

# CAMP MONITORING REPORT

545 Sackett Street

07/01/24 through 07/07/24

This Weekly Air Monitoring Report summarizes perimeter air monitoring data collected during the referenced period in accordance with the Community Air Monitoring Plan (CAMP) which was included as part of the NYSDEC approved Remedial Action Work Plan for the Former Fulton Manufactured Gas Plant (MGP) Site – Parcel III and Portion of Parcel IV. Monitoring for total volatile organic compounds (TVOCs) and airborne particulate dust (PM<sub>10</sub>) concentrations is being conducted at five air monitoring stations (AMS-1 through AMS-5) around the perimeter of the Site. The program includes compound-specific monitoring for benzene and tri-chloroethylene (TCE) if TVOC concentrations are detected above the alert level at the air monitoring station.

## Work Performed

- Performed community air monitoring.
- CEI changed out media in the water treatment system.
- CEI received deliveries, refueled equipment, demobilized equipment, and performed general housekeeping.

## Air Monitoring Summary

There were elevated PM<sub>10</sub> concentrations recorded at AMS-1 through AMS-5 during the night of 07/04/24 into the morning of 07/05/24. No elevated TVOC concentrations were recorded during the same period. No work performed onsite (July 4<sup>th</sup> holiday). Elevated PM<sub>10</sub> concentrations were likely attributable to July 4th fireworks. NYSDEC was notified by email on 07/05/24. There were no other TVOCs or PM<sub>10</sub> concentrations above the CAMP-established action levels, or observations of dust or odors associated with the Site during the monitoring period.
