### Remedial Action Work Summary

#### Work Activities Performed Onsite:

- Tension fabric structure (TFS) installation, continued;
- Vapor management system (VMS) setup, continued; and
- Load out and disposal of non-hazardous soil from the “L-shaped” portion of Parcel IV, Lot 17.

#### Contractor Work Performed Onsite:

Creamer Environmental, Inc (CEI), continued preparing for Phase 1 remedial excavation work and completed installation of the TFS and VMS. CEI continued to seal openings at the bottom of the TFS structure and completed installation of lifting brackets/tension bars on the outside of the TFS. The top of the previously installed steel sheeting of the support of excavation inside the TFS was exposed to install fall protection. The onsite pile of concrete was relocated to inside the TFS for future disposal.

Approximately 110 tons (5 truckloads) of non-hazardous soil from waste characterization grid WC-12 (the “L-shaped” portion of Parcel IV, Lot 17) were loaded out for disposal at Waste Management Fairless Hills facility. All transport trucks were cleaned and inspected before leaving the site to ensure compliance with local, state and federal regulations. Measures to control dust (tarping and limiting vehicle speed) were applied onsite as needed.

#### Air Monitoring:

- No community air monitoring program (CAMP) exceedances were observed during the day.
- GZA GeoEnvironmental, Inc. will provide a summary report for CAMP activities.

#### Erosion and Sediment Control

- Silt fence, catch basin drop bags and filter socks were inspected to confirm they were undamaged and functional.

#### Sampling Conducted:

- None

#### Other Items of Note:

- None
