### Project Team

#### General Contractor and Subcontractors:

- Mega Contracting Group, LLC (Mega)
- Creamer Environmental, Inc. (CEI)
- Earth Construction Services, LLC (ECS)

#### Engineers and Consultants:

- Roux Environmental Engineering and Geology, D.P.C. (Roux)
- GZA GeoEnvironmental Inc. of New York (GZANY)
- WSP USA (WSP)

### Remedial Action Work Summary

#### Work Activities Performed Onsite:

- Excavation and prep for future loadout of material from Gas Holder 3 excavation area.
- Continue dewatering operations for Gas Holder 3 excavation area.
- Water treatment system filter media change out.
- Biweekly sentinel well groundwater sampling event.

#### Contractor Work Performed Onsite:

Creamer Environmental Inc. (CEI) continued demolition of the former Gas Holder 3 foundation and reducing oversized material from both the foundation structure and backfilled material found inside the gas holder foundation in WC-GHW. This material was stabilized and staged for future loadout.

Earth Construction Services, LLC (ECS) continued 24-hour operation of the dewatering system for the Gas Holder 3 excavation area. Since the last reporting period, CEI treated approximately 310,400 gallons of recovered construction wastewater through the water treatment system (WTS) and discharged the treated water to the New York City Department of Environmental Protection (NYCDEP) combined sewer system. ECS continued installation of lower header pipe associated WTS wellpoints. CEI continued filter media change out by removing organoclay from treatment vessel of train 2 of the WTS with a vac truck and staging material inside the tension fabric structure (TFS) for future load out.

The vapor management system (VMS) associated with the TFS was operated throughout the day. Other dust and odor control measures (wetting, tarping, limiting vehicle speeds, covering trucks inside TFS, spraying loaded material with odor suppressant, etc.) continued to be performed to ensure there were no impacts to the neighborhood. Exposed soils were covered with Atmos odor suppressing foam during the work and at the end of the day.

#### Air Monitoring:

- No VOC or dust exceedances were observed from the community air monitoring program (CAMP).
- GZANY to provide a summary report of CAMP activities separately.

#### Erosion and Sediment Control:

- None.

#### Sampling Conducted:

- Sentinel wells SW-02S, SW-02D, SW-04S, SW-04D, SW-05S, SW-06S, and SW-06D were sampled and to be analyzed for:
  - TCL VOCs USEPA 8260,
  - TCL SVOCs USEPA 8270,

- PFAS.

**Other Items of Note:**

- Construction activities were observed as part of the ongoing combined sewer overflow (CSO) project west of Nevins Street.
- A resident inquired about the noise being generated from the vacuum truck. The anticipated work schedule and mitigation strategies were discussed with this individual. This interaction was reported to NYSDEC.
- After working hours, at approximately 5:20pm, the operator of the water treatment system was trying to close a valve on the 6" PVC piping between the dewatering system and the weir tanks of the water treatment system and broke the pipe in multiple locations. The dewatering system was immediately shut down and onsite containment of released water began. Some water reached the street but did not enter any catch basins. The onsite piping was repaired. This information was provided to NYSDEC via email at 7:30 pm and an Incident/ Corrective Action Report is being prepared.
