### Project Team

#### General Contractor and Subcontractors:

- Mega Contracting Group, LLC (Mega)
- Creamer Environmental, Inc. (CEI)

#### Engineers and Consultants:

- Roux Environmental Engineering and Geology, D.P.C. (Roux)
- GZA GeoEnvironmental Inc. of New York (GZANY)
- WSP USA (WSP)
- Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology D.P.C (Langan)

### Remedial Action Work Summary

#### Work Activities Performed Onsite:

- Installation of support of excavation (SOE) within the former Gas Holder 4 excavation area.
- Demobilization of steel sheeting, steel beams, struts, and crane mats.

#### Contractor Work Performed Onsite:

Creamer Environmental, Inc (CEI) continued fabricating steel bracing and installing walers associated with the support of excavation (SOE) system along perimeter of the Gas Holder 4 excavation area. Material within the former Gas Holder 4 footprint was excavated, as needed, to allow for SOE installation and this material was prepped for offsite disposal. All excavation and SOE related work was conducted inside the tension fabric structure (TFS) with the associated vapor management system (VMS) in operation throughout the day. CEI applied Atmos odor suppressing foam during excavation activities within the former Gas Holder 4 excavation area.

CEI demobilized the previously extracted steel sheeting, steel beams, struts and crane mats from the site. Metal debris encountered in the Gas Holder 4 excavation area was downsized in preparation for offsite disposal and CEI pumped accumulated rainwater from the former Gas Holder 3 excavation area to an onsite frac tank for future treatment and disposal.

Dust and odor control measures (application of Atmos odor suppressing foam, wetting, tarping, limiting vehicle speeds, covering trucks prior leaving the site, etc.) continued to be performed to ensure there were no impacts to the neighborhood. Truck tires were washed to ensure material was not being tracked offsite. Exposed soils were covered with Atmos odor suppressing foam and/or poly sheeting during work operations.

#### Air Monitoring:

- No VOC or dust exceedances were observed from the community air monitoring program (CAMP).
- GZANY to provide a summary report of CAMP activities separately.

#### Vibration Monitoring:

- No alerts of vibrations exceeding Site's threshold or limiting criteria (1" /second and 2" / second, respectively) were received.
- Vibration monitoring data is included at the end of this Daily Status Report.

#### Erosion and Sediment Control:

- CEI replaced inlet protection on catch basin #3.
- CEI replaced a filter sock along Degraw Street.

#### Sampling Conducted:

- None.
