### Project Team

#### General Contractor and Subcontractors:

- Mega Contracting Group, LLC (Mega)
- Creamer Environmental, Inc. (CEI)
- American Dewatering & Grouting (ADG)
- ENTACT, LLC (ENTACT)

#### Engineers and Consultants:

- Roux Environmental Engineering and Geology, D.P.C. (Roux)
- GZA GeoEnvironmental Inc. of New York (GZANY)
- WSP USA (WSP)

### Remedial Action Work Summary

#### Work Activities Performed Onsite:

- Excavation and demolition of the Gas Holder 4 structure.
- Continued mobilization and setup for In-situ Stabilization/Solidification work.
- Dewatering operations for Gas Holder 4 excavation area.

#### Contractor Work Performed Onsite:

CEI performed excavation and demolition activities associated with the Gas Holder 4 structure and prepped material for future loadout. All excavation work was conducted inside the tension fabric structure (TFS) with the associated vapor management system (VMS) in operation throughout the day. CEI continued to downsize metal debris located within the Gas Holder 4 excavation area for future disposal. ENTACT continued mobilization and setup of equipment associated with the upcoming In-situ Solidification/Stabilization (ISS) work. ENTACT relocated a generator within the center portion of the site, installed construction fencing and cut portions of the previously installed steel sheeting on the southwest corner of the site to facilitate access.

American Dewatering & Grouting (ADG) continued 24-hr operation of the dewatering system for the Gas Holder 4 excavation area and CEI operated the water treatment system (WTS). Since the last reporting period, CEI treated approximately 756,200 gallons of recovered construction wastewater through the WTS and discharged the treated water to the New York City Department of Environmental Protection (NYCDEP) combined sewer system. Routine maintenance to onsite dewatering and water treatment systems was performed. ADG continued to install components for the wellpoint dewatering system along the northern perimeter of the Gas Holder 4 excavation area and relocated a dewatering pump to the northwest corner of Gas Holder 4.

Dust and odor control measures (application of Atmos odor suppressing foam, wetting, tarping, limiting vehicle speeds, covering trucks prior leaving the site, etc.) continued to be performed to ensure there were no impacts to the neighborhood. Truck tires were washed to ensure material was not being tracked offsite. Exposed soils were covered with Atmos odor suppressing foam during work operations and at the end of the day.

#### Air Monitoring:

- No VOC or dust exceedances were observed from the community air monitoring program (CAMP).
- GZANY to provide a summary report of CAMP activities separately.

#### Vibration Monitoring:

- No alerts of vibrations exceeding Site's threshold or limiting criteria (1" /second and 2" / second, respectively) were received.
- Vibration monitoring data is included at the end of this Daily Status Report.

**Remedial Action Work Summary (continued)**
Erosion and Sediment Control:

- Roux completed the weekly Stormwater Pollution Prevention Plan (SWPPP) inspection.

Sampling Conducted:

- None.

Other Items of Note:

- Construction activities were observed as part of the ongoing combined sewer overflow (CSO) project west of Nevins Street.
- Construction activities were observed at the empty lot south of Sackett Street.
- Heide Dudek from the NYSDEC visited the site.
