## Weekly CAMP Report

Period: 03/04/24 through 03/10/24  
FILE NO: 03.0034060.10

Weekly Report No.: 082

This Weekly Air Monitoring Report summarizes perimeter air monitoring data collected during the referenced period in accordance with the Community Air Monitoring Plan (CAMP) which was included as part of the NYSDEC approved Remedial Action Work Plan for the Former Fulton Manufactured Gas Plant (MGP) Site – Parcel III and Portion of Parcel IV.

### CAMP Monitoring Approach

Air monitoring was performed during the reporting period in accordance with the CAMP. Air Monitoring location for the reporting period is shown on **Figure 1**. The air monitoring program consists of:

- Continuous monitoring for total volatile organic compounds (TVOCs) and airborne particulate dust (PM<sub>10</sub>) concentrations is being conducted at five air monitoring stations (AMS-1 through AMS-5) around the perimeter of the Site.
- The program includes compound-specific monitoring for benzene and tri-chloroethylene (TCE) if the TVOC concentration is greater than the alert level at the air monitoring station.
- Continuous monitoring of weather conditions.
- Periodic monitoring for TVOCs and PM<sub>10</sub> along Degraw Street using handheld equipment.
- Periodic observational monitoring for MGP-related odors and visible dust around the perimeter of the Site.

Action and Alert levels for monitored parameters are included in **Table 1**.

### Air Monitoring Summary

During the reporting period, GZA collected air monitoring data consisting of TVOC and PM<sub>10</sub> concentrations with the five air monitoring stations and using handheld instruments along Degraw Street. GZA also conducted observational monitoring for MGP-related odors and visible dust around the perimeter of the Site.

There were no TVOCs concentrations above the CAMP-established action levels during the reporting period. **Figures 2** and **Figure 3** summarize the TVOC and PM<sub>10</sub> concentrations, respectively, recorded during the reporting period.

On Thursday 3/7/24, at approximately 12:11 AM until 12:57 AM, AMS-1 and AMS-2 recorded elevated 15-minute time weighted average (TWA) concentrations greater than the Action Level for dust (PM<sub>10</sub>). The maximum 15-minute TWA PM<sub>10</sub> concentration recorded was 0.84 mg/m<sup>3</sup> and 0.56 mg/m<sup>3</sup> at AMS-1 and AMS-2, respectively, compared to the Action Level of 0.150 mg/m<sup>3</sup>.

There were no elevated concentrations greater than the Action Level for dust during this timeframe at the other air monitoring stations and no elevated concentrations of TVOCs at any of the stations. No work was being performed on the Site (after work hours) and there were no stockpiles of soil outside of the temporary fabric structure. The elevated concentrations were detected at the upwind and crosswind stations and were likely attributed to an offsite source.

GZA notified NYSDEC of elevated PM<sub>10</sub> concentrations by phone and email on 3/7/24.

**Table 2** summarizes the observational monitoring for MGP-related dust and odors during the reporting period.

There were no community inquiries received during the reporting period.

<b>Other</b>	<p>At approximately 12:21 AM until 12:57 AM, AMS-1 and AMS-2 recorded elevated 15-minute time weighted average (TWA) concentrations greater than the Action Level for dust (PM<sub>10</sub>). The maximum 15-minute TWA PM<sub>10</sub> concentration recorded was 0.84 mg/m<sup>3</sup> and 0.56 mg/m<sup>3</sup> at AMS-1 and AMS-2, respectively, compared to the Action Level of 0.150 mg/m<sup>3</sup>.</p> <p>There were no elevated concentrations greater than the Action Level for dust during this timeframe at the other air monitoring stations and no elevated concentrations of TVOCs at any of the stations. No work was being performed on the Site (after work hours) and there were no stockpiles of soil outside of the temporary fabric structure.</p> <p>AMS-1 was a crosswind and AMS-2 was an upwind station at the time (winds were from the NW). The elevated dust concentrations were likely attributable to an offsite source.</p> <p>GZA notified NYSDEC of elevated PM<sub>10</sub> concentrations by phone and email on 3/7/24.</p>
