

CAMP MONITORING REPORT

545 Sackett Street

04/01/24 through 04/07/24

This Weekly Air Monitoring Report summarizes perimeter air monitoring data collected during the referenced period in accordance with the Community Air Monitoring Plan (CAMP) which was included as part of the NYSDEC approved Remedial Action Work Plan for the Former Fulton Manufactured Gas Plant (MGP) Site – Parcel III and Portion of Parcel IV. Continuous monitoring for total volatile organic compounds (TVOCs) and airborne particulate dust (PM₁₀) concentrations is being conducted at five air monitoring stations (AMS-1 through AMS-5) around the perimeter of the Site. The program includes compound-specific monitoring for benzene and tri-chloroethylene (TCE) if TVOC concentrations are detected above the alert level at the air monitoring station.

Work Performed

- Performed community air monitoring.
- CEI excavated soil within the temporary fabric structure and loaded out material for disposal.
- CEI operated the vapor management system and the water treatment system, and ECS operated the dewatering system.
- CEI received deliveries and performed general housekeeping.

Air Monitoring Summary

There were no TVOCs or PM₁₀ concentrations above the CAMP-established action levels, or observations of dust or odors associated with the Site during the monitoring period. On Thursday, 04/04/24, NYSDEC notified Roux regarding an odor complaint from the public. Roux and GZA observed conditions in the area and found that clean water was being added to the tank identified in the complaint. No odors were detected and handheld PID readings were 0.0 ppm at the Site perimeter, at the location the photograph provided by NYSDEC was taken from in Sackett Street, and in the work area. Roux provided a summary of the findings to the NYSDEC. No elevated TVOC concentrations were detected by the air monitoring stations at the time of the complaint.
