Remedial Action Work Summary

Work Activities Performed Onsite:

- Load out and disposal of material from waste characterization grids WC-2 and WC-3.
- Installation of support of excavation (SOE) in Gas Holder 3 excavation area.

Contractor Work Performed Onsite:

Creamer Environmental, Inc. (CEI) exported 22 trucks (~484 tons) of urban fill with CVOCs from waste characterization grid WC-2 (5-10) and WC-3 (0-5 and 5-10) to Waste Management Fairless. CEI continued breaking surface concrete and downsizing material for future load out and disposal in grid WC-3. CEI continued installation and welding the SOE walers/ bracing in the Gas Holder 3 excavation area and continued installing the lagging wall between Gas Holder 3 and 4.

The vapor management system (VMS) associated with the tension fabric structure (TFS) was operated throughout the day. Dust and odor control measures (wetting, tarping, limiting vehicle speeds, etc.) were performed as needed, to ensure there were no impacts to the neighborhood. All truck tires were cleaned before leaving the Site, to ensure no material was tracked onto the surrounding streets. Exposed soils were covered with Atmos odor suppressing foam and/or poly sheeting at the end of the day.

Air Monitoring:

- No VOC or dust exceedances were observed from the community air monitoring program (CAMP).
- GZANY to provide a summary report of CAMP activities separately.

Erosion and Sediment Control:

- None.

Sampling Conducted:

- None.

Other Items of Note:

- Construction activities were observed as part of the ongoing combined sewer overflow (CSO) project west of Nevins Street.
