

CAMP MONITORING REPORT

545 Sackett Street

02/12/24 through 02/18/24

This Weekly Air Monitoring Report summarizes perimeter air monitoring data collected during the referenced period in accordance with the Community Air Monitoring Plan (CAMP) which was included as part of the NYSDEC approved Remedial Action Work Plan for the Former Fulton Manufactured Gas Plant (MGP) Site – Parcel III and Portion of Parcel IV. Continuous monitoring for total volatile organic compounds (TVOCs) and airborne particulate dust (PM₁₀) concentrations is being conducted at five air monitoring stations (AMS-1 through AMS-5) around the perimeter of the Site. The program includes compound-specific monitoring for benzene and tri-chloroethylene (TCE) if TVOC concentrations are detected above the alert level at the air monitoring station.

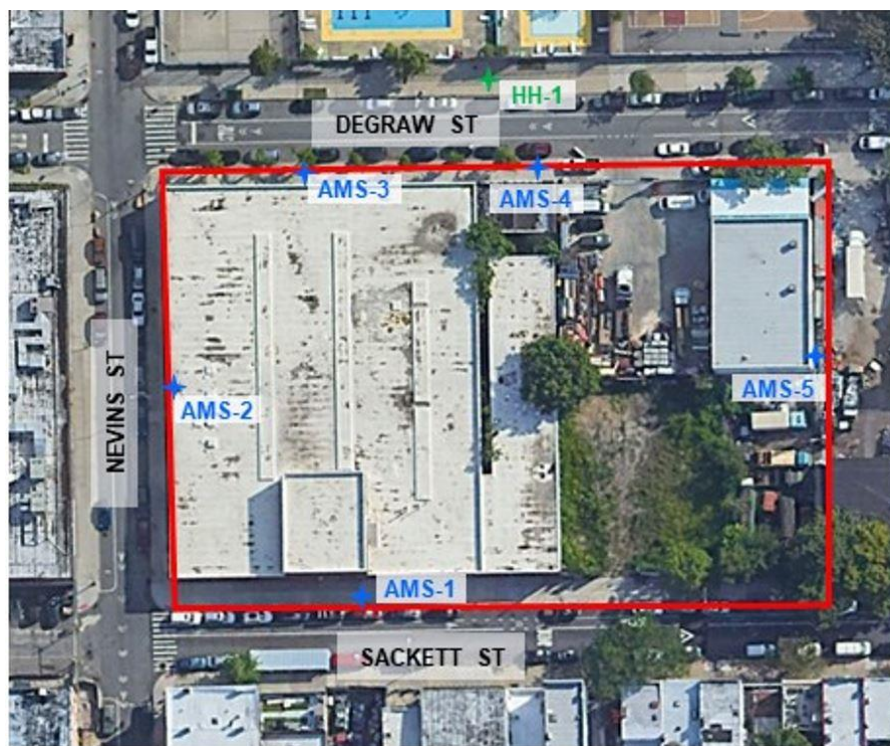

Work Performed

- Performed community air monitoring.
- CEI operated the vapor management system.
- CEI excavated soil within the temporary fabric structure and western portion of the Site and loaded out material for treatment and disposal.
- Earth Construction Services LLC (ECS) assembled the dewatering system.

Air Monitoring Summary

There were no TVOCs or PM₁₀ concentrations above the CAMP-established action levels, or observations of dust or odors associated with the Site during the monitoring period.

Figure 1 – CAMP Air Monitoring Station Locations

Key:

-  Perimeter Fence (approximate alignment)
-  AMS-1 Air Monitoring Station (approximate location)
-  HH-1 Handheld Monitoring Location (varies throughout the day)
