Dear Ms. Bell:

Re: Williamsburgh Works Former MGP Site
Suffolk County, Site ID:224055
Remedial Investigation Work Plan (RIWP)

The New York State Department of Environmental Conservation (Department) and New York State Department of Health have completed the review of the preliminary draft RIWP (GEI, April 2008). The work plan is approved with the following modifications:

- The "step-out borings" placed along North 12th street are insufficient to characterize the known MGP tar impacts beneath the Bayside Fuel Depot parcel. Site Investigation reports prepared by Metcalf and Eddy/AECOM (M&E) on behalf of the New York City Department of Design and Construction (NYCDCC) already indicate the presence of MGP impacts beneath the Bayside Fuel Depot property and in East River sediments. Provisions for step out borings within the Bayside Fuel property should be made as part of this initial scope of work.

  The Department has reviewed the following reports and determined that the data is usable and should be considered during the remedial investigation and the remedial decision making process:

  - *Bayside Fuel Company 1- 65 North 12th Street Block 2277, Lot 1, Brooklyn, New York (*M &E, November 2006);
  - *Property West of Kent Avenue Between and Including North 10th and North 12th Streets Block 2287, Lot 1,16&30, Block 2294, Lot 1&5, Brooklyn, New York (*M&E, November 2006);
  - *9th Street Equities LLC, 86 Kent Avenue Between &Including North 9th and North 10th Streets Block 2301, Lots 1,50, 60 &70, Brooklyn, New York (*M&E, August 2006); and

- *Motiva Enterprises LLC/Bushwick Creek Inlet, Kent Avenue Between South Shoreline of Bushwick Creek and Quay Street Block 2590, Lot 25&100, Brooklyn, New York* (M&E, November 2006).

- A fact sheet should be issued to notify local residents within 0.25 radius of the site of any planned field work.

- Please provide a two week pre-notification to the Department for any planned field work.

Please provide acceptance of these comments prior to the start of any field work. Feel free to contact me directly at (518) 402-9662 should you have any comments or questions.

Sincerely,

Lisa A. Gorton

Re: Remedial Investigation Work Plan Addendum
Williamsburg Works Former MGP
Site# 224055

Dear Mr. Campbell:

The Remedial Investigation Work Plan Addendum for the Williamsburg Works Former MGP is approved with the following modifications:

1. The Work Plan makes no mention of the deep tar observation on the 35 Kent Ave property, where tar was observed at approximately 57 feet bgs. The proposed protocol for terminating borings could result in premature cessation of drilling which would miss this contamination and thus understate the full nature and extent of contamination. Consequently, all borings must be advanced to a depth of at least 100 feet bgs.

2. Two additional soil borings must be completed along cross section line A' A. Each of these borings should be positioned to align with the approximate center of one of the Gasometer footprints located southeast of line A'A. Appropriate procedures should be followed to prevent the creation of a vertical migration pathway for NAPL. In the event that large volumes of extremely mobile NAPL are encountered in these borings, the New York State Department of Environmental Conservation will discuss appropriate modifications to the boring locations with National Grid.

Sincerely,

Kathleen Sukacka for

Henry T. Willems
Engineering Geologist 1

Re: Supplemental Remedial Investigation
Work Plan
Williamsburg Works Former MGP
Site No. 224055

Dear Mr. Campbell:

The New York State Department of Environmental Conservation (the Department) has reviewed the Supplemental Remedial Investigation Work Plan, dated August 25, 2010. The Work Plan is hereby approved with the following modification: One additional sediment core must be progressed approximately 50 feet to the northwest of existing sediment core WW-SED-07.

Please note that there is a strong likelihood that sediment coring in the Bushwick Inlet may be required to fully determine the nature and extent of contamination at the site. The Department recommends that National Grid consider extending the sediment coring aspect of the Supplemental Remedial Investigation into that area.

Sincerely,

Henry T. Willems
Engineering Geologist 1

1. Introduction

On behalf of National Grid USA (NGRID), formerly KeySpan Corporation, GEI Consultants, Inc. (GEI) has prepared this Remedial Investigation (RI) Work Plan for the Williamsburg Works (Williamsburg) former Manufactured Gas Plant (MGP) site. The site consists of four parcels located along North 12th and North 11th Streets, Kent Avenue and the East River in the Williamsburg Neighborhood of Brooklyn, New York. Figure 1 shows the location of the Williamsburg former MGP site.

NGRID is conducting this RI because a predecessor company, the Brooklyn Union Gas Company (BUG), operated the former MGP to produce manufactured gas for use in the surrounding community from 1850 to the 1930s. The Williamsburg MGP was dismantled prior to 1941, and the site was subsequently subdivided, sold to third parties and redeveloped for industrial uses. Currently the site is developed with warehouses, a service garage/gas station, and an industrial-factory building.

In February 2007, KeySpan and the New York State Department of Environmental Conservation (NYSDEC) entered into an administrative order on consent (ACO) and administrative settlement #A2-0552-0606 to evaluate environmental conditions at a number of sites in New York City and on Long Island. The Williamsburg former MGP site was identified in Table 3 of the ACO; however, the site was not covered under the order. In August of 2007, KeySpan and the NYSDEC completed a modification to the ACO in administrative settlement #A2-0552-0606 which added the Williamsburg Works former MGP site to the order.

The scope of work described in this RI Work Plan is intended to collect sufficient data to evaluate the nature and extent of compounds within soils, soil vapor and groundwater that may be associated with the Williamsburg former MGP site.

The scope of work described in this work plan also benefited from a site visit conducted by NGRID and NYSDEC staff on April 29, 2008. The site visit revealed that access to the two parcels closest to the East River (Block 2287, Lots 16 and 30; currently occupied by Citistorage) was not possible and the building located at 50 North Kent Avenue (Block 2287, Lot 1) was scheduled for imminent demolition (Plate 1). Based on these findings, the NYSDEC and NGRID agreed that investigation within these structures would not be conducted at this time. At such time that access to the Citistorage-occupied building can be obtained, evaluation of potential soil vapor intrusion and/or evaluation of soil and groundwater conditions may be warranted. Following demolition of the building at 50 North Kent Avenue, evaluation of subsurface conditions at that parcel would also be warranted.

The objectives of the RI scope are as follows:

- Defining the location of holder foundations and any other subsurface MGP structures that remain at the site
- Identifying and defining the extent of coal tar contamination at the site
- Defining the potential for non-aqueous phase liquid (NAPL) migration into the East River
- Defining MGP-related impacts to groundwater
- Investigating the potential for soil vapor intrusion
- Assessing whether potential pathways exist through which people, flora, or fauna could be exposed to the contaminants

This work plan has been prepared in general accordance with the ACO, the NYSDEC *Draft DER-10 Technical Guidance for Site Characterization and Remedial Investigation,* dated December 25, 2002, and the New York State Department of Health (NYSDOH) *Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York,* dated October 2006. As such, this work plan includes a brief site description, site history, and a proposed scope of work for the RI of the Williamsburg former MGP site. The RI scope of work includes the following tasks:

- Records Review
- Field Investigation Sampling, Analysis and Survey
- Quality Assurance / Quality Control (QA/QC) and Data Validation
- Step 1 Fish and Wildlife Resource Impact Analysis (FWRIA)
- Qualitative Human Health Exposure Assessment (QHHEA)
- RI Report Preparation

Detailed descriptions of each proposed work activity are provided in Section 5 of this work plan.

The RI appendices contain historical documents (Appendix A), environmental records information (Appendix B), a Community Air-Monitoring Plan (CAMP) (Appendix C), a Field Sampling Plan (FSP) (Appendix D), a Health and Safety Plan (HASP) (Appendix E) and a Quality Assurance Project Plan (QAPP) (Appendix F).

2. Site Background

2.1 Site Location and Description

The Williamsburg former MGP site was subdivided and sold to third parties in the years following decommissioning and is now comprised of four properties that encompass approximately 5.7 acres in the Williamsburg neighborhood of Brooklyn, New York. Three of the four parcels are contiguous and bordered by the East River, North 11th and North 12th Streets and Kent Avenue. A holder was located on the fourth parcel, which is located on the southeast side of Kent Avenue between North 11th and North 12th Streets. The site location is depicted on Figure 1. The addresses and parcel information for the properties of the Williamsburg former MGP site are listed below.

Williamsburg Former MGP Site

Address	Block	Lot
2 North 11th Street, Brooklyn, NY 11211	2287	30
20 North 12th Street, Brooklyn, NY 11211	2287	16
21 North 12th Street (50 Kent Avenue), Brooklyn, NY 11211	2287	1
35 Kent Avenue, Brooklyn, NY 11211	2288	1

The current site conditions are shown on Plate 1 and are discussed in Section 2.2.3.

2.2 Site History

The site history of the Williamsburg former MGP site and surrounding area was developed through the review of available Sanborn Fire Insurance (Sanborn) Maps and historical newspaper articles. A brief summary of the history of the Williamsburg former MGP site is provided below. The Sanborn Maps are included in Appendix A. A comprehensive illustration of historical features during the span of MGP operations is shown on Plate 1.

2.2.1 MGP History

The Williamsburgh Gas Light Company was incorporated in 1850 (Murphy, 1995) and is the first known operator of the Williamsburg MGP. The Williamsburg MGP is first shown on the 1887 Sanborn Map. The MGP gas production facilities were isolated to the 2 North 11th Street and 20 and 21 North 12th Street properties and consisted of coal gas production facilities including a retort house, an engine room, a meter house, and a condenser house. Gas storage and purification facilities included three gas holders, a governor house, a purifying house, two tar tanks, scrubbers and lime houses. These structures are shown on Plate 1.

In 1895, the Williamsburgh Gas Light Company and others merged to form the Brooklyn Union Gas Company (BUG), a predecessor to NGRID. The 1905 Sanborn Map indicates that the MGP was referred to as the BUG Williamsburg Branch and a gas holder is now shown at 35 Kent Avenue. Based upon the age of construction, the holder was likely a pit style holder with a sub-grade foundation.

According to the 1905 Sanborn Maps, the gas production facilities at 2 North 11th Street remained relatively unchanged with the exception of the addition of iron tanks and a pump house. One circular gas tank, a generator house, a condenser house, and exhauster houses were noted at 20 North 11th Street. Purifying houses were noted at 21 North 12th Street.

By 1916, the Williamsburg MGP appears to have converted to water gas production as evidenced by the addition of generators and conversion of the retort house to a generator house at 20 North 11th Street. Two additional oil tanks and a tar slop tank were noted at 2 North 11th Street. An additional gas holder was noted on the 35 Kent Avenue property (Plate 1).

The Williamsburg MGP ceased operation and the MGP structures dismantled prior to 1941, as evidenced by the vacant lots shown in the 1941 Sanborn Map.

2.2.2 Post-MGP History

Subsequent to dismantlement, the Williamsburg former MGP site was subdivided and redeveloped for commercial, industrial and manufacturing uses. A brief history of the post-MGP use was developed from available Sanborn Maps and is presented below by current parcel address and tax lot. All of these parcels are owned by third parties.

- 2 North 11th Street [Block 2287 Lot 30]: The property was used for oil truck parking from approximately 1978 until 1982. The current warehouse building was constructed in 1985 and used for lumber storage from 1988 until 1995 according to Sanborn Maps.

- 20 North 12th Street [Block 2287 Lot 16]: In 1965 a repair shop, office and scrap metal storage were on the property. By 1978, the property and buildings were vacant except for the office. In 1983, the buildings had been demolished and the property was used for parking. The current warehouse building was constructed in 1985 and used for lumber storage from 1988 until 1995 according to Sanborn Maps.

- 21 North 12th Street (50 Kent Avenue) [Block 2287 Lot 1]: A warehouse/industrial building was constructed by 1951 and was occupied by the Ferro-Co. Corp. for sheet metal product manufacturing. By 1965, the building was occupied by Commercial Corrugated Container Corp. By 1978, the property was occupied by a New York City sanitation garage, which currently occupies the site according to Sanborn Map information.

- 35 Kent Avenue [Block 2288 Lot 1]: According to Sanborn Maps, the property was developed as a garage in 1949 and utilized a gasoline storage tank as part of the operations. Colonial Tempered Glass currently operates the garage.

2.2.3 Current Site Conditions

The current site conditions and the surrounding area are shown on the aerial photograph in Plate 1. As discussed above in the site history, the site was subdivided into four parcels following dismantlement of the MGP. As shown in the aerial photograph, the majority of the Williamsburg former MGP site is either paved or developed with buildings. The current site conditions of each parcel are summarized below.

Williamsburg Former MGP

Address	Current Owner	Block	Lot	Land Use Description
2 North 11th Street Brooklyn, NY 11211	10th Street, LLC.	2287	30	Warehouse
20 North 12th Street Brooklyn, NY 11211	10th Street, LLC.	2287	16	Warehouse
21 North 12th Street (50 Kent Avenue) Brooklyn, NY 11211	Fifty Kent Avenue Associates	2287	1	Garage/Gas Station
35 Kent Avenue Brooklyn, NY 11211	Fourth Avenue Associates	2288	1	Industrial-Factory Building

The Williamsburg former MGP site and surrounding area are zoned for manufacturing (M3-1); as a result, the site is surrounded by commercial and manufacturing businesses. The Williamsburg former MGP site is bordered by the East River to the northwest, North 12th Street and a Bayside Oil terminal to the northeast, and by North 11th Street and warehouses to the southeast and southwest. Kent Avenue bisects the Williamsburg former MGP.

The Williamsburg former MGP site is developed with buildings that are secured with locked entrances or brick walls with gates.

3. Summary of Records Search

GEI completed a search of environmental records for the Williamsburg former MGP site as part of the preparation of the RI Work Plan. The purpose of this review was to determine:

- Environmental data and information currently available for the site
- History and description of the site including nature of operations
- Types, quantities, physical states, locations, methods and dates of hazardous waste disposal at the site
- Identity of other potential responsible parties (PRPs) for releases of hazardous waste at the site

3.1 Records Search

The record search report for the Williamsburg former MGP site included the review or evaluation of the following:

- For potential releases on site, GEI reviewed the NYSDEC's on-line Spills Incidents Database Search and the Environmental Remediation Database Search http://www.dec.ny.gov/chemical/8437.html

- For environmental data, potential hazardous waste storage, and PRPs, GEI relied upon information from Environmental Data Resources (EDR), a commercially available environmental database, searches dated May 11, 2004 and January 15, 2008, and available Sanborn Maps dated 1887 through 1996. EDR environmental database searches and Sanborn Maps are attached in Appendices A and B.

The site history, current site conditions and site security are discussed above within Section 2.2.

A Freedom of Information Act (FOIA) request letter was submitted to the NYSDEC to obtain information for the subject property and abutting properties with environmental records. NYSDEC provided correspondence and spill report information pertaining to the adjacent Bayside Fuel Oil Depot (Site V00587) in response to the FOIA request. No information pertaining to the Williamsburg Former MGP was provided in response to the FOIA request. This Bayside information will be evaluated and incorporated into the site conceptual model as the RI Work Plan for the former MGP is implemented. Relevant data and findings from the FOIA request information will be incorporated into the RI Report for the former MGP.

3.2 Environmental Records Information Summary

A search of the NYSDEC spill incidents and environmental site remediation databases was conducted by GEI on February 4, 2007. The following environmental records were encountered for the site when GEI accessed the databases.

3.2.1 NYSDEC Environmental Site Remediation Database Search

The NYSDEC website contained a record for the adjacent former Bayside Fuel Oil Depot located to the north of the site. No record was found for the Williamsburg Works MGP.

The Bayside Fuel Oil Depot (Site V00587) is located at 1-65 North 12th Street to the north of the site. The Bayside site is listed as a Class A site within the State Voluntary Cleanup Program (VCP), which indicates that a remedial program is underway but not yet currently complete. There is an existing oil spill stipulation (Spill No. 9804544) that has resulted in ongoing recovery of free-product and contaminated groundwater. A Phase II assessment was completed in 2003, and a FOIA request has been submitted to the NYSDEC for the Phase II report. Fuel oil contamination and MGP impacts have been reported at the Bayside site. Impacts, allegedly from the MGP, were observed from 20 feet below ground surface (bgs) to the top of clay encountered at 60 feet bgs. Concentrations of volatile organic compounds (VOCs), polycyclic aromatic hydrocarbons (PAHs), methyl tert-butyl ether (MTBE) and lead exceeded applicable soil cleanup objectives and groundwater standards. The RI phase is reportedly on-going.

3.2.2 NYSDEC Spill Incident Database Search

Multiple spill indents were encountered for the Williamsburg former MGP site at 50 Kent Avenue (a/k/a 21 North 12th Street). The spill incidents indicate that diesel was spilled at the site multiple times due to equipment failure and housekeeping. Quarterly Monitoring Reports indicate persistently high levels of soil and groundwater contamination potentially due to MGP impacts. Multiple spill reports remain open for this property. No other spill incident records were found during the GEI search for the parcels comprising the Williamsburg former MGP site.

Multiple spill incidents were encountered for streets and properties adjacent to and within one block of the Williamsburg former MGP site, including multiple spills at the Bayside Fuel Oil Depot which is located to the north of the site across North 12th Street. Three of the spill reports for the Bayside Fuel Oil Depot report alleged MGP impacts.

3.2.3 Commercial Environmental Records Review

A number of current/historic activities of potential environmental concern were identified on site and at adjacent and nearby properties, based on the EDR database search report and on Sanborn Maps. A summary of findings is presented in Table 1 and illustrated on Figure 2.

3.3 Possible Subsurface Structures

A review of Sanborn Maps revealed that a number of historic subsurface structures may be potentially located within the footprint of the Williamsburg former MGP site. Sanborn Maps depict the following possible subsurface structures were present during the operation of the MGP:

- Seven circular tar/oil tanks were located at 2 North 11th Street
- One gas tank was located at 20 North 12th Street
- Three gasholders were located at 21 North 12th Street
- Two gas holders were located at 35 Kent Avenue

The locations of these former MGP structures are shown on Plate 1.

A review of Sanborn Maps and the EDR environmental records report document post-MGP subsurface structures within the footprint of the former MGP. EDR environmental database searches and Sanborn Maps are attached in Appendices A and B. The structures are summarized below by property:

2 North 11th Street [Block 2287 Lot 30]

- One gasoline tank is shown on the 1965 Sanborn Map.

20 North 12th Street [Block 2287 Lot 16]

- Subsurface structures were not shown on the Sanborn Maps or indicated by the EDR report.

21 North 12th Street (50 Kent Avenue) [Block 2287 Lot 1]

- EDR indicates two, 2,000-gallon diesel underground storage tanks (USTs) were closed and removed in 1997 and one, 2,000-gasoline UST was closed in place in 1995.

35 Kent Avenue [Block 2288 Lot 1]

- One gasoline tank is shown on the 1951 Sanborn Map.

4. Local Environment

The following section provides a brief summary of the local environmental setting of the Williamsburg former MGP site and vicinity.

4.1 Surficial Geology

The Williamsburg former MGP site is underlain by artificial fill and glacial deposits (outwash sands and glacial till) according to published information. According to the 1989 *Surficial Geologic Map of New York, Lower Hudson Street* (Cadwell, 1989), the glacial till beneath the site is of variable texture (i.e., clay, silt-clay, boulder-clay) and typically poorly sorted, with variable clast contents that are well rounded and of varying lithologies. The glacial till deposits are stated to be approximately 100 feet thick in the vicinity of the site. Crystalline bedrock underlies the till, the contact of which is located at approximately elevation -100 feet (National Geodetic Vertical Datum [NGVD]) 1929 according to Buxton et. al. (1981).

4.2 Hydrogeology

The hydrogeology beneath the Williamsburg former MGP site is discussed in terms of the available groundwater data and the nearest water body, the East River. Based upon the surrounding topography, the anticipated depth to groundwater is approximately 10 feet bgs and the anticipated groundwater flow direction is northwest, towards the East River.

The East River is located at the northwestern boundary of the Williamsburg former MGP site. The East River is a saline Class I water body. The best use for saline Class I water bodies is for fishing and boating.

5. Scope of Work

The RI scope of work addresses field investigation tasks that will evaluate the nature and extent of soil and groundwater impacts related to the operation of the Williamsburg former MGP site. The type, number and depth of samples were developed based on a preliminary review of historic sources of information such as historic topographic maps and Sanborn Maps. Accordingly, the proposed sampling program includes sampling of soils, soil vapor and groundwater.

The RI scope of work includes the following tasks:

- Pre-Investigation Tasks
- Field Investigation Sampling and Analysis
- Sample Location Survey
- QA/QC and Data Validation
- Qualitative Human Health Exposure Assessment
- Step I Fish and Wildlife Resources Impact Analysis
- RI Report Preparation

A description of each proposed work activity is provided separately below, with the exception of the RI Report. Preparation of the RI Report is addressed in Section 6.

5.1 Pre-Investigation Tasks

Upon receipt of authorization from NGRID, and the necessary access agreements, the consultant will mobilize to the site to implement the sampling program. The initial field mobilization will include the following items to be completed prior to the commencement of the field RI activities:

- Establish a temporary decontamination area
- Establish a temporary waste storage area and make arrangements with NGRID for the removal of investigation-derived wastes (IDW)
- Identify underground utilities

5.1.1 Site Access

NGRID and its consultant/contractors will need site access granted by private property owners to complete the proposed RI scope of work. NGRID will negotiate access with the private property owners. If access to any site parcels can not be obtained, NGRID will work with the NYSDEC to gain access to complete the RI activities.

5.2 Field Investigation Sampling and Analysis

This section of the RI Work Plan describes the proposed surface soil, test pit, soil boring, groundwater monitoring well and soil vapor point installation, sampling and analysis activities. Table 2 presents the general rationale and proposed sampling and analysis for each of the RI sampling locations and media, and Plate 1 depicts all proposed sampling locations. In addition, procedures for ancillary tasks such as utility clearance, hydraulic conductivity testing, well development, air monitoring, and waste containerization and characterization are discussed in this section as well.

Sampling procedures and methods are detailed within the FSP in Appendix D. The proposed analyses, analytical methods, and QA/QC samples are discussed under each of the following subsections for surface soil, test pit, soil boring, monitoring well, sediment, soil vapor, and ambient air sampling procedures. Laboratory data deliverables and data validation procedures are discussed below in Section 5.5, and QA/QC procedures are detailed within the QAPP in Appendix F.

5.2.1 Utility Clearance

The general location of the proposed RI sample locations were identified during a preliminary site visit. Each actual proposed boring and subsurface investigation location will be marked with white paint by the consultant. The drilling subcontractor will provide the boring locations to the utility clearance organization (New York City and Long Island One Call) to identify potential utility conflicts at the site and within the street right of ways adjacent to the site. Prior to installation, each proposed RI sample location will also be cleared by a private utility mark-out company. A request will be submitted to the private property owner for on-site utility plans prior to completing intrusive activities.

Each test pit, soil boring, soil vapor point and monitoring well location will first be cleared utilizing manual or vacuum extraction methods to a depth of 5 feet bgs, or 1 foot below the estimated depth of any adjacent known utility.

5.2.2 Surface Soil Sample Collection

Nine surface soil samples (WW-SS-01 through WW-SS-09) will be collected from unpaved areas where surface soils are exposed around the exterior of the buildings, adjacent to the footprint of the Williamsburg former MGP. The sample locations are shown on Plate 1. Sample descriptions, rational and analysis are shown in Table 2.

Stainless-steel sampling implements (including spoons or trowels) and stainless steel bowls will be used to collect each surface soil sample from the upper 2 inches beneath any turf, vegetative or gravel layers. The exposed soil will be screened for VOCs using a photoionization detector

(PID). A discrete VOC soil sample will be collected from the area of the highest PID reading. Each surface soil sample will be sampled for VOCs by the United States Environmental Protection Agency (EPA) SW-846 Method 8260B, semivolatile organic compounds (SVOCs) by EPA Method 8270C; Target Analyte List (TAL) metals by EPA Method 6000/ 7000 series; herbicides by EPA Method 8151A; polychlorinated biphenyls (PCBs) by EPA Method 8082; pesticides by EPA Method 8081A; and free cyanide [extraction by EPA Method 9013A and analysis by Microdiffusion American Society for Testing and Materials (ASTM) Method D4282-02]. No compositing or mixing of the VOC sample aliquot will occur. Sample aliquots for analysis of SVOCs, metals, herbicides, PCBs, pesticides and free cyanide will be homogenized in a stainless steel bowl using a stainless steel spoon prior to being placed in laboratory-provided sample containers.

Each sampling implement will be decontaminated in accordance with decontamination procedures described in the FSP (Appendix D). QA/QC samples will include blind duplicate soil samples, MS/MSD samples, and equipment rinsate blank samples. The quality control samples will be completed at a frequency of 1/20 or once per week of sampling. An approved NYSDOH Environmental Laboratory Approval Program (ELAP) laboratory will perform the analyses. One trip blank will be included per shipment of soil samples to the laboratory.

5.2.3 Test Pit Excavation and Sample Collection

A total of six test pits (WW-TP-01 through WW-TP-06) are proposed to be excavated at the Williamsburg former MGP site. The proposed test pit excavation locations are shown on Plate 1, and the descriptions, rationale, and analysis are presented in Table 2. The test pits are proposed to assess the configuration and contents of former MGP structures which may be present in the site subsurface.

Each test pit will be photographed and logged by the field representative during the intrusive utility clearance (Section 5.1.2) and excavation. All material removed from the test pit will be placed on polyethylene sheeting. Odor-suppressing foam and/or other appropriate means to mitigate odor (e.g. plastic sheeting) will be provided by the consultant/contractor to control odor emissions that may result from excavating potentially impacted soils. Test pits will be terminated at the approximate groundwater table or practical extent of the equipment which is approximately 15 feet bgs. Field screening of soils for total organic vapors will be conducted with a PID from the ground surface to the entire depth of the excavation. A minimum of one soil sample will be selected for analysis per each test pit. Samples will be selected from the area exhibiting the most prominent signs of apparent contamination. If no impacts or structures are observed a sample will be collected from the bottom of the test pit. Each sample will be analyzed for VOCs by EPA Method 8260B; SVOCs by EPA Method 8270C; TAL metals by EPA Method 6000/7000 series; herbicides by EPA Method 8151A; PCBs by EPA Method 8082; pesticides by EPA Method 8081A, and free cyanide [extraction by EPA Method 9013A and analysis by Microdiffusion ASTM Method D4282-02].

After the completion of each test pit, the test pit will be backfilled in reverse sequence in which it was excavated, so that materials removed from the bottom of the test pit are placed back at the bottom and materials removed from the top of the test pit are placed back at the top. The test pits will be backfilled in lifts and compacted. Excess soils will be containerized in a lined roll-off which will be characterized by the consultant and disposed of by NGRID. If test pits are excavated in paved areas, the pavement will be restored following completion of RI activities.

QA/QC samples will include blind duplicate soil samples, MS/MSD samples, and equipment rinsate blank samples. The quality control samples will be completed at a frequency of 1/20 or once per week of sampling. A laboratory certified in the NYSDOH ELAP will perform the analyses. One trip blank will be included per shipment of soil samples to the laboratory.

5.2.4 Soil Boring Advancement and Sample Collection

A total of thirty-two (32) soil borings are proposed at the Williamsburg former MGP site. One soil boring (WW-SB-12) and one boring intended to be completed as a monitoring well (WW-MW-09) cannot be installed at this time due to access restrictions to the properties occupied by Citistorage (20 North 12th St and 2 North 11th St). If access can be obtained in the future, these proposed borings could be completed as originally intended. The proposed soil boring and monitoring well locations are shown on Plate 1. Table 2 provides sample description, rationale, and analysis. Each soil boring location will first be cleared utilizing manual methods or vacuum extraction methods to a depth of 5 feet bgs, or 1 foot below the estimated depth of any nearby known utility. NYSDEC requested that this RI Work Plan incorporate contingency "step out" soil boring locations at 20 ft intervals. Plate 1 includes potential step out locations depicted by red hatch marks moving radially away from the proposed borings at the periphery of the former MGP footprint. If MGP impacted materials are encountered in a borehole, then the consultant will clear utilities at the proposed step out location and dynamically delineate the lateral extent of apparent MGP impacts. Potential step out locations are not depicted where fixed structures are present.

Soil samples will be collected and logged continuously from each boring location. It is anticipated that drilling will proceed approximately 10 feet into soils that appear to be un-impacted according to visual and PID assessment in the field. If no impacts are observed at a particular on-site boring location, the boring will terminate at the top of the clay layer, which is anticipated at approximately 60 feet bgs. Any deep drilling through impacted zones will ensure that there is no vertical communication of DNAPL caused by the drilling. Specifically, the upper potentially-impacted units would be cased and sealed into a lower, more confining unit. Drilling methods and procedures will be consistent with the FSP included as Appendix D.

Drilling equipment (i.e., drilling rods, auger, casing, and/or macro-core sampler) will be decontaminated between each sample location. Soil cuttings and decontamination fluids will be

collected in 55-gallon United States Department of Transportation (USDOT) drums, lined roll-off or frac tank and will be disposed of by NGRID following characterization.

Up to three soil samples per boring will be selected for chemical analysis. The first soil sample will be collected from the depth interval indicating the greatest apparent degree of contamination, from beneath the pavement and road base to approximately 5 feet bgs during utility clearance activities, to evaluate shallow subsurface soil conditions for determination of potential exposure pathways at the site. A sample will also be collected during boring advancement at the depth interval indicating the greatest degree of impacts to evaluate the magnitude of the observed impacts at each boring. The greatest degree of contamination will be identified by field screening of the borings with a PID, and by visual and olfactory observations. If soils within a particular boring appear un-impacted then a sample will be collected from the observed groundwater table. A sample will be collected beneath MGP impacts, if present, at the completion of the boring.

Each sample will be analyzed for VOCs by EPA Method 8260B, SVOCs by EPA Method 8270C, TAL metals by EPA Method 6000/7000 series, and free cyanide [extraction by EPA Method 9013A and analysis by Microdiffusion ASTM Method D4282-02]. One sample from within the fill in each soil boring will be analyzed for herbicides by EPA Method 8151A, PCBs by EPA Method 8082 and pesticides by EPA Method 8081A. Environmental forensic analysis of PAHs may be used to evaluate co-mingled or non-MGP related impacts.

Geotechnical parameters will also be evaluated during the RI. Three samples of the clay layer will be analyzed for permeability and Atterberg limits. The fill and glacial outwash layers will also be analyzed for grain size by ASTM method D421/422, moisture content by ASTM method D-2216, and total organic carbon by ASTM method D2974 at 10 to 20 representative sample locations.

Following the collection of subsurface soil samples, each subsurface soil boring not completed as a well (Section 5.3.4) will be abandoned by tremmie grouting the boring from the bottom of the boring to the top in accordance with the FSP (Appendix D).

Each sampling implement will be decontaminated in accordance with decontamination procedures described in the FSP. QA/QC procedures are detailed within the QAPP located in Appendix F. QA/QC samples will include blind duplicate soil samples, MS/MSD samples, and equipment rinsate blank samples. The quality control samples will be completed at a frequency of 1/20. An approved NYSDOH ELAP registered laboratory will perform the analyses. One trip blank will be included per shipment of samples to the laboratory.

5.2.5 Monitoring Well Installation

Fifteen (15) of the proposed soil borings (WW-MW-01 through WW-MW-08 and WW-MW-10 through WW-MW-16) will be completed as permanent monitoring wells. As noted in Section 5.2.4, proposed monitoring well WW-MW-09 cannot be completed at this time due to access restrictions at 20 North 12th Street. Soils at each of the monitoring well locations will be continuously logged as described in Section 5.2.4. Temporary groundwater points will be installed and sampled at three locations (WW-SB-03, WW-SB-05 and WW-SB-07). The locations of the borings and the proposed analysis are shown on Plate 1 and Table 2, respectively. The permanent monitoring wells are proposed to evaluate the groundwater conditions at and immediately adjacent to the Williamsburg former MGP. Two of these monitoring wells will be placed downgradient of the Site, adjacent to the East River. Temporary groundwater points are proposed to evaluate the conditions immediately within the footprint of former MGP structures. Each monitoring well/ point will be installed in general accordance with procedures described below and within the FSP (Appendix D).

Each proposed monitoring well will be screened in the uppermost portion of the water table aquifer. Each well screen will extend approximately two feet above the water table. If DNAPL is encountered in the soil boring, the well screen bottom will be installed on top of any observed confining layer that may be retarding the migration of DNAPL. The screen lengths will not exceed 10 feet. Based upon the vertical extent of DNAPL tar, deep groundwater monitoring wells may be considered. The installation method selected for the deep wells will depend on the depth of contamination, the number of anticipated deep wells, and on the physical drilling conditions.

The monitoring wells will be constructed of 2-inch inside diameter (ID), flush-threaded polyvinyl chloride (PVC) screen and solid casing with a 2-foot sump. The annular space between the well screen and borehole wall will be backfilled with chemically inert sand to promote sufficient groundwater flow to the well and to minimize the passage of any fine-grained formational material into the well. A bentonite clay seal will be placed above the sand pack. The remaining annular space will be filled to grade with cement/bentonite grout. Each monitoring well will be fitted with a lockable cap and finished with a flush-mounted curb box secured with cement.

Temporary points will be constructed of a PVC screen and riser or collected through a stainless steel groundwater sampler. Each temporary groundwater point will be abandoned by tremmie grouting the boring from the bottom of the boring to the top in accordance with the FSP (Appendix D).

Soil cuttings and decontamination fluids generated during the installation of monitoring wells will be collected in 55-gallon USDOT drums, lined roll-off or frac tank and will be disposed of by NGRID subsequent to characterization.

5.2.6 Well Development

Each newly installed monitoring well will be developed by alternatively surging and pumping until the turbidity is less than 50 nephelometric turbidity units (NTUs) or until a maximum of 10 well volumes of water have been removed. A field turbidity meter will be used to monitor the NTU levels. Well development will be completed in general accordance with the FSP in Appendix D. Purged groundwater will be containerized in 55-gallon USDOT drums or frac tank and will be disposed of by NGRID at an approved facility.

5.2.7 Groundwater Sample Collection

The fifteen (15) proposed RI monitoring wells will be gauged and sampled. Each of the newly installed monitoring wells will be sampled after a minimum of two weeks following completion of well development. Prior to sampling, two synoptic rounds of groundwater level measurements will be recorded for the monitoring wells and an established surface water measuring point in the East River; the groundwater will be gauged at both the low tide and high tidal levels.

Monitoring wells will be purged and sampled utilizing low flow groundwater sampling procedures and in accordance with the FSP (Appendix D). Each groundwater sample will be analyzed for VOCs by EPA Method 8260B, SVOCs by EPA Method 8270C, TAL metals by EPA Method 6000/7000 series, herbicides by EPA Method 8151A, pesticides by EPA Method 8081A, PCBs by EPA Method 8082and cyanide by EPA Method 9012.

If DNAPL accumulation is present in any well, then no groundwater sample will be collected for laboratory analysis. If DNAPL is found to accumulate in a well, then the DNAPL will be bailed or pumped from the well and the volume of bailed DNAPL tar will be recorded. The DNAPL recovered from each well will be examined and described by the consultant's field representative. All DNAPL removed from a well will be containerized for disposal. The recovery rate of the DNAPL will be assessed through periodic measurements of DNAPL levels with an oil/water interface probe. DNAPL levels in each monitoring well will be measured and recorded with the time of the measurement after the DNAPL tar has been removed. If present a sample of the accumulated tar may be analyzed for disposal characteristics.

QA/QC procedures are detailed within the QAPP located in Appendix F. QA/QC samples will include blind duplicate soil samples, MS/MSD samples, and equipment rinsate blank samples. The quality control samples will be completed on a frequency of 1/20. An approved ELAP laboratory will perform the analyses. One trip blank will be included per shipment of samples to the laboratory.

5.2.8 Hydraulic Conductivity Testing

In-situ hydraulic conductivity tests (slug tests) will be completed at three (3) selected monitoring wells. The location of the slug tests will be determined after evaluation of the site lithology.

5.2.9 Sediment Sample Collection

A total of seven (7) sediment core locations (WW-SED-01 through WW-SED-07) are proposed for installation in the East River adjacent to the Williamsburg former MGP site. The proposed sediment core locations are shown on Plate 1. Table 2 provides sample description, rationale, and analysis.

Sediment core samples will be collected from a barge using an electric or pneumatically driven vibracore. The sediment cores will be collected in general accordance with the standard operating procedure for sediment sampling using vibratory equipment. The barge will be equipped with oil absorbent boom and other spill control materials in the event that any oily residue is generated during the sampling process.

Sediment cores will be advanced to a depth of 20 feet below the sediment water interface or to vibracore refusal. Sediment samples will be collected and logged continuously from each core location. Sediment sampling methods and procedures will be consistent with the FSP in Appendix D. Core locations will be surveyed using Global Positioning System (GPS) equipment and referenced to New York State Plane Coordinate System and North American Vertical Datum (NAVD).

Up to three sediment samples per core location will be selected for chemical analysis. The first sediment sample will be collected from 0 to 6 inches to evaluate the bioactive zone. A sample will also be collected at the depth interval indicating the greatest degree of impacts to evaluate the magnitude of the observed impacts at each sediment core location. The greatest degree of contamination will be identified by field screening of the cores with a PID, and by visual and olfactory observations. If no impacts are observed, analytical samples will be collected from the sediments at the interface of the sediment deposits and the native material. A sample will also be collected beneath the DNAPL impacts, if present, or at the completion of the coring run.

Each sample will be analyzed for VOCs by EPA Method 8260B, SVOCs by EPA Method 8270C, TAL metals by EPA Method 6000/7000 series, and free cyanide [extraction by EPA Method 9013A and analysis by Microdiffusion ASTM Method D4282-02], herbicides by EPA Method 8151A, PCBs by EPA Method 8082 and pesticides by EPA Method 8081A. Environmental forensic analysis of PAHs may be used to evaluate co-mingled or non-MGP related impacts.

Each sampling implement will be decontaminated in accordance with decontamination procedures described in the FSP in Appendix D. QA/QC procedures are detailed within the QAPP located in Appendix F. QA/QC samples will include blind duplicate sediment samples, MS/MSD samples, and equipment rinsate blank samples. The quality control samples will be completed at a frequency of 1/20. An approved NYSDOH ELAP registered laboratory will perform the analyses. One trip blank will be included per shipment of samples to the laboratory.

5.2.10 Soil Vapor Sample Collection

Soil vapor sampling is proposed for the building located at 35 Kent Avenue. Two (2) soil vapor samples (WW-SV-01, WW-SV-02) are proposed for collection to assess the soil vapor conditions beneath this building. Soil vapor sampling cannot be conducted at this time at the buildings occupied by Citistorage on 2 North 11th Street and 20 North 12th Street because of access restrictions. In addition the structure occupying 50 Kent Avenue is slated for demolition; therefore, soil vapor sampling will not be conducted at this time either.

Each soil vapor point will be installed and samples will be collected in general accordance with the New York State Department of Health's *"Guidance for Evaluating Soil Vapor Intrusion in the State of New York"* and National Grid's *"Draft Standard Operating Procedures for Soil Vapor Intrusion Evaluations at National Grid MGP Sites in New York State."*

Soil vapor points installed within building interiors will be installed and completed as permanent sub-slab soil vapor points. Sub-slab soil vapor points will be installed by drilling a hole through the concrete floor slab and then fitting the point with Teflon or stainless steel tubing secured with stainless steel fittings and cap. Each sub-slab soil sample port will be sealed with non-shrinking grout or beeswax and completed with flush-mount manhole covers.

Temporary soil vapor sample points installed outside of buildings will be advanced approximately 5 feet bgs, or 1 foot above the water table. Temporary points will be constructed utilizing a stainless steel screen that is fitted to Teflon or stainless steel tubing secured with stainless steel fittings and caps to the ground surface. The annular space around the screen will be backfilled with inert silica to a minimum of 6 inches above the screen. A bentonite seal will be placed above the sand and the reminder of the annulus will be filled with soil cuttings. The sampling port will be sealed with a 2-inch layer of bentonite paste at the surface.

To ensure that the sampling tube is sealed from the ambient air aboveground, the consultant will utilize helium as a tracer gas as described in the NYSDOH Soil Vapor Intrusion Guidance document. Each sample will be collected utilizing a SUMMA® canister with a laboratory-calibrated flow controller that will not exceed 0.2 liters/minute. Each SUMMA® canister will be shipped to an approved-NYSDOH ELAP registered laboratory for analysis. The sample will be analyzed for VOCs and naphthalene by the EPA Method TO-15 (including naphthalene). The

soil vapor sampling will target the winter heating season between November 15 and March 30 in accordance with NYSDOH Soil Vapor Guidance.

QA/QC procedures are detailed within the QAPP located in Appendix F. QA/QC samples will include one blind duplicate sample collected during each sampling event. An approved NYSDOH ELAP registered laboratory will perform the analyses.

5.2.11 Indoor and Outdoor Air Sample Collection

Two (2) indoor air samples (WW-IA-01, WW-IA-02) and one (1) outdoor ambient air samples (WW-OA-01) are proposed to be collected as part of the Williamsburg RI. The ambient air samples will be used to assess the potential for soil vapor intrusion into the building at 35 Kent Avenue. Soil vapor intrusion assessment at 2 North 11th Street and 20 North 12th Street cannot be conducted at this time due to access restrictions and the building occupying 50 Kent Avenue is slated to be demolished; therefore soil vapor intrusion assessment will not be conducted there either. The proposed locations are shown in Plate 1 and the rationale and analysis are provided in Table 2.

The proposed air samples will be collected from the approximate breathing height (approximately 3 to 5 feet above ground). Each indoor air and outdoor air samples will be collected utilizing an individually certified 6-Liter SUMMA® canister with a laboratory-supplied flow controller that is calibrated to an 8-hour period. The regulator flow rate will not exceed 0.2 liters per minute. Each SUMMA® canister will be shipped to an approved-NYSDOH ELAP registered laboratory for analysis. The samples will be analyzed for VOCs and naphthalene by the modified EPA Method TO-15.

QA/QC procedures are detailed within the QAPP located in Appendix F. QA/QC samples will include one blind duplicate air sample (indoor or outdoor air sample) collected during each sampling event. The ambient air sampling will target the winter heating season between November 15 and March 30 in accordance with NYSDOH Soil Vapor Guidance.

Property information will also be collected in general accordance with the NYSDOH Center of Environmental Health's Indoor Air Quality Questionnaire and Building Form that is provided as Appendix B of the New York State Department of Health's *"Guidance for Evaluating Soil Vapor Intrusion in the State of New York"* and NGRID's *"Draft Standard Operating Procedure-Soil Vapor Intrusion for MGP Sites in New York,"* which is located in the FSP in Appendix D.

5.2.12 Air Monitoring Implementation

A Community Air-Monitoring Plan (CAMP) will be implemented at the site during intrusive field activities. The CAMP will meet the requirements of the NYSDOH's Generic CAMP contained in Appendix 1 of NYSDEC's *Draft DER-10 Technical Guidance For Site*

Investigation and Remediation, dated December 25, 2002. Air quality will be monitored upwind and downwind of each intrusive work area (i.e., boring, monitoring well and test pit locations). VOCs and respirable particulates (PM-10) will be monitored upwind and downwind on a continuous basis. Wind direction will be determined using a wind sock(s) and/or flagging poles installed on site.

Total volatile organic vapors will be monitored using a PID. Particulate dust will be monitored using a DataRAM particulate meter or equivalent. The equipment will be calibrated at least daily or in accordance with manufacturers' recommendations. The proposed CAMP is presented in Appendix C of this work plan.

5.2.13 Decontamination and Investigation-Derived Wastes

Drilling equipment will be decontaminated at the established decontamination pad between each sample location in accordance with the FSP in Appendix D. Sampling equipment used for sample collection (e.g., stainless steel split spoons, sample spoons, and hand trowels) will be decontaminated prior to use and reuse or disposable sampling equipment will be used.

Soil cuttings and wastewaters produced during decontamination will be collected and contained within 55-gallon USDOT drums, roll-off or frac tank. NGRID will arrange for the disposal of the investigation-derived wastes after they have been characterized at the completion of the field program.

5.2.14 Waste Characterization Sample Collection

As stated above, NGRID will arrange for the disposal of the investigation-derived wastes at the completion of the RI field program.

A waste profile sample of soil and fluid investigation-derived wastes will be collected to characterize the wastes to determine the appropriate disposal options available. Samples will be collected into laboratory-preserved bottles, chilled with ice and submitted to the laboratory under chain of custody as described in the FSP and QAPP. Each disposal sample media will be sampled for parameters to meet the requirements of the approved disposal facilities. A list of potential disposal parameters is provided in the QAPP.

5.3 Survey

Each of the completed RI sample locations including test pits, soil borings, temporary groundwater points, monitoring wells and soil vapor locations will be surveyed by a New York State Licensed Land Surveyor. The elevation of each temporary monitoring well will be determined to ±0.01 foot and will be tied into the site benchmark. All locations and elevations will be referenced to the New York State Plane Coordinate System and NAVD.

5.4 Quality Assurance/Quality Control and Data Validation

An approved ELAP laboratory will provide New York State Category B data deliverables for all samples analyzed as part of the RI. The data will be validated in accordance with New York State Analytical Service Protocols (NYSASP). A data usability summary report will be prepared documenting the adequacy of the analytical data obtained from the laboratory and discussing any pertinent data excursions or limitations on the use of the data. The data usability report will be used in preparing the RI Report, and will be submitted as part of the RI Report. QA/QC procedures and data validation requirements for this RI are further addressed in the QAPP located in Appendix F.

5.5 Qualitative Human Health Exposure Assessment

A QHHEA will be prepared for the Williamsburg former MGP site. This assessment will generally follow the guidelines provided in the New York State Department of Health *Qualitative Human Health Exposure Assessment* (Appendix 3B to NYSDEC's December 2002 *Draft DER-10 Technical Guidance for Site Investigation and Remediation*). In general, the assessment will identify the exposure setting, identify exposure pathways, and evaluate the fate and transport of the identified contaminants of concern. The QHHEA will include all environmental data gathered pertaining to the RI. The qualitative assessment will identify potential risks for specific potential receptors based on complete pathways of exposure to contaminant levels exceeding default "screening criteria," such as the NYSDEC Part 375 soil standards and groundwater standards. The assessment will be used to render an opinion as to whether potential complete exposure pathway(s) and/or risk exist for potential receptors.

5.6 Step I Fish and Wildlife Resource Impact Analysis

A Step I FWRIA will be completed for the site. The Step I analysis will be conducted in accordance with the current version of NYSDEC's *Fish and Wildlife Impact Analysis for Inactive Hazardous Waste Sites* (*FWIA*). The general objectives of the Step I assessment are:

- Identify the fish and wildlife resources, habitats, cover type, wetland and stream classifications at the site and in the vicinity
- Identify the fauna expected within each cover type and aquatic habitat
- Document observations of stress to the site soils and vegetation
- Describe the value of habitat to expected fauna
- Describe the value of the fish and wildlife resources to humans
- Determine whether contaminants are present that potentially could affect the expected fish and wildlife resources
- Recommend whether a Step II FWRIA is warranted

The findings of the Step I FWRIA will be included in the RI Report.

6. RI Report Preparation

A RI report will be prepared for submittal to NYSDEC and NYSDOH. The report will present the findings of the RI and will describe the nature and extent and fate and transport of all encountered contaminants associated with the Williamsburg former MGP. The RI report will identify specific contaminant concentrations throughout each media (e.g., soil, groundwater, soil vapor, sediment, etc.) and compare contaminants of concern against appropriate regulatory criteria, which is necessary to assess whether any media require remediation or further evaluation. The RI report will also incorporate the findings of the hydraulic conductivity testing, QHHEA and Step I FWRIA.

7. Schedule

NGRID is actively procuring consultant services to implement this RI scope of work. A detailed schedule will be established upon the approval of this work plan and prior to commencing RI field activities. NGRID will notify NYSDEC five working days prior to the anticipated start date of the remedial investigation program.

Sanborn Fire Insurance Maps. 1887, 1905, 1916, 1941, 1951, 1965, 1978, 1979, 1980, 1981, 1982, 1983, 1986, 1987, 1988, 1989, 1991, 1993, 1995, and 1996.

Tables

Table 1
Summary of Environmental Records Information
Williamsburg Works MGP Site
Brooklyn, New York

On Site				Abutting Properties				Properties within One Block			
Parcel I.D. No.	Company Name	Facility Operations (years)	Ranking	Parcel I.D. No.	Company Name	Facility Operations (years)	Ranking	Parcel I.D. No.	Company Name	Facility Operations (years)	Ranking
1	NYC Department of Sanitation	Service Garage SQG/AST/UST (1970s-present)	Moderate chem-oil use & storage/moderate potential for release/on site >10 yrs.	3	North 12th Street Pro./Bayside Fuel Oil Dept. Corp./Transgas Energy Systems/Paragon Oil Co. Division of Texaco, Inc./Standard Oil Co.	Bulk Fuel Terminal/Refinery SQG (1880s-present)	Large chemical & oil use & storage/ abutting site/high potential for release/>20yrs	7	Hecla Iron Works	Iron Works (1900s-1920s)	Moderate chem-oil use/moderate potential for release/one block fr. site >10 yrs./upgradient fr. site
1	Commercial Corrugated Container Corporation	Manufacturing (1960s-1970s)	Minimal chem-oil use/minimal potential for release/on-site ≤10 yrs.(short duration)	4	Standard Oil Company	Petroleum Refinery (1900s-1920s)	Large chemical & oil use & storage /abutting site/high potential for release/≥20yrs	8	New York Quinine & Chemical Works, Inc.	Chemical Manufacturing (1880s-1950s)	Moderate chem-oil use/moderate potential for release/one block fr. site >10 yrs./upgradient fr. site
1	Ferro-Co. Corporation	Sheet Metal Product Manufacturer (1950s-1960s)	Moderate chem/oil use & storage/moderate potential for release/on site >10 yrs.	5	Hemisphere Steel Products/Parker Steel Products	Steel Product Manufacturer/SQG (1960s-present)	Moderate chem-oil use/moderate potential for release/abutting site >10 yrs.	9	Tuttle & Bailey Manufacturing Co.	Hot Air Ventilation & Register Factory/Foundry (1880s-1930s)	Moderate chem-oil use/moderate potential for release/one block fr. site >10 yrs./upgradient fr. site
2	Unknown	Oil truck parking (1970s-1980s)	Moderate chem/oil use & storage/moderate potential for release/on site >10 yrs.	6	Arkell Safety Bag Co.	Elastic Paper Lining Manufacturer (1900-1940s)	Moderate chem-oil use/moderate potential for release/abutting site >10 yrs.	10	Hecla Iron Works	Mill Works/Foundry (1880s-1930s)	Moderate chem-oil use/moderate potential for release/one block fr. site >10 yrs./upgradient fr. site
13	Unknown	Scrap Metal Yard/Repair Shop (1960s)	Large chem-oil use & storage/on-site/high potential for release	11	Pratt Manufacturing Company/Standard Oil Company of New York	Oil Company (1880s-1940s)	Moderate chem-oil use/moderate potential for release/abutting site >10 yrs.				
13	North 12th Street Transfer Station	SWF/Spills	Large chem-oil storage/on-site/high potential for release/ documented impact	12	Hildreth Varnish Company/C.C. Reed & Company	Varnish Manufacturer (1880s-late 1940s)	Moderate chem-oil use/moderate potential for release/abutting site >10 yrs.				

Notes:
AST - aboveground storage tank
SWF - solid waste facility
SQG - small quantity generator of hazardous waste
UST - underground storage tank

Soil Vapor Sample Locations														
WW-SV-01	Block 2288, Lot 1, within the footprint of the former gas holder	Soil vapor sample to screen the soil conditions within the footprint of the former gas holder	Beneath the building slab	0	0	1								X
WW-SV-02	Block 2288, Lot 1, within the footprint of the former gas holder	Soil vapor sample to screen the soil conditions within the footprint of the former gas holder	Beneath the building slab	0	0	1								X
Indoor Air Sample Locations														
WW-IA-01	Block 2288, Lot 1	Sample to evaluate indoor air quality at the building located at Block 2288, Lot 1	At the height of the breathing zone	0	0	1								X
WW-IA-02	Block 2288, Lot 1	Sample to evaluate indoor air quality at the building located at Block 2288, Lot 1	At the height of the breathing zone	0	0	1								X
Outdoor Air Sample Locations														
WW-OA-01	North 12th Street, adjacent to Block 2288, Lot 1	Sample to evaluate ambient air quality outside of the building located at Block 2288, Lot 1	At the height of the breathing zone	0	0	1								X

Notes:
Chemical analysis test methods specified are from U.S. EPA SW-846 test methods
EPA TO-15 analysis will include VOCs and naphthalene
EPA - Environmental Protection Agency
VOC - volatile organic compounds
SVOC - semivolatile organic compounds
TAL - target analyte list
PCBs - polychlorinated biphenyls
bgs - below ground surface
[1]-One sample from within the fill in each soil boring
[2]-Soils will be analyzed by Free Cyanide [extraction by EPA Method 9013A and analysis by Microdiffusion American Society for Testing and Materials (ASTM)]

EDR® Environmental Data Resources Inc

The complete Sanborn Library collection has been searched by EDR, and fire insurance maps covering the target property location provided by GEI Consultants Inc. were identified for the years listed below (selected maps only*). The certified Sanborn Library search results in this report can be authenticated by visiting www.edrnet.com/sanborn and entering the certification number. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by Sanborn Library LLC, the copyright holder for the collection.

Certified Sanborn Results:

Site Name: Williamsburg MGP
Address: Kent Ave
City, State, Zip: Williamsburg, NY 11211
Cross Street:
P.O. # NA
Project: Williamsburg
Certification # EA8F-42E4-9D99

* Environmental Data Resources, Inc. has been instructed by GEI Consultants Inc. to print ONLY the Sanborn Maps for the years listed below:

1981 (2)	1941 (2)
1980 (2)	1916 (2)
1979 (2)	1905 (2)
1978 (2)	1887 (1)
1965 (2)	
1951 (2)	

Total Maps: 19

Sanborn® Library search results
Certification # EA8F-42E4-9D99

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ✓ Library of Congress
- ✓ University Publications of America
- ✓ EDR Private Collection

Limited Permission To Make Copies

GEI Consultants Inc. (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL RECORDS

CERCLIS-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/21/2007 has revealed that there is 1 CERC-NFRAP site within approximately 0.625 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
SERVICE PLATING CO LTD	***154 N 7TH ST***	***1/4 - 1/2 S***	***AJ238***	***815***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/18/2007 has revealed that there is 1 CORRACTS site within approximately 1.125 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
RADIAC RESEARCH CORP	***33 S FIRST ST***	***1/2 - 1 SW***	***AP273***	***924***

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/11/2007 has revealed that there is 1 RCRA-TSDF site within approximately 0.625 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
RADIAC RESEARCH CORP	***33 S FIRST ST***	***1/2 - 1 SW***	***AP273***	***924***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/11/2007 has revealed that there are 5 RCRA-LQG sites within approximately 0.375 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/11/2007 has revealed that there are 3 RCRA-SQG sites within approximately 0.375 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/11/2007 has revealed that there are 5 RCRA-CESQG sites within approximately 0.375 miles of the target property.

EXECUTIVE SUMMARY

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 09/11/2007 has revealed that there are 25 RCRA-NonGen sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

FTTS: FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act) over the previous five years. To maintain currency, EDR contacts the Agency on a quarterly basis.

A review of the FTTS list, as provided by EDR, and dated 07/06/2007 has revealed that there is 1 FTTS site within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
EATON ALLEN CORP	67 KENT AVE	0 - 1/8 SSW	C43	128

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there is 1 HIST FTTS site within approximately 0.125 miles of the target property.

EATON ALLEN CORP	67 KENT AVE	0 - 1/8 SSW	C37	112

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 10/18/2007 has revealed that there are 13 FINDS sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

STATE AND LOCAL RECORDS

HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 HSWDS site within approximately 0.625 miles of the target property.

BUG, WILLIAMSBURG WORKS	KENT AVENUE, NORTH 12TH	0 - 1/8	A7	16

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, and dated 08/15/2007 has revealed that there is 1 SHWS site within approximately 1.125 miles of the target property.

HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 25 HIST LTANKS sites within approximately 0.625 miles of the target property.

EXECUTIVE SUMMARY

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the UST list, as provided by EDR, and dated 10/02/2007 has revealed that there are 31 UST sites within approximately 0.375 miles of the target property.

CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 CBS UST sites within approximately 0.375 miles of the target property.

EXECUTIVE SUMMARY

MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 MOSF UST sites within approximately 0.625 miles of the target property.

HIST SPILLS: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 55 NY Hist Spills sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the VCP list, as provided by EDR, and dated 08/15/2007 has revealed that there are 3 VCP sites within approximately 0.625 miles of the target property.

EDR PROPRIETARY RECORDS

EDR Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there are 3 Manufactured Gas Plants sites within approximately 1.125 miles of the target property.

MANHOLE 4353 (Continued) **S104510275**

CAS Number: Not reported
Last Date: 19940929
DEC Remarks: Con Ed e2MIS notes: Approx. 2 gallons of an unknown solid oily substance on walls of MH-4353. No water in manhole. Spill appears to be contained. Two liquid samples PBD ID) taken. 4/5/00, 2255 hrs: Analysis indicates presence of a substance similar to a heavy fuel oil. 54 ppm PCBs. 4/7/00, 2230 hrs: drain is cemented. Barrels were picked up. Clean up completed by double washing structure with biogen 760. Liquid waste removed by tanker. Solid waste placed into 2 barrels and picked up byAstoria transp. for disposal. No sump. No leaking equipment. Over 50 ppm clean up paperwork retained with Env. Ops.

As for now will remain as Third Party spill. LAB RESULT RECEIVED 7/8/02 - 2154 02-06294 FLASH POINT >140 DEG F. LAB RESULT RECEIVED 7/8/02 - 2252 02-06292 <1 ppm PCB. LAB SEQ 02-06293-001 - THE SAMPLE IS TO DEGRADED TO DETERMINE THE SOURCE. HOWEVER THEREARE CARACTERISTICS WHICH ARE SIMILAR TO A HEAVY FUEL. 7/9/02 @ 1430 D.E.C K.FOLEY ARRIVED ON LOCATION INSPECTED JOB & REQUESTED WE REINSPECT STRUCTURE A FEW DAYS AFTER CLEANUP COMPLETED FOR SOURCE OF OIL SEEPAGE. UPDATE 7/9/02 - 2300 VS3477 AND MH 63427 STEAM CLEANED & DOUBLE WASHED BY CLEAN HARBORS. IN MH 63427 OIL OOZING FROM SEAM BETWEEN WALLS & CEILING & DUCTS. SUMP FOUND CEMENTED. TAG REMAINS IN PLACE PENDING INSPECTION OF BOTH STRUCTURES IN A FEW DAYS AS PER DEC. Update 7/12/02 1100 hrs - C. Fernandez reports that when he inspected MH 63427, he found oil on water an on the walls. Another inspection will be done on Monday 7/15/02. Update 7/23/02 1330 hrs - R. Cosentino reports he found 3 unidentified monitoring wells in the area of the involved company structures. R. Cosentino reported this information to Jane O'Connell of the DEC. DEC will follow up with an investigation to whom the wells belong to. UPDATE 8/6/02 - 0940 STRUCTURE INSPECTED. MR. WALKER FOUNDAPPROX 1 GAL OF OIL ON APPROX 300 GALS OF WATER. FOLLOW UP INSPECTION BY D.E.C. IS SCHEDULED FOR TOMORROW (8/7/02). UPDATE 01-AUG-2002 11:48 HRS WHILE ON LOCATION TO MEET WITH DEC REP. & EH&S R.JAMES DISCOVERED APPROX. 1 QT OF UNKNOWN & 200 OF WATER IN VS-3477. 3 LIQ. SAMPLES TAKEN FROM SPILL 1 FOR PCB, 1 FOR ID AND 1 FOR SULPHUR CONTENT. ALSO FOUND IN M-63427 APPROX. 1 QT OF UNKNOWN OIL ON 100 GALS OF WATER. 3 LIQ. SAMPLESTAKEN FROM SPILL 1 FOR PCB, 1 FOR ID AND 1 FOR SULPHUR CONTENT. Update 8/7/02: Ron James met with DEC Rep Jane O'Connell at the spill vaults, to determine the source of the reoccurring oil in these structures. Ms. O'Connell visited the nearby Bayside Fuel Oil plant. She felt that it was unlikely that they werethe source of the oil in the structures. She felt if was probably residual #6 fuel oil from a Con Edison Fuel line spill in 1992. At her sugggestion, after the next cleanup we will inspect the duct lines coming from the direction of Kent Ave for residual #6 fuel oil. Wednesday, August 07, 2002 8:26 PM Lab Sequence Number:

MANHOLE #63427 VS/3477 (Continued) **S106005388**

02-07395-001 STRUCTURE: MANHOLE 63427 - analysis indicates the presence of a substance similar to a degraded mixture of a light and a heavy fuel oil. 2/28/03: At therequest of M. Sicherman, Responsible Operation was changed from Networks to EHS - Remediation. DEC inspector's notes: 7/8/02, 10:15 AM - According to Mike Kessler (ERT), Transmission Ops did investigate. Pipeline No.7 drained/capped in 1999. There is a fill line for nearby building near manhole. Crew still on-site performing clean up. Did no know when manhole was last opened. Trans Ops claims there would be oil in more manholes if related to pipeline no. 7. (KMF) 7/9/02: met at site with Tino Fernandez (Env. Ops.). Located on dead-end street across from Bayside Fuel Oil company. Approx. 400 gallons #6 oil in MH63427 & VS3477. MH and VS are located approx. halfway down N. 12th St. to west of Kent Ave. Pipeline No. 7 runs along Kent Ave (drianed/capped 1999). Clean Harbors supervisor Jeb Cook is on-site with crew. Once they clean MH and VS, Con Ed can determine where oil is seeping from. (KMF). 8/7/02: Met with Ron James (B/Q EH&S). Heavy oil found in manhole and transformer vault on south side of N. 12th Street. After reviewing file for DEC #9202230 (5/23/92), we agree that these structures were initially impacted be leak from Pipeline #7 at corner of N. 12th St/Kent Ave. The oil ID fromthe structure is "heavy fuel oil" According to e2mis report, the vault was "steam cleaned" last week, but there is still #6 oil visible on sides of transformer. There are a number of groundwater monitoring wells in the vicinity of the vault. Thevault lies across the street from the Bayside oil terminal. I interviewed the site manager and the on-site consultant (TRC) - both indicated that their wells are confined to within the property boundaries, and that there was little impact on southside of their property. Vault is also adjacent to a NYD Sanitation garage. I spoke with Jake Krimgold (DDC monitor) - he indicated that off-site wells are probably his, but that there was no free product. I will look at boring logs for well installations and see if there is any evidence of #6 oil contmaination (as opposed to diesel, which was the focus of their investigation). (JHO) Update 6/9/06 Spill closed based on final site investigation report located in eDocs App. B Site 25. (SKA) 11/7/06 - spill reopened based on phone call from Matthew Madsen (Con Ed remediation). Manhole was inspected yesterday and was apparently never cleaned out. i requested a revised e@mis report, and requested that adjacent and adjoining structures be inspected for evidence of additional oil. (JHO) END DECRemark - 0203699

DEC Memo:	Start CallerRemark - 9202230 AT RAVENSWOOD GS OIL 20" PIPELINE LEAK; FD, SANITATION, DEP HAZ MAT & IWCS NOTIFIED. AAA POLLUTION ON SCENE. END CallerRemark - 9202230
Remarks:	Start DECRemark - 9202230 Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL" 5/23/92, 11:45 AM: Sigona arrived on site. NYCDEP (Stan Siedenberg) already on-site. Depth to line approx. 6.5 feet, 20" line. Time of discovery - FDNY called Con Ed at 0445 hrs. Con Ed John Mitchell (Supt. of Fuel Oil pipelines) arrived at 0650 hrs. Confirmed leak with CIG at 0759 hrs. Observed oil into top of sewer manhole, oil in catch basins, oil in NY Telephone service box (NYTel notified by CIG). 3,000 gallons removed thus

N 12TH ST & KENT AVE (Continued) **S102142914**

far by AAA Polution Control. Also, AAA removed 2 large piles of contaminated soil (approx. 10-15 cu. yds. each). Excavation for pipeline is currently approx. 14' long by 5' wide along east side of center line of roadway (Kent Ave.). 3 Con Ed workers are shoveling oil saturated dirt from bottom of trench as AAA is pumping free product. According to John Mitchell (Con Ed), they are purging back to N. 1st Street terminal at 10 psi pressure.Valves at either end of leak area are closed (11t St. and Oak Ave.). There is an offset in the pipeline so that it can go around a sewer line. Oil is surging from hole in line observed at 13:20 hrs as the line is exposed (leak is on upper west side surface of pipeline). Oil is flowing freely into the trench as soil is removed. Hole is filled with between 100-300 gallons oil oil as it is being pumped. NYCDEP IWCS (Sagar Chatergee) arrived at 2:00 PM. He will get maps of sewers and investigate any sewer contamination. At 4:05 PM he informed Sigona that catch basins lead to 156" twin storm drains. Notified USCG (Lt. Mark Maser) at 4:15 PM of possible release from storm sewers to East River. By 5 PM, 3 vac trucks hadbeen filled (approx. 8,000 gallons) and taken off-site by AAA. At 6:20 PM, observed sheen on East River with Coast Guard and DEP. At 7:30 PM, while walking along N. 12th St. from Kent Ave to River, observed oil in two manholes (open gratingon transformer manhole). (AJS) 6/17/92, 12:25 PM: Observed new collar on pipeline, examined pipeline repair. Met with Harry Coates, Carmine Sabatasso (Con Ed). Area is clean - OK to backfill. Observed a few drops of oil in the telephone conduit about 50 feet west of the leak however these conduits will be pressure washed. (AJS) 11/23/94: REASSIGNED FROM SIGONA TO ENGELHARDT ON 11/23/94. APPENDIX B SITE NO. 25/45. TRANSFERRED FROM ENGELHARDT TO O'CONNELL. Update 6/9/06Spill closed based on final site investigation report located in eDocs App. B Site 25. (SKA) END DECRemark - 9202230

DEC Memo:	Start DECRemark - 9600011 Prior to Sept, 2004 data translation this spill Lead DEC Field was "ZHITOMIRSKY" TRANSFERRED FROM Y.KRIMGOLD. Also, refer to spill # 9607376 & 9401167. 12/14/04-Spill Case is trnsferred to I. Islam. The site is under remediation by LiRo Engineers. - II 4/22/05- Reviewed the quarterly monitoring report (Nov./04 - Jan./05). The monitoring data show persistently high level of both soil and groundwater contamination. LiRo claims that the long history of the site foroperation as a manufactured gas plant (MGP) may be the cause of this. However, a letter has been issued in order for LiRo to consider alternative measure(s) to remediate the site. The monitoring report has been installed in the eDoc Folder. - II5/13/05- Afsar Samani of DDC raised the MGP issue of this site in the meeting with DEC on 5/4/05 as LiRo has written them either to increase the cost for remediation of the MGP related contaminants at the site or get the Key Span and/or other responsible agency handle the MGP site through DEC. Koon Tang is exploring with the Central office as to the finding of responsible agency to handle the former MGP site remediation.- II. 5/31/03- Joe Moloughney of Central Office confirmed via email that this site would be remediated under the KeySpan Consent Order for MGP sites. This site has been assigned with # 224055 as the MGP site. Therefore, the spill is closed.- II END DECRemark - 9600011
Remarks:	Start CallerRemark - 9600011 also ground water affected - reprts says that site is contaminated with petro and heavy metals. Also see spill # 9401167. END CallerRemark - 9600011

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Handler accessibilty indicator: Transferred to the program or state equivalent.

Handler Activities Summary:
U.S. importer of hazardous waste: Unknown
Mixed waste (haz. and radioactive): Unknown
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: Unknown
Furnace exemption: Unknown
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Start CallerRemark - 9900693 fire dept manhole - pipeline leaked. clean up in

NORTH 13TH ST & KENT AVE (Continued) **S103936380**

progress. con ed # 124322 END CallerRemark - 9900693

Remarks: Start DECRemark - 9900693 Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL" 4/19/99: On scene Dan Shah (ERT), Bernard Hennelly (Eng. Specialist), Ray Turkin, Barry Korman, John Mitchell. Crews were pulling manholes as precursor to re-starting pigging operation in No. 7 pipeline. Found unknown quantity of unknown oil in manhole marked "FDNY" Looks like aged #6 oil. All service boxes and manholes in area were checked and are clean. Con Ed contacted FDNY maintenancecommunications. Manhole had been paved over - Con Ed crew had to break up asphaly on top of manhole to open it. In addtion to No. 7 pipeline, Bayside Fuel terminal located across the street (on west side of Kent Ave). Chem Lab on-site to take samples for oil ID and PCBs. Con Ed was to resume pigging operation today, but will wait until clean up is complete. FDNY on-site @ 1215 hrs, off site at 1220 hrs. NYCDEP (Keith Williams) on-site at 1220 hrs. (JHO) 1410 hrs: John Mitchell,Con Ed, spoke with FDNY Bob Shields. Manhole is for fire alarm conduits. Con Ed checked other FDNY manholes in every direction from this one - all clean. All State power vac is cleaning the manhole. They will check for sources once manhole is cleaned (seepage through manhole walls, oil in conduits, etc.). Oil ID is due back this afternoon. (JHO) 5/5/99: Manhole is to be monitored for additional oil accumulation. (JHO) e2mis no. 124-322: On April 19, 1999, C. Sabatasso of Transmission Operations reported approx.2.5 gallons of a oily substance between the outer cover and inner pan of a Fire Department Manhole. This is part of the job at Fuel Oil Line #7 pulling manhole covers before start pigging operations. Chem Lab has been notified to come take samples. UPDATE: spoke with C. Sabatasso via phone and was informed that manhole cover had been pull and the amount of the substance had to be changed from 2.5 gallons to 250 gallons of an oily substance. LARGE OIL SPILL CLEANUP CHECKLIST - Material spilled/discovered: Oil FUEL OIL #6. - Sample submitted for analysis? Yes Sample ID No.99-03967 & 03965. - Amount spilled/discovered: 100 GALLONS. - Removed/recovered liquid/solids. - Removed visible traces of oil. - Washed stained areas. - Name of contractor: ALL STATE POWER VAC. - Cleanup completed on Date: 4/19/99 Time: 20:15. Update 6/9/06 Spill closed based on final site investigation report located in eDocs App. B Site 25. (SKA) END DECRemark - 9900693

N 10TH ST/KENT AVE (Continued) **S103272943**

Remarks: EXCAVATING TO DETERMINE THE EXTENT OF THE LEAK END CallerRemark - 9612453
Start DECRemark - 9612453 Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL" 1/17/97 mmm:CALLED BACK JOHN MITCHELL FROM CON ED. #7 PIPELINE UNDER PRESSURE AND CON ED EMPLOYEE FOUND OIL IN ADJACENT ELECTRIC MANHOLE AT INTERSECTION OF KENT AVENUE & N. 10TH STREET. PIPELINE IS BEING TAKEN OUT OF SERVICE AND LOW POUR BEING INTRODUCED. EXCAVATION CREW MOBILIZED TO E.I. & R. 1/18/97:09:00 HRS- UPDATE-STILL DIGGING. NO LEAK FOUND 1/18/97:18:45 HRS- STILLDIGGING, NO LEAK FOUND YET 1/19/97:12:30 HRS - CALL FROM PAUL CARBONE FROM CON ED, STILL EXCAVATIONG ALONG KENT AVENUE. FOUND SMALL AMOUNT OF OIL IN TRENCH BUT NO LEAK ALONG PIPELINE (-20 WINDCHILLS). 1/20/97: MULQUEEN DOES SITE INSPECTION AND DISCUSSES SPILL WITH JOHN MITCHELL. TWO (2) TWENTY YARD ROLLOFFS FILLED WITH PETROLEUM CONTAMINATED SAND. TWO (2) MEG & ONE (1) CLEAN HARBORS VAC TRUCK(S) STANDING BY. THIS PIPELINE SECTION IS OFFSET TO THE WEST TO GO AROUND CON ED ELECTRIC MANHOLE. CON ED DIGGING AND LOOKING AT THE WELDS. FREE PRODUCT NOTED ON WATER TABLE IN POCKETS ALONG PIPELINE. APPROXIMATELY 70 FEET OF PIPELINE EXPOSED AT THIS TIME. 13:30 HRS: RETURN PAGE FROM PAUL CARBONE FROM CON ED. ACCORDING TOPAUL, THE STEAM PLANT IN MANHATTAN IS NOT IN FULL OPERATION AND RAVENSWOOD HAS BEEN GENERATING STEAM TO COMPENSATE, ESPECIALY DURING THE COLD WEATHER. RAVENSWOOD IS RUNNING LOW ON FUEL AND CON ED IS REQUESTING THAT THE PIPELINE IS ALLOWED TO GO BACK IN SERVICE. HE CITED THAT THERE WAS NO PRESSURE DECAY DURING TESTING. I TOLD HIM THAT IT WAS PROBABLY A FALSE POSITVE, DUE TO EXTREME COLD WEATHER. SINCE THIS WAS AN EMERGENCY, I TOLD HIM THAT THEY COULD PUT THE LINE BACK IN SERVICE, PROVIDED THAT THE EXCAVTED AREA IS ROADPLATED AND MONITORED. IF THERE IS ANY OTHER SIGNS OF OIL, THEN THEY ARE REQUIRED TO LAY THE PIPELINE UP AND DO REPAIRS AND CLEANUP. 1/22/97 UPDATE GHK: 10:00 ACCORDING TO JOHN MITCHELL, U.T. THE LINE IS STILL PRESSURIZED. 10:05 MET KAREL KONRAD/CHRISTINE KOVARI ONSITE. HE INDICATED THE FOLLOWING: THE OIL IN THE MANHOLE AND TRENCH WAS SAMPLED AND ANALYZED FOR FINGERPRINT AND PCB'S. THE RESULTS FROM THE TRENCH REVEALED PCB CONCENTRATIONS OF 98 AND 142 PPM. ADDITIONAL SAMPLES WERE COLLECTED TODAY. THE OIL IN THE MANHOLE REVEALED 36 PPM PCB'S. THE FINGERPRINT REVEALED HEAVY FUEL OIL. ALL ANALYTICAL WAS PERFORMED BY CON ED'S ASTORIA CHEM LAB. CON ED WILL PERFORM A SITE CHARACTERIZATION AND INSTALL TWO TO THREE 6" RECOVERY WELLS WITHIN THE EXISTING EXCAVATION (APPROXIMATELY 10 FEET INTO GROUNDWATER) AND INSTALL AT LEAST ONE UPGRADIENT AND ONE DOWNGRADIENT MONITORING WELL. CHRISTINE KOVARI WILL BE THE CON ED PROJECT MANAGER. 2/11/97:GHK update from C. Kovari (Con Ed Remediation) - no oil in recovery wells. 2/13/97: GHK at site with John Mitchell and Christine Kovari. Will return next week to see if any oil enters wells. If it does they will dample for oil ID, if not willanalyze ground water for VOCs and SVOCs via 8021 and 8270 in Friday Feb. 21.

DEC Memo:	Start CallerRemark - 0410252 1 OUNCE ON 20 GALLONS OF WATER: COMING OFF 24 HOUR

VAULT#4146 (Continued) **S106736182**

CLOCK, DUE TO TIME RESTRAINTS: NO TO 5 QUESTIONS: CONED # 156580 END CallerRemark - 0410252

Remarks: Start DECRemark - 0410252 156580 12/14/04 - 1220 R. CHARLES FOUND APPROX 1 OZ OF AN UNKNOWN OIL ON APPROX 20 GALS OF WATER IN THE CEMENT SUMP OF V4146 (FDR - 6B43). SPILL IS CONTAINED TO SUMP. NO SEWERS OR WATERWAYS AFFECTED. THERE IS A SEWER CONNECTION VIA AN UNPLUGGED, DEFECTIVE SUMP PUMP AND PIPING. THE TRAP OF THE PUMP WAS CHECKED AND NO TRACE OF OIL WAS FOUND. TRANSFORMER WAS PRESSURE TESTED AND HELD PRESSURE. TRANSFORMER INSTALLED 1/1/65. HISTORICAL PCB COUNT IS 2 PPM DTD 12/10/02. TAG # 34899 PLACED IN STRUCTURE. PCB SAMPLE TAKEN. CHAIN OF CUSTODY FORM # EE09683 FILLED OUT AN MARKED 'E' PRIORITY. CLEANUP PENDING LAB RESULT. Lab Sequence Number: 04-10382-001 - TOTAL PCB 64 ppm Update 12/15/04 @ 21:00 HRS. A. Walker reports, 75 Gal. liquid removed by ConEd over 50 tanker. 4 drums of solid waste removed and picked up by Astoria drum pickup. Double washed with BG760 and A1 HYDRO, sump found sealed, tag remains in place due to dirt under transformer. Update 1/8/2005 05:00hrs. O.S. B.Bamonte reports on location with Hufford, Eckstein and Glodowski. Structure was double washed with 5 gallons of safety clean detergent. Sump was found cemented. All solids were drummed. One drum was generated consisting of PCB solids, PPE and zone material. No lead. Drum was taken back to 3rd. Ave. yd. under the one trip rule. An >50 Astoria tanker removed 300 gallons of wash liquids from structure. Env. stop tag was removed. Job 100 complete. END DECRemark - 0410252

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Start CallerRemark - 9906462 HISTORICAL SPILL-FLOATING PRODUCT ON GROUND WATER-SPILL WILL CONTINUE TO BE INVESTIGATED. END CallerRemark - 9906462
Remarks: Start DECRemark - 9906462 Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL" 9/3/99 - Environmental firm was hired by company which is buying the on site company and leasing the land. Environmental firm did a phase 1 & phase 2 assessment with several wells and borings. Found floating product and contamination. SS told them to delineate the site, submit a profile of what is there now and a proposal of what will be done to clean it up. They asked about DEC going after a former owner, SS said no, DEC holds present owner responsible. Envir. firm will submit such a report "soon" 2/18/2000 Sangesland called Mr. Pradhan at Malcolm Pirnie (614-888-4953). Left a voice mail to ask whatever happened to the report DEC asked for in Sept.99 Report should include: 1) Delineate the site 2) Outline what is on the property now and what will be built 3) Identify how the product will be remediated. ALSO SEE SPILL # 0003390 4/12/04-Vought-Spill transferred from Sangesland to Rommel as per Rommel. 1/11/2006 - Haggerty - Malcolm Pirnie did Phase I,II site assessments to determine if this property was a canidate for development. After discovering free-floating product on groundwater, the decision was made not to develop this property. As far as I know, no additional investigation or remediation was done on site. I have made every attempt to locate responsible party with no luck I am requesting a site visit Alternate addresses 70-72 Wythe Ave 91-101 N 12 St 82 N 13 St 58 Wythe Ave 92 N 13 St I believe this property is located at the intersection of North 13th and Wythe Ave Region 2 rep visited the site, but could not get inside to inspect. Site is rented to "Nations Rent" - Oscar Parker salesman - 718-387-4872 Posted sign showed two different property

managers: Segal Realty Group LLC 718-388-9000 M.C. O'Brien Inc. 718-252-9191 Albany review (above) - jcgrathw 1/29/07 - Austin - Transferred from Albany assignment to Patel in R-2 office for further work - end 03/09/07-Hiralkumar Patel. left message for Bill Blaker (718-387-4872), tenant (Nations Rent) at site. 03/14/07-Hiralkumar Patel. spoke with Mr. Blaker. he gave Mr. Prigozen's number (718-366-7930). spoke with Sage Prigozen. he will ask his father, who is owner of property, to call. received message from Mr. Prigozen (Cell: 917-750-4112), property owner. 03/16/07-Hiralkumar Patel. spoke with Mr. Prigozen, property owner. currently he is living in Florida. as per him, they found this contamination during tank removal and has all paperwork in storage in NY. he will submit these paper once he comes to NY in June 07. Elliot Prigozen 3400 Pen American Drive Miami, Florida 33133 Ph. (917) 750-4112 (C) Fax (305) 860-6699 email: elliotp@bobcatzone.com 06/14/07-Hiralkumar Patel. tried cell number for Elliot, but no success. left message for Elliot's son. 06/15/07-Hiralkumar Patel. left message for Elliot's son. 06/18/07-Hiralkumar Patel. received call from Elliot Prigozen. he searched for records and found some reports on tank removals. asked him to send copy of those reports. Mr. Prigozen will be back in city after 10 days and will send copies at that time. PBS #: 2-091030. as per PBS record, site had following tanks: 1. two 1,500 gal Lube Oil UST, closed and removed in July 2000 2. one 1,500 gal gasoline UST, closed and removed in July 2000 3. four 550 gal diesel USTs, closed and removed in Dec. 1998 4. one 1,000 gal diesel AST, closed and removed in Apr. 2002 5. one 550 gal gasoline UST, closed-in-place in June 1989 6. one 550 gal diesel UST, closed-in-place 7. one 1,100 gal gasoline UST, closed-in-place total 11 tanks were on-site. sent letter to Mr. Prigozen requiring Phase I, soil and groundwater delineation. letter emailed to Mr. Prigozen. 07/02/07-Hiralkumar Patel. received message from Mr. Prigozen. left message for Sage Prigozen as Elliot's number was busy. 07/05/07-Hiralkumar Patel. received copy of three reports from Mr. Prigozen. 1. addendum to tank closure report (don't have original tank closure report) for four 550 gal USTs 2. geoprobe investigation report for soil investigation in area of previously removed four 550 gal USTs (four 550 gal USTs were located in parking lot along Kent Avenue) 3. closure report for four 1500 gal tanks, which were located near main entrance (on north side) along north 12th street, and were removed in June 2000. addendum to four 550 gal USTs closure includes a further review of sample analyticals for samples taken after tanks removed in Aug. 1998. during tank removal found heavy SVOC contamination in three endpoint samples out of four samples. geoprobe investigation in area of previously removed 550 gal USTs was done as found heavy SVOC contamination during endpoint analysis. abstract: - reporte prepared on Oct. 7, 1998 - four borings were installed (one on each side of excavation area of previous 550 gal UST location) - thee soil samples from the smear zone at approx. 7 ft bg, were chosen for analysis: S-1 (southeast of excavation),S-3 (northwest of excavation) and S-4 (northeast of excavation) - all three samples were analyzed for SVOCs only (as didn't found VOCs in previous sampling) - few SVOC contamination found in sample S-3 (which is along Kent ave) abstract of tank closure report for 1500 gal tanks: - removed four 1500 gal single wall, concrete-encased USTs. - from regional water table maps, groundwater occurs approx. 15 ft bg and flows in a northwesterly direction - tanks were located approx. 4 ft bg - tanks were in good condition with no corrosion. no visible holes or leaks were noted - sidewall samples were collected at 8 ft and bottom sample was collected at 12 ft bg - groundwater was not encountered at the site during excavation - approx. 79.16 tons of contaminated soil were removed - highest PID observed in west side wall sample (PID: 398.3 ppm) - due to observed staining, odors and documented PID readings, the DEC was notified (spill #: 0003390) - minor contamination found insoil endpoint samples spoke with Mr. Prigozen.

SYLVAN EQUIPTMENT (Continued) **S104194529**

explained him that spill was reported as found free product on groundwater during environmental investigation in 1999. and during tank removal activities, no groundwater sample was taken. asked him to delineate groundwater contamination. asked him to install monitoring wells atleast to previous tanks locations (one along kent ave and one along north 12th street). sent email to Mr. Prigozen with specific requirement of monitoring well locations. 07/09/07-Hiralkumar Patel. received call from Mr. Prigozen. he mentioned that he removed four 550 gal tanks from his site, which were located along Kent Avenuen and based on closure report addendum, there was no soil contamination. and he believes that groundwater contamination found in 1999 came from Texaco oil terminal along Kent Avenue. asked Mr. Prigozen to look for investigation report from Aug. 1999, based on which this case was reported. if monitoring wells, during that investigation, were installed along kent ave and found contaminated then based on groundwater flow direction data (if available in report), the department can ask upgradient property to do investigation, but if no site specific groundwater flow direction or previous monitoring well location available to the Deparment, then the department requires him to do groundwater delineation with site-specific groundwater flow direction. Mr. Prigozen will look for report. 07/09/07- Sangesland received a call froman Environmental consultant in Charlotte, North Carolina. He asked if the DEC required work to be done by a licenced New York State Prof. Engineer. Sangesland said no. The only requirement is the lab used for testing must be NYS Licenced and if any material is removed from the site it must be taken by a licenced hauler. 07/13/07-Hiralkumar Patel. received limited Phase II report from Mr. Prigozen. abstract: - an affidavit dated 06/13/1989 indicates that one 550 gal gasoline tank waspurged and filled with concrete slurry in the sourthern portion of the site - two soil borings and nine monitoring wells were installed - highest PID reading found in boring BK-6 (595 ppm) at 5 to 7 ft bg <-------- - groundwater sample was not obtained from boring location BK-6, which was installed closed to sediment trap area <---------- - based on site topography and nearby waterways, it is determined that the nearby groundwater flow direction is to the northwest - free product was measured in two monitoring wells (MW-10 with 1.5 inch and MW-7 with 0.05 inch of free product) <---------- - minor tetracholorethane was found in (assumed) upgradient groundwater samples (BK-1, BK-2 and BK-3) - MTBE contamination (236 ppb)found in groundwater samples MW-2 and MW-3 (area near abandoned gasoline tank) - highest contamination found in soil sample at BK-6 (near old sediment trap) ----------Xylene----Benzene BK-6 (1-3 ft)------8,730-----2,025 BK-6 (3-5 ft)------3,320-------327 //during Phase II, borings were installed to maximum depth of 17.5 ft bg, but report doesn't mentioned about groundwater depth.// 07/18/07-Hiralkumar Patel. after reviewing available reports found following: - no groundwater depth information - free product in wells MW-7 and MW-10 along Kent Avneue, but no groundwater flow direction - MTBE contamination in groundwater sample at BK3, which is close to previously abandoned gasoline tank location - benzene and xylene contamination in sample at BK-6, which is close to sediment trap. no groundwater sample taken from there. spoke with Mr. Prigozen. based on available data, asked Mr. Prigozen to do following: - soil and groundwater sampling at previous sampling location BK-6 (as found Benzene and Xylene in soil and had highest PID during Phase II investigation) - soil and groundwater sampling at previous sampling location BK-3, close to previously abandoned gasoline UST (as found MTBE in gw) - complete groundwater delineation (with atleast three permanent monitoring wells and site specific groundwater flow direction) in area of previous boring locations MW-7 and MW-10. asked Mr. Prigozen to check any previous wells exists on site. if nothe need to install new wells. based on available data and reports, asked Mr. Prigozen to disregard requirement of Phase I investigation, as mentioned in letter dated June 18,

SYLVAN EQUIPTMENT (Continued) **S104194529**

2007. 07/19/07-Hiralkumar Patel. sent letter to Mr. Prigozen requiringsoil/groundwater sampling at previous boring locations BK-3 and BK-6 and complete groundwater delineation in area of previous boring locations BK-7 and BK-10. letter emailed to Mr. Prigozen with map (from former phase II report) indicating locationswhere the Department requires further investigation. 09/06/07-Hiralkumar Patel. received email from Mr. Prigozen. he is contacting companies for price quote. 09/13/07-Hiralkumar Patel. left message for Mr. Prigozen. received call from Mr. Prigozen. he is reviewing quotes from companies and will fanalize next week. he will send company's name next week with scheduling and estimated date for report submission. 09/20/07-Hiralkumar Patel. received email from Mr. Prigozen. he has hired Hart & Hickman to do the investigative work. they will be on site in two to three weeks. Theron Grim Hart & Hickman, PC Ph. (704) 586-0007 Mr. Prigozen will call once get dates finalized for investigation work. 09/28/07-Hiralkumar Patel.received email from Mr. Prigozen. contractor will start work on Oct. 8th, 2007. RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Remarks:	Start DECRemark - 9400121 Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL "4/4/94, 3:00 PM: Engelhardt at site. On scene are Bob Grimm (MEG), Tom Thomas and Sagar Chatergee (NYCDEP), Carmine

NORTH 12TH AVE & KENT AVE (Continued) **S102148049**

Sabatasso (Con Ed). According to Tom Thomas, pil was noticed entering Newtown Creek WPCP some time late Sat. night/Sun. morning, but due to the inexperience of the operator on duty at the time, it was not reported to NYCDEP IWCS until early Monday morning (4/4). Thomas estimates that oil was leaking at rate of 30-40 gpm when he first found it leaking into sewer just a couple of feet below grade in the manole. Con Ed lowered pressure on the line for a period of 1hr sometime around 3:00 PM. By the time DEC observed manhole, leak rate appeared to be <5 gpm into sewer. Pipeline is located at a depth of 5'- 6' below grade. Leak is located close to both the were and the regulator chamber so there is some concern about possible surface water impacts. USCG P.O. Duly and P.O. Svendson were on scene earlier, but Engelhardt did not speak with them before they left. Asked MEG to boom off storm sewer outfalls (2 x 156" outfalls). Bob Grimm indicated that is current is greater than 1.5 knots, oil will escape beneath boom, but they placed it anyway. After soil was partially excavated there appeared to be some oil which migrated under the pavement. Upon excavation, 3 leaks were found: looking down at pipe facing south, 2 leaks at 4 o'clock and 1 leak at 9 o'clock (top of pipe = 12 o'clock). Carmine says leak at 9 o'clock was created by hammering while trying to remove insulation from pipe. All 3 leaks were plugged by 9:30 PM. (CAE) 4/5/94, 10:30 AM: Crew is now installing shoringon excavation. Vac truck is sucking water out of trench which is seeping in. Visited Newtown Creek WPCP - MEG on scene cleaning intake screens. Al Gordon (NYCDEP) on scene at WPCP. He indicated that some small amounts of oil did reach final treatment stages. Later in the day Engelhardt spoke by telephone with Jim Pynn (Newtown Creek Plant Supervisor). He said that crew had checked regulator and tide gates nad found no oil (at N. 12th Street). They are going to check storm sewer on N. 12thStreet to make sure there is no oil in anticipation of rain event tomorrow. (CAE) 4/6/94: Continuing excavation to locate good pipe. Engelhardt had spoken to Joe Cuozzo (NYCDEP) earlier and was told that Con Ed was demanding that MEG pull out of Newtown Creek WPCP even though Newtown personnel were not satisfied that the clean up was finished. Went to plant, met with Sal Bartolomeo, Jr. (Deputy Plant Superintendent) - he showed Engelhardt the extent of the contamination. There had beenoil on the screens but he was satisfied that those had been fully cleaned. He said there was a lot of oil in the wet well, which Con Ed (Carmine) had objections to cleaning. There was also oil which got into the settling, aeration and grease separation sections of the plant, as well as the sludge thickener unit. The matter was apparently resolved after Joe Cuozzo (NYCDEP) called John Wilson (Con Ed), who called John Mitchell (Con Ed, who authorized MEG to continue cleaning until plant was clean. (CAE) 4/11/94, 10:45 AM: Workers cleaning pipe for cleeve welding. Noticed that they had a small pump in the bottom of trench with output hose on street. Asked what this was for, Con Ed replied that water had seeped into trench from duct running though it. They had subsequently pumped out water from a nearby catch basin that had been feeding the duct. Asked them to make sure that this is done from now on (pump out catch basin as opposed to trench), instead of letting water accumulate intrench and then pumping it with possible oil in it. (CAE) 5/4/94: Met at Newtown Creek WPCP with Jim Pynn. Con Ed finished clean up on Friday 4/29. They ended up removing 70+ truckloads of solidified (w/fly ash) grit and taking it to a disposalsite in Michigan. Clean Ventures ended up finishing the job. (CAE) 5/4/94: fax from Jim Pynn - copies of 2 internal NYCDEP memos regarding the spill. 6/10/94: letter from Con Edison transmitting 3 TPH and 1 SVOC sample results. Requested closure. Closure not granted - additional investigation needed. Appendix B site no. 25/45. (JHO) Update 6/9/06 Spill closed based on final site investigation report located in eDocs App. B Site 25. (SKA) END DECRemark - 9400121

Remarks: Start DECRemark - 9900419 Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL" DEC responder notes: 4/12/99- 2:15PM. ROBERT LEUNG SPOKE TO C. ENGELHARDT AND GAVE HIM THE INFO. No. 6 oil spilled during piggingof No. 7 line. On location John Mitchell (White Hat for Con Ed), Barry Korman, Sal Bocuzzi. Barry Korman syas occurred while pigging, had recovery vac truck @ Noble Street. First truck = 4221 gallons, second truck = 1400 gallons when stopped (noticed oil on street). Notified by NYC Sanitation inpector at 12:00. They then shut down the compressor. Contractor Clean Venture was @ Noble Street - responded by 12:15. They were vac'ing line from North 1st Street to valve 10 (North 11th / Kent)- removed 12,000 gallons. FDNY came in fire boat - did not get off boat. No NYCDEP of USCG response. No

(Continued) **S104648846**

oil in water (Bushwick Inlet approx. 50 feet west). Thus far only 1 subsurface structure (Con Ed vault) is impacted. There is a sewer near15th Street - oil did not reach it. Equipment on location: 3600 gallon vac truck (AllState Power Vac); 3150 and 5040 gallon vac trucks (Clean Venture). (CAE) 5/25/99: call from John Mitchell. They have not been monitoring the well. They will start every week for 5 weeks, then go to every 2 weeks if no product. Will be going tomorrow and next Tuesday. (CAE) e2mis no. 124-172: On April 12, 1999, working on Fuel Line #7 in Brooklyn. J. O'Connell andM. Dobler was working Noble Street end and J. Daly was working at North 11th Street end of Fuel Line #7. A Santiation Department employee informed D. Daly that oil was coming out on the street. J. Daly informed J. O'Connell and they meet at the location (Kent Ave) where the oil was coming on the street. They took action by putting pads down, put drain plug on the catch basin and putting oil absorent down around the catch basin. Clean Ventures is at the location. They are in the process of taking oil out of the line. Approx. 30 gallons of oil spilled. UPDATE - April 13, 1999, from manhole 4348, 1800 gallons of oil has been pumped. At present leak has not been found, still looking. UPDATE - April 14, 1999, leak was found at11:00 am, leak clamped 14:00 Tuesday. LARGE OIL SPILL CLEANUP CHECKLIST -Location of spill: N.14TH STREET AND FRANKLIN STREET, BROOKLYN. -Source/cause of spill: PIGGING OPERATION TO REMOVE # FUEL OIL FROM PIPELINE #7; A 20 INCH DIA PIPELINE. -Description of area affected by spill: 50' X 10' X 12' (EXCAVATION - APPROX.). Excavated contaminated soil, bluestone. -Name of contractor: ALL STATE POWER VAC, CLEAN HARBORS AND RCI. -Recovered oil 1,800 GALLONS; Recovered fluids/solids 200 CUBIC YARDS; Recovered oil/water 3,000+ GALLONS . -8 SOIL SAMPLES WERE COLLECTED FROM THE EXCAVATION. -1 WELL INSTALLED; OIL SHEEN ON WATER. DEC Responder notes (cont'd.): Results of well gauging/bailing/vacuuming: 5/26/99: Well depth - 140" (11.7'); Top of product - 40.5"; Top of water - 29"; product thickness - 11.5". Well was vacuumed, approx. 400 gallons oil/water removed. 6/4/99: Oil thickness 1', Depth to water 9'6". Approx. 500 gallons oil/water removed. 6/9/99: Oil thickness 1'2", Depth to water 9'8". Approx. 500 gallons oil/water removed. 6/16/99: Oil thickness (pre-vacuum) 1', Depth to water 9'3". No notation on how much oil/water removed. Post-vacuum oil thickness 1.5". 6/25/99: Oil thickness 8", Depth to water 9'4". No notation on how much oil/water removed. 7/28/99: Oil thickness 4", Depth to water 8'9". Approx. 350 gallons oil/water removed. Additional vacuum enhanced fluid recovery (VEFR) events occurred 7/11/00 (16 gallons); 10/27/00 (100 gallons); 1/24/01 (16 gallons); 4/17/01 (30 gallons); 10/4/01 (17 gallons); 4/4/02 (32 gallons); 10/24/02 (110 gallons). THIS IS PART OF APPENDIX B SITE 25/45. (JHO) Update6/9/06 Spill closed based on final site investigation report located in eDocs App. B Site 25. (SKA) END DECRemark - 9900419

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions,

TRANSGAS ENERGY SYSTEMS (Continued) **1000351174**

and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

DEC Memo:	Start DECRemark - 0411570 Tipple was at the site at 6:40 AM and discovered the spill. Detailed work outline was discussed with Bayside and Classic Fuel to clean up both the yard area and the street. 08/10/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Called Pat at (718)372-9800 and talked to Ms. Dana regarding status of the spill. She said that when Mr. Pat will come she will find about it and she will convey my message to Pat. Mr. Pat will call me back. -QA 09/22/06: OnSeptember 21, received a closing confirmation letter from Mr. Albert Cirino (Model Petroleum Transportation INC.). According to Mr.Cirino the spill was on concrete. No water and no land were contaminted by the spill. the spill is cleaned. Also talkto Bayside Terminal manager Mr. Sergio, He said they clean their yard. Also talk to Mr. John (718)388-1515 he said yard is asphaltand asphalt is sealed, it is not open dirt. John spoke on phone that they picked up each & every pocket of the product.so according to letter of Albert Cirino and Conversation with John and Terminal Manager Sergio DEC Staff closed the spill. -QA END DECRemark - 0411570
Remarks:	Start CallerRemark - 0411570 OVER FILLED WHILE FILING UP A TANK: CLEANED UP: END CallerRemark - 0411570

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

EPA Region: 02
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:
Owner/operator name: BAYSIDE FUEL OIL DEPOT CORP
Owner/operator address: 1776 SHORE PKWY
BROOKLYN, NY 11214
Owner/operator country: Not reported
Owner/operator telephone: (718) 372-9800
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: 01/01/0001
Owner/Op end date: Not reported

Handler accessibilty indicator: Transferred to the program or state equivalent.

Handler Activities Summary:
U.S. importer of hazardous waste: Unknown
Mixed waste (haz. and radioactive): Unknown
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: Unknown
Furnace exemption: Unknown
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Historical Generators:
Date form received by agency: 07/11/2002
Facility name: TRANSGAS ENERGY SYSTEMS LLC
Classification: Large Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Site 3 of 3 in cluster M

Relative:
Lower

Actual:
1 ft.

VCP:

Program Type: VCP
Site Code: 57122
Assessment: Not reported
Env Problems: Previous studies at the Site confirm widespread petroleum contamination with MGP involvement. For example, fuel oil and naphthalene odors are reported in boring logs as deep as 60 feet, and in July 2002 TRC Environmental (TGE's consultant) found heavy staining and MGP waste in a boring 20 feet below grade and reported the occurrence to NYSDEC as a spill (No. 0203677). In addition to organic pollutants, a 1997 investigation also found soil samples with elevated levels of lead. The Phase IIassessment was completed in January 2003 and confirmed widespread groundwater and soil contamination with MGP waste and petroleum related contaminants. Heavy staining and odors (coal tar) observed from 20 feet depths to top of clay at 60 feet depths. VOCs and PAH exceed RSCOs below 20 feet depth. Benzene concentrations below 20 feet depth observed up to 864,000 ppb. Off-site benzene detected upto 128,000 ppb. Free product observed (wells B4, MW7). On-site groundwater impacted from water table to top of clay by petroleum and coal tar related compounds. Benzene detected throughout the site at concentrations of 6.5 ppb to 29,500 ppb (in MWB-11). MTBE ranged from 1.2 to 329 ppb and naphthalene ranged from 1.6 to 579 ppb.
Site Desc: The TransGas Energy (TGE) Facility is a project for a new energy facility located on the East River waterfront between the Greenpoint and Williamsburg sections of Brooklyn. TGE proposed to construct and operate an 1100-megawatt gas-fired plant on the Brooklyn waterfront near Bushwick Inlet between the communities of Greenpoint and Williamsburg. For over 100 years, the Site has been operated as a fuel oil storage and distribution facility. Site soils and groundwater are contaminated with Petroleum spill contaminants, MGP Waste and heavy metal contamination. TGE entered the Department's Voluntary Cleanup Program (VCP) in December 2002. The site must be remediated before the facility can be constructed. The current owner of the Site, which TGE has optioned for its cogeneration facility, is the Bayside Fuel Oil Depot. Under Bayside Fuel and previous owners (which include Socony Mobil, Texaco Refining and Marketing and others), the Site has been operated as a fuel oil storage and distribution facility for over 100 years. There is an existing oil spill stipulation (Spill No. 9804544) with Texaco Refining and Marketing that has resulted in ongoing recovery of free-product and contaminated-groundwater. The Phase II assessment was completed in January 2003 and confirmed widespread groundwater and soil contamination with MGP waste and petroleum related contaminants. RI is on-going.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:
Other Pertinent Environmental Activity Identified at Site

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

BROOKLYN EASTERN DISTRICT TERMINAL (Continued) **1000333149**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

POLY CONVERTERS OF AMERICA INC (Continued) **1000439808**

Contact email: Not reported
EPA Region: 02
Land type: Facility is not located on Indian land. Additional information is not known.
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Handler accessibilty indicator: Transferred to the program or state equivalent.

Handler Activities Summary:
U.S. importer of hazardous waste: Unknown
Mixed waste (haz. and radioactive): Unknown
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: Unknown
Furnace exemption: Unknown
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Historical Generators:
Date form received by agency: 07/08/1999
Facility name: POLY CONVERTERS OF AMERICA INC
Classification: Not a generator, verified

Date form received by agency: 06/02/1981
Facility name: POLY CONVERTERS OF AMERICA INC
Classification: Large Quantity Generator

Facility Has Received Notices of Violations:
Regulation violated: Not reported
Area of violation: Generators - General
Date violation determined: 05/22/1987
Date achieved compliance: 11/18/1987
Violation lead agency: State
Enforcement action: WRITTEN INFORMAL
Enforcement action date: 06/24/1987
Enf. disposition status: Not reported
Enf. disp. status date: Not reported

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D000
Waste name: Not Defined

Waste code: F007
Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS

Waste code: F008
Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Waste code: F009
Waste name: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D005
Waste name: BARIUM

Biennial Reports:

Last Biennial Reporting Year: 2005

Annual Waste Handled:

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Remarks: Start DECRemark - 9300512 Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL" WAS A SULLIVAN SPILL. REASSIGNED TO ENGELHARDT ON 4/27/95. NO EVIDENCE OF ANY SUBSURFACE INVESTIGATION AT THIS SITE. 4/2/03: APPENDIX B SITE NO 25/45. TRANSFERRED FROM ENGELHARDT TO O'CONNELL. 1/25/05: Limited Subsurface Investigation Report submitted. This report covers 5 locations where the pipeline is scheduled to be closed in-place as opposed to removed. This spill location(N. 7th and Kent) is one of the locations to be closed in-place. (JHO) 2/23/05: e-mail from Matt Madsen, Con Ed Remediation: "Contaminated soil was found in the excavation for the above referenced project between N6th St. and N7th St. Clayton Group Services will collect samples today or tomorrow. In addition to waste class parameters, I have asked Clayton to have the samples run for Modified 8100 so we can try to fingerprint the material. I will continue to keep you posted as we get additional information." (JHO) 3/10/05: E-mail to Madsen: "Matt: As we discussed on Friday, these are my comments on the "Limited Subsurface Investigation for Pipeline #7". 1. Only one boring location (BH-8, located at North 8th St.) exhibited visible contamination during drilling activities. Lab results for the sample collected at this boring exhibits elevated concentrations of several

NORTH 7TH ST & KENT AVE (Continued) **S103271745**

PAHs. Since this is the location of a know historical release (NYSDEC # 9300512) I think additional sampling is warranted. you indicated that the excavation has reached this intersection, and that additional samples may be collected during the excavation work. Also, this section may be removed, based on field conditions. In either case, an effort should be made to remove any contaminated soil that is encountered. Samples should be collected at the frequency approved in the construction work plan. 2. Please submit revised drawings without the word "Proposed" boring locations. 3. Please submit an electronic copy (PDF format) of the entire document, including Appendices." (JHO) 3/1/05: Response from Madsen: "Jane: Additional samples have been collected - I'll get them tabulated, plotted and over to you as soon as we havethem. I've also asked Clayton to make the requested revs to the figures and provide electronically. I can either have them reissue the original report with the corrected figures (electronically) and issue an addendum for the additional samples orhold the report until we have the new data and issue an entire new report with the additional data. Let me know what you would prefer." (JHO) 4/5/05: Revised Limited Subsurface Investigation Report submitted. (JHO) 5/13/05: Letter to Con Edapproving results of Limited Subsurface Investigation: "The data generated from the initial soil borings indicated only one area of concern (Kent Avenue at North 7th Street). This was the location of an historical release (NYSDEC spill # 9300512,spill date April 12, 1993). The concern at this location was visual evidence of contamination in a soil boring. The corresponding sample from that boring was submitted for lab analysis and the results indicated very low concentrations of several SVOC compounds. Although these concentrations were below the applicable TAGM value of 50 ppm, as a precaution the Department requested additional sampling in this area to confirm that there was no impact from the historical release. Subsequent sampling was completed in February 2005. Two additional soil samples were collected in the vicinity of the southwest corner of Kent Avenue and North 7th St. (the documented location of the historic release). No contamination was observed during collection of these samples. Analytical results of these samples correlate with the initial sample results. Results of soil sampling and analysis for the 5 sections of pipeline scheduled to be closed in-place indicate there is little or no residual contamination in the soil related to the pipeline. While there are low levels of SVOCs in soil surrounding the pipeline, these concentrations do not exceed the TAGM guidance of <50 ppm per constituent. These results are also indicative of urbanfill conditions, as opposed to fuel oil contamination. With the exception of the North 7th St. intersection, there was no visual evidence of contamination observed in the soil borings. Based on these results, the Department concurs that no further remediation is required for these sections of the pipeline to be closed in-place." Close out spill number. (JHO) END DECRemark - 9300512

SOIL CONTAMINATED AROUND PIPELINE, AAA CONTRACTORS REMOVED OIL SOAKED SOIL. END CallerRemark - 9001453

Remarks: Start DECRemark - 9001453 Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL" 5/8/90, 11:00 AM; 20" line between N. 7th & N. 8th St. on Kent Ave. #6 oil leaked 10 gallons to street, 800 gallons in vault removed by AAAcontractors by 11:30AM. Upon arrival at 11:00 AM, observed oil in vault, oil surfacing from ground at point of excavation. Con Ed planning to introduce low-pour oil into the line and reduce pressure. Howard Fickerssen, Supt. of Maintenance & Construction for Underground Transmissions (Con Ed) -(718) 706-2077. He reports there sre 230,000 gallons of oil in pipeline (2.5 miles long). Con Ed's North 1st Street terminal started packing the line with low our oil at 9 AM, expect it to be complete in about 2 hours. (AJS) 5/8/90, 2:15 PM: returned to scene. Excavation of line continuing along pipeline sections towards N. 8th St. J&B Waste Oil, working for AAA, is picking up oil. J&B is pumping oil from the ground while Con Edison is excavating pavement area. (AJS) 11/15/94: REASSIGNED FROM SIGONA TO ENGELHARDT ON 11/15/94. APPENDIX B SITE NO 25/45. TRANSFERRED FROM ENGELHARDT TO O'CONNELL. Update 6/9/06 Spill closed based on final site investigation report located ineDocs App. B Site 25. (SKA) END DECRemark - 9001453

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

NYC TRANSIT - STORAGE FACILITY (Continued) **1010327955**

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Handler accessibilty indicator: Transferred to the program or state equivalent.

Handler Activities Summary:

U.S. importer of hazardous waste:	Unknown
Mixed waste (haz. and radioactive):	Unknown
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	Unknown
Furnace exemption:	Unknown
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No

PAT & DOMS BODY & FENDER REPAIR (Continued) **1004755884**

Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Historical Generators:
Date form received by agency: 08/26/1994
Facility name: PAT & DOMS BODY & FENDER REPAIR
Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler accessibilty indicator: Transferred to the program or state equivalent.

Handler Activities Summary:

U.S. importer of hazardous waste:	Unknown
Mixed waste (haz. and radioactive):	Unknown
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	Unknown
Furnace exemption:	Unknown
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No
Off-site waste receiver:	Commercial status unknown

Historical Generators:

Date form received by agency:	07/29/1994
Facility name:	CONSOLIDATED FREIGHTWAYS
Classification:	Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Waste code:	D018
Waste name:	BENZENE

Violation Status: No violations found

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NASHMATEL WARE (Continued) **1000242734**

EPA Region: 02
Land type: Facility is not located on Indian land. Additional information is not known.
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Handler accessibilty indicator: Transferred to the program or state equivalent.

Handler Activities Summary:
U.S. importer of hazardous waste: Unknown
Mixed waste (haz. and radioactive): Unknown
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: Unknown
Furnace exemption: Unknown
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Historical Generators:
Date form received by agency: 07/08/1999
Facility name: NASHMATEL WARE
Classification: Not a generator, verified

Date form received by agency: 12/07/1984
Facility name: NASHMATEL WARE
Classification: Large Quantity Generator

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 09/01/1999
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: EPA

Evaluation date: 12/11/1992

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Start DECRemark - 0212557 Prior to Sept, 2004 data translation this spill Lead DEC Field was "SAWYER" 3/20/03 - AUSTIN, DDO - SENT OUT TTF LETTER TO BOB KNOZELMAN OF WH CHRISTIAN & sONS 1/7/04-Vought-Spill transferred from Vought to Austin. 1/27/04 - Sawyer - Spill transferred from Austin to Sawyer. 10/5/04 - Sawyer - Received another failed tank test from Pro Test with a letter informing the Department of repair attemps made and the ultimate removal of tank from service. Pro Test will update on further action, investigation and remediation. 03/04/05 - Sawyer - Jim from Protest called me about begining excavation at the above site 0n 3/08/05. They are going to remove the tank an about 60 cubic yards of contamination. 03/30/05 - Sawyer - Met Tom Leddy and Ted Dros of Protest Environmental at excavation. They will pump and pad the pit to clean sheen off water in pit. Clean endpoint samples and a ground water sample will then be needed. 5/26/05 - Sawyer- Received endpoint samples from Protest on 4/12/05 and though some of the groundwater samples were above ground water criteria, this property was included in the Greenpoint Plume. This is the reason there are gasoline constituents in the gw sample. The groundwater is between 12-15 and this is an industrial area. No further action required. Closed. END DECRemark - 0212557
Remarks:	Start CallerRemark - 0212557 tank failure, possible bad vent line END CallerRemark - 0212557

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Owner/Op end date: Not reported

Handler accessibilty indicator: Transferred to the program or state equivalent.

Handler Activities Summary:
U.S. importer of hazardous waste: Unknown
Mixed waste (haz. and radioactive): Unknown
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: Unknown
Furnace exemption: Unknown
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Historical Generators:
Date form received by agency: 01/09/1998
Facility name: N J Z COLORS INC
Site name: NJZ COLORS INC
Classification: Large Quantity Generator

Date form received by agency: 08/29/1989
Facility name: N J Z COLORS INC
Classification: Large Quantity Generator

Hazardous Waste Summary:
Waste code: D000
Waste name: Not Defined

N J Z COLORS INC (Continued) **1000137099**

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 01/22/1998
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported

DEC Memo:	Start DECRemark - 9609934 3/28/05 - Austin - Reassigned from O'dowd to Rahman - received report from AKRF, dated March, 2005, entitled "Spill closure Investigation" for review - end Austin - transferred to Albany for reassignment - end 07/22/05- Called AKRF Inc., as consultant for the USA Waste Inc. to see if there is a spill closure report. S. Scharf 09/16/05- finally got in touch with AKRF person. named Marc Godick (marc godick@akrf.com)(914-922-2356 and 646-388-9534). Marc forwarded me the spill closure report for my review/closure. Review of spill closure report found that closure was acceptable. GW was tested seven years later and all results were below GW standards. Spill closed via letter on November 23, 2005. S.Scharf 11/29/05. Marc godick AKRF, INC 34 South Broadway Suite 3N White Plains, NY 10601 914-922-2356 END DECRemark - 9609934
Remarks:	Start CallerRemark - 9609934 during removal of tanks found contaminated soil. At a later date, contaminated soils were reomved. Seven years later, GW testing revealed levels below GW standards. END CallerRemark - 9609934

DEC Memo:	Start DECRemark - 0413160 3/21/2005 There was an earlier tank test failure spill number (0004062-DeMeo) which has now been closed out in favor of this new spill number. Earth Tech believes that the old tank was relined after the tank failed theprior tank test several years ago, however no work was ever done to remediate the contamination which occurred because of that leak. Earth Tech believes that approx 2 years ago this buried tank was taken out of service. Since that time the building has been supplied by an above ground 5,000 gal tank. Unknown if the buried tank was ever emptied. Earth Tech recently did soil borings around the UST area and came back with high contamination levels. This information was forwarded to theCity SCA (SCA Contact:Lee Guterman 718-472-5802) SCA has now decided to removed the UST and excavate out the contaminated soil around it. Earth Tech is modifying the standard city bid package to site specific conditions and will work with the city as they put the excavation/remediation work out to bid. Bid package should go out around April 1st, 2005. Work should be done summer 2005. 04/13/06- Case was transferred from Jake Krimgold to Koon Tang. 7/9/07: Reassigned from Koon Tangto Kartik Chanda (Chanda) 7/18/07: Kartik Chanda of DEC reviewed all documents regarding this spill case. On 7/18/07, Chanda sent a letter to Ms. Lee Guuterman, Manager IEH Department, NYC School Construction Authority, requiring that the following information be submitted to the DEC for review by 9/4/07. 1. An explanation of the cause of the tank system failure; 2. Either a description of the work performed to restore the integrity of the tank system (including retesting results), ora description of the work performed to close (decommission) the tank; 3. Information regarding petroleum contamination found at the site and cleanup activities (if any) associated with a release from this tank system; 4. Any available documentation (i.e., invoices, bills, sampling analysis reports, etc.) pertaining to the work performed at this site associated with this violation END DECRemark - 0413160
Remarks:	Start CallerRemark - 0413160 OLD TANK THAT WAS INSTALLED AND WANTED IT TO BE REOVED. THEY TOOK TESTS AND FOUND THAT THE TANK HAS LEAKED. THE TANK HAS FAILED MANY TIMES BEFORE. TOOK TESTS FROM THE SOIL. HAS NOT BEEN CLEANED OR REMOVED. OUTSIDE UNDERGROUND TANK. 20,000 GAL CAPACITY. END CallerRemark - 0413160

Other Pertinent Environmental Activity Identified at Site

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Historical Generators:
Date form received by agency: 01/13/2000
Facility name: NYC BD OF ED - AUTOMOTIVE HIGH SCHOOL
Classification: Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

DEC Memo:	Start DECRemark - 0701659 05/10/07-Vought-Off hours responder. Vought called Winters and left message to return call to cell phone. Vought called Vijax and spoke to Anthony Rotello and cause of spill was bad gauge. Spill came out of gauge and onto concrete floor. No sewers or drains affected. Rotello confirmed that spill amount less than five gallons. Gauge will be replaced. No spill out of vent pipe. Vought received call from resident (Ms Winter) is satsified with cleanup and confirmed thatspill on concrete and no sewers or drains affected. Vought provided contact info in case additional issues arrise. Spill closed by Vought. END DECRemark - 0701659

Other Pertinent Environmental Activity Identified at Site

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo:	Start DECRemark - 0513729 This spill was called in 3 weeks late - Why? ECO's were on site and issued a summons Check with ECO's and get a report from Milro before closing case. 3/7/06-Vought-Spoke with Paul Basso (Milro) and soil borings were performed yesterday. Soil samples were collected from around gasoline tank and contamination was present. 3000-gallon gasoline tank onsite. Curb overfill resulted in filling of tank sump. Vapors impacted the police station. Oil company (Metro fuel oil) has hired Milro. Vought called NYPD 94th Precinct (Lt. Lott 718-383-6491 and Sgt. Gonzalez 718-383-4427 fax: 718-476-7503) and Sgt; Gonzalez requested that he be the sole contact for the Precinct. As per Lot: 1)gasoline odors were presentin the basement of the building but were mitigated via the installation of a ventilation system by Milro 2)NYCDOH was onsite yesterday and suggested continued ventilation 2)OSHA was onsite yesterday. Sgt. Gonzalez requested: 1)copy of spill report(Vought faxed on 3/7) and 2)notification of Milro of further work date. Vought called Milro and informed Paul to contact Precinct and to call DEC Rahman for further requirements (excavation versus SVE installation). Milro met with Officer Eddie and Sgt Cortez and they just spoke to Lt. Palanco. Vought left message with Lott to return call to DEC with one primary contact phone number. 03.10.06 Sharif Rahman-I spoke with Paul at Milro. He said they found pea gravel near manway of the gasolinetank is contaminated. They dug out 5' down the grade and the PID meter deflected for 150-180 ppm reading.There is a fillcap between the lounge and the dispenser that leads to an old UST.The UST is filled with water. Needs to do more investigation.03/13/06 Sharif Rahman-Rec'd proposal from Milro to remove the concrete slab above the underground gasoline tank and remove the contaminated pea gravel. A CSL was sent to Metro Fuel Oil 500 Kingsland AVenue Brooklyn, NY 11222 Attn: Jim Carey Cc: Lt.

NYCPD 94TH PRECINCT (Continued) **S107658676**

Polanco,NYPD-Fuel Control Unit. 04/24/06 Sharif Rahman- Milro is removing the pea gravel around the gasoline tank. I spoke with Paul Basso from Milro and suggested him to get approval from the appropriate person of Police Dept.(Lt. Polanco,718.476.7536)before they proceed with all kind of excavation and removal work at the tank area and in the basement as well. Paul informed me he would do thatway.Paul also informed me that they found a 2-3' gap in the tank vault which, apparently theescape way for the gasoline and vapor. Samples from the basement should be tested. Residual contamination between tank and building needs to be investigated and remediated, besides the source tank area.I spoke with Lt. Lott,(718)383-6491 and told her about the necessity of excavation and installation of soil borings in the premise. She confirmed me there is no odor complain,as of today. 07/07/06 Rahman- Milro took soil and ground water samples from the tank premises and sent to the lab. Strong odor was encountered during the sampling event.Mike Reardon(718.999.2463)of FDNY called DEC to know the status of the case. He indicated that the tank/piping removal should be done by a FD certified company. I gave him MILRO's contact # to check if they are certified by FD. 08/01/06- Rahman-Rec'd investigation summary report from MILRO.Seven borings were advanced around the gasoline tank and between the precinct and dispenser garage. Three ground water samples out of five showed significantcontamination(SB3:Benzene 8500 ug/L,Ethylbenzene 14000 ug/L,Toluene 49000 ug/L,MTBE , Naphthalene 18000 ug/L; SB4:Benzene 17000 ug/L,Ethylbenzene 2100 ug/L,Toluene 26000 ug/L,MTBE 16000 ug/L , Naphthalene 2100 ug/L; SB5:Benzene 18000 ug/L,Ethylbenzene 16000 ug/L,Toluene 58000 ug/L,MTBE 17000 ug/L , Naphthalene 28000 ug/L) . Ground water samples of SB6 and SB7 could not be collected due to boring refusal at 10 ft below grade.GW depth is at 12' below grade.Milro could not install soil boring through the tank vault due to the thickness of the concrete.However,boring was attempted through a void in the bottom of the tank vault that encountered contaminated soil below the tank.Guidance of professional engineer is recommended regarding the removal/treatment of contaminated soil below the tank vault due to structural concerns.Contamination in SB3(Absence of MTBE), located south side of 5000 gallon #2 Fuel oil tank indicates possibility of other source of contamination.Tightness testing ofFuel oil tank system is strongly recommended(contact: Lt. Polanco of NYPD@ 347.672.2367). Milro proposed to install GW monitoring wells to recover separate phase product.ORC will be applied to remediate the residual contaminated water. Case was transferred to Remedial section B for further action on it. 8/1/2006 Spill report is given to AZ by KT. AZ 8/2/06 Left a message for Paul at Milro (516-379-1500). AZ Contacted Paul (Milro). Left a message for Paul at Milro (516-379-1500). AZ Contacted Paul (Milro). They pulled out 1x3000 gal gasoline UST. Tank is in good shape. The cause of the spill was overfill. Complained about odors in the building. The release was below the vault. The vault was not removed. I recommend if safe and structurally possible the vault should be removed and the soil beneath the vault the vault should be excavated. AZ 8/3/06 Contacted Paul @ Milro). Product showed up in the sump. Complains about the odors in the building. Vault has drain holes and weep holes in the bottom. The vault is in poor condition. There is contamination below the vault. Some borings were done at the property. Contamination was found at the water table. No wells were installed. They should hire an engineer to evaluate the possibility of removing the vault. Wells should be installed. I contacted Lt. Polanco(NYPD 718-476-7524). I recommended, if it is structurally possible(from the engineering and safety standpoint) to remove the vault and all contaminated soil. AZ 8/22/2006 Received a letter from Milro and enclosed letter from Hydro Environmental Technologies. The letter from Milro stated that Mr. Douset (Hydro Environmental Technologies) inspected the site. Based on his inspection the tank vault should not be removed. I called Milro to notify them that I concur with this recommendation. Paul is out this week and I left a message for

NYCPD 94TH PRECINCT (Continued) **S107658676**

Anthony who is covering for him. AZ 8/23/2006 Contacted Anthony Mariano (Milro). They should submit to DEC alternative remedial strategy plan. AZ 9/14/2006 Left a message for Paul (Milro). AZ 9/19/2006 Conversation with Paul (Milro). AIG thinks that there are too many unknowns to perform the excavation. They will consider other alternatives. No wells wereinstalled in the area. One soil boring under the vault has shown signs of free phase. I recommended istalling wells in the area. Milro or the insurance company (AIG) will submit investigative/remedial proposals for this site to DEC. AZ 9/20/2006Lt. Lott NYPD 94-th Precinct 718-383-6491. We discussed the site and agreed that the site should be remediated. The tank vault could be temporarily filled in with clean back fill but this backfill could be excavated if this is necessary for futurethe site investigation. It is not recommended to install new tanks into this vault prior to remediation/investigation. FD contact Eugene Levintov 718-999-2451. AZ 9/20/2006 I contacted Paul and told him that they must submit a work plan within five working days. AZ 9/21/2006 I contacted Larry Doucet (Hydro Tech Environmental - 914-245-5411). They will submit an investigative plan with a schedule by Tuesday. AZ 10/3/2006 Left a message for Lt. Polanko 347-672-2367. Spoke with Lt. Polanko (NYPD). Discussed with Lt. Polanko progress of the clean up. Contacted Sergio Rojas (Hydro Tech Environmental -(732)929-2900). I reviewed the submitted Work Plan. The plan did not have a site plan with existing soil borings locations and didnot include a plan with proposed well locations. I requested to install wells, utilities allowing, near soil borings SB-3, SB-4, SB-5. A plan with the boring locations should be submitted to DEC. If free phase is discovered it should be pumped out.Plume should be delineated. Soil sampling and groundwater sampling are required. Hydro Tech was notified that contractors are doing the roof at the precinct and there is no access to the site for environmental consultants at the moment. AZ 11/7/2006 I contacted Anne Davis @Hydro Environmental Technologies @732-929-2900, additional phone #732-818-1800. They submiited a letter to Mr. Carey (Metro Oil) and copied NYSDEC on this letter. This submittal was discussed with Sergio on 10/3/2006. Nonew submittals were mailed to DEC. Soil borings have advanced (3) and two wells were completed. Shallow wells were installed in the garage previously. They attemped to install a new well in the garage but got refusal on a Geoprobe. No investigativeresults have been submitted to DEC so far. Wells must be sutveyed. At least 3 wells must be installed. Total concentrations must be included in the report. A plan showing all the wells, borings and excavated area should be submitted. Groundwater flow should be determined. The installed wells are 2" diameter. Free phase was discovered in MW-1 and just outside of the vault. They must submit a full a report to DEC ASAP. Anne stated that they will send us a report by 11/17/2006. Proposal for future installation should be included. The free phase should be delineated and pumped out as soon as possible. AZ 11/27/2006 Contacted Lt. Polanko @347-672-2367. I informed him that it’s ok to temporarily backfill the excavation if necessary but they will have open it up again if needed. Hydrotech will mail DEC their proposals tomorrow. AZ 12/20/2006 I have reviewed a Remedial Investigation Report received on Dec. 7, 2006, and contacted Anne Davis @Hydro Environmental Technologies @732-929-2900. I was told that delineation has not been completed due to the construction barriers installed at the site. I requested installation of 9 delineation wells ASAP. Groundwater flow direction should be established. IRM - enhanced fluid recovery via vac truck could be started from the existing wells immediately. Anne Davis stated that the wells will be installed in mid January. Upon plume delineation complection a remedial strategy will be developed and submitted to DEC for review. AZ 1/19/2007 I contacted Anne Davis@732-818-1800 fax#732-818-1802. The vault is backfilled. 8 wells were installed (total of 10 wells on site and 3 wells are on the sidewalk). They are sampling 11 wells next week. All wells must be developed including the old wells as per DEC instructions. Product was

NYCPD 94TH PRECINCT (Continued) **S107658676**

encountered in two wells: MW-2 - 0.2', MW-9 installed in place IP-2 (piezometer without water which was over drilled) in the garage) -0.03'.They should measure the amount of the pumped product. Enhanced fluid recovery will be performed twice a week? They do not have PID reaings on the removed air and amount of product pumped out. Anne is stating that the results of the field investigation will be submitted to DEC around March 2, 2007. I requested a quicker submittal of the investigation report. AZ 1/19/2007 I contacted Lt. Polanko and requested to expedite the issuance of the investigation report. AZ 7/2/2007 Reviewed Remedial Investigation Report and Proposed Remedial Action Plan submitted by Hydro Environmental Technologies on May 8, 2007. The investigation showed 0.07' of free phase in MW-01. Groundwater samples from wells MW-2 to MW-9 all contained total BTEX ranging from 14,336 ppb to 48,520 ppb. The report stated that the southern and eastern horizontal extent of contamination was not been delineated due to the limited access imposed by raw houses located along Manhattan Avenue and Lorimer Street. Additional delineation upgradient of the spill area was attempted but not completed since groundwater was not present in the upgradient wells. The report stated that background water contamination and organic solvents are present at the site. The BTEX and BN concentrations detected in MW-9, which is located approximately 30' upgradient of the spill area, were significantly higher then those concentrations obtained immediately upgradient of the spill (MW-7 and MW-8). The source of organic solvents is not known. The consultant proposed Dual Phase Vapor Extraction (DPVE)as a remedial strategy. The DPVE recovery system will recover total fluids from eight recovery wells MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-7, and MW-8. A high vacuum total fluids pump will depress the water table to a fixed depthbetween 16 and 18 feet below the grade. Groundwater will be treated using an oil/water separator, sediment filters, air stripper and GACA prior to discharge to a storm sewer lateral. The system will be designed to accommodate 10 gpm. Groundwater flow direction, according to the report, is south towards the former gasoline UST at a hydraulic gradient of 0.002 feet/foot and also northeast from Lorimer Avenue towards the former gasoline UST vault at a hydraulic gradient ranging from 0.06 to 0.08feet/foot. The submitted remedial plan did not specify capture zone radius of the remedial system. Apparently, the remedial system will not include portion of the plume located around MW-9. I called Anne Davis at (732)-818-1800. She was busy and told me that she will call right back. AZ 7-3-2007 Anne Davis has not called me back. I called Metro Oil Tom Torre(718-383-1400 Ext.#184). I discussed the remediation progress with him. On January 19 2007, DEC requsted that Investigative Report should be issued no later than March 2. However, the report was issued in May 2007. I requested information regarding the contact at the insurance company handling the case in order to expedite the site remediation. Mr. Torre will call me back with this info. AZ 7-5-2007 Contacted AIG insurance company (Glen Gunkel 770-870-2132). Claim #683-092965. AIG P.O. Box 2970 Alpharetta GA 30023-2970 We discussed the progress of the remediation. The remediation of this site is delayed. AIG environmental engineer will contact me. Left a message for Lieutenant Polanko. Russ Greatorex (AIG Consultants 770-870-2079) called me regarding the status of the site. I explained to him deficiencies of the submitted report. He will contacts the consultants and the deadlines will be enforced. A letter with DEC comments was sent to Hydro Environmental, Metro Oil and AIG: "The DEC comments are as the following: The DPVE recovery system could be used for the site remediation. However, the submitted remedial plan did not specify projected capture zone and radius of influence of the proposed remedial system. Apparently, the remedial system will not include portion of the plume located around well MW-9 and north of well MW-7. This area should be included in the remedial plan. The remedial plan should include a monitoring plan and implementation schedule. A schematic plan of the remedial system should be included in the proposal. Major

NYCPD 94TH PRECINCT (Continued) **S107658676**

parameters of the remedial system such as computations of drawdown, pumping rates and radius of influence; the capture zone, system monitoring parameters and frequency, and reporting frequency should specified in the report. The plume should be delineated in the northern part in the area of wellMW-9. The responsible party should obtain all necessary permits. The submittal of the remedial plan was significantly delayed. A revised remediation plan should be submitted to DEC within two weeks of the receipt of this letter." AZ 7-5-2007 I contacted Rob Meisner @732-818-1800 (Hydro Environmental). He stated that the Precinct provided the site plan. They are looking into a getting sanitary sewer permit. They will address all report deficiencies. AZ 8-7-2007 Meeting with Hydro Environmental (Rob Meisner), AIG (Tony Vinci ph. 201-631-7118), Metro Oil (Scott Alnwick ph. 718-383-1400), John Urda and V. Brevdo took place on Aug. 3, 2007. Three new wells were installed - MW-11, MW-12 and MW-13 with Geoprobe. DEC was not informed about the well installation. No Work Plan for the well installation was submitted to DEC. Neither soil sampling nor PID screening was performed during the well installation. It was agreed at the meeting that: 1. Some delineation wells will be installed downgradient - south and east of the source; 2. Aquifer test will be performed 3. Area around MW-9 will be addressed in the design of the remedial system; 4. The amended Work Plan will be submitted to DEC by September 15, 2007. AZ END DECRemark -0513729

VCP:
Program Type: VCP
Site Code: 57559
Assessment: Soils contaminated with metals and semi-volatile organic compounds were identified at this site. Contaminated soils have either been excavated and disposed of offsite or are covered by a concrete slab or the onsite building. Groundwater has not been impacted, however, the area is served by a public water supply. Volatile organic compounds were not detected at this site, therefore, exposures associated with soil vapor intrusion are unlikely.
Env Problems: The contaminants of concern in soil at the site were Semi Volatile Organic Compounds (SVOCs)and heavy metals. The groundwater has not been impacted by the contaminants. In 1998, the Pase I and Phase II Environmental Site Aassessment have revealed that the contaminants of concern in soil were above TAGM 4046 RSCO. The SVOCs had excedences ranging from non detected to Benzo(a)anthracene 43ppm, benzo(a)fluoranthene 1500ppm, benzo(b)fluoranthene 41ppm, benzo(k)fluoranthene 26ppm, benzo(a)pyrene 41ppm, Chrysene 38ppm,Dibenzofuran 12ppm. Some of the havy metal excedences were Arsenic 52ppm, Selenium 5.6ppm, Chromium 49ppm, Cadmium 12.5ppm, Lead 1930ppm,Zinc 1490ppm, Mercury 3.5ppm. The source was presumed to be in the fill material and also produced by uncontrolled dumping. During the remedial phase, the site has been excavated and the end point samples showed that the concentrations of the contaminats levels were very close to TAGM 4046 RSCO. The excavation has been backfilled with clean soil. The remediation was completed in 2002.
Site Desc: 101-105 West Street is located in the Greenpoint area of Brooklyn, NY 10310, Block 2556, Lot 58. The site is a 0.2-acre parcel used as a construction material storage yard. It is located between Kent Street and Java Street, on the west side of WestStreet. A commercial property borders the site to the east. The intended use of the site remains to be a construction material storage yard. The surrounding uses are mainly residential with some commercial divisions. Contamination at the site waspredominantly in the soil and represented by Semi Volatile Organic Compounds and metals, and resulted from historic fill and uncontrolled dumping of oil and oil-related products from trucks loading construction materials. The Remedial Investigationwork plan was approved in 1999 and the RI was completed in 2000. The groundwater is 8-10 feet below ground. The soil is sandy and it is covered with 3-4 feet of fill material. The Remedial Work Plan was approved in 2001 and the field remedial workwas completed in 2002. The remedy involved excavation of the entire site and off site disposal. Clean backfill material has been placed in the former excavation. Remedial work at the site is completed.

AO262 **FYN PAINT AND LACQUER CO., INC.** **VCP** **S108524789**
SW **230 KENT AVENUE** **N/A**
1/2-1 **BROOKLYN, NY 11211**
2696 ft.

Site 6 of 7 in cluster AO

Relative:
Higher

VCP:
Program Type: VCP
Actual: Site Code: 56974
19 ft. Assessment: Public water is provided to the area, thereby preventing exposures to groundwater. The site and surrounding area are covered with buildings or pavement, which limits or eliminates the potential for contact. DOH staff requested the volunteer assessthe presence of soil gas in the area to determine the potential for soil vapor intrusion.
Env Problems: The soil and the groundwater are highly contaminated with VOCs from historical spills during manufacturing processes of paint. The contaminated plume has migrated under the adjacent parking lot of the adjacent ConEd Facility. In 2002, ConEd sued Fyn Paint for contaminateing their site. In March 2007, the Pump and Treatment System is in operation at low capacity until the NYCDEP permit to discharge the residue into the municipal sewer system will be obtained. The residue is now stored into 55gal drums. A soil gas intrusion investigation work plan around the facility was approved and the field work is undergoing.
Site Desc: The site is located at the norhtwest corner of the intersection of Kent Ave with North First St., Brooklyn, NY. The current zoning is M3-1, heavy manufacturing. The site is adjacent to a ConEd Facility, Former North First St. Oil Storage Terminal. In 2002, ConEd sued Fyn Paint for contaminating their site with Volatile Organic Compounds (VOCs). Fyn Paint property is 500 ft away from the East River. In the neighbourhood there are warehouses, other manufacturing facilities and few residential buildings. The site's soil and groundwater are contaminated with elevated concentrations of VOCs as ethylbenzene, toluene, o&m/p xylenes, 2-butanone, and acetone. The site is in remedial investigation phase and an Interim Remedial Measure (IRM) is in operation at the site. The remedial investigation has not been completed. A soil gas intrusion survey is in process around the Fyn Paint property. In March 2007, the IRM consisting of a Pump and Treatment System (PTS). Design includes anactivated carbon filtration stage. The system is working at low capacity until a NYCDEP permit to discharge the residue into the municipal sewer system is obtained. At the present time, the residue is stored in 55 gal drums.

DEC Memo:	Start DECRemark - 0212132 01/27/2006 Kuldeep received the Fax from Brumer, but again information not adequate and need more follow up. 01/23/2006 Kuldeep sent a letterfor more information. 01/09/2006 Kuldeep Gupta- Facility Faxed on -01/06/2006 copy of consent Order. Region 2 Nick Lombardo on 01/09/2006 Faxed Report of 5000 gallon Tank Test report of 01/05/2004. 01/06/06 Kuldeep Gupta talked to Ms. Jill Huey and she need a letter in writing what document we need. She wanted to faxit at 1-718-486-6862. DEC Faxed the letter as requested. Kuldeep discussed with Philip Lodico Senior Attorney DEC and found Consent order signed on 03/24/2003 for not this spill. Prior to Sept, 2004 data translation this spill Lead DEC Field was "TIPPLE" Does not appear on PBS database. Called Jill Huey. She stated that she received a Consent Order to bring the facility in compliance with state laws. The tank is 5000 gallons. 3/11/2003 ars. DEC Sigona sent TTF notice on March 14, 2003. 9/11/06 This case was transfered from Albany to Region 2. Zhune spoke to Jill Huey (ph: 718-9052) She doesn't want phone calls. She wants every thing by writing. 9/11/06 A TTF letter was sending to : Jill Huey 498 Leonard Street Brooklyn, NY 11222 09/18/06 Ms. Huey sent a package of documents the passing tank test from 2003 was missing. 09/19/06 I sent a letter requesting her the tank test results from 2003. 09/22/03 Ms. Huey sent a package of 8 pages including the passing tank test results from 2003, letters stated the fallowing: The system test passed. After the system test failed in October due to a vent bad line, we decided to replace all pipes just to be sure we would pass. Also we would like to convey to yourdepartment that no contamination was detected in our system. What was the cause of the tank test failure on March 3, 2003? Water in tank issue. Piping needed to be replaced was replaced and systems test passed as a result of replacement.09/27/06 This case was closed for V. Zhune in accordance with J. Vought. END DECRemark - 0212132

DEC Memo:	Start DECRemark - 0704569 07/24/07-Vought-Off hours spill responder. Vought called ASR Lavado (ph:212-809-1110 fax:)212-809-1777). Vought called Lavado and left message to return call. Vought received message and returned call to Lavado (cell:646-235-4800). Site was old gas station in 1950's and was vacant lot. Site will be residential construction. Phase I shows tanks still in place and tanks were removed (gasoline and waste oil). Gasoline USTs encased in concrete and waste oil tank had numerous holes. Waste oil tank was vacuumed out however after removal, gross contamination was observed above tank. Samples were collected for waste disposal. Future plans will include excavation and collection of endpoint soil samples. Lavado will return call to DEC with site contact. DEC requires: 1)PBS registration 2)collection of endpoint samples with site plan 3)future use of site 4)owners address and fax 4)delineation 5)vapor barrier and possibly SSDS 6)notificaton upon collection of endpoint samples so that site visit by DEC may be scheduled. 8/3/07 - Austin - Transferred from Vought to Rahman for further review and action - end END DECRemark - 0704569
Remarks:	Start CallerRemark - 0704569 NOT YET CLEANED; HOLES DISCOVERED DURING A TANK PULL; END CallerRemark - 0704569

DEC Memo:	Start DECRemark - 9108332 Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL" 4/12/04-Vouight-Spill transferred from Sullivan to Rommel as per Rommel. Contacted present owner. Manny Shurka (212) 832-9100. He has no infoon followup tank test. He bought site in 1997. All tanks closed in 1999. If tanks were operated for two years after tank test failure, then tanks can be assumed to have been OK in 1997. Tanks were not suction dispensers. They used submersiblepumps. So, depending on where the tank test failure leak was, there could have been a release. Check with Manny if he did an environmental assessment when he bought the property or if Getty did one when they sold the property. END DECRemark - 9108332

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region

RADIAC RESEARCH CORP (Continued) **1000245435**

that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Updated By: JAAVERSA
Site Description: This site lies underneath the elevated Brooklyn - Queens Expressway (I-278) along Meeker Avenue between Metropolitan and Union Avenues in the Williamsburg Section of Brooklyn. It is believed that during the construction of the BQE, waste material and debris from the former Ansbacher Color & Dye Factory may have been used as fill material in the project area. A Phase II - type investigation was conducted by the New York State Department of Transportation in 1988. The investigation found hazardous levels of arsenic and lead in the soil and elevated levels of arsenic, lead and cyanide in the groundwater. During the reconstruction of the BQE in the early 1990s, the NYSDOT completed an IRM (soil removal) within the project's right-of way. The remaining contaminated soil is located beneath asphalt and concrete. A Preliminary Site Assessment was completed during the summer of 1999 to evaluate the areas outside the BQE footprint. The sampling results indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals, but the contaminated groundwater has not migrated significantly beyond the footprint of the former factory.
Environmental Problems: The primary contaminants of concern at this site are arsenic, lead, mercury and cyanide. Investigations indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals. The site does not constitute a significant threat to the environment as the contaminated soil is covered by existing layers of asphalt and concrete, and the contaminated groundwaterhas not migrated significantly beyond the footprint of the former factory.
Health Problems Assesment: Soil with residual arsenic and lead contamination remain under the BQE and is covered with several layers of concrete and asphalt. Contaminated soil also underlies several on-site buildings formerly used by Ansbacher. Contaminated groundwater isnot used if any, in buildings formerly used by Ansbacher. Off-site sampling of surface soils from residential yards adjacent to the site indicated the presence of metals (particularly arsenic and lead) at concentrations above the range of concentrations typically encountered in urban neighborhoods. However, the exact source of the metals in the soils could not be determined from the data collected. The NYSDOH gave the residents advice on how to minimize their exposure to these surface soilcontaminants.

Site Description:	Manhattan Adhesives is currently an empty factory building that is located at the foot of the Greenpoint Ave., Bridge in Brooklyn. Besides the Manhattan Adhesives factory, about 10 feet from the northeast wall is a manhole (not a sewer of drain) into which liquid waste was allegedly discharged. This waste came from a condemned oil storage site located at the intersection of Rt. 280, and the NJ Turnpike in NJ. The manhole is suspected of being the opening to an underground tank; however, the quantity of the waste allegedly dumped exceeds the capacity of most tanks. This information was obtained from the State Senate Committee on Crime and the Brooklyn District Attorney's office. Phase I State Superfund has been completed. A partial phase IIinvestigation was completed during 1985 and recommended no further action. The Responsible Party has agreed to undertake an investigation in 1986. An investigation has not found hazardous waste on-site.
Confirmed HW:	Waste oil alleged to contain PCB's: Over 400,000 gal.
