### Project Team

#### General Contractor and Subcontractors:

- Mega Contracting Group, LLC
- Creamer Environmental, Inc. (CEI)

#### Engineers and Consultants:

- Roux Environmental Engineering and Geology, D.P.C.
- GZA GeoEnvironmental, Inc.

### Remedial Action Work Summary

#### Work Activities Performed Onsite:

- Pre-trenching for sheeting alignment for support of excavation (SOE) along the east and south sides of the former Gas Holder 4.

#### Contractor Work Performed Onsite:

Creamer Environmental, Inc (CEI) began pre-trenching along the south and east sides of the proposed cofferdam for former Gas Holder 4. The former concrete building slab was removed and stockpiled for future disposal. CEI excavated 17 linear feet along the south side and 25 linear feet along the east side of Gas Holder 4. CEI removed and stockpiled obstructions encountered where future SOE sheeting installation is to occur. Excavated soil was placed back to the pre-trench excavation area and all exposed soil was covered with plastic sheeting at the end of the day.

Measures to control dust (wetting, tarping, limiting vehicle speeds, etc.) and vapor/ odor suppression (foam) were implemented as needed. No work was conducted inside the tension fabric structure (TFS). The vapor managements system (VMS) was not operated during today's work.

#### Air Monitoring:

- No community air monitoring program (CAMP) exceedances were observed during the day.
- GZA GeoEnvironmental, Inc. will provide a summary report for CAMP activities.

#### Erosion and Sediment Control

- Erosion and sediment controls were inspected to ensure that silt fence and filter sock were undamaged and operational.

#### Sampling Conducted:

- None

#### Other Items of Note:

- Utility work unrelated to this project was conducted on Nevins Street, in the vicinity of Degraw Street.
