BE WITHIN 36-IN OF GRADE.

NTS

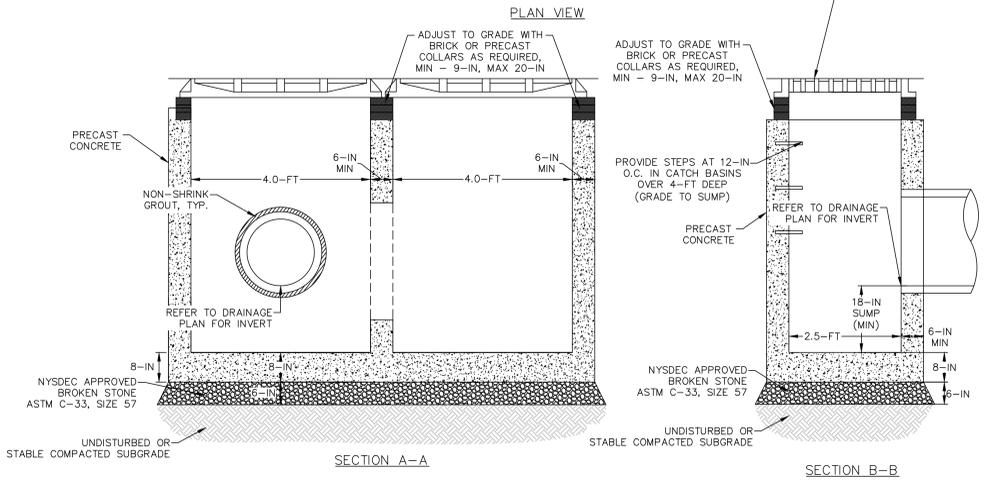

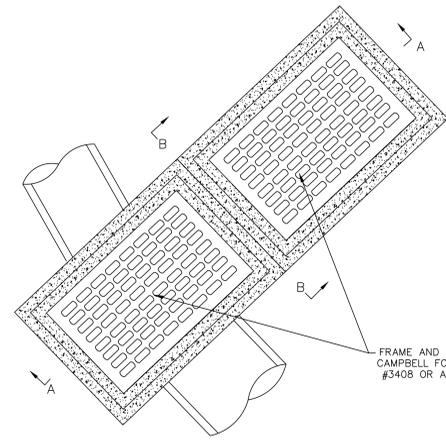

- NOTES:**
1. ALL MANHOLES SECTIONS SHALL CONFORM TO ASTM C-478, LATEST REVISION STANDARD SPECIFICATIONS FOR PRECAST REINFORCED MANHOLE SECTIONS.
 2. MANHOLE RISER SECTIONS TO BE FURNISHED IN 1, 2, 3 OR 4-FT HEIGHTS AS REQUIRED.
 3. PRECAST DRAINAGE STRUCTURES SHALL COMPLY WITH THE FOLLOWING:
 - A. CONCRETE STRENGTH: 4,000 PSI @ 28 DAYS
 - B. REINFORCING STEEL: ASTM A496-A615, GRADE 60 (F_y = 60,000 PSI)
 - C. ENTRAINED AIR: 5.0 - 9.0 PERCENT
 - D. DESIGN LOAD: AASHTO H-20-44 WITH 30% IMPACT AND 130 PSF EQUIVALENT SOIL PRESSURE
 - E. INSTALLATION OF PRECAST CONCRETE DRAINAGE STRUCTURES SHALL COMPLY WITH ASTM C 891.
 4. FLAT SLAB TOPS (NO JOINT) MUST HAVE TOP AND BOTTOM STEEL.
 5. MANHOLE STEPS TO BE S.S. OR STEEL REINFORCED COPOLYMER POLYPROPYLENE.
 6. THE DEPTH OF THE CAST-IN-PLACE BENCH SHALL BE EQUAL TO 1/3 OF THE DIAMETER OF THE SEWER.
 7. THE BENCH SHALL SLOPE TOWARD THE INVERT CHANNEL AT A RATE OF 1" PER FOOT.
 8. PIPE CONNECTIONS SHALL BE GROUTED FIRMLY AND NEATLY IN PLACE WITH NON-SHRINK GROUT.
 9. STEPS TO BE STAINLESS STEEL OR STEEL REINFORCED CO-POLYMER PROPYLENE. STEPS SHALL BE PROVIDED WHEN THE DEPTH FROM GRADE TO INVERT EXCEEDS 4-FT. THE TOP STEP SHALL BE WITHIN 36-IN OF GRADE.

2 5-FT MANHOLE
NTS

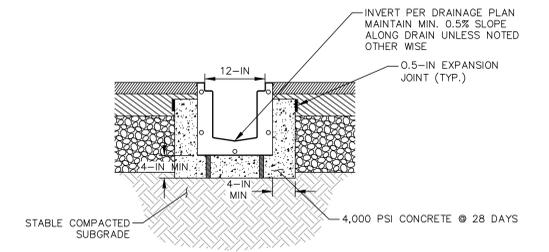

- NOTES:**
1. SOIL CONDITIONS AT BOTTOM OF EXCAVATION DEEMED UNSUITABLE BY FIELD ENGINEER SHALL BE EXCAVATED TO SUITABLE MATERIAL OR A MAXIMUM OF TWO ADDITIONAL FEET OF BEDDING MATERIAL.
 2. PRECAST DRAINAGE STRUCTURES SHALL COMPLY WITH THE FOLLOWING:
 - A. CONCRETE STRENGTH: 4,000 PSI @ 28 DAYS
 - B. REINFORCING STEEL: ASTM A496-A615, GRADE 60 (F_y = 60,000 PSI)
 - C. ENTRAINED AIR: 5.0 - 9.0 PERCENT
 - D. DESIGN LOAD: AASHTO H-20-44 WITH 30% IMPACT AND 130 PSF EQUIVALENT SOIL PRESSURE
 - E. INSTALLATION OF PRECAST CONCRETE DRAINAGE STRUCTURES SHALL COMPLY WITH ASTM C 891.
 3. INTERIOR STRUCTURE DIMENSIONS SHOW ARE MINIMUM VALUES. PROVIDE DIMENSIONS AS NEEDED TO ACCOMMODATE 6-INCH CLEARANCE FROM SIDE WALLS OF BASIN TO OUTSIDE OF PIPE PENETRATION.
 4. ALL PIPE PENETRATIONS SHALL BE FLUSH WITH THE INSIDE WALLS OF THE CATCH BASIN. PIPE CONNECTIONS SHALL BE GROUTED FIRMLY AND NEATLY IN PLACE WITH NON-SHRINK GROUT.
 5. STEPS TO BE STAINLESS STEEL OR STEEL REINFORCED CO-POLYMER PROPYLENE. STEPS SHALL BE PROVIDED WHEN THE DEPTH FROM GRADE TO SUMP EXCEEDS 4-FT. THE TOP STEP SHALL BE WITHIN 36-IN OF GRADE.

4 SINGLE CATCH BASIN
NTS

- NOTES:**
1. SOIL CONDITIONS AT BOTTOM OF EXCAVATION DEEMED UNSUITABLE BY FIELD ENGINEER SHALL BE EXCAVATED TO SUITABLE MATERIAL OR A MAXIMUM OF TWO ADDITIONAL FEET OF BEDDING MATERIAL.
 2. PRECAST DRAINAGE STRUCTURES SHALL COMPLY WITH THE FOLLOWING:
 - A. CONCRETE STRENGTH: 4,000 PSI @ 28 DAYS
 - B. REINFORCING STEEL: ASTM A496-A615, GRADE 60 (F_y = 60,000 PSI)
 - C. ENTRAINED AIR: 5.0 - 9.0 PERCENT
 - D. DESIGN LOAD: AASHTO H-20-44 WITH 30% IMPACT AND 130 PSF EQUIVALENT SOIL PRESSURE
 - E. INSTALLATION OF PRECAST CONCRETE DRAINAGE STRUCTURES SHALL COMPLY WITH ASTM C 891.
 3. INTERIOR STRUCTURE DIMENSIONS SHOW ARE MINIMUM VALUES. PROVIDE DIMENSIONS AS NEEDED TO ACCOMMODATE 6-INCH CLEARANCE FROM SIDE WALLS OF BASIN TO OUTSIDE OF PIPE PENETRATION.
 4. ALL PIPE PENETRATIONS SHALL BE FLUSH WITH THE INSIDE WALLS OF THE CATCH BASIN. PIPE CONNECTIONS SHALL BE GROUTED FIRMLY AND NEATLY IN PLACE WITH NON-SHRINK GROUT.
 5. STEPS TO BE STAINLESS STEEL OR STEEL REINFORCED CO-POLYMER PROPYLENE. STEPS SHALL BE PROVIDED WHEN THE DEPTH FROM GRADE TO SUMP EXCEEDS 4-FT. THE TOP STEP SHALL BE WITHIN 36-IN OF GRADE.

5 DOUBLE CATCH BASIN
NTS

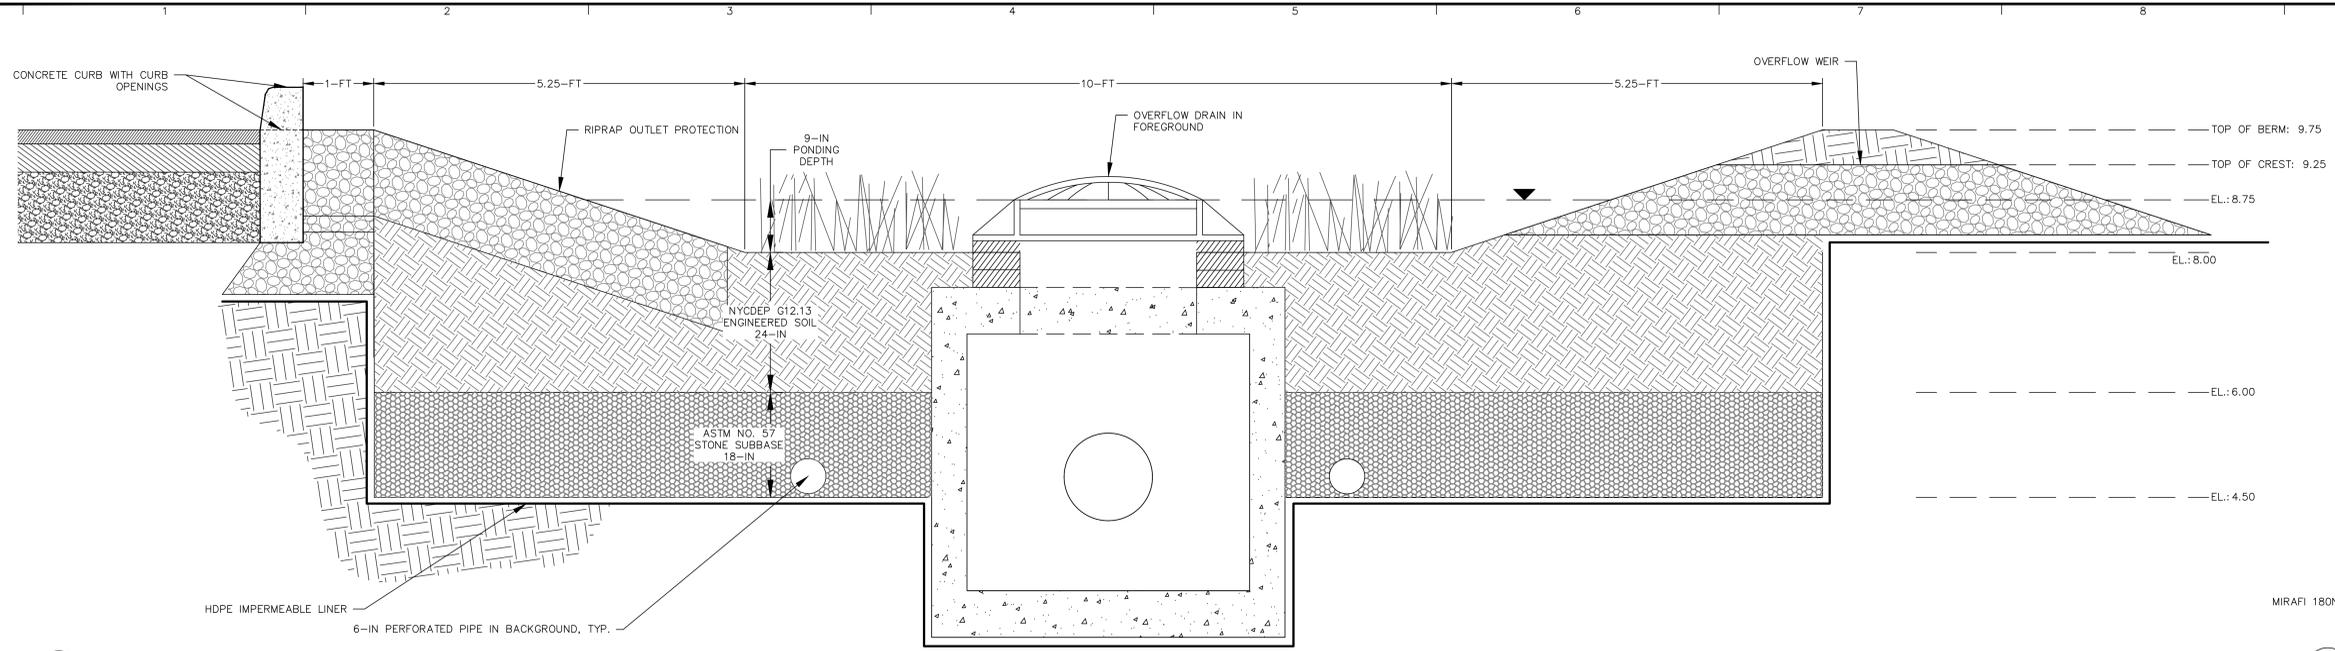

- NOTES:**
1. TRENCH DRAIN SHALL BE MODEL S300K MANUFACTURED WITH TYPE D END OUTLET (SK3-10) BY ACO DRAIN, OR APPROVED EQUAL.
 2. GRATE SHALL BE TYPE 8650/8660 PERFORATED STAINLESS STEEL GRATE LOAD CLASS C MANUFACTURED BY ACO DRAIN OR APPROVED EQUAL.
 3. TRENCH DRAIN DETAIL SHALL BE INSTALLED FOR TD-1, TD-2, & TD-3.

3 TRENCH DRAIN

PREFACE

This Stormwater Pollution Prevention Plan (SWPPP) has been prepared for the construction of a fleet vehicle parking facility located at 2731 West 12th Street, Brooklyn, New York. A SWPPP is required for this site to comply with New York State Department of Environmental Conservation (NYS DEC) stormwater management design manual.

Design and Construction Stormwater Team

Owner/Developer

Prologis

SWPPP Implementation

The owner/developer and contractor are responsible for the proper implementation of all temporary and permanent stormwater pollution prevention measures proposed in this SWPPP.

This SWPPP shall be kept on-site and will be made available for review by the inspector, contractor, subcontractors, and applicable federal, state, and local regulatory agencies that have jurisdiction over the construction site. If necessary, any of these regulatory agencies may notify the owner or developer and contractor that the SWPPP is not in compliance with NYS DEC regulations.

SWPPP Amendments

The SWPPP preparer, owner, developer, or contractor shall amend this SWPPP to reflect any changes in design, construction, operation and maintenance of stormwater management practices associated with this SWPPP. Amendment of the SWPPP by the SWPPP preparer, owner, developer, or contractor may also be deemed necessary under the following conditions:

- Field conditions render the erosion and sediment control measures to be ineffective in minimizing pollutants from stormwater discharges.
- To identify a new contractor that will implement any measure of the SWPPP.

Revisions of the SWPPP shall be performed within 7 days of changes being identified. Minor amendments to the SWPPP must be marked up in a field book and maintained on site. Major amendments, such as changes to structural components that would require design review, must be filed with the regulatory agency.

EXISTING CONDITIONS

Figure 1 - Site Vicinity Map

Site Description

- Project/Site Name: 2731 West 12th Street
- Borough: Brooklyn
- Block and Lot: 7247 / 106
- Total Project Area: 730,989 SF (16.8 AC)
- Within MS4: No
- Site Vicinity: The site is bound to the North by the city owned Belt Parkway Access Road which is directly beneath the elevated Belt Parkway. The northeast of the site is bound NYCT infrastructure, and the remainder of the site is bound by the Coney Island Creek.

Existing Site Use

The site was a former National Grid Manufactured Gas Plant (MGP). The site was decommissioned, and remedial activities took place in 2003 and 2004. The site is now a vacant, mostly grass-covered lot that includes remnant concrete foundation elements; out-of-service electrical equipment associated with historical site operations; and drainage swales in the eastern, southern, and western parts of the site.

According to the November 2009 Final Engineering Report (FER) prepared by Paulus, Sokolowski and Sartor Engineering, PC (revised April 2013), the site is underlain by an about 3-foot-thick low-permeability multi-component environmental cap (LPMEC), which consists of at least 6 inches of topsoil underlain by 2 feet of imported soil and a geosynthetic clay liner, followed by fill to about 10 feet below grade surface (bgs). A sheet pile barrier wall system was also installed around the perimeter of the site as part of the implementation of remedial activities in 2003 and 2004 to keep contaminants from leaving the site.

Watershed and Drainage Conditions

The following are known existing watershed and drainage conditions for the site:

Table 1 – Watershed and Drainage Conditions

Fronting Sewers	There are no sewers fronting the project site
FEMA Flood Zone	Zone AE with BFE of 10 feet
Site Elevations	<ul style="list-style-type: none">• North Property Line – between about el. +8.40 and el. +10.75• South Property Line – between about el. -2.00 and el. -0.50• East Property Line – between about el. -1.00 and el. +1.20• West Property Line – between about el. -2.00 and el. +8.50

Runoff stays above the LPMEC and overland flows to one the Coney Island Creek or one of three existing swales that discharge to the Coney Island Creek on the southwest, south, and east of the site.

Soil Conditions

Existing soil conditions are based on a subsurface field investigation and laboratory testing consisting of eleven test borings. The subsurface conditions generally consist of fill, upper sand, organic clay, silt, and peat, and lower sand. Groundwater levels were measured and reported to be about Elev. +2.5 at the upland portion of the site and Elev. +1 near Coney Island Creek. Refer to the soil testing results and boring locations map obtained by Mueser Rutledge Engineers PLLC in Appendix E

The following table describes the stratum encountered in borings during the subsurface investigation:

Table 3 – Soil Stratums

Stratum	Description
Stratum F	Fill [Class 7]: Loose to compact brown, gray, and black, fine to coarse sand, some silt, some to trace gravel. The thickness of the fill layer is about 4.5 to 13.5 feet.
Stratum S1	Upper Sand [Class 3b]: Loose to compact gray and brown fine to coarse sand, trace silt to silty, trace gravel. The thickness of the upper sand layer is 4 to 9.5 feet.
Stratum O	Organic Clay, Silt, and Peat [Class 7]: Black organic clay, silty to some silt, with peat or roots, trace to some fine to medium sand, trace gravel or gray silt to silty fine to medium sand, some to trace peat or roots, trace to some clay. The thickness of the upper sand layer is 2 to 10 feet.
Stratum S2	Sand [Class 3b]: Loose to medium compact, gray, dark gray, and brown fine to coarse sand, some to trace silt, trace to some gravel. The depth of this stratum varies from 7 to 24.5 feet below grade

Stratum M	Clayey Silt [Class 6]: Gray clayey silt layer within Stratum S2. N values recorded in this stratum are 5 and 9. The depth of Stratum M is 8-ft thick
-----------	--

According to the USDA NRCS National Cooperative Soil Survey report (refer to Appendix D), the site is classified as the following:

- Hydrological Soil Group (HSG): Unranked
- Soil classifications: 100% Oi—Oil-waste land

PROPOSED CONDITIONS

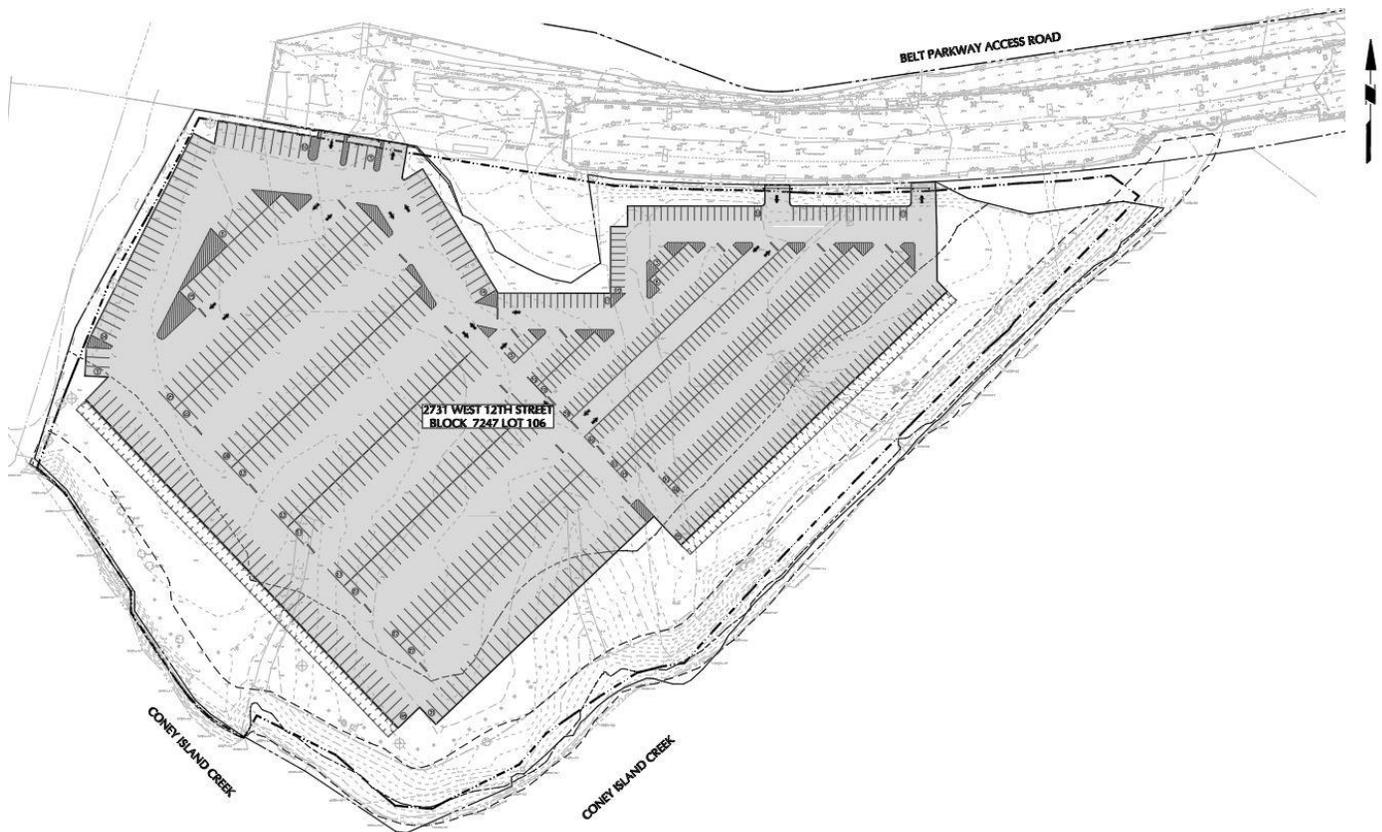

Figure 2 - Project Area Site Plan

Project Description

- Total Area to be Disturbed: 573,900 SF (13.2 AC)
- Existing Impervious Area to be Disturbed: 0 SF (0.00 AC)

-
- Proposed Impervious Area within the Disturbed Area: 466,115 SF (10.7 AC)
 - Proposed Land Use: Commercial
 - Proposed Development: Vehicle Fleet Parking Facility
 - Stormwater Management Practices (SMPs): Hydrodynamic Separator Unit, Bioretention
 - Estimated Construction Duration: April 2025 – December 2025

Proposed Site Management Plan

As documented in the FER, the remediation site is subject to ongoing environmental requirements outlined in an Environmental Notice, Site Management Plan, and Excavation Work Plan (EWP) due to remaining MGP-related impacts in soil, sediment, and groundwater. The redevelopment project will result in disturbance of the previously constructed LPMEC (engineered cap), and underlying impacted material within an approximately 466,115-square-foot portion of the site. All work that will result in disturbance of the LPMEC and underlying impacted material will be completed in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved 10 June 2019 Site Management Plan, Revision No. 4, and its appended EWP, and the forthcoming NYSDEC-approved Notice of Intrusive Activity (NOIA) letter.

The redevelopment project will include regrading the engineered cap and underlying impacted fill to achieve development grade; excavation and trenching for the installation of sub-grade drainage infrastructure, utilities, and foundation elements; off-site disposal of disturbed impacted soil/fill; restoration of the engineered cap; and import of soil/fill in accordance with the sampling and analytical requirements of the Site Management Plan, EWP, and Quality Assurance Project Plan for engineered cap restoration. In areas of proposed pavement, the asphalt pavement will serve as the impermeable soil cap.

While the export of significant quantities of impacted fill is not anticipated, some off-site disposal is anticipated and will be performed in compliance with the requirements of the Site Management Plan, EWP and the forthcoming NYSDEC-approved NOIA. All excavated material that will not be placed as backfill under the engineered cap or alternative cover system will be stockpiled, characterized in accordance with disposal facility requirements, and disposed of off-site at a National Grid- and NYSDEC-approved facility permitted to accept the material in accordance with

the EWP. All material will be handled in accordance with the SMP, EWP, and the forthcoming NYSDEC-approved NOIA.

EROSION AND SEDIMENT CONTROL DURING CONSTRUCTION

NYS DEC requires the implementation of protective measures to minimize the impacts from construction activities involving soil disturbance. Temporary soil erosion and sediment control measures will be applied to this site to minimize the amount of sediment carried by stormwater runoff during construction activities. Temporary structural and vegetative measures have been designed in accordance with the NYS DEC Standards and Specifications for Erosion and Sediment Control (latest edition). The following summarizes the planned soil erosion and sediment control practices as shown on Drawing C-100 and Drawing C-101 enclosed herein.

The following sections provide general guidance to the proper soil erosion and sediment control measures for various aspects of construction. It is the responsibility of the contractor to use the Contract Drawings, this SWPPP, and observed site conditions to develop project-specific erosion and sediment control plans.

General Erosion and Sediment Control Practices

- **Dust Control:** Excessive dust shall be monitored and controlled in accordance with the NYSDOH Community Air Monitoring Program (CAMP). If airborne dust is observed leaving the work area, dust suppression will be employed. Dust suppression can be achieved through the use of a dedicated water distribution system, on-site water truck for road wetting, or an alternate source with suitable supply and pressure for use in dust control. Gravel will be used for on-site roads to provide clean and dust-free road surface. Refer to NYS DEC Blue Book Section 2.25 for specifications.
- **Silt Fence:** A silt fence may be installed along down-gradient areas of the site perimeter to prevent any sediment laden runoff from discharging to the adjacent streets and NYC DEP storm sewers. The proposed location of the silt fence is shown on C-100 and C-101. Refer to NYS DEC Blue Book Section 5.54 for specifications.
- **Stabilized Construction Entrances:** The locations of the stabilized construction entrances will be determined by the contractor. Potential locations for the construction entrances are

shown on C-100 and C-101. Wash-down water and runoff from the construction entrances shall be directed to the appropriate soil erosion and sediment control measures. Stabilized Construction Entrances shall be clean crushed angular stone, ASTM C-33 size No. 1 or 2. Refer to NYS DEC Blue Book Section 2.30 for specifications.

- Temporary Crushed Virgin Stone: Temporarily place crushed virgin stone on exposed rough-graded soil areas that will be left exposed for more than fourteen days, and not subject to construction traffic. Refer to section "Temporary Stabilization" for specifications for temporary placement of crushed stone.
- Temporary Seeding: Temporarily seed exposed rough-graded soil areas that will be left exposed for more than fourteen days, and not subject to construction traffic. Refer to section "Temporary Stabilization" for specifications for temporary seeding. Refer to NYS DEC Blue Book Section 4.58 for specifications.
- Inlet Protection: Inlet protection shall be installed at all stormwater inlets receiving runoff from disturbed areas of the site. The proposed locations of inlet protection are shown on C-101. Refer to NYS DEC Blue Book Section 5.57 for specifications.
- Concrete Truck Washout Facility: The locations of the concrete truck washout facilities will be determined by the contractor. Potential locations for the concrete truck washout facilities are shown on C-100 and C-101: however, the contractor may relocate as necessary to facilitate the work, and document the relocation within the SWPPP folder on-site. Contractor will be responsible for sizing the washout facility based on the expected quantity of trucks (chutes and hoppers). Refer to NYS DEC Blue Book Section 2.24 for specifications.
- Staging & Equipment Storage Areas: Provide standard soil erosion and sediment control measures to all areas used for equipment staging and storage. The objective of these measures shall be to prevent any off-site sediment tracking due to equipment, loading of trucks or other vehicles, etc.
- Stockpile Protection: The locations of the soil stockpiles will be determined by the contractor. Potential locations for the soil stockpiles are shown on C-100 and C-101. All soil stockpiles shall be limited in size to about 1,000 cubic yards and be covered with 6-mil plastic sheeting or tarp at the end of each work day. Stone stockpiles do not require any erosion and sediment controls.

-
- Turbidity Curtain: Turbidity curtain shall be located beyond the lateral limits of the construction site and firmly anchored in place. The alignment should be set as close to the work area as possible but not so close as to be disturbed by applicable construction equipment. Refer to NYS DEC Blue Book Section 5.65 for additional specifications.
 - Tree Protection: If the construction area is within the dripline of any existing tree to remain, temporary tree protection shall be installed to protect the tree from mechanical injury during construction in accordance with NYC DPR standards and specifications. Refer to NYS DEC Blue Book Section 2.26 for additional specifications.

Temporary Stabilization

The contractor shall initiate surface stabilization measures as soon as practical in those portions of the site where construction activities have temporarily or permanently ceased. The application of soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the current soil disturbance activity ceased. The following measures for temporary stabilization may be used:

Crushed Virgin Stone

For temporary placement of crushed virgin stone:

- Cover disturbed area with a minimum 4-inch layer of 3/4-inch to 1-inch crushed virgin stone.

Maintenance:

- The contractor may be directed to patch any areas which, in the opinion of the Qualified Inspector, are unacceptable.
- The contractor shall maintain the stone cover and install new stone as needed if soil becomes exposed.

Vegetative Plan

For temporary seeding and mulch:

- Type of seed:
 - During Growing Season (Spring, Summer, or Early Fall): seed the area with ryegrass at 30 lbs per acre (approximately 0.7lbs / 1,000sf).

-
- During Late Fall/Early Winter: seed with Certified “Aroostook” winter rye at 100 lbs per acre (2.5 lbs/1,000 sf)
 - Broadcast seed at the manufacturer’s recommended rate with a cyclone seeder, drop spreader, or cultipacker seeder.
 - Rake seed into the soil and lightly pack to establish good contact.
 - Mulch the seeded area with hay or straw at 2 tons per acre (approximately 90 lbs/1,000 sf). Mulch anchoring is to be used in areas where wind or water erosion are a concern. Nylon or synthetic anchoring products are not to be used.

Maintenance:

- The contractor may be directed to reseed any areas which, in the opinion of the Qualified Inspector are unacceptable.
- The contractor shall adequately maintain the erosion control cover, including watering as necessary.
- If the growth is inadequate for erosion control, the contractor shall overseed using half the rate of seed originally applied.
- If the grass seed growth is over 60% damaged, reseed following the originally specified rate.

Construction Sequencing

Below is the general sequence of construction and appropriate soil erosion and sediment control practices tied to each phase. All soil erosion and sediment control practices shall be constructed in accordance with the latest edition of New York State guidelines for soil erosion and sediment control. The construction phases are as follows:

1. **Phase 1 – Earthwork, Installation of Site Management Plan, and On-Site Utility Installation:** This phase includes the excavation and the installation of the environmental site management plan. Construction activities consist of site excavation, on-site utility installation, grading, and installation of the Site Management Plan. A support of excavation system will be installed along the site perimeter. During this phase, there is no potential for stormwater runoff due to the site being lower in elevation than the surrounding area. At the end of this phase, the site will be stabilized by a concrete building foundation slab.

2. **Phase 2 – Hardscaping and SMP Installation:** This phase includes the hardscaping of the parking facility and installation of the final stormwater management practices. At the end of this phase, the site will be stabilized by the site pavements and bioretention basins

Table 4 – Construction Phasing and Sequence Plan: Phase 1 – Earthwork, Installation of Site Management Plan, and On-Site Utility Installation

Installation of SMPs	N/A	N/A	There will be no on-site erosion and sediment control practices during installation of SMPs.
----------------------	-----	-----	--

Allowable Non-Stormwater Discharges

The following table summarizes allowable non-stormwater discharges likely to be present at the project site during construction. This SWPPP is designed to convey all non-stormwater discharges to on-site control measures, away from public streets or adjacent water bodies. Turbid water is to be detained to allow sufficient sedimentation time (minimum of 24 hours).

Table 6 – Allowable Non-Stormwater Discharges During Construction

Type of Authorized Non-Stormwater Discharge	Likely to be Present at Your Site?
Landscape irrigation	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
Waters used to wash vehicles and equipment (cleansers are not used)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
Water used to control dust (no chemical additives)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
Potable water including uncontaminated water line flushing	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
External building wash down (soaps/solvents are not used, and external surfaces do not contain hazardous substances)	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Pavement wash waters (spills or leaks have not occurred)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
Uncontaminated air conditioning or compressor condensate*	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Uncontaminated, non-turbid discharges of ground water or spring water*	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Foundation or footing drains*	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Discharges from construction de-watering operations*	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No

*Require permits from DEP's Bureau of Water and Sewer Operations, DEP's Bureau of Waste Water Treatment, Department of Buildings and/or NYSDEC.

Dewatering

If required, dewatering activities for the project site will be performed under a NYC DEP dewatering permit obtained by the contractor. The contractor shall be responsible for maintaining

the existing permit. The temporary dewatering system will be maintained and operated in accordance with manufacturer recommendations and the Operation and Maintenance Manual.

Inventory for Pollution Prevention Plan

The contractor is responsible for maintaining a log book of all pollutant generating activities. The log book shall be kept in the trailer at all times. A template for materials maintained on-site are included in Appendix J. The list will include potential pollutants and where they will be stored on-site. This can include but are not limited to:

- Asphalt
- Bituminous concrete products
- Concrete and concrete products
- Diesel and gasoline fuels
- Paints
- Plastics
- Silicon (sealants)
- Steel
- Wood

Spill Prevention

The following are material management practices that are to be used by the contractor to reduce the risk of spills or other accidental exposure of materials and substances to storm water runoff during construction.

- Materials stored on-site with potential for spillage are to be stored in a neat and orderly manner in their appropriate containers. Materials with a potential for spillage shall be stored under a roof or other enclosure when possible.
- Products are to be kept in their original containers with the original manufacturer's label.
- Substances are not to be mixed with one another unless recommended by the manufacturer.
- Prior to disposal, a product is to be completely used up or its container is to be resealed whenever possible.
- Manufacturers' recommendations for proper use and disposal are to be followed.

-
- During periodic inspections, the proper use and disposal of materials is to be recorded on the inspection form.
 - On-site vehicles are to be monitored for leaks and receive regular preventive maintenance to reduce the chance of leakage of petroleum products. Petroleum products are to be stored in closed containers that are clearly labeled. Used oils are to be disposed of properly.
 - Materials are to be brought on-site in the minimum quantities required to limit on-site storage.
 - Paint containers are to be tightly sealed and properly stored when not required for use. Excess paint, solvents, and other similar products shall not be discharged to the storm sewer system. These items are to be properly disposed of according to manufacturers' instructions or state and local regulations.
 - Proper precautions are to be taken so materials do not spill onto public thoroughfares. If materials are spilled in these areas they are to be removed immediately so that they do not enter the surface and subsurface drainage systems.
 - Oil containers are to have appropriate secondary containment. If total oil storage on-site exceeds a cumulative total of 1,320 gallons, then a Spill Prevention Control and Countermeasure (SPCC) plan must be prepared by the owner or contractor.
 - If necessary, the owner or contractor is to prepare a SPCC plan to cover proposed activities.

Spill Control Practices

The following practices are to be adhered to by the contractor for spill prevention and cleanup:

- Spills of petroleum, toxins, or hazardous material are to be reported to the owner and appropriate state or local government agencies immediately, regardless of size.
- Manufacturers' recommended methods for spill cleanup are to be clearly posted at the site. Site personnel are to be made aware of the procedures and the location of the information and cleanup supplies.
- Materials and equipment necessary for spill cleanup are to be kept in designated material storage areas on-site. Equipment and materials are to include but not be limited to brooms, dust pans, mops, rags, gloves, goggles, spill control materials, sand, sawdust, and trash containers specifically for this purpose.

-
- Spills are to be cleaned up immediately after discovery.
 - The spill area is to be kept well ventilated and personnel are to wear appropriate protective clothing to prevent injury from contact with hazardous substances.
 - A spill report is to be completed and filed in the SWPPP and is to include a description of the spill, the cause of the spill, and the corrective actions taken.
 - At minimum, all spills of petroleum products of 5 or more gallons shall be reported to NYSDEC Spill Hotline at 1-800-457-7362.

Additional Stormwater Controls

The following is a description of additional controls and measures that are to be implemented at the site by the contractor to minimize pollutant transport.

- Solid waste disposal dumpsters and containers are to be covered and emptied regularly. Solid waste is to be disposed of properly in accordance with local regulations.
- Portable toilets are to be installed and cleaned regularly with their contents properly disposed of.
- Building materials are to be properly stored and contained on-site.

INSPECTION DURING CONSTRUCTION

A Qualified Inspector (QI) shall conduct an assessment of the site prior to the commencement of construction. The SPDES General Permit for Construction Activity GP-0-20-001 outlines the following requirements and guidelines for inspections during construction:

The owner or operator shall have a qualified professional conduct a site inspection at least once every seven calendar days. In order to be authorized to disturb greater than five (5) acres of soil at any one time the owner or operator shall have a qualified professional conduct at least two (2) site inspections in accordance with Part IV.C. of this permit every seven (7) calendar days., for as long as greater than five (5) acres of soil remain disturbed. The two (2) inspections shall be separated by a minimum of two (2) full calendar days. At a minimum, the qualified professional shall inspect all soil erosion and sediment

control practices to ensure integrity and effectiveness, all post-construction stormwater management practices under construction to ensure that they are constructed in conformance with the SWPPP, all areas of disturbance that have not achieved final stabilization, and all points of discharge from the construction site.

The QI shall prepare an inspection report subsequent to each and every inspection. At a minimum, the inspection report shall include and/or address the following:

1. Date and time of inspection;
2. Name and title of person(s) performing inspection;
3. A description of the weather and soil conditions (i.e. dry, wet, saturated) at the time of inspection;
4. Reason for inspection (i.e. once weekly, twice weekly, 30-day inspection, inspection after rainfall, etc.);
5. A description of the condition of the runoff at all points of discharge from the construction site. This shall include identification of any discharges of sediment from the construction site. Include discharges from conveyance systems (i.e. pipes, culverts, ditches, etc.) and overland flow;
6. The approximate stage of construction (i.e. percent complete);
7. Identification of all erosion and sediment control practices and pollution prevention measures that need repair or maintenance;
8. Identification of all erosion and sediment control and pollution prevention measures that were not installed properly or are not functioning as designed and need to be reinstalled or replaced;
9. Description and sketch of areas with active soil disturbance activity, areas that have been disturbed but are inactive at the time of the inspection, and areas that have been stabilized (temporary and/or final) since the last inspection;
10. Current phase of construction of all post-construction stormwater management practices and identification of all construction that is not in conformance with the SWPPP and technical standards;

-
11. Corrective action(s) that must be taken to install, repair, replace or maintain erosion and sediment control practices and pollution prevention measures; and to correct deficiencies identified with the construction of the post-construction stormwater management practices;
 12. Identification and status of all corrective actions that were required by previous inspection; and
 13. Digital photographs, with date stamp, that clearly show the condition of all practices that have been identified as needing corrective actions. The qualified inspector shall attach paper color copies of the digital photographs to the inspection report being maintained onsite within seven (7) calendar days of the date of the inspection. The qualified inspector shall also take digital photographs, with date stamp, that clearly show the condition of the practice(s) after the corrective action has been completed. The qualified inspector shall attach paper color copies of the digital photographs to the inspection report that documents the completion of the corrective action work within seven (7) calendar days of that inspection.

Within one business day of the completion of an inspection, the Qualified Inspector (QI) shall notify the owner or developer and the appropriate contractor (or subcontractor) of any corrective actions that need to be taken. The contractor or subcontractor shall begin implementing the corrective actions within one business day of this notification and shall complete the corrective actions in a reasonable time frame.

Prior to the completion of work, the contractor shall have the QI perform a final site inspection. The QI shall certify that the site has undergone final stabilization using either vegetative or structural stabilization methods and that all temporary erosion and sediment control measures are no longer required.

Trained Contractor

At minimum, one Trained Contractor shall be on-site on a daily basis during all construction activities that involve soil disturbance. The Trained Contractor will be responsible for conducting daily inspections of the erosion and sediment control practices and ensuring that the erosion and sediment control practices are in good working order. The Trained Contractor must document

these inspections in a log and maintain the log on-site. Refer to Appendix J for the Trained Contractor Daily Inspection Log for a sample report. If an issue is identified, the appropriate contractor (or subcontractor) shall begin implementing the corrective actions within one business day of this notification and shall complete the corrective actions in a reasonable time frame.

Suspended Operations

Inspections are to occur as described above until construction is completed and the site is stabilized. During periods of suspended soil disturbance (i.e. winter shutdown and interim site stabilization) less than 12 months in duration, the owner, developer, or contractor may request reduced inspection frequencies in accordance with Part II, Section D of NYS DEC SPDES general permit for stormwater discharges.

For lot line buildings, where the site is stabilized prior to the installation of all SMPs, the owner, developer, or contractor should request reduced QI inspection frequencies. The owner, developer, or contractor must notify DEC a minimum of seven (7) days before the shutdown and submit documentation showing that the site is stable and all SMPs are operational. Site inspections are to be performed by a qualified professional at least once every 30 calendar days. During suspended operations, the disturbed areas must be stabilized. Refer to the section “Temporary Stabilization” for accepted surface stabilization measures.

Winter Stabilization

The contractor shall initiate enhanced surface stabilization measures to manage potential erosion and sediment during construction activities occurring between November 15th and April 1st (winter months). The following modifications to the SWPPP shall be made during Winter Stabilization:

- Snow shall be managed and cleared in a manner that will not impact ongoing construction activities nor increase the potential for sediment laden runoff from melt water.
- Stabilized construction entrances shall be widened to provide access for snow management. Snow management shall not destroy or degrade the installed erosion and sediment control practices. If the erosion and sediment control practices are impacted and can no longer function as intended, the contractor shall take corrective action in a timely manner.

Soil stockpiles must be protected at the end of each work day with 6-mil plastic sheeting or tarp. Alternatively, soil stockpiles may be protected by the use of established vegetation or anchored straw mulch. Silt fence, or hay bales, shall be installed at least 15 feet from the toe of the stockpile.

If construction activities have temporarily ceased, the contractor shall initiate temporary stabilization measures within three days. Refer to the section "Temporary Stabilization" for details and specifications.

POST-CONSTRUCTION STORMWATER CONTROLS

Stormwater management is essential in protecting the receiving waters of the State of New York from the effects of urban stormwater runoff. As such, NYSDEC has developed requirements to improve the protection of these waters. Through the use of stormwater management practices, in accordance with the New York State Stormwater Manual, the water quality and quantity requirements can be achieved.

Water Quality Requirements and Controls

All stormwater will be treated in accordance with NYSDEC standards. NYSDEC requires the treatment of the water quality volume, as defined in Chapter 4 of the SMDM. This volume is designed for the 90% rainfall event number for the State of New York, and derived from the impervious coverage of the development, as well as the contributing drainage area. The water quality volume is required to be treated through the implementation of acceptable stormwater management practices, as listed in Section 5.2 of the SMDM.

Per New York State Stormwater Manual Section 9.2.1, meeting runoff reduction volume sizing criteria is required for the project as there is an increase in impervious area (465,115 sf/10.7 ac) that results in a runoff reduction volume requirement of 11,046 sf.

Water quality controls for this SWPPP have been sized following the criteria of New York State Stormwater Manual. For this project, stormwater management practices (SMPs) are sized to treat 100% of the water quality volume from the disturbed area.

Water Quality Unit (Hydrodynamic Separator) and Bioretention (Filtration)

This project includes bioretention (filtration) basins that provide 14,672 cf of storage volume to meet 100% of the required runoff reduction volume for the site, and provides 36,678 cf of treatment towards the 55,027 cf water quality volume requirement for the site. Two Contech Cascade Hydrodynamic Separators are utilized that provide treatment for the remainder of the site prior to discharging to the Coney Island Creek via 3 outfalls. The CS-10 unit has been sized to treat 29,795 cf equivalent to a peak flow of 8.34 cfs. The CS-4 unit has been sized to treat 5,481 cf. equivalent to a peak flow of 1.53 cfs.

Appendix A includes calculations for the peak water quality discharge for post-construction stormwater management that will be treated by the SMPs. Appendix C contains the specifications of the Contech Cascade Hydrodynamic Separator. Drawing C-402 and C-403 contains the details of the bioretention basins and the Hydrodynamic Separators, respectively.

Post-Construction Stormwater Controls Maintenance

Following the permanent stabilization of all construction activities, the owner is responsible for maintaining the site's stormwater controls.

- Hydrodynamic Separator Unit: Refer to Appendix B for the Hydrodynamic Separator operations and Maintenance (O&M) manual.
- Bioretention Basins: Refer to Appendix B for the bioretention operations and Maintenance (O&M) manual.
- Catch basin and storm manhole sumps shall be inspected and cleaned when 50% of the sump capacity is filled with sediment.
- Inlet grates shall be inspected regularly and debris shall be removed regularly.

CERTIFICATIONS AND FORMS

The following certifications forms are to be reviewed, understood, filled out, and signed by the appropriate personnel at the appropriate time:

-
- The Pre-Construction Documents & Certifications provided in Appendix G shall be filled out by the owner/developer, preparer, and qualified professional, as appropriately shown in the section.
 - The site-specific Construction Duration Inspection form shall be provided in Appendix H and is to be filled out and signed by the qualified professional that performs site inspections and oversee installation of ESCs for this project.
 - The Monthly Summary of Site Inspection Activities form provided in Appendix I is to be filled out and signed by the owner, or the duly authorized representative of the owner.
 - The Contractor's Certification Statement provided in Appendix J is to be filled out and signed by the contractor with primary responsibility for the project site.
 - The Contractor's Certification Statement provided in Appendix J is to be filled out and signed by all subcontractors.
 - The Certificate of Issuance provided in Appendix J is to be filled out and signed by the contractor with primary responsibility for the project site prior to performing any site work.
 - The Erosion and Water Quality Control Identification form provided in Appendix J is to be filled out by the developer/contractor.
 - Records of site work and site stabilization are to be kept on the Construction Stabilization form provided in Appendix J and is to be filled out by the developer/contractor as necessary.
 - The Certificate of Change by the Contractor provided in Appendix K is to be filled out and signed by the contractor upon implementation of any requested changes to the SWPPP by the owner, preparer, or any local authority having jurisdiction over the project site. Changes to the SWPPP are only to be made when the plan or Contractor's implementation proves to be ineffective in eliminating or significantly minimizing pollutants from the construction activity.
 - The Final Stabilization and Retention of Records form provided in Appendix K is to be filled out and signed by the qualified professional that will perform site inspections and oversee installation of erosion control measures for this project.
 - The Certificate of Return provided in Appendix K is to be filled out and signed by the contractor and owner/developer after final stabilization of the site has been completed.

RETENTION OF RECORDS

The following are to be retained by the owner at the site and for a period of five years from the date the site is finally stabilized:

- SWPPP
- Contract Documents including contract drawings and technical specifications
- Stormwater inspections and maintenance reports
- Contractor Certification
- SWPPP Certification Statement of Satisfactory Completion
- Correspondence regarding stormwater practices

LANGAN PROJECT NO. 170697301

PLANNED EROSION AND SEDIMENT CONTROL MEASURES:
 THE NYS DEC AND NYC DEP REQUIRES THE IMPLEMENTATION OF PROTECTIVE MEASURES TO MINIMIZE THE EFFECT OF EROSION AND SEDIMENT MOVEMENT DUE TO CONSTRUCTION ACTIVITIES INVOLVING SOIL DISTURBANCE. TEMPORARY SOIL EROSION AND SEDIMENT CONTROL MEASURES WILL BE APPLIED TO MINIMIZE THE AMOUNT OF SEDIMENT TRACKED FROM THE SITE. THE TEMPORARY MEASURES HAVE BEEN DESIGNED IN ACCORDANCE WITH THE NYS DEC STANDARDS AND SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROL (NOVEMBER 2016). THE SOIL EROSION AND SEDIMENT CONTROL (SECO) MEASURES ON THESE PLANS AND AS DESCRIBED BELOW ARE THE MINIMUM MEASURED NEEDED TO MEET THE REQUIREMENTS. CONTRACTOR SHALL ADJUST THE SECO MEASURES PROVIDED THROUGHOUT CONSTRUCTION, INCLUDING PROVIDING SUPPLEMENTAL MEASURES IF NEEDED, TO EFFECTIVELY CONTROL EROSION AND SEDIMENTATION. THE FOLLOWING SUMMARIZES THE PROPOSED MEASURES:

1. DUST CONTROL: CONTRACTOR SHALL CONTROL EXCESSIVE DUST BY WATER SPRINKLING.
2. STABILIZED CONSTRUCTION ACCESS: CONTRACTOR SHALL INSTALL STABILIZED CONSTRUCTION ACCESS POINTS AT EACH POINT OF ENTRY/EXIT REQUIRED BY THE CONTRACTOR'S MEANS AND METHODS OF CONSTRUCTION PRIOR TO THE COMMENCEMENT OF WORK. WASH-DOWN WATER AND RUNOFF FROM THE CONSTRUCTION ACCESS PAD SHALL BE DIRECTED TO APPROPRIATE SOIL EROSION AND SEDIMENT CONTROL MEASURES.
3. TEMPORARY STOCKPILE: ALL SOIL STOCKPILES SHALL BE LIMITED IN SIZE TO ABOUT 1,000 CUBIC YARDS AND COVERED WITH MINIMUM 6 MIL PLASTIC SHEETING OR TARPS AT THE END OF EACH WORK DAY. STONE STOCKPILES DO NOT REQUIRE ANY PARTICULAR EROSION AND SEDIMENT CONTROL.
4. SILT FENCE: SILT FENCE SHALL BE INSTALLED AT DOWNSTREAM LOCATIONS ALONG THE PERIMETER OF THE SITE TO PREVENT SEDIMENT LADEN RUNOFF FROM DISCHARGING TO CITY SEWERS.
5. TURBIDITY CURTAIN: TURBIDITY CURTAINS SHALL BE INSTALLED WITHIN THE WATERBODY BEYOND THE LATERAL LIMITS OF CONSTRUCTION SITE AND FIRMLY ANCHORED IN PLACE.
6. SITE POLLUTION PREVENTION: CONTRACTOR SHALL INSTALL STANDARD SOIL EROSION AND SEDIMENT CONTROL MEASURES AT ALL AREAS USED FOR EQUIPMENT STAGING. THE OBJECTIVE OF THESE MEASURES SHALL BE TO PREVENT ANY OFF-SITE SEDIMENT TRACKING DUE TO EQUIPMENT, LOADING OF TRUCKS OR OTHER VEHICLES, ETC.

EROSION & SEDIMENT CONTROL PLAN - PHASE 1
 SCALE: 1" = 50'

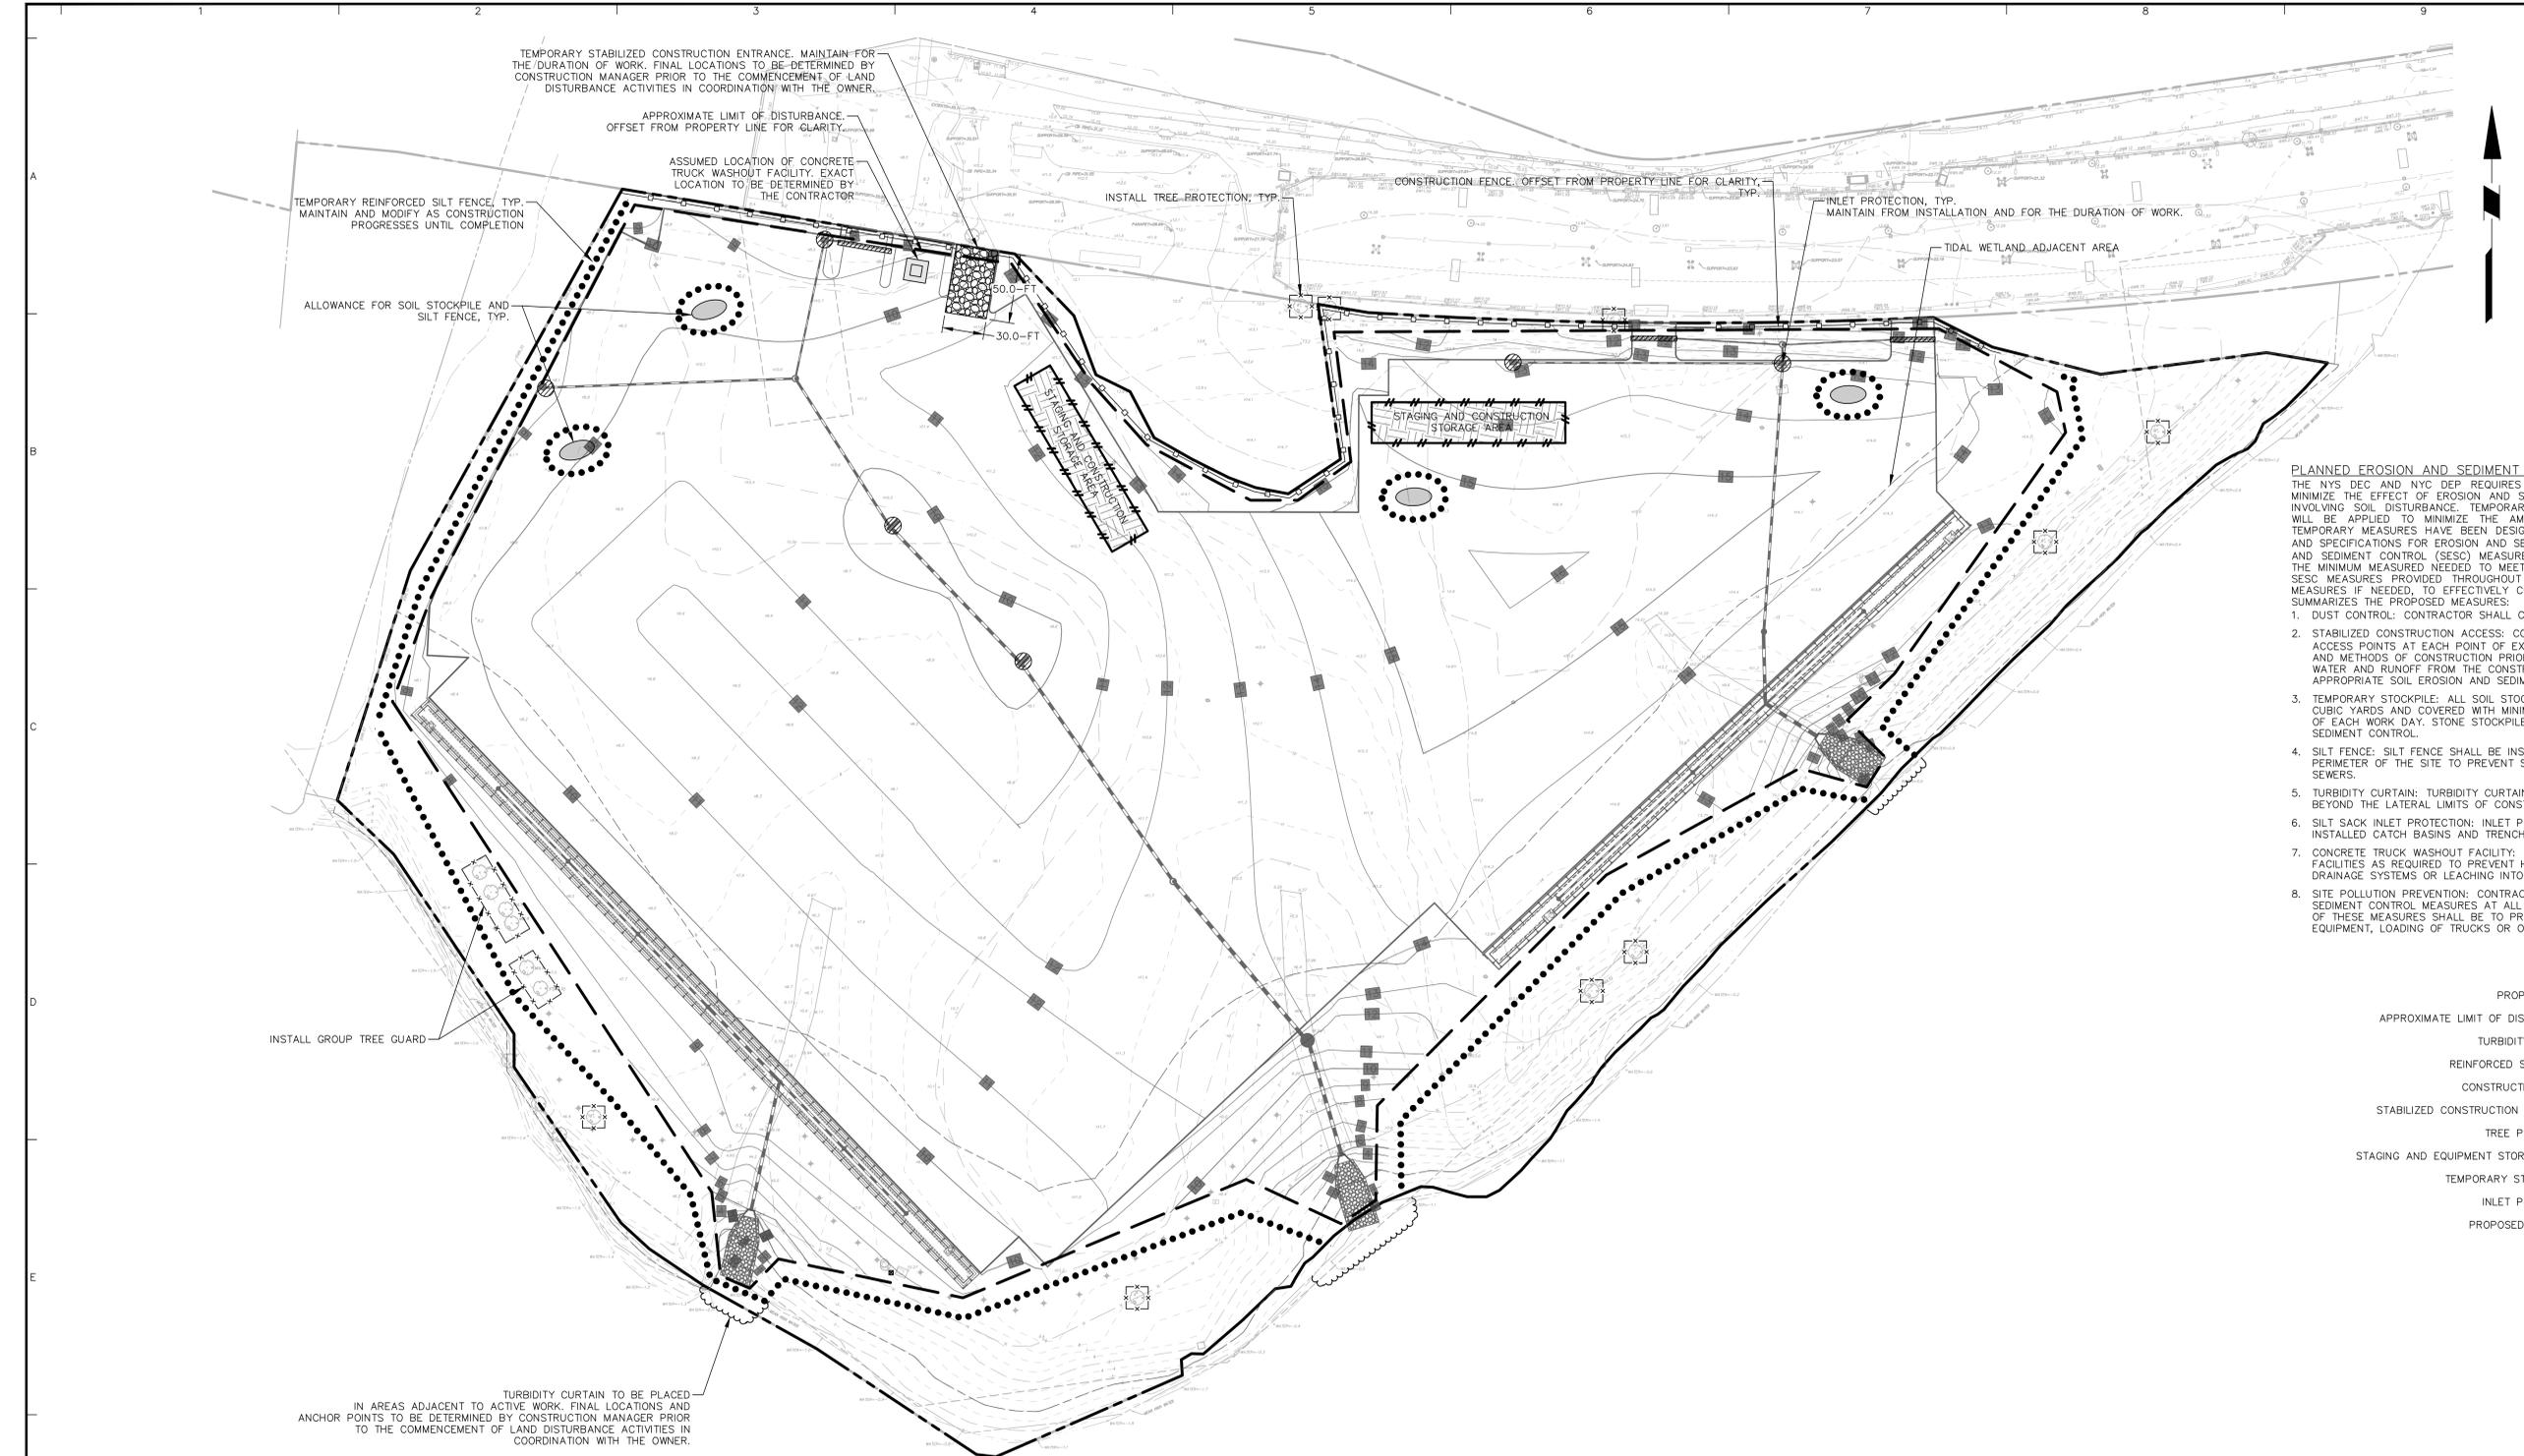

- NOTES:**
1. EXISTING TOPOGRAPHIC AND BOUNDARY INFORMATION SHOWN HEREON PER THE "ALTA/NSPS LAND TITLE SURVEY" PREPARED BY LANGAN ENGINEERING, ENVIRONMENTAL, SURVEY, LANDSCAPE ARCHITECTURE, AND GEOLOGY, D.P.C.; DATED DECEMBER 20, 2023.
 2. ELEVATIONS SHOWN ARE REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88). NAVD88 DATUM IS 1.10 FEET ABOVE THE NATIONAL GEODETIC SURVEY DATUM OF 1929, (US COAST AND GEODETIC SURVEY DATUM) MEAN SEA LEVEL AT SANDY HOOK, NJ (NGVD 29) AND 1.447 FEET BELOW THE BROOKLYN BOROUGH DATUM (BBD).
 3. **SOIL EROSION AND SEDIMENT CONTROL NOTES:**
 1. THE CONTRACTOR IS RESPONSIBLE FOR ENSURING ALL WORK CONFORMS WITH ALL FEDERAL, STATE, COUNTY OR LOCAL CODES HAVING JURISDICTION OVER SUCH WORK.
 2. THE CONTRACTOR SHALL COMPLY WITH ALL APPLICABLE OSHA REGULATIONS AND SAFETY PROCEDURES TO ENSURE PERSONNEL HEALTH AND SAFETY. THE CONTRACTOR MUST MAINTAIN A SAFE AND CLEAN WORKING ENVIRONMENT AND SHALL ENSURE PROPER PERSONAL PROTECTIVE EQUIPMENT IS WORN AT ALL TIMES. IN AREAS WHERE PEDESTRIAN AND/OR VEHICULAR TRAFFIC MAY BE AFFECTED BY THE WORK, THE CONTRACTOR SHALL CORDON OFF THE WORK AREA.
 3. PRIOR TO COMMENCING WORK, THE CONTRACTOR SHALL VISIT THE SITE AND SHALL NOTIFY THE OWNER'S REPRESENTATIVE OF ANY UTILITIES, STRUCTURES OR ANY OTHER ELEMENTS WHICH MAY IMPED EROSION CONTROL MEASURES. IF NECESSARY, SHALL BE COORDINATED THROUGH THE OWNER'S REPRESENTATIVE AT NO ADDITIONAL COST.
 4. IT IS THE CONTRACTORS' RESPONSIBILITY TO VERIFY, COORDINATE AND STAGE OR SEQUENCE HIS WORK WITH ANY OTHER PLANNED OR ONGOING CONSTRUCTION ACTIVITIES AT THE SITE.
 5. THE CONTRACTOR SHALL COORDINATE ANY STAGE WORK, LAY DOWN, AND STORAGE AREA LOCATIONS AND ACCESS WITH OWNER, PRIOR TO START OF WORK.
 6. ALL SOIL EROSION AND SEDIMENT CONTROL PRACTICES ON THIS PLAN SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION (NYSDEC) STANDARDS AND SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROL AND SPDES GENERAL PERMIT FOR STORMWATER DISCHARGES FROM CONSTRUCTION ACTIVITY (PERMIT NO. GP-D-20-001). THESE MEASURES SHALL BE INSTALLED PRIOR TO ANY MAJOR SOIL DISTURBANCE OR IN THE PROPER SEQUENCE AND MAINTAINED UNTIL PERMANENT PROTECTION IS ESTABLISHED.
 7. CATCH BASINS WITHIN AND DOWNSTREAM OF THE WORK AREA SHALL BE PROTECTED WITH FILTER FABRIC THROUGHOUT THE CONSTRUCTION PERIOD UNTIL THE WORK AREA IS PERMANENTLY STABILIZED.
 8. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR MAINTAINING THE SECURITY OF THE PROJECT SITE DURING ALL WORKING AND NON-WORKING HOURS, SEVEN DAYS A WEEK. CONTRACTOR SHALL PROVIDE A PLAN, WHICH SHALL BE APPROVED BY THE OWNER, SHOWING FENCE LAYOUT, GATE, & SIGN LOCATIONS.
 9. ALL DEBRIS CREATED BY THE CONTRACTOR IN THE IMMEDIATE VICINITY OF WORK SHALL BE RECOVERED AND PROPERLY DISPOSED OF BY THE CONTRACTOR AT NO ADDITIONAL COST TO THE OWNER.
 10. ALL CONSTRUCTION VEHICLES HAULING MATERIALS EITHER INTO OR OUT OF THE CONSTRUCTION AREA SHALL HAVE A SECURED TARP OVER MATERIALS TO PREVENT SEDIMENT POLLUTION OF PUBLIC ROADWAYS.
 11. IF REQUIRED, THE CONTRACTOR SHALL REQUEST WRITTEN APPROVAL FROM THE OWNER'S REPRESENTATIVE FOR TEMPORARY SHUTDOWN OF UTILITIES, A MINIMUM OF THREE WORKING DAYS IN ADVANCE.
 12. ALL SITE EROSION AND SEDIMENT CONTROL (SECO) MEASURES SHOWN ON THE PLANS ARE MINIMUM MEASURES REQUIRED. THE SOIL EROSION NEEDS WILL VARY THROUGHOUT CONSTRUCTION. THE CONTRACTOR SHALL PROVIDE INCREASED SECO MEASURES AND CONTROLS, IN ACCORDANCE WITH NYSDEC STANDARDS, AS NECESSARY TO PREVENT SEDIMENT FROM ENTERING THE STORMWATER SYSTEMS OF THE SURROUNDING WATERBODIES DURING CONSTRUCTION. THE OWNER, NYSDEC, NYCDEP, OR THE ARCHITECT MAY REQUEST ADDITIONAL MEASURES AND CONTROLS TO MINIMIZE THE POTENTIAL FOR ONSITE OR OFFSITE PROBLEMS THAT MAY OCCUR DURING CONSTRUCTION.
 13. ANY LAND DISTURBED AND EXPOSED FOR MORE THAN 7 DAYS AND NOT IN ACTIVE USE SHALL BE SEEDED. SHOULD THE SEASON PREVENT THE ESTABLISHMENT OF A TEMPORARY COVER, THE DISTURBED AREAS SHALL BE MULCHED WITH STRAW OR APPROVED EQUAL. THE SEEDING SHALL BE DONE IN ACCORDANCE WITH THE STANDARD SPECIFICATION FOR TEMPORARY SEEDING.
 14. CONTRACTOR SHALL IMMEDIATELY STABILIZE AREAS WHERE SLOPES ARE GREATER THAN 3 TO 1.
 15. PAVED ROADWAYS AND CONSTRUCTION ACCESS POINTS SHALL BE MAINTAINED IN A CLEAN STATE AT ALL TIMES.
 16. THE SITE SHALL BE GRADED AND MAINTAINED TO DIVERT ALL STORMWATER RUNOFF TOWARDS SOIL EROSION AND SEDIMENT CONTROL MEASURES.
 17. THE CONTRACTOR SHALL IMPLEMENT DUST CONTROL MEASURES DURING CONSTRUCTION. THE CONTRACTOR IS TO MINIMIZE DUST CLOUDS BY SPRINKLING CONSTRUCTION AREA WITH POTABLE WATER OR OTHER NYSDEC APPROVED METHODS. MAINTAIN DUST CONTROL MEASURES THROUGH DRY WEATHER PERIODS UNTIL ALL DISTURBED AREAS ARE STABILIZED.
 18. CONTRACTOR SHALL OBSERVE FUNCTION AND ADEQUACY OF SECO MEASURES DURING INSPECTIONS OCCURRING A MINIMUM OF ONCE PER WEEK AND IF THOSE ARE NOT SUFFICIENT, ADDITIONAL SOIL EROSION MEASURES SHALL BE IMPLEMENTED.
 19. ALL SOIL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE MAINTAINED BY THE CONTRACTOR UNTIL FINAL ACCEPTANCE OF THE WORK BY THE OWNER UPON CERTIFICATION OF FINAL ACCEPTANCE. THE OWNER SHALL ASSUME RESPONSIBILITY FOR THE CONTINUED MAINTENANCE OF PERMANENT SOIL EROSION AND SEDIMENT CONTROL MEASURES.

- CONSTRUCTION PROGRAM:**
1. FLAG THE WORK LIMITS AND ITEMS TO BE PROTECTED (I.E. TREES)
 2. INSTALL SILT FENCE AND CONSTRUCTION BARRIERS AS NEEDED.
 3. COMPLETE SITE REMOVALS FOR THE SITE AS NEEDED.
 4. REMOVE EROSION CONTROL ITEMS WHEN EARTHWORK IS COMPLETE AND ALL PERMANENT SURFACES ARE IN PLACE AND ESTABLISHED.
 5. KEEP AREAS BEYOND SITE IN CLEAN, CLEAR CONDITION DURING COURSE OF WORK.
- MAINTENANCE NOTES:**
1. FINAL CONSTRUCTION SEQUENCING AND STAGING PLANS SHALL BE PREPARED BY THE CONTRACTOR AND SUBMITTED TO THE OWNER FOR REVIEW AND APPROVAL PRIOR TO THE START OF CONSTRUCTION.
 2. THE SITE CONTRACTOR WILL BE RESPONSIBLE FOR THE PROPER CONSTRUCTION AND MAINTENANCE OF ALL TEMPORARY EROSION AND SEDIMENTATION CONTROL MEASURES AND RELATED ITEMS INCLUDED WITHIN THIS PLAN. THE SITE CONTRACTOR WILL ALSO BE RESPONSIBLE FOR THE PROPER CONSTRUCTION AND STABILIZATION OF PERMANENT CONTROL MEASURES AND RELATED ITEMS INCLUDED WITHIN THIS PLAN THROUGH COMPLETION OF CONSTRUCTION.

3. ALL EROSION AND SEDIMENT CONTROLS SHALL REMAIN IN PLACE UNTIL THE TRIBUTARY AREA TO THE CONTROL IS COMPLETELY STABILIZED AT THE END OF THE SITE AND LANDSCAPING WORK. ALL CONTROLS SHALL BE CHECKED DAILY AND AFTER STORM EVENTS TO ENSURE THEY ARE IN PROPER WORKING ORDER.
4. ALL EROSION AND SEDIMENT CONTROL PRACTICES WILL BE CHECKED FOR STABILITY AND OPERATION FOLLOWING EVERY RUNOFF-PRODUCING RAINFALL BUT IN NO CASE LESS THAN ONCE A WEEK. ANY NEEDED REPAIRS WILL BE MADE IMMEDIATELY TO MAINTAIN ALL PRACTICES DURING A SPECIFIC CONSTRUCTION STAGE.
5. SEDIMENT WILL BE REMOVED FROM BEHIND THE SILT FENCE WHEN ACCUMULATION IS APPROXIMATELY 6 INCHES AT THE FENCE, OR WHEN BULGES DEVELOP IN THE FENCE. THE SILT FENCE WILL BE REPAIRED AS NECESSARY TO MAINTAIN A BARRIER.
6. IN ADDITION TO IMPLEMENTATION AND MAINTENANCE OF EROSION AND SEDIMENT CONTROL MEASURES FOR ONGOING ACTIVE CONSTRUCTION ACTIVITY, THE SITE CONTRACTOR SHALL INITIATE STABILIZATION MEASURES AS SOON AS POSSIBLE IN PORTIONS OF THE SITE WHERE CONSTRUCTION ACTIVITIES HAVE TEMPORARILY OR PERMANENTLY CEASED BUT IN NO CASE NO MORE THAN 14 DAYS AFTER THE CONSTRUCTION ACTIVITY IN THAT PORTION OF THE SITE HAD TEMPORARILY OR PERMANENTLY CEASED. THE SOIL STABILIZATION MEASURES SELECTED SHALL BE IN CONFORMANCE WITH THE MOST CURRENT VERSION OF THE TECHNICAL STANDARD, NEW YORK STATE STANDARDS AND SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROL.

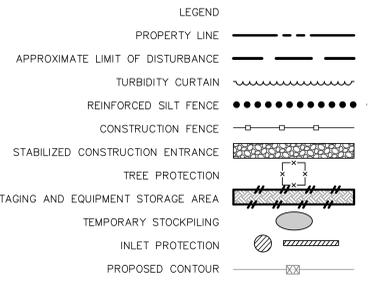

WARNING: IT IS A VIOLATION OF THE NYS EDUCATION LAW ARTICLE 148 FOR ANY PERSON, UNLESS HE IS ACTING UNDER THE DIRECTION OF A LICENSED PROFESSIONAL ENGINEER, LAND SURVEYOR OR GEOLOGIST, TO ALTER THIS ITEM IN ANY WAY.

PLANNED EROSION AND SEDIMENT CONTROL MEASURES:
 THE NYS DEC AND NYC DEP REQUIRES THE IMPLEMENTATION OF PROTECTIVE MEASURES TO MINIMIZE THE EFFECT OF EROSION AND SEDIMENT MOVEMENT DUE TO CONSTRUCTION ACTIVITIES INVOLVING SOIL DISTURBANCE. TEMPORARY SOIL EROSION AND SEDIMENT CONTROL MEASURES WILL BE APPLIED TO MINIMIZE THE AMOUNT OF SEDIMENT TRACKED FROM THE SITE. THE TEMPORARY MEASURES HAVE BEEN DESIGNED IN ACCORDANCE WITH THE NYS DEC STANDARDS AND SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROL (NOVEMBER 2016). THE SOIL EROSION AND SEDIMENT CONTROL (SECO) MEASURES ON THESE PLANS AND AS DESCRIBED BELOW ARE THE MINIMUM MEASURED NEEDED TO MEET THE REQUIREMENTS. CONTRACTOR SHALL ADJUST THE SECO MEASURES PROVIDED THROUGHOUT CONSTRUCTION, INCLUDING PROVIDING SUPPLEMENTAL MEASURES IF NEEDED, TO EFFECTIVELY CONTROL EROSION AND SEDIMENTATION. THE FOLLOWING SUMMARIZES THE PROPOSED MEASURES:

1. DUST CONTROL: CONTRACTOR SHALL CONTROL EXCESSIVE DUST BY WATER SPRINKLING.
2. STABILIZED CONSTRUCTION ACCESS: CONTRACTOR SHALL INSTALL STABILIZED CONSTRUCTION ACCESS POINTS AT EACH POINT OF ENTRY REQUIRED BY THE CONTRACTOR'S MEANS AND METHODS OF CONSTRUCTION PRIOR TO THE COMMENCEMENT OF WORK. WASH-DOWN WATER AND RUNOFF FROM THE CONSTRUCTION ACCESS PAD SHALL BE DIRECTED TO APPROPRIATE SOIL EROSION AND SEDIMENT CONTROL MEASURES.
3. TEMPORARY STOCKPILE: ALL SOIL STOCKPILES SHALL BE LIMITED IN SIZE TO ABOUT 1,000 CUBIC YARDS AND COVERED WITH MINIMUM 6 MIL PLASTIC SHEETING OR TARPS AT THE END OF EACH WORK DAY. STONE STOCKPILES DO NOT REQUIRE ANY PARTICULAR EROSION AND SEDIMENT CONTROL.
4. SILT FENCE: SILT FENCE SHALL BE INSTALLED AT DOWNSTREAM LOCATIONS ALONG THE PERIMETER OF THE SITE TO PREVENT SEDIMENT LADEN RUNOFF FROM DISCHARGING TO CITY SEWERS.
5. TURBIDITY CURTAIN: TURBIDITY CURTAINS SHALL BE INSTALLED WITHIN THE WATERBODY BEYOND THE LATERAL LIMITS OF CONSTRUCTION SITE AND FIRMLY ANCHORED IN PLACE.
6. SILT SACK INLET PROTECTION: INLET PROTECTION WILL BE INSTALLED IN ALL NEWLY INSTALLED CATCH BASINS AND TRENCH DRAINS LOCATED WITHIN THE LIMIT OF DISTURBANCE.
7. CONCRETE TRUCK WASHOUT FACILITY: CONTRACTOR SHALL INSTALL CONCRETE WASHOUT FACILITIES AS REQUIRED TO PREVENT HIGHLY ALKALINE RUNOFF FROM ENTERING STORM DRAINAGE SYSTEMS OR LEACHING INTO SOIL.
8. SITE POLLUTION PREVENTION: CONTRACTOR SHALL INSTALL STANDARD SOIL EROSION AND SEDIMENT CONTROL MEASURES AT ALL AREAS USED FOR EQUIPMENT STAGING. THE OBJECTIVE OF THESE MEASURES SHALL BE TO PREVENT ANY OFF-SITE SEDIMENT TRACKING DUE TO EQUIPMENT, LOADING OF TRUCKS OR OTHER VEHICLES, ETC.

EROSION & SEDIMENT CONTROL PLAN - PHASE 2
 SCALE: 1" = 50'

NOTES:

1. EXISTING TOPOGRAPHIC AND BOUNDARY INFORMATION SHOWN HEREON PER THE "ALTA/NSPS LAND TITLE SURVEY" PREPARED BY LANGAN ENGINEERING, ENVIRONMENTAL, SURVEY, LANDSCAPE ARCHITECTURE, AND GEOLOGY, D.P.C.; DATED DECEMBER 20, 2023.
2. ELEVATIONS SHOWN ARE REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88). NAVD88 DATUM IS 1.10 FEET ABOVE THE NATIONAL GEODETIC SURVEY DATUM OF 1929, (US COAST AND GEODETIC SURVEY DATUM) MEAN SEA LEVEL AT SANDY HOOK, NJ (NGVD 29) AND 1.447 FEET BELOW THE BROOKLYN BOROUGH DATUM (BBB).

SOIL EROSION AND SEDIMENT CONTROL NOTES:

1. THE CONTRACTOR IS RESPONSIBLE FOR ENSURING ALL WORK CONFORMS WITH ALL FEDERAL, STATE, COUNTY OR LOCAL CODES HAVING JURISDICTION OVER SUCH WORK.
2. THE CONTRACTOR SHALL COMPLY WITH ALL APPLICABLE OSHA REGULATIONS AND SAFETY PROCEDURES TO ENSURE PERSONNEL HEALTH AND SAFETY. THE CONTRACTOR MUST MAINTAIN A SAFE AND CLEAN WORKING ENVIRONMENT AND SHALL ENSURE PROPER PERSONAL PROTECTIVE EQUIPMENT IS WORN AT ALL TIMES. IN AREAS WHERE PEDESTRIAN AND/OR VEHICULAR TRAFFIC MAY BE AFFECTED BY THE WORK, THE CONTRACTOR SHALL CORDON OFF THE WORK AREA.
3. PRIOR TO COMMENCING WORK, THE CONTRACTOR SHALL VISIT THE SITE AND SHALL NOTIFY THE OWNER'S REPRESENTATIVE OF ANY UTILITIES, STRUCTURES OR ANY OTHER ELEMENTS WHICH MAY IMPED EROSION CONTROL MEASURES. IF NECESSARY, SHALL BE COORDINATED THROUGH THE OWNER'S REPRESENTATIVE AT NO ADDITIONAL COST.
4. IT IS THE CONTRACTORS' RESPONSIBILITY TO VERIFY, COORDINATE AND STAGE OR SEQUENCE HIS WORK WITH ANY OTHER PLANNED OR ONGOING CONSTRUCTION ACTIVITIES AT THE SITE.
5. THE CONTRACTOR SHALL COORDINATE ANY STAGE WORK, LAY DOWN, AND STORAGE AREA LOCATIONS AND ACCESS WITH OWNER, PRIOR TO START OF WORK.
6. ALL SOIL EROSION AND SEDIMENT CONTROL PRACTICES ON THIS PLAN SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION (NYSDEC) STANDARDS AND SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROL AND SPDES GENERAL PERMIT FOR STORMWATER DISCHARGES FROM CONSTRUCTION ACTIVITY (PERMIT NO. GP-D-20-001). THESE MEASURES SHALL BE INSTALLED PRIOR TO ANY MAJOR SOIL DISTURBANCE OR IN THE PROPER SEQUENCE AND MAINTAINED UNTIL PERMANENT PROTECTION IS ESTABLISHED.

7. CATCH BASINS WITHIN AND DOWNSTREAM OF THE WORK AREA SHALL BE PROTECTED WITH FILTER FABRIC THROUGHOUT THE CONSTRUCTION PERIOD UNTIL THE WORK AREA IS PERMANENTLY STABILIZED.
8. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR MAINTAINING THE SECURITY OF THE PROJECT SITE DURING ALL WORKING AND NON-WORKING HOURS, SEVEN DAYS A WEEK. CONTRACTOR SHALL PROVIDE A PLAN, WHICH SHALL BE APPROVED BY THE OWNER, SHOWING FENCE LAYOUT, GATE, & SIGN LOCATIONS.
9. ALL DEBRIS CREATED BY THE CONTRACTOR IN THE IMMEDIATE VICINITY OF WORK SHALL BE RECOVERED AND PROPERLY DISPOSED OF BY THE CONTRACTOR AT NO ADDITIONAL COST TO THE OWNER.
10. ALL CONSTRUCTION VEHICLES HAULING MATERIALS EITHER INTO OR OUT OF THE CONSTRUCTION AREA SHALL HAVE A SECURED TARP OVER MATERIALS TO PREVENT SEDIMENT POLLUTION OF PUBLIC ROADWAYS.
11. IF REQUIRED, THE CONTRACTOR SHALL REQUEST WRITTEN APPROVAL FROM THE OWNER'S REPRESENTATIVE FOR TEMPORARY SHUTDOWN OF UTILITIES, A MINIMUM OF THREE WORKING DAYS IN ADVANCE.
12. ALL SITE EROSION AND SEDIMENT CONTROL (SECO) MEASURES SHOWN ON THE PLANS ARE MINIMUM MEASURES REQUIRED. THE SOIL EROSION NEEDS WILL VARY THROUGHOUT CONSTRUCTION. THE CONTRACTOR SHALL PROVIDE INCREASED SECO MEASURES AND CONTROLS, IN ACCORDANCE WITH NYSDEC STANDARDS, AS NECESSARY TO PREVENT SEDIMENT FROM ENTERING THE STORMWATER SYSTEMS OF THE SURROUNDING WATERBODIES DURING CONSTRUCTION. THE OWNER, NYSDEC, NYCDEP, OR THE ARCHITECT MAY REQUEST ADDITIONAL MEASURES AND CONTROLS TO MINIMIZE THE POTENTIAL FOR ONSITE OR OFFSITE PROBLEMS THAT MAY OCCUR DURING CONSTRUCTION.
13. ANY LAND DISTURBED AND EXPOSED FOR MORE THAN 7 DAYS AND NOT IN ACTIVE USE SHALL BE SEEDED. SHOULD THE SEASON PREVENT THE ESTABLISHMENT OF A TEMPORARY COVER, THE DISTURBED AREAS SHALL BE MULCHED WITH STRAW OR APPROVED EQUAL. THE SEEDING SHALL BE DONE IN ACCORDANCE WITH THE STANDARD SPECIFICATION FOR TEMPORARY SEEDING.
14. CONTRACTOR SHALL IMMEDIATELY STABILIZE AREAS WHERE SLOPES ARE GREATER THAN 3 TO 1.
15. PAVED ROADWAYS AND CONSTRUCTION ACCESS POINTS SHALL BE MAINTAINED IN A CLEAN STATE AT ALL TIMES.

16. THE SITE SHALL BE GRADED AND MAINTAINED TO DIVERT ALL STORMWATER RUNOFF TOWARDS SOIL EROSION AND SEDIMENT CONTROL MEASURES.
17. THE CONTRACTOR SHALL IMPLEMENT DUST CONTROL MEASURES DURING CONSTRUCTION. THE CONTRACTOR IS TO MINIMIZE DUST CLOUDS BY SPRINKLING CONSTRUCTION AREA WITH POTABLE WATER OR OTHER NYSDEC APPROVED METHODS. MAINTAIN DUST CONTROL MEASURES THROUGH DRY WEATHER PERIODS UNTIL ALL DISTURBED AREAS ARE STABILIZED.
18. CONTRACTOR SHALL OBSERVE FUNCTION AND ADEQUACY OF SECO MEASURES DURING INSPECTIONS OCCURRING A MINIMUM OF ONCE PER WEEK AND IF THOSE ARE NOT SUFFICIENT, ADDITIONAL SOIL EROSION MEASURES SHALL BE IMPLEMENTED.
19. ALL SOIL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE MAINTAINED BY THE CONTRACTOR UNTIL FINAL ACCEPTANCE OF THE WORK BY THE OWNER UPON CERTIFICATION OF FINAL ACCEPTANCE. THE OWNER SHALL ASSUME RESPONSIBILITY FOR THE CONTINUED MAINTENANCE OF PERMANENT SOIL EROSION AND SEDIMENT CONTROL MEASURES.

- NOTES:**
1. GEOTEXTILE: PLACE OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.
 2. STONE SIZE: SHALL BE ASTM C-33 SIZE No. 1 OR 2. RECYCLED CONCRETE AGGREGATE IS NOT ACCEPTABLE.
 3. WIDTH: SHALL BE 24-FT, UNLESS THERE ARE MULTIPLE ENTRANCES TO THE SITE, WHERE THE MINIMUM WIDTH SHALL THEN BE 12-FT.
 4. SURFACE RUNOFF: SLOPE ALL DRAINAGE AWAY FROM CONSTRUCTION ENTRANCE. IF SURFACE RUNOFF MUST BE SLOPED TOWARD CONSTRUCTION ENTRANCES IT SHALL BE PIPED BENEATH THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
 5. MAINTENANCE: THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS-OF-WAY. ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACKED ONTO PUBLIC RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY AND DISPOSED OF PROPERLY.
 6. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON AN AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
 7. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.
 8. LOCATION OF TRUCK CLEANING PAD TO BE DETERMINED BY CONTRACTOR IN FIELD WITH OWNER APPROVAL. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL RELATED PERMITS.

1 STABILIZED CONSTRUCTION ENTRANCE
NTS

- NOTES:**
1. SOIL STOCKPILES SHALL BE LIMITED TO 1,000-CY IN SIZE.
 2. SOIL STOCKPILES SHALL BE COVERED WITH 6-MIL PLASTIC SHEETING OR TARP AT THE END OF EACH WORK DAY.
 3. STOCKPILES MUST BE 50-FT FROM SLOPE, ROADWAY, STREAMS, WETLANDS, AND DRAINAGE FACILITIES.
 4. SILT FENCE NOT TO EXCEED 10-FT FROM TOE OF STOCKPILE.

2 TEMPORARY STOCKPILING WITH REINFORCED SILT FENCE

SLOPE	STEEPNESS	REINFORCED
<2%	>50:1	N/A
2-10%	50:1 TO 10:1	250/2000
10-20%	10:1 TO 5:1	150/1000
20-33%	5:1 TO 3:1	80/750
33-50%	3:1 TO 2:1	70/350
>50%	2:1	30/175

CRITERIA FOR SILT FENCE FABRIC		
Fabric Properties	Minimum Acceptable Value	Test Method
Grab Tensile Strength (lbs)	110	ASTM D 4632
Elongation at Failure (%)	20	ASTM D 4632
Mullen Burst Strength (PSI)	300	ASTM D 3786
Puncture Strength (lbs)	60	ASTM D 4833
Minimum Trapezoidal Tear Strength (lbs)	50	ASTM D 4533
Flow Through Rate (gal/min/sf)	25	ASTM D 4491
Equivalent Opening Size	40-80	US Std Sieve ASTM D 4751
Minimum UV Residual (%)	70	ASTM D 4355

- CONSTRUCTION SPECIFICATIONS**
1. WOVEN WIRE FENCE TO BE FASTENED SECURELY TO FENCE POSTS WITH WIRE TIES OR STAPLES. POSTS SHALL BE STEEL EITHER "T" OR "U" TYPE.
 2. FILTER CLOTH TO BE TO BE FASTENED SECURELY TO WOVEN WIRE FENCE WITH TIES SPACED EVERY 24" AT TOP AND MID SECTION. FENCE SHALL BE WOVEN WIRE, 6" MAXIMUM MESH OPENING.
 3. WHEN TWO SECTIONS OF FILTER CLOTH ADJOIN EACH OTHER THEY SHALL BE OVER-LAPPED BY SIX INCHES AND FOLDED. FILTER CLOTH SHALL BE EITHER FILTER X, MIRAFI 100X, STABILINKA T140N, OR APPROVED EQUIVALENT.
 4. PREFABRICATED UNITS SHALL MEET THE MINIMUM REQUIREMENTS SHOWN.
 5. MAINTENANCE SHALL BE PERFORMED AS NEEDED AND MATERIAL REMOVED WHEN "BULGES" DEVELOP IN THE REINFORCED SILT FENCE.

GENERAL NOTES:

- EXISTING TOPOGRAPHIC AND BOUNDARY INFORMATION SHOWN HEREON AS PER THE "ALTA/NSPS LAND TITLE SURVEY" PREPARED BY LANGAN ENGINEERING, ENVIRONMENTAL, SURVEY, LANDSCAPE ARCHITECTURE, AND GEOLOGY, D.P.C., DATED OCTOBER 26, 2022.
- ELEVATIONS SHOWN ARE REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88). NAVD88 DATUM IS 1.10 FEET ABOVE THE NATIONAL GEODETIC SURVEY DATUM OF 1929. (US COAST AND GEODETIC SURVEY DATUM) MEAN SEA LEVEL AT SANDY HOOK, NJ (NGVD 29) AND 1.447 FEET BELOW THE BROOKLYN BOROUGH DATUM (BBD).

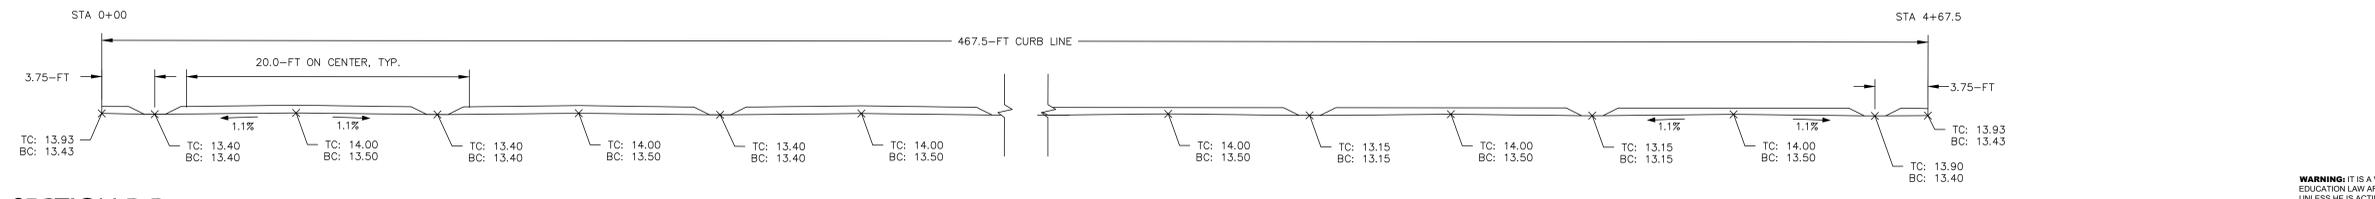

GRADING NOTES:

- ALL EXISTING UTILITY LINES AND EQUIPMENT WITHIN THE PROPERTY AND LIMIT OF WORK SHALL BE FIELD VERIFIED PRIOR TO COMMENCEMENT OF DEMOLITION ACTIVITIES. DISCREPANCIES WITH THE UTILITY SURVEY SHALL BE IDENTIFIED. CONTRACTOR SHALL NOTIFY THE MEP AND CIVIL ENGINEER IMMEDIATELY.
- THE CONTRACTOR IS RESPONSIBLE FOR PROVIDING ALL LABOR, EQUIPMENT, AND MATERIALS AS REQUIRED FOR THE WORK SHOWN ON THE CONTRACT DRAWINGS.
- THE OWNER'S ENGINEER SHALL NOT BE RESPONSIBLE FOR CONSTRUCTION METHODS AND MEANS FOR COMPLETION OF THE WORK DEPICTED ON THESE PLANS, NOR FOR ANY CONFLICTS AND/OR REVISIONS WHICH RESULT FROM THE SAME. THE CONTRACTOR SHALL BE RESPONSIBLE FOR DETERMINING METHODS AND MEANS OF COMPLETION OF THE WORK PRIOR TO THE COMMENCEMENT OF CONSTRUCTION AND NOTIFY THE OWNER'S ENGINEER WHEN A CONFLICT IS IDENTIFIED.
- THE CONTRACTOR SHALL EXERCISE EXTREME CARE WHEN PERFORMING ANY WORK ACTIVITIES ADJACENT TO EXISTING WALLS AND BUILDING WALLS TO REMAIN IN PLACE.
- THE CONTRACTOR SHALL REFER TO THE BUILDERS PAVEMENT PLAN AND SCARA FOR SIDEWALK, CURB AND ROADWAY WORK WITHIN THE RIGHT-OF-WAY.
- ALL FINISH GRADING IS TO BE DONE SO AS TO ENSURE POSITIVE DRAINAGE TOWARD THE APPROPRIATE DRAINAGE STRUCTURES.
- WHERE MANUFACTURER'S NAMES AND PRODUCT NUMBERS ARE INDICATED ON DRAWINGS, IT SHALL BE CONSTRUED TO MEAN THE ESTABLISHMENT OF QUALITY AND PERFORMANCE STANDARDS OF SUCH ITEMS. ALL OTHER PRODUCTS MUST BE SUBMITTED TO THE OWNER'S ENGINEER FOR APPROVAL BEFORE THEY SHALL BE DEEMED EQUAL.
- WHERE EXISTING CONCRETE PAVEMENT OR ASPHALT CONCRETE PAVEMENT ARE REMOVED, THE CONTRACTOR SHALL SAWCUT AND NEATLY TRIM EDGE OF REMAINING PAVEMENT BEFORE INSTALLING NEW CONSTRUCTION.
- INFORMATION RELATED TO ELEVATIONS AND PROPOSED UTILITIES (SUCH AS ROADWAY GRADES, INVERT ELEVATIONS, RIM ELEVATIONS, GRATE ELEVATIONS, BUILDING FINISHED FLOOR ELEVATIONS, ETC.) MAY BE FOUND IN MORE THAN ONE LOCATION IN THE CONTRACT DOCUMENTS. THE CONTRACTOR SHALL SUFFICIENTLY REVIEW ALL PLANS, PROFILES AND ANY OTHER INFORMATION IN THE CONTRACT DOCUMENTS FOR CONSISTENCY PRIOR TO BID. ANY INCONSISTENCIES OR DISCREPANCIES THAT ARE FOUND BY THE CONTRACTOR OR HIS ASSIGNS SHALL BE IMMEDIATELY BROUGHT TO THE ATTENTION OF THE OWNER AND ENGINEER IN WRITING, IN THE FORMAT OF AN RFI PRIOR TO BID.

- DRAINAGE NOTES:**
- ALL EXISTING UTILITY LINES AND EQUIPMENT WITHIN THE PROPERTY AND LIMIT OF WORK SHALL BE FIELD VERIFIED PRIOR TO COMMENCEMENT OF DEMOLITION ACTIVITIES. DISCREPANCIES WITH THE UTILITY SURVEY SHALL BE IDENTIFIED. CONTRACTOR SHALL NOTIFY THE MEP AND CIVIL ENGINEER IMMEDIATELY.
 - THE CONTRACTOR IS RESPONSIBLE FOR PROVIDING ALL LABOR, EQUIPMENT, AND MATERIALS AS REQUIRED FOR THE WORK SHOWN ON THE CONTRACT DRAWINGS.
 - THE OWNER'S ENGINEER SHALL NOT BE RESPONSIBLE FOR CONSTRUCTION METHODS AND MEANS FOR COMPLETION OF THE WORK DEPICTED ON THESE PLANS, NOR FOR ANY CONFLICTS AND/OR REVISIONS WHICH RESULT FROM THE SAME. THE CONTRACTOR SHALL BE RESPONSIBLE FOR DETERMINING METHODS AND MEANS OF COMPLETION OF THE WORK PRIOR TO THE COMMENCEMENT OF CONSTRUCTION AND NOTIFY THE OWNER'S ENGINEER WHEN A CONFLICT IS IDENTIFIED.
 - THE CONTRACTOR SHALL EXERCISE EXTREME CARE WHEN PERFORMING ANY WORK ACTIVITIES ADJACENT TO EXISTING WALLS AND BUILDING WALLS TO REMAIN IN PLACE.
 - COVERS AND INLET GRATES SHALL BE PROVIDED FLUSH AT ALL LOCATIONS AS SHOWN ON THE PLAN.
 - STORM DRAINAGE PIPING SHALL BE TEMPORARILY PROTECTED WITH A MINIMUM OF TWO FEET OF COVER DURING CONSTRUCTION.
 - ALL FINISH GRADING IS TO BE DONE SO AS TO ENSURE POSITIVE DRAINAGE TOWARD THE APPROPRIATE DRAINAGE STRUCTURES.
 - THE CONTRACTOR SHALL SUBMIT SHOP DRAWINGS FOR ALL PRODUCTS (I.E. PIPES, STRUCTURES, ETC.) INCLUDING MATERIAL SPECIFICATIONS FOR FILL MATERIAL AND PAVEMENT SECTION. ALL SITE-RELATED SHOP DRAWINGS SUBMITTED TO THE OWNER'S ENGINEER SHALL BEAR THE APPROVAL STAMP OF GENERAL CONTRACTOR.
 - WHERE MANUFACTURER'S NAMES AND PRODUCT NUMBERS ARE INDICATED ON DRAWINGS, IT SHALL BE CONSTRUED TO MEAN THE ESTABLISHMENT OF QUALITY AND PERFORMANCE STANDARDS OF SUCH ITEMS. ALL OTHER PRODUCTS MUST BE SUBMITTED TO THE OWNER'S ENGINEER FOR APPROVAL BEFORE THEY SHALL BE DEEMED EQUAL.
 - ALL DAMAGED MANHOLES CAUSED BY THE CONTRACTOR'S WORK SHALL BE REPAIRED OR REPLACED BY THE CONTRACTOR, AS DIRECTED BY THE OWNER'S ENGINEER, AT NO COST TO THE CITY.
 - PRIOR TO INSTALLATION OF THE DRAINAGE FACILITIES PROPOSED UNDER THIS PLAN, PERMITS ARE TO BE OBTAINED FROM THE LOCAL SEWER RECORDS OFFICE OF THE DEPARTMENT OF ENVIRONMENTAL PROTECTION (D.E.P.). CONSTRUCTION INSPECTION IS TO BE REQUESTED AT LEAST 24 HOURS IN ADVANCE FROM THE HOUSE CONNECTION INSPECTION UNIT OF THE D.E.P. DIVISION OF SEWER REGULATION AND CONTROL.
 - CONTRACTOR TO OBTAIN CONSTRUCTION PERMITS AS NEEDED FOR THE NEW UTILITY CONNECTIONS.
 - INFORMATION RELATED TO ELEVATIONS AND PROPOSED UTILITIES (SUCH AS ROADWAY GRADES, INVERT ELEVATIONS, RIM ELEVATIONS, GRATE ELEVATIONS, ETC.) MAY BE FOUND IN MORE THAN ONE LOCATION IN THE CONTRACT DOCUMENTS. THE CONTRACTOR SHALL SUFFICIENTLY REVIEW ALL PLANS AND ANY OTHER INFORMATION IN THE CONTRACT DOCUMENTS FOR CONSISTENCY PRIOR TO BID. ANY INCONSISTENCIES OR DISCREPANCIES THAT ARE FOUND BY THE CONTRACTOR OR HIS ASSIGNS SHALL BE IMMEDIATELY BROUGHT TO THE ATTENTION OF THE OWNER AND ENGINEER IN WRITING, IN THE FORMAT OF AN RFI PRIOR TO BID.

DRAINAGE PLAN
SCALE: 1" = 50'

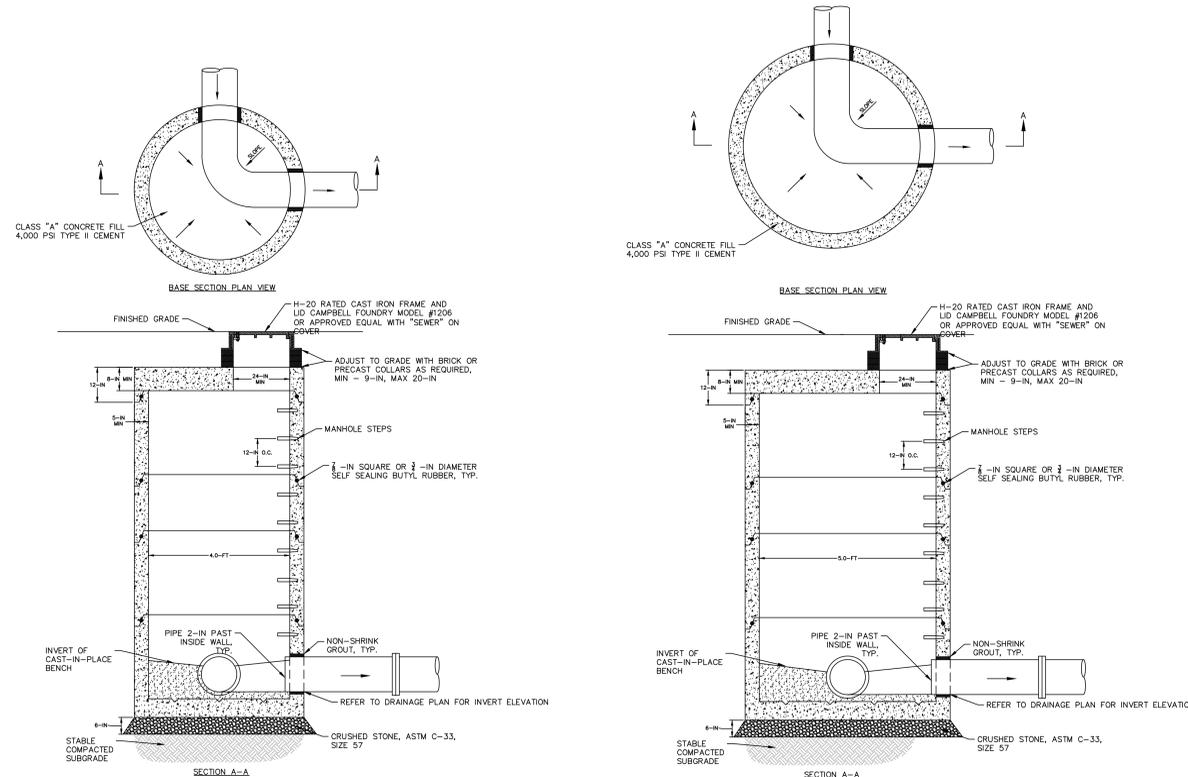

GENERAL NOTES:

- EXISTING TOPOGRAPHIC AND BOUNDARY INFORMATION SHOWN HEREON AS PER THE "ALTA/NSPS LAND TITLE SURVEY" PREPARED BY LANGAN ENGINEERING, ENVIRONMENTAL, SURVEY, LANDSCAPE ARCHITECTURE, AND GEOLOGY, D.P.C.; DATED DECEMBER 20, 2023.
- ELEVATIONS SHOWN ARE REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88). NAVD88 DATUM IS 1.10 FEET ABOVE THE NATIONAL GEODETIC SURVEY DATUM OF 1929, (US COAST AND GEODETIC SURVEY DATUM) MEAN SEA LEVEL AT SANDY HOOK, NJ (NGVD 29) AND 1.447 FEET BELOW THE BROOKLYN BOROUGH DATUM (BBD).

WARNING: IT IS A VIOLATION OF THE NYS EDUCATION LAW ARTICLE 145 FOR ANY PERSON, UNLESS HE IS ACTING UNDER THE DIRECTION OF A LICENSED PROFESSIONAL ENGINEER, LAND SURVEYOR OR GEOLOGIST, TO ALTER THIS ITEM IN ANY WAY.

- NOTES:**
1. ALL MANHOLE SECTIONS SHALL CONFORM TO ASTM C-478, LATEST REVISION STANDARD SPECIFICATIONS FOR PRECAST REINFORCED MANHOLE SECTIONS.
 2. MANHOLE RISER SECTIONS TO BE FURNISHED IN 1, 2, 3 OR 4-FT HEIGHTS AS REQUIRED.
 3. PRECAST DRAINAGE STRUCTURES SHALL COMPLY WITH THE FOLLOWING:
 - A. CONCRETE STRENGTH: 4,000 PSI @ 28 DAYS
 - B. REINFORCING STEEL: ASTM A496-A615, GRADE 60 (F_y = 60,000 PSI)
 - C. ENTRAINED AIR: 5.0 - 9.0 PERCENT
 - D. DESIGN LOAD: AASHTO H-20-44 WITH 30% IMPACT AND 130 PSF EQUIVALENT SOIL PRESSURE
 - E. INSTALLATION OF PRECAST CONCRETE DRAINAGE STRUCTURES SHALL COMPLY WITH ASTM C 891.
 4. FLAT SLAB TOPS (NO JOINT) MUST HAVE TOP AND BOTTOM STEEL.
 5. MANHOLE STEPS TO BE S.S. OR STEEL REINFORCED COPOLYMER POLYPROPYLENE.
 6. THE DEPTH OF THE CAST-IN-PLACE BENCH SHALL BE EQUAL TO 3/4 OF THE DIAMETER OF THE SEWER.
 7. THE BENCH SHALL SLOPE TOWARD THE INVERT CHANNEL AT A RATE OF 1" PER FOOT.
 8. PIPE CONNECTIONS SHALL BE GROUTED FIRMLY AND NEATLY IN PLACE WITH NON-SHRINK GROUT.
 9. STEPS TO BE STAINLESS STEEL OR STEEL REINFORCED CO-POLYMER PROPYLENE. STEPS SHALL BE PROVIDED WHEN THE DEPTH FROM GRADE TO INVERT EXCEEDS 4-FT. THE TOP STEP SHALL BE WITHIN 36-IN OF GRADE.

1 4-FT MANHOLE
NTS

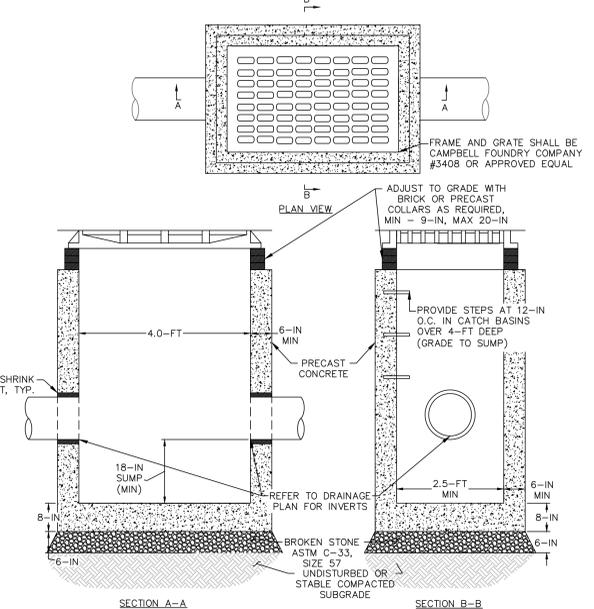

- NOTES:**
1. ALL MANHOLE SECTIONS SHALL CONFORM TO ASTM C-478, LATEST REVISION STANDARD SPECIFICATIONS FOR PRECAST REINFORCED MANHOLE SECTIONS.
 2. MANHOLE RISER SECTIONS TO BE FURNISHED IN 1, 2, 3 OR 4-FT HEIGHTS AS REQUIRED.
 3. PRECAST DRAINAGE STRUCTURES SHALL COMPLY WITH THE FOLLOWING:
 - A. CONCRETE STRENGTH: 4,000 PSI @ 28 DAYS
 - B. REINFORCING STEEL: ASTM A496-A615, GRADE 60 (F_y = 60,000 PSI)
 - C. ENTRAINED AIR: 5.0 - 9.0 PERCENT
 - D. DESIGN LOAD: AASHTO H-20-44 WITH 30% IMPACT AND 130 PSF EQUIVALENT SOIL PRESSURE
 - E. INSTALLATION OF PRECAST CONCRETE DRAINAGE STRUCTURES SHALL COMPLY WITH ASTM C 891.
 4. FLAT SLAB TOPS (NO JOINT) MUST HAVE TOP AND BOTTOM STEEL.
 5. MANHOLE STEPS TO BE S.S. OR STEEL REINFORCED COPOLYMER POLYPROPYLENE.
 6. THE DEPTH OF THE CAST-IN-PLACE BENCH SHALL BE EQUAL TO 3/4 OF THE DIAMETER OF THE SEWER.
 7. THE BENCH SHALL SLOPE TOWARD THE INVERT CHANNEL AT A RATE OF 1" PER FOOT.
 8. PIPE CONNECTIONS SHALL BE GROUTED FIRMLY AND NEATLY IN PLACE WITH NON-SHRINK GROUT.
 9. STEPS TO BE STAINLESS STEEL OR STEEL REINFORCED CO-POLYMER PROPYLENE. STEPS SHALL BE PROVIDED WHEN THE DEPTH FROM GRADE TO INVERT EXCEEDS 4-FT. THE TOP STEP SHALL BE WITHIN 36-IN OF GRADE.

2 5-FT MANHOLE
NTS

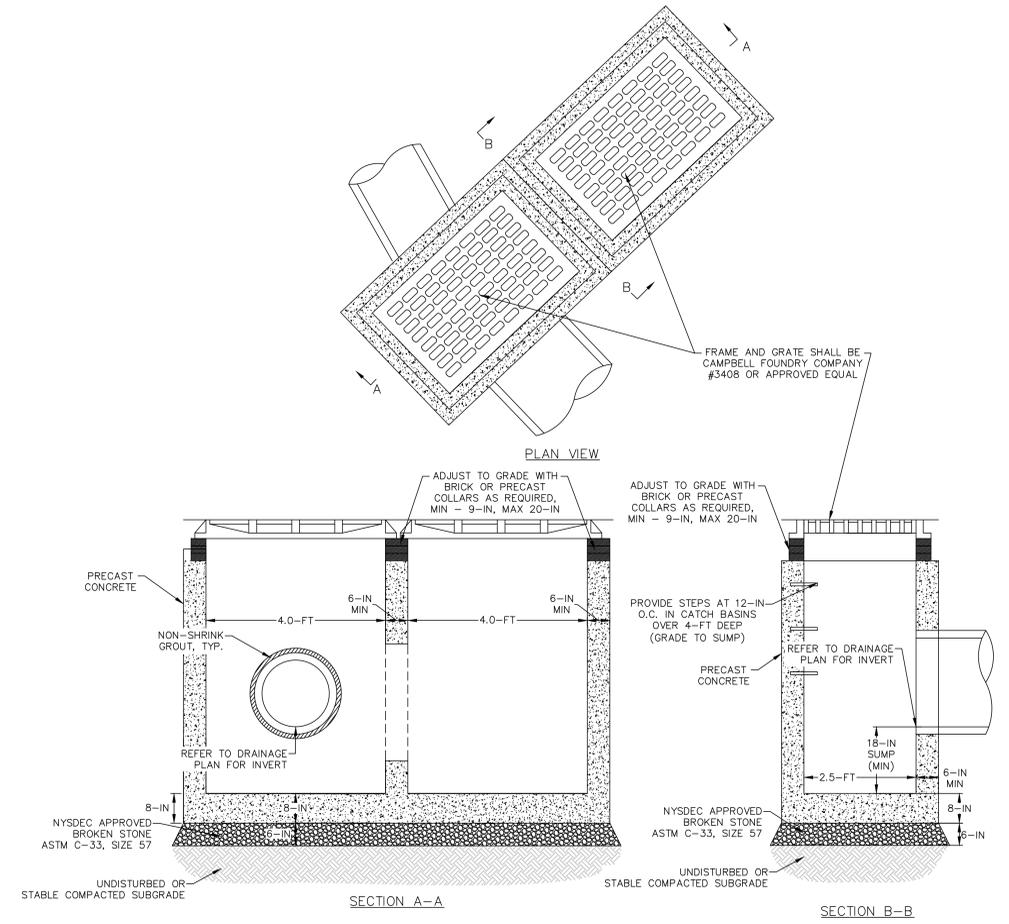

- NOTES:**
1. TRENCH DRAIN SHALL BE MODEL S300K MANUFACTURED WITH TYPE D END OUTLET (SK3-10) BY ACO DRAIN, OR APPROVED EQUAL.
 2. GRATE SHALL BE TYPE 8650/8660 PERFORATED STAINLESS STEEL GRATE LOAD CLASS C MANUFACTURED BY ACO DRAIN OR APPROVED EQUAL.
 3. TRENCH DRAIN DETAIL SHALL BE INSTALLED FOR TD-1, TD-2, & TD-3.

3 TRENCH DRAIN
NTS

- NOTES:**
1. SOIL CONDITIONS AT BOTTOM OF EXCAVATION DEEMED UNSUITABLE BY FIELD ENGINEER SHALL BE EXCAVATED TO SUITABLE MATERIAL OR A MAXIMUM OF TWO ADDITIONAL FEET OF BEDDING MATERIAL.
 2. PRECAST DRAINAGE STRUCTURES SHALL COMPLY WITH THE FOLLOWING:
 - A. CONCRETE STRENGTH: 4,000 PSI @ 28 DAYS
 - B. REINFORCING STEEL: ASTM A496-A615, GRADE 60 (F_y = 60,000 PSI)
 - C. ENTRAINED AIR: 5.0 - 9.0 PERCENT
 - D. DESIGN LOAD: AASHTO H-20-44 WITH 30% IMPACT AND 130 PSF EQUIVALENT SOIL PRESSURE
 - E. INSTALLATION OF PRECAST CONCRETE DRAINAGE STRUCTURES SHALL COMPLY WITH ASTM C 891.
 3. INTERIOR STRUCTURE DIMENSIONS SHOW ARE MINIMUM VALUES. PROVIDE DIMENSIONS AS NEEDED TO ACCOMMODATE 6-INCH CLEARANCE FROM SIDE WALLS OF BASIN TO OUTSIDE OF PIPE PENETRATION.
 4. ALL PIPE PENETRATIONS SHALL BE FLUSH WITH THE INSIDE WALLS OF THE CATCH BASIN. PIPE CONNECTIONS SHALL BE GROUTED FIRMLY AND NEATLY IN PLACE WITH NON-SHRINK GROUT.
 5. STEPS TO BE STAINLESS STEEL OR STEEL REINFORCED CO-POLYMER PROPYLENE. STEPS SHALL BE PROVIDED WHEN THE DEPTH FROM GRADE TO SUMP EXCEEDS 4-FT. THE TOP STEP SHALL BE WITHIN 36-IN OF GRADE.

4 SINGLE CATCH BASIN
NTS

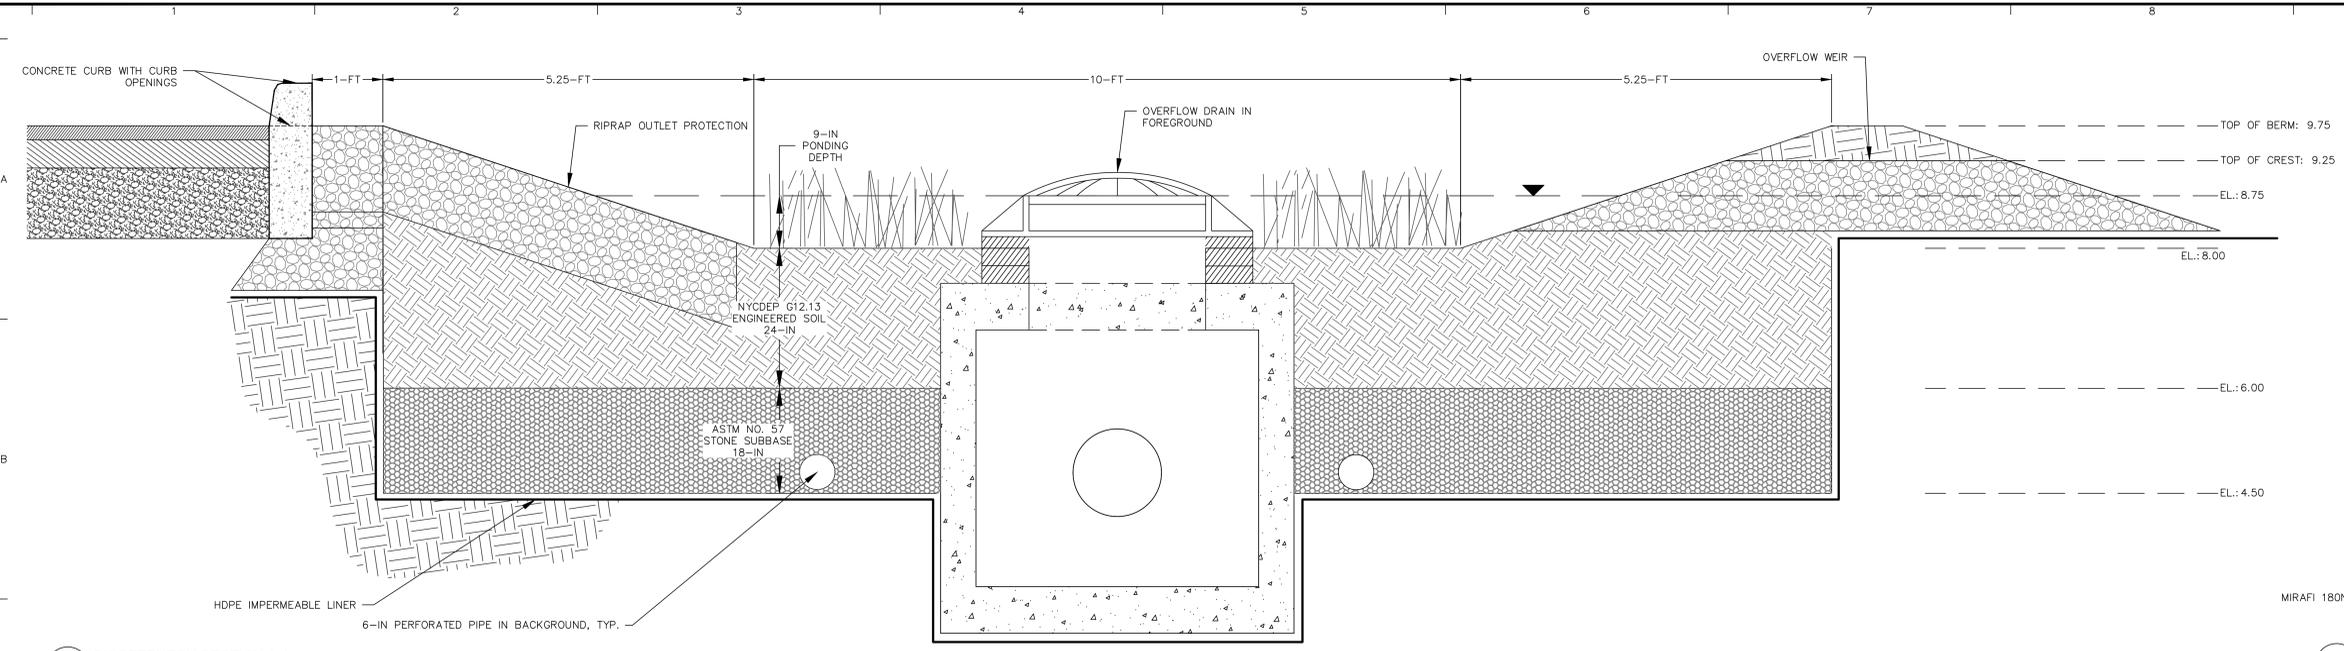

- NOTES:**
1. SOIL CONDITIONS AT BOTTOM OF EXCAVATION DEEMED UNSUITABLE BY FIELD ENGINEER SHALL BE EXCAVATED TO SUITABLE MATERIAL OR A MAXIMUM OF TWO ADDITIONAL FEET OF BEDDING MATERIAL.
 2. PRECAST DRAINAGE STRUCTURES SHALL COMPLY WITH THE FOLLOWING:
 - A. CONCRETE STRENGTH: 4,000 PSI @ 28 DAYS
 - B. REINFORCING STEEL: ASTM A496-A615, GRADE 60 (F_y = 60,000 PSI)
 - C. ENTRAINED AIR: 5.0 - 9.0 PERCENT
 - D. DESIGN LOAD: AASHTO H-20-44 WITH 30% IMPACT AND 130 PSF EQUIVALENT SOIL PRESSURE
 - E. INSTALLATION OF PRECAST CONCRETE DRAINAGE STRUCTURES SHALL COMPLY WITH ASTM C 891.
 3. INTERIOR STRUCTURE DIMENSIONS SHOW ARE MINIMUM VALUES. PROVIDE DIMENSIONS AS NEEDED TO ACCOMMODATE 6-INCH CLEARANCE FROM SIDE WALLS OF BASIN TO OUTSIDE OF PIPE PENETRATION.
 4. ALL PIPE PENETRATIONS SHALL BE FLUSH WITH THE INSIDE WALLS OF THE CATCH BASIN. PIPE CONNECTIONS SHALL BE GROUTED FIRMLY AND NEATLY IN PLACE WITH NON-SHRINK GROUT.
 5. STEPS TO BE STAINLESS STEEL OR STEEL REINFORCED CO-POLYMER PROPYLENE. STEPS SHALL BE PROVIDED WHEN THE DEPTH FROM GRADE TO SUMP EXCEEDS 4-FT. THE TOP STEP SHALL BE WITHIN 36-IN OF GRADE.

5 DOUBLE CATCH BASIN

APPENDIX A
Water Quality Calculations

2731 West 12th Street - Prologis

Stormwater Water Quality and Runoff Reduction Calculations

Site Information:

General:

Lot Area	730989 SF (16.8 ac)
Sewer Type	N/A - Discharges to Coney Island Creek
New Impervious Area	465115 sf (10.1 ac)

Site Characteristics:

Cover Type	Cover Area (sf)	Runoff Coeff. (C)
Roof Area	0	0.95
Pavement Area	465115	0.85
Green Roof Area	0	0.70
Landscaped Area	265874	0.20
Total	730989	0.61

Required Stormwater Quality Volume (WQ_v):

$$WQ_v = \left(\frac{1.5''}{12}\right) \times A \times R_v$$

$$R_v = 0.05 + (0.009 \times I)$$

A_s = Site Area (SF)

R_v = Runoff Coefficient Relating Total Rainfall to Runoff

WQ_v = Water Quality Volume (CF)

I = Percent Impervious Cover

Impervious Cover = 64%

$$R_v = (0.05) + (0.009 * 64\%)$$

$$WQ_v = (1.5/12) * 0.95 * 730989 \text{ (SF)}$$

A _s	I%	R _v	WQ _v (CF)
730989	61	0.60	55027

Runoff Reduction Volume (RR_v):

$$RR_v = \left(\frac{1.5''}{12} \right) \times 0.95 \times A_{ic} \times S$$

RR_v = Runoff Reduction Volume (CF)

A_{ic} = Total Area of New Impervious Cover (SF)

S = Specific Reduction Factor (from HSG)

A _{ic}	S	RR _v
465115	0.20	11046

Provided Volume (V_{PROV}):

SMP Type	Drainage Area	V _{PROV} (CF)	WQ _v (CF)	RR _v (CF)
Bioretention Basin #1	137057	20174	20174	8070
Bioretention Basin #2	60454	16504	16504	6602
Hydrodynamic Separator CS-10	250906	29795	29795	0
Hydrodynamic Separator CS-4	46153	5481	5481	0
Total	494570	71954	71954	14671

*Filtration contributes 40% volume to RR_v

*Refer to calculation sheet within this appendix for volume provided by SMPs.

WQ_v: 71954 CF > 55027 CF

RR_v: 14671 CF > 11046 CF

Water treatment volume to be managed by SMPs

Coney Island Creek - 2731 West 12th Street

Bioretention

Volume of SMP	$V_{SMP} = V_P + V_S + V_D - V_{DRAIN}$
Ponding Volume	$V_P = A_{SMP} * D_p$
Soil Volume	$V_S = A_{SMP} * D_s * n_s$
Internal Drain Volume (Modular)	$V_{DRAIN} = V_S * N_S$
Drainage Layer Volume	$V_D = A_{SMP} * D_D * n_D$

INPUTS:

Basin 1

		0.38 <i>ac-ft</i>

DRAINAGE AREA TRIBUTARY TO HDS UNIT CS-4

Water Quality Volume Calculation, WQv:

$$WQv = 1.5/12 \times Rv \times A$$

Where: P = 90% Rainfall Event Number (See Figure 4.1) = 1.5
 I = Impervious Cover (Percent)
 Rv = 0.05 + 0.009 (I) ; Min Rv = 0.2
 A = Site Area in acres

I = 100 %
 Rv = 0.950
 A = 1.060 ac 46,153 sf

WQv = 0.126 acre-feet or 5,481 cubic feet

***The project is required to treat 100% of the WQv.**

Water Quality Peak Flow Calculation, Qp:

$$CN = \frac{1000}{[10 + 5P + 10Q - 10(Q^2 + 1.25 QP)^{1/2}]}$$

Where: P = 90% Rainfall Event Number (See Figure 4.1) = 1.5
 Q = runoff volume, in inches = 1.43

CN = 99.36
 Use CN = 98
 Tc = 0.1 hr.

Ia = 0.062 in. (Initial Abstraction - see Table 4-1 from the TR-55 Manual)
 Ia/P = 0.041
 qu = 650 cms/in (Unit Peak Discharge - see Exhibit 4-III from the TR-55 Manual)

$$Qp = qu * A * WQv$$

Where: WQv = Water Quality Volume in inches - also referred to as Q
 A = drainage area in square miles

Qp = 1.53 cfs

Treatment Unit CS-4: approved for treatment of 1.80-cfs

DRAINAGE AREA TRIBUTARY TO HDS UNIT CS-10

Water Quality Volume Calculation, WQv:

$$WQv = 1.5/12 \times Rv \times A$$

Where: P = 90% Rainfall Event Number (See Figure 4.1) = 1.5
 I = Impervious Cover (Percent)
 Rv = 0.05 + 0.009 (I) ; Min Rv = 0.2
 A = Site Area in acres

I = 100 %
 Rv = 0.950
 A = 5.760 ac 250,906 sf

WQv = 0.684 acre-feet or 29,795 cubic feet

***The project is required to treat 100% of the WQv.**

Water Quality Peak Flow Calculation, Qp:

$$CN = \frac{1000}{[10 + 5P + 10Q - 10(Q^2 + 1.25 QP)^{1/2}]}$$

Where: P = 90% Rainfall Event Number (See Figure 4.1) = 1.5
 Q = runoff volume, in inches = 1.43

CN = 99.36
 Use CN = 98
 Tc = 0.1 hr.

Ia = 0.041 in. (Initial Abstraction - see Table 4-1 from the TR-55 Manual)
 Ia/P = 0.027
 qu = 650 cms/in (Unit Peak Discharge - see Exhibit 4-III from the TR-55 Manual)

$$Qp = qu * A * WQv$$

Where: WQv = Water Quality Volume in inches - also referred to as Q
 A = drainage area in square miles

Qp = 8.34 cfs

Treatment Unit CS-10: approved for treatment of 11.3-cfs

APPENDIX B

Operations and Maintenance (O&M) Manual for SMPs

BIORETENTION OPERATION AND MAINTENANCE (O&M) MANUAL

Entity responsible for maintenance:

Prologis

Sheila Sutton

ssutton@prologis.com

SMPs to be maintained:

- BIORETENTION

Post Construction Inspection and Maintenance Site Checklist

BIORETENTION	Yes	No	NA
Watering	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<ol style="list-style-type: none"> 1. <i>Maintenance:</i> Watering of new plantings during the first two years of establishment 2. <i>Frequency:</i> During extended dry periods of no significant precipitation within 7 days, or as needed based on plant condition 			
Weeding	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<ol style="list-style-type: none"> 1. <i>Maintenance:</i> Removal of non-native or undesirable vegetation 2. <i>Frequency:</i> Quarterly at minimum during the growing season or more frequently based on ongoing inspections 			
Mulching	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<ol style="list-style-type: none"> 1. <i>Maintenance:</i> Mulching of planting beds. 2. <i>Frequency:</i> Once annually for the first two growing seasons or until beds have filled in 			
Vegetation Management	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<ol style="list-style-type: none"> 1. <i>Maintenance:</i> Cutting and trimming of detrital herbaceous vegetation from the previous growing season to four to six inches above the ground 2. <i>Frequency:</i> Annually in late winter or early spring prior to break in dormancy 			
Sediment Removal	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<ol style="list-style-type: none"> 1. <i>Maintenance:</i> Removal of accumulated sediment and debris from practice areas 2. <i>Frequency:</i> Twice per year or more frequently if needed based on ongoing inspections (note: leaves and other natural materials can be left in place if they do not impede conveyance) 			
Pipe Cleaning	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

<ol style="list-style-type: none"> <u>Maintenance</u>: Vacuum cleaning of accumulated sediment and debris within inlets sumps and hoods <u>Frequency</u>: Minimum annually or more frequently if debris accumulation is rapid based on ongoing and annual inspections 			
Outlet Cleaning	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<ol style="list-style-type: none"> <u>Maintenance</u>: Removal of accumulated sediment and debris from risers (vacuum cleaning), trash racks, and spillways and clearing sediment from orifices and outlet control structures to prevent clogging <u>Frequency</u>: Annually at minimum or more frequently based on ongoing and annual inspections 			
Erosion Control	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<ol style="list-style-type: none"> <u>Maintenance</u>: Stabilization of eroded soil areas with vegetative or mechanical means <u>Frequency</u>: As warranted based on ongoing inspections 			

Notes:

- The site must be returned to the approved conditions when any repairs are made.

Date of inspection: _____

Comments:

Actions to be taken:

Cascade Separator[®] Inspection and Maintenance Guide

Maintenance

The Cascade Separator® system should be inspected at regular intervals and maintained when necessary to ensure optimum performance. The rate at which the system collects sediment and debris will depend upon on-site activities and site pollutant characteristics. For example, unstable soils or heavy winter sanding will cause the sediment storage sump to fill more quickly but regular sweeping of paved surfaces will slow accumulation.

Inspection

Inspection is the key to effective maintenance and is easily performed. Pollutant transport and deposition may vary from year to year and regular inspections will help ensure that the system is cleaned out at the appropriate time. At a minimum, inspections should be performed twice per year (i.e. spring and fall). However, more frequent inspections may be necessary in climates where winter sanding operations may lead to rapid accumulations, or in equipment wash-down areas. Installations should also be inspected more frequently where excessive amounts of trash are expected.

A visual inspection should ascertain that the system components are in working order and that there are no blockages or obstructions in the inlet chamber, flumes or outlet channel. The inspection should also quantify the accumulation of hydrocarbons, trash and sediment in the system. Measuring pollutant accumulation can be done with a calibrated dipstick, tape measure or other measuring instrument. If absorbent material is used for enhanced removal of hydrocarbons, the level of discoloration of the sorbent material should also be identified during inspection. It is useful and often required as part of an operating permit to keep a record of each inspection. A simple form for doing so is provided in this Inspection and Maintenance Guide.

Access to the Cascade Separator unit is typically achieved through one manhole access cover. The opening allows for inspection and cleanout of the center chamber (cylinder) and sediment storage sump, as well as inspection of the inlet chamber and slanted skirt. For large units, multiple manhole covers allow access to the chambers and sump.

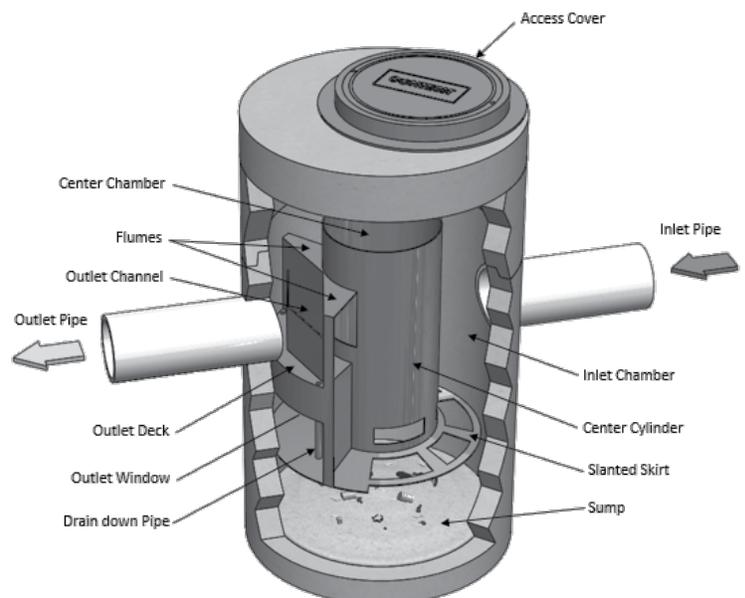

The Cascade Separator system should be cleaned before the level of sediment in the sump reaches the maximum sediment depth and/or when an appreciable level of hydrocarbons and trash has accumulated. If sorbent material is used, it must be replaced when significant discoloration has occurred. Performance may be impacted when maximum sediment storage capacity is exceeded. Contech recommends maintaining the system when sediment level reaches 50% of maximum storage volume. The level of sediment is easily determined by measuring the distance from the system outlet invert (standing water level) to the top of the sediment pile. To avoid underestimating the level of sediment in the chamber, the measuring device must be lowered to the top of the sediment pile carefully. Finer, silty particles at the top of the pile typically offer less resistance to the end of the rod than larger particles toward the bottom of the pile. Once this measurement is recorded, it should be compared to the chart in this document to determine if the height of the sediment pile off the bottom of the sump floor exceeds 50% of the maximum sediment storage.

Cleaning

Cleaning of a Cascade Separator system should be done during dry weather conditions when no flow is entering the system. The use of a vacuum truck is generally the most effective and convenient method of removing pollutants from the system. Simply remove the manhole cover and insert the vacuum tube down through the center chamber and into the sump. The system should be completely drained down and the sump fully evacuated of sediment. The areas outside the center chamber and the slanted skirt should also be washed off if pollutant build-up exists in these areas.

In installations where the risk of petroleum spills is small, liquid contaminants may not accumulate as quickly as sediment. However, the system should be cleaned out immediately in the event of an oil or gasoline spill. Motor oil and other hydrocarbons that accumulate on a more routine basis should be removed when an appreciable layer has been captured. To remove these pollutants, it may be preferable to use absorbent pads since they are usually less expensive to dispose than the oil/water emulsion that may be created by vacuuming the oily layer. Trash and debris can be netted out to separate it from the other pollutants. Then the system should be power washed to ensure it is free of trash and debris.

Manhole covers should be securely seated following cleaning activities to prevent leakage of runoff into the system from above and to ensure proper safety precautions. Confined space entry procedures need to be followed if physical access is required. Disposal of all material removed from the Cascade Separator system must be done in accordance with local regulations. In many locations, disposal of evacuated sediments may be handled in the same manner as disposal of sediments removed from catch basins or deep sump manholes. Check your local regulations for specific requirements on disposal. If any components are damaged, replacement parts can be ordered from the manufacturer.

Cascade Separator® Maintenance Indicators and Sediment Storage Capacities

Model Number	Diameter		Distance from Water Surface to Top of Sediment Pile		Sediment Storage Capacity	
	ft	m	ft	m	y ³	m ³
CS-3	3	0.9	1.5	0.5	0.4	0.3
CS-4	4	1.2	2.5	0.8	0.7	0.5
CS-5	5	1.3	3	0.9	1.1	0.8
CS-6	6	1.8	3.5	1	1.6	1.2
CS-8	8	2.4	4.8	1.4	2.8	2.1
CS-10	10	3.0	6.2	1.9	4.4	3.3
CS-12	12	3.6	7.5	2.3	6.3	4.8

Note: The information in the chart is for standard units. Units may have been designed with non-standard sediment storage depth.

A Cascade Separator unit can be easily cleaned in less than 30 minutes.

A vacuum truck excavates pollutants from the systems.

APPENDIX C

Contech Specifications – Hydrodynamic Separator

SECTION (____)
STORM WATER TREATMENT DEVICE

1.0 GENERAL

- 1.1 This item shall govern the furnishing and installation of the Cascade Separator® by Contech Engineered Solutions LLC, complete and operable as shown and as specified herein, in accordance with the requirements of the plans and contract documents.
- 1.2 The Contractor shall furnish all labor, equipment and materials necessary to install the storm water treatment device(s) (SWTD) and appurtenances specified in the Drawings and these specifications.
- 1.3 The manufacturer of the SWTD shall be one that is regularly engaged in the engineering design and production of systems deployed for the treatment of storm water runoff for at least five (5) years and which have a history of successful production, acceptable to the Engineer. In accordance with the Drawings, the SWTD(s) shall be a Cascade Separator™ device manufactured by:

Contech Engineered Solutions LLC
9100 Centre Pointe Drive
West Chester, OH, 45069
Tel: 1 800 338 1122

1.4 Related Sections

- 1.4.1 Section 02240: Dewatering
 - 1.4.2 Section 02260: Excavation Support and Protection
 - 1.4.3 Section 02315: Excavation and Fill
 - 1.4.4 Section 02340: Soil Stabilization
- 1.5 All components shall be subject to inspection by the engineer at the place of manufacture and/or installation. All components are subject to being rejected or identified for repair if the quality of materials and manufacturing do not comply with the requirements of this specification. Components which have been identified as defective may be subject for repair where final acceptance of the component is contingent on the discretion of the Engineer.
 - 1.6 The manufacturer shall guarantee the SWTD components against all manufacturer originated defects in materials or workmanship for a period of twelve (12) months from the date the components are delivered to the owner for installation. The manufacturer shall upon its determination repair, correct or replace any manufacturer originated defects advised in writing to the manufacturer within the referenced warranty period. The use of SWTD components shall be limited to the application for which it was specifically designed.
 - 1.7 The SWTD manufacturer shall submit to the Engineer of Record a “Manufacturer’s Performance Certification” certifying that each SWTD is capable of achieving the specified removal efficiencies listed in these specifications. The certification shall be supported by independent third-party research

- 1.8 No product substitutions shall be accepted unless submitted 10 days prior to project bid date, or as directed by the Engineer of Record. Submissions for substitutions require review and approval by the Engineer of Record, for hydraulic performance, impact to project designs, equivalent treatment performance, and any required project plan and report (hydrology/hydraulic, water quality, stormwater pollution) modifications that would be required by the approving jurisdictions/agencies. Contractor to coordinate with the Engineer of Record any applicable modifications to the project estimates of cost, bonding amount determinations, plan check fees for changes to approved documents, and/or any other regulatory requirements resulting from the product substitution.

2.0 MATERIALS

- 2.1 Housing unit of stormwater treatment device shall be constructed of pre-cast or cast-in-place concrete, no exceptions. Precast concrete components shall conform to applicable sections of ASTM C 478, ASTM C 857 and ASTM C 858 and the following:
 - 2.1.1 Concrete shall achieve a minimum 28-day compressive strength of 4,000 pounds per square-inch (psi);
 - 2.1.2 Unless otherwise noted, the precast concrete sections shall be designed to withstand lateral earth and AASHTO H-20 traffic loads;
 - 2.1.3 Cement shall be Type III Portland Cement conforming to ASTM C 150;
 - 2.1.4 Aggregates shall conform to ASTM C 33;
 - 2.1.5 Reinforcing steel shall be deformed billet-steel bars, welded steel wire or deformed welded steel wire conforming to ASTM A 615, A 185, or A 497.
 - 2.1.6 Joints shall be sealed with preformed joint sealing compound conforming to ASTM C 990.
 - 2.1.7 Shipping of components shall not be initiated until a minimum compressive strength of 4,000 psi is attained or five (5) calendar days after fabrication has expired, whichever occurs first.
- 2.2 Internal Components and appurtenances shall conform to the following:
 - 2.2.1 Hardware shall be manufactured of Type 316 stainless steel conforming to ASTM A 320;
 - 2.2.2 Support brackets shall be manufactured of 5052 aluminum
 - 2.2.3 Fiberglass components shall conform to applicable sections of ASTM D-4097
 - 2.2.4 Polypropylene copolymer components shall conform to a tensile strength of 3,600 psi (ASTM D-638), and Izod impact value of "no break" (ASTM D-256).
 - 2.2.5 Access system(s) conform to the following:
Manhole castings shall be designed to withstand AASHTO H-20 loadings and manufactured of cast-iron conforming to ASTM A 48 Class 30.

3.0 PERFORMANCE

- 3.1 The SWTD shall be sized to either achieve an 80 percent average annual reduction in the total suspended solid load or treat a flow rate designated by the jurisdiction in which the project is located. Both methods should be sized using the OK-110 particle distribution having particles ranging from 53 microns to 212 microns with a d50 of around 110 microns.
- 3.2 The SWTD shall be designed with a sump chamber for the storage of captured sediments and other negatively buoyant pollutants in between maintenance cycles. The minimum storage

capacity provided by the sump chamber shall be in accordance with the volume listed in Table 1. The boundaries of the sump chamber shall be limited to that which do not degrade the SWTD's treatment efficiency as captured pollutants accumulate. In order to not restrict the Owner's ability to maintain the SWTD, the minimum dimension providing access from the ground surface to the sump chamber shall be 16 inches in diameter.

- 3.3 The SWTD shall be designed to capture and retain Total Petroleum Hydrocarbons generated by wet-weather flow and dry-weather gross spills and have a capacity listed in Table 1 of the required unit.
- 3.4 The SWTD shall convey the flow from the peak storm event of the drainage network, in accordance with required hydraulic upstream conditions as defined by the Engineer. If a substitute SWTD is proposed, supporting documentation shall be submitted that demonstrates equal or better upstream hydraulic conditions compared to that specified herein. This documentation shall be signed and sealed by a Professional Engineer registered in the State of the work. All costs associated with preparing and certifying this documentation shall be born solely by the Contractor.

4.0 EXECUTION

- 4.1 The contractor shall exercise care in the storage and handling of the SWTD components prior to and during installation. Any repair or replacement costs associated with events occurring after delivery is accepted and unloading has commenced shall be borne by the contractor.
- 4.2 The SWTD shall be installed in accordance with the manufacturer's recommendations and related sections of the contract documents. The manufacturer shall provide the contractor installation instructions and offer on-site guidance during the important stages of the installation as identified by the manufacturer at no additional expense. A minimum of 72 hours notice shall be provided to the manufacturer prior to their performance of the services included under this subsection.
- 4.3 The contractor shall fill all voids associated with lifting provisions provided by the manufacturer. These voids shall be filled with non-shrinking grout providing a finished surface consistent with adjacent surfaces. The contractor shall trim all protruding lifting provisions flush with the adjacent concrete surface in a manner, which leaves no sharp points or edges.
- 4.4 The contractor shall removal all loose material and pooling water from the SWTD prior to the transfer of operational responsibility to the Owner.

TABLE 1: Storm Water Treatment Device Storage Capacities

Cascade Model	Minimum Sump Storage Capacity (yd ³)	Minimum Oil Storage Capacity (gal)

Custom Soil Resource Report for **Kings County, New York**

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (<http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/>) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (<https://offices.sc.egov.usda.gov/locator/app?agency=nrcs>) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

Custom Soil Resource Report

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

Custom Soil Resource Report

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
 Web Soil Survey URL:
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Kings County, New York
 Survey Area Data: Version 14, Sep 4, 2023

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 1, 2023—Sep 1, 2023

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas

Custom Soil Resource Report

are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Kings County, New York

BVUA—Bigapple-Verrazano-Urban land complex, 0 to 3 percent slopes

Map Unit Setting

National map unit symbol: 2pddn
Elevation: 0 to 10 feet
Mean annual precipitation: 40 to 52 inches
Mean annual air temperature: 47 to 62 degrees F
Frost-free period: 216 to 234 days
Farmland classification: Not prime farmland

Map Unit Composition

Bigapple, sandy loam, and similar soils: 45 percent
Verrazano and similar soils: 35 percent
Urban land, sandy substratum: 20 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Bigapple, Sandy Loam

Setting

Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loamy human-transported material over sandy dredge spoils

Typical profile

^A - 0 to 7 inches: sandy loam
2^C - 7 to 72 inches: stratified gravelly coarse sand to sand

Properties and qualities

Slope: 0 to 3 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to very high (1.42 to 20.00 in/hr)
Depth to water table: About 59 to 79 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 6 percent
Available water supply, 0 to 60 inches: Very low (about 2.5 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3s
Hydrologic Soil Group: A
Ecological site: F149BY100NY - Urban Site Complex
Hydric soil rating: No

Description of Verrazano

Setting

Landform position (two-dimensional): Backslope, summit, footslope, toeslope
Landform position (three-dimensional): Crest, side slope, base slope, talf, rise

Custom Soil Resource Report

Down-slope shape: Convex, linear
Across-slope shape: Convex, linear
Parent material: Loamy human-transported material over beach sand and/or sandy outwash and/or dredge spoils

Typical profile

^A - 0 to 3 inches: sandy loam
^Bw - 3 to 17 inches: sandy loam
^BC - 17 to 24 inches: loam
2C - 24 to 72 inches: sand

Properties and qualities

Slope: 0 to 3 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 1.98 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 8 percent
Available water supply, 0 to 60 inches: Moderate (about 6.1 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 1
Hydrologic Soil Group: B
Ecological site: F149BY100NY - Urban Site Complex
Hydric soil rating: No

Description of Urban Land, Sandy Substratum

Setting

Landform position (two-dimensional): Summit
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Asphalt over human-transported material

Typical profile

M1 - 0 to 6 inches: cemented material
M2 - 6 to 20 inches: cemented material
2^C - 20 to 72 inches: coarse sand

Properties and qualities

Slope: 0 to 3 percent
Depth to restrictive feature: 0 inches to manufactured layer
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Very low (0.00 to 0.00 in/hr)
Calcium carbonate, maximum content: 5 percent
Available water supply, 0 to 60 inches: Very low (about 0.0 inches)

Interpretive groups

Glossary

Many of the terms relating to landforms, geology, and geomorphology are defined in more detail in the following National Soil Survey Handbook link: "[National Soil Survey Handbook](#)."

ABC soil

A soil having an A, a B, and a C horizon.

Ablation till

Loose, relatively permeable earthy material deposited during the downwasting of nearly static glacial ice, either contained within or accumulated on the surface of the glacier.

AC soil

A soil having only an A and a C horizon. Commonly, such soil formed in recent alluvium or on steep, rocky slopes.

Aeration, soil

The exchange of air in soil with air from the atmosphere. The air in a well aerated soil is similar to that in the atmosphere; the air in a poorly aerated soil is considerably higher in carbon dioxide and lower in oxygen.

Aggregate, soil

Many fine particles held in a single mass or cluster. Natural soil aggregates, such as granules, blocks, or prisms, are called peds. Clods are aggregates produced by tillage or logging.

Alkali (sodic) soil

A soil having so high a degree of alkalinity (pH 8.5 or higher) or so high a percentage of exchangeable sodium (15 percent or more of the total exchangeable bases), or both, that plant growth is restricted.

Alluvial cone

A semiconical type of alluvial fan having very steep slopes. It is higher, narrower, and steeper than a fan and is composed of coarser and thicker layers of material deposited by a combination of alluvial episodes and (to a much lesser degree) landslides (debris flow). The coarsest materials tend to be concentrated at the apex of the cone.

Alluvial fan

A low, outspread mass of loose materials and/or rock material, commonly with gentle slopes. It is shaped like an open fan or a segment of a cone. The material was deposited by a stream at the place where it issues from a narrow mountain valley or upland valley or where a tributary stream is near or at its junction with the main stream. The fan is steepest near its apex, which points upstream, and slopes gently and convexly outward (downstream) with a gradual decrease in gradient.

Alluvium

Unconsolidated material, such as gravel, sand, silt, clay, and various mixtures of these, deposited on land by running water.

Alpha,alpha-dipyridyl

A compound that when dissolved in ammonium acetate is used to detect the presence of reduced iron (Fe II) in the soil. A positive reaction implies reducing conditions and the likely presence of redoximorphic features.

Animal unit month (AUM)

The amount of forage required by one mature cow of approximately 1,000 pounds weight, with or without a calf, for 1 month.

Aquic conditions

Current soil wetness characterized by saturation, reduction, and redoximorphic features.

Argillic horizon

A subsoil horizon characterized by an accumulation of illuvial clay.

Arroyo

The flat-floored channel of an ephemeral stream, commonly with very steep to vertical banks cut in unconsolidated material. It is usually dry but can be transformed into a temporary watercourse or short-lived torrent after heavy rain within the watershed.

Aspect

The direction toward which a slope faces. Also called slope aspect.

Association, soil

A group of soils or miscellaneous areas geographically associated in a characteristic repeating pattern and defined and delineated as a single map unit.

Available water capacity (available moisture capacity)

The capacity of soils to hold water available for use by most plants. It is commonly defined as the difference between the amount of soil water at field moisture capacity and the amount at wilting point. It is commonly expressed as inches of water per inch of soil. The capacity, in inches, in a 60-inch profile or to a limiting layer is expressed as:

Custom Soil Resource Report

Very low: 0 to 3

Low: 3 to 6

Moderate: 6 to 9

High: 9 to 12

Very high: More than 12

Backslope

The position that forms the steepest and generally linear, middle portion of a hillslope. In profile, backslopes are commonly bounded by a convex shoulder above and a concave footslope below.

Backswamp

A flood-plain landform. Extensive, marshy or swampy, depressed areas of flood plains between natural levees and valley sides or terraces.

Badland

A landscape that is intricately dissected and characterized by a very fine drainage network with high drainage densities and short, steep slopes and narrow interfluves. Badlands develop on surfaces that have little or no vegetative cover overlying unconsolidated or poorly cemented materials (clays, silts, or sandstones) with, in some cases, soluble minerals, such as gypsum or halite.

Bajada

A broad, gently inclined alluvial piedmont slope extending from the base of a mountain range out into a basin and formed by the lateral coalescence of a series of alluvial fans. Typically, it has a broadly undulating transverse profile, parallel to the mountain front, resulting from the convexities of component fans. The term is generally restricted to constructional slopes of intermontane basins.

Basal area

The area of a cross section of a tree, generally referring to the section at breast height and measured outside the bark. It is a measure of stand density, commonly expressed in square feet.

Base saturation

The degree to which material having cation-exchange properties is saturated with exchangeable bases (sum of Ca, Mg, Na, and K), expressed as a percentage of the total cation-exchange capacity.

Base slope (geomorphology)

A geomorphic component of hills consisting of the concave to linear (perpendicular to the contour) slope that, regardless of the lateral shape, forms an apron or wedge at the bottom of a hillside dominated by colluvium and slope-wash sediments (for example, slope alluvium).

Bedding plane

A planar or nearly planar bedding surface that visibly separates each successive layer of stratified sediment or rock (of the same or different lithology)

from the preceding or following layer; a plane of deposition. It commonly marks a change in the circumstances of deposition and may show a parting, a color difference, a change in particle size, or various combinations of these. The term is commonly applied to any bedding surface, even one that is conspicuously bent or deformed by folding.

Bedding system

A drainage system made by plowing, grading, or otherwise shaping the surface of a flat field. It consists of a series of low ridges separated by shallow, parallel dead furrows.

Bedrock

The solid rock that underlies the soil and other unconsolidated material or that is exposed at the surface.

Bedrock-controlled topography

A landscape where the configuration and relief of the landforms are determined or strongly influenced by the underlying bedrock.

Bench terrace

A raised, level or nearly level strip of earth constructed on or nearly on a contour, supported by a barrier of rocks or similar material, and designed to make the soil suitable for tillage and to prevent accelerated erosion.

Bisequum

Two sequences of soil horizons, each of which consists of an illuvial horizon and the overlying eluvial horizons.

Blowout (map symbol)

A saucer-, cup-, or trough-shaped depression formed by wind erosion on a preexisting dune or other sand deposit, especially in an area of shifting sand or loose soil or where protective vegetation is disturbed or destroyed. The adjoining accumulation of sand derived from the depression, where recognizable, is commonly included. Blowouts are commonly small.

Borrow pit (map symbol)

An open excavation from which soil and underlying material have been removed, usually for construction purposes.

Bottom land

An informal term loosely applied to various portions of a flood plain.

Boulders

Rock fragments larger than 2 feet (60 centimeters) in diameter.

Breaks

A landscape or tract of steep, rough or broken land dissected by ravines and gullies and marking a sudden change in topography.

Breast height

An average height of 4.5 feet above the ground surface; the point on a tree where diameter measurements are ordinarily taken.

Brush management

Use of mechanical, chemical, or biological methods to make conditions favorable for reseeding or to reduce or eliminate competition from woody vegetation and thus allow understory grasses and forbs to recover. Brush management increases forage production and thus reduces the hazard of erosion. It can improve the habitat for some species of wildlife.

Butte

An isolated, generally flat-topped hill or mountain with relatively steep slopes and talus or precipitous cliffs and characterized by summit width that is less than the height of bounding escarpments; commonly topped by a caprock of resistant material and representing an erosion remnant carved from flat-lying rocks.

Cable yarding

A method of moving felled trees to a nearby central area for transport to a processing facility. Most cable yarding systems involve use of a drum, a pole, and wire cables in an arrangement similar to that of a rod and reel used for fishing. To reduce friction and soil disturbance, felled trees generally are reeled in while one end is lifted or the entire log is suspended.

Calcareous soil

A soil containing enough calcium carbonate (commonly combined with magnesium carbonate) to effervesce visibly when treated with cold, dilute hydrochloric acid.

Caliche

A general term for a prominent zone of secondary carbonate accumulation in surficial materials in warm, subhumid to arid areas. Caliche is formed by both geologic and pedologic processes. Finely crystalline calcium carbonate forms a nearly continuous surface-coating and void-filling medium in geologic (parent) materials. Cementation ranges from weak in nonindurated forms to very strong in indurated forms. Other minerals (e.g., carbonates, silicate, and sulfate) may occur as accessory cements. Most petrocalcic horizons and some calcic horizons are caliche.

California bearing ratio (CBR)

The load-supporting capacity of a soil as compared to that of standard crushed limestone, expressed as a ratio. First standardized in California. A soil having a CBR of 16 supports 16 percent of the load that would be supported by standard crushed limestone, per unit area, with the same degree of distortion.

Canopy

The leafy crown of trees or shrubs. (See Crown.)

Canyon

A long, deep, narrow valley with high, precipitous walls in an area of high local relief.

Capillary water

Water held as a film around soil particles and in tiny spaces between particles. Surface tension is the adhesive force that holds capillary water in the soil.

Catena

A sequence, or “chain,” of soils on a landscape that formed in similar kinds of parent material and under similar climatic conditions but that have different characteristics as a result of differences in relief and drainage.

Cation

An ion carrying a positive charge of electricity. The common soil cations are calcium, potassium, magnesium, sodium, and hydrogen.

Cation-exchange capacity

The total amount of exchangeable cations that can be held by the soil, expressed in terms of milliequivalents per 100 grams of soil at neutrality (pH 7.0) or at some other stated pH value. The term, as applied to soils, is synonymous with base-exchange capacity but is more precise in meaning.

Catsteps

See Terracettes.

Cement rock

Shaly limestone used in the manufacture of cement.

Channery soil material

Soil material that has, by volume, 15 to 35 percent thin, flat fragments of sandstone, shale, slate, limestone, or schist as much as 6 inches (15 centimeters) along the longest axis. A single piece is called a channer.

Chemical treatment

Control of unwanted vegetation through the use of chemicals.

Chiseling

Tillage with an implement having one or more soil-penetrating points that shatter or loosen hard, compacted layers to a depth below normal plow depth.

Cirque

A steep-walled, semicircular or crescent-shaped, half-bowl-like recess or hollow, commonly situated at the head of a glaciated mountain valley or high on the side of a mountain. It was produced by the erosive activity of a mountain glacier. It commonly contains a small round lake (tarn).

Clay

As a soil separate, the mineral soil particles less than 0.002 millimeter in diameter. As a soil textural class, soil material that is 40 percent or more clay, less than 45 percent sand, and less than 40 percent silt.

Clay depletions

See Redoximorphic features.

Clay film

A thin coating of oriented clay on the surface of a soil aggregate or lining pores or root channels. Synonyms: clay coating, clay skin.

Clay spot (map symbol)

A spot where the surface texture is silty clay or clay in areas where the surface layer of the soils in the surrounding map unit is sandy loam, loam, silt loam, or coarser.

Claypan

A dense, compact subsoil layer that contains much more clay than the overlying materials, from which it is separated by a sharply defined boundary. The layer restricts the downward movement of water through the soil. A claypan is commonly hard when dry and plastic and sticky when wet.

Climax plant community

The stabilized plant community on a particular site. The plant cover reproduces itself and does not change so long as the environment remains the same.

Coarse textured soil

Sand or loamy sand.

Cobble (or cobblestone)

A rounded or partly rounded fragment of rock 3 to 10 inches (7.6 to 25 centimeters) in diameter.

Cobbly soil material

Material that has 15 to 35 percent, by volume, rounded or partially rounded rock fragments 3 to 10 inches (7.6 to 25 centimeters) in diameter. Very cobbly soil material has 35 to 60 percent of these rock fragments, and extremely cobbly soil material has more than 60 percent.

COLE (coefficient of linear extensibility)

See Linear extensibility.

Colluvium

Unconsolidated, unsorted earth material being transported or deposited on side slopes and/or at the base of slopes by mass movement (e.g., direct gravitational action) and by local, unconcentrated runoff.

Complex slope

Irregular or variable slope. Planning or establishing terraces, diversions, and other water-control structures on a complex slope is difficult.

Complex, soil

A map unit of two or more kinds of soil or miscellaneous areas in such an intricate pattern or so small in area that it is not practical to map them separately at the selected scale of mapping. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas.

Concretions

See Redoximorphic features.

Conglomerate

A coarse grained, clastic sedimentary rock composed of rounded or subangular rock fragments more than 2 millimeters in diameter. It commonly has a matrix of sand and finer textured material. Conglomerate is the consolidated equivalent of gravel.

Conservation cropping system

Growing crops in combination with needed cultural and management practices. In a good conservation cropping system, the soil-improving crops and practices more than offset the effects of the soil-depleting crops and practices. Cropping systems are needed on all tilled soils. Soil-improving practices in a conservation cropping system include the use of rotations that contain grasses and legumes and the return of crop residue to the soil. Other practices include the use of green manure crops of grasses and legumes, proper tillage, adequate fertilization, and weed and pest control.

Conservation tillage

A tillage system that does not invert the soil and that leaves a protective amount of crop residue on the surface throughout the year.

Consistence, soil

Refers to the degree of cohesion and adhesion of soil material and its resistance to deformation when ruptured. Consistence includes resistance of soil material to rupture and to penetration; plasticity, toughness, and stickiness of puddled soil material; and the manner in which the soil material behaves when subject to compression. Terms describing consistence are defined in the "Soil Survey Manual."

Contour stripcropping

Growing crops in strips that follow the contour. Strips of grass or close-growing crops are alternated with strips of clean-tilled crops or summer fallow.

Control section

The part of the soil on which classification is based. The thickness varies among different kinds of soil, but for many it is that part of the soil profile between depths of 10 inches and 40 or 80 inches.

Coprogenous earth (sedimentary peat)

A type of limnic layer composed predominantly of fecal material derived from aquatic animals.

Corrosion (geomorphology)

A process of erosion whereby rocks and soil are removed or worn away by natural chemical processes, especially by the solvent action of running water, but also by other reactions, such as hydrolysis, hydration, carbonation, and oxidation.

Corrosion (soil survey interpretations)

Soil-induced electrochemical or chemical action that dissolves or weakens concrete or uncoated steel.

Cover crop

A close-growing crop grown primarily to improve and protect the soil between periods of regular crop production, or a crop grown between trees and vines in orchards and vineyards.

Crop residue management

Returning crop residue to the soil, which helps to maintain soil structure, organic matter content, and fertility and helps to control erosion.

Cropping system

Growing crops according to a planned system of rotation and management practices.

Cross-slope farming

Deliberately conducting farming operations on sloping farmland in such a way that tillage is across the general slope.

Crown

The upper part of a tree or shrub, including the living branches and their foliage.

Cryoturbate

A mass of soil or other unconsolidated earthy material moved or disturbed by frost action. It is typically coarser than the underlying material.

Cuesta

An asymmetric ridge capped by resistant rock layers of slight or moderate dip (commonly less than 15 percent slopes); a type of homocline produced by differential erosion of interbedded resistant and weak rocks. A cuesta has a long, gentle slope on one side (dip slope) that roughly parallels the inclined beds; on the other side, it has a relatively short and steep or clifflike slope (scarp) that cuts through the tilted rocks.

Culmination of the mean annual increment (CMAI)

The average annual increase per acre in the volume of a stand. Computed by dividing the total volume of the stand by its age. As the stand increases in age, the mean annual increment continues to increase until mortality begins to reduce the rate of increase. The point where the stand reaches its maximum annual rate of growth is called the culmination of the mean annual increment.

Cutbanks cave

The walls of excavations tend to cave in or slough.

Decreasers

The most heavily grazed climax range plants. Because they are the most palatable, they are the first to be destroyed by overgrazing.

Deferred grazing

Postponing grazing or resting grazing land for a prescribed period.

Delta

A body of alluvium having a surface that is fan shaped and nearly flat; deposited at or near the mouth of a river or stream where it enters a body of relatively quiet water, generally a sea or lake.

Dense layer

A very firm, massive layer that has a bulk density of more than 1.8 grams per cubic centimeter. Such a layer affects the ease of digging and can affect filling and compacting.

Depression, closed (map symbol)

A shallow, saucer-shaped area that is slightly lower on the landscape than the surrounding area and that does not have a natural outlet for surface drainage.

Depth, soil

Generally, the thickness of the soil over bedrock. Very deep soils are more than 60 inches deep over bedrock; deep soils, 40 to 60 inches; moderately deep, 20 to 40 inches; shallow, 10 to 20 inches; and very shallow, less than 10 inches.

Desert pavement

A natural, residual concentration or layer of wind-polished, closely packed gravel, boulders, and other rock fragments mantling a desert surface. It forms where wind action and sheetwash have removed all smaller particles or where rock fragments have migrated upward through sediments to the surface. It typically protects the finer grained underlying material from further erosion.

Diatomaceous earth

A geologic deposit of fine, grayish siliceous material composed chiefly or entirely of the remains of diatoms.

Dip slope

A slope of the land surface, roughly determined by and approximately conforming to the dip of the underlying bedrock.

Diversion (or diversion terrace)

A ridge of earth, generally a terrace, built to protect downslope areas by diverting runoff from its natural course.

Divided-slope farming

A form of field stripcropping in which crops are grown in a systematic arrangement of two strips, or bands, across the slope to reduce the hazard of water erosion. One strip is in a close-growing crop that provides protection from erosion, and the other strip is in a crop that provides less protection from erosion. This practice is used where slopes are not long enough to permit a full stripcropping pattern to be used.

Drainage class (natural)

Refers to the frequency and duration of wet periods under conditions similar to those under which the soil formed. Alterations of the water regime by human activities, either through drainage or irrigation, are not a consideration unless they have significantly changed the morphology of the soil. Seven classes of natural soil drainage are recognized—*excessively drained, somewhat excessively drained, well drained, moderately well drained, somewhat poorly drained, poorly drained, and very poorly drained*. These classes are defined in the “Soil Survey Manual.”

Drainage, surface

Runoff, or surface flow of water, from an area.

Drainageway

A general term for a course or channel along which water moves in draining an area. A term restricted to relatively small, linear depressions that at some time move concentrated water and either do not have a defined channel or have only a small defined channel.

Draw

A small stream valley that generally is shallower and more open than a ravine or gulch and that has a broader bottom. The present stream channel may appear inadequate to have cut the drainageway that it occupies.

Drift

A general term applied to all mineral material (clay, silt, sand, gravel, and boulders) transported by a glacier and deposited directly by or from the ice or transported by running water emanating from a glacier. Drift includes unstratified material (till) that forms moraines and stratified deposits that form outwash plains, eskers, kames, varves, and glaciofluvial sediments. The term is generally applied to Pleistocene glacial deposits in areas that no longer contain glaciers.

Drumlin

A low, smooth, elongated oval hill, mound, or ridge of compact till that has a core of bedrock or drift. It commonly has a blunt nose facing the direction from which the ice approached and a gentler slope tapering in the other direction. The longer axis is parallel to the general direction of glacier flow. Drumlins are products of streamline (laminar) flow of glaciers, which molded the subglacial floor through a combination of erosion and deposition.

Duff

A generally firm organic layer on the surface of mineral soils. It consists of fallen plant material that is in the process of decomposition and includes everything from the litter on the surface to underlying pure humus.

Dune

A low mound, ridge, bank, or hill of loose, windblown granular material (generally sand), either barren and capable of movement from place to place or covered and stabilized with vegetation but retaining its characteristic shape.

Earthy fill

See Mine spoil.

Ecological site

An area where climate, soil, and relief are sufficiently uniform to produce a distinct natural plant community. An ecological site is the product of all the environmental factors responsible for its development. It is typified by an association of species that differ from those on other ecological sites in kind and/or proportion of species or in total production.

Eluviation

The movement of material in true solution or colloidal suspension from one place to another within the soil. Soil horizons that have lost material through eluviation are eluvial; those that have received material are illuvial.

Endosaturation

A type of saturation of the soil in which all horizons between the upper boundary of saturation and a depth of 2 meters are saturated.

Eolian deposit

Sand-, silt-, or clay-sized clastic material transported and deposited primarily by wind, commonly in the form of a dune or a sheet of sand or loess.

Ephemeral stream

A stream, or reach of a stream, that flows only in direct response to precipitation. It receives no long-continued supply from melting snow or other source, and its channel is above the water table at all times.

Episaturation

A type of saturation indicating a perched water table in a soil in which saturated layers are underlain by one or more unsaturated layers within 2 meters of the surface.

Erosion

The wearing away of the land surface by water, wind, ice, or other geologic agents and by such processes as gravitational creep.

Erosion (accelerated)

Erosion much more rapid than geologic erosion, mainly as a result of human or animal activities or of a catastrophe in nature, such as a fire, that exposes the surface.

Erosion (geologic)

Erosion caused by geologic processes acting over long geologic periods and resulting in the wearing away of mountains and the building up of such landscape features as flood plains and coastal plains. Synonym: natural erosion.

Erosion pavement

A surficial lag concentration or layer of gravel and other rock fragments that remains on the soil surface after sheet or rill erosion or wind has removed the finer soil particles and that tends to protect the underlying soil from further erosion.

Erosion surface

A land surface shaped by the action of erosion, especially by running water.

Escarpment

A relatively continuous and steep slope or cliff breaking the general continuity of more gently sloping land surfaces and resulting from erosion or faulting. Most commonly applied to cliffs produced by differential erosion. Synonym: scarp.

Escarpment, bedrock (map symbol)

A relatively continuous and steep slope or cliff, produced by erosion or faulting, that breaks the general continuity of more gently sloping land surfaces. Exposed material is hard or soft bedrock.

Escarpment, nonbedrock (map symbol)

A relatively continuous and steep slope or cliff, generally produced by erosion but in some places produced by faulting, that breaks the continuity of more gently sloping land surfaces. Exposed earthy material is nonsoil or very shallow soil.

Esker

A long, narrow, sinuous, steep-sided ridge of stratified sand and gravel deposited as the bed of a stream flowing in an ice tunnel within or below the ice (subglacial) or between ice walls on top of the ice of a wasting glacier and left

behind as high ground when the ice melted. Eskers range in length from less than a kilometer to more than 160 kilometers and in height from 3 to 30 meters.

Extrusive rock

Igneous rock derived from deep-seated molten matter (magma) deposited and cooled on the earth's surface.

Fallow

Cropland left idle in order to restore productivity through accumulation of moisture. Summer fallow is common in regions of limited rainfall where cereal grain is grown. The soil is tilled for at least one growing season for weed control and decomposition of plant residue.

Fan remnant

A general term for landforms that are the remaining parts of older fan landforms, such as alluvial fans, that have been either dissected or partially buried.

Fertility, soil

The quality that enables a soil to provide plant nutrients, in adequate amounts and in proper balance, for the growth of specified plants when light, moisture, temperature, tilth, and other growth factors are favorable.

Fibric soil material (peat)

The least decomposed of all organic soil material. Peat contains a large amount of well preserved fiber that is readily identifiable according to botanical origin. Peat has the lowest bulk density and the highest water content at saturation of all organic soil material.

Field moisture capacity

The moisture content of a soil, expressed as a percentage of the oven-dry weight, after the gravitational, or free, water has drained away; the field moisture content 2 or 3 days after a soaking rain; also called *normal field capacity*, *normal moisture capacity*, or *capillary capacity*.

Fill slope

A sloping surface consisting of excavated soil material from a road cut. It commonly is on the downhill side of the road.

Fine textured soil

Sandy clay, silty clay, or clay.

Firebreak

An area cleared of flammable material to stop or help control creeping or running fires. It also serves as a line from which to work and to facilitate the movement of firefighters and equipment. Designated roads also serve as firebreaks.

First bottom

An obsolete, informal term loosely applied to the lowest flood-plain steps that are subject to regular flooding.

Flaggy soil material

Material that has, by volume, 15 to 35 percent flagstones. Very flaggy soil material has 35 to 60 percent flagstones, and extremely flaggy soil material has more than 60 percent flagstones.

Flagstone

A thin fragment of sandstone, limestone, slate, shale, or (rarely) schist 6 to 15 inches (15 to 38 centimeters) long.

Flood plain

The nearly level plain that borders a stream and is subject to flooding unless protected artificially.

Flood-plain landforms

A variety of constructional and erosional features produced by stream channel migration and flooding. Examples include backswamps, flood-plain splays, meanders, meander belts, meander scrolls, oxbow lakes, and natural levees.

Flood-plain splay

A fan-shaped deposit or other outspread deposit formed where an overloaded stream breaks through a levee (natural or artificial) and deposits its material (commonly coarse grained) on the flood plain.

Flood-plain step

An essentially flat, terrace-like alluvial surface within a valley that is frequently covered by floodwater from the present stream; any approximately horizontal surface still actively modified by fluvial scour and/or deposition. May occur individually or as a series of steps.

Fluvial

Of or pertaining to rivers or streams; produced by stream or river action.

Foothills

A region of steeply sloping hills that fringes a mountain range or high-plateau escarpment. The hills have relief of as much as 1,000 feet (300 meters).

Footslope

The concave surface at the base of a hillslope. A footslope is a transition zone between upslope sites of erosion and transport (shoulders and backslopes) and downslope sites of deposition (toeslopes).

Forb

Any herbaceous plant not a grass or a sedge.

Forest cover

All trees and other woody plants (underbrush) covering the ground in a forest.

Forest type

A stand of trees similar in composition and development because of given physical and biological factors by which it may be differentiated from other stands.

Fragipan

A loamy, brittle subsurface horizon low in porosity and content of organic matter and low or moderate in clay but high in silt or very fine sand. A fragipan appears cemented and restricts roots. When dry, it is hard or very hard and has a higher bulk density than the horizon or horizons above. When moist, it tends to rupture suddenly under pressure rather than to deform slowly.

Genesis, soil

The mode of origin of the soil. Refers especially to the processes or soil-forming factors responsible for the formation of the solum, or true soil, from the unconsolidated parent material.

Gilgai

Commonly, a succession of microbasins and microknolls in nearly level areas or of microvalleys and microridges parallel with the slope. Typically, the microrelief of clayey soils that shrink and swell considerably with changes in moisture content.

Glaciofluvial deposits

Material moved by glaciers and subsequently sorted and deposited by streams flowing from the melting ice. The deposits are stratified and occur in the form of outwash plains, valley trains, deltas, kames, eskers, and kame terraces.

Glaciolacustrine deposits

Material ranging from fine clay to sand derived from glaciers and deposited in glacial lakes mainly by glacial meltwater. Many deposits are bedded or laminated.

Gleyed soil

Soil that formed under poor drainage, resulting in the reduction of iron and other elements in the profile and in gray colors.

Graded stripcropping

Growing crops in strips that grade toward a protected waterway.

Grassed waterway

A natural or constructed waterway, typically broad and shallow, seeded to grass as protection against erosion. Conducts surface water away from cropland.

Gravel

Rounded or angular fragments of rock as much as 3 inches (2 millimeters to 7.6 centimeters) in diameter. An individual piece is a pebble.

Gravel pit (map symbol)

An open excavation from which soil and underlying material have been removed and used, without crushing, as a source of sand or gravel.

Gravelly soil material

Material that has 15 to 35 percent, by volume, rounded or angular rock fragments, not prominently flattened, as much as 3 inches (7.6 centimeters) in diameter.

Gravelly spot (map symbol)

A spot where the surface layer has more than 35 percent, by volume, rock fragments that are mostly less than 3 inches in diameter in an area that has less than 15 percent rock fragments.

Green manure crop (agronomy)

A soil-improving crop grown to be plowed under in an early stage of maturity or soon after maturity.

Ground water

Water filling all the unblocked pores of the material below the water table.

Gully (map symbol)

A small, steep-sided channel caused by erosion and cut in unconsolidated materials by concentrated but intermittent flow of water. The distinction between a gully and a rill is one of depth. A gully generally is an obstacle to farm machinery and is too deep to be obliterated by ordinary tillage whereas a rill is of lesser depth and can be smoothed over by ordinary tillage.

Hard bedrock

Bedrock that cannot be excavated except by blasting or by the use of special equipment that is not commonly used in construction.

Hard to reclaim

Reclamation is difficult after the removal of soil for construction and other uses. Revegetation and erosion control are extremely difficult.

Hardpan

A hardened or cemented soil horizon, or layer. The soil material is sandy, loamy, or clayey and is cemented by iron oxide, silica, calcium carbonate, or other substance.

Head slope (geomorphology)

A geomorphic component of hills consisting of a laterally concave area of a hillside, especially at the head of a drainageway. The overland waterflow is converging.

Hemic soil material (mucky peat)

Organic soil material intermediate in degree of decomposition between the less decomposed fibric material and the more decomposed sapric material.

High-residue crops

Such crops as small grain and corn used for grain. If properly managed, residue from these crops can be used to control erosion until the next crop in the rotation is established. These crops return large amounts of organic matter to the soil.

Hill

A generic term for an elevated area of the land surface, rising as much as 1,000 feet above surrounding lowlands, commonly of limited summit area and having a well defined outline. Slopes are generally more than 15 percent. The distinction between a hill and a mountain is arbitrary and may depend on local usage.

Hillslope

A generic term for the steeper part of a hill between its summit and the drainage line, valley flat, or depression floor at the base of a hill.

Horizon, soil

A layer of soil, approximately parallel to the surface, having distinct characteristics produced by soil-forming processes. In the identification of soil horizons, an uppercase letter represents the major horizons. Numbers or lowercase letters that follow represent subdivisions of the major horizons. An explanation of the subdivisions is given in the "Soil Survey Manual." The major horizons of mineral soil are as follows:

Custom Soil Resource Report

O horizon: An organic layer of fresh and decaying plant residue.

L horizon: A layer of organic and mineral limnic materials, including coprogenous earth (sedimentary peat), diatomaceous earth, and marl.

A horizon: The mineral horizon at or near the surface in which an accumulation of humified organic matter is mixed with the mineral material. Also, a plowed surface horizon, most of which was originally part of a B horizon.

E horizon: The mineral horizon in which the main feature is loss of silicate clay, iron, aluminum, or some combination of these.

B horizon: The mineral horizon below an A horizon. The B horizon is in part a layer of transition from the overlying A to the underlying C horizon. The B horizon also has distinctive characteristics, such as (1) accumulation of clay, sesquioxides, humus, or a combination of these; (2) prismatic or blocky structure; (3) redder or browner colors than those in the A horizon; or (4) a combination of these.

C horizon: The mineral horizon or layer, excluding indurated bedrock, that is little affected by soil-forming processes and does not have the properties typical of the overlying soil material. The material of a C horizon may be either like or unlike that in which the solum formed. If the material is known to differ from that in the solum, an Arabic numeral, commonly a 2, precedes the letter C.

Cr horizon: Soft, consolidated bedrock beneath the soil.

R layer: Consolidated bedrock beneath the soil. The bedrock commonly underlies a C horizon, but it can be directly below an A or a B horizon.

M layer: A root-limiting subsoil layer consisting of nearly continuous, horizontally oriented, human-manufactured materials.

W layer: A layer of water within or beneath the soil.

Humus

The well decomposed, more or less stable part of the organic matter in mineral soils.

Hydrologic soil groups

Refers to soils grouped according to their runoff potential. The soil properties that influence this potential are those that affect the minimum rate of water infiltration on a bare soil during periods after prolonged wetting when the soil is not frozen. These properties include depth to a seasonal high water table, the infiltration rate, and depth to a layer that significantly restricts the downward movement of water. The slope and the kind of plant cover are not considered but are separate factors in predicting runoff.

Igneous rock

Rock that was formed by cooling and solidification of magma and that has not been changed appreciably by weathering since its formation. Major varieties include plutonic and volcanic rock (e.g., andesite, basalt, and granite).

Illuviation

The movement of soil material from one horizon to another in the soil profile. Generally, material is removed from an upper horizon and deposited in a lower horizon.

Impervious soil

A soil through which water, air, or roots penetrate slowly or not at all. No soil is absolutely impervious to air and water all the time.

Increasesers

Species in the climax vegetation that increase in amount as the more desirable plants are reduced by close grazing. Increasesers commonly are the shorter plants and the less palatable to livestock.

Infiltration

The downward entry of water into the immediate surface of soil or other material, as contrasted with percolation, which is movement of water through soil layers or material.

Infiltration capacity

The maximum rate at which water can infiltrate into a soil under a given set of conditions.

Infiltration rate

The rate at which water penetrates the surface of the soil at any given instant, usually expressed in inches per hour. The rate can be limited by the infiltration capacity of the soil or the rate at which water is applied at the surface.

Intake rate

The average rate of water entering the soil under irrigation. Most soils have a fast initial rate; the rate decreases with application time. Therefore, intake rate for design purposes is not a constant but is a variable depending on the net irrigation application. The rate of water intake, in inches per hour, is expressed as follows:

- Very low:* Less than 0.2
- Low:* 0.2 to 0.4
- Moderately low:* 0.4 to 0.75
- Moderate:* 0.75 to 1.25
- Moderately high:* 1.25 to 1.75
- High:* 1.75 to 2.5
- Very high:* More than 2.5

Interfluve

A landform composed of the relatively undissected upland or ridge between two adjacent valleys containing streams flowing in the same general direction. An elevated area between two drainageways that sheds water to those drainageways.

Interfluve (geomorphology)

A geomorphic component of hills consisting of the uppermost, comparatively level or gently sloping area of a hill; shoulders of backwearing hillslopes can narrow the upland or can merge, resulting in a strongly convex shape.

Intermittent stream

A stream, or reach of a stream, that does not flow year-round but that is commonly dry for 3 or more months out of 12 and whose channel is generally below the local water table. It flows only during wet periods or when it receives ground-water discharge or long, continued contributions from melting snow or other surface and shallow subsurface sources.

Invaders

On range, plants that encroach into an area and grow after the climax vegetation has been reduced by grazing. Generally, plants invade following disturbance of the surface.

Iron depletions

See Redoximorphic features.

Irrigation

Application of water to soils to assist in production of crops. Methods of irrigation are:

Basin: Water is applied rapidly to nearly level plains surrounded by levees or dikes.

Border: Water is applied at the upper end of a strip in which the lateral flow of water is controlled by small earth ridges called border dikes, or borders.

Controlled flooding: Water is released at intervals from closely spaced field ditches and distributed uniformly over the field.

Corrugation: Water is applied to small, closely spaced furrows or ditches in fields of close-growing crops or in orchards so that it flows in only one direction.

Drip (or trickle): Water is applied slowly and under low pressure to the surface of the soil or into the soil through such applicators as emitters, porous tubing, or perforated pipe.

Furrow: Water is applied in small ditches made by cultivation implements. Furrows are used for tree and row crops.

Sprinkler: Water is sprayed over the soil surface through pipes or nozzles from a pressure system.

Subirrigation: Water is applied in open ditches or tile lines until the water table is raised enough to wet the soil.

Wild flooding: Water, released at high points, is allowed to flow onto an area without controlled distribution.

Kame

A low mound, knob, hummock, or short irregular ridge composed of stratified sand and gravel deposited by a subglacial stream as a fan or delta at the margin of a melting glacier; by a supraglacial stream in a low place or hole on the surface of the glacier; or as a ponded deposit on the surface or at the margin of stagnant ice.

Karst (topography)

A kind of topography that formed in limestone, gypsum, or other soluble rocks by dissolution and that is characterized by closed depressions, sinkholes, caves, and underground drainage.

Knoll

A small, low, rounded hill rising above adjacent landforms.

Ksat

See Saturated hydraulic conductivity.

Lacustrine deposit

Material deposited in lake water and exposed when the water level is lowered or the elevation of the land is raised.

Lake plain

A nearly level surface marking the floor of an extinct lake filled by well sorted, generally fine textured, stratified deposits, commonly containing varves.

Lake terrace

A narrow shelf, partly cut and partly built, produced along a lakeshore in front of a scarp line of low cliffs and later exposed when the water level falls.

Landfill (map symbol)

An area of accumulated waste products of human habitation, either above or below natural ground level.

Landslide

A general, encompassing term for most types of mass movement landforms and processes involving the downslope transport and outward deposition of soil and rock materials caused by gravitational forces; the movement may or may not involve saturated materials. The speed and distance of movement, as well as the amount of soil and rock material, vary greatly.

Large stones

Rock fragments 3 inches (7.6 centimeters) or more across. Large stones adversely affect the specified use of the soil.

Lava flow (map symbol)

A solidified, commonly lobate body of rock formed through lateral, surface outpouring of molten lava from a vent or fissure.

Leaching

The removal of soluble material from soil or other material by percolating water.

Levee (map symbol)

An embankment that confines or controls water, especially one built along the banks of a river to prevent overflow onto lowlands.

Linear extensibility

Refers to the change in length of an unconfined clod as moisture content is decreased from a moist to a dry state. Linear extensibility is used to determine the shrink-swell potential of soils. It is an expression of the volume change between the water content of the clod at $1/3$ - or $1/10$ -bar tension (33kPa or 10kPa tension) and oven dryness. Volume change is influenced by the amount and type of clay minerals in the soil. The volume change is the percent change for the whole soil. If it is expressed as a fraction, the resulting value is COLE, coefficient of linear extensibility.

Liquid limit

The moisture content at which the soil passes from a plastic to a liquid state.

Loam

Soil material that is 7 to 27 percent clay particles, 28 to 50 percent silt particles, and less than 52 percent sand particles.

Loess

Material transported and deposited by wind and consisting dominantly of silt-sized particles.

Low strength

The soil is not strong enough to support loads.

Low-residue crops

Such crops as corn used for silage, peas, beans, and potatoes. Residue from these crops is not adequate to control erosion until the next crop in the rotation is established. These crops return little organic matter to the soil.

Marl

An earthy, unconsolidated deposit consisting chiefly of calcium carbonate mixed with clay in approximately equal proportions; formed primarily under freshwater lacustrine conditions but also formed in more saline environments.

Marsh or swamp (map symbol)

A water-saturated, very poorly drained area that is intermittently or permanently covered by water. Sedges, cattails, and rushes are the dominant vegetation in marshes, and trees or shrubs are the dominant vegetation in swamps. Not used in map units where the named soils are poorly drained or very poorly drained.

Mass movement

A generic term for the dislodgment and downslope transport of soil and rock material as a unit under direct gravitational stress.

Masses

See Redoximorphic features.

Meander belt

The zone within which migration of a meandering channel occurs; the flood-plain area included between two imaginary lines drawn tangential to the outer bends of active channel loops.

Meander scar

A crescent-shaped, concave or linear mark on the face of a bluff or valley wall, produced by the lateral erosion of a meandering stream that impinged upon and undercut the bluff.

Meander scroll

One of a series of long, parallel, close-fitting, crescent-shaped ridges and troughs formed along the inner bank of a stream meander as the channel migrated laterally down-valley and toward the outer bank.

Mechanical treatment

Use of mechanical equipment for seeding, brush management, and other management practices.

Medium textured soil

Very fine sandy loam, loam, silt loam, or silt.

Mesa

A broad, nearly flat topped and commonly isolated landmass bounded by steep slopes or precipitous cliffs and capped by layers of resistant, nearly horizontal rocky material. The summit width is characteristically greater than the height of the bounding escarpments.

Metamorphic rock

Rock of any origin altered in mineralogical composition, chemical composition, or structure by heat, pressure, and movement at depth in the earth's crust. Nearly all such rocks are crystalline.

Mine or quarry (map symbol)

An open excavation from which soil and underlying material have been removed and in which bedrock is exposed. Also denotes surface openings to underground mines.

Mine spoil

An accumulation of displaced earthy material, rock, or other waste material removed during mining or excavation. Also called earthy fill.

Mineral soil

Soil that is mainly mineral material and low in organic material. Its bulk density is more than that of organic soil.

Minimum tillage

Only the tillage essential to crop production and prevention of soil damage.

Miscellaneous area

A kind of map unit that has little or no natural soil and supports little or no vegetation.

Miscellaneous water (map symbol)

Small, constructed bodies of water that are used for industrial, sanitary, or mining applications and that contain water most of the year.

Moderately coarse textured soil

Coarse sandy loam, sandy loam, or fine sandy loam.

Moderately fine textured soil

Clay loam, sandy clay loam, or silty clay loam.

Mollic epipedon

A thick, dark, humus-rich surface horizon (or horizons) that has high base saturation and pedogenic soil structure. It may include the upper part of the subsoil.

Moraine

In terms of glacial geology, a mound, ridge, or other topographically distinct accumulation of unsorted, unstratified drift, predominantly till, deposited primarily by the direct action of glacial ice in a variety of landforms. Also, a general term for a landform composed mainly of till (except for kame moraines, which are composed mainly of stratified outwash) that has been deposited by a glacier. Some types of moraines are disintegration, end, ground, kame, lateral, recessional, and terminal.

Morphology, soil

The physical makeup of the soil, including the texture, structure, porosity, consistence, color, and other physical, mineral, and biological properties of the various horizons, and the thickness and arrangement of those horizons in the soil profile.

Mottling, soil

Irregular spots of different colors that vary in number and size. Descriptive terms are as follows: abundance—*few*, *common*, and *many*; size—*fine*, *medium*, and *coarse*; and contrast—*faint*, *distinct*, and *prominent*. The size measurements are of the diameter along the greatest dimension. *Fine* indicates less than 5 millimeters (about 0.2 inch); *medium*, from 5 to 15 millimeters (about 0.2 to 0.6 inch); and *coarse*, more than 15 millimeters (about 0.6 inch).

Mountain

A generic term for an elevated area of the land surface, rising more than 1,000 feet (300 meters) above surrounding lowlands, commonly of restricted summit area (relative to a plateau) and generally having steep sides. A mountain can

occur as a single, isolated mass or in a group forming a chain or range. Mountains are formed primarily by tectonic activity and/or volcanic action but can also be formed by differential erosion.

Muck

Dark, finely divided, well decomposed organic soil material. (See Sapric soil material.)

Mucky peat

See Hemic soil material.

Mudstone

A blocky or massive, fine grained sedimentary rock in which the proportions of clay and silt are approximately equal. Also, a general term for such material as clay, silt, claystone, siltstone, shale, and argillite and that should be used only when the amounts of clay and silt are not known or cannot be precisely identified.

Munsell notation

A designation of color by degrees of three simple variables—hue, value, and chroma. For example, a notation of 10YR 6/4 is a color with hue of 10YR, value of 6, and chroma of 4.

Natric horizon

A special kind of argillic horizon that contains enough exchangeable sodium to have an adverse effect on the physical condition of the subsoil.

Neutral soil

A soil having a pH value of 6.6 to 7.3. (See Reaction, soil.)

Nodules

See Redoximorphic features.

Nose slope (geomorphology)

A geomorphic component of hills consisting of the projecting end (laterally convex area) of a hillside. The overland waterflow is predominantly divergent. Nose slopes consist dominantly of colluvium and slope-wash sediments (for example, slope alluvium).

Nutrient, plant

Any element taken in by a plant essential to its growth. Plant nutrients are mainly nitrogen, phosphorus, potassium, calcium, magnesium, sulfur, iron, manganese, copper, boron, and zinc obtained from the soil and carbon, hydrogen, and oxygen obtained from the air and water.

Organic matter

Plant and animal residue in the soil in various stages of decomposition. The content of organic matter in the surface layer is described as follows:

Custom Soil Resource Report

Very low: Less than 0.5 percent

Low: 0.5 to 1.0 percent

Moderately low: 1.0 to 2.0 percent

Moderate: 2.0 to 4.0 percent

High: 4.0 to 8.0 percent

Very high: More than 8.0 percent

Outwash

Stratified and sorted sediments (chiefly sand and gravel) removed or “washed out” from a glacier by meltwater streams and deposited in front of or beyond the end moraine or the margin of a glacier. The coarser material is deposited nearer to the ice.

Outwash plain

An extensive lowland area of coarse textured glaciofluvial material. An outwash plain is commonly smooth; where pitted, it generally is low in relief.

Paleoterrace

An erosional remnant of a terrace that retains the surface form and alluvial deposits of its origin but was not emplaced by, and commonly does not grade to, a present-day stream or drainage network.

Pan

A compact, dense layer in a soil that impedes the movement of water and the growth of roots. For example, *hardpan*, *fragipan*, *claypan*, *plowpan*, and *traffic pan*.

Parent material

The unconsolidated organic and mineral material in which soil forms.

Peat

Unconsolidated material, largely undecomposed organic matter, that has accumulated under excess moisture. (See Fibric soil material.)

Ped

An individual natural soil aggregate, such as a granule, a prism, or a block.

Pedisediment

A layer of sediment, eroded from the shoulder and backslope of an erosional slope, that lies on and is being (or was) transported across a gently sloping erosional surface at the foot of a receding hill or mountain slope.

Pedon

The smallest volume that can be called “a soil.” A pedon is three dimensional and large enough to permit study of all horizons. Its area ranges from about 10 to 100 square feet (1 square meter to 10 square meters), depending on the variability of the soil.

Percolation

The movement of water through the soil.

Perennial water (map symbol)

Small, natural or constructed lakes, ponds, or pits that contain water most of the year.

Permafrost

Ground, soil, or rock that remains at or below 0 degrees C for at least 2 years. It is defined on the basis of temperature and is not necessarily frozen.

pH value

A numerical designation of acidity and alkalinity in soil. (See Reaction, soil.)

Phase, soil

A subdivision of a soil series based on features that affect its use and management, such as slope, stoniness, and flooding.

Piping

Formation of subsurface tunnels or pipelike cavities by water moving through the soil.

Pitting

Pits caused by melting around ice. They form on the soil after plant cover is removed.

Plastic limit

The moisture content at which a soil changes from semisolid to plastic.

Plasticity index

The numerical difference between the liquid limit and the plastic limit; the range of moisture content within which the soil remains plastic.

Plateau (geomorphology)

A comparatively flat area of great extent and elevation; specifically, an extensive land region that is considerably elevated (more than 100 meters) above the adjacent lower lying terrain, is commonly limited on at least one side by an abrupt descent, and has a flat or nearly level surface. A comparatively large part of a plateau surface is near summit level.

Playa

The generally dry and nearly level lake plain that occupies the lowest parts of closed depressions, such as those on intermontane basin floors. Temporary flooding occurs primarily in response to precipitation and runoff. Playa deposits are fine grained and may or may not have a high water table and saline conditions.

Plinthite

The sesquioxide-rich, humus-poor, highly weathered mixture of clay with quartz and other diluents. It commonly appears as red mottles, usually in platy, polygonal, or reticulate patterns. Plinthite changes irreversibly to an ironstone hardpan or to irregular aggregates on repeated wetting and drying, especially if it is exposed also to heat from the sun. In a moist soil, plinthite can be cut with a spade. It is a form of laterite.

Plowpan

A compacted layer formed in the soil directly below the plowed layer.

Ponding

Standing water on soils in closed depressions. Unless the soils are artificially drained, the water can be removed only by percolation or evapotranspiration.

Poorly graded

Refers to a coarse grained soil or soil material consisting mainly of particles of nearly the same size. Because there is little difference in size of the particles, density can be increased only slightly by compaction.

Pore linings

See Redoximorphic features.

Potential native plant community

See Climax plant community.

Potential rooting depth (effective rooting depth)

Depth to which roots could penetrate if the content of moisture in the soil were adequate. The soil has no properties restricting the penetration of roots to this depth.

Prescribed burning

Deliberately burning an area for specific management purposes, under the appropriate conditions of weather and soil moisture and at the proper time of day.

Productivity, soil

The capability of a soil for producing a specified plant or sequence of plants under specific management.

Profile, soil

A vertical section of the soil extending through all its horizons and into the parent material.

Proper grazing use

Grazing at an intensity that maintains enough cover to protect the soil and maintain or improve the quantity and quality of the desirable vegetation. This practice increases the vigor and reproduction capacity of the key plants and

promotes the accumulation of litter and mulch necessary to conserve soil and water.

Rangeland

Land on which the potential natural vegetation is predominantly grasses, grasslike plants, forbs, or shrubs suitable for grazing or browsing. It includes natural grasslands, savannas, many wetlands, some deserts, tundras, and areas that support certain forb and shrub communities.

Reaction, soil

A measure of acidity or alkalinity of a soil, expressed as pH values. A soil that tests to pH 7.0 is described as precisely neutral in reaction because it is neither acid nor alkaline. The degrees of acidity or alkalinity, expressed as pH values, are:

Ultra acid: Less than 3.5

Extremely acid: 3.5 to 4.4

Very strongly acid: 4.5 to 5.0

Strongly acid: 5.1 to 5.5

Moderately acid: 5.6 to 6.0

Slightly acid: 6.1 to 6.5

Neutral: 6.6 to 7.3

Slightly alkaline: 7.4 to 7.8

Moderately alkaline: 7.9 to 8.4

Strongly alkaline: 8.5 to 9.0

Very strongly alkaline: 9.1 and higher

Red beds

Sedimentary strata that are mainly red and are made up largely of sandstone and shale.

Redoximorphic concentrations

See Redoximorphic features.

Redoximorphic depletions

See Redoximorphic features.

Redoximorphic features

Redoximorphic features are associated with wetness and result from alternating periods of reduction and oxidation of iron and manganese compounds in the soil. Reduction occurs during saturation with water, and oxidation occurs when the soil is not saturated. Characteristic color patterns are created by these processes. The reduced iron and manganese ions may be removed from a soil if vertical or lateral fluxes of water occur, in which case there is no iron or manganese precipitation in that soil. Wherever the iron and manganese are oxidized and precipitated, they form either soft masses or hard concretions or nodules. Movement of iron and manganese as a result of redoximorphic processes in a soil may result in redoximorphic features that are defined as follows:

Custom Soil Resource Report

1. Redoximorphic concentrations.—These are zones of apparent accumulation of iron-manganese oxides, including:
 - A. Nodules and concretions, which are cemented bodies that can be removed from the soil intact. Concretions are distinguished from nodules on the basis of internal organization. A concretion typically has concentric layers that are visible to the naked eye. Nodules do not have visible organized internal structure; *and*
 - B. Masses, which are noncemented concentrations of substances within the soil matrix; *and*
 - C. Pore linings, i.e., zones of accumulation along pores that may be either coatings on pore surfaces or impregnations from the matrix adjacent to the pores.
2. Redoximorphic depletions.—These are zones of low chroma (chromas less than those in the matrix) where either iron-manganese oxides alone or both iron-manganese oxides and clay have been stripped out, including:
 - A. Iron depletions, i.e., zones that contain low amounts of iron and manganese oxides but have a clay content similar to that of the adjacent matrix; *and*
 - B. Clay depletions, i.e., zones that contain low amounts of iron, manganese, and clay (often referred to as silt coatings or skeletans).
3. Reduced matrix.—This is a soil matrix that has low chroma *in situ* but undergoes a change in hue or chroma within 30 minutes after the soil material has been exposed to air.

Reduced matrix

See Redoximorphic features.

Regolith

All unconsolidated earth materials above the solid bedrock. It includes material weathered in place from all kinds of bedrock and alluvial, glacial, eolian, lacustrine, and pyroclastic deposits.

Relief

The relative difference in elevation between the upland summits and the lowlands or valleys of a given region.

Residuum (residual soil material)

Unconsolidated, weathered or partly weathered mineral material that accumulated as bedrock disintegrated in place.

Rill

A very small, steep-sided channel resulting from erosion and cut in unconsolidated materials by concentrated but intermittent flow of water. A rill generally is not an obstacle to wheeled vehicles and is shallow enough to be smoothed over by ordinary tillage.

Riser

The vertical or steep side slope (e.g., escarpment) of terraces, flood-plain steps, or other stepped landforms; commonly a recurring part of a series of natural, steplike landforms, such as successive stream terraces.

Road cut

A sloping surface produced by mechanical means during road construction. It is commonly on the uphill side of the road.

Rock fragments

Rock or mineral fragments having a diameter of 2 millimeters or more; for example, pebbles, cobbles, stones, and boulders.

Rock outcrop (map symbol)

An exposure of bedrock at the surface of the earth. Not used where the named soils of the surrounding map unit are shallow over bedrock or where "Rock outcrop" is a named component of the map unit.

Root zone

The part of the soil that can be penetrated by plant roots.

Runoff

The precipitation discharged into stream channels from an area. The water that flows off the surface of the land without sinking into the soil is called surface runoff. Water that enters the soil before reaching surface streams is called ground-water runoff or seepage flow from ground water.

Saline soil

A soil containing soluble salts in an amount that impairs growth of plants. A saline soil does not contain excess exchangeable sodium.

Saline spot (map symbol)

An area where the surface layer has an electrical conductivity of 8 mmhos/cm more than the surface layer of the named soils in the surrounding map unit. The surface layer of the surrounding soils has an electrical conductivity of 2 mmhos/cm or less.

Sand

As a soil separate, individual rock or mineral fragments from 0.05 millimeter to 2.0 millimeters in diameter. Most sand grains consist of quartz. As a soil textural class, a soil that is 85 percent or more sand and not more than 10 percent clay.

Sandstone

Sedimentary rock containing dominantly sand-sized particles.

Sandy spot (map symbol)

A spot where the surface layer is loamy fine sand or coarser in areas where the surface layer of the named soils in the surrounding map unit is very fine sandy loam or finer.

Sapric soil material (muck)

The most highly decomposed of all organic soil material. Muck has the least amount of plant fiber, the highest bulk density, and the lowest water content at saturation of all organic soil material.

Saturated hydraulic conductivity (Ksat)

The ease with which pores of a saturated soil transmit water. Formally, the proportionality coefficient that expresses the relationship of the rate of water movement to hydraulic gradient in Darcy's Law, a law that describes the rate of water movement through porous media. Commonly abbreviated as "Ksat." Terms describing saturated hydraulic conductivity are:

Very high: 100 or more micrometers per second (14.17 or more inches per hour)

High: 10 to 100 micrometers per second (1.417 to 14.17 inches per hour)

Moderately high: 1 to 10 micrometers per second (0.1417 inch to 1.417 inches per hour)

Moderately low: 0.1 to 1 micrometer per second (0.01417 to 0.1417 inch per hour)

Low: 0.01 to 0.1 micrometer per second (0.001417 to 0.01417 inch per hour)

Very low: Less than 0.01 micrometer per second (less than 0.001417 inch per hour).

To convert inches per hour to micrometers per second, multiply inches per hour by 7.0572. To convert micrometers per second to inches per hour, multiply micrometers per second by 0.1417.

Saturation

Wetness characterized by zero or positive pressure of the soil water. Under conditions of saturation, the water will flow from the soil matrix into an unlined auger hole.

Scarification

The act of abrading, scratching, loosening, crushing, or modifying the surface to increase water absorption or to provide a more tillable soil.

Sedimentary rock

A consolidated deposit of clastic particles, chemical precipitates, or organic remains accumulated at or near the surface of the earth under normal low temperature and pressure conditions. Sedimentary rocks include consolidated equivalents of alluvium, colluvium, drift, and eolian, lacustrine, and marine deposits. Examples are sandstone, siltstone, mudstone, claystone, shale, conglomerate, limestone, dolomite, and coal.

Sequum

A sequence consisting of an illuvial horizon and the overlying eluvial horizon. (See Eluviation.)

Series, soil

A group of soils that have profiles that are almost alike, except for differences in texture of the surface layer. All the soils of a series have horizons that are similar in composition, thickness, and arrangement.

Severely eroded spot (map symbol)

An area where, on the average, 75 percent or more of the original surface layer has been lost because of accelerated erosion. Not used in map units in which "severely eroded," "very severely eroded," or "gullied" is part of the map unit name.

Shale

Sedimentary rock that formed by the hardening of a deposit of clay, silty clay, or silty clay loam and that has a tendency to split into thin layers.

Sheet erosion

The removal of a fairly uniform layer of soil material from the land surface by the action of rainfall and surface runoff.

Short, steep slope (map symbol)

A narrow area of soil having slopes that are at least two slope classes steeper than the slope class of the surrounding map unit.

Shoulder

The convex, erosional surface near the top of a hillslope. A shoulder is a transition from summit to backslope.

Shrink-swell

The shrinking of soil when dry and the swelling when wet. Shrinking and swelling can damage roads, dams, building foundations, and other structures. It can also damage plant roots.

Shrub-coppice dune

A small, streamlined dune that forms around brush and clump vegetation.

Side slope (geomorphology)

A geomorphic component of hills consisting of a laterally planar area of a hillside. The overland waterflow is predominantly parallel. Side slopes are dominantly colluvium and slope-wash sediments.

Silica

A combination of silicon and oxygen. The mineral form is called quartz.

Silica-sesquioxide ratio

The ratio of the number of molecules of silica to the number of molecules of alumina and iron oxide. The more highly weathered soils or their clay fractions in warm-temperate, humid regions, and especially those in the tropics, generally have a low ratio.

Silt

As a soil separate, individual mineral particles that range in diameter from the upper limit of clay (0.002 millimeter) to the lower limit of very fine sand (0.05 millimeter). As a soil textural class, soil that is 80 percent or more silt and less than 12 percent clay.

Siltstone

An indurated silt having the texture and composition of shale but lacking its fine lamination or fissility; a massive mudstone in which silt predominates over clay.

Similar soils

Soils that share limits of diagnostic criteria, behave and perform in a similar manner, and have similar conservation needs or management requirements for the major land uses in the survey area.

Sinkhole (map symbol)

A closed, circular or elliptical depression, commonly funnel shaped, characterized by subsurface drainage and formed either by dissolution of the surface of underlying bedrock (e.g., limestone, gypsum, or salt) or by collapse of underlying caves within bedrock. Complexes of sinkholes in carbonate-rock terrain are the main components of karst topography.

Site index

A designation of the quality of a forest site based on the height of the dominant stand at an arbitrarily chosen age. For example, if the average height attained by dominant and codominant trees in a fully stocked stand at the age of 50 years is 75 feet, the site index is 75.

Slickensides (pedogenic)

Grooved, striated, and/or glossy (shiny) slip faces on structural peds, such as wedges; produced by shrink-swell processes, most commonly in soils that have a high content of expansive clays.

Slide or slip (map symbol)

A prominent landform scar or ridge caused by fairly recent mass movement or descent of earthy material resulting from failure of earth or rock under shear stress along one or several surfaces.

Slope

The inclination of the land surface from the horizontal. Percentage of slope is the vertical distance divided by horizontal distance, then multiplied by 100. Thus, a slope of 20 percent is a drop of 20 feet in 100 feet of horizontal distance.

Slope alluvium

Sediment gradually transported down the slopes of mountains or hills primarily by nonchannel alluvial processes (i.e., slope-wash processes) and characterized by particle sorting. Lateral particle sorting is evident on long slopes. In a profile sequence, sediments may be distinguished by differences in size and/or specific gravity of rock fragments and may be separated by stone lines. Burnished peds and sorting of rounded or subrounded pebbles or cobbles distinguish these materials from unsorted colluvial deposits.

Slow refill

The slow filling of ponds, resulting from restricted water transmission in the soil.

Slow water movement

Restricted downward movement of water through the soil. See Saturated hydraulic conductivity.

Sodic (alkali) soil

A soil having so high a degree of alkalinity (pH 8.5 or higher) or so high a percentage of exchangeable sodium (15 percent or more of the total exchangeable bases), or both, that plant growth is restricted.

Sodic spot (map symbol)

An area where the surface layer has a sodium adsorption ratio that is at least 10 more than that of the surface layer of the named soils in the surrounding map unit. The surface layer of the surrounding soils has a sodium adsorption ratio of 5 or less.

Sodicity

The degree to which a soil is affected by exchangeable sodium. Sodicity is expressed as a sodium adsorption ratio (SAR) of a saturation extract, or the ratio of Na^+ to $\text{Ca}^{++} + \text{Mg}^{++}$. The degrees of sodicity and their respective ratios are:

Slight: Less than 13:1

Moderate: 13-30:1

Strong: More than 30:1

Sodium adsorption ratio (SAR)

A measure of the amount of sodium (Na) relative to calcium (Ca) and magnesium (Mg) in the water extract from saturated soil paste. It is the ratio of the Na concentration divided by the square root of one-half of the Ca + Mg concentration.

Soft bedrock

Bedrock that can be excavated with trenching machines, backhoes, small rippers, and other equipment commonly used in construction.

Soil

A natural, three-dimensional body at the earth's surface. It is capable of supporting plants and has properties resulting from the integrated effect of climate and living matter acting on earthy parent material, as conditioned by relief and by the passage of time.

Soil separates

Mineral particles less than 2 millimeters in equivalent diameter and ranging between specified size limits. The names and sizes, in millimeters, of separates recognized in the United States are as follows:

Very coarse sand: 2.0 to 1.0

Coarse sand: 1.0 to 0.5

Medium sand: 0.5 to 0.25

Fine sand: 0.25 to 0.10

Very fine sand: 0.10 to 0.05

Silt: 0.05 to 0.002

Clay: Less than 0.002

Solum

The upper part of a soil profile, above the C horizon, in which the processes of soil formation are active. The solum in soil consists of the A, E, and B horizons. Generally, the characteristics of the material in these horizons are unlike those of the material below the solum. The living roots and plant and animal activities are largely confined to the solum.

Spoil area (map symbol)

A pile of earthy materials, either smoothed or uneven, resulting from human activity.

Stone line

In a vertical cross section, a line formed by scattered fragments or a discrete layer of angular and subangular rock fragments (commonly a gravel- or cobble-sized lag concentration) that formerly was draped across a topographic surface and was later buried by additional sediments. A stone line generally caps material that was subject to weathering, soil formation, and erosion before burial. Many stone lines seem to be buried erosion pavements, originally formed by sheet and rill erosion across the land surface.

Stones

Rock fragments 10 to 24 inches (25 to 60 centimeters) in diameter if rounded or 15 to 24 inches (38 to 60 centimeters) in length if flat.

Stony

Refers to a soil containing stones in numbers that interfere with or prevent tillage.

Stony spot (map symbol)

A spot where 0.01 to 0.1 percent of the soil surface is covered by rock fragments that are more than 10 inches in diameter in areas where the surrounding soil has no surface stones.

Strath terrace

A type of stream terrace; formed as an erosional surface cut on bedrock and thinly mantled with stream deposits (alluvium).

Stream terrace

One of a series of platforms in a stream valley, flanking and more or less parallel to the stream channel, originally formed near the level of the stream; represents the remnants of an abandoned flood plain, stream bed, or valley floor produced during a former state of fluvial erosion or deposition.

Stripcropping

Growing crops in a systematic arrangement of strips or bands that provide vegetative barriers to wind erosion and water erosion.

Structure, soil

The arrangement of primary soil particles into compound particles or aggregates. The principal forms of soil structure are:

Platy: Flat and laminated

Prismatic: Vertically elongated and having flat tops

Columnar: Vertically elongated and having rounded tops

Angular blocky: Having faces that intersect at sharp angles (planes)

Subangular blocky: Having subrounded and planar faces (no sharp angles)

Granular: Small structural units with curved or very irregular faces

Structureless soil horizons are defined as follows:

Single grained: Entirely noncoherent (each grain by itself), as in loose sand

Massive: Occurring as a coherent mass

Stubble mulch

Stubble or other crop residue left on the soil or partly worked into the soil. It protects the soil from wind erosion and water erosion after harvest, during preparation of a seedbed for the next crop, and during the early growing period of the new crop.

Subsoil

Technically, the B horizon; roughly, the part of the solum below plow depth.

Subsoiling

Tilling a soil below normal plow depth, ordinarily to shatter a hardpan or claypan.

Substratum

The part of the soil below the solum.

Subsurface layer

Any surface soil horizon (A, E, AB, or EB) below the surface layer.

Summer fallow

The tillage of uncropped land during the summer to control weeds and allow storage of moisture in the soil for the growth of a later crop. A practice common in semiarid regions, where annual precipitation is not enough to produce a crop every year. Summer fallow is frequently practiced before planting winter grain.

Summit

The topographically highest position of a hillslope. It has a nearly level (planar or only slightly convex) surface.

Surface layer

The soil ordinarily moved in tillage, or its equivalent in uncultivated soil, ranging in depth from 4 to 10 inches (10 to 25 centimeters). Frequently designated as the "plow layer," or the "Ap horizon."

Surface soil

The A, E, AB, and EB horizons, considered collectively. It includes all subdivisions of these horizons.

Talus

Rock fragments of any size or shape (commonly coarse and angular) derived from and lying at the base of a cliff or very steep rock slope. The accumulated mass of such loose broken rock formed chiefly by falling, rolling, or sliding.

Taxadjuncts

Soils that cannot be classified in a series recognized in the classification system. Such soils are named for a series they strongly resemble and are designated as taxadjuncts to that series because they differ in ways too small to be of consequence in interpreting their use and behavior. Soils are recognized as taxadjuncts only when one or more of their characteristics are slightly outside the range defined for the family of the series for which the soils are named.

Terminal moraine

An end moraine that marks the farthest advance of a glacier. It typically has the form of a massive arcuate or concentric ridge, or complex of ridges, and is underlain by till and other types of drift.

Terrace (conservation)

An embankment, or ridge, constructed across sloping soils on the contour or at a slight angle to the contour. The terrace intercepts surface runoff so that water soaks into the soil or flows slowly to a prepared outlet. A terrace in a field

generally is built so that the field can be farmed. A terrace intended mainly for drainage has a deep channel that is maintained in permanent sod.

Terrace (geomorphology)

A steplike surface, bordering a valley floor or shoreline, that represents the former position of a flood plain, lake, or seashore. The term is usually applied both to the relatively flat summit surface (tread) that was cut or built by stream or wave action and to the steeper descending slope (scarp or riser) that has graded to a lower base level of erosion.

Terracettes

Small, irregular steplike forms on steep hillslopes, especially in pasture, formed by creep or erosion of surficial materials that may be induced or enhanced by trampling of livestock, such as sheep or cattle.

Texture, soil

The relative proportions of sand, silt, and clay particles in a mass of soil. The basic textural classes, in order of increasing proportion of fine particles, are *sand, loamy sand, sandy loam, loam, silt loam, silt, sandy clay loam, clay loam, silty clay loam, sandy clay, silty clay, and clay*. The sand, loamy sand, and sandy loam classes may be further divided by specifying "coarse," "fine," or "very fine."

Thin layer

Otherwise suitable soil material that is too thin for the specified use.

Till

Dominantly unsorted and nonstratified drift, generally unconsolidated and deposited directly by a glacier without subsequent reworking by meltwater, and consisting of a heterogeneous mixture of clay, silt, sand, gravel, stones, and boulders; rock fragments of various lithologies are embedded within a finer matrix that can range from clay to sandy loam.

Till plain

An extensive area of level to gently undulating soils underlain predominantly by till and bounded at the distal end by subordinate recessional or end moraines.

Tilth, soil

The physical condition of the soil as related to tillage, seedbed preparation, seedling emergence, and root penetration.

Toeslope

The gently inclined surface at the base of a hillslope. Toeslopes in profile are commonly gentle and linear and are constructional surfaces forming the lower part of a hillslope continuum that grades to valley or closed-depression floors.

Topsoil

The upper part of the soil, which is the most favorable material for plant growth. It is ordinarily rich in organic matter and is used to topdress roadbanks, lawns, and land affected by mining.

Trace elements

Chemical elements, for example, zinc, cobalt, manganese, copper, and iron, in soils in extremely small amounts. They are essential to plant growth.

Tread

The flat to gently sloping, topmost, laterally extensive slope of terraces, flood-plain steps, or other stepped landforms; commonly a recurring part of a series of natural steplike landforms, such as successive stream terraces.

Tuff

A generic term for any consolidated or cemented deposit that is 50 percent or more volcanic ash.

Upland

An informal, general term for the higher ground of a region, in contrast with a low-lying adjacent area, such as a valley or plain, or for land at a higher elevation than the flood plain or low stream terrace; land above the footslope zone of the hillslope continuum.

Valley fill

The unconsolidated sediment deposited by any agent (water, wind, ice, or mass wasting) so as to fill or partly fill a valley.

Variiegation

Refers to patterns of contrasting colors assumed to be inherited from the parent material rather than to be the result of poor drainage.

Varve

A sedimentary layer or a lamina or sequence of laminae deposited in a body of still water within a year. Specifically, a thin pair of graded glaciolacustrine layers seasonally deposited, usually by meltwater streams, in a glacial lake or other body of still water in front of a glacier.

Very stony spot (map symbol)

A spot where 0.1 to 3.0 percent of the soil surface is covered by rock fragments that are more than 10 inches in diameter in areas where the surface of the surrounding soil is covered by less than 0.01 percent stones.

Water bars

Smooth, shallow ditches or depressional areas that are excavated at an angle across a sloping road. They are used to reduce the downward velocity of water and divert it off and away from the road surface. Water bars can easily be driven over if constructed properly.

Weathering

All physical disintegration, chemical decomposition, and biologically induced changes in rocks or other deposits at or near the earth's surface by atmospheric or biologic agents or by circulating surface waters but involving essentially no transport of the altered material.

Well graded

Refers to soil material consisting of coarse grained particles that are well distributed over a wide range in size or diameter. Such soil normally can be easily increased in density and bearing properties by compaction. Contrasts with poorly graded soil.

Wet spot (map symbol)

A somewhat poorly drained to very poorly drained area that is at least two drainage classes wetter than the named soils in the surrounding map unit.

Wilting point (or permanent wilting point)

The moisture content of soil, on an oven-dry basis, at which a plant (specifically a sunflower) wilts so much that it does not recover when placed in a humid, dark chamber.

Windthrow

The uprooting and tipping over of trees by the wind.

SITE AND PROJECT DESCRIPTION

The project site is located at 2731 West 12th Street in the Gravesend neighborhood of Brooklyn, New York (Block 7247, Lot 106), as shown on Figure No. 1. The lot area is about 700,000 square feet. The site is generally bounded by the Coney Island Creek to the south and east, and the Belt Parkway and underlying parking area to the north.

Other notable adjacencies to the site are as follows:

- To the south and east are two narrow lots, Lots 125 and 288. Both lots are vacant and lie along the shoreline of Coney Island Creek. The lots are titled to NYC Department of Small Business Services (SBS).
- The western limit of the site abuts Lot 30, which in turn is adjacent to a New York City Transit (NYCT) elevated viaduct carrying the N and D subway lines. Lot 30 is currently vacant and titled to the NYC Transit Authority.
- To the north, the site mostly fronts an at-grade parking lot beneath the elevated Belt Parkway viaduct, except for Lot 13 at approximately the midpoint and Lot 218 at the northeast corner. Both lots are currently vacant and owned by the NYC Department of Sanitation. North of the elevated Belt Parkway is the NYCT Coney Island train yard.

We understand that the current proposed development is an at-grade parking area with vehicular access via the parking area to the north of the site beneath the Belt Parkway. However, future development schemes include a multistory warehouse with surrounding at-grade parking and a bridge across Coney Island Creek at the southeast corner of the site connecting the proposed facility to Neptune Avenue on Coney Island.

Site History

Figure 2 shows the site in various phases of development. The 1895 Fire Insurance Map shows Coney Island Creek wrapping around the site in a similar pattern as seen today. The site is undeveloped at the time and a proposed ship canal alignment crosses the northern part of the site. The 1920 atlas shows the start of development with several buildings and circular tanks, as well as a vehicle bridge and a train bridge connecting the site to Coney Island to the south across the creek. The 2008 drawing SES-9 of abandoned structures by Severson from the site's SMP shows several former tank and building foundations that remain, while the bridges have been removed.

Site-wide soil remediation was conducted in approximately 2007 to 2008. The remediation included but was not limited to installation of a perimeter sheet pile barrier, excavation and removal of some contaminated soil, establishment of a 50-foot wide Ecological Buffer Zone at the transition from Coney Island Creek to the upland areas, and placement of a Low Permeability Multi-Component Environmental Cap with a gravel venting layer and vents throughout the upland portion of the site. The perimeter sheeting is reported to extend to Elev. -17 along the upland perimeter and to Elev. -26 along Coney Island Creek.

Datum

Elevations in this report are referenced to the North American Vertical Datum of 1988 (NAVD88).

Topography

Site topography generally ranges from about Elev. +16 near the northeast corner to Elev. +8 at the southwest corner, with sharp declines along the perimeter with Coney Island Creek to the water line.

SUBSURFACE INVESTIGATION

2023 Subsurface Investigation

MRCE prepared a due diligence investigation plan consisting of twelve (12) geotechnical borings that was submitted through Prologis and its environmental consultant, Langan, to the NYS DEC for approval. The plan was approved and required a Community Air Monitoring Plan (CAMP) to be

conducted while intrusive work was ongoing. Langan administered the CAMP and performed environmental sampling during the 2023 MRCE geotechnical investigation.

The twelve geotechnical borings, MR-1U through MR-12A, were made by Craig Geotechnical Drilling Co. of Mays Landing, New Jersey between March 27, 2023 and April 3, 2023 under the continuous inspection of MRCE Engineer Ben Jahnke.

The boring locations were laid out by survey and cleared with ground penetrating radar by others. As-drilled boring locations are shown on the attached Drawing No. B-1. A description of each geotechnical investigation component is provided below.

Geotechnical Borings

All borings were made by track-mounted drill rigs employing wash-rotary techniques. Four borings (MR-1U, MR-5, MR-7, and MR-12A) were advanced to 62 feet below grade, while the remaining eight borings were advanced to 32 feet. Steel casing and drilling mud were employed to stabilize the boreholes. Typically, four split-spoon samples were conducted in the top 10 feet of each boring, and then at 5-foot centers, thereafter.

Soil Sampling

Soil samples were obtained in general conformance with ASTM D1586 – *Standard Test Method for Standard Penetration Test (SPT) and Split-Barrel Sampling of Soils* using a two-inch outer diameter split-spoon sampler driven with a 140-pound hammer free-falling 30 inches. All borings were sampled with an automatic hammer. Hammer blows required to advance the sampler through each of four, six-inch intervals were recorded. The Standard Penetration Test (SPT) resistance expressed in blows per foot (bpf), also termed N-value, is an indication of the relative density of the material sampled and is calculated by summing the blows from the second and third six-inch drive intervals. Soil samples were classified in accordance with the Unified Soil Classification System (USCS), placed in screw-top glass jars, and delivered to our laboratory. A summary of the USCS criteria is provided on Drawing GS-R, Geotechnical Reference Standards. Boring logs are attached in Appendix A.

In addition to the SPT samples, relatively “undisturbed” tube samples of fine grained/organic soils were attempted in eight (8) of the borings using a Shelby tube sampler. Undisturbed sampling involved attaching a thin walled tube to the Shelby head and pushing the tube into the soil for a length of 24 inches using the drill rig. A total of five (5) Shelby tube samples were recovered. Upon recovery, the tubes were waxed and capped to preserve moisture and protected from the elements until shipment to our laboratory.

Borehole Closure

Upon boring completion, in accordance with the NYSDEC approved plan, all boreholes were tremie grouted with a cement-bentonite mix and the top 5-feet of each hole was backfilled with hydrated bentonite pellets. All drill tooling and sampling equipment was cleaned withalconox between holes, and all drill spoils and cleaning fluid was drummed. Drums were labeled and stored on a drum storage pad for testing and disposal by others.

Groundwater Observation

Groundwater observation wells were not included in MRCE’s investigation due to the potential contamination. Groundwater data is available in the SMP and in GEI’s periodic reports.

LABORATORY REVIEW AND TESTING RESULTS

All soil samples were delivered to the MRCE soil mechanics laboratory. Laboratory testing was not conducted due to the odor of the samples.

SUBSURFACE CONDITIONS

General descriptions of soil and rock strata encountered in the MRCE borings are listed below in order of their occurrence with depth.

Stratum F – Fill (NYC Class 7)

The uppermost material encountered in all of the borings was Stratum F - fill. Stratum F consists of medium compact to loose, brown, black, gray, and white fine to coarse sand, some silt to silty, trace gravel to gravelly, trace brick, roots, clay, mica. The fill layer includes the 38" thick surficial multimedia environmental cap which includes geotextiles, clean fill, and a gravel venting layer. The geotextile was encountered in several samples. The fill ranges from 4.5 to 13.5 feet thick and averages 9.5 feet thick. N values range from 4 to refusal and average 24.

Stratum S1 – Sand (NYC Class 3b)

A natural sand Stratum S1 was encountered below the fill in five borings (MR-3, MR-5, MR-9, MR-10U, and MR-11U). Stratum S1 consists of medium compact to loose, black or dark gray fine to coarse sand, silty to some silt, trace to some gravel, trace clay, roots. Where encountered, Stratum S1 was 4 to 9.5 feet thick. N values range from 5 to 50 and average 23.

Stratum O – Organic Clay, Silt, and Peat (NYC Class 7)

A natural organic deposit, Stratum O, was encountered in nine of the twelve borings. The three borings (MR-5, MR-9, MR-12A) that did not encounter Stratum O were at the southwest portion of the site. Where encountered, Stratum O was underlying the surficial fill or Stratum S1 with thickness ranging from 2 to 10 feet. Stratum O consists of black organic clay, silty to some silt, with peat or roots, trace to some fine to medium sand, trace gravel or gray silt to silty fine to medium sand, some to trace peat or roots, trace to some clay. SPT N values range from weight of hammer to 8 and average approximately 2.

Stratum S2 – Sand (NYC Class 3b)

All twelve borings were terminated in the underlying natural sand Stratum S2. Stratum S2 consists of loose to medium compact, gray, dark gray, and brown fine to coarse sand, some to trace silt, trace to some gravel. Stratum S2 was encountered at depths ranging from 7 to 24.5 feet below grade. N values range from 1 to 32 and average 14.

Stratum M – Clayey Silt (NYC Class 6)

One boring, MR-1U, encountered an approximately 8-foot-thick clayey silt layer within Stratum S2. Stratum M consists of gray clayey silt and the two N values recorded in this stratum are 5 and 9.

Groundwater

Available data from the 2019 SMP show that groundwater ranged from Elev. +2.5 at the upland portion of the site to Elev. +1 near Coney Island Creek. Groundwater monitoring wells are currently maintained by GEI. The most recently available Periodic Review Report by GEI dated December

2022 includes groundwater data reproduced herein as Appendix C. Groundwater elevation in the wells vary from Elev. +6.7 to +0.2 with the lowest readings typically at the shoreline. Groundwater elevation is highest near the northwest quadrant of the site and decreases towards Coney Island Creek to the south and east.

Interpretation of Subsurface Conditions

MRCE's interpretation of subsurface strata based on the investigation is presented on Drawing Nos. GS-1 through GS-4. Transitions between strata are necessary interpolations between data derived at each boring location and may not reflect actual subsurface conditions.

Flood Level

The site is within a special flood hazard area as shown on Figure No. 3. The 2007 Flood Insurance Rate Map (FIRM) and the 2015 Preliminary FIRM produced by the Federal Emergency Management Agency (FEMA) show the approximately western half of the site within Flood Zone AE, indicating a 1% annual chance of flooding. The approximately eastern half of the site is shown on both maps to be a combination of shaded and unshaded Zone X which indicates a 0.2% annual chance or less than a 0.2% chance of flooding, respectively. The extent of Zone AE on the site decreased from the 2007 map to the 2015 preliminary map likely due to changes in grade from the remediation work and additional of the environmental cap conducted in approximately 2008.

PRELIMINARY SEISMIC EVALUATION

Design of the proposed at-grade parking lot will not require a seismic evaluation, however, design of the proposed development schemes including a multistory facility and bridge over Coney Island Creek would have to comply with the seismic provisions of the 2022 New York City Building Code (Code), or the most current Code at the time of the design and development. For structures, the Code requires an evaluation of the seismic Site Class to determine the seismic design parameters.

Liquefaction Evaluation

An assessment of the liquefaction potential under the seismic event specified by the Code is necessary to evaluate the seismic Site Class. Typically, loose granular soils below the groundwater table are subject to potential liquefaction. Liquefaction susceptibility was assessed using the NYCBC Liquefaction Assessment Diagram (NYCBC Figure 1813.1), which compares SPT N-values with specified liquefaction "screening lines". The screening indicates that there is a potential for liquefaction of site soils. Additional borings supplemented with Cone Penetrating Testing (CPT) in conjunction with a site-specific evaluation will be necessary for future development and design.

Site Class

Based on the guidelines of the Code, the seismic site class is either Site Class E, Soft Soil Profile, with seismic coefficients $S_{DS} = 0.450$ and $S_{D1} = 0.171$, or Site Class F, dependent upon the results of additional borings and CPTs, and a site-specific liquefaction evaluation.

PRELIMINARY RECOMMENDATIONS: AT-GRADE PARKING

The proposed development is an at-grade parking lot with a perimeter bioretention system along the border with the Coney Island Creek. Based on the proposed site grading plans, up to three to four feet of fill is anticipated to be placed over most of the site with the existing grade cut in the northeast quadrant.

The general stratigraphy at the site based on the boring investigation and available boring information includes about 5 to 15 feet of fill overlying a 2- to 10-foot-thick compressible silt and/or organic clay over natural outwash sand. The silt/organic clay layer was not encountered in the borings to the southwest of the site (MR-5, MR-9, and MR-12).

The presence of compressible organic clay/silt at depth will result in ground settlement over time, which will require re-surfacing of the asphalt parking lot to maintain grades.

Settlement will not be uniform across the site. Settlement will be greatest in areas of maximum fill height and where the silt/organic clay layer is thickest. Little if any settlement is anticipated in areas to be cut and in the southwest quadrant, considering the silt/organic clay strata was not encountered in this area and also this is where abandoned tank foundations are present. Additional pitch in proposed drainage pipes is recommended to account for future settlement and to maintain proper drainage.

We anticipate the reuse of clean fills above the existing environmental cap. Where grade is cut, replacement of the environmental cap will be necessary, which may lead to over-excavation for a new cap and excavation and removal of contaminated soils.

Some measures can be taken to reduce the amount of settlement including limiting fill thickness, using light-weight fill, or placing surcharge fills with wick drains in advance of parking lot construction.

CONSTRUCTION CONSIDERATIONS

Soil Excavation and Support-of-Excavation

Based on the conceptual drawings, the proposed grading and bioretention system will require excavations through the fill and natural sands, which can be removed using conventional earth moving equipment. Existing intact foundations from the previous buildings and structures that may be present in the fill stratum will have to be removed using pneumatic hammers.

Temporary construction excavations in soil should be sloped as necessary for safety and stability or supported by sheeting and bracing in accordance with OSHA regulations. Open-cut excavation is permissible for shallow excavations, such as for the bioretention system or local pits within the general excavation, provided such excavation is stable and does not undermine or cause damage to adjacent structures. Where such conditions permit, the excavation sides should be sloped no steeper than 1V:1.5H in soil. Sloped excavations along public sidewalks should be protected using a thin concrete cover, minimum three inches thick, to prevent erosion and undermining of the sidewalk and/or street.

For deeper excavations, or where conditions do not permit sloped excavations, drilled-in soldier piles and timber lagging is a suitable and economical method of temporary excavation support. Lateral bracing using tiebacks or internal rakers may be required. Support of excavation must be designed by a qualified engineer experienced in SOE design.

Temporary Construction Dewatering

Proposed grading and bioretention system elevations are anticipated to be above the prevailing groundwater level, therefore, we do not anticipate significant groundwater flows into the excavations. However, the Contractor should plan to remove any water infiltration into the excavations (groundwater, precipitation, or surface run-off) by pumping from local sumps established at the base of the excavation. Surface water should be controlled by sloping grades away from the excavation to prevent water inflow.

The environmental engineer should be consulted with respect to the means and ability to pump surface water or groundwater from excavation areas.

If some areas require over-excavation for unsuitable bearing soils or to replace the environmental cap at a lower elevation, and therefore, extend below the groundwater level, sumps will be required to locally drawdown the groundwater level to maintain a dry and stable subgrade during construction.

Subgrade Preparation

Subgrade for parking lot construction must be proof-rolled using a heavy static compactor prior to sub-base and asphalt placement to determine if there any soft areas are present. If soft areas, organic soils, or deleterious materials are encountered at the slab subgrade elevation, then these areas must be over-excavated and replaced with suitable structural fill. Hard points, such as building remnants and boulders, should be removed a minimum of one foot below parking lot subgrade.

Soil subgrades must be free of standing water. All water must be diverted away from and not allowed to pond in excavations. Care should be exercised to prevent disturbing or loosening the soil in the sides and bottoms of excavations.

Final subgrade exposure in soils must be made using hand tools or a smooth-edged excavating tool, such as a backhoe bucket with the teeth shielded, and operated by reach of equipment working on mats or at least two feet above subgrade. Final subgrade should be promptly covered to protect subgrade materials from subsequent deterioration from weather, surface water infiltration and construction traffic in the interim period until parking lot construction is completed.

Backfill Requirements

Structural fill is recommended for backfilling below the proposed parking lot sub-base. Structural fill should consist of a well-graded sand, gravel, crushed rock, or a mixture of these containing no organic matter, wood, brick, or deleterious materials. Structural fill should have a maximum particle size of 3 inches and a maximum of 10 percent passing the No. 200 sieve. All fill should be placed in loose lifts not exceeding 12 inches (six inches where hand operated equipment is used), at its optimum moisture content plus or minus 3 percent, and compacted to 95 percent of Modified Proctor maximum dry density (ASTM D 1557). Lift thickness is dependent on compaction effort and should be reviewed with the contractor's compaction equipment.

Granular onsite soils are suitable for reuse as fill provided that the soils meet the above gradation requirements, are free of organic or other deleterious materials, sorted for particles larger than 3 inches, possess moisture contents suitable for compaction, and are approved by the environmental engineer for reuse. Contractors should expect some processing may be needed to the meet the requirements above. Alternatively, granular materials can be imported for fill. Onsite soils and sources of off-site borrow should be subjected to laboratory testing including grain size and moisture density tests prior to use to determine if they meet specified backfill requirements.

Light weight fills can be considered to decrease overburden loads on the underlying organic deposits and, therefore, limit future settlement.

Instrumentation and Monitoring

To establish the existing conditions of the surrounding structures, preconstruction condition surveys should be performed prior to demolition and excavation to document the existing conditions of the adjacent elevated Belt Parkway, sidewalks, and streets. This survey should include photographing existing conditions and installing crack gages over existing structural cracks where appropriate.

Monitoring of the adjacent structures for vibrations, settlement, and lateral movement during demolition and construction is required. Optical monitoring points for vertical and lateral displacements should be established on the Belt Parkway structure, the perimeter sheet pile perimeter, and on adjacent structures prior to construction and monitored on a regular basis during demolition, excavation, and parking lot construction. Seismographs should also be installed on the elevated Belt Parkway structure to measure vibration levels caused by vibration-inducing work during excavation and construction. Baseline ambient noise and vibration levels and optical monitoring point readings should be established prior to construction. The monitoring program should identify threshold and limiting values for vibrations and displacements based on the condition of the adjacent structures observed during pre-construction inspections.

Additional instrumentation and monitoring may be necessary due to the proximity of the of the site to the NYCT Coney Island Yard and elevated [D]-train viaduct.

NYCT Considerations

New York City Transit (NYCT) requires support of excavation and structural plans be submitted for review and approval prior to construction for projects within 200 feet of NYCT structures. The proposed parking lot is within 200 feet of NYCT structures on the north and west sides, therefore, a submittal to NYCT for review is required. This should be done early in the design process as the duration of review is uncertain.

NYCBC Special Inspection Requirements

The following items related to construction of foundation elements are subject to NYCBC Special Inspection by a registered professional engineer.

1. Excavation – Sheeting, Shoring, and Bracing
2. Subsurface Conditions – Fill Placement & In-Place Density

FUTURE PROPOSED MULTISTORY WAREHOUSE DEVELOPMENT

We understand several development schemes including a multistory warehouse and a bridge over Coney Island Creek are being considered. A more robust subsurface investigation to satisfy NYCBC requirements and provide adequate information for foundation design is required for any proposed development. Proposed development options currently being considered are included in Appendix D.

Additional Subsurface Investigation

Due to the underlying soft organic deposits, deep foundations consisting of piles is anticipated for future development of the site. For deep foundations, the Code requires at least one boring for every 2,000 square feet for built up areas up to 20,000 square feet and one boring for each additional 4,000 square feet in excess of 20,000 square feet. Up to half of the borings may be substituted for CPTs at a 2 to 1 ratio. For example, the May 3, 2022 Multistory Warehouse option includes a built over area of approximately 240,000 square feet. A development of this size on deep foundations would require

65 borings, or a combination of 33 borings and 48 CPTs. Additional borings and CPTs would be required for the bridge. Due diligence borings conducted within 25-feet of the building footprint may be included to satisfy Code requirements for the number of borings.

CPTs are recommended as they typically provide cost savings compared to borings and provide additional in-situ data for the organic deposits and lower sands to aid in design. In-situ seismic testing can be performed with CPTs to aid in determining the seismic site class and liquefaction potential.

Column and Floor Slab Support

We anticipate that columns may be supported on deep foundations bearing in the natural sand stratum or deeper. Columns may be supported on pile groups while a structural slab may be supported on a grid of individual piles. Alternatively, ground improvement may be conducted for a slab-on-grade. Due to the contamination on site and underlying natural sands full displacement piles may be the most effective and efficient method of deep foundation support. Full displacement piles utilize a continuous flight auger with little to no excavation spoils, and the augered hole is filled with concrete potentially tying in to the existing environmental cap. Connection to the environmental cap would have to be confirmed with the environmental engineer. Depending upon access to the near and far sides of the creek, the bridge may also be supported on full displacement piles.

The environmental cap should be below the pile caps or structural slab to avoid areas of sharp differential settlement that may tear the geotextiles and create discontinuities.

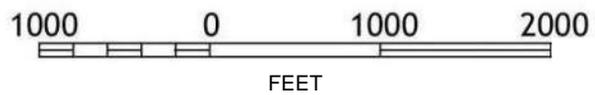

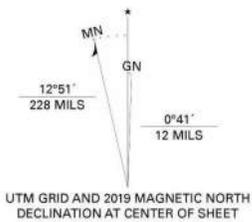

A pile load test program is required to confirm the pile design prior to production piles being installed.

GEOTECHNICAL REVIEW OF DESIGN & CONSTRUCTION

Recommendations for design and construction in this report are based on the information obtained from the borings and available subsurface information. However, conditions on the site may vary between discrete boring locations and observed at the time of the subsurface explorations. The nature and extent of variations between borings may not become evident until exposed in construction.

Geotechnical observation of excavation and construction is recommended to provide an opportunity to observe soil conditions and behavior as exposed during construction, evaluate the applicability of the recommendations provided in this report to the conditions encountered, and recommend appropriate changes in design or construction procedures if conditions differ from those described herein. We recommend that all foundation construction and subgrade preparation be observed by a qualified geotechnical engineer.

LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

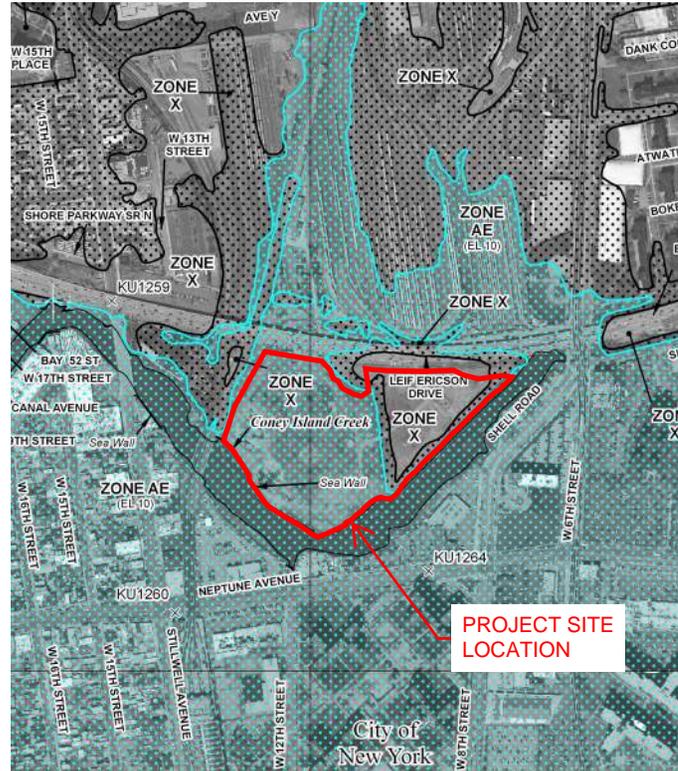

- ZONE A** No Base Flood Elevations determined.
- ZONE AE** Base Flood Elevations determined.
- ZONE AH** Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
- ZONE AO** Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of unusual fan flooding, velocities also determined.
- ZONE AR** Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
- ZONE A99** Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
- ZONE V** Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
- ZONE VE** Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE
The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

- OTHER FLOOD AREAS**
 - ZONE X** Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.
 - OTHER AREAS** Areas determined to be outside the 0.2% annual chance floodplain. Areas in which flood hazards are undetermined, but possible.
- COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS**
- OTHERWISE PROTECTED AREAS (OPAs)**

- CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.
- 1% annual chance floodplain boundary
- 0.2% annual chance floodplain boundary
- Floodway boundary
- Zone D boundary
- CBRS and OPA boundary
- Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, Flood depths or flood velocities.
- Limit of Moderate Wave Action
- Base Flood Elevation line and value; elevation in feet*
- Base Flood Elevation value where uniform within zone; elevation in feet*

- * Referenced to the North American Vertical Datum of 1988

2731 12TH STREET

MUESER RUTLEDGE CONSULTING ENGINEERS PLLC		
14 PENN PLAZA - 225 WEST 34TH STREET, NEW YORK, NY 10122		
MADE BY: PED	CH'KD BY:	DATE: 05-02-2023
FILE NUMBER: 14466	DRAWING NUMBER: FIGURE 3	

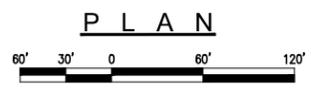

GENERAL NOTES:

1. BASE PLAN PREPARED USING ALTA/NSPS LAND TITLE SURVEY, BY LANGAN, DATED 10/26/2022, GOOGLE EARTH AND DRAWING NO. SES-9, LOCATION & ELEVATION OF ABANDONED PIPES, RELIEF HOLDERS & OTHER BELOW GRADE STRUCTURES, DATED 11/04/08, PREPARED BY SEVENSON ENVIRONMENTAL SERVICES, INC.
2. BORINGS MR-1U THROUGH MR-12A WERE CONDUCTED BY CRAIG GEOTECHNICAL DRILLING COMPANY BETWEEN MARCH 27, 2023 AND APRIL 3, 2023 UNDER THE CONTINUOUS INSPECTION OF MRCE.
3. BORINGS MR-1U THROUGH MR-12A WERE LOCATED IN THE FIELD AND CLEARED WITH GEOPHYSICAL SURVEY BY OTHERS.4
4. GROUND SURFACE ELEVATIONS FOR BORINGS MR-1U THROUGH MR-12A WERE TAKEN FROM LANGAN'S 10/26/22 LAND TITLE SURVEY.
5. B AND PSS SERIES BORING LOCATIONS ARE FROM FIGURE 3 OF THE SMP, AND ASSOCIATED ORGANIC STRATUM DATA IS FROM FIGURES 4 AND 5 OF THE SMP.
6. ALL ELEVATIONS ARE IN FEET AND ARE REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM 1988 (NAVD 88).
7. FOR GEOLOGIC SECTIONS, SEE DRAWING NOS. GS-1 THROUGH GS-4.

LEGEND:

- MR-1U - 2023 MRCE BORING LOCATION
- [2.2] - "A" DENOTES AN OFFSET BORING DUE TO AN OBSTRUCTION
- [U] - "U" DENOTES AN UNDISTURBED TUBE SAMPLE WAS COLLECTED
- [] - THICKNESS OF STRATUM 0
- B-142 - HISTORIC BORING FROM THE SMP
- MW-8 - PIEZOMETER BY OTHERS
- SHEET PILING LINE
- PROPERTY LINE
- X X - SECTION CALLOUTS

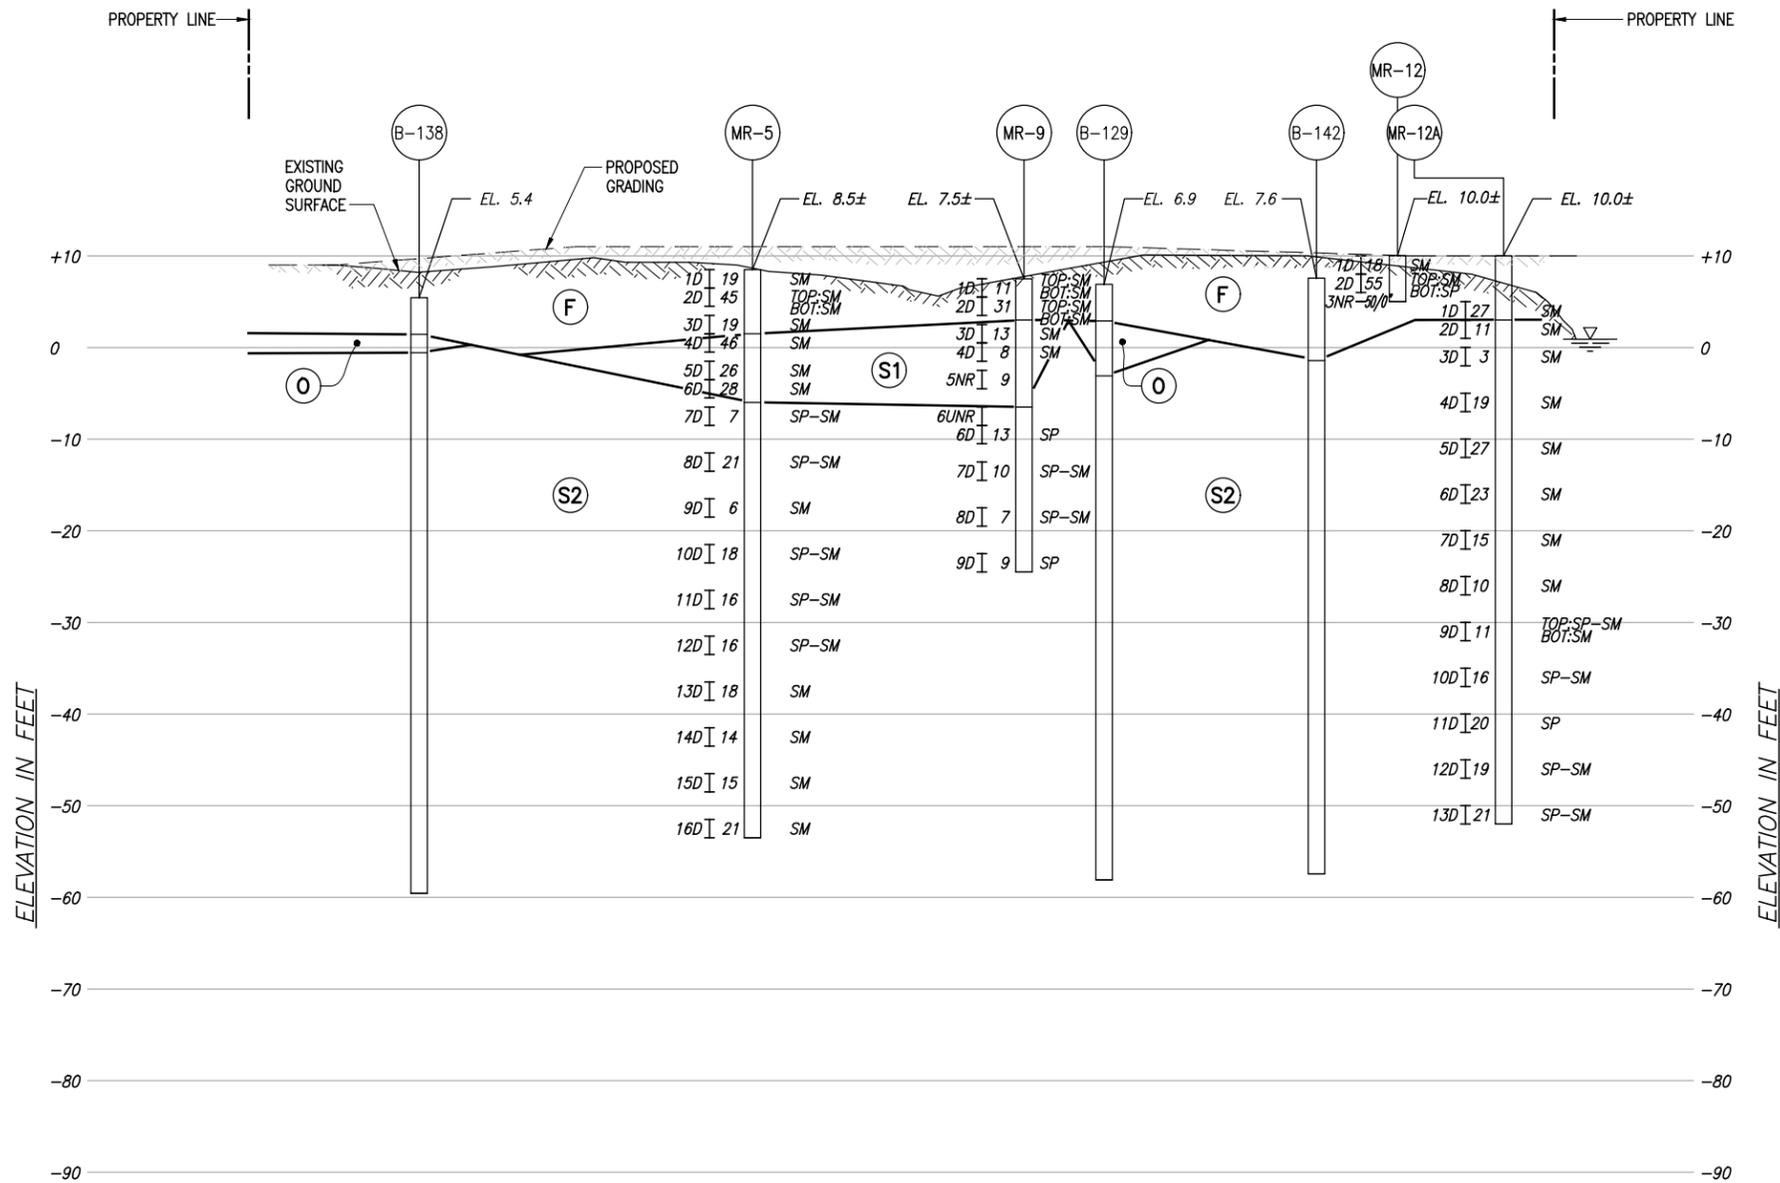

WARNING: IF IT IS A VIOLATION OF THE NEW YORK STATE EDUCATION LAW FOR ANY PERSON, UNLESS ACTING UNDER THE DIRECTION OF A LICENSED PROFESSIONAL ENGINEER, TO ALTER ANY ITEM ON THESE PLANS IN ANY WAY. IF ALTERATIONS TO THESE PLANS ARE MADE, THE ALTERATIONS SHALL BE MADE IN ACCORDANCE WITH ARTICLE 145 - SECTION 7209.2 OF THE NEW YORK STATE EDUCATION LAW.

THIS DRAWING IS THE PROPERTY OF MUESER RUTLEDGE CONSULTING ENGINEERS, PLLC (MRCE), IS FURNISHED SUBJECT TO RETURN ON DEMAND AND ON THE CONDITION THAT THE INFORMATION AND TECHNOLOGY EMBODIED HEREIN SHALL NOT BE DISCLOSED OR USED AND THE DRAWING SHALL NOT BE REPRODUCED OR COPIED IN WHOLE OR IN PART EXCEPT AS PREVIOUSLY AUTHORIZED IN WRITING BY MRCE. ANY PERSON WHO MAY RESERVE OR OBSERVE THIS DRAWING WILL BE HELD STRICTLY LIABLE FOR ANY VIOLATION OF THIS NOTICE, WHETHER WILLFUL OR NEGLIGENT.

UNIFIED SOIL CLASSIFICATION (INCLUDING IDENTIFICATION AND DESCRIPTION)

MAJOR DIVISIONS	GROUP SYMBOLS	TYPICAL NAMES	FIELD IDENTIFICATION PROCEDURES (EXCLUDING PARTICLES LARGER THAN 3 IN. AND BASING FRACTIONS ON ESTIMATED WEIGHTS)			
COARSE-GRAINED SOILS MORE THAN HALF OF MATERIAL IS LARGER THAN NO. 200 SIEVE SIZE (FOR VISUAL CLASSIFICATION, THE 1/4 -IN. SIZE MAY BE USED AS EQUIVALENT TO THE NO. 4 SIEVE SIZE)	GRAVELS	CLEAN GRAVELS (LITTLE OR NO FINES)	GW WELL GRADED GRAVELS, GRAVEL-SAND MIXTURES, LITTLE OR NO FINES.			
		GRAVELS WITH FINES (APPRECIABLE AMOUNT OF FINES)	GP POORLY GRADED GRAVELS, GRAVEL-SAND MIXTURES, LITTLE OR NO FINES.			
	SANDS	CLEAN SANDS (LITTLE OR NO FINES)	SW WELL-GRADED SANDS, GRAVELLY SANDS, LITTLE OR NO FINES.			
		SANDS WITH FINES (APPRECIABLE AMOUNT OF FINES)	SP POORLY GRADED SANDS, GRAVELLY SANDS, LITTLE OR NO FINES.			
	FINE-GRAINED SOILS MORE THAN HALF OF MATERIAL IS SMALLER THAN NO. 200 SIEVE SIZE (FOR VISUAL CLASSIFICATION, THE 1/4 -IN. SIZE MAY BE USED AS EQUIVALENT TO THE NO. 4 SIEVE SIZE)	SANDS WITH FINES (APPRECIABLE AMOUNT OF FINES)	SM SILTY SANDS, SAND-SILT-MIXTURES.	NONPLASTIC FINES OR FINES WITH LOW PLASTICITY (FOR IDENTIFICATION PROCEDURES SEE CL BELOW)		
			SC CLAYEY SANDS, SAND-CLAY MIXTURES.	PLASTIC FINES (FOR IDENTIFICATION PROCEDURES SEE CL BELOW)		
		SILTS AND CLAYS	ML INORGANIC SILTS, SANDY SILTS, ROCK FLOUR, OR CLAYEY SILTS WITH SLIGHT PLASTICITY.	NONE TO SLIGHT	QUICK TO SLOW	NONE
			CL INORGANIC CLAYS, OF LOW TO MEDIUM PLASTICITY, GRAVELLY CLAYS, SANDY CLAYS, SILTY CLAYS, LEAN CLAYS.	MEDIUM TO HIGH	NONE TO VERY SLOW	MEDIUM
	OL ORGANIC SILTS AND ORGANIC SILTY CLAYS OF LOW PLASTICITY.		SLIGHT TO MEDIUM	SLOW	SLIGHT	
	SILTY SANDS AND SILTY CLAYS	MH INORGANIC SILTS, MICACEOUS OR DIATOMACEOUS FINE SANDY OR SILTY SOILS, ELASTIC SILTS.	SLIGHT TO MEDIUM	SLOW TO NONE	SLIGHT TO MEDIUM	
CH INORGANIC CLAYS OF HIGH PLASTICITY, FAT CLAYS.		HIGH TO VERY HIGH	NONE	HIGH		
SANDS WITH FINES (APPRECIABLE AMOUNT OF FINES)	OH ORGANIC CLAYS OF MEDIUM TO HIGH PLASTICITY, ORGANIC SILTS.	MEDIUM TO HIGH	NONE TO VERY SLOW	SLIGHT TO MEDIUM		
	PT PEAT AND OTHER HIGHLY ORGANIC SOILS.	READILY IDENTIFIED BY COLOR, ODOR, SPONGY FEEL AND FREQUENTLY BY FIBROUS TEXTURE.				

BOUNDARY CLASSIFICATIONS: SOILS POSSESSING CHARACTERISTICS OF TWO GROUPS ARE DESIGNATED BY COMBINATIONS OF GROUP SYMBOLS, I.E.: SP-SC POORLY GRADED SAND WITH CLAY BINDER.

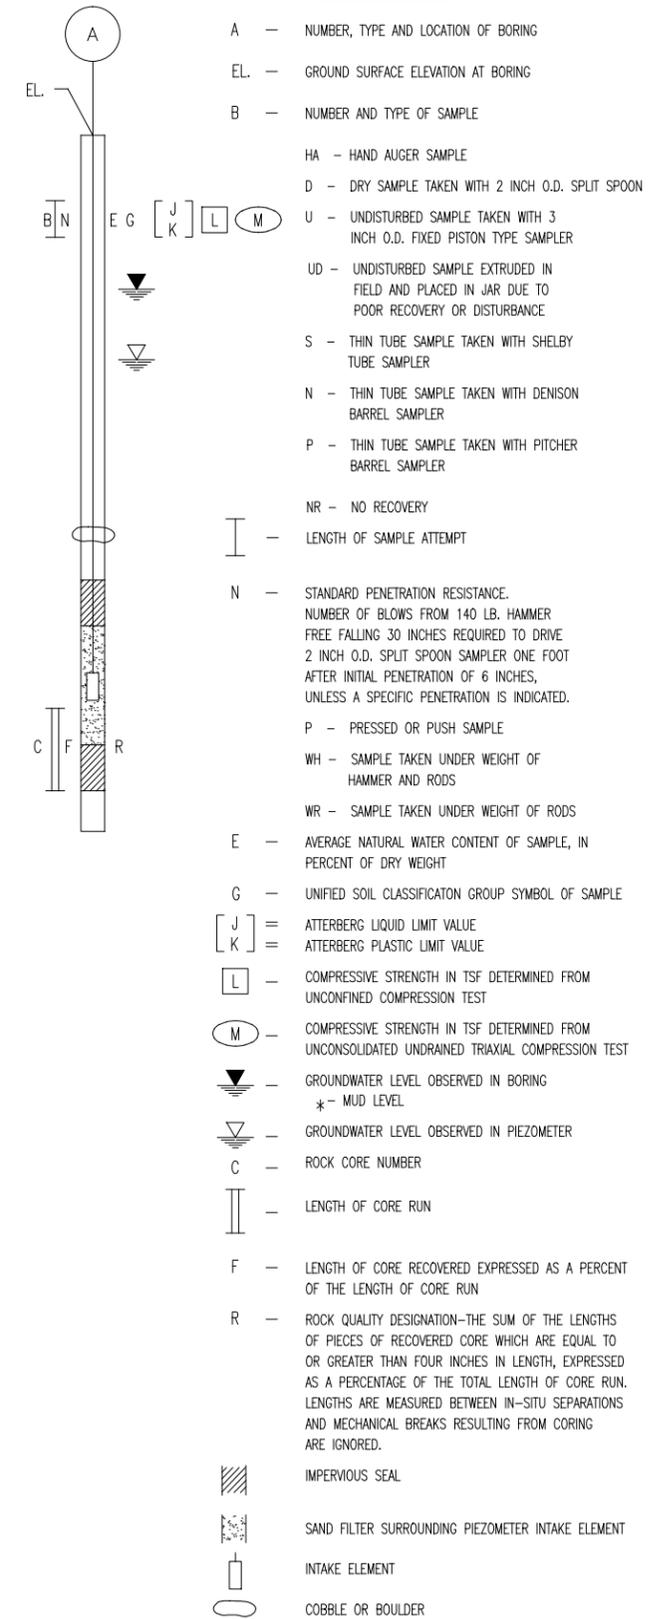

TERMINOLOGY USED IN MRCE SOIL DESCRIPTIONS

DEGREE OF COMPACTION FOR NON-PLASTIC SOIL		CONSISTENCY OF CLAY AND CLAYEY SILT ⁺			DESCRIPTION OF CONSTITUENT PERCENTAGES AS USED IN SOIL SAMPLE CLASSIFICATIONS
DEGREE OF COMPACTION	BLOWS* PER FOOT	CONSISTENCY	UNCONFINED COMPRESSIVE STRENGTH (TSF)	IDENTIFICATION CHARACTERISTICS	
LOOSE	0 TO 10	SOFT	LESS THAN 0.5	EASILY REMOLDED WITH SLIGHT FINGER PRESSURE	1% TO 12% - "TRACE"
MEDIUM COMPACT	11 TO 29	MEDIUM	0.5 TO 1.0	REQUIRES SUBSTANTIAL PRESSURE FOR REMOLDING	13% TO 30% - "SOME"
COMPACT	30 TO 50	STIFF	1.0 TO 4.0	DIFFICULT TO REMOLD WITH FINGERS	31% TO 49% - ADJECTIVE FORM OF SOIL GROUP (EG. SANDY)
VERY COMPACT	GREATER THAN 50	HARD	GREATER THAN 4.0	CANNOT BE REMOLDED WITH FINGERS	EQUAL AMOUNT - "AND" (EG. SAND AND GRAVEL)

* STANDARD PENETRATION RESISTANCE USING 140 LB. HAMMER FREE FALLING 30 INCHES TO DRIVE A 2 INCH O.D. SPLIT-SPOON SAMPLER.

⁺ NONPLASTIC SILTS ARE DESCRIBED USING DEGREE OF COMPACTION AS PRESENTED FOR NON-PLASTIC SOIL.

APPENDIX F

NYS DEC Details and Specifications

STANDARD AND SPECIFICATIONS FOR COMPOST FILTER SOCK

Definition & Scope

A **temporary** sediment control practice composed of a degradable geotextile mesh tube filled with compost filter media to filter sediment and other pollutants associated with construction activity to prevent their migration offsite.

Condition Where Practice Applies

Compost filter socks can be used in many construction site applications where erosion will occur in the form of sheet erosion and there is no concentration of water flowing to the sock. In areas with steep slopes and/or rocky terrain, soil conditions must be such that good continuous contact between the sock and the soil is maintained throughout its length. For use on impervious surfaces such as road pavement or parking areas, proper anchorage must be provided to prevent shifting of the sock or separation of the contact between the sock and the pavement. Compost filter socks are utilized both at the site perimeter as well as within the construction areas. These socks may be filled after placement by blowing compost into the tube pneumatically, or filled at a staging location and moved into its designed location.

Design Criteria

1. Compost filter socks will be placed on the contour with both terminal ends of the sock extended 8 feet upslope at a 45 degree angle to prevent bypass flow.
2. Diameters designed for use shall be 12" – 32" except

that 8" diameter socks may be used for residential lots to control areas less than 0.25 acres.

3. The flat dimension of the sock shall be at least 1.5 times the nominal diameter.
4. The **Maximum Slope Length** (in feet) above a compost filter sock shall not exceed the following limits:

Dia. (in.)	Slope %						
	2	5	10	20	25	33	50
8	225*	200	100	50	20	—	—
12	250	225	125	65	50	40	25
18	275	250	150	70	55	45	30
24	350	275	200	130	100	60	35
32	450	325	275	150	120	75	50

* Length in feet

5. The compost infill shall be well decomposed (matured at least 3 months), weed-free, organic matter. It shall be aerobically composted, possess no objectionable odors, and contain less than 1%, by dry weight, of man-made foreign matter. The physical parameters of the compost shall meet the standards listed in Table 5.2 - Compost Standards Table. **Note: All biosolids compost produced in New York State (or approved for importation) must meet NYS DEC's 6 NYCRR Part 360 (Solid Waste Management Facilities) requirements. The Part 360 requirements are equal to or more stringent than 40 CFR Part 503 which ensure safe standards for pathogen reduction and heavy metals content. When using compost filter socks adjacent to surface water, the compost should have a low nutrient value.**
6. The compost filter sock fabric material shall meet the

7. Compost filter socks shall be anchored in earth with 2” x 2” wooden stakes driven 12” into the soil on 10 foot centers on the centerline of the sock. On uneven terrain, effective ground contact can be enhanced by the placement of a fillet of filter media on the disturbed area side of the compost sock.
8. All specific construction details and material specifications shall appear on the erosion and sediment control constructions drawings when compost filter socks are included in the plan.
3. Socks shall be inspected weekly and after each runoff event. Damaged socks shall be repaired in the manner required by the manufacturer or replaced within 24 hours of inspection notification.
4. Biodegradable filter socks shall be replaced after 6 months; photodegradable filter socks after 1 year. Polypropylene socks shall be replaced according to the manufacturer’s recommendations.
5. Upon stabilization of the area contributory to the sock, stakes shall be removed. The sock may be left in place and vegetated or removed in accordance with the stabilization plan. For removal the mesh can be cut and the compost spread as an additional mulch to act as a soil supplement.

Maintenance

1. Traffic shall not be permitted to cross filter socks.
2. Accumulated sediment shall be removed when it reaches half the above ground height of the sock and disposed of in accordance with the plan.

STANDARD AND SPECIFICATIONS FOR CONCRETE TRUCK WASHOUT

Definition & Scope

A temporary excavated or above ground lined constructed pit where concrete truck mixers and equipment can be washed after their loads have been discharged, to prevent highly alkaline runoff from entering storm drainage systems or leaching into soil.

Conditions Where Practice Applies

Washout facilities shall be provided for every project where concrete will be poured or otherwise formed on the site. This facility will receive highly alkaline wash water from the cleaning of chutes, mixers, hoppers, vibrators, placing equipment, trowels, and screeds. Under no circumstances will wash water from these operations be allowed to infiltrate into the soil or enter surface waters.

Design Criteria

Capacity: The washout facility should be sized to contain solids, wash water, and rainfall and sized to allow for the evaporation of the wash water and rainfall. Wash water shall be estimated at 7 gallons per chute and 50 gallons per hopper of the concrete pump truck and/or discharging drum. The minimum size shall be 8 feet by 8 feet at the bottom and 2 feet deep. If excavated, the side slopes shall be 2 horizontal to 1 vertical.

Location: Locate the facility a minimum of 100 feet from drainage swales, storm drain inlets, wetlands, streams and other surface waters. Prevent surface water from entering the structure except for the access road. Provide appropriate access with a gravel access road sloped down to the structure. Signs shall be placed to direct drivers to the facility after their load is discharged.

Liner: All washout facilities will be lined to prevent

leaching of liquids into the ground. The liner shall be plastic sheeting with a minimum thickness of 10 mils with no holes or tears, and anchored beyond the top of the pit with an earthen berm, sand bags, stone, or other structural appurtenance except at the access point.

If pre-fabricated washouts are used they must ensure the capture and containment of the concrete wash and be sized based on the expected frequency of concrete pours. They shall be sited as noted in the location criteria.

Maintenance

- All concrete washout facilities shall be inspected daily. Damaged or leaking facilities shall be deactivated and repaired or replaced immediately. Excess rainwater that has accumulated over hardened concrete should be pumped to a stabilized area, such as a grass filter strip.
- Accumulated hardened material shall be removed when 75% of the storage capacity of the structure is filled. Any excess wash water shall be pumped into a containment vessel and properly disposed of off site.
- Dispose of the hardened material off-site in a construction/demolition landfill. On-site disposal may be allowed if this has been approved and accepted as part of the projects SWPPP. In that case, the material should be recycled as specified, or buried and covered with a minimum of 2 feet of clean compacted earthfill that is permanently stabilized to prevent erosion.
- The plastic liner shall be replaced with each cleaning of the washout facility.
- Inspect the project site frequently to ensure that no concrete discharges are taking place in non-designated areas.

STANDARD AND SPECIFICATIONS FOR DUST CONTROL

dust control (see Section 3).

Mulch (including gravel mulch) – Mulch offers a fast effective means of controlling dust. This can also include rolled erosion control blankets.

Spray adhesives – These are products generally composed of polymers in a liquid or solid form that are mixed with water to form an emulsion that is sprayed on the soil surface with typical hydroseeding equipment. The mixing ratios and application rates will be in accordance with the manufacturer's recommendations for the specific soils on the site. In no case should the application of these adhesives be made on wet soils or if there is a probability of precipitation within 48 hours of its proposed use. Material Safety Data Sheets will be provided to all applicators and others working with the material.

Definition & Scope

The control of dust resulting from land-disturbing activities, to prevent surface and air movement of dust from disturbed soil surfaces that may cause off-site damage, health hazards, and traffic safety problems.

Conditions Where Practice Applies

On construction roads, access points, and other disturbed areas subject to surface dust movement and dust blowing where off-site damage may occur if dust is not controlled.

Design Criteria

Construction operations should be scheduled to minimize the amount of area disturbed at one time. Buffer areas of vegetation should be left where practical. Temporary or permanent stabilization measures shall be installed. No specific design criteria is given; see construction specifications below for common methods of dust control.

Water quality must be considered when materials are selected for dust control. Where there is a potential for the material to wash off to a stream, ingredient information must be provided to the NYSDEC.

No polymer application shall take place without written approval from the NYSDEC.

Construction Specifications

A. **Non-driving Areas** – These areas use products and materials applied or placed on soil surfaces to prevent airborne migration of soil particles.

Vegetative Cover – For disturbed areas not subject to traffic, vegetation provides the most practical method of

B. **Driving Areas** – These areas utilize water, polymer emulsions, and barriers to prevent dust movement from the traffic surface into the air.

Sprinkling – The site may be sprayed with water until the surface is wet. This is especially effective on haul roads and access route to provide short term limited dust control.

Polymer Additives – These polymers are mixed with water and applied to the driving surface by a water truck with a gravity feed drip bar, spray bar or automated distributor truck. The mixing ratios and application rates will be in accordance with the manufacturer's recommendations. Incorporation of the emulsion into the soil will be done to the appropriate depth based on expected traffic. Compaction after incorporation will be by vibratory roller to a minimum of 95%. The prepared surface shall be moist and no application of the polymer will be made if there is a probability of precipitation within 48 hours of its proposed use. Material Safety Data Sheets will be provided to all applicators working with the material.

Barriers – Woven geo-textiles can be placed on the driving surface to effectively reduce dust throw and particle migration on haul roads. Stone can also be used for construction roads for effective dust control.

Windbreak – A silt fence or similar barrier can control air currents at intervals equal to ten times the barrier height. Preserve existing wind barrier vegetation as much as practical.

Maintenance

Maintain dust control measures through dry weather periods until all disturbed areas are stabilized.

STANDARD AND SPECIFICATIONS FOR PROTECTING VEGETATION DURING CONSTRUCTION

Definition & Scope

The protection of trees, shrubs, ground cover and other vegetation from damage by construction equipment. In order to preserve existing vegetation determined to be important for soil erosion control, water quality protection, shade, screening, buffers, wildlife habitat, wetland protection, and other values.

Conditions Where Practices Applies

On planned construction sites where valued vegetation exists and needs to be preserved.

Design Criteria

1. Planning Considerations

A. Inventory:

1) Property boundaries, topography, vegetation and soils information should be gathered. Identify potentially high erosion areas, areas with tree windthrow potential, etc. A vegetative cover type map should be made on a copy of a topographic map which shows other natural and manmade features. Vegetation that is desirable to preserve because of its value for screening, shade, critical erosion control, endangered species, aesthetics, etc., should be identified and marked on the map.

2) Based upon this data, general statements should be prepared about the present condition, potential problem areas, and unique features of the property.

B. Planning:

1) After engineering plans (plot maps) are prepared, another field review should take place and

recommendations made for the vegetation to be saved. Minor adjustments in location of roads, dwellings, and utilities may be needed. Construction on steep slopes, erodible soils, wetlands, and streams should be avoided. Clearing limits should be delineated (See "Determine Limits of Clearing and Grading" on page 2.2).

2) Areas to be seeded and planted should be identified. Remaining vegetation should blend with their surroundings and/or provide special function such as a filter strip, buffer zone, or screen.

3) Trees and shrubs of special seasonal interest, such as flowering dogwood, red maple, striped maple, serviceberry, or shadbush, and valuable potential shade trees should be identified and marked for special protective treatment as appropriate.

4) Trees to be cut should be marked on the plans. If timber can be removed for salable products, a forester should be consulted for marketing advice.

5) Trees that may become a hazard to people, personal property, or utilities should be removed. These include trees that are weak-wooded, disease-prone, subject to windthrow, or those that have severely damaged root systems.

6) The vigor of remaining trees may be improved by a selective thinning. A forester should be consulted for implementing this practice.

2. Measures to Protect Vegetation

A. Limit soil placement over existing tree and shrub roots to a maximum of 3 inches. Soils with loamy texture and good structure should be used.

B. Use retaining walls and terraces to protect roots of trees and shrubs when grades are lowered. Lowered grades should start no closer than the dripline of the tree. For narrow-canopied trees and shrubs, the stem diameter in inches is converted to feet and doubled, such that a 10 inch tree should be protected to 20 feet.

C. Trenching across tree root systems should be the same minimum distance from the trunk, as in "B". Tunnels under root systems for underground utilities should start 18 inches or deeper below the normal ground surface. Tree roots which must be severed should be cut clean. Backfill material that will be in contact with the roots should be topsoil or a prepared planting soil mixture.

D. Construct sturdy fences, or barriers, of wood, steel, or other protective material around valuable

vegetation for protection from construction equipment. Place barriers far enough away from trees, but not less than the specifications in "B", so that tall equipment such as backhoes and dump trucks do not contact tree branches.

E. Construction limits should be identified and clearly marked to exclude equipment.

F. Avoid spills of oil/gas and other contaminants.

G. Obstructive and broken branches should be pruned properly. The branch collar on all branches whether living or dead should not be damaged. The 3 or 4 cut method should be used on all branches larger than two inches at the cut. First cut about one-third the way through the underside of the limb (about 6-12 inches from the tree trunk). Then (approximately an inch further out) make a second cut through the limb from the upper side. When the branch is removed, there is no splintering of the main tree trunk. Remove the stub. If the branch is larger than 5-6 inches in diameter, use the four cut system. Cuts 1 and 2 remain the same and cut 3 should be from the underside of the limb, on the outside of the branch collar. Cut 4 should be from the top and in alignment with the 3rd cut. Cut 3 should be 1/4 to 1/3 the way through the limb. This will prevent the bark from peeling down the trunk. Do not paint the cut surface.

H. Penalties for damage to valuable trees, shrubs, and herbaceous plants should be clearly spelled out in the contract.

PROTECTING TREES IN HEAVY USE AREAS

The compaction of soil over the roots of trees and shrubs by the trampling of recreationists, vehicular traffic, etc., reduces oxygen, water, and nutrient uptake by feeder roots. This weakens and may eventually kill the plants. Table 2.6 rates the "Susceptibility of Tree Species to Compaction."

Where heavy compaction is anticipated, apply and maintain a 3 to 4 inch layer of undecayed wood chips or 2 inches of No. 2 washed, crushed gravel. In addition, use of a wooden or plastic mat may be used to lessen compaction, if applicable.

Table 2.6 Susceptibility of Tree Species to Compaction¹

Resistant:

Box elder.....	<i>Acer negundo</i>	Willows.....	<i>Salix spp.</i>
Green ash.....	<i>Fraxinus pennsylvanica</i>	Honey locust.....	<i>Gleditsia triacanthos</i>
Red elm.....	<i>Ulmus rubra</i>	Eastern cottonwood.....	<i>Populus deltoides</i>
Hawthornes.....	<i>Crataegus spp.</i>	Swamp white oak.....	<i>Quercus bicolor</i>
Bur oak.....	<i>Quercus macrocarpa</i>	Hophornbeam.....	<i>Ostrya virginiana</i>
Northern white cedar....	<i>Thuja occidentalis</i>		

Intermediate:

Red maple.....	<i>Acer rubrum</i>	Sweetgum.....	<i>Liquidambar styraciflua</i>
Silver maple.....	<i>Acer saccharinum</i>	Norway maple.....	<i>Acer platanoides</i>
Hackberry.....	<i>Celtis occidentalis</i>	Shagbark hickory.....	<i>Carya ovata</i>
Black gum.....	<i>Nyssa sylvatica</i>	London plane.....	<i>Platanus x hybrida</i>

White pine.....	<i>Pinus strobus</i>	White ash.....	<i>Fraxinus americana</i>
Blue spruce.....	<i>Picea pungens</i>	Paper birch.....	<i>Betula papyrifera</i>
White oak.....	<i>Quercus alba</i>	Moutain ash.....	<i>Sorbus aucuparia</i>
Red pine.....	<i>Pinus resinosa</i>	Japanese maple.....	<i>Acer palmatum</i>

¹ If a tree species does not appear on the list, insufficient information is available to rate it for this purpose.

STANDARD AND SPECIFICATIONS FOR SILT FENCE

Definition & Scope

A **temporary** barrier of geotextile fabric installed on the contours across a slope used to intercept sediment laden runoff from small drainage areas of disturbed soil by temporarily ponding the sediment laden runoff allowing settling to occur. The maximum period of use is limited by the ultraviolet stability of the fabric (approximately one year).

Conditions Where Practice Applies

A silt fence may be used subject to the following conditions:

1. Maximum allowable slope length and fence length will not exceed the limits shown in the Design Criteria for the specific type of silt fence used ; and
2. Maximum ponding depth of 1.5 feet behind the fence; and
3. Erosion would occur in the form of sheet erosion; and
4. There is no concentration of water flowing to the barrier; and
5. Soil conditions allow for proper keying of fabric, or other anchorage, to prevent blowouts.

Design Criteria

1. Design computations are not required for installations of 1 month or less. Longer installation periods should be designed for expected runoff.
2. All silt fences shall be placed as close to the disturbed area as possible, but at least 10 feet from the toe of a slope steeper than 3H:1V, to allow for maintenance and

roll down. The area beyond the fence must be undisturbed or stabilized.

3. The type of silt fence specified for each location on the plan shall not exceed the maximum slope length and maximum fence length requirements shown in the following table:

		Slope Length/Fence Length (ft.)		
Slope	Steepness	Standard	Reinforced	Super
<2%	< 50:1	300/1500	N/A	N/A
2-10%	50:1 to 10:1	125/1000	250/2000	300/2500
10-20%	10:1 to 5:1	100/750	150/1000	200/1000
20-33%	5:1 to 3:1	60/500	80/750	100/1000
33-50%	3:1 to 2:1	40/250	70/350	100/500
>50%	> 2:1	20/125	30/175	50/250

Standard Silt Fence (SF) is fabric rolls stapled to wooden stakes driven 16 inches in the ground.

Reinforced Silt Fence (RSF) is fabric placed against welded wire fabric with anchored steel posts driven 16 inches in the ground.

Super Silt Fence (SSF) is fabric placed against chain link fence as support backing with posts driven 3 feet in the ground.

4. Silt fence shall be removed as soon as the disturbed area has achieved final stabilization.

The silt fence shall be installed in accordance with the appropriate details. Where ends of filter cloth come together, they shall be overlapped, folded and stapled to prevent sediment bypass. Butt joints are not acceptable. A detail of the silt fence shall be shown on the plan. See Figure 5.30 on page 5.56 for Reinforced Silt Fence as an example of details to be provided.

Criteria for Silt Fence Materials

1. Silt Fence Fabric: The fabric shall meet the following specifications unless otherwise approved by the appropriate erosion and sediment control plan approval authority. Such approval shall not constitute statewide acceptance.

Fabric Properties	Minimum Acceptable Value	Test Method
Grab Tensile Strength (lbs)	110	ASTM D 4632
Elongation at Failure (%)	20	ASTM D 4632
Mullen Burst Strength (PSI)	300	ASTM D 3786
Puncture Strength (lbs)	60	ASTM D 4833
Minimum Trapezoidal Tear Strength (lbs)	50	ASTM D 4533
Flow Through Rate (gal/min/sf)	25	ASTM D 4491
Equivalent Opening Size	40-80	US Std Sieve ASTM D 4751
Minimum UV Residual (%)	70	ASTM D 4355

Super Silt Fence

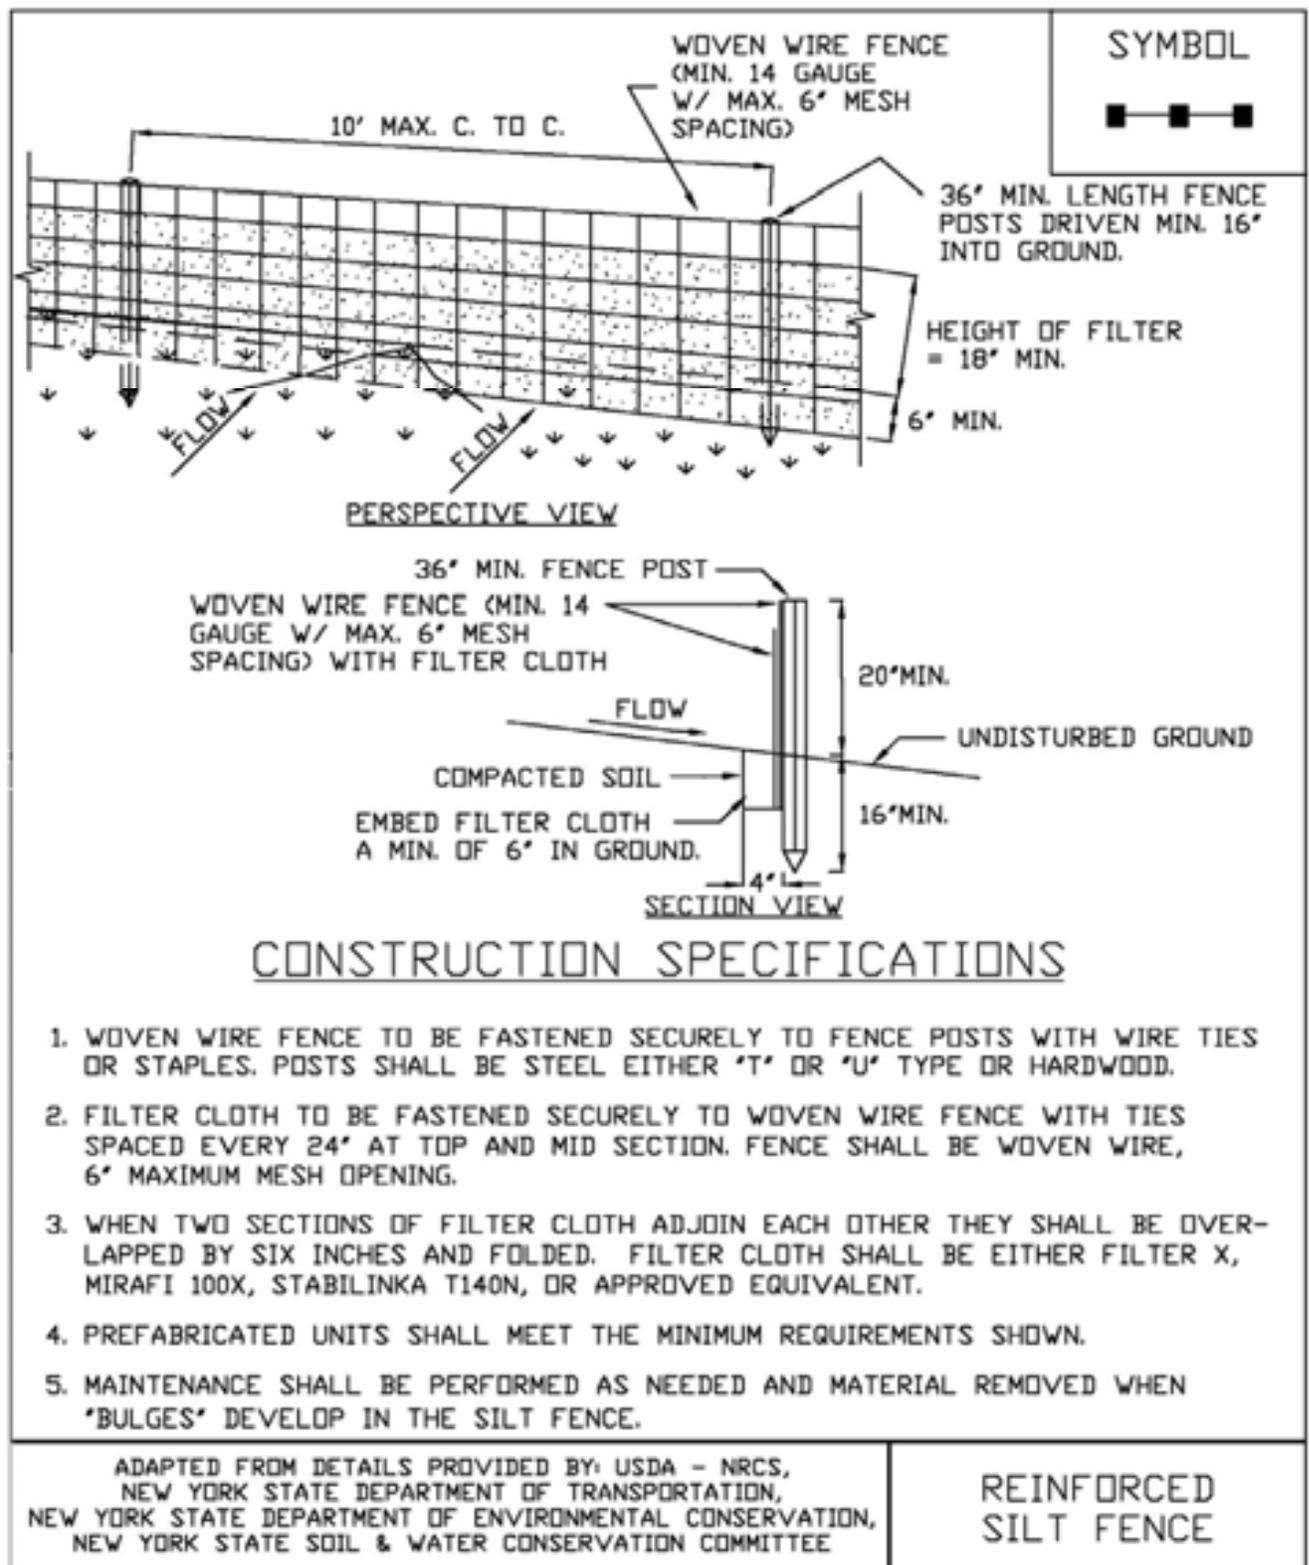

2. Fence Posts (for fabricated units): The length shall be a minimum of 36 inches long. Wood posts will be of sound quality hardwood with a minimum cross sectional area of 3.5 square inches. Steel posts will be standard T and U section weighing not less than 1.00 pound per linear foot. Posts for super silt fence shall be standard chain link fence posts.
3. Wire Fence for reinforced silt fence: Wire fencing shall be a minimum 14 gage with a maximum 6 in. mesh opening, or as approved.
4. Prefabricated silt fence is acceptable as long as all material specifications are met.

Reinforced Silt Fence

**Figure 5.30
Reinforced Silt Fence**

STANDARD AND SPECIFICATIONS FOR SITE POLLUTION PREVENTION

Definition & Scope

A collection of management practices intended to control non-sediment pollutants associated with construction activities to prevent the generation of pollutants due to improper handling, storage, and spills and prevent the movement of toxic substances from the site into surface waters.

Conditions Where Practice Applies

On all construction sites where the earth disturbance exceeds 5,000 square feet, and involves the use of fertilizers, pesticides, petroleum based chemicals, fuels and lubricants, as well as sealers, paints, cleared woody vegetation, garbage, and sanitary wastes.

Design Criteria

The variety of pollutants on a particular site and the severity of their impacts depend on factors such as the nature of the construction activity, the physical characteristics of the construction site, and the proximity of water bodies and conveyances to the pollutant source.

1. All state and federal regulations shall be followed for the storage, handling, application, usage, and disposal of pesticides, fertilizers, and petroleum products.
2. Vehicle and construction equipment staging and maintenance areas will be located away from all drainage ways with their parking areas graded so the runoff from these areas is collected, contained and treated prior to discharge from the site.
3. Provide sanitary facilities for on-site personnel.
4. Store, cover, and isolate construction materials including topsoil, and chemicals, to prevent runoff of

pollutants and contamination of groundwater and surface waters.

5. Develop and implement a spill prevention and control plan. The plan should include NYSDEC's spill reporting and initial notification requirements.
6. Provide adequate disposal for solid waste including woody debris, stumps, and other construction waste and include these methods and directions in the construction details on the site construction drawings. Fill, woody debris, stumps and construction waste shall not be placed in regulated wetlands, streams or other surface waters.
7. Distribute or post informational material regarding proper handling, spill response, spill kit location, and emergency actions to be taken, to all construction personnel.
8. Refueling equipment shall be located at least 100 feet from all wetlands, streams and other surface waters.

STANDARD AND SPECIFICATIONS FOR STABILIZED CONSTRUCTION ACCESS

Definition & Scope

A stabilized pad of aggregate underlain with geotextile located at any point where traffic will be entering or leaving a construction site to or from a public right-of-way, street, alley, sidewalk, or parking area. The purpose of stabilized construction access is to reduce or eliminate the tracking of sediment onto public rights-of-way or streets.

Conditions Where Practice Applies

A stabilized construction access shall be used at all points of construction ingress and egress.

Design Criteria

See Figure 2.1 on page 2.31 for details.

Aggregate Size: Use a matrix of 1-4 inch stone, or reclaimed or recycled concrete equivalent.

Thickness: Not less than six (6) inches.

Width: 12-foot minimum but not less than the full width of points where ingress or egress occurs. 24-foot minimum if there is only one access to the site.

Length: As required, but not less than 50 feet (except on a single residence lot where a 30 foot minimum would apply).

Geotextile: To be placed over the entire area to be covered with aggregate. Filter cloth will not be required on a single-family residence lot. Piping of surface water under entrance shall be provided as required. If piping is impossible, a mountable berm with 5:1 slopes will be permitted.

Criteria for Geotextile: The geotextile shall be woven or nonwoven fabric consisting only of continuous chain polymeric filaments or yarns of polyester. The fabric shall be

inert to commonly encountered chemicals, hydro-carbons, mildew, rot resistant, and conform to the fabric properties as shown:

Fabric Properties ³	Light Duty ¹ Roads Grade Sub-grade	Heavy Duty ² Haul Roads Rough Graded	Test Method
Grab Tensile Strength (lbs)	200	220	ASTM D1682
Elongation at Failure (%)	50	60	ASTM D1682
Mullen Burst Strength (lbs)	190	430	ASTM D3786
Puncture Strength (lbs)	40	125	ASTM D751 Modified
Equivalent	40-80	40-80	US Std Sieve
Opening Size			CW-02215
Aggregate Depth	6	10	-

¹Light Duty Road: Area sites that have been graded to subgrade and where most travel would be single axle vehicles and an occasional multi-axle truck. Acceptable materials are Trevira Spunbond 1115, Mirafi 100X, Typar 3401, or equivalent.

²Heavy Duty Road: Area sites with only rough grading, and where most travel would be multi-axle vehicles. Acceptable materials are Trevira Spunbond 1135, Mirafi 600X, or equivalent.

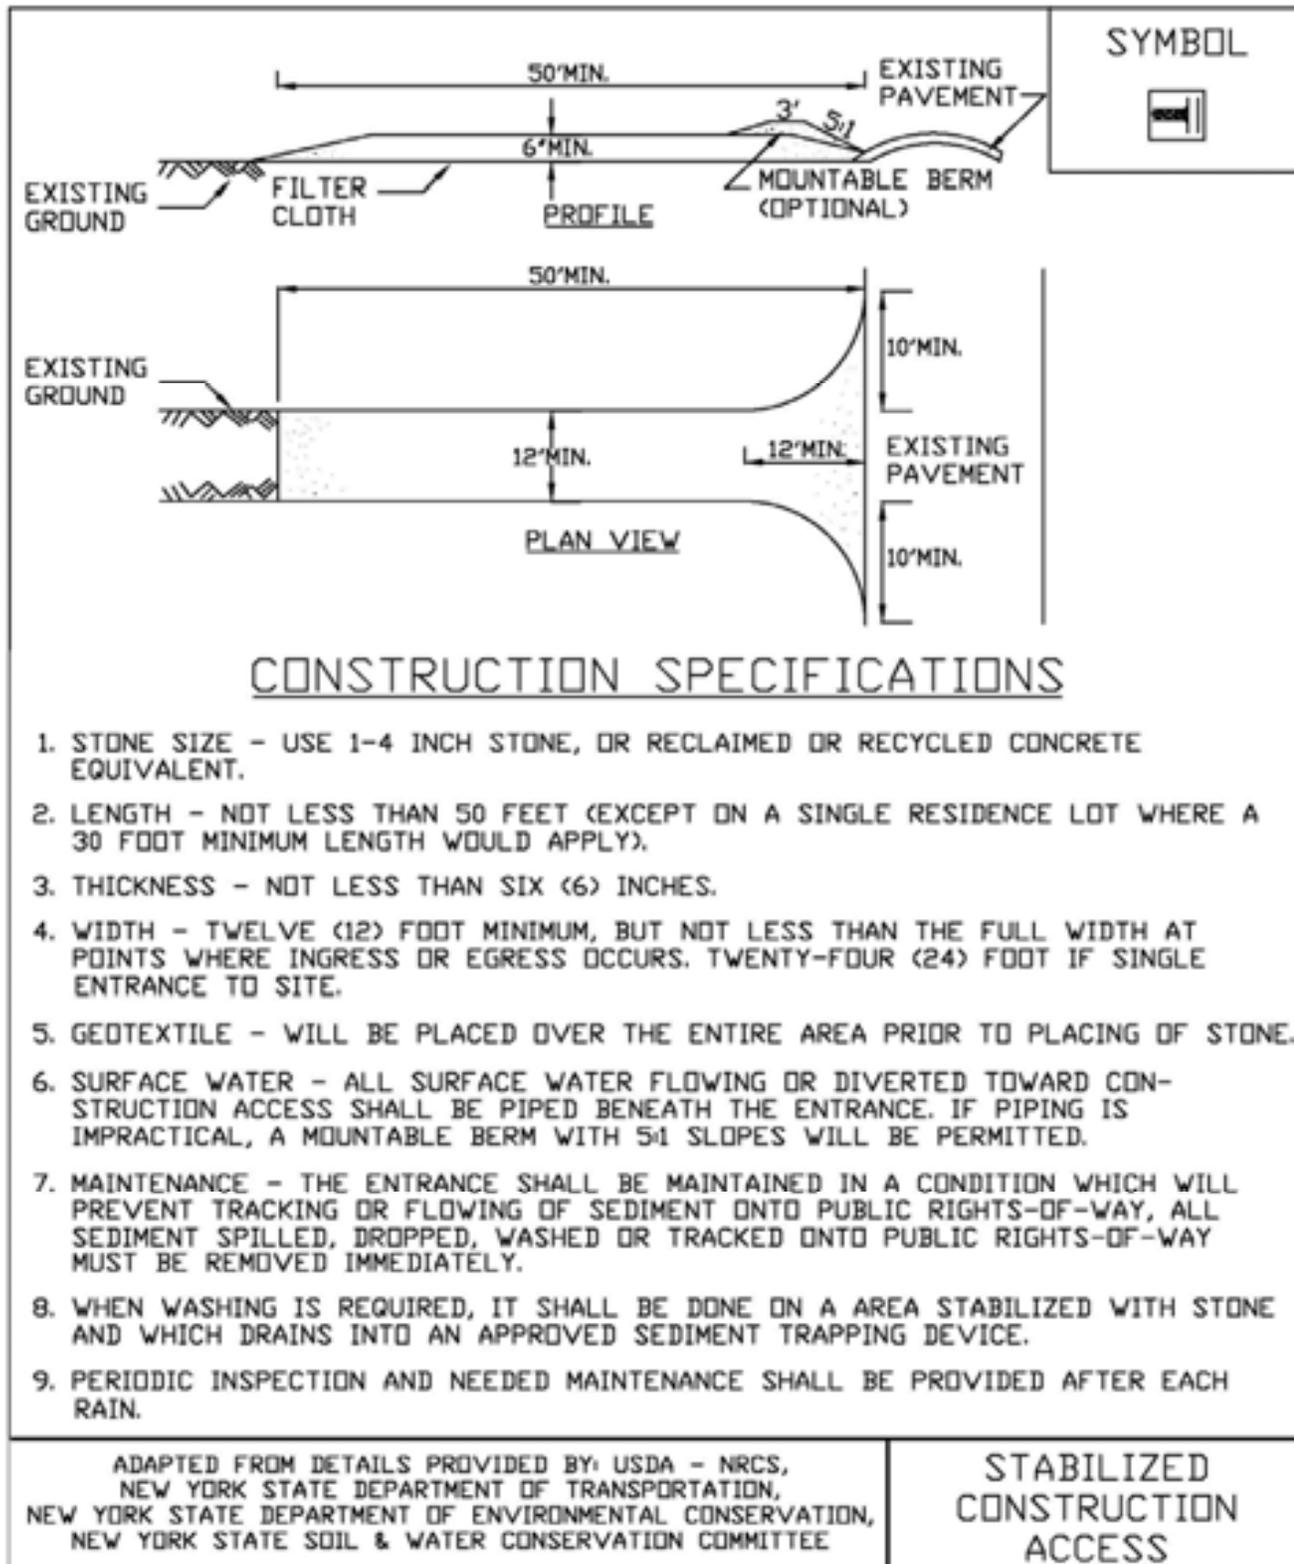

³Fabrics not meeting these specifications may be used only when design procedure and supporting documentation are supplied to determine aggregate depth and fabric strength.

Maintenance

The access shall be maintained in a condition which will prevent tracking of sediment onto public rights-of-way or streets. This may require periodic top dressing with additional aggregate. All sediment spilled, dropped, or washed onto public rights-of-way must be removed immediately.

When necessary, wheels must be cleaned to remove sediment prior to entrance onto public rights-of-way. When washing is required, it shall be done on an area stabilized with aggregate, which drains into an approved sediment-trapping device. All sediment shall be prevented from entering storm drains, ditches, or watercourses.

Figure 2.1
Stabilized Construction Access

STANDARD AND SPECIFICATIONS FOR STORM DRAIN INLET PROTECTION

Definition & Scope

A **temporary** barrier with low permeability, installed around inlets in the form of a fence, berm or excavation around an opening, detaining water and thereby reducing the sediment content of sediment laden water by settling thus preventing heavily sediment laden water from entering a storm drain system.

Conditions Where Practice Applies

This practice shall be used where the drainage area to an inlet is disturbed, it is not possible to temporarily divert the storm drain outfall into a trapping device, and watertight blocking of inlets is not advisable. **It is not to be used in place of sediment trapping devices.** This practice shall be used with an upstream buffer strip if placed at a storm drain inlet on a paved surface. It may be used in conjunction with storm drain diversion to help prevent siltation of pipes installed with low slope angle.

Types of Storm Drain Inlet Practices

There are five (5) specific types of storm drain inlet protection practices that vary according to their function, location, drainage area, and availability of materials:

- I. Excavated Drop Inlet Protection
- II. Fabric Drop Inlet Protection
- III. Stone & Block Drop Inlet Protection
- IV. Paved Surface Inlet Protection
- V. Manufactured Insert Inlet Protection

Design Criteria

Drainage Area – The drainage area for storm drain inlets shall not exceed one acre. Erosion control/temporary stabilization measures must be implemented on the disturbed

drainage area tributary to the inlet. The crest elevations of these practices shall provide storage and minimize bypass flow.

Type I – Excavated Drop Inlet Protection

This practice is generally used during initial overlot grading after the storm drain trunk line is installed.

Limit the drainage area to the inlet device to 1 acre. Excavated side slopes shall be no steeper than 2:1. The minimum depth shall be 1 foot and the maximum depth 2 feet as measured from the crest of the inlet structure. Shape the excavated basin to fit conditions with the longest dimension oriented toward the longest inflow area to provide maximum trap efficiency. The capacity of the excavated basin should be established to contain 900 cubic feet per acre of disturbed area. Weep holes, protected by fabric and stone, should be provided for draining the temporary pool.

Inspect and clean the excavated basin after every storm. Sediment should be removed when 50 percent of the storage volume is achieved. This material should be incorporated into the site in a stabilized manner.

Type II – Fabric Drop Inlet Protection

This practice is generally used during final elevation grading phases after the storm drain system is completed.

Limit the drainage area to 1 acre per inlet device. Land area slope immediately surrounding this device should not exceed 1 percent. The maximum height of the fabric above the inlet crest shall not exceed 1.5 feet unless reinforced.

The top of the barrier should be maintained to allow overflow to drop into the drop inlet and not bypass the inlet to

unprotected lower areas. Support stakes for fabric shall be a minimum of 3 feet long, spaced a maximum 3 feet apart. They should be driven close to the inlet so any overflow drops into the inlet and not on the unprotected soil. Improved performance and sediment storage volume can be obtained by excavating the area.

Inspect the fabric barrier after each rain event and make repairs as needed. Remove sediment from the pool area as necessary with care not to undercut or damage the filter fabric. Upon stabilization of the drainage area, remove all materials and unstable sediment and dispose of properly. Bring the adjacent area of the drop inlet to grade, smooth and compact and stabilize in the appropriate manner to the site.

Type III – Stone and Block Drop Inlet Protection

This practice is generally used during the initial and intermediate overlot grading of a construction site.

Limit the drainage area to 1 acre at the drop inlet. The stone barrier should have a minimum height of 1 foot and a maximum height of 2 feet. Do not use mortar. The height should be limited to prevent excess ponding and bypass flow.

Recess the first course of blocks at least 2 inches below the crest opening of the storm drain for lateral support. Subsequent courses can be supported laterally if needed by placing a 2x4 inch wood stud through the block openings perpendicular to the course. The bottom row should have a few blocks oriented so flow can drain through the block to dewater the basin area.

The stone should be placed just below the top of the blocks on slopes of 2:1 or flatter. Place hardware cloth of wire mesh with ½ inch openings over all block openings to hold stone in place.

As an optional design, the concrete blocks may be omitted and the entire structure constructed of stone, ringing the outlet (“doughnut”). The stone should be kept at a 3:1 slope toward the inlet to keep it from being washed into the inlet. A level area 1 foot wide and four inches below the crest will further prevent wash. Stone on the slope toward the inlet should be at least 3 inches in size for stability and 1 inch or smaller away from the inlet to control flow rate. The elevation of the top of the stone crest must be maintained 6 inches lower than the ground elevation down slope from the inlet to ensure that all storm flows pass over the stone into the storm drain and not past the structure. Temporary diking should be used as necessary to prevent bypass flow.

The barrier should be inspected after each rain event and repairs made where needed. Remove sediment as necessary to provide for accurate storage volume for subsequent rains. Upon stabilization of contributing drainage area, remove all

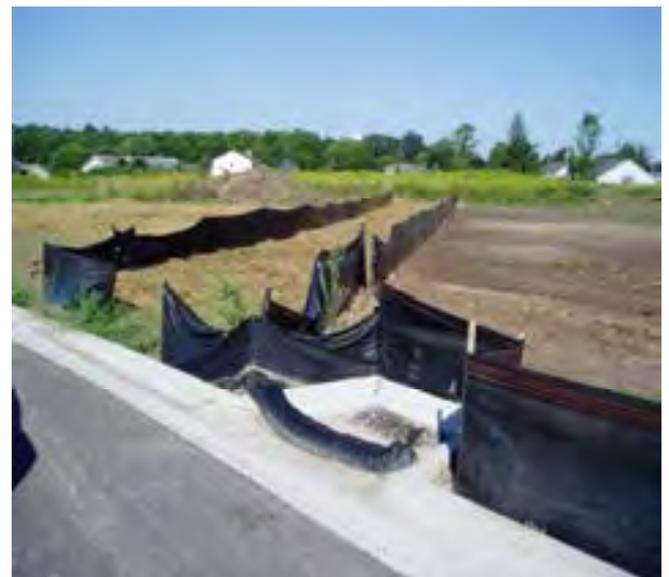

materials and any unstable soil and dispose of properly.

Bring the disturbed area to proper grade, smooth, compact and stabilize in a manner appropriate to the site.

Type IV – Paved Surface Inlet Protection

This practice is generally used after pavement construction has been done while final grading and soil stabilization is occurring. These practices should be used with upstream buffer strips in linear construction applications, and with temporary surface stabilization for overlot areas, to reduce the sediment load at the practice. This practice includes sand bags, compost filter socks, geo-tubes filled with ballast, and manufactured surface barriers. Pea gravel can also be used in conjunction with these practices to improve performance. When the inlet is not at a low point, and is offset from the pavement or gutter line, protection should be selected and installed so that flows are not diverted around the inlet.

The drainage area should be limited to 1 acre at the drain inlet. All practices will be placed at the inlet perimeter or beyond to maximize the flow capacity of the inlet. Practices shall be weighted, braced, tied, or otherwise anchored to prevent movement or shifting of location on paved surfaces. Traffic safety shall be integrated with the use of this practice. All practices should be marked with traffic safety cones as appropriate. Structure height shall not cause flooding or by-pass flow that would cause additional erosion.

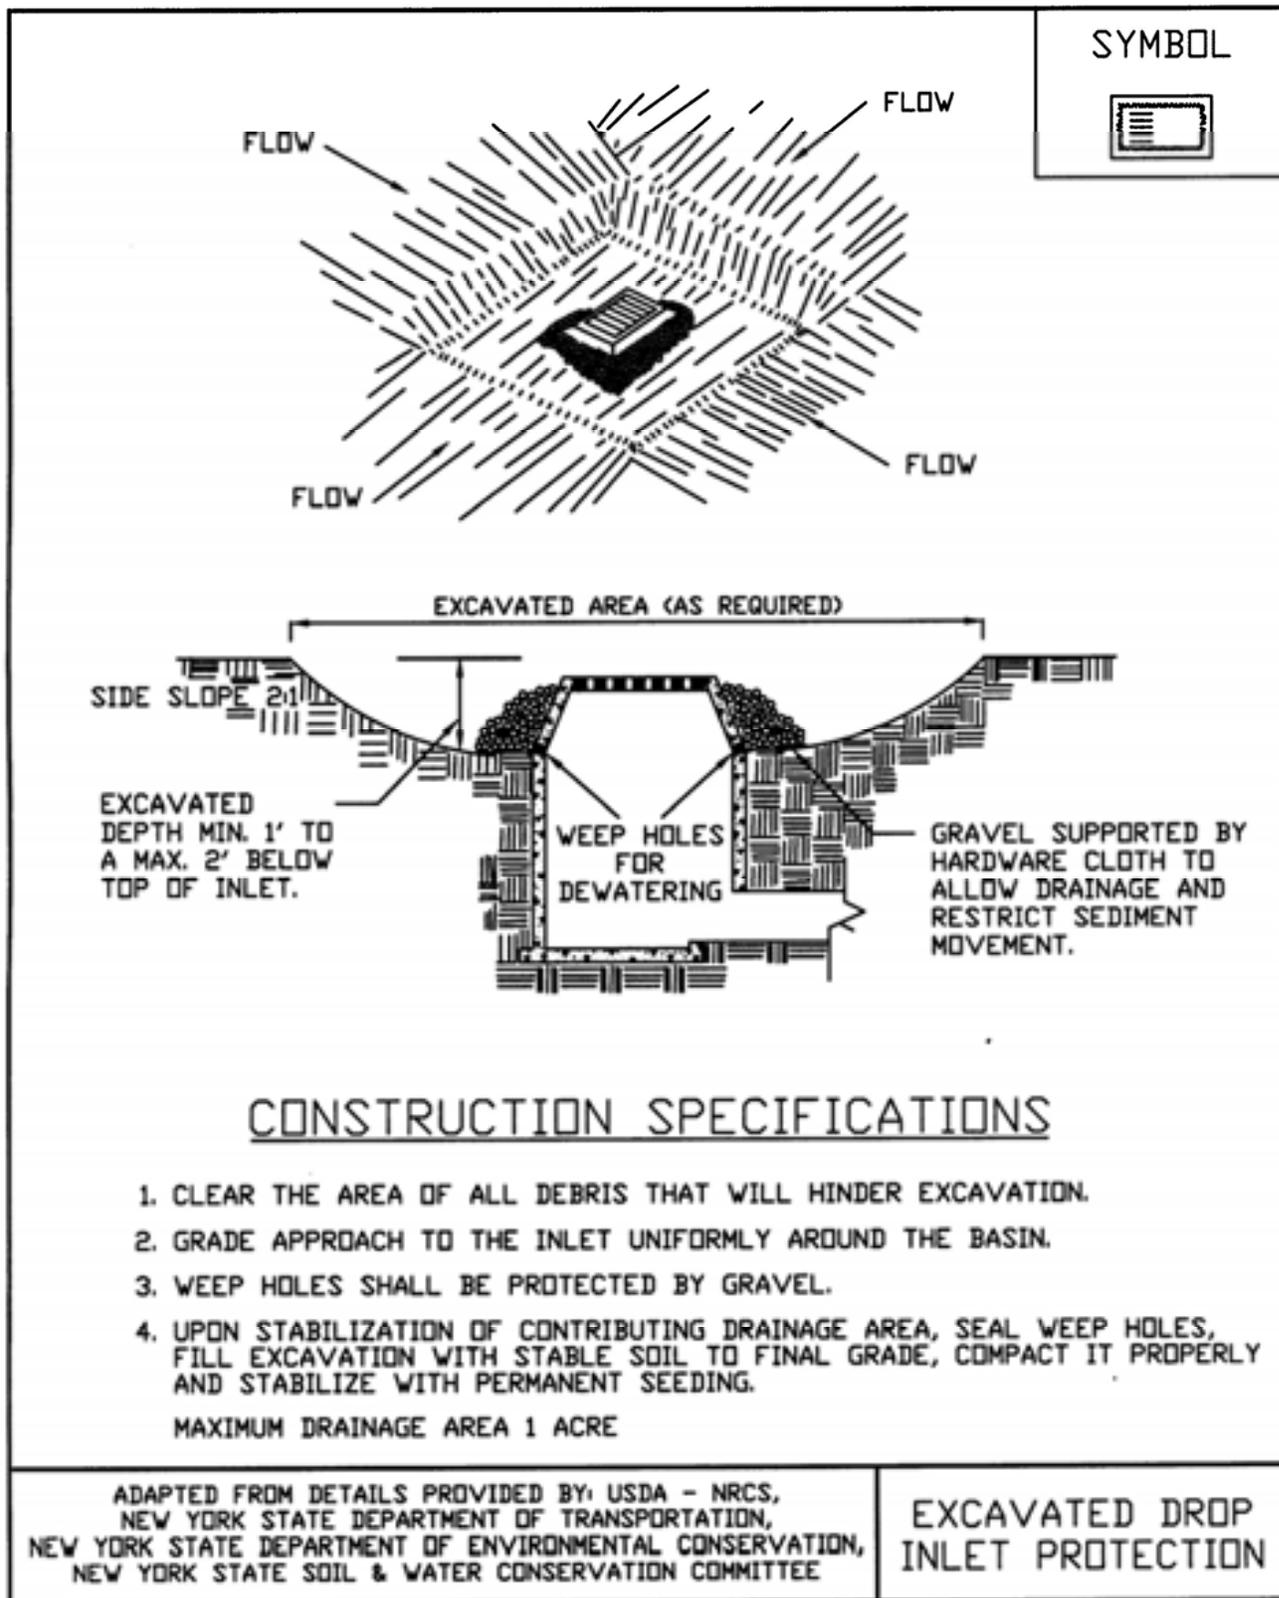

The structure should be inspected after every storm event. Any sediment should be removed and disposed of on the site. Any broken or damaged components should be replaced. Check all materials for proper anchorage and secure as necessary.

Type V - Manufactured Insert Inlet Protection

The drainage area shall be limited to 1 acre at the drain inlet. All inserts will be installed and anchored in accordance with the manufacturers recommendations and design details. The fabric portion of the structure will equal or exceed the performance standard for the silt fence fabric. The inserts will be installed to preserve a minimum of 50 percent of the open, unobstructed design flow area of the storm drain inlet opening to maintain capacity for storm events.

**Figure 5.31
Excavated Drop Inlet Protection**

Fabric Drop Inlet Protection**

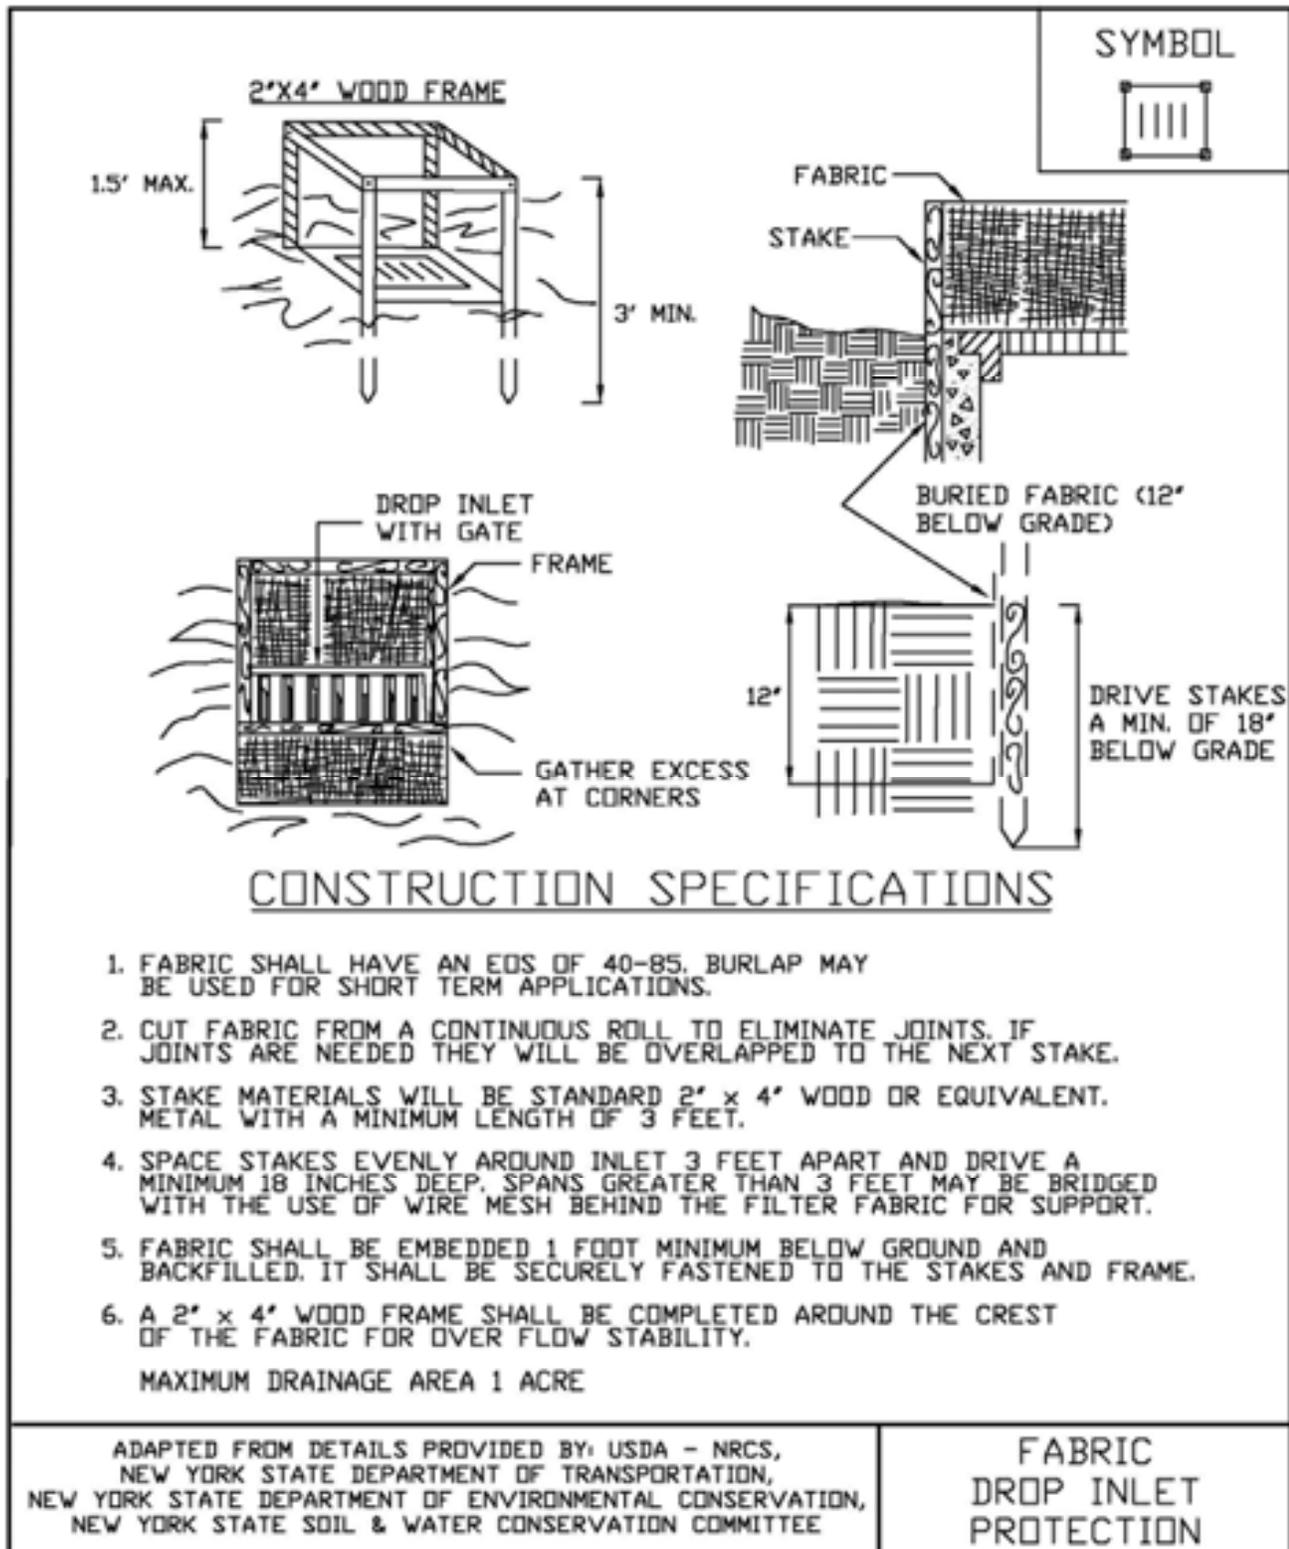

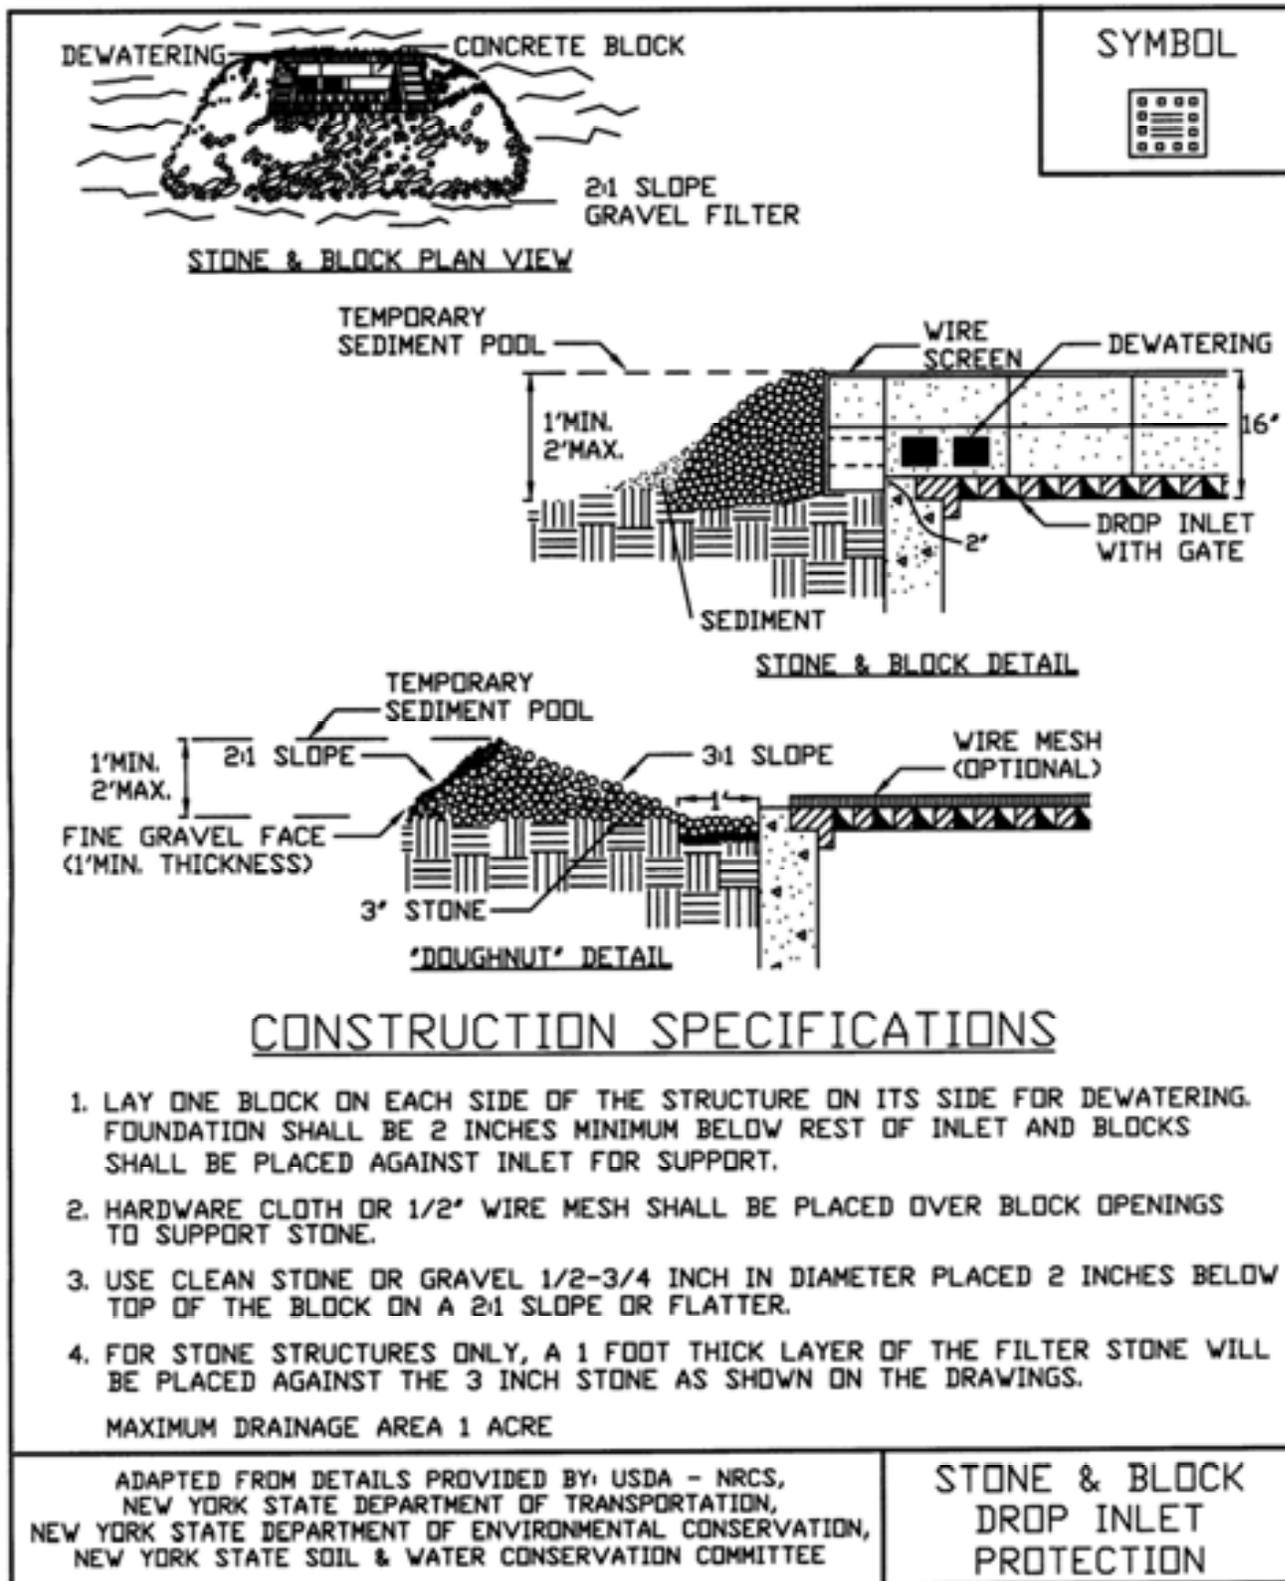

Figure 5.33
Stone & Block Drop Inlet Protection

STANDARD AND SPECIFICATIONS FOR TEMPORARY CONSTRUCTION AREA SEEDING

Definition & Scope

Providing temporary erosion control protection to disturbed areas and/or localized critical areas for an interim period by covering all bare ground that exists as a result of construction activities or a natural event. Critical areas may include but are not limited to steep excavated cut or fill slopes and any disturbed, denuded natural slopes subject to erosion.

Conditions Where Practice Applies

Temporary seedings may be necessary on construction sites to protect an area, or section, where final grading is complete, when preparing for winter work shutdown, or to provide cover when permanent seedings are likely to fail due to mid-summer heat and drought. The intent is to provide temporary protective cover during temporary shutdown of construction and/or while waiting for optimal planting time.

Criteria

Water management practices must be installed as appropriate for site conditions. The area must be rough graded and slopes physically stable. Large debris and rocks are usually removed. Seedbed must be seeded within 24 hours of disturbance or scarification of the soil surface will be necessary prior to seeding.

Fertilizer or lime are not typically used for temporary seedings.

IF: Spring or summer or early fall, then seed the area with ryegrass (annual or perennial) at 30 lbs. per acre (Approximately 0.7 lb./1000 sq. ft. or use 1 lb./1000 sq. ft.).

IF: Late fall or early winter, then seed Certified 'Aroostook' winter rye (cereal rye) at 100 lbs. per acre (2.5 lbs./1000 sq. ft.).

Any seeding method may be used that will provide uniform application of seed to the area and result in relatively good soil to seed contact.

Mulch the area with hay or straw at 2 tons/acre (approx. 90 lbs./1000 sq. ft. or 2 bales). Quality of hay or straw mulch allowable will be determined based on long term use and visual concerns. Mulch anchoring will be required where wind or areas of concentrated water are of concern. Wood fiber hydromulch or other sprayable products approved for erosion control (nylon web or mesh) may be used if applied according to manufacturers' specification. Caution is advised when using nylon or other synthetic products. They may be difficult to remove prior to final seeding and can be a hazard to young wildlife species.

STANDARD AND SPECIFICATIONS FOR TURBIDITY CURTAIN

Definition & Scope

A **temporary** flexible, impenetrable barrier used to trap sediment in water bodies. This curtain is weighted at the bottom to achieve closure while supported at the top through a flotation system and used to prevent the migration of silt from a work site in a water environment into the larger body of water. Top bar float has to support weight of curtain material. Bottom anchor has to be flexible so that it will lie along the contour of the water body bottom.

Condition Where Practice Applies

A turbidity curtain is generally used when construction activity occurs within a waterbody or along its shoreline and is of short duration, generally less than one month. Curtains are used in calm water surfaces and not in areas of flowing water. **Turbidity curtains are not to be used across flowing watercourses.**

Design Criteria

The turbidity curtain shall be located beyond the lateral limits of the construction site and firmly anchored in place. The alignment should be set as close to the work area as possible but not so close as to be disturbed by applicable construction equipment. The height of the curtain shall be 20 percent greater than the depth of the water to allow for water level fluctuations. The area that the turbidity curtain protects shall not contain large culverts or drainage areas that if flows occur behind the curtain would cause a breach or lost contact at the bottom surface.

If water depths at the design alignment are minimal, the toe can be anchored in place by staking.

See Figure 5.35 on page 5.66.

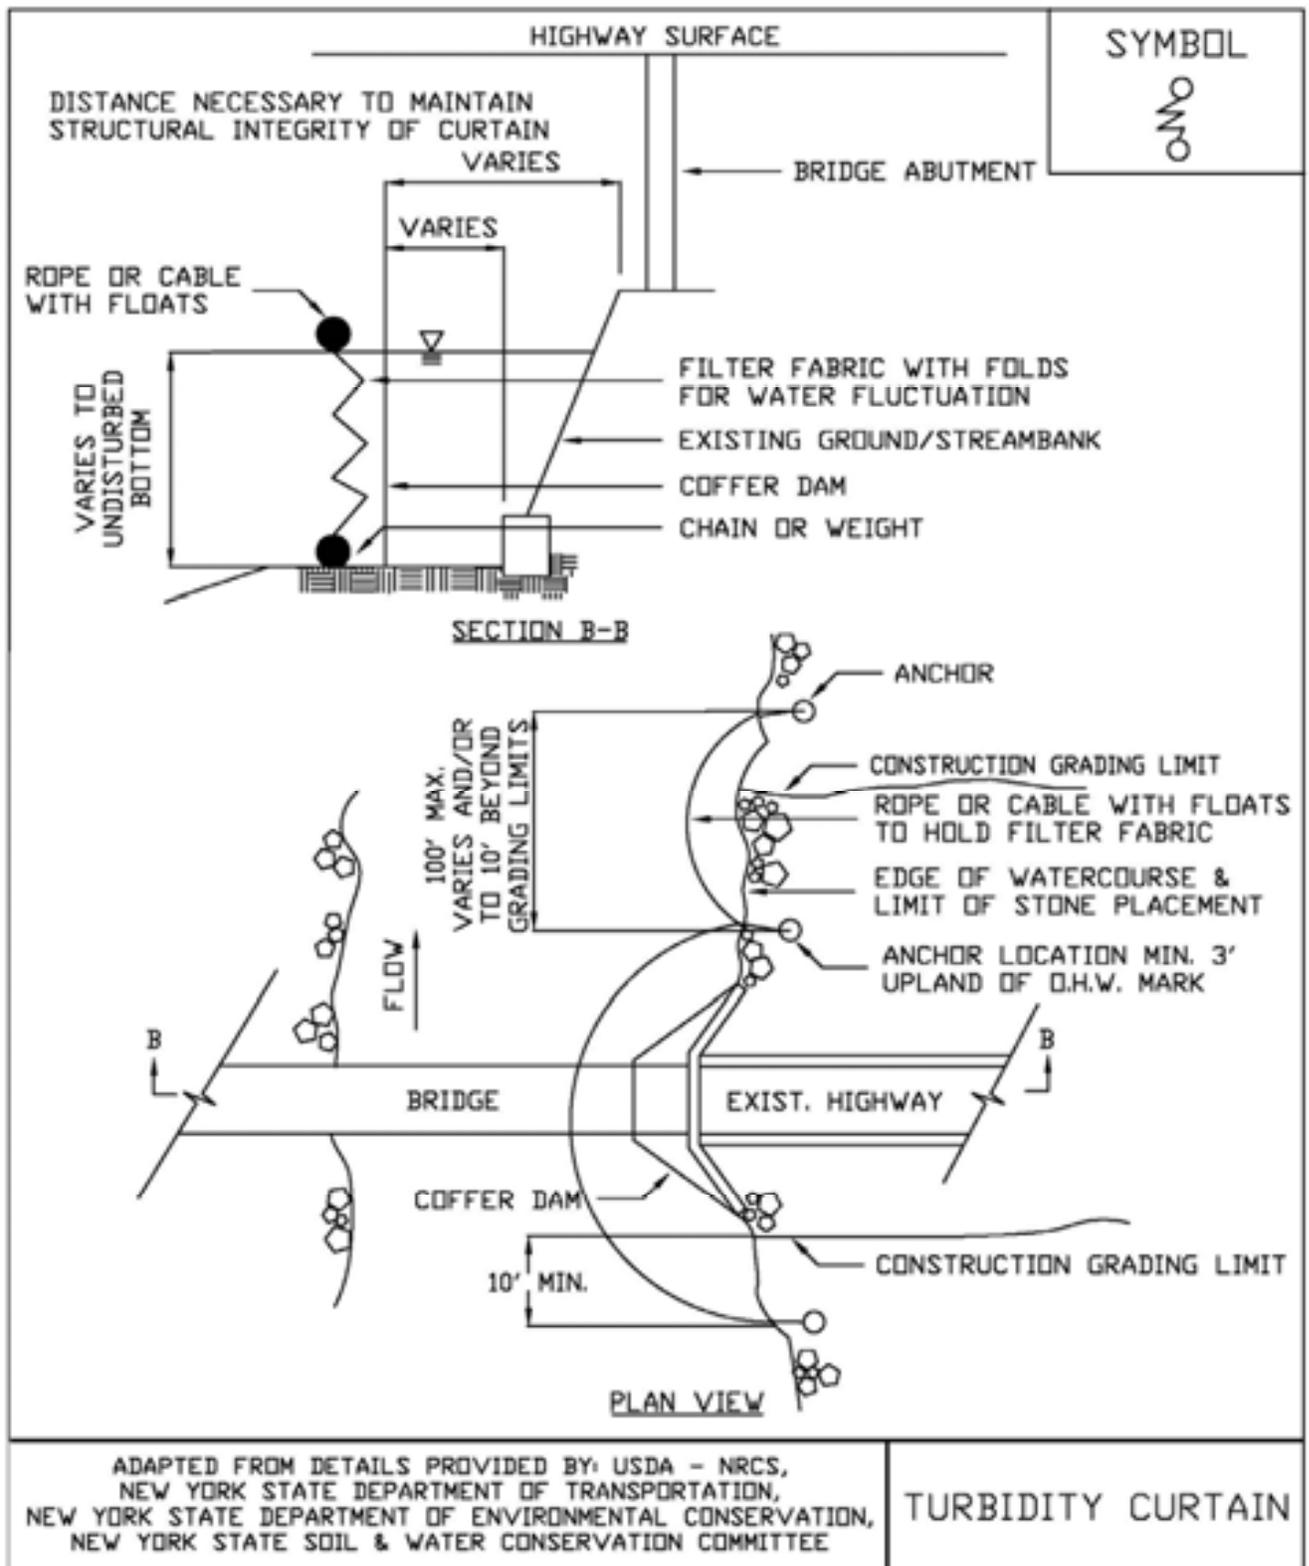

Construction Specifications

The area of proposed installation of the curtain shall be inspected for obstacles and impediments that could damage the curtain or impair its effectiveness to retain sediment. All materials shall be removed so they cannot enter the waterbody. Shallow installations can be made by securing the curtain by staking rather than using a flotation system. Supplemental anchors of the turbidity curtain toe shall be used, as needed, depending on water surface disturbances such as boats and wave action by winds.

Maintenance

The turbidity curtain shall be inspected daily and repaired or replaced immediately. It is not normally necessary to remove sediment deposited behind the curtain; but, when necessary, removal is usually done by hand prior to removal of the barrier. All removed silt is stabilized away from the waterbody. The barrier shall be removed by carefully pulling it toward the construction site to minimize the release of attached sediment. Any floating construction or natural debris shall be immediately removed to prevent damage to the curtain. If the curtain is oriented in a manner that faces the prevailing winds, frequent checks of the anchorage shall be made.

**Figure 5.35
Turbidity Curtain**

APPENDIX G

Pre-Construction Documents & Certifications

PRE-CONSTRUCTION DOCUMENTS

Project Name: 2731 West 12th Street

Name of Owner/Developer: Prologis

Name of Preparer: Langan Engineering, Environmental, Surveying, Landscape Architecture, and Geology, D.P.C.

Preamble to Site Assessment and Inspections

The following information to be read by all person's involved in the construction of stormwater related activities:

A qualified professional shall conduct an assessment of the site prior to the development activity (1) and certify in this inspection report that the appropriate erosion and sediment controls described in the SWPPP have been adequately installed or implemented to ensure overall preparedness of the site for the commencement of construction.

Prior to the commencement of construction, the Preparer shall certify in this site logbook that the SWPPP has been prepared in accordance with the State's standards and meets all Federal, State and local erosion and sediment control requirements.

When construction starts, site inspections shall be conducted by the qualified professional at least every 7 calendar days or within 24 hours of the end of a storm event of 0.5 inches or greater (Construction Duration Inspections), except as otherwise required during "temporary shutdown". The developer shall maintain a record of all inspection reports in this **site logbook**. The site logbook shall be maintained on site and be made available to the permitting authorities upon request. The developer shall post at the site, in a publicly accessible location, a summary of the site inspection activities on a monthly basis (Monthly Summary Report).

A qualified professional shall perform a final site inspection. The qualified professional shall certify that the site had undergone final stabilization (2) using either vegetative or structural stabilization methods and that all temporary erosion and sediment controls (such as silt fencing) not needed for long-term erosion control have been removed. In addition, a qualified professional must identify and certify that all permanent structures described in the SWPPP have been constructed and provide the owner(s) with an operation and maintenance plan that ensures the structure(s) continuously functions as designed.

The Owner, qualified inspector and qualified professional must submit a Notice of Termination Request to NYCDEP via the SWPTS. DEP may inspect the site to confirm that it meets the requirements of the NOT. If post construction practices are present an application for a Stormwater Maintenance Permit must also be submitted via SWPTS.

(1) “Development activity” means soil disturbance on a site including but not limited to land contour work, clearing, grading, excavation, demolition, construction, reconstruction, new development, redevelopment, creation or replacement of impervious surface, stockpiling activities or placement of fill. Clearing activities include but are not limited to the cutting and skidding of trees, stump removal and brush root removal. Such term does not include routine maintenance (such as road resurfacing) that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility.

(2) “Final stabilization” means that all soil-disturbing activities at the site have been completed and a uniform, perennial vegetative cover with a density of eighty (80) percent has been established or equivalent stabilization measures (such as the use of mulches or geotextiles) have been employed on all unpaved areas and areas not covered by permanent structures.

PRE-CONSTRUCTION CERTIFICATIONS

Owner's Certification

I certify that I am the Owner of this property and have read or been advised of the applicable sections of the Rules of the City of New York (RCNY) Title 15, Chapter 19.1 and I believe that I understand them. I also understand that, under RCNY, I am responsible for submitting a fee to initiate review of the stormwater pollution prevention plan (SWPPP). I hereby certify that this SWPPP and all associated documentation provided were prepared under my direction or supervision. I understand that certifying false, incorrect or inaccurate information is a violation of the laws of the City of New York and could subject me to criminal or civil penalties and/or administrative proceedings. I also understand that, by submitting this application, I am acknowledging that the SWPPP has been developed and will be implemented as the first element of construction.

Name (please print): Sheila Sutton

SWPPP Preparer Certification

I hereby certify that the Stormwater Pollution Prevention Plan (SWPPP) for this project was prepared by me or under my direct supervision in accordance with the RCNY Title 15 Chapter 19.1 and terms and conditions of the most recent NYSDEC SPDES General Permit for Stormwater Discharges from Construction Sites. Furthermore, I understand that certifying false, incorrect or inaccurate information is a violation of this permit and the laws of the City New York and could subject me to criminal, civil and/or administrative proceedings.

APPENDIX H

Construction Duration Inspections

CONSTRUCTION DURATION INSPECTION FORM 2731 West 12th Street

Instructions for Qualified Inspector:

- Inspection Forms will be filled out during the entire construction phase of the project.
- Complete inspections must include:
 - An inspection form
 - A site plan showing the areas under active construction
 - Color Photos with date and time stamps showing any deficiencies or corrections to previous deficiencies
 - The signature of the Qualified Inspector (QI) and Qualified Professional

Required Elements:

- On a site map, indicate the extent of all disturbed site areas and drainage pathways.
 - Indicate site areas that are expected to undergo initial disturbance or significant site work within the next 7-day period.
 - Indicate, on a site map, all areas of the site that have undergone temporary or permanent stabilization.
 - Indicate all disturbed site areas that have not undergone active site work during the previous 7-day period.
- Inspect all sediment control practices and record the approximate degree of sediment accumulation as a percentage of sediment storage volume (for example, 10 percent, 20 percent, and 50 percent).
- Inspect all erosion and sediment control practices and record all maintenance requirements such as verifying the integrity of barrier or diversion systems (e.g. earthen berms or silt fencing) and containment systems (sediment basins and sediment traps).
- Identify all erosion and sediment control practices and pollution prevention measures that were not installed properly or are not functioning as designed and need to be reinstalled or replaced.
- Identify current phase of construction of all post-construction stormwater management practices and identification of all construction that is not in conformance with the SWPPP and technical standards
- Identify any evidence of rill or gully erosion occurring on slopes and any loss of stabilizing vegetation or seeding/mulching.
- Document any excessive deposition of sediment or ponding water along barrier or diversion systems. Record the depth of sediment within containment structures, any erosion near outlet and overflow structures, and verify the ability of rock filters around perforated risers pipes to pass water.
- Immediately report to the Owner or Contractor any deficiencies that are identified with the implementation of the SWPPP.
- Take color photos with time and date stamps of any identified deficiencies or corrections to previous deficiencies
- Include identification and status of all corrective actions that were required by previous inspection; and
- Contractor shall maintain an onsite record of all inspection documents and reports in the site log book.

CONSTRUCTION DURATION INSPECTION FORM 2731 WEST 12TH STREET

SITE PLAN/SKETCH:

Provide a concise sketch indicating construction activities, location and description of stormwater runoff from the site, stabilization activities, and soil erosion and sediment control BMPs. Indicate areas of disturbance at the time of inspection, areas that have been temporarily or permanently stabilized since the last inspection. Indicate BMPs improperly installed or in need of repair.

Refer to SWPPP Drawings C-100, C-101, and C-201 for the site soil erosion and sediment controls and standard details (prepared by Langan, last revised 10/17/2024)

APPENDIX L
Copy of SPDES General Permit

Department of
Environmental
Conservation

NEW YORK STATE
DEPARTMENT OF ENVIRONMENTAL CONSERVATION

SPDES GENERAL PERMIT
FOR STORMWATER DISCHARGES

From

CONSTRUCTION ACTIVITY

Permit No. GP- 0-20-001

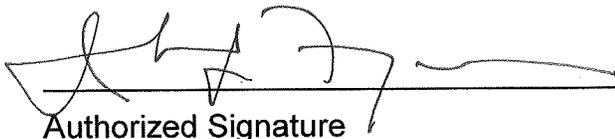

Issued Pursuant to Article 17, Titles 7, 8 and Article 70
of the Environmental Conservation Law

Effective Date: January 29, 2020

Expiration Date: January 28, 2025

John J. Ferguson

Chief Permit Administrator

Authorized Signature

1-23-20

Date

Address: NYS DEC
Division of Environmental Permits
625 Broadway, 4th Floor
Albany, N.Y. 12233-1750

PREFACE

Pursuant to Section 402 of the Clean Water Act (“CWA”), stormwater *discharges* from certain *construction activities* are unlawful unless they are authorized by a *National Pollutant Discharge Elimination System (“NPDES”)* permit or by a state permit program. New York administers the approved State Pollutant Discharge Elimination System (SPDES) program with permits issued in accordance with the New York State Environmental Conservation Law (ECL) Article 17, Titles 7, 8 and Article 70.

An *owner or operator* of a *construction activity* that is eligible for coverage under this permit must obtain coverage prior to the *commencement of construction activity*. Activities that fit the definition of “*construction activity*”, as defined under 40 CFR 122.26(b)(14)(x), (15)(i), and (15)(ii), constitute construction of a *point source* and therefore, pursuant to ECL section 17-0505 and 17-0701, the *owner or operator* must have coverage under a SPDES permit prior to *commencing construction activity*. The *owner or operator* cannot wait until there is an actual *discharge* from the *construction site* to obtain permit coverage.

***Note: The italicized words/phrases within this permit are defined in Appendix A.**

Part 1. PERMIT COVERAGE AND LIMITATIONS

A. Permit Application

This permit authorizes stormwater *discharges to surface waters of the State* from the following *construction activities* identified within 40 CFR Parts 122.26(b)(14)(x), 122.26(b)(15)(i) and 122.26(b)(15)(ii), provided all of the eligibility provisions of this permit are met:

1. *Construction activities* involving soil disturbances of one (1) or more acres; including disturbances of less than one acre that are part of a *larger common plan of development or sale* that will ultimately disturb one or more acres of land; excluding *routine maintenance activity* that is performed to maintain the original line and grade, hydraulic capacity or original purpose of a facility;
2. *Construction activities* involving soil disturbances of less than one (1) acre where the Department has determined that a *SPDES* permit is required for stormwater *discharges* based on the potential for contribution to a violation of a *water quality standard* or for significant contribution of *pollutants to surface waters of the State*.
3. *Construction activities* located in the watershed(s) identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

B. Effluent Limitations Applicable to Discharges from Construction Activities

Discharges authorized by this permit must achieve, at a minimum, the effluent limitations in Part I.B.1. (a) – (f) of this permit. These limitations represent the degree of effluent reduction attainable by the application of best practicable technology currently available.

1. Erosion and Sediment Control Requirements - The *owner or operator* must select, design, install, implement and maintain control measures to *minimize the discharge of pollutants* and prevent a violation of the *water quality standards*. The selection, design, installation, implementation, and maintenance of these control measures must meet the non-numeric effluent limitations in Part I.B.1.(a) – (f) of this permit and be in accordance with the New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016, using sound engineering judgment. Where control measures are not designed in conformance with the design criteria included in the technical standard, the *owner or operator* must include in the *Stormwater Pollution Prevention Plan* (“SWPPP”) the reason(s) for the

deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

- a. **Erosion and Sediment Controls.** Design, install and maintain effective erosion and sediment controls to *minimize* the *discharge of pollutants* and prevent a violation of the *water quality standards*. At a minimum, such controls must be designed, installed and maintained to:
- (i) *Minimize* soil erosion through application of runoff control and soil stabilization control measure to *minimize pollutant discharges*;
 - (ii) Control stormwater *discharges*, including both peak flowrates and total stormwater volume, to *minimize* channel and *streambank* erosion and scour in the immediate vicinity of the *discharge* points;
 - (iii) *Minimize* the amount of soil exposed during *construction activity*;
 - (iv) *Minimize* the disturbance of *steep slopes*;
 - (v) *Minimize* sediment *discharges* from the site;
 - (vi) Provide and maintain *natural buffers* around surface waters, direct stormwater to vegetated areas and maximize stormwater infiltration to reduce *pollutant discharges*, unless *infeasible*;
 - (vii) *Minimize* soil compaction. Minimizing soil compaction is not required where the intended function of a specific area of the site dictates that it be compacted;
 - (viii) Unless *infeasible*, preserve a sufficient amount of topsoil to complete soil restoration and establish a uniform, dense vegetative cover; and
 - (ix) *Minimize* dust. On areas of exposed soil, *minimize* dust through the appropriate application of water or other dust suppression techniques to control the generation of pollutants that could be discharged from the site.
- b. **Soil Stabilization.** In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within fourteen (14) days from the date the current soil disturbance activity ceased. For construction sites that *directly discharge* to one of the 303(d) segments

listed in Appendix E or is located in one of the watersheds listed in Appendix C, the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the current soil disturbance activity ceased. See Appendix A for definition of *Temporarily Ceased*.

- c. **Dewatering.** *Discharges* from *dewatering* activities, including *discharges* from *dewatering* of trenches and excavations, must be managed by appropriate control measures.

- d. **Pollution Prevention Measures.** Design, install, implement, and maintain effective pollution prevention measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. At a minimum, such measures must be designed, installed, implemented and maintained to:
 - (i) *Minimize* the *discharge* of *pollutants* from equipment and vehicle washing, wheel wash water, and other wash waters. This applies to washing operations that use clean water only. Soaps, detergents and solvents cannot be used;

 - (ii) *Minimize* the exposure of building materials, building products, construction wastes, trash, landscape materials, fertilizers, pesticides, herbicides, detergents, sanitary waste, hazardous and toxic waste, and other materials present on the site to precipitation and to stormwater. Minimization of exposure is not required in cases where the exposure to precipitation and to stormwater will not result in a *discharge* of *pollutants*, or where exposure of a specific material or product poses little risk of stormwater contamination (such as final products and materials intended for outdoor use) ; and

 - (iii) Prevent the *discharge* of *pollutants* from spills and leaks and implement chemical spill and leak prevention and response procedures.

- e. **Prohibited Discharges.** The following *discharges* are prohibited:
 - (i) Wastewater from washout of concrete;

 - (ii) Wastewater from washout and cleanout of stucco, paint, form release oils, curing compounds and other construction materials;

- (iii) Fuels, oils, or other *pollutants* used in vehicle and equipment operation and maintenance;
 - (iv) Soaps or solvents used in vehicle and equipment washing; and
 - (v) Toxic or hazardous substances from a spill or other release.
- f. Surface Outlets. When discharging from basins and impoundments, the outlets shall be designed, constructed and maintained in such a manner that sediment does not leave the basin or impoundment and that erosion at or below the outlet does not occur.

C. Post-construction Stormwater Management Practice Requirements

1. The *owner or operator* of a *construction activity* that requires post-construction stormwater management practices pursuant to Part III.C. of this permit must select, design, install, and maintain the practices to meet the *performance criteria* in the New York State Stormwater Management Design Manual (“Design Manual”), dated January 2015, using sound engineering judgment. Where post-construction stormwater management practices (“SMPs”) are not designed in conformance with the *performance criteria* in the Design Manual, the *owner or operator* must include in the SWPPP the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.
2. The *owner or operator* of a *construction activity* that requires post-construction stormwater management practices pursuant to Part III.C. of this permit must design the practices to meet the applicable *sizing criteria* in Part I.C.2.a., b., c. or d. of this permit.

a. Sizing Criteria for New Development

- (i) Runoff Reduction Volume (“RRv”): Reduce the total Water Quality Volume (“WQv”) by application of RR techniques and standard SMPs with RRv capacity. The total WQv shall be calculated in accordance with the criteria in Section 4.2 of the Design Manual.
- (ii) Minimum RRv and Treatment of Remaining Total WQv: Construction activities that cannot meet the criteria in Part I.C.2.a.(i) of this permit due to site limitations shall direct runoff from all newly constructed impervious areas to a RR technique or standard SMP with RRv capacity unless infeasible. The specific site limitations that prevent the reduction of 100% of the WQv shall be documented in the SWPPP.

For each impervious area that is not directed to a RR technique or standard SMP with RRv capacity, the SWPPP must include documentation which demonstrates that all options were considered and for each option explains why it is considered infeasible.

In no case shall the runoff reduction achieved from the newly constructed impervious areas be less than the Minimum RRv as calculated using the criteria in Section 4.3 of the Design Manual.

The remaining portion of the total WQv that cannot be reduced shall be treated by application of standard SMPs.

- (iii) Channel Protection Volume (“Cpv”): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event; remaining after runoff reduction. The Cpv requirement does not apply when:
 - (1) Reduction of the entire Cpv is achieved by application of runoff reduction techniques or infiltration systems, or
 - (2) The site discharges directly to tidal waters, or fifth order or larger streams.

- (iv) *Overbank* Flood Control Criteria (“Qp”): Requires storage to attenuate the post-development 10-year, 24-hour peak discharge rate (Qp) to predevelopment rates. The Qp requirement does not apply when:
 - (1) the site discharges directly to tidal waters or fifth order or larger streams, or
 - (2) A downstream analysis reveals that *overbank* control is not required.

- (v) Extreme Flood Control Criteria (“Qf”): Requires storage to attenuate the post-development 100-year, 24-hour peak discharge rate (Qf) to predevelopment rates. The Qf requirement does not apply when:
 - (1) the site discharges directly to tidal waters or fifth order or larger streams, or
 - (2) A downstream analysis reveals that *overbank* control is not required.

b. Sizing Criteria for New Development in Enhanced Phosphorus Removal Watershed

- (i) Runoff Reduction Volume (RRv): Reduce the total Water Quality Volume (WQv) by application of RR techniques and standard SMPs with RRv capacity. The total WQv is the runoff volume from the 1-year, 24 hour design storm over the post-developed watershed and shall be

calculated in accordance with the criteria in Section 10.3 of the Design Manual.

- (ii) Minimum RRv and Treatment of Remaining Total WQv: *Construction activities* that cannot meet the criteria in Part I.C.2.b.(i) of this permit due to *site limitations* shall direct runoff from all newly constructed *impervious areas* to a RR technique or standard SMP with RRv capacity unless *infeasible*. The specific *site limitations* that prevent the reduction of 100% of the WQv shall be documented in the SWPPP. For each *impervious area* that is not directed to a RR technique or standard SMP with RRv capacity, the SWPPP must include documentation which demonstrates that all options were considered and for each option explains why it is considered *infeasible*.

In no case shall the runoff reduction achieved from the newly constructed *impervious areas* be less than the Minimum RRv as calculated using the criteria in Section 10.3 of the Design Manual. The remaining portion of the total WQv that cannot be reduced shall be treated by application of standard SMPs.

- (iii) Channel Protection Volume (Cpv): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event; remaining after runoff reduction. The Cpv requirement does not apply when:
 - (1) Reduction of the entire Cpv is achieved by application of runoff reduction techniques or infiltration systems, or
 - (2) The site *discharges* directly to tidal waters, or fifth order or larger streams.
- (iv) *Overbank* Flood Control Criteria (Qp): Requires storage to attenuate the post-development 10-year, 24-hour peak *discharge* rate (Qp) to predevelopment rates. The Qp requirement does not apply when:
 - (1) the site *discharges* directly to tidal waters or fifth order or larger streams, or
 - (2) A downstream analysis reveals that *overbank* control is not required.
- (v) Extreme Flood Control Criteria (Qf): Requires storage to attenuate the post-development 100-year, 24-hour peak *discharge* rate (Qf) to predevelopment rates. The Qf requirement does not apply when:
 - (1) the site *discharges* directly to tidal waters or fifth order or larger streams, or
 - (2) A downstream analysis reveals that *overbank* control is not required.

c. Sizing Criteria for Redevelopment Activity

- (i) Water Quality Volume (WQv): The WQv treatment objective for *redevelopment activity* shall be addressed by one of the following options. *Redevelopment activities* located in an Enhanced Phosphorus Removal Watershed (see Part III.B.3. and Appendix C of this permit) shall calculate the WQv in accordance with Section 10.3 of the Design Manual. All other *redevelopment activities* shall calculate the WQv in accordance with Section 4.2 of the Design Manual.
- (1) Reduce the existing *impervious cover* by a minimum of 25% of the total disturbed, *impervious area*. The Soil Restoration criteria in Section 5.1.6 of the Design Manual must be applied to all newly created pervious areas, or
 - (2) Capture and treat a minimum of 25% of the WQv from the disturbed, *impervious area* by the application of standard SMPs; or reduce 25% of the WQv from the disturbed, *impervious area* by the application of RR techniques or standard SMPs with RRv capacity., or
 - (3) Capture and treat a minimum of 75% of the WQv from the disturbed, *impervious area* as well as any additional runoff from tributary areas by application of the alternative practices discussed in Sections 9.3 and 9.4 of the Design Manual., or
 - (4) Application of a combination of 1, 2 and 3 above that provide a weighted average of at least two of the above methods. Application of this method shall be in accordance with the criteria in Section 9.2.1(B) (IV) of the Design Manual.

If there is an existing post-construction stormwater management practice located on the site that captures and treats runoff from the *impervious area* that is being disturbed, the WQv treatment option selected must, at a minimum, provide treatment equal to the treatment that was being provided by the existing practice(s) if that treatment is greater than the treatment required by options 1 – 4 above.

- (ii) Channel Protection Volume (Cpv): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site.
- (iii) *Overbank* Flood Control Criteria (Qp): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site.
- (iv) Extreme Flood Control Criteria (Qf): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site

d. Sizing Criteria for Combination of Redevelopment Activity and New Development

Construction projects that include both New Development and Redevelopment Activity shall provide post-construction stormwater management controls that meet the sizing criteria calculated as an aggregate of the Sizing Criteria in Part I.C.2.a. or b. of this permit for the New Development portion of the project and Part I.C.2.c of this permit for Redevelopment Activity portion of the project.

D. Maintaining Water Quality

The Department expects that compliance with the conditions of this permit will control *discharges* necessary to meet applicable *water quality standards*. It shall be a violation of the *ECL* for any discharge to either cause or contribute to a violation of *water quality standards* as contained in Parts 700 through 705 of Title 6 of the Official Compilation of Codes, Rules and Regulations of the State of New York, such as:

1. There shall be no increase in turbidity that will cause a substantial visible contrast to natural conditions;
2. There shall be no increase in suspended, colloidal or settleable solids that will cause deposition or impair the waters for their best usages; and
3. There shall be no residue from oil and floating substances, nor visible oil film, nor globules of grease.

If there is evidence indicating that the stormwater *discharges* authorized by this permit are causing, have the reasonable potential to cause, or are contributing to a violation of the *water quality standards*; the *owner or operator* must take appropriate corrective action in accordance with Part IV.C.5. of this general permit and document in accordance with Part IV.C.4. of this general permit. To address the *water quality standard* violation the *owner or operator* may need to provide additional information, include and implement appropriate controls in the SWPPP to correct the problem, or obtain an individual SPDES permit.

If there is evidence indicating that despite compliance with the terms and conditions of this general permit it is demonstrated that the stormwater *discharges* authorized by this permit are causing or contributing to a violation of *water quality standards*, or if the Department determines that a modification of the permit is necessary to prevent a violation of *water quality standards*, the authorized *discharges* will no longer be eligible for coverage under this permit. The Department may require the *owner or operator* to obtain an individual SPDES permit to continue discharging.

E. Eligibility Under This General Permit

1. This permit may authorize all *discharges* of stormwater from *construction activity* to *surface waters of the State* and *groundwaters* except for ineligible *discharges* identified under subparagraph F. of this Part.
2. Except for non-stormwater *discharges* explicitly listed in the next paragraph, this permit only authorizes stormwater *discharges*; including stormwater runoff, snowmelt runoff, and surface runoff and drainage, from *construction activities*.
3. Notwithstanding paragraphs E.1 and E.2 above, the following non-stormwater discharges are authorized by this permit: those listed in 6 NYCRR 750-1.2(a)(29)(vi), with the following exception: “Discharges from firefighting activities are authorized only when the firefighting activities are emergencies/unplanned”; waters to which other components have not been added that are used to control dust in accordance with the SWPPP; and uncontaminated *discharges* from *construction site* de-watering operations. All non-stormwater discharges must be identified in the SWPPP. Under all circumstances, the *owner or operator* must still comply with *water quality standards* in Part I.D of this permit.
4. The *owner or operator* must maintain permit eligibility to *discharge* under this permit. Any *discharges* that are not compliant with the eligibility conditions of this permit are not authorized by the permit and the *owner or operator* must either apply for a separate permit to cover those ineligible *discharges* or take steps necessary to make the *discharge* eligible for coverage.

F. Activities Which Are Ineligible for Coverage Under This General Permit

All of the following are **not** authorized by this permit:

1. *Discharges* after *construction activities* have been completed and the site has undergone *final stabilization*;
2. *Discharges* that are mixed with sources of non-stormwater other than those expressly authorized under subsection E.3. of this Part and identified in the SWPPP required by this permit;
3. *Discharges* that are required to obtain an individual SPDES permit or another SPDES general permit pursuant to Part VII.K. of this permit;
4. *Construction activities* or *discharges* from *construction activities* that may adversely affect an *endangered or threatened species* unless the *owner or*

operator has obtained a permit issued pursuant to 6 NYCRR Part 182 for the project or the Department has issued a letter of non-jurisdiction for the project. All documentation necessary to demonstrate eligibility shall be maintained on site in accordance with Part II.D.2 of this permit;

5. *Discharges* which either cause or contribute to a violation of *water quality standards* adopted pursuant to the *ECL* and its accompanying regulations;
6. *Construction activities* for residential, commercial and institutional projects:
 - a. Where the *discharges* from the *construction activities* are tributary to waters of the state classified as AA or AA-s; and
 - b. Which are undertaken on land with no existing *impervious cover*; and
 - c. Which disturb one (1) or more acres of land designated on the current United States Department of Agriculture (“USDA”) Soil Survey as Soil Slope Phase “D”, (provided the map unit name is inclusive of slopes greater than 25%), or Soil Slope Phase “E” or “F” (regardless of the map unit name), or a combination of the three designations.
7. *Construction activities* for linear transportation projects and linear utility projects:
 - a. Where the *discharges* from the *construction activities* are tributary to waters of the state classified as AA or AA-s; and
 - b. Which are undertaken on land with no existing *impervious cover*; and
 - c. Which disturb two (2) or more acres of land designated on the current USDA Soil Survey as Soil Slope Phase “D” (provided the map unit name is inclusive of slopes greater than 25%), or Soil Slope Phase “E” or “F” (regardless of the map unit name), or a combination of the three designations.

8. *Construction activities* that have the potential to affect an *historic property*, unless there is documentation that such impacts have been resolved. The following documentation necessary to demonstrate eligibility with this requirement shall be maintained on site in accordance with Part II.D.2 of this permit and made available to the Department in accordance with Part VII.F of this permit:
- a. Documentation that the *construction activity* is not within an archeologically sensitive area indicated on the sensitivity map, and that the *construction activity* is not located on or immediately adjacent to a property listed or determined to be eligible for listing on the National or State Registers of Historic Places, and that there is no new permanent building on the *construction site* within the following distances from a building, structure, or object that is more than 50 years old, or if there is such a new permanent building on the *construction site* within those parameters that NYS Office of Parks, Recreation and Historic Preservation (OPRHP), a Historic Preservation Commission of a Certified Local Government, or a qualified preservation professional has determined that the building, structure, or object more than 50 years old is not historically/archeologically significant.
 - 1-5 acres of disturbance - 20 feet
 - 5-20 acres of disturbance - 50 feet
 - 20+ acres of disturbance - 100 feet, or
 - b. DEC consultation form sent to OPRHP, and copied to the NYS DEC Agency Historic Preservation Officer (APO), and
 - (i) the State Environmental Quality Review (SEQR) Environmental Assessment Form (EAF) with a negative declaration or the Findings Statement, with documentation of OPRHP's agreement with the resolution; or
 - (ii) documentation from OPRHP that the *construction activity* will result in No Impact; or
 - (iii) documentation from OPRHP providing a determination of No Adverse Impact; or
 - (iv) a Letter of Resolution signed by the owner/operator, OPRHP and the DEC APO which allows for this *construction activity* to be eligible for coverage under the general permit in terms of the State Historic Preservation Act (SHPA); or
 - c. Documentation of satisfactory compliance with Section 106 of the National Historic Preservation Act for a coterminous project area:

- (i) No Affect
- (ii) No Adverse Affect
- (iii) Executed Memorandum of Agreement, or

d. Documentation that:

- (i) SHPA Section 14.09 has been completed by NYS DEC or another state agency.
9. *Discharges from construction activities* that are subject to an existing SPDES individual or general permit where a SPDES permit for *construction activity* has been terminated or denied; or where the *owner or operator* has failed to renew an expired individual permit.

Part II. PERMIT COVERAGE

A. How to Obtain Coverage

1. An *owner or operator* of a *construction activity* that is not subject to the requirements of a regulated, traditional land use control MS4 must first prepare a SWPPP in accordance with all applicable requirements of this permit and then submit a completed Notice of Intent (NOI) to the Department to be authorized to discharge under this permit.
2. An *owner or operator* of a *construction activity* that is subject to the requirements of a *regulated, traditional land use control MS4* must first prepare a SWPPP in accordance with all applicable requirements of this permit and then have the SWPPP reviewed and accepted by the *regulated, traditional land use control MS4* prior to submitting the NOI to the Department. The *owner or operator* shall have the “MS4 SWPPP Acceptance” form signed in accordance with Part VII.H., and then submit that form along with a completed NOI to the Department.
3. The requirement for an *owner or operator* to have its SWPPP reviewed and accepted by the *regulated, traditional land use control MS4* prior to submitting the NOI to the Department does not apply to an *owner or operator* that is obtaining permit coverage in accordance with the requirements in Part II.F. (Change of *Owner or Operator*) or where the *owner or operator* of the *construction activity* is the *regulated, traditional land use control MS4* . This exemption does not apply to *construction activities* subject to the New York City Administrative Code.

B. Notice of Intent (NOI) Submittal

1. Prior to December 21, 2020, an owner or operator shall use either the electronic (eNOI) or paper version of the NOI that the Department prepared. Both versions of the NOI are located on the Department's website (<http://www.dec.ny.gov/>). The paper version of the NOI shall be signed in accordance with Part VII.H. of this permit and submitted to the following address:

**NOTICE OF INTENT
NYS DEC, Bureau of Water Permits
625 Broadway, 4th Floor
Albany, New York 12233-3505**

2. Beginning December 21, 2020 and in accordance with EPA's 2015 NPDES Electronic Reporting Rule (40 CFR Part 127), the *owner or operator* must submit the NOI electronically using the *Department's* online NOI.
3. The *owner or operator* shall have the SWPPP preparer sign the "SWPPP Preparer Certification" statement on the NOI prior to submitting the form to the Department.
4. As of the date the NOI is submitted to the Department, the *owner or operator* shall make the NOI and SWPPP available for review and copying in accordance with the requirements in Part VII.F. of this permit.

C. Permit Authorization

1. An *owner or operator* shall not *commence construction activity* until their authorization to *discharge* under this permit goes into effect.
2. Authorization to *discharge* under this permit will be effective when the *owner or operator* has satisfied all of the following criteria:
 - a. project review pursuant to the State Environmental Quality Review Act ("SEQRA") have been satisfied, when SEQRA is applicable. See the Department's website (<http://www.dec.ny.gov/>) for more information,
 - b. where required, all necessary Department permits subject to the *Uniform Procedures Act ("UPA")* (see 6 NYCRR Part 621), or the equivalent from another New York State agency, have been obtained, unless otherwise notified by the Department pursuant to 6 NYCRR 621.3(a)(4). *Owners or operators of construction activities* that are required to obtain *UPA* permits

must submit a preliminary SWPPP to the appropriate DEC Permit Administrator at the Regional Office listed in Appendix F at the time all other necessary *UPA* permit applications are submitted. The preliminary SWPPP must include sufficient information to demonstrate that the *construction activity* qualifies for authorization under this permit,

- c. the final SWPPP has been prepared, and
 - d. a complete NOI has been submitted to the Department in accordance with the requirements of this permit.
3. An *owner or operator* that has satisfied the requirements of Part II.C.2 above will be authorized to *discharge* stormwater from their *construction activity* in accordance with the following schedule:
- a. For *construction activities* that are not subject to the requirements of a *regulated, traditional land use control MS4*:
 - (i) Five (5) business days from the date the Department receives a complete electronic version of the NOI (eNOI) for *construction activities* with a SWPPP that has been prepared in conformance with the design criteria in the technical standard referenced in Part III.B.1 and the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C.; or
 - (ii) Sixty (60) business days from the date the Department receives a complete NOI (electronic or paper version) for *construction activities* with a SWPPP that has not been prepared in conformance with the design criteria in technical standard referenced in Part III.B.1. or, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C., the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, or;
 - (iii) Ten (10) business days from the date the Department receives a complete paper version of the NOI for *construction activities* with a SWPPP that has been prepared in conformance with the design criteria in the technical standard referenced in Part III.B.1 and the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C.

- b. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4*:
 - (i) Five (5) business days from the date the Department receives both a complete electronic version of the NOI (eNOI) and signed “MS4 SWPPP Acceptance” form, or
 - (ii) Ten (10) business days from the date the Department receives both a complete paper version of the NOI and signed “MS4 SWPPP Acceptance” form.
4. Coverage under this permit authorizes stormwater *discharges* from only those areas of disturbance that are identified in the NOI. If an *owner or operator* wishes to have stormwater *discharges* from future or additional areas of disturbance authorized, they must submit a new NOI that addresses that phase of the development, unless otherwise notified by the Department. The *owner or operator* shall not *commence construction activity* on the future or additional areas until their authorization to *discharge* under this permit goes into effect in accordance with Part II.C. of this permit.

D. General Requirements For Owners or Operators With Permit Coverage

1. The *owner or operator* shall ensure that the provisions of the SWPPP are implemented from the *commencement of construction activity* until all areas of disturbance have achieved *final stabilization* and the Notice of Termination (“NOT”) has been submitted to the Department in accordance with Part V. of this permit. This includes any changes made to the SWPPP pursuant to Part III.A.4. of this permit.
2. The *owner or operator* shall maintain a copy of the General Permit (GP-0-20-001), NOI, *NOI Acknowledgment Letter*, SWPPP, MS4 SWPPP Acceptance form, inspection reports, responsible contractor’s or subcontractor’s certification statement (see Part III.A.6.), and all documentation necessary to demonstrate eligibility with this permit at the *construction site* until all disturbed areas have achieved *final stabilization* and the NOT has been submitted to the Department. The documents must be maintained in a secure location, such as a job trailer, on-site construction office, or mailbox with lock. The secure location must be accessible during normal business hours to an individual performing a compliance inspection.
3. The *owner or operator of a construction activity* shall not disturb greater than five (5) acres of soil at any one time without prior written authorization from the Department or, in areas under the jurisdiction of a *regulated, traditional land*

- use control MS4, the regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*). At a minimum, the *owner or operator* must comply with the following requirements in order to be authorized to disturb greater than five (5) acres of soil at any one time:
- a. The *owner or operator* shall have a *qualified inspector* conduct **at least** two (2) site inspections in accordance with Part IV.C. of this permit every seven (7) calendar days, for as long as greater than five (5) acres of soil remain disturbed. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.
 - b. In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the current soil disturbance activity ceased. The soil stabilization measures selected shall be in conformance with the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016.
 - c. The *owner or operator* shall prepare a phasing plan that defines maximum disturbed area per phase and shows required cuts and fills.
 - d. The *owner or operator* shall install any additional site-specific practices needed to protect water quality.
 - e. The *owner or operator* shall include the requirements above in their SWPPP.
4. In accordance with statute, regulations, and the terms and conditions of this permit, the Department may suspend or revoke an *owner's or operator's* coverage under this permit at any time if the Department determines that the SWPPP does not meet the permit requirements or consistent with Part VII.K..
 5. Upon a finding of significant non-compliance with the practices described in the SWPPP or violation of this permit, the Department may order an immediate stop to all activity at the site until the non-compliance is remedied. The stop work order shall be in writing, describe the non-compliance in detail, and be sent to the *owner or operator*.
 6. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4*, the *owner or operator* shall notify the

regulated, traditional land use control MS4 in writing of any planned amendments or modifications to the post-construction stormwater management practice component of the SWPPP required by Part III.A. 4. and 5. of this permit. Unless otherwise notified by the *regulated, traditional land use control MS4*, the *owner or operator* shall have the SWPPP amendments or modifications reviewed and accepted by the *regulated, traditional land use control MS4* prior to commencing construction of the post-construction stormwater management practice.

E. Permit Coverage for Discharges Authorized Under GP-0-15-002

1. Upon renewal of SPDES General Permit for Stormwater Discharges from *Construction Activity* (Permit No. GP-0-15-002), an *owner or operator* of a *construction activity* with coverage under GP-0-15-002, as of the effective date of GP- 0-20-001, shall be authorized to *discharge* in accordance with GP- 0-20-001, unless otherwise notified by the Department.

An *owner or operator* may continue to implement the technical/design components of the post-construction stormwater management controls provided that such design was done in conformance with the technical standards in place at the time of initial project authorization. However, they must comply with the other, non-design provisions of GP-0-20-001.

F. Change of Owner or Operator

1. When property ownership changes or when there is a change in operational control over the construction plans and specifications, the original *owner or operator* must notify the new *owner or operator*, in writing, of the requirement to obtain permit coverage by submitting a NOI with the Department. For *construction activities* subject to the requirements of a *regulated, traditional land use control MS4*, the original *owner or operator* must also notify the MS4, in writing, of the change in ownership at least 30 calendar days prior to the change in ownership.
2. Once the new *owner or operator* obtains permit coverage, the original *owner or operator* shall then submit a completed NOT with the name and permit identification number of the new *owner or operator* to the Department at the address in Part II.B.1. of this permit. If the original *owner or operator* maintains ownership of a portion of the *construction activity* and will disturb soil, they must maintain their coverage under the permit.
3. Permit coverage for the new *owner or operator* will be effective as of the date the Department receives a complete NOI, provided the original *owner or*

operator was not subject to a sixty (60) business day authorization period that has not expired as of the date the Department receives the NOI from the new *owner or operator*.

Part III. STORMWATER POLLUTION PREVENTION PLAN (SWPPP)

A. General SWPPP Requirements

1. A SWPPP shall be prepared and implemented by the *owner or operator* of each *construction activity* covered by this permit. The SWPPP must document the selection, design, installation, implementation and maintenance of the control measures and practices that will be used to meet the effluent limitations in Part I.B. of this permit and where applicable, the post-construction stormwater management practice requirements in Part I.C. of this permit. The SWPPP shall be prepared prior to the submittal of the NOI. The NOI shall be submitted to the Department prior to the *commencement of construction activity*. A copy of the completed, final NOI shall be included in the SWPPP.
2. The SWPPP shall describe the erosion and sediment control practices and where required, post-construction stormwater management practices that will be used and/or constructed to reduce the *pollutants* in stormwater *discharges* and to assure compliance with the terms and conditions of this permit. In addition, the SWPPP shall identify potential sources of pollution which may reasonably be expected to affect the quality of stormwater *discharges*.
3. All SWPPPs that require the post-construction stormwater management practice component shall be prepared by a *qualified professional* that is knowledgeable in the principles and practices of stormwater management and treatment.
4. The *owner or operator* must keep the SWPPP current so that it at all times accurately documents the erosion and sediment controls practices that are being used or will be used during construction, and all post-construction stormwater management practices that will be constructed on the site. At a minimum, the *owner or operator* shall amend the SWPPP, including construction drawings:
 - a. whenever the current provisions prove to be ineffective in minimizing *pollutants* in stormwater *discharges* from the site;

- b. whenever there is a change in design, construction, or operation at the *construction site* that has or could have an effect on the *discharge* of *pollutants*;
 - c. to address issues or deficiencies identified during an inspection by the *qualified inspector*, the Department or other regulatory authority; and
 - d. to document the final construction conditions.
5. The Department may notify the *owner or operator* at any time that the SWPPP does not meet one or more of the minimum requirements of this permit. The notification shall be in writing and identify the provisions of the SWPPP that require modification. Within fourteen (14) calendar days of such notification, or as otherwise indicated by the Department, the *owner or operator* shall make the required changes to the SWPPP and submit written notification to the Department that the changes have been made. If the *owner or operator* does not respond to the Department's comments in the specified time frame, the Department may suspend the *owner's or operator's* coverage under this permit or require the *owner or operator* to obtain coverage under an individual SPDES permit in accordance with Part II.D.4. of this permit.
6. Prior to the *commencement of construction activity*, the *owner or operator* must identify the contractor(s) and subcontractor(s) that will be responsible for installing, constructing, repairing, replacing, inspecting and maintaining the erosion and sediment control practices included in the SWPPP; and the contractor(s) and subcontractor(s) that will be responsible for constructing the post-construction stormwater management practices included in the SWPPP. The *owner or operator* shall have each of the contractors and subcontractors identify at least one person from their company that will be responsible for implementation of the SWPPP. This person shall be known as the *trained contractor*. The *owner or operator* shall ensure that at least one *trained contractor* is on site on a daily basis when soil disturbance activities are being performed.

The *owner or operator* shall have each of the contractors and subcontractors identified above sign a copy of the following certification statement below before they commence any *construction activity*:

"I hereby certify under penalty of law that I understand and agree to comply with the terms and conditions of the SWPPP and agree to implement any corrective actions identified by the *qualified inspector* during a site inspection. I also understand that the *owner or operator* must comply with

the terms and conditions of the most current version of the New York State Pollutant Discharge Elimination System ("SPDES") general permit for stormwater *discharges* from *construction activities* and that it is unlawful for any person to cause or contribute to a violation of *water quality standards*. Furthermore, I am aware that there are significant penalties for submitting false information, that I do not believe to be true, including the possibility of fine and imprisonment for knowing violations"

In addition to providing the certification statement above, the certification page must also identify the specific elements of the SWPPP that each contractor and subcontractor will be responsible for and include the name and title of the person providing the signature; the name and title of the *trained contractor* responsible for SWPPP implementation; the name, address and telephone number of the contracting firm; the address (or other identifying description) of the site; and the date the certification statement is signed. The *owner or operator* shall attach the certification statement(s) to the copy of the SWPPP that is maintained at the *construction site*. If new or additional contractors are hired to implement measures identified in the SWPPP after construction has commenced, they must also sign the certification statement and provide the information listed above.

7. For projects where the Department requests a copy of the SWPPP or inspection reports, the *owner or operator* shall submit the documents in both electronic (PDF only) and paper format within five (5) business days, unless otherwise notified by the Department.

B. Required SWPPP Contents

1. Erosion and sediment control component - All SWPPPs prepared pursuant to this permit shall include erosion and sediment control practices designed in conformance with the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016. Where erosion and sediment control practices are not designed in conformance with the design criteria included in the technical standard, the *owner or operator* must demonstrate *equivalence* to the technical standard. At a minimum, the erosion and sediment control component of the SWPPP shall include the following:
 - a. Background information about the scope of the project, including the location, type and size of project

- b. A site map/construction drawing(s) for the project, including a general location map. At a minimum, the site map shall show the total site area; all improvements; areas of disturbance; areas that will not be disturbed; existing vegetation; on-site and adjacent off-site surface water(s); floodplain/floodway boundaries; wetlands and drainage patterns that could be affected by the *construction activity*; existing and final contours ; locations of different soil types with boundaries; material, waste, borrow or equipment storage areas located on adjacent properties; and location(s) of the stormwater *discharge(s)*;
- c. A description of the soil(s) present at the site, including an identification of the Hydrologic Soil Group (HSG);
- d. A construction phasing plan and sequence of operations describing the intended order of *construction activities*, including clearing and grubbing, excavation and grading, utility and infrastructure installation and any other activity at the site that results in soil disturbance;
- e. A description of the minimum erosion and sediment control practices to be installed or implemented for each *construction activity* that will result in soil disturbance. Include a schedule that identifies the timing of initial placement or implementation of each erosion and sediment control practice and the minimum time frames that each practice should remain in place or be implemented;
- f. A temporary and permanent soil stabilization plan that meets the requirements of this general permit and the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016, for each stage of the project, including initial land clearing and grubbing to project completion and achievement of *final stabilization*;
- g. A site map/construction drawing(s) showing the specific location(s), size(s), and length(s) of each erosion and sediment control practice;
- h. The dimensions, material specifications, installation details, and operation and maintenance requirements for all erosion and sediment control practices. Include the location and sizing of any temporary sediment basins and structural practices that will be used to divert flows from exposed soils;
- i. A maintenance inspection schedule for the contractor(s) identified in Part III.A.6. of this permit, to ensure continuous and effective operation of the erosion and sediment control practices. The maintenance inspection

schedule shall be in accordance with the requirements in the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016;

- j. A description of the pollution prevention measures that will be used to control litter, construction chemicals and construction debris from becoming a *pollutant* source in the stormwater *discharges*;
 - k. A description and location of any stormwater *discharges* associated with industrial activity other than construction at the site, including, but not limited to, stormwater *discharges* from asphalt plants and concrete plants located on the *construction site*; and
 - l. Identification of any elements of the design that are not in conformance with the design criteria in the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016. Include the reason for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.
2. Post-construction stormwater management practice component – The *owner or operator* of any construction project identified in Table 2 of Appendix B as needing post-construction stormwater management practices shall prepare a SWPPP that includes practices designed in conformance with the applicable *sizing criteria* in Part I.C.2.a., c. or d. of this permit and the *performance criteria* in the technical standard, New York State Stormwater Management Design Manual dated January 2015

Where post-construction stormwater management practices are not designed in conformance with the *performance criteria* in the technical standard, the *owner or operator* must include in the SWPPP the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

The post-construction stormwater management practice component of the SWPPP shall include the following:

- a. Identification of all post-construction stormwater management practices to be constructed as part of the project. Include the dimensions, material specifications and installation details for each post-construction stormwater management practice;

- b. A site map/construction drawing(s) showing the specific location and size of each post-construction stormwater management practice;
- c. A Stormwater Modeling and Analysis Report that includes:
 - (i) Map(s) showing pre-development conditions, including watershed/subcatchments boundaries, flow paths/routing, and design points;
 - (ii) Map(s) showing post-development conditions, including watershed/subcatchments boundaries, flow paths/routing, design points and post-construction stormwater management practices;
 - (iii) Results of stormwater modeling (i.e. hydrology and hydraulic analysis) for the required storm events. Include supporting calculations (model runs), methodology, and a summary table that compares pre and post-development runoff rates and volumes for the different storm events;
 - (iv) Summary table, with supporting calculations, which demonstrates that each post-construction stormwater management practice has been designed in conformance with the *sizing criteria* included in the Design Manual;
 - (v) Identification of any *sizing criteria* that is not required based on the requirements included in Part I.C. of this permit; and
 - (vi) Identification of any elements of the design that are not in conformance with the *performance criteria* in the Design Manual. Include the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the Design Manual;
- d. Soil testing results and locations (test pits, borings);
- e. Infiltration test results, when required; and
- f. An operations and maintenance plan that includes inspection and maintenance schedules and actions to ensure continuous and effective operation of each post-construction stormwater management practice. The plan shall identify the entity that will be responsible for the long term operation and maintenance of each practice.

3. Enhanced Phosphorus Removal Standards - All construction projects identified in Table 2 of Appendix B that are located in the watersheds identified in Appendix C shall prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the applicable *sizing criteria* in Part I.C.2. b., c. or d. of this permit and the *performance criteria*, Enhanced Phosphorus Removal Standards included in the Design Manual. At a minimum, the post-construction stormwater management practice component of the SWPPP shall include items 2.a - 2.f. above.

C. Required SWPPP Components by Project Type

Unless otherwise notified by the Department, *owners or operators of construction activities* identified in Table 1 of Appendix B are required to prepare a SWPPP that only includes erosion and sediment control practices designed in conformance with Part III.B.1 of this permit. *Owners or operators of the construction activities* identified in Table 2 of Appendix B shall prepare a SWPPP that also includes post-construction stormwater management practices designed in conformance with Part III.B.2 or 3 of this permit.

Part IV. INSPECTION AND MAINTENANCE REQUIREMENTS

A. General Construction Site Inspection and Maintenance Requirements

1. The *owner or operator* must ensure that all erosion and sediment control practices (including pollution prevention measures) and all post-construction stormwater management practices identified in the SWPPP are inspected and maintained in accordance with Part IV.B. and C. of this permit.
2. The terms of this permit shall not be construed to prohibit the State of New York from exercising any authority pursuant to the ECL, common law or federal law, or prohibit New York State from taking any measures, whether civil or criminal, to prevent violations of the laws of the State of New York or protect the public health and safety and/or the environment.

B. Contractor Maintenance Inspection Requirements

1. The *owner or operator* of each *construction activity* identified in Tables 1 and 2 of Appendix B shall have a *trained contractor* inspect the erosion and sediment control practices and pollution prevention measures being implemented within the active work area daily to ensure that they are being maintained in effective operating condition at all times. If deficiencies are identified, the contractor shall

begin implementing corrective actions within one business day and shall complete the corrective actions in a reasonable time frame.

2. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *trained contractor* can stop conducting the maintenance inspections. The *trained contractor* shall begin conducting the maintenance inspections in accordance with Part IV.B.1. of this permit as soon as soil disturbance activities resume.
3. For construction sites where soil disturbance activities have been shut down with partial project completion, the *trained contractor* can stop conducting the maintenance inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational.

C. Qualified Inspector Inspection Requirements

The *owner or operator* shall have a *qualified inspector* conduct site inspections in conformance with the following requirements:

[Note: The *trained contractor* identified in Part III.A.6. and IV.B. of this permit **cannot** conduct the *qualified inspector* site inspections unless they meet the *qualified inspector* qualifications included in Appendix A. In order to perform these inspections, the *trained contractor* would have to be a:

- licensed Professional Engineer,
 - Certified Professional in Erosion and Sediment Control (CPESC),
 - New York State Erosion and Sediment Control Certificate Program holder
 - Registered Landscape Architect, or
 - someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity].
1. A *qualified inspector* shall conduct site inspections for all *construction activities* identified in Tables 1 and 2 of Appendix B, with the exception of:
 - a. the construction of a single family residential subdivision with 25% or less *impervious cover* at total site build-out that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located

in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E;

- b. the construction of a single family home that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E;
 - c. construction on agricultural property that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres; and
 - d. *construction activities* located in the watersheds identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.
2. Unless otherwise notified by the Department, the *qualified inspector* shall conduct site inspections in accordance with the following timetable:
- a. For construction sites where soil disturbance activities are on-going, the *qualified inspector* shall conduct a site inspection at least once every seven (7) calendar days.
 - b. For construction sites where soil disturbance activities are on-going and the *owner or operator* has received authorization in accordance with Part II.D.3 to disturb greater than five (5) acres of soil at any one time, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.
 - c. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *qualified inspector* shall conduct a site inspection at least once every thirty (30) calendar days. The *owner or operator* shall notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix F) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4*, the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*) in writing prior to reducing the frequency of inspections.

- d. For construction sites where soil disturbance activities have been shut down with partial project completion, the *qualified inspector* can stop conducting inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational. The *owner or operator* shall notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix F) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4*, the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*) in writing prior to the shutdown. If soil disturbance activities are not resumed within 2 years from the date of shutdown, the *owner or operator* shall have the *qualified inspector* perform a final inspection and certify that all disturbed areas have achieved *final stabilization*, and all temporary, structural erosion and sediment control measures have been removed; and that all post-construction stormwater management practices have been constructed in conformance with the SWPPP by signing the “*Final Stabilization*” and “*Post-Construction Stormwater Management Practice*” certification statements on the NOT. The *owner or operator* shall then submit the completed NOT form to the address in Part II.B.1 of this permit.
 - e. For construction sites that directly *discharge* to one of the 303(d) segments listed in Appendix E or is located in one of the watersheds listed in Appendix C, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.
3. At a minimum, the *qualified inspector* shall inspect all erosion and sediment control practices and pollution prevention measures to ensure integrity and effectiveness, all post-construction stormwater management practices under construction to ensure that they are constructed in conformance with the SWPPP, all areas of disturbance that have not achieved *final stabilization*, all points of *discharge* to natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the *construction site*, and all points of *discharge* from the *construction site*.
 4. The *qualified inspector* shall prepare an inspection report subsequent to each and every inspection. At a minimum, the inspection report shall include and/or address the following:

- a. Date and time of inspection;
- b. Name and title of person(s) performing inspection;
- c. A description of the weather and soil conditions (e.g. dry, wet, saturated) at the time of the inspection;
- d. A description of the condition of the runoff at all points of *discharge* from the *construction site*. This shall include identification of any *discharges* of sediment from the *construction site*. Include *discharges* from conveyance systems (i.e. pipes, culverts, ditches, etc.) and overland flow;
- e. A description of the condition of all natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the *construction site* which receive runoff from disturbed areas. This shall include identification of any *discharges* of sediment to the surface waterbody;
- f. Identification of all erosion and sediment control practices and pollution prevention measures that need repair or maintenance;
- g. Identification of all erosion and sediment control practices and pollution prevention measures that were not installed properly or are not functioning as designed and need to be reinstalled or replaced;
- h. Description and sketch of areas with active soil disturbance activity, areas that have been disturbed but are inactive at the time of the inspection, and areas that have been stabilized (temporary and/or final) since the last inspection;
- i. Current phase of construction of all post-construction stormwater management practices and identification of all construction that is not in conformance with the SWPPP and technical standards;
- j. Corrective action(s) that must be taken to install, repair, replace or maintain erosion and sediment control practices and pollution prevention measures; and to correct deficiencies identified with the construction of the post-construction stormwater management practice(s);
- k. Identification and status of all corrective actions that were required by previous inspection; and

- I. Digital photographs, with date stamp, that clearly show the condition of all practices that have been identified as needing corrective actions. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report being maintained onsite within seven (7) calendar days of the date of the inspection. The *qualified inspector* shall also take digital photographs, with date stamp, that clearly show the condition of the practice(s) after the corrective action has been completed. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report that documents the completion of the corrective action work within seven (7) calendar days of that inspection.
5. Within one business day of the completion of an inspection, the *qualified inspector* shall notify the *owner or operator* and appropriate contractor or subcontractor identified in Part III.A.6. of this permit of any corrective actions that need to be taken. The contractor or subcontractor shall begin implementing the corrective actions within one business day of this notification and shall complete the corrective actions in a reasonable time frame.
6. All inspection reports shall be signed by the *qualified inspector*. Pursuant to Part II.D.2. of this permit, the inspection reports shall be maintained on site with the SWPPP.

Part V. TERMINATION OF PERMIT COVERAGE

A. Termination of Permit Coverage

1. An *owner or operator* that is eligible to terminate coverage under this permit must submit a completed NOT form to the address in Part II.B.1 of this permit. The NOT form shall be one which is associated with this permit, signed in accordance with Part VII.H of this permit.
2. An *owner or operator* may terminate coverage when one or more the following conditions have been met:
 - a. Total project completion - All *construction activity* identified in the SWPPP has been completed; and all areas of disturbance have achieved *final stabilization*; and all temporary, structural erosion and sediment control measures have been removed; and all post-construction stormwater management practices have been constructed in conformance with the SWPPP and are operational;

- b. Planned shutdown with partial project completion - All soil disturbance activities have ceased; and all areas disturbed as of the project shutdown date have achieved *final stabilization*; and all temporary, structural erosion and sediment control measures have been removed; and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational;
 - c. A new *owner or operator* has obtained coverage under this permit in accordance with Part II.F. of this permit.
 - d. The *owner or operator* obtains coverage under an alternative SPDES general permit or an individual SPDES permit.
3. For *construction activities* meeting subdivision 2a. or 2b. of this Part, the *owner or operator* shall have the *qualified inspector* perform a final site inspection prior to submitting the NOT. The *qualified inspector* shall, by signing the “*Final Stabilization*” and “*Post-Construction Stormwater Management Practice certification statements*” on the NOT, certify that all the requirements in Part V.A.2.a. or b. of this permit have been achieved.
4. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4* and meet subdivision 2a. or 2b. of this Part, the *owner or operator* shall have the *regulated, traditional land use control MS4* sign the “*MS4 Acceptance*” statement on the NOT in accordance with the requirements in Part VII.H. of this permit. The *regulated, traditional land use control MS4* official, by signing this statement, has determined that it is acceptable for the *owner or operator* to submit the NOT in accordance with the requirements of this Part. The *regulated, traditional land use control MS4* can make this determination by performing a final site inspection themselves or by accepting the *qualified inspector’s* final site inspection certification(s) required in Part V.A.3. of this permit.
5. For *construction activities* that require post-construction stormwater management practices and meet subdivision 2a. of this Part, the *owner or operator* must, prior to submitting the NOT, ensure one of the following:
 - a. the post-construction stormwater management practice(s) and any right-of-way(s) needed to maintain such practice(s) have been deeded to the municipality in which the practice(s) is located,

- b. an executed maintenance agreement is in place with the municipality that will maintain the post-construction stormwater management practice(s),
- c. for post-construction stormwater management practices that are privately owned, the *owner or operator* has a mechanism in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the *owner or operator's* deed of record,
- d. for post-construction stormwater management practices that are owned by a public or private institution (e.g. school, university, hospital), government agency or authority, or public utility; the *owner or operator* has policy and procedures in place that ensures operation and maintenance of the practices in accordance with the operation and maintenance plan.

Part VI. REPORTING AND RETENTION RECORDS

A. Record Retention

The *owner or operator* shall retain a copy of the NOI, NOI Acknowledgment Letter, SWPPP, MS4 SWPPP Acceptance form and any inspection reports that were prepared in conjunction with this permit for a period of at least five (5) years from the date that the Department receives a complete NOT submitted in accordance with Part V. of this general permit.

B. Addresses

With the exception of the NOI, NOT, and MS4 SWPPP Acceptance form (which must be submitted to the address referenced in Part II.B.1 of this permit), all written correspondence requested by the Department, including individual permit applications, shall be sent to the address of the appropriate DOW Water (SPDES) Program contact at the Regional Office listed in Appendix F.

Part VII. STANDARD PERMIT CONDITIONS

A. Duty to Comply

The *owner or operator* must comply with all conditions of this permit. All contractors and subcontractors associated with the project must comply with the terms of the SWPPP. Any non-compliance with this permit constitutes a violation of the Clean Water

Act (CWA) and the ECL and is grounds for an enforcement action against the *owner or operator* and/or the contractor/subcontractor; permit revocation, suspension or modification; or denial of a permit renewal application. Upon a finding of significant non-compliance with this permit or the applicable SWPPP, the Department may order an immediate stop to all *construction activity* at the site until the non-compliance is remedied. The stop work order shall be in writing, shall describe the non-compliance in detail, and shall be sent to the *owner or operator*.

If any human remains or archaeological remains are encountered during excavation, the *owner or operator* must immediately cease, or cause to cease, all *construction activity* in the area of the remains and notify the appropriate Regional Water Engineer (RWE). *Construction activity* shall not resume until written permission to do so has been received from the RWE.

B. Continuation of the Expired General Permit

This permit expires five (5) years from the effective date. If a new general permit is not issued prior to the expiration of this general permit, an *owner or operator* with coverage under this permit may continue to operate and *discharge* in accordance with the terms and conditions of this general permit, if it is extended pursuant to the State Administrative Procedure Act and 6 NYCRR Part 621, until a new general permit is issued.

C. Enforcement

Failure of the *owner or operator*, its contractors, subcontractors, agents and/or assigns to strictly adhere to any of the permit requirements contained herein shall constitute a violation of this permit. There are substantial criminal, civil, and administrative penalties associated with violating the provisions of this permit. Fines of up to \$37,500 per day for each violation and imprisonment for up to fifteen (15) years may be assessed depending upon the nature and degree of the offense.

D. Need to Halt or Reduce Activity Not a Defense

It shall not be a defense for an *owner or operator* in an enforcement action that it would have been necessary to halt or reduce the *construction activity* in order to maintain compliance with the conditions of this permit.

E. Duty to Mitigate

The *owner or operator* and its contractors and subcontractors shall take all reasonable steps to *minimize* or prevent any *discharge* in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

F. Duty to Provide Information

The *owner or operator* shall furnish to the Department, within a reasonable specified time period of a written request, all documentation necessary to demonstrate eligibility and any information to determine compliance with this permit or to determine whether cause exists for modifying or revoking this permit, or suspending or denying coverage under this permit, in accordance with the terms and conditions of this permit. The NOI, SWPPP and inspection reports required by this permit are public documents that the *owner or operator* must make available for review and copying by any person within five (5) business days of the *owner or operator* receiving a written request by any such person to review these documents. Copying of documents will be done at the requester's expense.

G. Other Information

When the *owner or operator* becomes aware that they failed to submit any relevant facts, or submitted incorrect information in the NOI or in any of the documents required by this permit, or have made substantive revisions to the SWPPP (e.g. the scope of the project changes significantly, the type of post-construction stormwater management practice(s) changes, there is a reduction in the sizing of the post-construction stormwater management practice, or there is an increase in the disturbance area or *impervious area*), which were not reflected in the original NOI submitted to the Department, they shall promptly submit such facts or information to the Department using the contact information in Part II.A. of this permit. Failure of the *owner or operator* to correct or supplement any relevant facts within five (5) business days of becoming aware of the deficiency shall constitute a violation of this permit.

H. Signatory Requirements

1. All NOIs and NOTs shall be signed as follows:
 - a. For a corporation these forms shall be signed by a responsible corporate officer. For the purpose of this section, a responsible corporate officer means:

- (i) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation; or
 - (ii) the manager of one or more manufacturing, production or operating facilities, provided the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;
 - b. For a partnership or sole proprietorship these forms shall be signed by a general partner or the proprietor, respectively; or
 - c. For a municipality, State, Federal, or other public agency these forms shall be signed by either a principal executive officer or ranking elected official. For purposes of this section, a principal executive officer of a Federal agency includes:
 - (i) the chief executive officer of the agency, or
 - (ii) a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrators of EPA).
2. The SWPPP and other information requested by the Department shall be signed by a person described in Part VII.H.1. of this permit or by a duly authorized representative of that person. A person is a duly authorized representative only if:
- a. The authorization is made in writing by a person described in Part VII.H.1. of this permit;
 - b. The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or a well field,

superintendent, position of *equivalent* responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position) and,

- c. The written authorization shall include the name, title and signature of the authorized representative and be attached to the SWPPP.
3. All inspection reports shall be signed by the *qualified inspector* that performs the inspection.
4. The MS4 SWPPP Acceptance form shall be signed by the principal executive officer or ranking elected official from the *regulated, traditional land use control MS4*, or by a duly authorized representative of that person.

It shall constitute a permit violation if an incorrect and/or improper signatory authorizes any required forms, SWPPP and/or inspection reports.

I. Property Rights

The issuance of this permit does not convey any property rights of any sort, nor any exclusive privileges, nor does it authorize any injury to private property nor any invasion of personal rights, nor any infringement of Federal, State or local laws or regulations. *Owners or operators* must obtain any applicable conveyances, easements, licenses and/or access to real property prior to *commencing construction activity*.

J. Severability

The provisions of this permit are severable, and if any provision of this permit, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of this permit shall not be affected thereby.

K. Requirement to Obtain Coverage Under an Alternative Permit

1. The Department may require any owner or operator authorized by this permit to apply for and/or obtain either an individual SPDES permit or another SPDES general permit. When the Department requires any discharger authorized by a general permit to apply for an individual SPDES permit, it shall notify the discharger in writing that a permit application is required. This notice shall

include a brief statement of the reasons for this decision, an application form, a statement setting a time frame for the owner or operator to file the application for an individual SPDES permit, and a deadline, not sooner than 180 days from owner or operator receipt of the notification letter, whereby the authorization to discharge under this general permit shall be terminated. Applications must be submitted to the appropriate Permit Administrator at the Regional Office. The Department may grant additional time upon demonstration, to the satisfaction of the Department, that additional time to apply for an alternative authorization is necessary or where the Department has not provided a permit determination in accordance with Part 621 of this Title.

2. When an individual SPDES permit is issued to a discharger authorized to *discharge* under a general SPDES permit for the same *discharge(s)*, the general permit authorization for outfalls authorized under the individual SPDES permit is automatically terminated on the effective date of the individual permit unless termination is earlier in accordance with 6 NYCRR Part 750.

L. Proper Operation and Maintenance

The *owner or operator* shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the *owner or operator* to achieve compliance with the conditions of this permit and with the requirements of the SWPPP.

M. Inspection and Entry

The *owner or operator* shall allow an authorized representative of the Department, EPA, applicable county health department, or, in the case of a *construction site* which *discharges* through an *MS4*, an authorized representative of the *MS4* receiving the discharge, upon the presentation of credentials and other documents as may be required by law, to:

1. Enter upon the owner's or operator's premises where a regulated facility or activity is located or conducted or where records must be kept under the conditions of this permit;
2. Have access to and copy at reasonable times, any records that must be kept under the conditions of this permit; and

3. Inspect at reasonable times any facilities or equipment (including monitoring and control equipment), practices or operations regulated or required by this permit.
4. Sample or monitor at reasonable times, for purposes of assuring permit compliance or as otherwise authorized by the Act or ECL, any substances or parameters at any location.

N. Permit Actions

This permit may, at any time, be modified, suspended, revoked, or renewed by the Department in accordance with 6 NYCRR Part 621. The filing of a request by the *owner or operator* for a permit modification, revocation and reissuance, termination, a notification of planned changes or anticipated noncompliance does not limit, diminish and/or stay compliance with any terms of this permit.

O. Definitions

Definitions of key terms are included in Appendix A of this permit.

P. Re-Opener Clause

1. If there is evidence indicating potential or realized impacts on water quality due to any stormwater discharge associated with construction activity covered by this permit, the owner or operator of such discharge may be required to obtain an individual permit or alternative general permit in accordance with Part VII.K. of this permit or the permit may be modified to include different limitations and/or requirements.
2. Any Department initiated permit modification, suspension or revocation will be conducted in accordance with 6 NYCRR Part 621, 6 NYCRR 750-1.18, and 6 NYCRR 750-1.20.

Q. Penalties for Falsification of Forms and Reports

In accordance with 6NYCRR Part 750-2.4 and 750-2.5, any person who knowingly makes any false material statement, representation, or certification in any application, record, report or other document filed or required to be maintained under this permit, including reports of compliance or noncompliance shall, upon conviction, be punished in accordance with ECL §71-1933 and or Articles 175 and 210 of the New York State Penal Law.

R. Other Permits

Nothing in this permit relieves the *owner or operator* from a requirement to obtain any other permits required by law.

APPENDIX A – Acronyms and Definitions

Acronyms

APO – Agency Preservation Officer

BMP – Best Management Practice

CPESC – Certified Professional in Erosion and Sediment Control

Cpv – Channel Protection Volume

CWA – Clean Water Act (or the Federal Water Pollution Control Act, 33 U.S.C. §1251 et seq)

DOW – Division of Water

EAF – Environmental Assessment Form

ECL - Environmental Conservation Law

EPA – U. S. Environmental Protection Agency

HSG – Hydrologic Soil Group

MS4 – Municipal Separate Storm Sewer System

NOI – Notice of Intent

NOT – Notice of Termination

NPDES – National Pollutant Discharge Elimination System

OPRHP – Office of Parks, Recreation and Historic Places

Qf – Extreme Flood

Qp – Overbank Flood

RRv – Runoff Reduction Volume

RWE – Regional Water Engineer

SEQR – State Environmental Quality Review

SEQRA - State Environmental Quality Review Act

SHPA – State Historic Preservation Act

SPDES – State Pollutant Discharge Elimination System

SWPPP – Stormwater Pollution Prevention Plan

TMDL – Total Maximum Daily Load

UPA – Uniform Procedures Act

USDA – United States Department of Agriculture

WQv – Water Quality Volume

Definitions

All definitions in this section are solely for the purposes of this permit.

Agricultural Building – a structure designed and constructed to house farm implements, hay, grain, poultry, livestock or other horticultural products; excluding any structure designed, constructed or used, in whole or in part, for human habitation, as a place of employment where agricultural products are processed, treated or packaged, or as a place used by the public.

Agricultural Property – means the land for construction of a barn, *agricultural building*, silo, stockyard, pen or other structural practices identified in Table II in the “Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State” prepared by the Department in cooperation with agencies of New York Nonpoint Source Coordinating Committee (dated June 2007).

Alter Hydrology from Pre to Post-Development Conditions - means the post-development peak flow rate(s) has increased by more than 5% of the pre-developed condition for the design storm of interest (e.g. 10 yr and 100 yr).

Combined Sewer - means a sewer that is designed to collect and convey both “sewage” and “stormwater”.

Commence (Commencement of) Construction Activities - means the initial disturbance of soils associated with clearing, grading or excavation activities; or other construction related activities that disturb or expose soils such as demolition, stockpiling of fill material, and the initial installation of erosion and sediment control practices required in the SWPPP. See definition for “*Construction Activity(ies)*” also.

Construction Activity(ies) - means any clearing, grading, excavation, filling, demolition or stockpiling activities that result in soil disturbance. Clearing activities can include, but are not limited to, logging equipment operation, the cutting and skidding of trees, stump removal and/or brush root removal. Construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility.

Construction Site – means the land area where *construction activity(ies)* will occur. See definition for “*Commence (Commencement of) Construction Activities*” and “*Larger Common Plan of Development or Sale*” also.

Dewatering – means the act of draining rainwater and/or groundwater from building foundations, vaults or excavations/trenches.

Direct Discharge (to a specific surface waterbody) - means that runoff flows from a *construction site* by overland flow and the first point of discharge is the specific surface waterbody, or runoff flows from a *construction site* to a separate storm sewer system

and the first point of discharge from the separate storm sewer system is the specific surface waterbody.

Discharge(s) - means any addition of any pollutant to waters of the State through an outlet or *point source*.

Embankment –means an earthen or rock slope that supports a road/highway.

Endangered or Threatened Species – see 6 NYCRR Part 182 of the Department’s rules and regulations for definition of terms and requirements.

Environmental Conservation Law (ECL) - means chapter 43-B of the Consolidated Laws of the State of New York, entitled the Environmental Conservation Law.

Equivalent (Equivalence) – means that the practice or measure meets all the performance, longevity, maintenance, and safety objectives of the technical standard and will provide an equal or greater degree of water quality protection.

Final Stabilization - means that all soil disturbance activities have ceased and a uniform, perennial vegetative cover with a density of eighty (80) percent over the entire pervious surface has been established; or other equivalent stabilization measures, such as permanent landscape mulches, rock rip-rap or washed/crushed stone have been applied on all disturbed areas that are not covered by permanent structures, concrete or pavement.

General SPDES permit - means a SPDES permit issued pursuant to 6 NYCRR Part 750-1.21 and Section 70-0117 of the ECL authorizing a category of discharges.

Groundwater(s) - means waters in the saturated zone. The saturated zone is a subsurface zone in which all the interstices are filled with water under pressure greater than that of the atmosphere. Although the zone may contain gas-filled interstices or interstices filled with fluids other than water, it is still considered saturated.

Historic Property – means any building, structure, site, object or district that is listed on the State or National Registers of Historic Places or is determined to be eligible for listing on the State or National Registers of Historic Places.

Impervious Area (Cover) - means all impermeable surfaces that cannot effectively infiltrate rainfall. This includes paved, concrete and gravel surfaces (i.e. parking lots, driveways, roads, runways and sidewalks); building rooftops and miscellaneous impermeable structures such as patios, pools, and sheds.

Infeasible – means not technologically possible, or not economically practicable and achievable in light of best industry practices.

Larger Common Plan of Development or Sale - means a contiguous area where multiple separate and distinct *construction activities* are occurring, or will occur, under one plan. The term “plan” in “larger common plan of development or sale” is broadly defined as any announcement or piece of documentation (including a sign, public notice or hearing, marketing plan, advertisement, drawing, permit application, State Environmental Quality Review Act (SEQRA) environmental assessment form or other documents, zoning request, computer design, etc.) or physical demarcation (including boundary signs, lot stakes, surveyor markings, etc.) indicating that *construction activities* may occur on a specific plot.

For discrete construction projects that are located within a larger common plan of development or sale that are at least 1/4 mile apart, each project can be treated as a separate plan of development or sale provided any interconnecting road, pipeline or utility project that is part of the same “common plan” is not concurrently being disturbed.

Minimize – means reduce and/or eliminate to the extent achievable using control measures (including best management practices) that are technologically available and economically practicable and achievable in light of best industry practices.

Municipal Separate Storm Sewer (MS4) - a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

- (i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, stormwater, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to surface waters of the State;
- (ii) Designed or used for collecting or conveying stormwater;
- (iii) Which is not a *combined sewer*, and
- (iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2.

National Pollutant Discharge Elimination System (NPDES) - means the national system for the issuance of wastewater and stormwater permits under the Federal Water Pollution Control Act (Clean Water Act).

Natural Buffer –means an undisturbed area with natural cover running along a surface water (e.g. wetland, stream, river, lake, etc.).

New Development – means any land disturbance that does not meet the definition of Redevelopment Activity included in this appendix.

New York State Erosion and Sediment Control Certificate Program – a certificate program that establishes and maintains a process to identify and recognize individuals who are capable of developing, designing, inspecting and maintaining erosion and sediment control plans on projects that disturb soils in New York State. The certificate program is administered by the New York State Conservation District Employees Association.

NOI Acknowledgment Letter - means the letter that the Department sends to an owner or operator to acknowledge the Department's receipt and acceptance of a complete Notice of Intent. This letter documents the owner's or operator's authorization to discharge in accordance with the general permit for stormwater discharges from *construction activity*.

Nonpoint Source - means any source of water pollution or pollutants which is not a discrete conveyance or *point source* permitted pursuant to Title 7 or 8 of Article 17 of the Environmental Conservation Law (see ECL Section 17-1403).

Overbank –means flow events that exceed the capacity of the stream channel and spill out into the adjacent floodplain.

Owner or Operator - means the person, persons or legal entity which owns or leases the property on which the *construction activity* is occurring; an entity that has operational control over the construction plans and specifications, including the ability to make modifications to the plans and specifications; and/or an entity that has day-to-day operational control of those activities at a project that are necessary to ensure compliance with the permit conditions.

Performance Criteria – means the design criteria listed under the “Required Elements” sections in Chapters 5, 6 and 10 of the technical standard, New York State Stormwater Management Design Manual, dated January 2015. It does not include the Sizing Criteria (i.e. WQv, RRv, Cpv, Qp and Qf) in Part I.C.2. of the permit.

Point Source - means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, vessel or other floating craft, or landfill leachate collection system from which *pollutants* are or may be discharged.

Pollutant - means dredged spoil, filter backwash, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand and industrial, municipal, agricultural waste and ballast discharged into water; which may cause or might reasonably be expected to cause pollution of the waters of the state in contravention of the standards or guidance values adopted as provided in 6 NYCRR Parts 700 et seq .

Qualified Inspector - means a person that is knowledgeable in the principles and practices of erosion and sediment control, such as a licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, New York State Erosion and Sediment Control Certificate Program holder or other Department endorsed individual(s).

It can also mean someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided that person has training in the principles and practices of erosion and sediment control. Training in the principles and practices of erosion and sediment control means that the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect has received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect shall receive four (4) hours of training every three (3) years.

It can also mean a person that meets the *Qualified Professional* qualifications in addition to the *Qualified Inspector* qualifications.

Note: Inspections of any post-construction stormwater management practices that include structural components, such as a dam for an impoundment, shall be performed by a licensed Professional Engineer.

Qualified Professional - means a person that is knowledgeable in the principles and practices of stormwater management and treatment, such as a licensed Professional Engineer, Registered Landscape Architect or other Department endorsed individual(s). Individuals preparing SWPPPs that require the post-construction stormwater management practice component must have an understanding of the principles of hydrology, water quality management practice design, water quantity control design, and, in many cases, the principles of hydraulics. All components of the SWPPP that involve the practice of engineering, as defined by the NYS Education Law (see Article 145), shall be prepared by, or under the direct supervision of, a professional engineer licensed to practice in the State of New York.

Redevelopment Activity(ies) – means the disturbance and reconstruction of existing impervious area, including impervious areas that were removed from a project site within five (5) years of preliminary project plan submission to the local government (i.e. site plan, subdivision, etc.).

Regulated, Traditional Land Use Control MS4 - means a city, town or village with land use control authority that is authorized to discharge under New York State DEC's

SPDES General Permit For Stormwater Discharges from Municipal Separate Stormwater Sewer Systems (MS4s) or the City of New York's Individual SPDES Permit for their Municipal Separate Storm Sewer Systems (NY-0287890).

Routine Maintenance Activity - means *construction activity* that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility, including, but not limited to:

- Re-grading of gravel roads or parking lots,
- Cleaning and shaping of existing roadside ditches and culverts that maintains the approximate original line and grade, and hydraulic capacity of the ditch,
- Cleaning and shaping of existing roadside ditches that does not maintain the approximate original grade, hydraulic capacity and purpose of the ditch if the changes to the line and grade, hydraulic capacity or purpose of the ditch are installed to improve water quality and quantity controls (e.g. installing grass lined ditch),
- Placement of aggregate shoulder backing that stabilizes the transition between the road shoulder and the ditch or *embankment*,
- Full depth milling and filling of existing asphalt pavements, replacement of concrete pavement slabs, and similar work that does not expose soil or disturb the bottom six (6) inches of subbase material,
- Long-term use of equipment storage areas at or near highway maintenance facilities,
- Removal of sediment from the edge of the highway to restore a previously existing sheet-flow drainage connection from the highway surface to the highway ditch or *embankment*,
- Existing use of Canal Corp owned upland disposal sites for the canal, and
- Replacement of curbs, gutters, sidewalks and guide rail posts.

Site limitations – means site conditions that prevent the use of an infiltration technique and or infiltration of the total WQv. Typical site limitations include: seasonal high groundwater, shallow depth to bedrock, and soils with an infiltration rate less than 0.5 inches/hour. The existence of site limitations shall be confirmed and documented using actual field testing (i.e. test pits, soil borings, and infiltration test) or using information from the most current United States Department of Agriculture (USDA) Soil Survey for the County where the project is located.

Sizing Criteria – means the criteria included in Part I.C.2 of the permit that are used to size post-construction stormwater management control practices. The criteria include; Water Quality Volume (WQv), Runoff Reduction Volume (RRv), Channel Protection Volume (Cpv), *Overbank Flood* (Qp), and *Extreme Flood* (Qf).

State Pollutant Discharge Elimination System (SPDES) - means the system established pursuant to Article 17 of the ECL and 6 NYCRR Part 750 for issuance of permits authorizing discharges to the waters of the state.

Steep Slope – means land area designated on the current United States Department of Agriculture (“USDA”) Soil Survey as Soil Slope Phase “D”, (provided the map unit name is inclusive of slopes greater than 25%) , or Soil Slope Phase E or F, (regardless of the map unit name), or a combination of the three designations.

Streambank – as used in this permit, means the terrain alongside the bed of a creek or stream. The bank consists of the sides of the channel, between which the flow is confined.

Stormwater Pollution Prevention Plan (SWPPP) – means a project specific report, including construction drawings, that among other things: describes the construction activity(ies), identifies the potential sources of pollution at the *construction site*; describes and shows the stormwater controls that will be used to control the pollutants (i.e. erosion and sediment controls; for many projects, includes post-construction stormwater management controls); and identifies procedures the *owner or operator* will implement to comply with the terms and conditions of the permit. See Part III of the permit for a complete description of the information that must be included in the SWPPP.

Surface Waters of the State - shall be construed to include lakes, bays, sounds, ponds, impounding reservoirs, springs, rivers, streams, creeks, estuaries, marshes, inlets, canals, the Atlantic ocean within the territorial seas of the state of New York and all other bodies of surface water, natural or artificial, inland or coastal, fresh or salt, public or private (except those private waters that do not combine or effect a junction with natural surface waters), which are wholly or partially within or bordering the state or within its jurisdiction. Waters of the state are further defined in 6 NYCRR Parts 800 to 941.

Temporarily Ceased – means that an existing disturbed area will not be disturbed again within 14 calendar days of the previous soil disturbance.

Temporary Stabilization - means that exposed soil has been covered with material(s) as set forth in the technical standard, New York Standards and Specifications for Erosion and Sediment Control, to prevent the exposed soil from eroding. The materials can include, but are not limited to, mulch, seed and mulch, and erosion control mats (e.g. jute twisted yarn, excelsior wood fiber mats).

Total Maximum Daily Loads (TMDLs) - A TMDL is the sum of the allowable loads of a single pollutant from all contributing point and *nonpoint sources*. It is a calculation of the maximum amount of a pollutant that a waterbody can receive on a daily basis and still meet *water quality standards*, and an allocation of that amount to the pollutant's sources. A TMDL stipulates wasteload allocations (WLAs) for *point source* discharges, load allocations (LAs) for *nonpoint sources*, and a margin of safety (MOS).

Trained Contractor - means an employee from the contracting (construction) company, identified in Part III.A.6., that has received four (4) hours of Department endorsed

training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the *trained contractor* shall receive four (4) hours of training every three (3) years.

It can also mean an employee from the contracting (construction) company, identified in Part III.A.6., that meets the *qualified inspector* qualifications (e.g. licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, New York State Erosion and Sediment Control Certificate Program holder, or someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity).

The *trained contractor* is responsible for the day to day implementation of the SWPPP.

Uniform Procedures Act (UPA) Permit - means a permit required under 6 NYCRR Part 621 of the Environmental Conservation Law (ECL), Article 70.

Water Quality Standard - means such measures of purity or quality for any waters in relation to their reasonable and necessary use as promulgated in 6 NYCRR Part 700 et seq.

APPENDIX B – Required SWPPP Components by Project Type

Table 1
Construction Activities that Require the Preparation of a SWPPP That Only Includes Erosion and Sediment Controls

<p>The following construction activities that involve soil disturbances of one (1) or more acres of land, but less than five (5) acres:</p> <ul style="list-style-type: none">• Single family home <u>not</u> located in one of the watersheds listed in Appendix C or <u>not directly discharging</u> to one of the 303(d) segments listed in Appendix E• Single family residential subdivisions with 25% or less impervious cover at total site build-out and <u>not</u> located in one of the watersheds listed in Appendix C and <u>not</u> directly discharging to one of the 303(d) segments listed in Appendix E• Construction of a barn or other <i>agricultural building</i>, silo, stock yard or pen.
<p>The following construction activities that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land:</p> <p>All construction activities located in the watersheds identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.</p>
<p>The following construction activities that involve soil disturbances of one (1) or more acres of land:</p> <ul style="list-style-type: none">• Installation of underground, linear utilities; such as gas lines, fiber-optic cable, cable TV, electric, telephone, sewer mains, and water mains• Environmental enhancement projects, such as wetland mitigation projects, stormwater retrofits and stream restoration projects• Pond construction• Linear bike paths running through areas with vegetative cover, including bike paths surfaced with an impervious cover• Cross-country ski trails and walking/hiking trails• Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are not part of residential, commercial or institutional development;• Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that include incidental shoulder or curb work along an existing highway to support construction of the sidewalk, bike path or walking path.• Slope stabilization projects• Slope flattening that changes the grade of the site, but does not significantly change the runoff characteristics

Table 1 (Continued) CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT ONLY INCLUDES EROSION AND SEDIMENT CONTROLS

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Spoil areas that will be covered with vegetation
- Vegetated open space projects (i.e. recreational parks, lawns, meadows, fields, downhill ski trails) excluding projects that *alter hydrology from pre to post development* conditions,
- Athletic fields (natural grass) that do not include the construction or reconstruction of *impervious area* and do not *alter hydrology from pre to post development* conditions
- Demolition project where vegetation will be established, and no redevelopment is planned
- Overhead electric transmission line project that does not include the construction of permanent access roads or parking areas surfaced with *impervious cover*
- Structural practices as identified in Table II in the “Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State”, excluding projects that involve soil disturbances of greater than five acres and construction activities that include the construction or reconstruction of impervious area
- Temporary access roads, median crossovers, detour roads, lanes, or other temporary impervious areas that will be restored to pre-construction conditions once the construction activity is complete

Table 2
CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT INCLUDES
POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Single family home located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family home that disturbs five (5) or more acres of land
- Single family residential subdivisions located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family residential subdivisions that involve soil disturbances of between one (1) and five (5) acres of land with greater than 25% impervious cover at total site build-out
- Single family residential subdivisions that involve soil disturbances of five (5) or more acres of land, and single family residential subdivisions that involve soil disturbances of less than five (5) acres that are part of a larger common plan of development or sale that will ultimately disturb five or more acres of land
- Multi-family residential developments; includes duplexes, townhomes, condominiums, senior housing complexes, apartment complexes, and mobile home parks
- Airports
- Amusement parks
- Breweries, cideries, and wineries, including establishments constructed on agricultural land
- Campgrounds
- Cemeteries that include the construction or reconstruction of impervious area (>5% of disturbed area) or *alter the hydrology from pre to post development* conditions
- Commercial developments
- Churches and other places of worship
- Construction of a barn or other *agricultural building* (e.g. silo) and structural practices as identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State" that include the construction or reconstruction of *impervious area*, excluding projects that involve soil disturbances of less than five acres.
- Golf courses
- Institutional development; includes hospitals, prisons, schools and colleges
- Industrial facilities; includes industrial parks
- Landfills
- Municipal facilities; includes highway garages, transfer stations, office buildings, POTW's, water treatment plants, and water storage tanks
- Office complexes
- Playgrounds that include the construction or reconstruction of impervious area
- Sports complexes
- Racetracks; includes racetracks with earthen (dirt) surface
- Road construction or reconstruction, including roads constructed as part of the construction activities listed in Table 1

Table 2 (Continued)

CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Parking lot construction or reconstruction, including parking lots constructed as part of the construction activities listed in Table 1
- Athletic fields (natural grass) that include the construction or reconstruction of impervious area (>5% of disturbed area) or *alter the hydrology from pre to post development* conditions
- Athletic fields with artificial turf
- Permanent access roads, parking areas, substations, compressor stations and well drilling pads, surfaced with *impervious cover*, and constructed as part of an over-head electric transmission line project, wind-power project, cell tower project, oil or gas well drilling project, sewer or water main project or other linear utility project
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are part of a residential, commercial or institutional development
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are part of a highway construction or reconstruction project
- All other construction activities that include the construction or reconstruction of *impervious area* or *alter the hydrology from pre to post development* conditions, and are not listed in Table 1

APPENDIX C – Watersheds Requiring Enhanced Phosphorus Removal

Watersheds where *owners or operators* of construction activities identified in Table 2 of Appendix B must prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the Enhanced Phosphorus Removal Standards included in the technical standard, New York State Stormwater Management Design Manual (“Design Manual”).

- Entire New York City Watershed located east of the Hudson River - Figure 1
- Onondaga Lake Watershed - Figure 2
- Greenwood Lake Watershed -Figure 3
- Oscawana Lake Watershed – Figure 4
- Kinderhook Lake Watershed – Figure 5

Figure 1 - New York City Watershed East of the Hudson

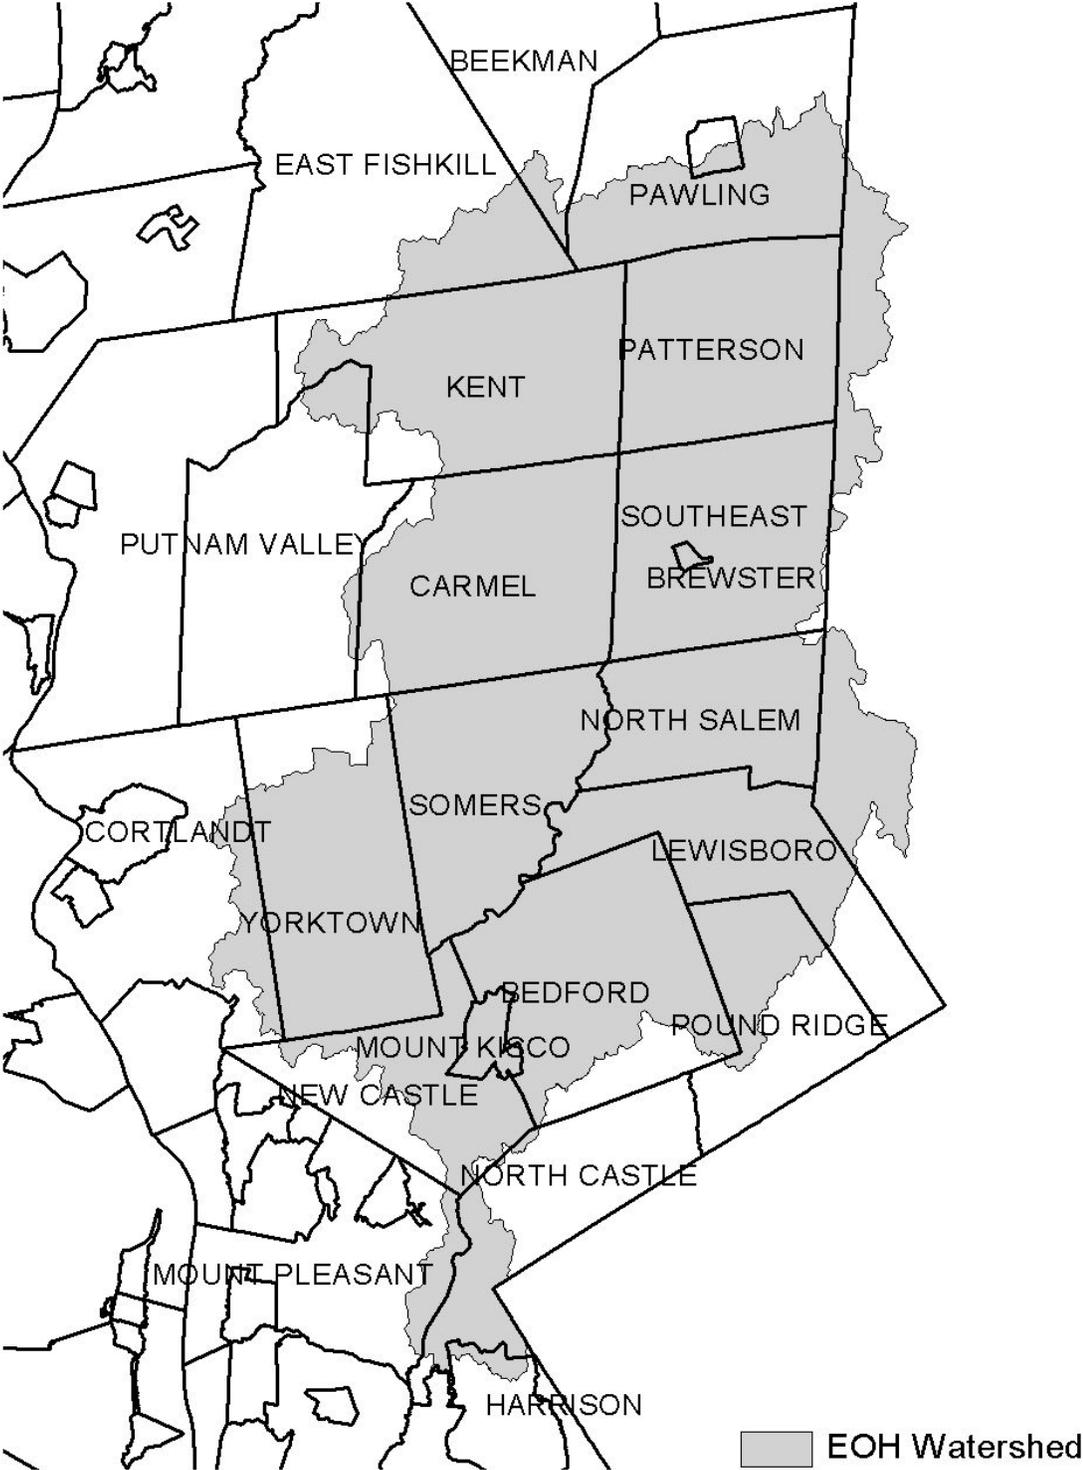

Figure 2 - Onondaga Lake Watershed

Figure 3 - Greenwood Lake Watershed

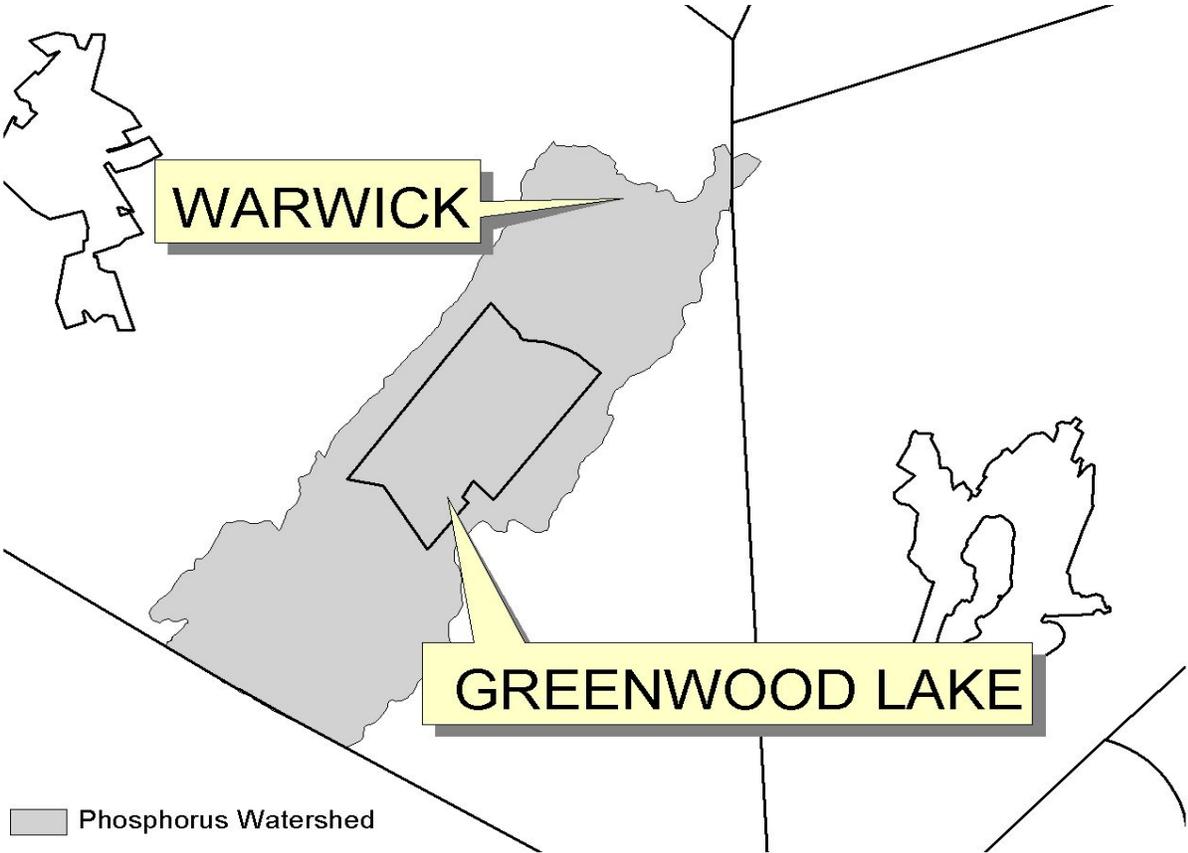

Figure 4 - Oscawana Lake Watershed

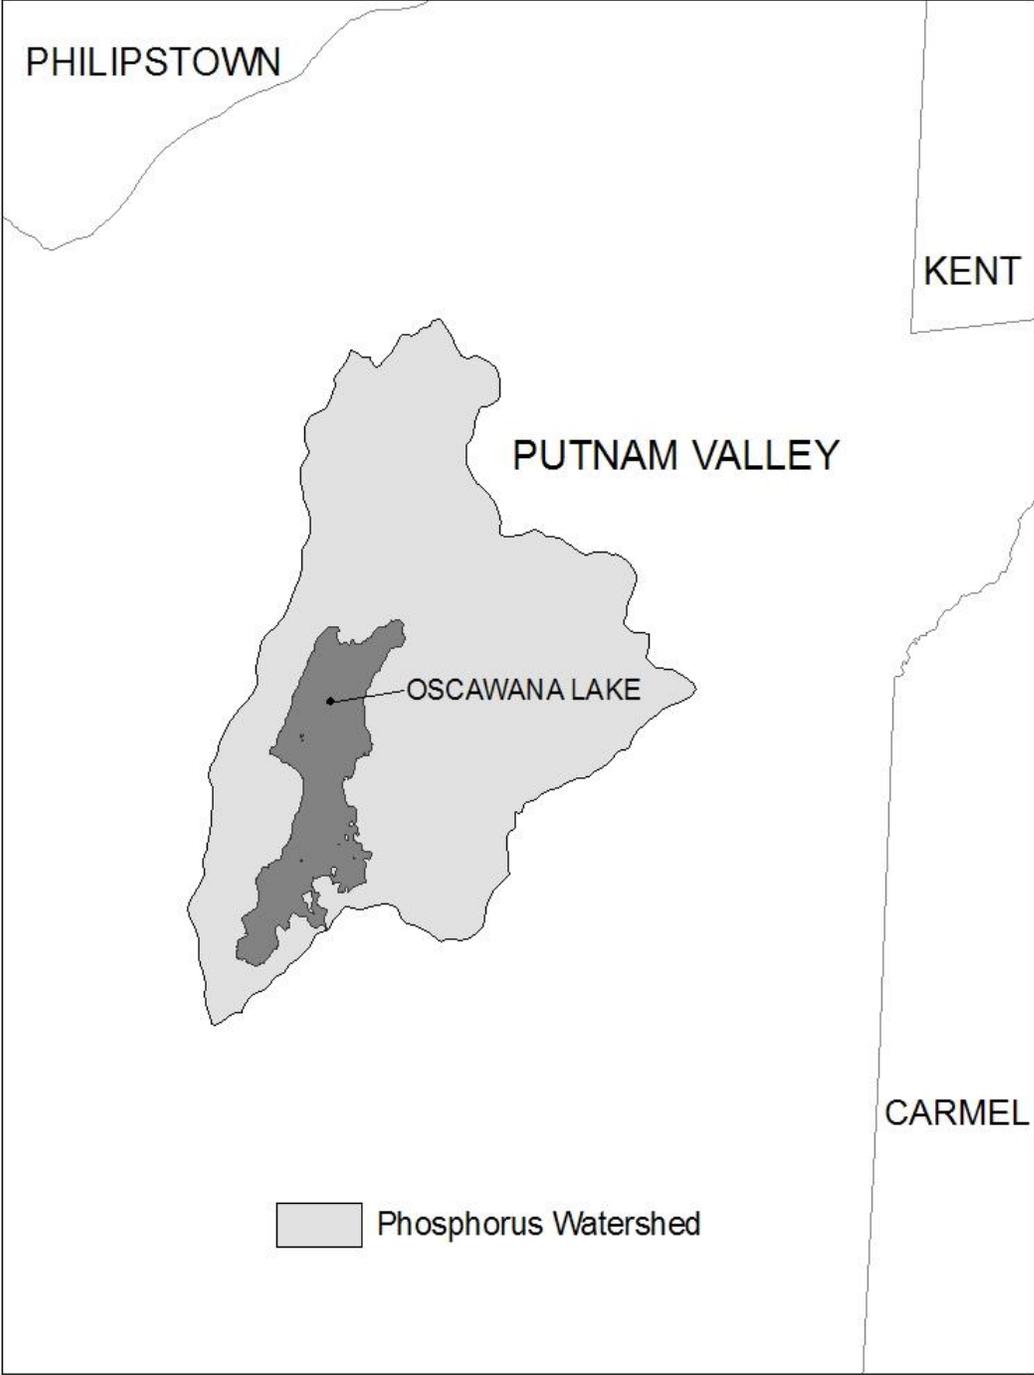

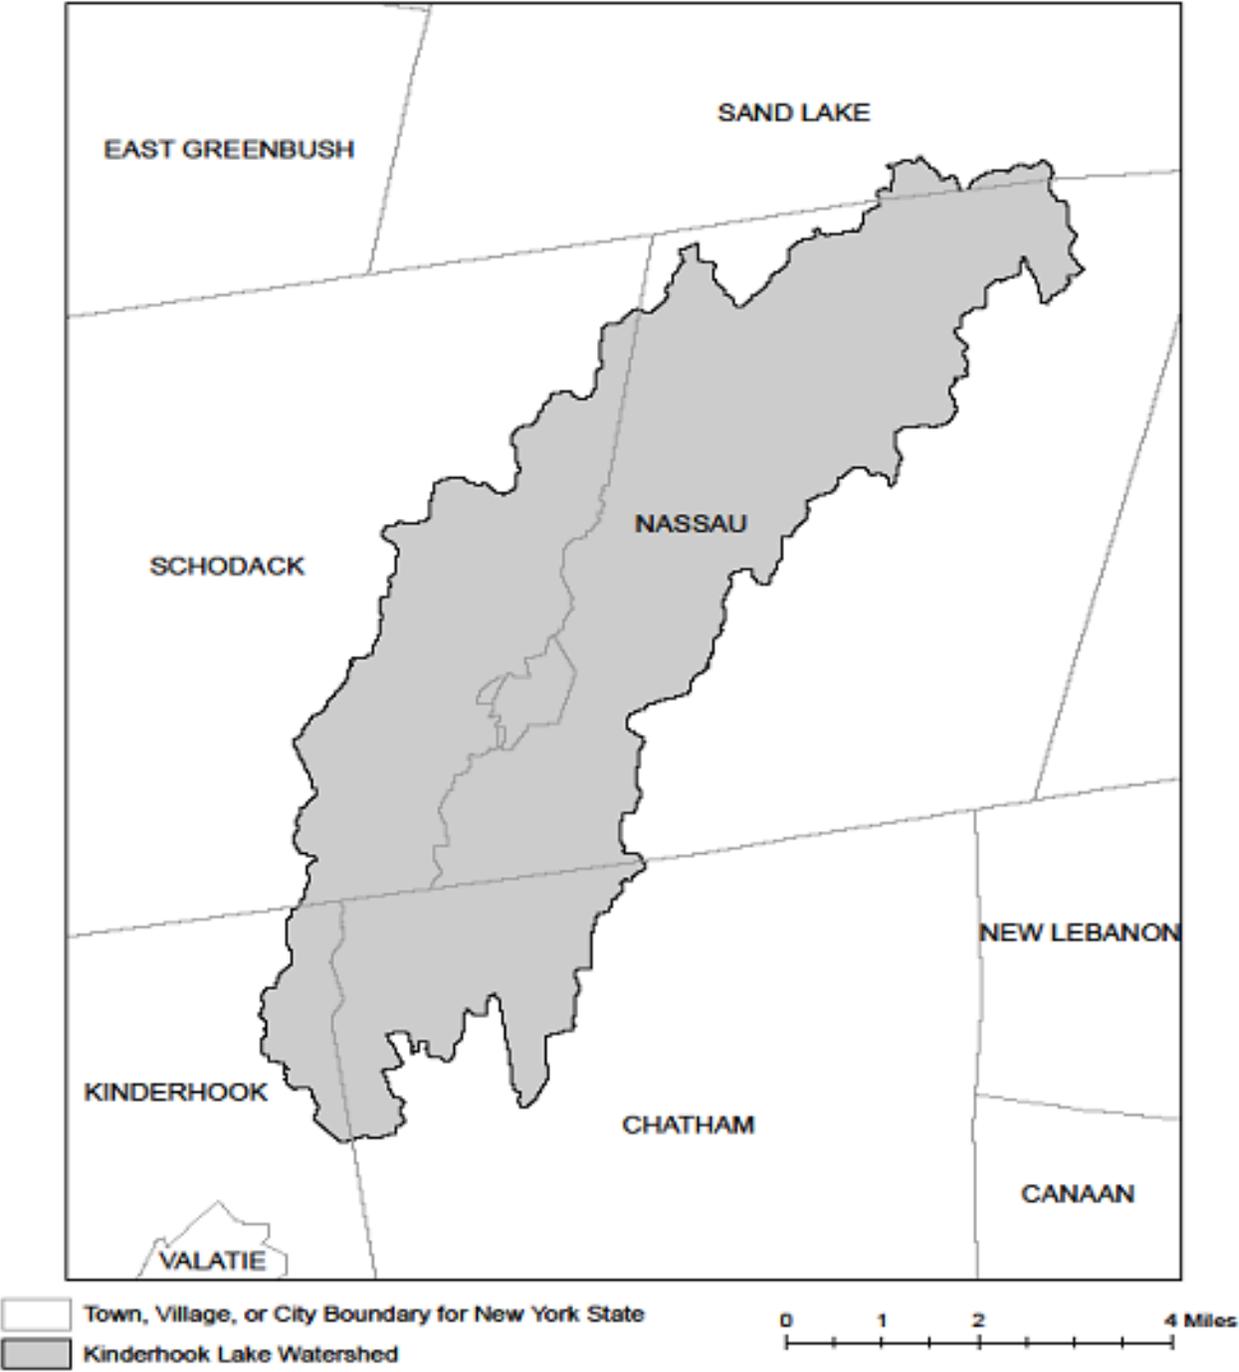

Figure 5 - Kinderhook Lake Watershed

APPENDIX D – Watersheds with Lower Disturbance Threshold

Watersheds where *owners or operators* of construction activities that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land must obtain coverage under this permit.

Entire New York City Watershed that is located east of the Hudson River - See Figure 1 in Appendix C

APPENDIX E – 303(d) Segments Impaired by Construction Related Pollutant(s)

List of 303(d) segments impaired by pollutants related to *construction activity* (e.g. silt, sediment or nutrients). The list was developed using "The Final New York State 2016 Section 303(d) List of Impaired Waters Requiring a TMDL/Other Strategy" dated November 2016. *Owners or operators* of single family home and single family residential subdivisions with 25% or less total impervious cover at total site build-out that involve soil disturbances of one or more acres of land, but less than 5 acres, and *directly discharge* to one of the listed segments below shall prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the New York State Stormwater Management Design Manual ("Design Manual"), dated January 2015.

COUNTY	WATERBODY	POLLUTANT
Albany	Ann Lee (Shakers) Pond, Stump Pond	Nutrients
Albany	Basic Creek Reservoir	Nutrients
Allegany	Amity Lake, Saunders Pond	Nutrients
Bronx	Long Island Sound, Bronx	Nutrients
Bronx	Van Cortlandt Lake	Nutrients
Broome	Fly Pond, Deer Lake, Sky Lake	Nutrients
Broome	Minor Tribs to Lower Susquehanna (north)	Nutrients
Broome	Whitney Point Lake/Reservoir	Nutrients
Cattaraugus	Allegheny River/Reservoir	Nutrients
Cattaraugus	Beaver (Alma) Lake	Nutrients
Cattaraugus	Case Lake	Nutrients
Cattaraugus	Linlyco/Club Pond	Nutrients
Cayuga	Duck Lake	Nutrients
Cayuga	Little Sodus Bay	Nutrients
Chautauqua	Bear Lake	Nutrients
Chautauqua	Chadakoin River and tribs	Nutrients
Chautauqua	Chautauqua Lake, North	Nutrients
Chautauqua	Chautauqua Lake, South	Nutrients
Chautauqua	Findley Lake	Nutrients
Chautauqua	Hulburt/Clymer Pond	Nutrients
Clinton	Great Chazy River, Lower, Main Stem	Silt/Sediment
Clinton	Lake Champlain, Main Lake, Middle	Nutrients
Clinton	Lake Champlain, Main Lake, North	Nutrients
Columbia	Kinderhook Lake	Nutrients
Columbia	Robinson Pond	Nutrients
Cortland	Dean Pond	Nutrients

303(d) Segments Impaired by Construction Related Pollutant(s)

Dutchess	Fall Kill and tribs	Nutrients
Dutchess	Hillside Lake	Nutrients
Dutchess	Wappingers Lake	Nutrients
Dutchess	Wappingers Lake	Silt/Sediment
Erie	Beeman Creek and tribs	Nutrients
Erie	Ellicott Creek, Lower, and tribs	Silt/Sediment
Erie	Ellicott Creek, Lower, and tribs	Nutrients
Erie	Green Lake	Nutrients
Erie	Little Sister Creek, Lower, and tribs	Nutrients
Erie	Murder Creek, Lower, and tribs	Nutrients
Erie	Rush Creek and tribs	Nutrients
Erie	Scajaquada Creek, Lower, and tribs	Nutrients
Erie	Scajaquada Creek, Middle, and tribs	Nutrients
Erie	Scajaquada Creek, Upper, and tribs	Nutrients
Erie	South Branch Smoke Cr, Lower, and tribs	Silt/Sediment
Erie	South Branch Smoke Cr, Lower, and tribs	Nutrients
Essex	Lake Champlain, Main Lake, South	Nutrients
Essex	Lake Champlain, South Lake	Nutrients
Essex	Willsboro Bay	Nutrients
Genesee	Bigelow Creek and tribs	Nutrients
Genesee	Black Creek, Middle, and minor tribs	Nutrients
Genesee	Black Creek, Upper, and minor tribs	Nutrients
Genesee	Bowen Brook and tribs	Nutrients
Genesee	LeRoy Reservoir	Nutrients
Genesee	Oak Orchard Cr, Upper, and tribs	Nutrients
Genesee	Tonawanda Creek, Middle, Main Stem	Nutrients
Greene	Schoharie Reservoir	Silt/Sediment
Greene	Sleepy Hollow Lake	Silt/Sediment
Herkimer	Steele Creek tribs	Silt/Sediment
Herkimer	Steele Creek tribs	Nutrients
Jefferson	Moon Lake	Nutrients
Kings	Hendrix Creek	Nutrients
Kings	Prospect Park Lake	Nutrients
Lewis	Mill Creek/South Branch, and tribs	Nutrients
Livingston	Christie Creek and tribs	Nutrients
Livingston	Conesus Lake	Nutrients
Livingston	Mill Creek and minor tribs	Silt/Sediment
Monroe	Black Creek, Lower, and minor tribs	Nutrients
Monroe	Buck Pond	Nutrients
Monroe	Cranberry Pond	Nutrients

303(d) Segments Impaired by Construction Related Pollutant(s)

Monroe	Lake Ontario Shoreline, Western	Nutrients
Monroe	Long Pond	Nutrients
Monroe	Mill Creek and tribs	Nutrients
Monroe	Mill Creek/Blue Pond Outlet and tribs	Nutrients
Monroe	Minor Tribs to Irondequoit Bay	Nutrients
Monroe	Rochester Embayment - East	Nutrients
Monroe	Rochester Embayment - West	Nutrients

DEC Region

2

The DEC Region must be provided. Please use the NYSDEC Stormwater Interactive Map (<https://gisservices.dec.ny.gov/gis/stormwater/>) to confirm which DEC Region this site is located in. To view the DEC Regions, click on **Other Useful Reference Layers** on the left side of the map, then click on **DEC Administrative Boundary**. Zoom out as needed to see the Region boundaries.

For projects that span multiple Regions, please select a primary Region and then provide the additional Regions as a note in Question 39.

County

KINGS

Name of Nearest Cross Street

Tax Map Numbers

NONE PROVIDED

If the project does not have tax map numbers (e.g. linear projects), enter **Not Applicable** or "N/A".

1. Coordinates

Provide the Geographic Coordinates for the project site. The two methods are:

- Navigate to the project location on the map (below) and click to place a marker and obtain the XY coordinates.
- The "Find Me" button will provide the lat/long for the person filling out this form. Then pan the map to the correct location and click the map to place a marker and obtain the XY coordinates.

Navigate to your location and click on the map to get the X,Y coordinates

40.58172084927663,-73.97854961181122

Project Details

2. What is the nature of this project?

Redevelopment with increase in impervious area

For the purposes of this eNOI, **New Construction** refers to any project that does not involve the disturbance of existing impervious area (i.e. 0 acres). If existing impervious area will be disturbed on the project site, it is considered redevelopment with either increase in impervious area or no increase in impervious area.

3. Select the predominant land use for both pre and post development conditions.

Pre-Development Existing Landuse

Industrial

Post-Development Future Land Use

Parking Lot

3a. If Single Family Subdivision was selected in question 3, enter the number of subdivision lots.

NONE PROVIDED

4. In accordance with the larger common plan of development or sale, enter the total project site acreage, the acreage to be disturbed and the future impervious area (acreage)within the disturbed area.

*** ROUND TO THE NEAREST TENTH OF AN ACRE. ***

Total Site Area (acres)

16.8

Total Area to be Disturbed (acres)

13.2

Existing Impervious Area to be Disturbed (acres)

0.0

Future Impervious Area Within Disturbed Area (acres)

10.7

5. Do you plan to disturb more than 5 acres of soil at any one time?

Yes

6. Indicate the percentage (%) of each Hydrologic Soil Group(HSG) at the site.

A (%)

0

B (%)

0

C (%)

0

D (%)

100

7. Is this a phased project?

No

8. Enter the planned start and end dates of the disturbance activities.

Start Date
04/01/2025

End Date
12/01/2025

9. Identify the nearest surface waterbody(ies) to which construction site runoff will discharge.
Coney Island Creek

Drainage ditches and storm sewer systems are not considered surface waterbodies. Please identify the surface waterbody that they discharge to. If the nearest surface waterbody is unnamed, provide a description of the waterbody, such as, ♦ Unnamed tributary to Niagara River. ♦

9a. Type of waterbody identified in question 9?
Stream/Creek Off Site

Other Waterbody Type Off Site Description
NONE PROVIDED

9b. If "wetland" was selected in 9A, how was the wetland identified?
NONE PROVIDED

10. Has the surface waterbody(ies) in question 9 been identified as a 303(d) segment in Appendix E of GP-0-20-001?
No

11. Is this project located in one of the Watersheds identified in Appendix C of GP-0-20-001?
No

12. Is the project located in one of the watershed areas associated with AA and AA-S classified waters?
No

Please use the DEC Stormwater Interactive Map (<https://gisservices.dec.ny.gov/gis/stormwater/>) to confirm if this site is located in one of the watersheds of an AA or AA-S classified water. To view the watershed areas, click on ♦ Permit Related Layers ♦ on the left side of the map, then click on ♦ Class AA AAS Watersheds. ♦

If No, skip question 13.

13. Does this construction activity disturb land with no existing impervious cover and where the Soil Slope Phase is identified as D (provided the map unit name is inclusive of slopes greater than 25%), E or F on the USDA Soil Survey?
No

If Yes, what is the acreage to be disturbed?
NONE PROVIDED

14. Will the project disturb soils within a State regulated wetland or the protected 100 foot adjacent area?
Yes

15. Does the site runoff enter a separate storm sewer system (including roadside drains, swales, ditches, culverts, etc)?
No

16. What is the name of the municipality/entity that owns the separate storm sewer system?
NONE PROVIDED

17. Does any runoff from the site enter a sewer classified as a Combined Sewer?
No

18. Will future use of this site be an agricultural property as defined by the NYS Agriculture and Markets Law?
No

19. Is this property owned by a state authority, state agency, federal government or local government?
No

20. Is this a remediation project being done under a Department approved work plan? (i.e. CERCLA, RCRA, Voluntary Cleanup Agreement, etc.)

No

Required SWPPP Components

21. Has the required Erosion and Sediment Control component of the SWPPP been developed in conformance with the current NYS Standards and Specifications for Erosion and Sediment Control (aka Blue Book)?

Yes

22. Does this construction activity require the development of a SWPPP that includes the post-construction stormwater management practice component (i.e. Runoff Reduction, Water Quality and Quantity Control practices/techniques)?

Yes

If you answered No in question 22, skip question 23 and the Post-construction Criteria and Post-construction SMP Identification sections.

23. Has the post-construction stormwater management practice component of the SWPPP been developed in conformance with the 2015 or 2024 NYS Stormwater Management Design Manual?

Yes

24. The Stormwater Pollution Prevention Plan (SWPPP) was prepared by:

Professional Engineer (P.E.)

SWPPP Preparer

Langan Eng, Env, Surveying, L.A.& Geo, DPC

Contact Name (Last, First)

O'Connor, Michele

NONE PROVIDED

Erosion & Sediment Control Criteria

25. Has a construction sequence schedule for the planned management practices been prepared?

Yes

26. Select all of the erosion and sediment control practices that will be employed on the project site:

Temporary Structural

Dust Control
Silt Fence
Stabilized Construction Entrance
Storm Drain Inlet Protection
Turbidity Curtain

Biotechnical

None

Vegetative Measures

Protecting Vegetation
Seeding

Permanent Structural

Rock Outlet Protection

Other

NONE PROVIDED

Post-Construction Criteria

*** IMPORTANT: Completion of Questions 27-39 is not required if response to Question 22 is No.**

27. Identify all site planning practices that were used to prepare the final site plan/layout for the project.

Parking Reduction

27a. Indicate which of the following soil restoration criteria was used to address the requirements in Section 5.1.6("Soil Restoration") of the Design Manual.

All disturbed areas will be restored in accordance with the Soil Restoration requirements in Table 5.3 of the Design Manual (see page 5-22).

28. Provide the total Water Quality Volume (WQv) required for this project (based on final site plan/layout). (Acre-feet)

1.26

29. Post-construction SMP Identification

Use the Post-construction SMP Identification section to identify the RR techniques (Area Reduction), RR techniques(Volume Reduction) and Standard SMPs with RRv Capacity that were used to reduce the Total WQv Required (#28).

Identify the SMPs to be used by providing the total impervious area that contributes runoff to each technique/practice selected. For the Area Reduction Techniques, provide the total contributing area (includes pervious area) and, if applicable, the total impervious area that contributes runoff to the technique/practice.

Note: Redevelopment projects shall use the Post-Construction SMP Identification section to identify the SMPs used to treat and/or reduce the WQv required. If runoff reduction techniques will not be used to reduce the required WQv, skip to question 33a after identifying the SMPs.

30. Indicate the Total RRv provided by the RR techniques (Area/Volume Reduction) and Standard SMPs with RRv capacity identified in question 29. (acre-feet)

0.34

31. Is the Total RRv provided (#30) greater than or equal to the total WQv required (#28)?

No

If Yes, go to question 36. If No, go to question 32.

32. Provide the Minimum RRv required based on HSG. [Minimum RRv Required = (P) (0.95) (Ai) / 12, Ai=(s) (Aic)] (acre-feet)

0.25

32a. Is the Total RRv provided (#30) greater than or equal to the Minimum RRv Required (#32)?

Yes

If Yes, go to question 33.

Note: Use the space provided in question #39 to summarize the specific site limitations and justification for not reducing 100% of WQv required (#28). A detailed evaluation of the specific site limitations and justification for not reducing 100% of the WQv required (#28) must also be included in the SWPPP.

If No, sizing criteria has not been met; therefore, NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

33. SMPs

Use the Post-construction SMP Identification section to identify the Standard SMPs and, if applicable, the Alternative SMPs to be used to treat the remaining total WQv (=Total WQv Required in #28 - Total RRv Provided in #30).

Also, provide the total impervious area that contributes runoff to each practice selected.

NOTE: Use the Post-construction SMP Identification section to identify the SMPs used on Redevelopment projects.

33a. Indicate the Total WQv provided (i.e. WQv treated) by the SMPs identified in question #33 and Standard SMPs with RRv Capacity identified in question #29. (acre-feet)

1.65

Note: For the standard SMPs with RRv capacity, the WQv provided by each practice = the WQv calculated using the contributing drainage area to the practice - provided by the practice. (See Table 3.5 in Design Manual)

34. Provide the sum of the Total RRv provided (#30) and the WQv provided (#33a).

1.99

35. Is the sum of the RRv provided (#30) and the WQv provided (#33a) greater than or equal to the total WQv required (#28)?

Yes

If Yes, go to question 36.

If No, sizing criteria has not been met; therefore, NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

36. Provide the total Channel Protection Storage Volume (CPv required and provided or select waiver (#36a), if applicable.

CPv Required (acre-feet)

NONE PROVIDED

CPv Provided (acre-feet)

NONE PROVIDED

36a. The need to provide channel protection has been waived because:

Site discharges directly to tidal waters or a fifth order or larger stream.

37. Provide the Overbank Flood (Qp) and Extreme Flood (Qf) control criteria or select waiver (#37a), if applicable.

Overbank Flood Control Criteria (Qp)

Pre-Development (CFS)

NONE PROVIDED

Post-Development (CFS)

NONE PROVIDED

Total Extreme Flood Control Criteria (Qf)

Pre-Development (CFS)

NONE PROVIDED

Post-Development (CFS)

NONE PROVIDED

37a. The need to meet the Qp and Qf criteria has been waived because:

Site discharges directly to tidal waters or a fifth order or larger stream.

38. Has a long term Operation and Maintenance Plan for the post-construction stormwater management practice(s) been developed?

Yes

If Yes, Identify the entity responsible for the long term Operation and Maintenance

Owner

39. Use this space to summarize the specific site limitations and justification for not reducing 100% of WQv required (#28). (See question #32a) This space can also be used for other pertinent project information.

NONE PROVIDED

Post-Construction SMP Identification

Runoff Reduction (RR) Techniques, Standard Stormwater Management Practices (SMPs) and Alternative SMPs

Identify the Post-construction SMPs to be used by providing the total impervious area that contributes runoff to each technique/practice selected. For the Area Reduction Techniques, provide the total contributing area (includes pervious area) and, if applicable, the total impervious area that contributes runoff to the technique/practice.

RR Techniques (Area Reduction)

Round to the nearest tenth

**RE: ACKNOWLEDGMENT of NOTICE OF INTENT for
Coverage Under SPDES General Permit for
Storm Water Discharges from CONSTRUCTION
ACTIVITY – General Permit No. GP-0-20-001**

Dear Prospective Permittee:

This is to acknowledge that the New York State Department of Environmental Conservation (Department) has received a complete Notice of Intent (NOI) for coverage under General Permit No. GP-0-20-001 for the construction activities located at:

**2731 West 12th Street
2731 West 12th Street
Brooklyn, NY 11224**

County: **KINGS**

Pursuant to Environmental Conservation Law (ECL) Article 17, Titles 7 and 8, and ECL Article 70, coverage under GP-0-20-001 for the above construction site is effective five (5) business days from **12/20/2024**, which is the date the Department received your complete eNOI.

The permit identification number for this site is: **NYR11N628**. Be sure to include this permit identification number on any forms or correspondence you send the Department. When coverage under GP-0-20-001 is no longer needed, you must submit a Notice of Termination to the Department.

Additionally, authorization to discharge under GP-0-20-001 is conditioned upon compliance with Part II.C. of GP-0-20-001, specifically the following:

1. A final Storm Water Pollution Prevention Plan has been prepared;
2. When applicable, project review pursuant to the State Environmental Quality Review Act (SEQRA) has been satisfied;
3. Where required, all necessary Department permits subject to the Uniform Procedures Act (UPA) (see 6 NYCRR Part 621), or the equivalent from another New York State agency, have been obtained, unless otherwise notified by the Department pursuant to 6 NYCRR 621.3(a)(4).

If other UPA permits, or the equivalent, are required, you must submit a preliminary SWPPP to the appropriate Permit Administrator at the Regional Office listed in Appendix F to GP-0-20-001. The preliminary SWPPP must be submitted at the time that the applications for all other UPA permits, or the equivalent, are submitted to the Department.

Note: Construction cannot commence until all of the above have been satisfied.

Please be advised that before disturbing greater than 5 acres of soil at any one time, you have obtained approval from our Regional Office. You should contact the Regional Office listed below.

Selvin Southwell
NYS Department of Environmental Conservation - Region: 2
One Hunters Point Plaza, 47-40 21st Street
Long Island City, NY 11101-5407

Please also be advised that there is an annual regulatory fee of \$110, which is billed by the Department in the late fall. The regulatory fee covers a period of one calendar year. In addition, since September 1, 2004, construction stormwater permittees have been assessed an initial authorization fee which is now \$110 per acre of land disturbed and \$675 per acre of future impervious area. The initial authorization fee covers the duration of the authorized disturbance.

Should you have any questions regarding any aspect of the requirements specified in GP-0-20-001, please contact me at (518) 402-8188.

Sincerely,

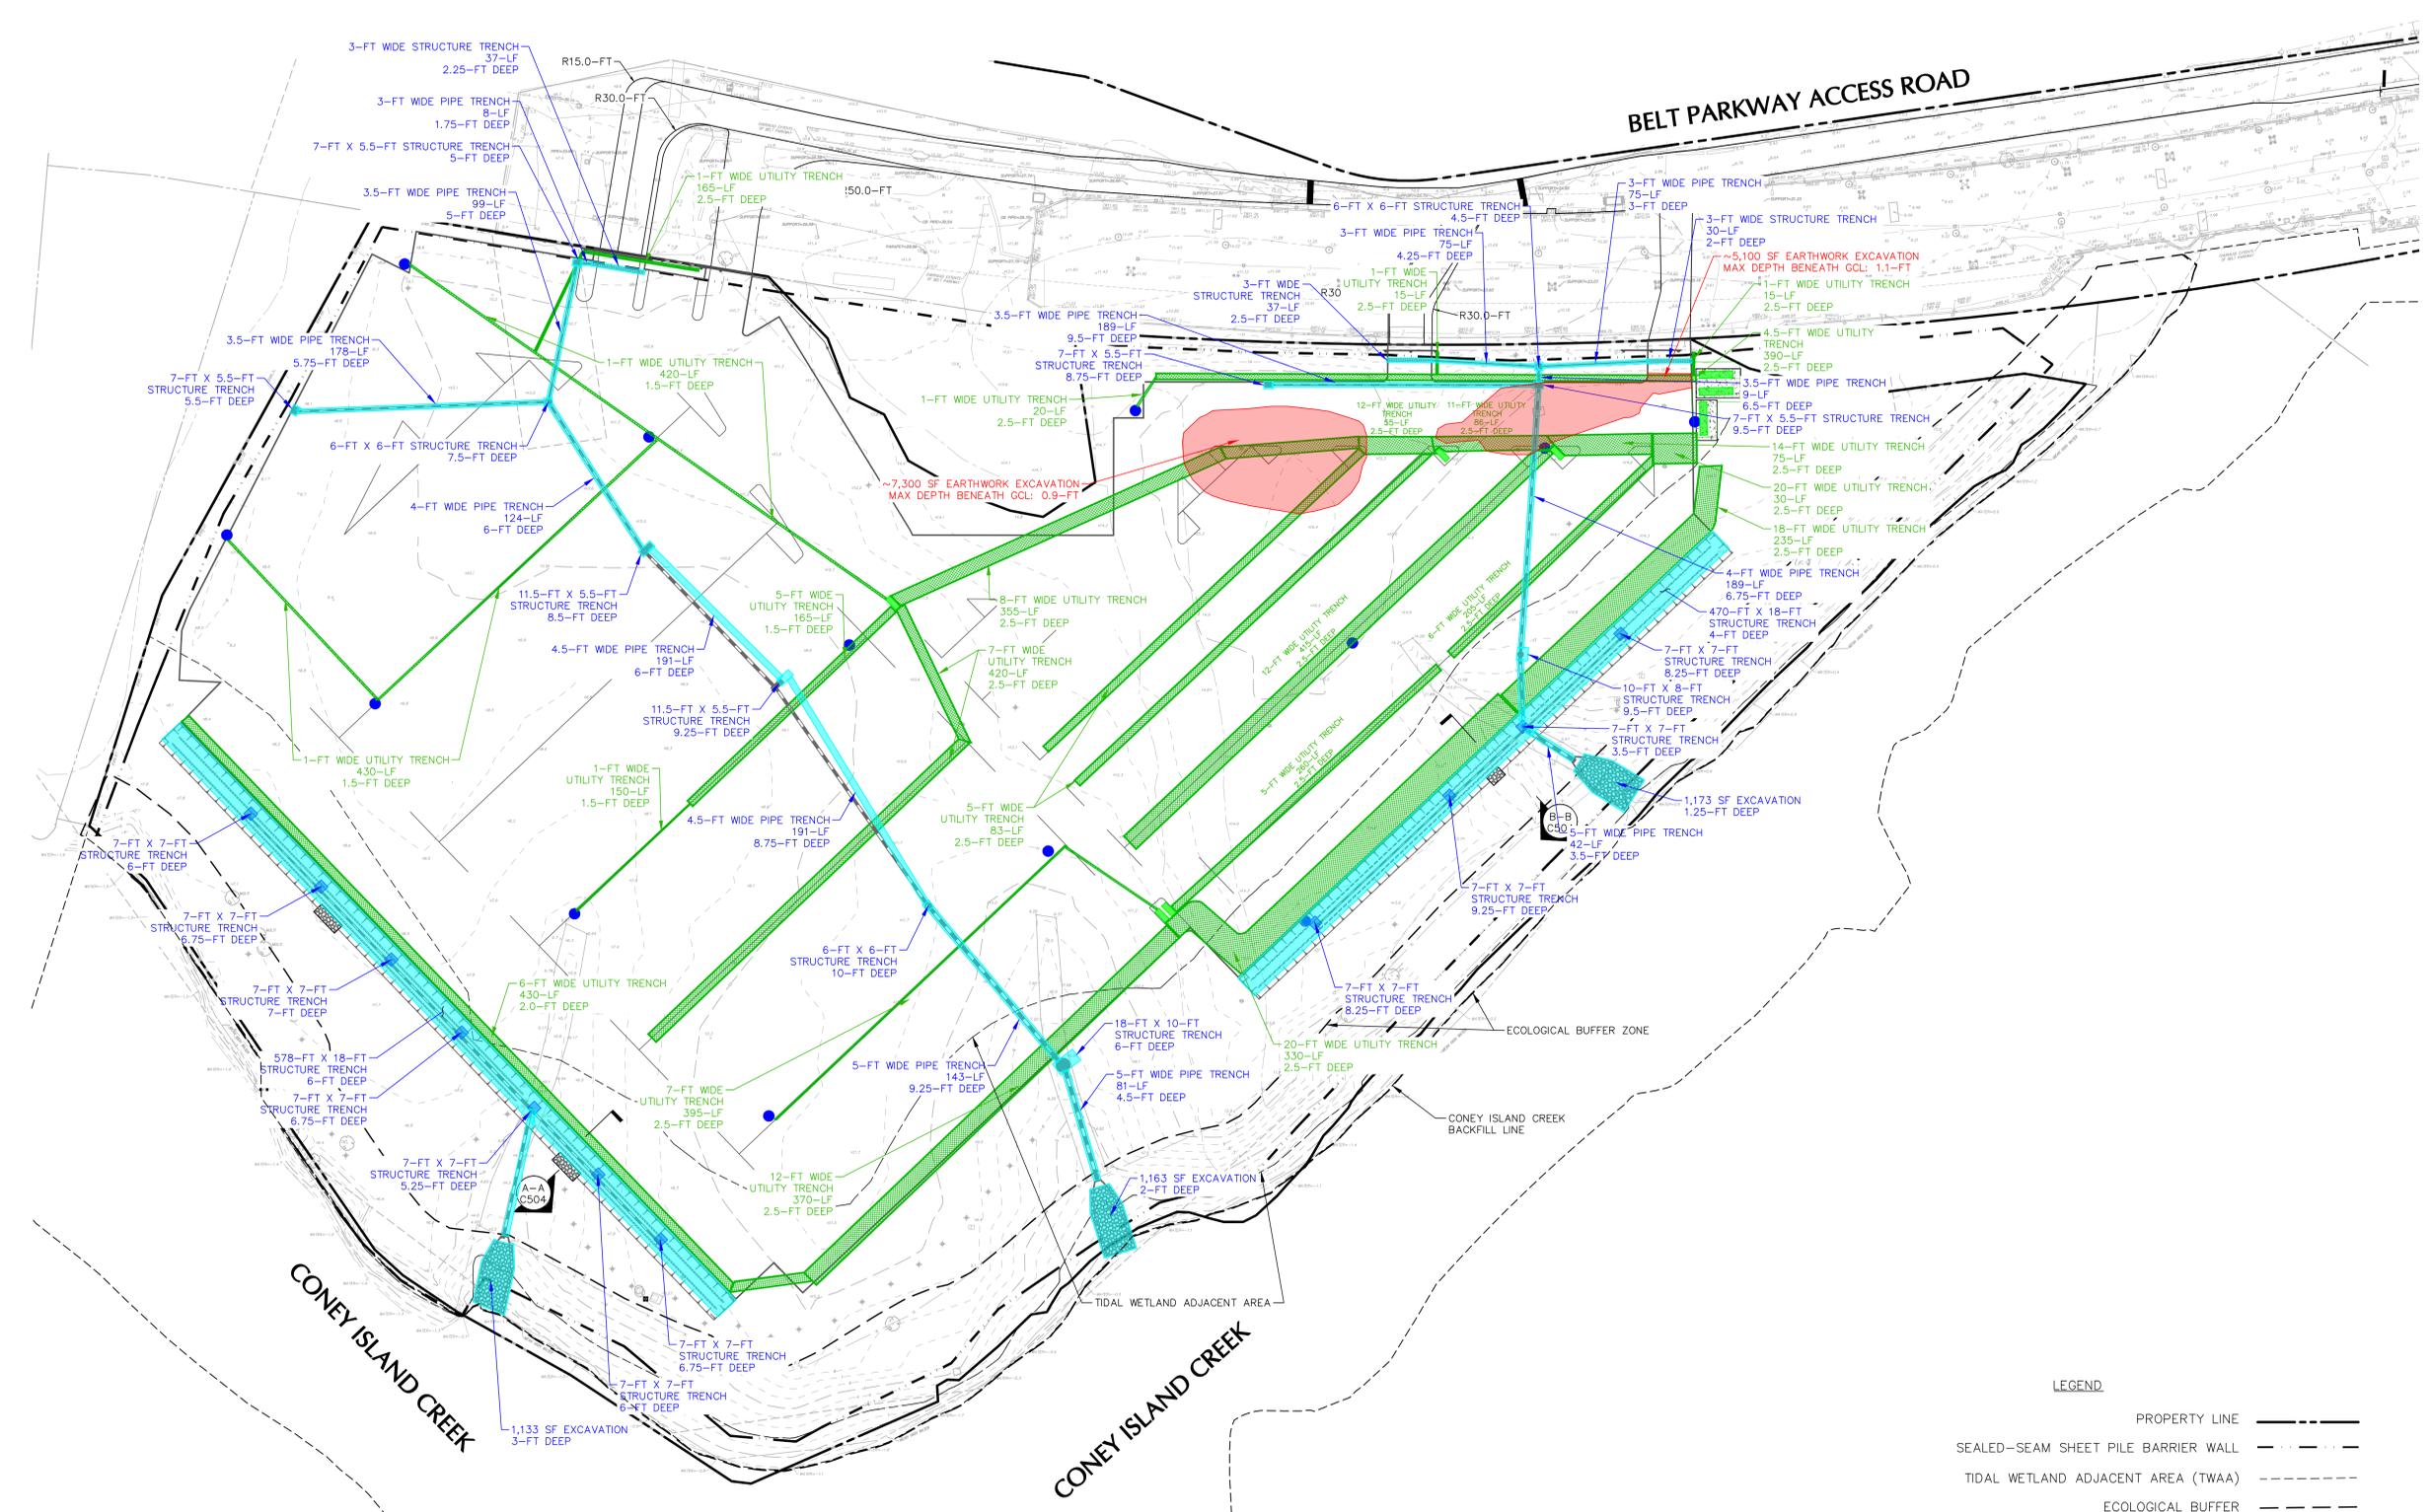

**John Muthersbaugh
Assistant Engineer**

REQUEST TO IMPORT/REUSE FILL OR SOIL FORM

**NEW YORK STATE
DEPARTMENT OF ENVIRONMENTAL CONSERVATION**

Request to Import/Reuse Fill or Soil

This form is based on the information required by DER-10, Section 5.4(e) and 6NYCRR Part 360.13. Use of this form is not a substitute for reading the applicable regulations and Technical Guidance document.

SECTION 1 – SITE BACKGROUND

Site Name:

Site Number:

The allowable site use is:

Have Ecological Resources been identified?

Is this soil originating from the site?

How many cubic yards of soil will be imported/reused?

If greater than 1000 cubic yards will be imported, enter volume to be imported:

SECTION 2 – MATERIAL OTHER THAN SOIL

Is the material to be imported gravel, rock or stone?

Does it contain less than 10%, by weight, material that passes a size 100 sieve?

Is this virgin material from a permitted mine or quarry?

Is this material recycled concrete or brick from a DEC registered processing facility?

SECTION 3 - SAMPLING

Provide a brief description of the number and type of samples collected in the space below:

Example Text: 5 discrete samples were collected and analyzed for VOCs. 2 composite samples were collected and analyzed for SVOCs, Inorganics & PCBs/Pesticides.

If the material meets requirements of DER-10 section 5.4(e)5 (other material), no chemical testing needed.

SECTION 3 CONT'D - SAMPLING

Provide a brief written summary of the sampling results or attach evaluation tables (compare to DER-10, Appendix 5):

Example Text: Arsenic was detected up to 17 ppm in 1 (of 5) samples; the allowable level is 16 ppm.

If Ecological Resources have been identified use the "If Ecological Resources are Present" column in Appendix 5.

SECTION 4 – SOURCE OF FILL

Name of person providing fill and relationship to the source:

Name and address of fill source:

Location where fill was obtained:

Identification of any state or local approvals as a fill source:

If no approvals are available, provide a brief history of the use of the property that is the fill source:

Provide a list of supporting documentation included with this request:

--

The information provided on this form is accurate and complete.

1.0 INTRODUCTION

1.1 General

This CONSTRUCTION HEALTH AND SAFETY PLAN (CHASP) was developed to address disturbance of known and reasonably anticipated subsurface contaminants and comply with Occupational Safety and Health Administration (OSHA) Standard 29 Code of Federal Regulation (CFR) 1910.120(b)(4), Hazardous Waste Operations and Emergency Response during anticipated site for the property located at 2731 West 12th Street located in the Coney Island neighborhood of Brooklyn, New York (hereafter referred to as the "Site"). The legal description for the Site is the Borough of Brooklyn/Kings County Tax Block 7247, Lot 106.

This CHASP provides the minimum requirements for implementing site operations during future remedial measures. All contractors performing work on this site must implement their own CHASP that, at a minimum, adheres to this CHASP. The contractor is responsible for their own health and safety and that of their subcontractors. Langan personnel will implement this CHASP while onsite.

The content of this CHASP may change or undergo revision based upon additional information made available to health and safety personnel, monitoring results, or changes in the work plan.

1.2 Site Location and Background

A portion of the site was historically operated as a manufactured gas plant (MGP) and was remediated pursuant to a May 12, 1995, Order on Consent and Administrative Settlement (Index No. CO 2-20200901-300) administered by the New York State Department of Environmental Conservation (NYSDEC). The site is registered as New York State Inactive Hazardous Waste Disposal Site No. C224026 and was investigated and remediated by the Responsible Party (The Brooklyn Union Gas Company d/b/a National Grid NY). The site is now subject to ongoing site management in accordance with a June 10, 2019, NYSDEC-approved Site Management Plan (SMP). A Site Location Map is provided in Figure 1.

1.3 Summary of Work Tasks

1.3.1 Geophysical Investigation - Underground Utility Clearance Policy

Prior to the commencement of intrusive field activities (i.e., soil borings); Langan will follow the Langan Underground Utility Clearance Policy including retaining a geophysical consultant to conduct a geophysical survey using ground penetrating radar (GPR) and electromagnetic

detection equipment. The objective of the survey will be to identify any underground storage tank (UST) structures, drains, underground utilities, and other subsurface anomalies that may be encountered during the investigation. During this time Langan personnel will inspect the site and confirm investigation locations are both accessible and free of potential utility or other known or suspected subsurface structures.

1.3.2 "Soft-Dig" Clearance of Borehole Locations

If there is no geophysical survey for utility clearance or the results of the geophysical survey are inconclusive at specific locations subject to intrusive work, or otherwise in compliance with Langan's Underground Utility Clearance Policy, the drilling contractor may "soft-dig" each proposed drilling location or a separate contractor may be retained to "soft-dig" the locations to confirm they are free of utilities or other known or suspected subsurface structures. The dimensions of each location should extend to a depth of 5-feet and be about 1.5 times the anticipated diameter of the borehole when drilled. Langan personnel will confirm that the "soft dig" activities are completed to these specifications.

1.3.3 Day Lighting Excavation and Soil Screening

Langan may retain an excavation contractor to daylight buried unidentified structures. The purpose of the daylighting is to confirm if these structures are subsurface structures of concern (USTs, utilities sewer lines, storm water drains, electrical, gas or other utility line as well as other artifacts pertinent to the work plan). The excavation contractor will contact the appropriate utility mark-out authority and make available to their staff the verification number and effective dates.

The excavation contractor will employ "soft dig" methods in accordance with the Langan Underground Utility Clearance Policy when excavating. Langan may screen excavated soil for visual, olfactory, and instrumental indicators suggestive of a potential chemical or petroleum release. Instrument screening for the presence of volatile organic compounds (VOC) may be performed with a duly calibrated photoionization detector (PID). Contractors will notify Langan personnel if they identify indications suggestive of a potential chemical or petroleum release. Contaminated material shall be handled, and properly disposed in accordance with federal, state and city regulations, criteria, and guidelines.

1.3.4 Excavation and Soil Screening

Langan personnel will screen excavated material for visual, olfactory, and instrumental indicators suggestive of a potential chemical or petroleum release. Instrument screening for the presence of volatile organic compounds (VOC) may be performed with a duly calibrated Photoionization detector (PID). Contractors will excavate for utilities, foundation components and potential

grading using heavy equipment and hand tools. Contractors will notify Langan personnel if they identify indications of a potential chemical or petroleum release. Contaminated material must be handled, and property disposed in accordance with federal, state and city regulations, criteria, and guidelines.

1.3.5 Soil Screening

As part of future excavation activities, the Langan personnel will report when they have observed visual and olfactory indications of possible soil impact. Langan personnel will also report concentrations of VOCs or methane above background when using a properly calibrated handheld PID and flame ionization detector (FID), or equivalent.

1.3.6 Soil Sampling

Soil samples (waste characterization, excavation endpoint, delineation, or quality assurance/quality control [QA/QC]) may be collected during construction, as required. Langan personnel will coordinate with the contractor in sampling soil (in accordance with the Site Management Plan [SMP], where applicable). If stockpile soil sampling is required from above ground level, suitable excavation equipment (i.e., excavator, front end loader) should be used to collect the sample.

Soil samples will be submitted to a NYSDOH ELAP-certified laboratory and analyzed in accordance with work plan specifications.

1.3.7 Endpoint/Delineation Soil Sampling

As part of the excavation activities, Langan may retain a drilling contractor to advance soil borings to a depth bgs specified in the work plan. If required, soil sampling will be completed to delineate suspected hazardous and/or source material areas, should hazardous materials be identified in soil analytical data. Boring locations will be based on the results of previous investigations and document review. The drilling contractor will contact the appropriate utility mark-out authority and make available to their drilling staff the verification number and effective dates. The borings may be filled with clean soil cuttings after samples are collected.

In addition to hazardous delineation, Langan will screen soil for visual, olfactory, and instrumental indicators suggestive of a potential petroleum release. Instrument screening for the presence of VOCs may be performed with a calibrated PID. Soil samples for excavation endpoint or delineation sampling (along with QA/QC samples) will be submitted to a NYSDOH ELAP-certified laboratory and analyzed accordance with work plan specifications.

1.3.8 Stockpiling

As part of future excavation activities, potentially impacted soil may be stockpiled pending laboratory analysis and determining proper off-site disposal. Visibly contaminated soil, if encountered, must be segregated, and stockpiled on at least 10 millimeters of plastic sheeting; reusable soil and fill must be segregated and stockpiled separately from unusable fill, concrete and other debris; the stockpiles must be kept covered with 6 millimeters thick plastic sheeting; the plastic sheeting covering the stockpiles must be anchored firmly in place by weights, stakes, or both; the Contractor must maintain the plastic sheeting.

1.3.9 Characterization of Excavated Material

When required by the work plan, Langan personnel will characterize excavated soil or clean backfill in accordance with Langan standards.

1.3.10 Construction Activity Inspections and Observations

Langan will observe construction activities including the general oversight, observation of landscaping activities, and other select observation, project management, and supervision as specified in the work plan or in accordance with the construction documents, or special inspection requirements administered by the New York City Department of Buildings. Materials used for construction will be inspected by Langan for conformance to the design documents.

1.3.11 Observation/Monitoring Well Plugging and Abandonment

At an unspecified future date, the observation/monitoring wells will be abandoned. Plugging and abandonment will be in accordance with federal and state requirements. Langan may retain a drilling contractor to complete the plugging and abandonment activities. The contractor will contact the appropriate utility mark-out authority and make available to their field staff the verification number and effective dates. Langan may observe the plugging and abandonment of one or more observation/monitoring wells to document that the plugging and abandonment activities were completed in accordance with the work plan and regulations.

1.3.12 QA/QC Sampling

Samples for quality assurance/quality control [QA/QC] may also be collected and submitted to an approved laboratory and analyzed in accordance with work plan specifications. Information regarding the QA/QC samples including required method of analysis may be included in the same COC as the soil samples unless otherwise instructed by the work plan.

1.3.13 Excavation Backfill

Areas of the site that were over-excavated may be backfilled to development grade (i.e., the grade required to complete construction of the foundation and sidewalk extension). Imported material should meet specifications defined in the work plan or consist of clean fill that meets the 6 New York Codes, Rules and Regulations (NYCRR) Part 375-6.8(a) Unrestricted Use Soil Cleanup Objectives (UU SCOs) or other acceptable fill material such as virgin stone from a permitted mine or quarry or recycled concrete aggregate (RCA), from a New York State Department of Environmental Conservation (NYSDEC)-registered facility in compliance with 6 NYCRR Part 360 registration and permitting requirements for the period of RCA acquisition. Imported RCA must be derived from recognizable and uncontaminated concrete.

1.3.14 Decommissioning and Removal of Underground Storage Tank

If an underground storage tank (UST) is encountered, a UST decommissioning and removal contractor shall furnish all labor and materials, equipment and incidentals required for the proper decontamination, removal, and closure of any UST in accordance with federal, state and local regulations. Langan personnel will monitor VOCs with a calibrated PID downwind from the UST excavation and record the PID readings.

1.3.15 Construction Dewatering

Construction dewatering may be required, the dewatering contractor shall be responsible for handling contaminated dewatering fluids in accordance with federal, state and local regulations. Dewatering fluids are likely to be discharged to the local sanitary sewer system after treatment and under approved regulatory permit. Alternatively, the contractor may provide containerized storage to allow for testing of groundwater prior to, and after, treatment and before disposal. If required, Langan field personnel may sample dewatering treatment system liquids from either a discharge standpipe or a storage tank. Dewatering samples will be submitted to an ELAP-certified laboratory for analysis.

1.3.16 Installation of an Engineering Composite Cover

Langan will observe and document the installation of an engineering composite cover.

1.3.17 Storm water Pollution Prevention Inspection

If required and in accordance with the SMP, Langan personnel with Storm Water Pollution Prevention (SWPPP) inspection credentials will conduct SWPPP inspections. Langan will observe the stormwater pollution prevention system install to document that the install is in

accordance with the work plan and take appropriate measures if impacted soil is observed during excavation.

1.3.18 Equipment Decontamination

Before the start of the day's sampling and after sampling each run, sampling equipment will be decontaminated by the decontamination process outlined Attachment B - Decontamination Procedures. Decontamination wastes and purge water will be temporarily stored on site pending analytical results.

1.3.19 Management of Investigative-Derived Waste

The investigative-derived waste (IDW) generated during this investigation will be contained in DOT-approved 55-gallon drums. The drums will be temporarily stored on the site or as directed by the client representative. All drums will be filled between to two-thirds full to allow easy maneuvering during drum pickup and disposal. Drum labels are to be provided by Langan (Environmental Closet). All drums will be labeled as "IDW Pending Analysis" until sample data are reported from the laboratory. Drum labels will include date filled and locations where waste was generated along with the standard information required by the labels in accordance with the Langan SOP09, Drum Labeling.

Closed top drums are to be used to store liquids. Debris, including plastic sheeting, polyethylene tubing, personal protection equipment (PPE), decontamination debris, etc. will be segregated from and disposed in large heavy duty garbage bags and disposed of at the site. Excess unused glassware should be returned to the lab along with the last day of collection samples.

1.3.20 Drum Sampling

Langan personnel may collect drum samples, as required, prior to off-site drum disposal. Samples will be placed into laboratory-supplied batch-certified clean glassware and submitted to an approved laboratory and analyzed in accordance with work plan specifications, if required.

1.3.21 Surveying

Surveying activities may be completed by Langan. Surveying will be conducted by licensed surveyors.

2.0 IDENTIFICATION OF KEY PERSONNEL/HEALTH AND SAFETY PERSONNEL
