1.0 Introduction

AECOM Technical Services Inc. (AECOM), on behalf of National Grid, is submitting this report summarizing and certifying the completion of construction activities for the Shallow Soil Interim Remedial Measure (IRM) conducted on the 254 Maspeth Avenue parcel of the former Equity Works Manufactured Gas Plant (MGP) site (site) located in Brooklyn, New York. The Shallow Soil IRM was completed in accordance with the New York State Department of Environmental Conservation (NYSDEC) approved IRM Work Plan (Work Plan) (National Grid, 2011) and pursuant to a Multi-site Order on Consent and administrative settlement with the NYSDEC, Index # A2-0552-0606.

The activities conducted as part of the Shallow Soil IRM followed the Work Plan submitted to the NYSDEC on December 16, 2011 and which was approved by the NYSDEC and New York State Department of Health (NYSDOH) on July 5, 2012. The Work Plan was developed to address readily recoverable contaminants in the shallow soil on 254 Maspeth Avenue property and was based on several site investigations including the Remedial Investigation (RI) and the Pre-Design Investigation (National Grid, 2011). The Work Plan was also developed to provide a clean corridor for the redevelopment construction activities proposed by the third-party property owner at the 254 Maspeth Avenue property.

The major construction activities for the Shallow Soil IRM were implemented over a one-month period beginning September 10, 2012 and ending September 28, 2012 and included the following:

- Removal and disposal of select surface and subsurface soils above the groundwater table for off-site thermal treatment.
- Removal of former MGP structures encountered within the excavation footprints.
- Placement of a demarcation fabric at the bottom of the excavations and placement of clean gravel backfill to 3 feet (ft) below ground surface (bgs).

A description of the site, statement of IRM objectives, and overview of this report are presented below.

1.1 Site Description

Figure 1-1 shows the location of the former Equity Works MGP site, which includes three modern properties (222 Maspeth Avenue, 252 Maspeth Avenue, and 254 Maspeth Avenue, as identified on Figure 1-2), and its surrounding on a United States Geological Survey (USGS) topographic map. The IRM described in this report was conducted on the 254 Maspeth Avenue portion of the site.

A pre-IRM site layout map depicting the 2012 facility layout on the 254 Maspeth Avenue property and the approximate location of the former Equity Works MGP structures is presented in Figure 1-2. The site was operated as an MGP site from approximately 1893 to 1929, first by the Equity Gas Light Company and later by the Brooklyn Union Gas Company (BUG). Gas manufacturing used the carbureted water gas (aka Lowes) process. BUG sold the Site in September 1951. Subsequently, the site was used for storage (pipe and valves) for the period of 1965 to 1981, and appears to have been vacant during the period of 1986 to 1988. The site appears to have been used as a solid waste transfer facility from 1990 under the ownership of various parties.

A RI is currently being conducted at the site by National Grid. Specifics of the RI scope of work are presented in the NYSDEC-approved RI Work Plan (AECOM, 2009) and subsequent work plan addendums. Based on information obtained during the RI on the 254 Maspeth Avenue property, five former MGP era structures (former generator house, former boiler house, former tar tank, former tar separator, and former gas oil storage house) were present on the 254 Maspeth Avenue property. The locations of these former structures are shown on Figure 1-2. Foundations of each of the five former structures were encountered during the RI.

The site currently houses a waste recycling facility and associated vehicle and equipment storage, with primary site activities occurring at the 222 Maspeth Avenue parcel, currently operated by Cooper Tank Recycling (Cooper Tank). The entire site is now owned by third parties as provided below:

- 222 Maspeth Avenue – This property is owned by 222 Maspeth Avenue, LLC and is currently used as an active waste recycling/waste transfer station. Currently one enclosed building housing offices and one open building (no walls, with roof) housing waste recycling operations are present on the lot. The business on the lot is operated by Cooper Tank.
- 252 Maspeth Avenue – This property is owned by Giacomo and Giovanna Bordone and is currently leased by Cooper Tank. The property is used as a maintenance center for equipment and a two story concrete building is present on the north side, along Maspeth Avenue. The business on the lot is operated by Cooper Tank.
- 254 Maspeth Avenue – This property is currently owned by 254 Maspeth Avenue, LLC and leased to Cooper Tank for occasional storage of empty roll-offs, parking of tractor-trailers, and Cooper Tank employee vehicle parking. Two rectangular concrete scales for measuring truck tare weight are located on the northern portion of the property. A storm water collection structure is located north of the truck scales. The business on the lot is operated by Cooper Tank.

The current operator of 254 Maspeth Avenue property, Cooper Tank, is in the process of amending a NYSDEC Part 360 Permit for operating a recycling facility. This permit, which will include expansion of the current 222 Maspeth Avenue facility into the 252 and 254 Maspeth Avenue properties, requires construction of a minimum 8-inch thick concrete pad across the entire surface of the site, a storm water collection system, and a 30-foot high wall along the perimeter of the 254 Maspeth Avenue property. These activities will be invasive and could encounter residual MGP waste observed during the ongoing RI activities. As a result, National Grid and the NYSDEC agreed that this Shallow Soil IRM was to be performed on the 254 Maspeth Avenue property prior to the redevelopment activities.

1.2 IRM Objectives

The objectives of the Shallow Soil IRM were to:

- Remove, to the extent possible, visual MGP-residual impacts observed in soils above the water table (or to a minimum depth of 5 ft bgs if the water table is shallower) on the 254 Maspeth Avenue property. The limits of excavation as detailed in the Work Plan are shown in Figure 1-3.
- Provide a safe working environment, with relation to the potential exposure to MGP-residual impacts, during the proposed redevelopment of the 254 Maspeth Avenue property (Figure 1-4).

Soils that were visually impacted with MGP-residuals were targeted for removal during the Shallow Soil IRM, as they were identified as sources that were readily recoverable and could potentially be exposed during the redevelopment of the 254 Maspeth Avenue property. Cooper Tank, responsible for the proposed

redevelopment of the 254 Maspeth Avenue property, had stated to National Grid that field activity during the proposed redevelopment would extend to a maximum depth of 5 ft bgs. Any remaining deeper MGP-residual impacts encountered during the excavation activities were to be identified with plastic sheeting to identify and mitigate exposure to the underlying material.

During the IRM, groundwater was observed at depths below 5 ft bgs at an approximate depth of 7 ft bgs. As such, soils within the limits of the Shallow Soil IRM were removed to an average depth of 7 ft bgs. Any remaining deeper MGP-residual impacts across the 254 Maspeth Avenue property are being addressed by demarcation at the bottom of the Shallow Soil IRM excavations, the product recovery IRM (separate from this soil removal IRM), and by current interim Site Management Plan for the site.

1.3 Report Overview

Section 2 presents the details of the IRM construction activities. Section 3 presents a summary of the construction activities and Section 4 contains references.

2.0 IRM Activities

EQ Northeast (EQ) was selected by National Grid to serve as the primary remediation contractor to complete the remedial construction work as detailed in the Work Plan (AECOM, 2011) and in accordance with the contract documents including specifications and design drawings. EQ was also responsible for the Health and Safety of its employees, subcontractors, suppliers, agents, inspectors, visitors, the general public, and any others associated with or interacting with EQ to provide labor, goods, or other services during the Shallow Soil IRM. AECOM served as the construction manager and engineer. AECOM's responsibilities included (1) monitoring compliance with the Work Plan and the Contract Documents, (2) documenting the construction activities and excavation quantities, and (3) performing perimeter air monitoring and vibration monitoring.

The Shallow Soil IRM was conducted from September 10, 2012 through September 28, 2012 by implementing the objectives of the Shallow Soil IRM, including removal and treatment/disposal of shallow soils above the groundwater table as discussed in Section 1.2 and shown in Figure 1-3. The main components of the IRM included:

- Mobilization and Work Area Preparation
  - Public Relations and Communication
  - Soil Profile
  - Work Area Preparation
  - Utility Survey
  - Decontamination Pad Installation
  - Background Monitoring
  - Security
- Environmental Controls
  - Community Air Monitoring Plan (CAMP)
  - Odor, Vapor, and Dust Control Plan
  - Vibration Monitoring Plan
  - Transportation Plan
  - Decontamination
- Excavation
  - Geotechnical Engineering Control
  - Materials Removal, Transportation, and Treatment/Disposal
  - Backfill and Compaction
- Restoration

- Surveying
- Demobilization

The remainder of this section describes these main components of the IRM. A photographic log documenting portions of the IRM is presented in Appendix A.

2.1 Mobilization and Work Area Preparation

An initial kick-off meeting was held on September 6, 2012 with representatives from National Grid, AECOM, and EQ. AECOM mobilized to 254 Maspeth Avenue property on September 6 to setup CAMP equipment and conduct background air monitoring, setup vibration monitoring equipment and conduct background vibration monitoring, and oversee the pre-construction structural survey of 254 Maspeth Avenue and adjacent properties. The pre-construction survey was performed by H2M Architects and Engineers of Long Island, New York.

EQ mobilized to the 254 Maspeth Avenue property on September 10, 2012 and initiated mobilization, work area management, and preparation. The preparation for remedial activities began immediately upon mobilization of equipment and personnel. Mobilization activities were completed on September 13, 2013 and work area preparation activities were completed on September 14, 2013, and included:

- Public relations and communications.
- Obtaining required permits, arranging for waste transportation, arranging for utility hook-ups (as needed), staging necessary equipment and personnel, preparing the Construction Health and Safety Plan (CHASP), and holding an on-site health and safety training session.
- Establishing parking areas, haul routes, and work zones for authorized personnel.
- Constructing the decontamination facility.
- Installation of erosion controls in accordance with local, state, and federal regulations. The erosion and sedimentation controls were maintained throughout the duration of the work.
- Work Area security including security personal, installation of temporary construction fence, and placement of fabric screen.
- Relocation and/or clearing of debris within work areas.
- Characterization and removal of unknown drums within work areas.
- Survey by a New York State-licensed surveyor for initial benchmarks and stakeout for the excavation limits.
- Installing perimeter air monitoring stations and notification system.
- Vibration monitoring setup and baseline monitoring.
- Level B Utility survey and protection.
- Construction of staging and containment areas and construction entrance.
- Traffic control and management.
- A NYSDEC-approved project sign was erected at the project entrance and remained in place during the Shallow Soil IRM.

2.1.1 Public Relations and Communication

Prior to mobilization, NYSDEC-approved Fact Sheets were distributed to property owners adjacent to the 254 Maspeth Avenue property. Additionally, National Grid representatives made contact with all neighbors, local NYSDEC officials, and other state and local government officials. National Grid established this communication plan to ensure all stake holders were aware of the proposed project and had a single point of contact for any questions and concerns that might have arisen during the work. The extensive communications plan was considered a success, as National Grid received no comments and/or complaints during the duration of the project.

2.1.2 Soil Profile

Prior to mobilization, soil profile data was collected from the area designated for excavation and provided to Clean Earth of Southeast Pennsylvania (CESP) and Bayshore Recycling Inc. (Bayshore Recycling) thermal treatment facilities for approval. Based on the soil profile data, Bayshore Recycling was able to approve a fast track schedule for accepting soils at their facility. This allowed the remediation contractor to:

- Aggressively plan remedial and construction activities prior to mobilization.
- Enhance excavation schedule by increasing haul truck frequency.
- Reduce onsite soil management activities.
- Improve site control due to minimal soil stockpiling on-site.
- Improve odor and vapor control due to efficient management of soils onsite.

2.1.3 Utility Survey

Prior to excavation, Dig Safely New York was contacted and companies with subsurface utilities at the 254 Maspeth Avenue were asked to mark-out their utilities in the areas of excavation. Copies of available New York City sewer and water maps from the 254 Maspeth Avenue property vicinity were also obtained and reviewed during underground utility clearance procedures. Additionally, historical mark-outs were reviewed and potential utility locations discussed with the property owner and with Cooper Tank. Following review of the utilities in the work area, a private company surveyed the excavation footprint for any potential utilities using geophysical methods. These protocols predicted that subsurface utilities were not present in the excavation areas, and utilities were not encountered during the excavation activities.

2.1.4 Decontamination Facility

A temporary, 12 ft x 48 ft equipment decontamination facility was constructed on the north portion of the work area and to the south of the Cooper Tank truck scales. The decontamination facility included placement of berms and 48-inch landfill liners with a slight slope to a corner sump. All trucks were dry decontaminated with the use of brushes and brooms prior to leaving the work area. Equipment used within the exclusion zones (excavation areas) was decontaminated using a pressure washer.

2.1.5 Background Monitoring

A background set of air and vibration monitoring data was established prior to excavation. A one-day set of volatile organic compounds (VOCs) and dust measurements were collected via photoionization detectors (PIDs) and DustTrak monitors respectively to establish background ambient air conditions. A three-day set of vibration measurements were collected to establish background vibration conditions.

2.1.6 Work Area Security

A temporary security trailer was installed near the entrance of the work area, and an off-hour security guard was present for the duration of the Shallow Soil IRM. Site personnel acted as site security during work hours. A temporary construction fence was installed south of the Cooper Tank truck scales and along the south boundary of the property to prevent unauthorized entry into the work area. A fabric screen was installed on the existing fence surrounding the property to help control dust, prevent horizontal migration of odors, and elevate the discharge point of emissions of vapors to facilitate dispersion, minimize their effect on downwind receptors, and limit visibility of the excavation.

2.2 Environmental Controls

Due to the immediate proximity of commercial businesses to the Shallow Soil IRM activities, management of odors, vapors, dust, noise, and vibration was an important component of this project. The NYSDEC-approved Community Environmental Response Plan (CERP) was developed to identify and address environmental impacts to the community resulting from the implementation of the Shallow Soil IRM. The CERP was approved by the NYSDEC in 2012 and included the plans listed in the following sub-sections.

2.2.1 Community Air Monitoring Plan

The Community Air Monitoring Plan [(CAMP), Appendix A of the CERP (AECOM, 2012)] was implemented during the Shallow Soil IRM activities. The purpose of the CAMP was to provide an early warning system to alert AECOM and National Grid that concentrations of total volatile organic compounds (TVOCs), respirable particulate matter (RPM_{10}) (*i.e.*, dust), or odors in ambient air were approaching alert levels or action levels due to Shallow Soil IRM activities. The early detection of emissions and associated contingency measures was intended to expedite any necessary mitigation measures and to reduce the potential for the community to be exposed to constituents at levels above accepted regulatory limits and recommended guidelines. Appendix B contains the perimeter air monitoring data, including the background data and real-time monitoring data (DustTrak and PID data).

As outlined in the CAMP, a four-tiered classification and warning system based on Action Levels was used to provide warning and mitigation procedures to prevent emissions during the Shallow Soil IRM. Action level concentrations for TVOCs and RPM_{10} were developed in accordance with the generic NYSDOH CAMP (NYSDEC, 2010). The four-tiered warning system was based on real-time contaminant concentrations averaged over a fifteen-minute period. Response actions were implemented when TVOC, particulates, or odors exceeded the alert levels or action levels.

Parameter	Alert Limit	Action Limit	Operational Level	Alert Level	Action Level	Shut Down
TVOC – ppmv	3.7	5.0	$[C] \leq 3.7$	$3.7 < [C_{avg}] \leq 5.0$	$5.0 < [C_{avg}] \leq 25$	$[C_{avg}] > 25$
Benzene- ppmv	0.8	1	$[C] \leq 0.8$	$0.8 < [C_{avg}] \leq 1.0$	$[C_{avg}] > 1$	
RPM_{10} - $\mu g/m^3$	100	150	$[C] \leq 100$	$100 < [C_{avg}] \leq 150$	$[C_{avg}] > 150$	

Real-time air monitoring for TVOCs and RPM_{10} was conducted continuously during periods of intrusive activity at upwind and downwind locations along the perimeter of work area. Upwind TVOC concentrations were measured at the start of each workday and periodically thereafter to establish background conditions. The locations of the instruments were changed during the day to adapt to changing wind directions.

Portable (battery operated) monitoring stations were used to collect the real-time data and included the following components: station case and tripod; total organic vapor analyzer; particulate monitor and data logger. The monitoring data was converted to 15-minute averages, and stored in data-loggers at each location. The averaged values were compared to the Alert/Action Levels. The units were equipped with an audible alarm to indicate exceedances of these levels.

There were no measurements of TVOCs and RPM_{10} above the alert or action level for a 15-minute period at the downwind monitoring station that were associated with intrusive activities during Shallow Soil IRM. The RPM_{10} recorded above the alert and/or action level at the upwind location (PMT-1) are likely due to off-site operations and not associated with the intrusive activities on the site as all downwind measurements were below the action level. The CAMP Report is included in Appendix B.

2.2.2 Odor, Vapor and Dust Control Plan

Odor, vapor, and dust control were required due to the immediate proximity of commercial business. A three-tiered set of controls were implemented during the Shallow Soil IRM as per the NYSDEC approved Odor Vapor and Dust Control Plan (Appendix B of CERP [AECOM, 2012]).

2.2.2.1 Level I

Level I controls were built into the design of the Shallow Soil IRM and included proactive measures to minimize the effect of fugitive emissions. These included:

- Placement of a visual barrier cloth on the property perimeter fencing. The resistance caused by the visual barrier elevated the discharge point of any emissions leaving the Work Area to the top of the perimeter fence and promoted better atmospheric mixing and dispersion of any emissions.
- Use of 10-mil polyethylene liners and tarps on trucks used to transport impacted material. All trucks used for off-site transport had liners and tarps in place to cover impacted material. On-site haul routes were routinely wetted to control dust.
- Covering all stockpiles of impacted material if left inactive for a period of more than 2 hours.

2.2.2.2 Level II

Level II controls included procedures that were implemented in response to specific increases in fugitive emissions, but were not likely to have a significant impact in the schedule of Shallow Soil IRM activities. The following Level II controls were implemented during the remedial action:

Suppressing Agents

Odor suppressant foam for VOC mitigation and water spray for dust suppression were applied over emissions sources for controlling emissions. Odor suppressant foam (Rusmar AC-600) was created by the injection of air into a foam concentrate/water mixture using a pneumatic foam unit. The foam was applied via a hose to cover excavations/stockpiles, and during the loading of trucks to a thickness of 3 to 6 inches to control VOC and odor emissions.

Spray of water was used to minimize the amount of dust created.

Tarps

Tarps provided effective control for source areas that were likely to be inactive for extended periods of time. Rolls of 6-mil polyethylene were used to cover inactive stockpiles. Tarps were also used for covering

exposed soils loaded into trucks. All trucks were lined with 10-mil polyethylene sheeting, the liners large enough to overlap and fully cover the top of the load. Additional automatic mesh tarps were used to secure the liners.

2.2.2.3 Level III

Level III controls included procedures that would have been initiated in response to specific increases in fugitive emissions that were likely to have a more significant impact on production schedule and Shallow Soil IRM activities. Level III controls are required when Level II controls had been exhausted and ambient concentrations of emissions continued to exceed the site-specific action levels. No Level III procedures were employed during the Shallow Soil IRM.

The excavation was performed with no odor and vapor complaints from the nearby businesses.

2.2.3 Vibration Monitoring Plan

The Vibration Monitoring Plan detailed in the CERP (AECOM, 2012) approved by the NYSDEC described the procedure to monitor potential vibration and settlement impacts resulting from the Shallow Soil IRM. The Vibration Monitoring Plan identified the receptors, the relevant damage criteria, monitoring equipment, the proposed monitoring locations, and the mitigation procedures for responding to observed exceedances of the vibration and settlement thresholds. Pre-construction vibration monitoring was conducted to establish a baseline.

Vibration monitors were installed along the northern wall of the warehouse building on 7 Rewe Street property as identified in the Vibration Monitoring Plan. An Instantel MiniMate Plus with mounted triaxial geophones was used for continuous vibration monitoring. The vibration monitor was setup with an event trigger corresponding to the site-specific Warning Action Limit (2 peak particle velocity (ppv)) and action levels (5 ppv). In cases when the limit was reached, the vibration monitor recorded, saved, and sent out the event report through an email message system to the monitoring staff and field engineer. After each event the monitoring staff and field engineer evaluated potential sources causing such an event and defined a mitigation measure if necessary.

No exceedance of structural damage warning threshold was recorded. A Vibration Monitoring Report is included in Appendix C.

2.2.4 Transportation Plan

The Transportation Plan (Appendix C of the CERP [AECOM, 2012]) approved by NYSDEC described the procedures and the specific offsite transportation routes that were followed to manage construction traffic during the Shallow Soil IRM in a manner that minimized disturbance to the community.

The Transportation Plan was strictly adhered to during the Shallow Soil IRM. All trucks used for hauling were permitted for waste transport in the State of New York. The trucks were loaded directly from excavations, or from an on-site stockpile area to ensure impacted material did not spread throughout the Work Area. The vehicles were loaded in such a way as to avoid contamination of their exteriors, including tires. Each truck was lined with 10-mil-thick polyethylene sheeting (as opposed to the 12-mil requirement in the Transportation Plan) prior to loading. A plastic liner was also wrapped over loaded soils to minimize odors during transport. No soils with free liquids were shipped from the Work Area. Odor-suppressing foam was applied to the material on the trucks. All trucks were covered with an automatic mesh tarp prior to leaving the Work Area to ensure that no material was blown off the truck during transportation and to minimize the release of odors. After loading, all trucks entered a decontamination pad where dry brushing

ensured that any residual soil was removed from the truck body, wheels, and tires and impacted soils did not track onto the streets.

Waste shipments were documented using the required waste manifests. All shipments of waste from the Site had documentation, describing the type and amount of material and the receiving facility. Each truck was dispatched from the Work Area with the appropriate bill-of-lading or manifest, and followed the prescribed transportation route to its destination.

2.2.5 Decontamination

During the excavation activities, decontamination of equipment was performed in order to prevent cross contamination as well as to prevent contaminated material from spreading off-site during waste hauling activities. Trucks used for transportation of excavated material were decontaminated using dry decontamination methods (*i.e.*, removal of loose material with a broom or brush). These methods, along with parking of trucks on plastic sheeting during loading, were effective at preventing the spread of contaminated materials onto roadways during transport to disposal facilities. Decontamination of the earth-moving equipment occurred at the completion of the excavation phase and prior to the handling of clean backfill. The method of equipment decontamination consisted of dry methods to remove any impacted soil.

2.3 Excavation

The excavation activities were the main remedial action conducted as part of the Shallow Soil IRM. Components of the successful excavation operation included geotechnical engineering control, material removal, transportation and treatment/disposal, and backfill and compaction. Figure 2-1 presents an as-built drawing of the completed excavation. Daily activity reports were maintained by the Site Engineer and EQ and are included in Appendix D. Each activity is discussed below.

2.3.1 Geotechnical Engineering Control

The 254 Maspeth Avenue property is bounded on the south by a one-story brick Warehouse building (7 Rewe Street), east by the Fed Ex property chain link fence, and to the west by the 252 Maspeth Avenue property perimeter concrete wall. As such, benching of the excavation areas were designed and implemented as an engineering control to prevent the risk of building collapse, foundation collapse, fence collapse, and/or personnel injury. Benching procedures involved excavation adjacent to the surface structures to the depth of the footer with deeper excavation completed at a 1:1 (horizontal to vertical) slope to the final excavation depth. The site engineer performed visual inspections at least twice per day, documenting the extent of the excavation at the time of inspection, and documenting any findings based on observation of the building and excavation. In addition, as detailed in Section 2.2.3, a vibration monitor was placed adjacent to the Warehouse building to ensure that the excavation did not result in any damage to the warehouse building structure. The vibration monitor was equipped with remote alarm system to alert the site engineer of any exceedance of vibration alert [2 peak particle velocity (ppv)] and action levels (5 ppv). No exceedance of the structural damage warning threshold was recorded.

2.3.2 Materials Removal, Transportation, and Treatment/Disposal

Materials removed during the Shallow Soil IRM include soil and fill material, domestic trash, unknown foundations, historic piping, and construction & demolition (C&D) debris. Former MGP structure walls and foundations are believed to have been encountered during excavation as evidenced by concrete and brick fragments but could not be conclusively determined. As described in the Work Plan, excavation was conducted in four discrete locations on the southern portion of the 254 Maspeth Avenue property. The four

excavations were designated as Area A, Area B, Area C, and Area D as shown in Figure 2-1, and a cross section of each excavation area is shown in Figure 2-2. Details of the excavation areas are provided below.

2.3.2.1 Area A

Fill material consisting of soil and C&D debris was removed to an approximate depth of 7 to 8 ft bgs in Area A. The lateral limits of excavation were extended eastward to remove visible MGP-residual impacted soil observed at approximately 5 ft bgs. Visible MGP-residual impacted soil was observed on the northern wall of the excavation at a depth of 4 to 6 ft bgs but could not be removed due to the presence of perimeter fence separating the 254 Maspeth Avenue property and the Fed Ex property. Brick and concrete fragments believed to have been the former Tar Separator were observed on the northern wall of the excavation.

Approximately 37.4 cubic yards (cy) (in-place volume) of fill material was removed from Area A. The fill material was stockpiled over 10-millimeter liner prior to off-site transportation. The fill material was transported via lined trucks to Bayshore Recycling for thermal treatment and disposal. An orange demarcation fabric was placed at the bottom of the excavation (7 to 8 ft bgs). The excavation was backfilled with clean stone backfill to approximately 3 ft bgs following placement of the demarcation fabric, because the site-improvement activities by Cooper Tank involved the excavation of the same areas, so backfill was not required from 0 to 3 ft bgs. Backfill was later provided by Cooper Tank upon completion of their wall foundation construction activities.

2.3.2.2 Area B

Fill material consisting of soil, boulders, and C&D debris was removed to an approximate depth of 5 ft bgs in Area B. The lateral limits of excavation were extended southward to remove visible MGP-residual impacted soil observed at approximately 5 ft bgs. The excavation was also vertically extended to a depth of 6 ft bgs on the southern portion of Area B to remove visible MGP-residual impacted soils. Excavation was laterally extended till no visual MGP-residual impacts were observed.

Approximately 20.4 cy (in-place volume) of fill material was removed from Area B. The fill material was stockpiled over a 10-mil liner prior to off-site transportation. The fill material was transported via lined trucks to Bayshore Recycling for thermal treatment and disposal. An orange demarcation fabric was placed at the bottom of the excavation (5 to 6 ft bgs). The excavation was backfilled with clean stone backfill to approximately 3 ft bgs following placement of the demarcation fabric. Backfill was later provided by Cooper Tank upon completion of their wall foundation construction activities.

2.3.2.3 Area C

Fill material consisting of soil, domestic trash, and C&D debris was removed to an approximate depth of 5 ft bgs in Area C. The lateral limits of excavation were extended approximately 8 to 10 ft to the south to remove visible MGP-residual impacted soil observed at approximately 4 to 6 ft bgs. The excavation was also vertically extended to a depth of 7 ft bgs on the northern, western, and southwestern portion of Area C to removed visible MGP-residual impacted soils. Visible MGP-residual impacted soil was also observed on the eastern wall of the excavation at a depth of 3 to 5 ft bgs but could not be removed due to the presence of perimeter fence separating the 254 Maspeth Avenue property and the Fed Ex property. Approximately 432 cy (in-place volume) of fill material was removed from Area C.

The fill material was stockpiled over a 10-mil liner prior to off-site transportation. The fill material was transported via lined trucks to Bayshore Recycling for thermal treatment and disposal. An orange demarcation fabric was placed at the bottom of the excavation (5 to 7 ft bgs). The excavation was backfilled

with clean stone backfill to approximately 3 to 4 ft bgs following placement of the demarcation fabric. Backfill was later provided by Cooper Tank upon completion of their wall foundation construction activities.

2.3.2.4 Area D

Fill material consisting of soil, domestic trash, and C&D debris was removed to an approximate depth of 5 to 7 ft bgs in Area D. The lateral limits of excavation were extended approximately 3 feet to the east to remove visible MGP-residual impacted soil observed at approximately 4 ft bgs. A portion of the excavation was also extended north to remove visible MGP-residual impacted soil. Visible rMGP-residual impacted soil was observed on the southern wall of the excavation at a depth of 3 to 5 ft bgs but could not be removed due to the proximity of the Warehouse building on the 7 Rewe Street property. Approximately 284.8 cy (in-place volume) of fill material was removed from Area C.

The fill material was stockpiled over 10-mil liner prior to off-site transportation. The fill material was transported via lined trucks to Bayshore Recycling for thermal treatment and disposal. An orange demarcation fabric was placed at the bottom of the excavation (5 to 7 ft bgs). The excavation was backfilled with clean stone backfill to ground surface following placement of the demarcation fabric.

2.3.2.5 Means and Methods for Materials Removal, Transportation, and Treatment/Disposal

Stockpiled soils were covered with 10-mil polyethylene sheeting during periods of anticipated precipitation to prevent run-off, erosion, and absorption of excessive moisture, which could affect the handling and thermal treatment properties of the soils. Stockpiled soils left more than two hours, including overnight periods, were covered with plastic sheeting and/or odor suppressing agents.

As detailed above, the implementation of the Shallow Soil IRM resulted in the removal of fill and non-hazardous MGP-residual impacted soils and C&D debris. Fill material consisting of soil, domestic trash, tires, piping, and plastic materials were removed from the excavation areas. Several surface and subsurface concrete/brick/steel walls and foundations, monitoring wells, historic piping, wood piles, metal debris, abandoned utility lines, and other miscellaneous structures had to be demolished and removed from the excavation areas. All C&D debris was broken up with an excavator bucket if needed, and shipped off-site for disposal with the non-hazardous, MGP-residual impacted soils.

A total of 68 loads with 1,671.35 tons of non-hazardous, MGP-residual impacted soils and non-hazardous construction debris were excavated and transported off-site for thermal treatment at Bayshore Recycling. Table 2-1 shows the daily summary of material removed during the Shallow Soil IRM. A detailed summary of the debris quantities and types is provided in Appendix E. Manifests from Bayshore Recycling are also provided in Appendix E. The Certificates of Recycling are presented in Appendix F.

2.3.3 Backfill and Compaction

Following excavation activities and documentation of the limits of excavation by the remediation contractor (EQ) and the site engineer, backfill of the excavation was conducted in accordance with the EQ's technical execution plan and included placement of clean 1 to 2.5-inch stone in 12-inch lift to a level of approximately 3 ft below the original grade except Area D. The stone backfill was placed to grade in Area D. Backfill was only placed to 3 ft below the original grade in Areas A, B, and C because the site-improvement activities by Cooper Tank involved the excavation of the same areas, so backfill was not required from 0 to 3 ft bgs.

The stone backfill material was brought to the 254 Maspeth Avenue property in tri-axle dump trucks from the Armored Inc. located in Newark, New Jersey. The borrow source backfill material was tested prior to delivery for metals, polycyclic aromatic hydrocarbons (PAHs), semivolatile organic compounds (SVOCs),

and VOCs, pesticides, polychlorinated biphenyls (PCBs), and herbicides. The laboratory analytical results are included in Appendix G. Table 2-2 summarizes chemical analytical results for backfill, in comparison to Unrestricted Use SCOs from 6 New York Codes, Rules and Regulations (NYCRR) Subpart 375-6 Remedial Program Soil Cleanup Objectives (NYSDEC 2006).

A total of 940.21 tons of clean stone backfill was bought on-site and placed within the excavation areas.

2.4 Site Restoration

Areas disturbed during construction, aside from the excavation areas, were re-graded to match the surrounding areas. All remnants of the remediation activities were removed from the 254 Maspeth Avenue property after completion of remediation activities. A survey was completed to document that the final surface met the elevation and slope specified in the design documents and drawings. The final restored site condition is shown in the as-built Figure 2-3.

2.5 Demobilization

Upon completion of site restoration and backfilling, the contractor began to demobilize their equipment and materials from the site. Demobilization began the week of September 24 and was completed by October 4, 2012. Demobilization activities included the removal of all construction equipment, odor/vapor suppression equipment, construction materials, and debris. In addition, all temporary facilities and utilities were removed. The temporary excavation fencing around Area A, B, and C excavations were left in place for site control and safety until Cooper Tank implemented their construction activities.

3.0 Summary

The Shallow Soil IRM was successfully completed at the 254 Maspeth Avenue portion of the former Equity Works MGP site in accordance with the Work Plan and included the following activities:

- Excavation of approximately 774.6 cy of non-hazardous MGP-residual impacted soil and non-hazardous C&D materials.
- Offsite transportation and thermal treatment/disposal of 1,671.35 tons of non-hazardous MGP-residual impacted soil and non-hazardous C&D materials to Bayshore Recycling.
- A total of 940.21 tons of stone backfill material was transported to the 254 Maspeth Avenue property and placed in the excavation areas.
- The CERP Plan successfully minimized community impacts during the RA.
- Disturbed areas of the work area were regraded and/or covered with 6-inch gravel cover to be restored to final design elevations.

Notes:
< or U - The compound was not detected at the indicated concentration
J - Data indicates the presence of a compound that meets the identification criteria. The result is less than the quantitation limit but greater than MDL. The concentration given is an approximate value.

c- calibration acceptablil
c - Calibration acceptability criteria exceeded for this analyte
s - Recovery exceeded control limits for this analyte
(1) Per DER-10, the SCO for Hexavalent or Trivalent Chromium is considered to be met if the analysis for the total species of this contaminant is below the specific SCO for Hexavalent Chromium.

SCO's for organic constituents (volatile organic compounds, semivolatile organic compounds, and pesticides) are capped at 100 ppm for residential use, 500 ppm for commercial use, 1000 ppm for industrial use. SCOs for metals are capped at 10,000 ppm.

Weekly Air Monitoring Summary

Client:	**National Grid**
Location:	**254 Maspeth Avenue, Brooklyn, NY** **Equity Former MGP Site**
Period:	**September 14th through September 19th, 2012**

During the report period there were no TVOC or PM_{10} concentrations greater than the Action and Response Limits. This data summary report includes both tabular information and written discussions summarizing the ambient air-quality data collected during the report period in accordance with the Equity MGP IRM project CAMP (December 2011).

Introduction

Engineering controls, dust suppression, and odor suppression are used as necessary throughout the daily work activities. Community air monitoring data is reviewed and compared to the NYSDEC/NYSDOH Action Limits. In order to manage the Site more effectively National Grid has employed more conservative Alert and Response Limits to help mitigate fugitive emissions before the Action Limits are reached. The purpose of the Alert and Response limits are to help manage the Site and prevent concentrations above the Action Limits.

- **Table 1**: Site specific Alert, Response and Action Limits and the corresponding Site conditions.

Real-Time Air Monitoring Summary – TVOC and PM_{10}

Continuous real-time air monitoring for PM_{10} and TVOC was conducted upwind and downwind of the work area along the Site perimeter at two (2) PAM (portable air monitoring) stations. The intent of the real-time air monitoring program is to provide an early detection of short-term emissions and potential off Site migration of remediation related PM_{10} and TVOCs. The real-time perimeter air monitoring system consists of an upwind and downwind monitoring station, supplemented by routine periodic/as-needed hand-held and observational air monitoring; one (1) meteorological tower.

During the report period there were no TVOC or PM_{10} concentrations greater than the Action and Response Limits at the downwind location. PAM-1 was placed upwind of excavation and PAM-2 was placed at a downwind location. Hence, no exceedences were recorded at downwind location and the exceedence of PM_{10} at PAM-1 was attributed to an upwind off-site source. The results of the real-time air monitoring are presented in the following tables:

- **Table 2**: Weekly real-time maximum PM_{10} and TVOC concentrations and periodic hand-held naphthalene and HCN concentrations summary;
- **Table 3**: Concentrations above the Action Limits; and
- **Table 4**: Concentrations above the Response Limits.

Weekly Site Activities, Meteorological Observations, and Site Maps

Additional information related to the air monitoring activities during the report period is included in the following table and figures:

- **Table 5**: Weekly Site activities summary;
- **Table 6**: Weekly meteorological summaries; and
- **Figure 1:** Daily/weekly Site map.

Table 1: Site Specific Alert, Response, and Action Limits and the Corresponding Site Conditions

				Site Condition			
Target – units	**Alert Limit**	**Response Limit**	**Action Limit**	**Operational Condition**	**Alert Condition (Above Background[1])**	**Response Condition (Above Background[1])**	**Action Condition (Above Background[1])**
TVOC (PID) – ppm	3.7	5.0	25.0	$[C_{avg}] \leq 3.7$	$[C_{avg}] > 3.7$ and $[C_{avg}] \leq 5.0$	$[C_{avg}] > 5.0$ and $[C_{avg}] \leq 25.0$	$[C_{avg}] > 25.0$
Benzene (GC) – ppm	NA	NA	1.0	$[C_{avg}] \leq 1.0$	NA	NA	$[C_{avg}] > 1.0$
PM_{10} – $\mu g/m^3$	NA	100	150	$[C_{avg}] \leq 100$	NA	$[C_{avg}] > 100$ and $[C_{avg}] \leq 150$	$[C_{avg}] > 150$

Definitions:

TVOC = Total Volatile Organic Compounds
PID = Photoionization Detector
GC = Gas Chromatograph
PM_{10} = Respirable Particulate Matter
ppm = Parts per million volume
$\mu g/m^3$ = Micrograms per cubic meter
$[C_{avg}]$ = 15-minute average concentration of target
DT = Dräger Tubes
NA = Not applicable, odor intensity will be either an Operational Level or Action Level; there is no Alert and/or Response Limit and there is no Alert Limit for PM_{10}.

Notes:

[1] Background is defined as the current upwind concentration. Background concentrations will be used to calculate the actual Property contributions to TVOCs and PM_{10} during the final evaluation of the Site conditions shown in **Table 3** and **4**.

Table 2: Weekly Real-Time Maximum PM_{10} and TVOC Concentration Summary

	PAM-1		PAM-2	
	PM_{10} µg/m^3	**TVOC ppm**	**PM_{10} µg/m^3**	**TVOC ppm**

Weekly Air Monitoring Summary

Client:	**National Grid**
Location:	**254 Maspeth Avenue, Brooklyn, NY** **Equity Former MGP Site**
Period:	**September 20th through September 25th, 2012**

During the report period there were no TVOC or PM_{10} concentrations greater than the Action and Response Limits. This data summary report includes both tabular information and written discussions summarizing the ambient air-quality data collected during the report period in accordance with the Equity MGP IRM project CAMP (December 2011).

Introduction

Engineering controls, dust suppression, and odor suppression are used as necessary throughout the daily work activities. Community air monitoring data is reviewed and compared to the NYSDEC/NYSDOH Action Limits. In order to manage the Site more effectively National Grid has employed more conservative Alert and Response Limits to help mitigate fugitive emissions before the Action Limits are reached. The purpose of the Alert and Response limits are to help manage the Site and prevent concentrations above the Action Limits.

- **Table 1**: Site specific Alert, Response and Action Limits and the corresponding Site conditions.

Real-Time Air Monitoring Summary – TVOC and PM_{10}

Continuous real-time air monitoring for PM_{10} and TVOC was conducted upwind and downwind of the work area along the Site perimeter at two (2) PAM (portable air monitoring) stations. The intent of the real-time air monitoring program is to provide an early detection of short-term emissions and potential off Site migration of remediation related PM_{10} and TVOCs. The real-time perimeter air monitoring system consists of an upwind and downwind monitoring station, supplemented by routine periodic/as-needed hand-held and observational air monitoring; one (1) meteorological tower.

During the report period there were no TVOC or PM_{10} concentrations greater than the Action and Response Limits at the downwind location. PAM-1 was placed upwind of excavation and PAM-2 was placed at a downwind location. Hence, no exceedences were recorded at downwind location and the exceedence of PM_{10} at PAM-1 was attributed to an upwind off-site source. The results of the real-time air monitoring are presented in the following tables:

- **Table 2**: Weekly real-time maximum PM_{10} and TVOC concentrations and periodic hand-held naphthalene and HCN concentrations summary;
- **Table 3**: Concentrations above the Action Limits; and
- **Table 4**: Concentrations above the Response Limits.

Weekly Site Activities, Meteorological Observations, and Site Maps

Additional information related to the air monitoring activities during the report period is included in the following table and figures:

- **Table 5**: Weekly Site activities summary;
- **Table 6**: Weekly meteorological summaries; and
- **Figure 1:** Daily/weekly Site map.

Table 1: Site Specific Alert, Response, and Action Limits and the Corresponding Site Conditions

				Site Condition			
Target – units	**Alert Limit**	**Response Limit**	**Action Limit**	**Operational Condition**	**Alert Condition (Above Background[1])**	**Response Condition (Above Background[1])**	**Action Condition (Above Background[1])**
TVOC (PID) – ppm	3.7	5.0	25.0	$[C_{avg}] \leq 3.7$	$[C_{avg}] > 3.7$ and $[C_{avg}] \leq 5.0$	$[C_{avg}] > 5.0$ and $[C_{avg}] \leq 25.0$	$[C_{avg}] > 25.0$
Benzene (GC) – ppm	NA	NA	1.0	$[C_{avg}] \leq 1.0$	NA	NA	$[C_{avg}] > 1.0$
PM_{10} – $\mu g/m^3$	NA	100	150	$[C_{avg}] \leq 100$	NA	$[C_{avg}] > 100$ and $[C_{avg}] \leq 150$	$[C_{avg}] > 150$

Definitions:

TVOC = Total Volatile Organic Compounds
PID = Photoionization Detector
GC = Gas Chromatograph
PM_{10} = Respirable Particulate Matter
ppm = Parts per million volume
$\mu g/m^3$ = Micrograms per cubic meter
$[C_{avg}]$ = 15-minute average concentration of target
DT = Dräger Tubes
NA = Not applicable, odor intensity will be either an Operational Level or Action Level; there is no Alert and/or Response Limit and there is no Alert Limit for PM_{10}.

Notes:

[1] Background is defined as the current upwind concentration. Background concentrations will be used to calculate the actual Property contributions to TVOCs and PM_{10} during the final evaluation of the Site conditions shown in **Table 3** and **4**.

Weekly Air Monitoring Summary

Client:	**National Grid**
Location:	**254 Maspeth Avenue, Brooklyn, NY** **Equity Former MGP Site**
Period:	**September 26th through September 28th, 2012**

During the report period there were no TVOC or PM_{10} concentrations greater than the Action and Response Limits. This data summary report includes both tabular information and written discussions summarizing the ambient air-quality data collected during the report period in accordance with the Equity MGP IRM project CAMP (December 2011).

Introduction

Engineering controls, dust suppression, and odor suppression are used as necessary throughout the daily work activities. Community air monitoring data is reviewed and compared to the NYSDEC/NYSDOH Action Limits. In order to manage the Site more effectively National Grid has employed more conservative Alert and Response Limits to help mitigate fugitive emissions before the Action Limits are reached. The purpose of the Alert and Response limits are to help manage the Site and prevent concentrations above the Action Limits.

- **Table 1**: Site specific Alert, Response and Action Limits and the corresponding Site conditions.

Real-Time Air Monitoring Summary – TVOC and PM_{10}

Continuous real-time air monitoring for PM_{10} and TVOC was conducted upwind and downwind of the work area along the Site perimeter at two (2) PAM (portable air monitoring) stations. The intent of the real-time air monitoring program is to provide an early detection of short-term emissions and potential off Site migration of remediation related PM_{10} and TVOCs. The real-time perimeter air monitoring system consists of an upwind and downwind monitoring station, supplemented by routine periodic/as-needed hand-held and observational air monitoring; one (1) meteorological tower.

During the report period there were no TVOC or PM_{10} concentrations greater than the Action and Response Limits at the downwind location. PAM-1 was placed upwind of excavation and PAM-2 was placed at a downwind location. Hence, no exceedences were recorded at downwind location and the exceedence of PM_{10} at PAM-1 was attributed to an upwind off-site source. The results of the real-time air monitoring are presented in the following tables:

- **Table 2**: Weekly real-time maximum PM_{10} and TVOC concentrations and periodic hand-held naphthalene and HCN concentrations summary;
- **Table 3**: Concentrations above the Action Limits; and
- **Table 4**: Concentrations above the Response Limits.

Weekly Site Activities, Meteorological Observations, and Site Maps

Additional information related to the air monitoring activities during the report period is included in the following table and figures:

- **Table 5**: Weekly Site activities summary;
- **Table 6**: Weekly meteorological summaries; and
- **Figure 1:** Daily/weekly Site map.

Table 1: Site Specific Alert, Response, and Action Limits and the Corresponding Site Conditions

				Site Condition			
Target – units	**Alert Limit**	**Response Limit**	**Action Limit**	**Operational Condition**	**Alert Condition (Above Background[1])**	**Response Condition (Above Background[1])**	**Action Condition (Above Background[1])**
TVOC (PID) – ppm	3.7	5.0	25.0	$[C_{avg}] \leq 3.7$	$[C_{avg}] > 3.7$ and $[C_{avg}] \leq 5.0$	$[C_{avg}] > 5.0$ and $[C_{avg}] \leq 25.0$	$[C_{avg}] > 25.0$
Benzene (GC) – ppm	NA	NA	1.0	$[C_{avg}] \leq 1.0$	NA	NA	$[C_{avg}] > 1.0$
PM_{10} – $\mu g/m^3$	NA	100	150	$[C_{avg}] \leq 100$	NA	$[C_{avg}] > 100$ and $[C_{avg}] \leq 150$	$[C_{avg}] > 150$

Definitions:

TVOC = Total Volatile Organic Compounds
PID = Photoionization Detector
GC = Gas Chromatograph
PM_{10} = Respirable Particulate Matter
ppm = Parts per million volume
$\mu g/m^3$ = Micrograms per cubic meter
$[C_{avg}]$ = 15-minute average concentration of target
DT = Dräger Tubes
NA = Not applicable, odor intensity will be either an Operational Level or Action Level; there is no Alert and/or Response Limit and there is no Alert Limit for PM_{10}.

Notes:

[1] Background is defined as the current upwind concentration. Background concentrations will be used to calculate the actual Property contributions to TVOCs and PM_{10} during the final evaluation of the Site conditions shown in **Table 3** and **4**.

Vibration Monitoring Report

AECOM
One World Financial Center
200 Liberty Street, 25th Floor
(212)798-8500

Memorandum

Date: October 10, 2012

To: Jenifer Pfeiffer

From: Fang Yang, Priyal Pandya, and Brian Brownworth

Subject: Equity Excavation Activity Vibration Monitoring Results

Introduction

AECOM has been retained by National Grid to conduct a vibration monitoring program at the Equity Former MGP Site, located at 254 Maspeth Avenue, Brooklyn, NY, during the short duration when the excavation activity of using heavy equipment occurred on site. The purpose of this program is to monitor potential seismic effects from heavy equipment operation on neighborhood structures to ensure that no potential structure damage would occur.

Vibration Fundamentals

A source (such as using a excavator and backhoe hammer for excavation activity) can excite the adjacent ground, creating vibration waves that propagate (or move) through the various soil and rock strata potentially reaching the foundations of nearby buildings and then throughout the parts of the building structure. The effects of ground-borne vibration can include perceptible movement of the building floors, rattling of windows, shaking of items on shelves or hanging on walls, and rumbling sounds. Vibration effects can range from simply causing annoyance to people inside buildings, to minor (cosmetic) damage to walls and ceiling, to major structural damage, although the latter is an extremely rare occurrence. Differences in these vibration outcomes is related to the magnitude of the vibration that propagates to nearby structures. Vibrations of greater magnitude may cause building damage but vibrations at much lower levels may be felt by humans but be too low to cause building damage.

Evaluation criteria for determining vibration impacts due to remediation activities include thresholds for (1) human perception, annoyance, and interference and (2) damage to fragile and historical buildings. Although no standardized vibration criteria for construction activities have been established, exceedances of certain vibration levels may typically cause community reactions.

Vibration energy is measured as peak particle velocity (PPV). PPV is appropriate for evaluating vibration associated with construction activities, and the resulting stresses that potentially are damaging to buildings. PPV represents the maximum instantaneous positive or negative peak of a vibration signal, and is commonly used to measure and evaluate impulse vibrations associated with excavation. The U.S. Bureau of Mines (USBM) publishes guidelines

based on PPV that is frequently used to set acceptable vibration limits for various types of structures.

Vibration Limit

The structure damage thresholds are defined for various building structures depending on the structure's strength and ability to absorb ground-borne vibration. Since all buildings are continually exposed to vibration, they are generally designed to withstand elevated ground-borne vibration without resulting in stress fractures or hairline cracks. For most buildings, the likelihood of damage or even minor cosmetic damage is highly unlikely unless there are pre-existing faults with the building structure and there is nearby blasting or excessive pounding from construction equipment (such as excavator).

By definition, the PPV is the maximum rate of change of position (displacement) with respect to time as measured on the ground surface. The velocity amplitudes are given in units of inches per second (ips) from zero to peak amplitude. The frequency of vibration is the number of oscillations that occur in one second. The frequency units given are in hertz (cycles per second). The dominant frequency is usually defined as the frequency at the maximum particle velocity, which can be shown from the seismograph. The particle velocity is recorded in three (3) perpendicular axes, with the maximum allowable peak particle velocity being in the maximum measure along any of three axes.

Thresholds of vibration induced cracking are generally site specific and depend on the type and age of the structure, the frequency of ground-borne vibration, and type of soil supporting the structure. Research by the USBM and other investigative groups have established criteria relating the occurrence of structural damage to certain frequencies and level of ground motion. According to the USBM, within the range of four (4) to 12 hertz, the maximum particle velocity recommended to preclude the threshold damage to plaster-on-wood for old structures is 0.5 inch per second (ips) and 0.1 ips established for historic monuments. Given the structure types around the Maspeth Avenue excavation site, 0.5 ips is considered a conservative threshold that can be used as a warning threshold for potential plaster cracker at nearby building structures.

Vibration Monitoring

Baseline Condition

The baseline vibration monitoring was performed prior to the excavation activity, on September 6, 2012 and September 7, 2012. The baseline recorded data for the monitor (shows that the baseline vibration levels remained below Warning Action Limit of 0.5 ips.

Remedial Action Condition

Vibration monitoring was continuously conducted for approximately three weeks in month of September 2012 from week of September 10, 2012 through week of September 24, 2012. One Minimate seismograph with a geophone was installed within the site that is the closest to excavation area with potential worst-case ground-borne vibration impact from the excavation activities (see Figure 1 through Figure 4). The monitor was setup with an event trigger corresponding to the site-specific Warning Action Limit of 0.5 ips. The vibration levels were monitored remotely in real time and a warning email would be sent out to the key monitoring staffs and site engineer if a warning threshold were exceeded so that the on-site engineer could investigate the cause of exceedance occurrence and take appropriate action if necessary.

Table 1 provides the vibration monitoring summary. During the entire monitored period, no event exceeding the Warning Action Limit associated with the monitored excavation activities was recorded with one exception. On September 24th, one event exceeding the 0.5 ips Warning Action Limit was recorded at 08:12 a.m. with the PVS of 0.789 ips. Detail monitoring backups are attached to this memo. The events highlighted in yellow in the backup are from monitoring setup/human interruption.

Table 1

Vibration Monitoring (ips)	
Unit	BE11263
Warning Action Limit	0.5
Baseline Condition	
6th September and 7th September	No event recorded
Remedial Action Condition	
Week of 10th September	No event recorded
Week of 17th September	No event recorded
Week of 24th September	One event recorded*

Note:

*The event occurred on September 24th, 2012 during excavation activity.

Conclusion

Between September 10, 2012 and September 28, 2012 when the excavation activities occurred at Equity Former MGP Site, Brooklyn, New York, no exceedance of potential structural damage warning threshold was recorded.

ACCOUNTING OF WASTES STORED/STOCKPILED ON-SITE

MATERIALS BROUGHT ON SITE (NAME OF SUPPLIER, TYPE, VOLUME)

Front end loader/forks, Hammer attachment, Compressor, 10,000 gallon frac tank

TIME SUMMARY

Time		Description of Activities
From	To	
0700	0730	AECOM and EQ onsite performing tailgate health and Safety, going over spray foam MS/DS
0730	0800	Marking out spaces on Fed-Ex property, drum company onsite to pick up 10 drums
0800	0815	Drums picked up, Jenn P. offsite, High visibility fence being installed along Rewe St. property.
0815	0900	Baker tank onsite, site prep, moving frac tank into location for project.
0900	0915	Hank from NY DEC onsite
0915	1000	Hank offsite, front end loader delivered, moving site debris to prep for excavation.
1000	1030	Asked permission from Ray at Cooper Tank to fill water buffalo with water from his hose, he said it was fine.
1030	1100	Weather station onsite, delivered by US Environmental
1100	1200	moving driller debris out of work zones and stockpiling out of the way.
1200	1230	Break for lunch
1230	1300	Continue moving driller debris, testing spray foam system, everything works great.
1300	1330	Weekly project conference call, See meeting minutes email
1330	1400	Spoke with Dave on signs and he was directed to stick to specifications for language.
1400	1500	EQ cleaned up work areas and parked machines, offsite at 1500.
1500	1600	Brian from AECOM onsite moving solar panel for vibration monitoring, AECOM offsite at 1600

ACCOUNTING OF WASTES STORED/STOCKPILED ON-SITE

Stckpile of soils from Area A was on-site and was loaded in the truck in the morning. Small stockpiles were created from the soils excavated from Areas A & B

and placed in Area C before loading on the trucks

MATERIALS BROUGHT ON SITE (NAME OF SUPPLIER, TYPE, VOLUME)

No new material was brought on-site, crushed fill previously brought on-site was stockpiled along the edge of the sidewall between Areas B and C

TIME SUMMARY

Time From	Time To	Description of Activities
0700		Calibrated Dustmeter and PIDs
0715		Set up CAMP stations, met Contractor (EQ), inspected site
0730		Dust control in progress by spraying water
0815		Don from National Grid was on-site, inspected crushed fill for wood, glass, plastic etc. in addition to concrete blocks. Material from Area A stockpile was loaded in the first truck (AP 701B), the truck was cleaned with a broom on decon pad
0830		2nd truck(AN 981W) was lined and filled with stockpiled soils, wrapped and cleaned before going off-site
0845		3rd truck (AN 383M) was lined and filled with soils from Area C
0900		Short liners were ordered instead of 10 foot liners. EQ was asked to get wider liners. Truck 4 and 5 were loadedfrom Area C
1000		Filling tank for foaming
1030		break
1100		Foaming excavation Area C, started excavating Area A, tarp was placed on the ground, and the soil was stockpiled on Area C
1130		Groundwater was encountered at approximately 10 feet bgs, foamed Area A and stockpile
1200		Monitoring well in Area A was destroyed. Truck AP 701B was again on-site
1230		6th truck was lined and filled
1300		6th truck was wrapped and cleaned before it went off-site.
1330		7th truck was lined
1345		7th truck was filled with soils from Area C, black coal ask type material was encountered in Area C
1400		7th truck was wrapped and cleaned, 8th truck was lined (AN 981N), excavation was foamed
1430		8th truck was loaded, wrapped and cleaned; water was sprayed on site for dust control; 9th truck was also loaded
1500		10th truck was lined; Other side of Area A was excavated, Area C was foamed, tarp was placed below trucks
1530		Excavation of Area A was completed and foamed, started excavation of Area B
1600		DEC asked to chase MGP contamination if further residues are encountered in Area B, surveyor surveyed Area A, safety fence was installed around open excavations and was foamed

SUMMARY OF DAILY ACTIVITIES

Spills, Leaks, Discharges: None

Changes to Design: None

Survey activities: Surveyed bottom, top, and slope elevations in Area A

DAILY AND POST RAINFALL EH&S CONTROLS INSPECTION: (VERIFY INTEGRITY OF CONTROLS. NOTIFY ENGINEER OF DEFICIENCIES. IMMEDIATELY).

Signs of Erosion: None

Surface/Vegetative Cover Condition:

Items for Repair: None

DAILY STOCKPILE INSPECTION: (VERIFY INTEGRITY OF STOCKPILE LINER AND COVER SYSTEM. CORRECT DEFICIENCIES IMMEDIATELY)

Stockpiles were lined and the the liner was secured

TIME SUMMARY

Time		Description of Activities
From	To	
0700	0730	PP and JD onsite, JD calibrating CAMP equipment, PP wend over RD notes and spoke to John from EQ about yesterday.
0730	0745	Lining first truck, AL 256S, covering decon pad to prevent water from accumulating and washing out decon pad.
0745	0750	First truck lined and setup to be loaded, fence removed from Area C and first truck will be loaded from there.
0750	0800	PID's for up and down wind not functioning properly, JD woring on fixing them.
0800	0810	Notified EQ that loading needs to wait till PID's are working.
0810	0850	Cleared to start loading first truck, PID's started working.
0850	0855	Excavating and loading from Area C.
0855	0900	Started digging area A and stockpiling on Area C
0900	0911	First truck loaded, moving to decon pad to be wrapped and cleaned off, second truck being loaded, loader moving equipment
		for EQ C-Box that is being delivered.
0911	0915	Second truck loaded
0915	0920	First truck off decon pad, covering truck with truck tarp, second loaded truck being covered with poly liner, loading third truck.
0920	0945	Sheen present on water table @~8'
0945	0958	Third truck offsite and covered properly
0958	1000	moving water buffalo to be filled from hydrant across the street.
1000	1115	Foaming Area C while waiting for trucks to make round trip.
1115	1230	Hank from NY DEC onsite, decon pad rain water containerized
1230	1250	Truck AL 256S onsite being lined for second load today
1250	1255	Donald C. onsite, dropped off more manifests
1255	1300	First truck ready to be loaded.
1300	1320	Digging in Area C and loaded first truck
1320	1335	Foamed area C between trucks, first truck being sealed up, second truck lined and backing up to be loaded.
1335	1345	second truck loaded and being tied up for offsite disposal, taking surficial soil from Area C and using as an odor block
		against south wall, foam being applied as well.
1345	1400	moving to Area B for third truck.
1400	1410	started digging Area B and loading into third truck for afternoon load out
1410	1430	Third truck loaded and NY DEC was happy with the hole being complete.
1430	1530	EQ cleaning up for the day and offsite, AECOM offsite

Truck Liners

TIME SUMMARY

Time		Description of Activities
From	To	
0700	0715	AECOM and EQ onsite, performed tailgate H&S meeting performed, Jeff set up camp stations
0715	0730	Preparing site for work Area A looks okay, B has a spot where NAPL may seep in, C is excavated further than originally marked
		but the area where tar was present seems well formed/excavated. The GW table seems to be at 7-7.5 ft.
0730	0745	1st truck onsite, 2nd & 3rd lined up at entrance. John said that the big liners are still coming (may be today and not sure about
		backfill, Mike G. was onsite last week & didn't approve fill that was brought on-site. Two material were sampled last week.
0745	0800	Truck 1 was lined for loading out of Area D AP701B poly was placed on ground where truck will be loaded, puddle of water &
		mud to right of the gate. Not related to site
0800	0810	Truck 1 is being loaded out of Area D. Truck 2 is being lined AL-718E
0810	0820	2nd truck is now being loaded out of Area D. Some staining at the edge of the excavation
0820	0825	2nd Truck loaded & 3rd truck is in place. The stain didn't extend and in the excavation looked ok
0825	0830	The tar was swept & 3rd truck is being loaded AK597T
0830	0835	Truck 2 is being covered. Truck 4 is being lined AN983L, a tire, a brick, block and another sand block was encountered &
		separated from soils.
0835	0840	Truck 2 is bing cleaned. Done loading truck 3(non-MGP)
0840	0845	Truck 4 is being loaded out of Area D. Truck 3 is being wrapped.
0845	0850	Truck 3 is being cleaned
0850	0855	Truck 3 is off site. Truck 4 is loaded & Truck 5 is lined AP139A, Chris of EQ is requesting dust control measures.
0855	1145	6th Truck onsite being lined AL256S, GW in area D encountered @7.5ft, odor coming from excavation.
1145	1150	Measured impacted area from western wall w/tape measure, 7th truck is being loaded with material(impacted) from area D
		AP701B
1150	1200	8th truck is lined & is being loaded from area D. AL718E, truck 7 is wrapped, John was asked to foam area C again, there is a
		well in Area D (excavating around it)
1200	1205	7th truck cleaned & sent off-site received manifest(blank), 9th truck is being loaded AK597T, Using rope to flip top tarp over
		truck, active dust control, gave manifest to Chris.
1205	1215	Impacts extenc to 30ft on north, encountered another drum with concrete bottom at about 35', more impacts at about 35' from
		the western wall - 4-5 ft bgs.
1215	1225	9th truck is loaded & being wrapped
1225	1230	10th truck is being loaded with area D
1230	1235	10th truck full & on decon pad decided to dig further North at about 30 feet from western edge
1235	1240	11th truck was loaded AN983L
1240	1245	12th truck is being filled and the 35 feet Northern edge is being dug further. Black solid wast that smells like tar mixed with oil
		(can molt) Shail Pandya discussed over excavation w/ Donald Campbell & he approved it.
1245	1255	12th truck was filled, Northern edge - MGP impacts (Melting when sun light hits it)
1255	1300	Foaming excavation D, Impacts extend further North at 35'
1300	1320	13th truck on-site being loaded from extended D AL256S
1320	1400	No activities onsite
1400	1430	Lunch Break
1430	1500	Installing safety fence, Foamed area C & repaired fence. A structure was exposed in Northern wall of excavation D
1500	1530	Dave (PM of EQ) onsite. John asked about excavation, they may have to dig further at area C, B and D. Save wells, the drums
		do not belong to property owner, EQ is concerned about disposing debris(surface) & drums. They will dispose of tires &
		concrete encountered during excavation. Big concrete will be taken by the property owner.
1530		EQ and AECOM offsite.

Percent Moisture	9.5		1	wt%		D2216	09/24/2012 10:34 AM

Qualifiers: E = Value above quantitation range
B = Found in Blank
D.F. = Dilution Factor D = Results for Dilution
H = Received/analyzed outside of analytical holding time
+ = ELAP / NELAC does not offer certification for this analyte
c = Calibration acceptability criteria exceeded for this analyte
r = Reporting limit below calibration range
J = Estimated value - below calibration range
s = Recovery exceeded control limits for this analyte
N = Indicates presumptive evidence of compound

Chain of custody present?	Yes	☑	No	☐		
Chain of custody signed when relinquished and received?	Yes	☑	No	☐		
Chain of custody agrees with sample labels?	Yes	☑	No	☐		
Are matrices correctly identified on Chain of custody?	Yes	☑	No	☐		
Is it clear what analyses were requested?	Yes	☑	No	☐		
Custody seals intact on sample bottles?	Yes	☐	No	☐	Not Present	☑
Samples in proper container/bottle?	Yes	☑	No	☐		
Were correct preservatives used and noted?	Yes	☑	No	☐		
Preservative added to bottles:						
Sample Condition?	Intact	☑	Broken	☐	Leaking	☐
Sufficient sample volume for indicated test?	Yes	☑	No	☐		
Were container labels complete (ID, Pres, Date)?	Yes	☑	No	☐		
All samples received within holding time?	Yes	☑	No	☐		
Was an attempt made to cool the samples?	Yes	☑	No	☐		
All samples received at a temp. of > 0° C to 6.0° C?	Yes	☑	No	☐		
Response when temperature is outside of range:						
Sample Temp. taken and recorded upon receipt?	Yes	☑	No	☐	To	0.2 º
Water - Were bubbles absent in VOC vials?	Yes	☐	No	☐	No Vials	☑
Water - Was there Chlorine Present?	Yes	☐	No	☐	NA	☑
Water - pH acceptable upon receipt?	Yes	☐	No	☐	No Water	☑
Are Samples considered acceptable?	Yes	☑	No	☐		
Custody Seals present?	Yes	☐	No	☑		
Airbill or Sticker?	Air Bill	☐	Sticker	☐	Not Present	☑
Airbill No:
