

CAMP MONITORING REPORT

545 Sackett Street

01/01/24 through 01/07/24

This Weekly Air Monitoring Report summarizes perimeter air monitoring data collected during the referenced period in accordance with the Community Air Monitoring Plan (CAMP) which was included as part of the NYSDEC approved Remedial Action Work Plan for the Former Fulton Manufactured Gas Plant (MGP) Site – Parcel III and Portion of Parcel IV. Continuous monitoring for total volatile organic compounds (TVOCs) and airborne particulate dust (PM₁₀) concentrations is being conducted at five air monitoring stations (AMS-1 through AMS-5) around the perimeter of the Site. The program includes compound-specific monitoring for benzene and tri-chloroethylene (TCE) if TVOC concentrations are detected above the alert level at the air monitoring station.

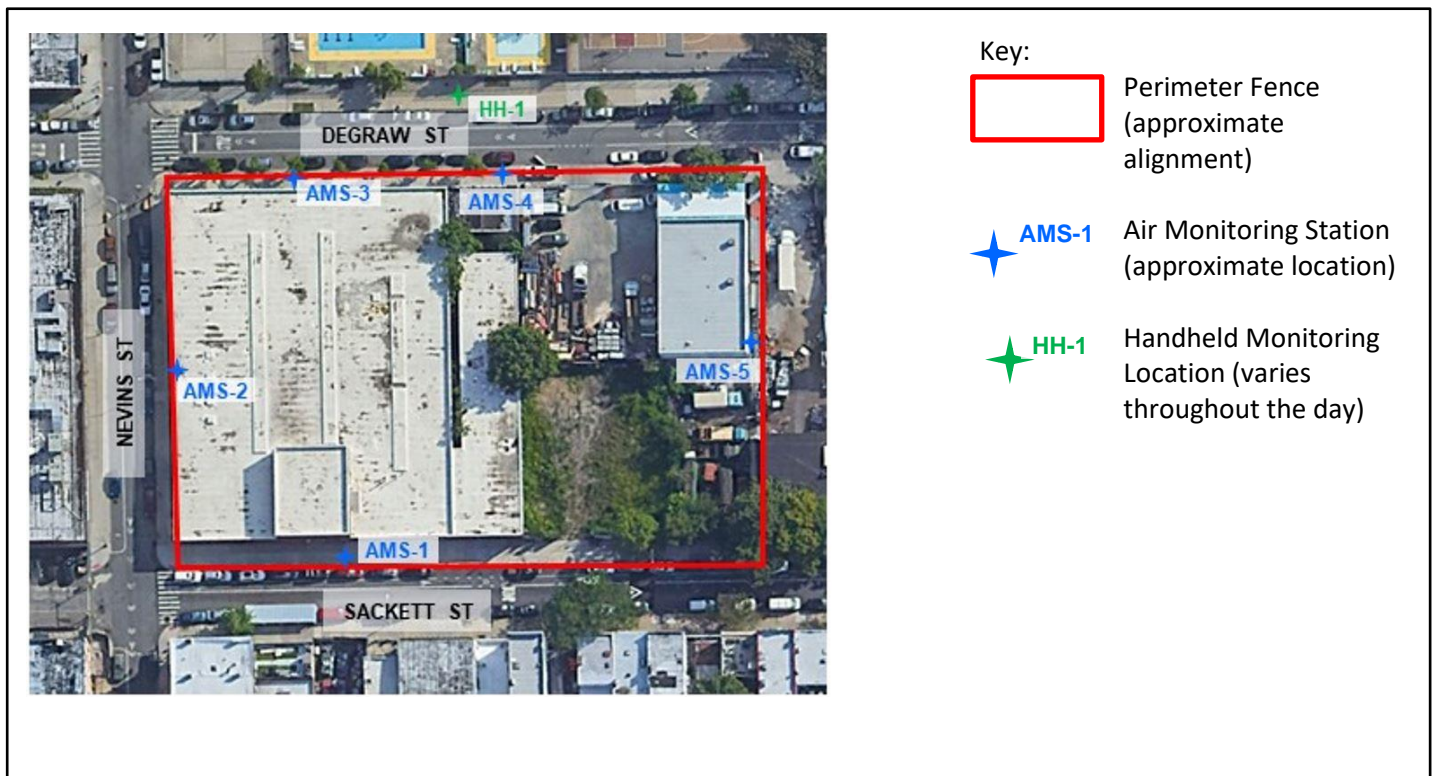

Work Performed

- Performed community air monitoring.
- CEI operated the vapor management system.
- CEI excavated soil within the temporary fabric structure.
- CEI continued installing the support of excavation system.
- CEI received deliveries, refueled equipment, and relocated materials.

Air Monitoring Summary

There were no TVOC or PM₁₀ concentrations above the CAMP-established action levels, or observations of dust or odors associated with the Site during the monitoring period. There was no work on the Site January 1, 2024, in observance of New Year Holiday.
