SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL RECORDS

CERCLIS-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/21/2007 has revealed that there is 1 CERC-NFRAP site within approximately 0.625 miles of the target property.

The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/11/2007 has revealed that there is 1 RCRA-TSDF site within approximately 0.625 miles of the target property.

EXECUTIVE SUMMARY

FTTS: FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act) over the previous five years. To maintain currency, EDR contacts the Agency on a quarterly basis.

A review of the FTTS list, as provided by EDR, and dated 07/06/2007 has revealed that there is 1 FTTS site within approximately 0.125 miles of the target property.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there is 1 HIST FTTS site within approximately 0.125 miles of the target property.

The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 10/18/2007 has revealed that there are 13 FINDS sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

STATE AND LOCAL RECORDS

HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 HSWDS site within approximately 0.625 miles of the target property.

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, and dated 08/15/2007 has revealed that there is 1 SHWS site within approximately 1.125 miles of the target property.

HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 25 HIST LTANKS sites within approximately 0.625 miles of the target property.

HIST SPILLS: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 55 NY Hist Spills sites within approximately 0.25 miles of the target property.

EDR PROPRIETARY RECORDS

EDR Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there are 3 Manufactured Gas Plants sites within approximately 1.125 miles of the target property.

MANHOLE #63427 VS/3477 (Continued)

S106005388

02-07395-001 STRUCTURE: MANHOLE 63427 - analysis indicates the presence of a substance similar to a degraded mixture of a light and a heavy fuel oil.
 2/28/03: At therequest of M. Sicherman, Responsible Operation was changed from Networks to EHS - Remediation. DEC inspector's notes: 7/8/02, 10:15 AM - According to Mike Kessler (ERT), Transmission Ops did investigate. Pipeline No.7 drained/capped in 1999. There is a fill line for nearby building near manhole. Crew still on-site performing clean up. Did no know when manhole was last opened. Trans Ops claims there would be oil in more manholes if related to pipeline no. 7. (KMF) 7/9/02: met at site with Tino Fernandez (Env. Ops.). Located on dead-end street across from Bayside Fuel Oil company. Approx. 400 gallons #6 oil in MH63427 & VS3477. MH and VS are located approx. halfway down N. 12th St. to west of Kent Ave. Pipeline No. 7 runs along Kent Ave (driained/capped 1999). Clean Harbors supervisor Jeb Cook is on-site with crew. Once they clean MH and VS, Con Ed can determine where oil is seeping from. (KMF). 8/7/02: Met with Ron James (B/Q EH&S). Heavy oil found in manhole and transformer vault on south side of N. 12th Street. After reviewing file for DEC #9202230 (5/23/92), we agree that these structures were initially impacted be leak from Pipeline #7 at corner of N. 12th St/Kent Ave. The oil ID fromthe structure is "heavy fuel oil" According to e2mis report, the vault was "steam cleaned" last week, but there is still #6 oil visible on sides of transformer. There are a number of groundwater monitoring wells in the vicinity of the vault. Thevault lies across the street from the Bayside oil terminal. I interviewed the site manager and the on-site consultant (TRC) - both indicated that their wells are confined to within the property boundaries, and that there was little impact on southside of their property. Vault is also adjacent to a NYD Sanitation garage. I spoke with Jake Krimgold (DDC monitor) - he indicated that off-site wells are probably his, but that there was no free product. I will look at boring logs for well installations and see if there is any evidence of #6 oil contmaination (as opposed to diesel, which was the focus of their investigation). (JHO) Update 6/9/06 Spill closed based on final site investigation report located in eDocs App. B Site 25. (SKA) 11/7/06 - spill reopened based on phone call from Matthew Madsen (Con Ed remediation). Manhole was inspected yesterday and was apparently never cleaned out. i requested a revised e@mis report, and requested that adjacent and adjoining structures be inspected for evidence of additional oil. far by AAA Polution Control. Also, AAA removed 2 large piles of contaminated soil (approx. 10-15 cu. yds. each). Excavation for pipeline is currently approx. 14' long by 5' wide along east side of center line of roadway (Kent Ave.). 3 Con Ed workers are shoveling oil saturated dirt from bottom of trench as AAA is pumping free product. According to John Mitchell (Con Ed), they are purging back to N. 1st Street terminal at 10 psi pressure. Valves at either end of leak area are closed (11t St. and Oak Ave.). There is an offset in the pipeline so that it can go around a sewer line. Oil is surging from hole in line observed at 13:20 hrs as the line is exposed (leak is on upper west side surface of pipeline). Oil is flowing freely into the trench as soil is removed. Hole is filled with between 100-300 gallons oil oil as it is being pumped. NYCDEP IWCS (Sagar Chatergee) arrived at 2:00 PM. He will get maps of sewers and investigate any sewer contamination. At 4:05 PM he informed Sigona that catch basins lead to 156" twin storm drains. Notified USCG (Lt. Mark Maser) at 4:15 PM of possible release from storm sewers to East River. By 5 PM, 3 vac trucks hadbeen filled (approx. 8,000 gallons) and taken off-site by AAA. At 6:20 PM, observed sheen on East River with Coast Guard and DEP. At 7:30 PM, while walking along N. 12th St. from Kent Ave to River, observed oil in two manholes (open gratingon transformer manhole). (AJS) 6/17/92, 12:25 PM: Observed new collar on pipeline, examined pipeline repair. Met with Harry Coates, Carmine Sabatasso (Con Ed). Area is clean - OK to backfill. Observed a few drops of oil in the telephone conduit about 50 feet west of the leak however these conduits will be pressure washed. (AJS) 11/23/94: REASSIGNED FROM SIGONA TO ENGELHARDT ON 11/23/94.  DEC Memo:

Start DECRemark - 9600011 Prior to Sept, 2004 data translation this spill Lead DEC Field was "ZHITOMIRSKY" TRANSFERRED FROM Y.KRIMGOLD. Also, refer to spill # 9607376 & 9401167. 12/14/04-Spill Case is transferred to I. Islam. The site is under remediation by LiRo Engineers. - II 4/22/05- Reviewed the quarterly monitoring report (Nov./04 - Jan./05). The monitoring data show persistently high level of both soil and groundwater contamination. LiRo claims that the long history of the site for operation as a manufactured gas plant (MGP) may be the cause of this. However, a letter has been issued in order for LiRo to consider alternative measure(s) to remediate the site. The monitoring report has been installed in the eDoc Folder. - II5/13/05- Afsar Samani of DDC raised the MGP issue of this site in the meeting with DEC on 5/4/05 as LiRo has written them either to increase the cost for remediation of the MGP related contaminants at the site or get the Key Span and/or other responsible agency handle the MGP site through DEC. Koon Tang is exploring with the Central office as to the finding of responsible agency to handle the former MGP site remediation.- II. 5/31/03- Joe Moloughney of Central Office confirmed via email that this site would be remediated under the KeySpan Consent Order for MGP sites. This site has been assigned with # 224055 as the MGP site. Therefore, the spill is closed.- II END DECRemark - 9600011

Remarks: Start CallerRemark - 9600011 also ground water affected - repts says that site is contaminated with petro and heavy metals. Also see spill # 9401167. END CallerRemark - 9600011

RAVENSWOOD IS RUNNING LOW ON FUEL AND CON ED IS REQUESTING THAT THE PIPELINE IS
ALLOWED TO GO BACK IN SERVICE. HE CITED THAT THERE WAS NO PRESSURE DECAY
DURING TESTING. I TOLD HIM THAT IT WAS PROBABLY A FALSE POSITVE, DUE TO
EXTREME COLD WEATHER. SINCE THIS WAS AN EMERGENCY, I TOLD HIM THAT THEY COULD
PUT THE LINE BACK IN SERVICE, PROVIDED THAT THE EXCAVATED AREA IS ROADPLATED AND
MONITORED. IF THERE IS ANY OTHER SIGNS OF OIL, THEN THEY ARE REQUIRED TO LAY
THE PIPELINE UP AND DO REPAIRS AND CLEANUP. 1/22/97 UPDATE GHK: 10:00

RESULTS FROM THE TRENCH REVEALED PCB CONCENTRATIONS OF 98 AND 142 PPM.
ADDITIONAL SAMPLES WERE COLLECTED TODAY. THE OIL IN THE MANHOLE REVEALED 36
PPM PCB'S. THE FINGERPRINT REVEALED HEAVY FUEL OIL. ALL ANALYTICAL WAS
PERFORMED BY CON ED'S ASTORIA CHEM LAB. CON ED WILL PERFORM A SITE
CHARACTERIZATION AND INSTALL TWO TO THREE 6" RECOVERY WELLS WITHIN THE EXISTING

THIS PIPELINE SECTION IS OFFSET TO THE WEST TO GO AROUND CON ED ELECTRIC MANHOLE. CON ED DIGGING AND LOOKING AT THE WELDS. FREE PRODUCT NOTED ON WATER TABLE IN POCKETS ALONG PIPELINE. APPROXIMATELY70 FEET OF PIPELINE EXPOSED AT THIS TIME. 13:30 HRS: RETURN PAGE FROM PAUL CARBONE FROM CON ED. ACCORDING TO PAUL, THE STEAM PLANT IN MANHATTAN IS NOT IN FULL OPERATION AND RAVENSWOOD HAS BEEN GENERATING STEAM TO COMPENSATE, ESPECIALY DURING THE COLD WEATHER. RAVENSWOOD IS RUNNING LOW ON FUEL AND CON ED IS REQUESTING THAT THE PIPELINE IS ALLOWED TO GO BACK IN SERVICE. HE CITED THAT THERE WAS NO PRESSURE DECAY DURING TESTING. I TOLD HIM THAT IT WAS PROBABLY A FALSE POSITVE, DUE TO EXTREMECOLD WEATHER. SINCE THIS WAS AN EMERGENCY, I TOLD HIM THAT THEY COULD PUT THE LINE BACK IN SERVICE, PROVIDED THAT THE EXCAVATED AREA IS ROADPLATED AND MONITORED. IF THERE IS ANY OTHER SIGNS OF OIL, THEN THEY ARE REQUIRED TO LAY THE PIPELINE UP ANDDO REPAIRS AND CLEANUP. 1/22/97 UPDATE GHK: 10:00 ACCORDING TO JOHN MITCHELL, U.T. THE LINE IS STILL PRESSURIZED. 10:05 MET KAREL KONRAD/CHRISTINE KOVARI ONSITE. HE INDICATED THE FOLLOWING: THE OIL IN THE MANHOLE AND TRENCH WAS SAMPLED AND ANALYZED FOR FINGERPRINT AND PCB S. THE RESULTS FROM THE TRENCH REVEALED PCB CONCENTRATIONS OF 98 AND 142 PPM. ADDITIONAL SAMPLES WERE COLLECTED TODAY. THE OIL IN THE MANHOLE REVEALED 36 PPM PCB S. THE FINGERPRINT REVEALED HEAVY FUEL OIL. ALL ANALYTICAL WAS PERFORMED BY CON ED S ASTORIA CHEM LAB. CON ED WILL PERFORM A SITE CHARACTERIZATION AND INSTALL TWO TO THREE 6 RECOVERY WELLS WITHIN THE EXISTING EXCAVATION APPROXIMATELY 10 FEET INTO GROUNDWATER) AND INSTALL AT LEAST ONE UPGRADE AND ONE DOWNGRADE MONITORING WELL. CHRISTINE KOVARI WILL BE THE CON ED PROJECT MANAGER.

Remark: THEY HAVE A LEAK GOING INTO A MANHOLE.THEY EXCAVATING TO DETERMINE THE EXTENT OF THE LEAK

Remarks: Start DECRemark - 9906462 Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL" 9/3/99 - Environmental firm was hired by company which is buying the on site company and leasing the land. Environmental firm did a phase 1 & phase 2 assessment with several wells and borings. Found floating product and contamination. SS told them to delineate the site, submit a profile of what is there now and a proposal of what will be done to clean it up. They asked about DEC going after a former owner, SS said no, DEC holds present owner responsible. Envir. firm will submit such a report "soon" 2/18/2000 Sangesland called Mr. Pradhan at Malcolm Pirnie (614-888-4953). Left a voice mail to ask whatever happened to the report DEC asked for in Sept.99 Report should include: 1) Delineate the site 2) Outline what is on the property now and what will be built 3) Identify how the product will be remediated. ALSO SEE SPILL # 0003390 4/12/04-Vought-Spill transferred from Sangesland to Rommel as per Rommel. 1/11/2006 - Haggerty - Malcolm Pirnie did Phase I,II site assessments to determine if this property was a candidate for development. After discovering free-floating product on groundwater, the decision was made not to develop this property. As far as I know, no additional investigation or remediation was done on site. I have made every attempt to locate responsible party with no luck I am requesting a site visit Alternate addresses 70-72 Wythe Ave 91-101 N 12 St 82 N 13 St 58 Wythe Ave 92 N 13 St I believe this property is located at the intersection of North 13th and Wythe Ave Region 2 rep visited the site, but could not get inside to inspect. PBS #: 2-091030. as per PBS record, site had following tanks: 1. two 1,500 gal Lube Oil UST, closed and removed in July 2000 2. one 1,500 gal gasoline UST, closed and removed in July 2000 3. four 550 gal diesel USTs, closed and removed in Dec. 1998 4. one 1,000 gal diesel AST, closed and removed in Apr. 2002 5. one 550 gal gasoline UST, closed-in-place in June 1989 6. one 550 gal diesel UST, closed-in-place 7. one 1,100 gal gasoline UST, closed-in-place total 11 tanks were on-site. sent letter to Mr. Prigozen requiring Phase I, soil and groundwater delineation. letter emailed to Mr. Prigozen. 07/02/07-Hiralkumar Patel. received message from Mr. Prigozen. left message for Sage Prigozen as Elliot's number was busy. 07/05/07-Hiralkumar Patel. received copy of three reports from Mr. Prigozen. 1. addendum to tank closure report (don't have original tank closure report) for four 550 gal USTs 2. geoprobe investigation report for soil investigation in area of previously removed four 550 gal USTs (four 550 gal USTs were located in parking lot along Kent Avenue) 3. closure report for four 1500 gal tanks, which were located near main entrance (on north side) along north 12th street, and were removed in June 2000. addendum to four 550 gal USTs closure includes a further review of sample analyticals for samples taken after tanks removed in Aug. 1998. during tank removal found heavy SVOC contamination in three endpoint samples out of four samples. geoprobe investigation in area of previously removed 550 gal USTs was done as found heavy SVOC contamination during endpoint analysis. abstract: - report prepared on Oct. 7, 1998 - four borings were installed (one on each side of excavation area of previous 550 gal UST location) - three soil samples from the smear zone at approx. 7 ft bg, were chosen for analysis: S-1 (southeast of excavation), S-3 (northwest of excavation) and S-4 (northeast of excavation) - all three samples were analyzed for SVOCs only (as didn't find VOCs in previous sampling) - few SVOC contamination found in sample S-3 (which is along Kent ave) abstract of tank closure report for 1500 gal tanks: - removed four 1500 gal single wall, concrete-encased USTs. - from regional water table maps, groundwater occurs approx. 15 ft bg and flows in a northwesterly direction - tanks were located approx. 4 ft bg - tanks were in good condition with no corrosion. no visible holes or leaks were noted - sidewall samples were collected at 8 ft and bottom sample was collected at 12 ft bg - groundwater was not encountered at the site during excavation - approx. 79.16 tons of contaminated soil were removed - highest PID observed in west side wall sample (PID: 398.3 ppm) - due to observed staining, odors and documented PID readings, the DEC was notified (spill #: 0003390) - minor contamination found in soil endpoint samples spoke with Mr. Prigozen.

explained him that spill was reported as found free product on groundwater during environmental investigation in 1999. and during tank removal activities, no groundwater sample was taken. asked him to delineate groundwater contamination. asked him to install monitoring wells atleast to previous tanks locations (one along kent ave and one along north 12th street). sent email to Mr. Prigozen with specific requirement of monitoring well locations. 07/09/07-Hiralkumar Patel. received call from Mr. Prigozen. he mentioned that he removed four 550 gal tanks from his site, which were located along Kent Avenuen and based on closure report addendum, there was no soil contamination. and he believes that groundwater contamination found in 1999 came from Texaco oil terminal along Kent Avenue. asked Mr. Prigozen to look for investigation report from Aug. 1999, based on which this case was reported. if monitoring wells, during that investigation, were installed along kent ave and found contaminated then based on groundwater flow direction data (if available in report), the department can ask upgradient property to do investigation, but if no site specific groundwater flow direction or previous monitoring well location available to the Department, then the department requires him to do groundwater delineation with site-specific groundwater flow direction. Mr. Prigozen will look for report. 07/09/07- Sangesland received a call from an Environmental consultant in Charlotte, North Carolina. He asked if the DEC required work to be done by a licenced New York State Prof. Engineer. Sangesland said no. The only requirement is the lab used for testing must be NYS Licenced and if any material is removed from the site it must be taken by a licenced hauler. 07/13/07-Hiralkumar Patel. received limited Phase II report from Mr. Prigozen. abstract: - an affidavit dated 06/13/1989 indicates that one 550 gal gasoline tank was purged and filled with concrete slurry in the southern portion of the site - two soil borings and nine monitoring wells were installed - highest PID reading found in boring BK-6 (595 ppm) at 5 to 7 ft bg <----- - groundwater sample was not obtained from boring location BK-6, which was installed closed to sediment trap area <----- - based on site topography and nearby waterways, it is determined that the nearby groundwater flow direction is to the northwest - free product was measured in two monitoring wells (MW-10 with 1.5 inch and MW-7 with 0.05 inch of free product) <----- - minor tetrachlorethane was found in (assumed) upgradient groundwater samples (BK-1, BK-2 and BK-3) - MTBE contamination (236 ppb) found in groundwater samples MW-2 and MW-3 (area near abandoned gasoline tank) - highest contamination found in soil sample at BK-6 (near old sediment trap) -----Xylene----Benzene BK-6 (1-3 ft)-----8,730-----2,025 BK-6 (3-5 ft)-----3,320-----327 //during Phase II, borings were installed to maximum depth of 17.5 ft bg, but report doesn't mentioned about groundwater depth.// 07/18/07-Hiralkumar Patel. after reviewing available reports found following: - no groundwater depth information - free product in wells MW-7 and MW-10 along Kent Avneue, but no groundwater flow direction - MTBE contamination in groundwater sample at BK3, which is close to previously abandoned gasoline tank location - benzene and xylene contamination in sample at BK-6, which is close to sediment trap. no groundwater sample taken from there. spoke with Mr. Prigozen. based on available data, asked Mr. Prigozen to do following: - soil and groundwater sampling at previous sampling location BK-6 (as found Benzene and Xylene in soil and had highest PID during Phase II investigation) - soil and groundwater sampling at abandoned sampling location BK-3, close to previously abandoned gasoline UST (as found MTBE in gw) - complete groundwater delineation (with atleast three permanent monitoring wells and site specific groundwater flow direction) in area of previous boring locations MW-7 and MW-10. asked Mr. Prigozen to check any previous wells exists on site. if nothe need to install new wells. based on available data and reports, asked Mr. Prigozen to disregard requirement of Phase I investigation, as mentioned in letter dated June 18,

DEC Remarks: 9/3/99 - Environmental firm was hired by company which is buying the on site company and leasing the land. Environmental firm did a phase 1 phase 2 assessment with several wells and borings. Found floating product and contamination. SS told them to delineate the site, submit a profile of what is there now and a proposal of what will be done to clean it up. They asked about DEC going after a former owner, SS said no, DEC holds present owner responsible. Envir. firm will submit such a report soon 2/18/2000 Sangesland called Mr. Pradhan at Malcolm Pirnie 614-888-4953). Left a voice mail to ask whatever happened to the report DEC asked for in Sept.99 Report should include: 1) Delineate the site 2) Outline what is on the property now and what will be built 3) Identify how the product will be remediated. ALSO SEE SPILL 0003390

Remark: HISTORICAL SPILL-FLOATING PRODUCT ON GROUND WATER-SPILL WILL CONTINUE TO BE INVESTIGATED.

Sabatasso (Con Ed). According to Tom Thomas, pil was noticed entering Newtown Creek WPCP some time late Sat. night/Sun. morning, but due to the inexperience of the operator on duty at the time, it was not reported to NYCDEP IWCS until early Monday morning (4/4). Thomas estimates that oil was leaking at rate of 30-40 gpm when he first found it leaking into sewer just a couple of feet below grade in the manole. Con Ed lowered pressure on the line for a period of 1hr sometime around 3:00 PM. By the time DEC observed manhole, leak rate appeared to be <5 gpm into sewer. Pipeline is located at a depth of 5' - 6' below grade. Leak is located close to both the were and the regulator chamber so there is some concern about possible surface water impacts. USCG P.O. Duly and P.O. Svendson were on scene earlier, but Engelhardt did not speak with them before they left. Asked MEG to boom off storm sewer outfalls (2 x 156" outfalls). Bob Grimm indicated that is current is greater than 1.5 knots, oil will escape beneath boom, but they placed it anyway. After soil was partially excavated there appeared to be some oil which migrated under the pavement. Upon excavation, 3 leaks were found: looking down at pipe facing south, 2 leaks at 4 o'clock and 1 leak at 9 o'clock (top of pipe = 12 o'clock). Carmine says leak at 9 o'clock was created by hammering while trying to remove insulation from pipe. All 3 leaks were plugged by 9:30 PM. (CAE) 4/5/94, 10:30 AM: Crew is now installing shoring excavation. Vac truck is sucking water out of trench which is seeping in. Visited Newtown Creek WPCP - MEG on scene cleaning intake screens. Al Gordon (NYCDEP) on scene at WPCP. He indicated that some small amounts of oil did reach final treatment stages. Later in the day Engelhardt spoke by telephone with Jim Pynn (Newtown Creek Plant Supervisor). He said that crew had checked regulator and tide gates nad found no oil (at N. 12th Street). They are going to check storm sewer on N. 12thStreet to make sure there is no oil in anticipation of rain event tomorrow. (CAE) 4/6/94: Continuing excavation to locate good pipe. Engelhardt had spoken to Joe Cuozzo (NYCDEP) earlier and was told that Con Ed was demanding that MEG pull out of Newtown Creek WPCP even though Newtown personnel were not satisfied that the clean up was finished. Went to plant, met with Sal Bartolomeo, Jr. (Deputy Plant Superintendent) - he showed Engelhardt the extent of the contamination. There had beenoil on the screens but he was satisfied that those had been fully cleaned. He said there was a lot of oil in the wet well, which Con Ed (Carmine) had objections to cleaning. There was also oil which got into the settling, aeration and grease separation sections of the plant, as well as the sludge thickener unit. The matter was apparently resolved after Joe Cuozzo (NYCDEP) called John Wilson (Con Ed), who called John Mitchell (Con Ed, who authorized MEG to continue cleaning until plant was clean. (CAE) 4/11/94, 10:45 AM: Workers cleaning pipe for cleave welding. Noticed that they had a small pump in the bottom of trench with output hose on street. Asked what this was for, Con Ed replied that water had seeped into trench from duct running though it. They had subsequently pumped out water from a nearby catch basin that had been feeding the duct. Asked them to make sure that this is done from now on (pump out catch basin as opposed to trench), instead of letting water accumulate intr trench and then pumping it with possible oil in it. (CAE) 5/4/94: Met at Newtown Creek WPCP with Jim Pynn. Con Ed finished clean up on Friday 4/29. They ended up removing 70+ truckloads of solidified (w/fly ash) grit and taking it to a disposalsite in Michigan. Clean Ventures ended up finishing the job. (CAE) 5/4/94: fax from Jim Pynn - copies of 2 internal NYCDEP memos regarding the spill. 6/10/94: letter from Con Edison transmitting 3 TPH and 1 SVOC sample results. Requested closure. Closure not granted - additional investigation needed. Appendix B site no. 25/45. (JHO) Update 6/9/06 Spill closed based on final site investigation report located in eDocs App. B Site 25. RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions,

and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

 Env Problems:

Actual:

Previous studies at the Site confirm widespread petroleum contamination with MGP involvement. For example, fuel oil and naphthalene odors are reported in boring logs as deep as 60 feet, and in July 2002 TRC Environmental (TGE's consultant) found heavy staining and MGP waste in a boring 20 feet below grade and reported the occurrence to NYSDEC as a spill (No. 0203677). In addition to organic pollutants, a 1997 investigation also found soil samples with elevated levels of lead. The Phase II assessment was completed in January 2003 and confirmed widespread groundwater and soil contamination with MGP waste and petroleum related contaminants. Heavy staining and odors (coal tar) observed from 20 feet depths to top of clay at 60 feet depths. VOCs and PAH exceed RSCOs below 20 feet depth. Benzene concentrations below 20 feet depth observed up to 864,000 ppb. Off-site benzene detected upto 128,000 ppb. Free product observed (wells B4, MW7). On-site groundwater impacted from water table to top of clay by petroleum and coal tar related compounds. Benzene detected throughout the site at concentrations of 6.5 ppb to 29,500 ppb (in MWB-11). MTBE ranged from 1.2 to 329 ppb and naphthalene ranged from 1.6 to 579 ppb.

Site Desc: The TransGas Energy (TGE) Facility is a project for a new energy facility located on the East River waterfront between the Greenpoint and Williamsburg sections of Brooklyn. TGE proposed to construct and operate an 1100-megawatt gas-fired plant on the Brooklyn waterfront near Bushwick Inlet between the communities of Greenpoint and Williamsburg. For over 100 years, the Site has been operated as a fuel oil storage and distribution facility. Site soils and groundwater are contaminated with Petroleum spill contaminants, MGP Waste and heavy metal contamination. TGE entered the Department's Voluntary Cleanup Program (VCP) in December 2002. The site must be remediated before the facility can be constructed. The current owner of the Site, which TGE has optioned for its cogeneration facility, is the Bayside Fuel Oil Depot. Under Bayside Fuel and previous owners (which include Socony Mobil, Texaco Refining and Marketing and others), the Site has been operated as a fuel oil storage and distribution facility for over 100 years. There is an existing oil spill stipulation (Spill No. 9804544) with Texaco Refining and Marketing that has resulted in ongoing recovery of free-product and contaminated-groundwater. The Phase II assessment was completed in January 2003 and confirmed widespread groundwater and soil contamination with MGP waste and petroleum related contaminants. RI is on-going.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

This report covers 5 locations where the pipeline is scheduled to be closed in-place as opposed to removed. This spill location(N. 7th and Kent) is one of the locations to be closed in-place. (JHO) 2/23/05: e-mail from Matt Madsen, Con Ed Remediation: "Contaminated soil was found in the excavation for the above referenced project between N6th St. and N7th St. Clayton Group Services will collect samples today or tomorrow. In addition to waste class parameters, I have asked Clayton to have the samples run for Modified 8100 so we can try to fingerprint the material. I will continue to keep you posted as we get additional information." (JHO) 3/10/05: E-mail to Madsen: "Matt: As we discussed on Friday, these are my comments on the "Limited Subsurface Investigation for Pipeline #7". 1. PAHs. Since this is the location of a know historical release (NYSDEC # 9300512) I think additional sampling is warranted. you indicated that the excavation has reached this intersection, and that additional samples may be collected during the excavation work. Also, this section may be removed, based on field conditions. In either case, an effort should be made to remove any contaminated soil that is encountered. Samples should be collected at the frequency approved in the construction work plan. 2. Please submit revised drawings without the word "Proposed" boring locations. 3. Please submit an electronic copy (PDF format) of the entire document, including Appendices." (JHO) 3/1/05: Response from Madsen: "Jane: Additional samples have been collected - I'll get them tabulated, plotted and over to you as soon as we havethem. I've also asked Clayton to make the requested revs to the figures and provide electronically. I can either have them reissue the original report with the corrected figures (electronically) and issue an addendum for the additional samples orhold the report until we have the new data and issue an entire new report with the additional data. Let me know what you would prefer." (JHO) 4/5/05: Revised Limited Subsurface Investigation Report submitted. (JHO) 5/13/05: Letter to Con Edapproving results of Limited Subsurface Investigation: "The data generated from the initial soil borings indicated only one area of concern (Kent Avenue at North 7th Street). This was the location of an historical release (NYSDEC spill # 9300512,spill date April 12, 1993). The concern at this location was visual evidence of contamination in a soil boring. The corresponding sample from that boring was submitted for lab analysis and the results indicated very low concentrations of several SVOC compounds. Although these concentrations were below the applicable TAGM value of 50 ppm, as a precaution the Department requested additional sampling in this area to confirm that there was no impact from the historical release. Subsequent sampling was completed in February 2005. Two additional soil samples were collected in the vicinity of the southwest corner of Kent Avenue and North 7th St. (the documented location of the historic release). No contamination was observed during collection of these samples. Analytical results of these samples correlate with the initial sample results. Results of soil sampling and analysis for the 5 sections of pipeline scheduled to be closed in-place indicate there is little or no residual contamination in the soil related to the pipeline. While there are low levels of SVOCs in soil surrounding the pipeline, these concentrations do not exceed the TAGM guidance of <50 ppm per constituent. These results are also indicative of urbanfill conditions, as opposed to fuel oil contamination. With the exception of the North 7th St. intersection, there was no visual evidence of contamination observed in the soil borings. Based on these results, the Department concurs that no further remediation is required for these sections of the pipeline to be closed in-place." Close out spill number. (JHO) END

SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Pro Test will update on further action, investigation and remediation. 03/04/05 - Sawyer - Jim from Protest called me about beginning excavation at the above site On 3/08/05. They are going to remove the tank an about 60 cubic yards of contamination. 03/30/05 - Sawyer - Met Tom Leddy and Ted Dros of Protest Environmental at excavation. They will pump and pad the pit to clean sheen off water in pit. Clean endpoint samples and a ground water sample will then be needed. 5/26/05 - Sawyer- Received endpoint samples from Protest on 4/12/05 and though some of the groundwater samples were above ground water criteria, this property was included in the Greenpoint Plume. This is the reason there are gasoline constituents in the gw sample. The groundwater is between 12-15 and this is an industrial area. No further action required. Closed. END DECRemark - 0212557

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Spill Tank Test: Tank Number: Tank Size: Test Method: Leak Rate: Gross Fail: Modified By: Last Modified: Test Method: DEC Memo:	Not reported Not reported Not reported Not reported Not reported Not reported Not reported Not reported Not reported Start DECRemark - 0413160 3/21/2005 There was an earlier tank test failure spill number (0004062-DeMeo) which has now been closed out in favor of this new spill number. Earth Tech believes that the old tank was relined after the tank failed the prior tank test several years ago, however no work was ever done to remediate the contamination which occurred because of that leak. Earth Tech believes that approx 2 years ago this buried tank was taken out of service. Since that time the building has been supplied by an above ground 5,000 gal tank. Unknown if the buried tank was ever emptied. Earth Tech recently did soil borings around the UST area and came back with high contamination levels. This information was forwarded to the City SCA (SCA Contact: Lee Guterman 718-472-5802) SCA has now decided to remove the UST and excavate out the contaminated soil around it. Earth Tech is modifying the standard city bid package to site specific conditions and will work with the city as they put the excavation/remediation work out to bid. Bid package should go out around April 1st, 2005. Work should be done summer 2005. 04/13/06- Case was transferred from Jake Krimgold to Koon Tang. 7/9/07: Reassigned from Koon Tang to Kartik Chanda (Chanda) 7/18/07: Kartik Chanda of DEC reviewed all documents regarding this spill case. On 7/18/07, Chanda sent a letter to Ms. Lee Guuteran, Manager IEH Department, NYC School Construction Authority, requiring that the following information be submitted to the DEC for review by 9/4/07. 1. An explanation of the cause of the tank system failure; 2. Either a description of the work performed to restore the integrity of the tank system (including retesting results), or a description of the work performed to close (decommission) the tank; 3. Information regarding petroleum contamination found at the site and cleanup activities (if any) associated with a release from this tank system; 4. Any available documentation (i.e., invoices, bills, sampling analysis reports, etc.) pertaining to the work performed at this site associated with this violation END DECRemark - 0413160 Remarks: Start CallerRemark - 0413160 OLD TANK THAT WAS INSTALLED AND WANTED IT TO BE REMOVED. FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: Start DECRemark - 0513729 This spill was called in 3 weeks late - Why? ECO's were on site and issued a summons Check with ECO's and get a report from Milro before closing case. 3/7/06-Vought-Spoke with Paul Basso (Milro) and soil borings were performed yesterday. Soil samples were collected from around gasoline tank and contamination was present. 3000-gallon gasoline tank onsite. Curb overfill resulted in filling of tank sump. Vapors impacted the police station. Oil company (Metro fuel oil) has hired Milro. Vought called NYPD 94th Precinct (Lt. Lott 718-383-6491 and Sgt. Gonzalez 718-383-4427 fax: 718-476-7503) and Sgt; Gonzalez requested that he be the sole contact for the Precinct. As per Lot: 1)gasoline odors were presentin the basement of the building but were mitigated via the installation of a ventilation system by Milro 2)NYCDOH was onsite yesterday and suggested continued ventilation 2)OSHA was onsite yesterday. Sgt. Gonzalez requested: 1)copy of spill report(Vought faxed on 3/7) and 2)notification of Milro of further work date. Vought called Milro and informed Paul to contact Precinct and to call DEC Rahman for further requirements (excavation versus SVE installation). Milro met with Officer Eddie and Sgt Cortez and they just spoke to Lt. Palanco. Vought left message with Lott to return call to DEC with one primary contact phone number. 03.10.06 Sharif Rahman-I spoke with Paul at Milro. He said they found pea gravel near manway of the gasolinetank is contaminated. They dug out 5' down the grade and the PID meter deflected for 150-180 ppm reading. There is a fillcap between the lounge and the dispenser that leads to an old UST. The UST is filled with water. Needs to do more investigation. 03/13/06 Sharif Rahman-Rec'd proposal from Milro to remove the concrete slab above the underground gasoline tank and remove the contaminated pea gravel. A CSL was sent to Metro Fuel Oil 500 Kingsland AVenue Brooklyn, NY 11222 Attn: Jim Carey Cc: Lt.

Polanco,NYPD-Fuel Control Unit. 04/24/06 Sharif Rahman- Milro is removing the pea gravel around the gasoline tank. I spoke with Paul Basso from Milro and suggested him to get approval from the appropriate person of Police Dept.(Lt. Polanco,718.476.7536)before they proceed with all kind of excavation and removal work at the tank area and in the basement as well. Paul informed me he would do that way.Paul also informed me that they found a 2-3' gap in the tank vault which, apparently the escape way for the gasoline and vapor. Samples from the basement should be tested. Residual contamination between tank and building needs to be investigated and remediated, besides the source tank area.I spoke with Lt. Lott,(718)383-6491 and told her about the necessity of excavation and installation of soil borings in the premise. She confirmed me there is no odor complain,as of today. 07/07/06 Rahman- Milro took soil and ground water samples from the tank premises and sent to the lab. Strong odor was encountered during the sampling event.Mike Reardon(718.999.2463)of FDNY called DEC to know the status of the case. He indicated that the tank/piping removal should be done by a FD certified company. I gave him MILRO's contact # to check if they are certified by FD. 08/01/06- Rahman-Rec'd investigation summary report from MILRO.Seven borings were advanced around the gasoline tank and between the precinct and dispenser garage. Three ground water samples out of five showed significant contamination(SB3:Benzene 8500 ug/L,Ethylbenzene 14000 ug/L,Toluene 49000 ug/L,MTBE , Naphthalene 18000 ug/L; SB4:Benzene 17000 ug/L,Ethylbenzene 2100 ug/L,Toluene 26000 ug/L,MTBE 16000 ug/L , Naphthalene 2100 ug/L; SB5:Benzene 18000 ug/L,Ethylbenzene 16000 ug/L,Toluene 58000 ug/L,MTBE 17000 ug/L , Naphthalene 28000 ug/L) . Ground water samples of SB6 and SB7 could not be collected due to boring refusal at 10 ft below grade.GW depth is at 12' below grade.Milro could not install soil boring through the tank vault due to the thickness of the concrete.However,boring was attempted through a void in the bottom of the tank vault that encountered contaminated soil below the tank.Guidance of professional engineer is recommended regarding the removal/treatment of contaminated soil below the tank vault due to structural concerns.Contamination in SB3(Absence of MTBE), located south side of 5000 gallon #2 Fuel oil tank indicates possibility of other source of contamination.Tightness testing of Fuel oil tank system is strongly recommended(contact: Lt. Polanco of NYPD@ 347.672.2367). Milro proposed to install GW monitoring wells to recover separate phase product. ORC will be applied to remediate the residual contaminated water. Case was transferred to Remedial section B for further action on it. 8/1/2006 Spill report is given to AZ by KT. AZ 8/2/06 Left a message for Paul at Milro (516-379-1500). AZ Contacted Paul (Milro). Left a message for Paul at Milro (516-379-1500). AZ Contacted Paul (Milro). They pulled out 1x3000 gal gasoline UST. Tank is in good shape. The cause of the spill was overfill. Complained about odors in the building. The release was below the vault. The vault was not removed. I recommend if safe and structurally possible the vault should be removed and the soil beneath the vault the vault should be excavated. AZ 8/3/06 Contacted Paul @ Milro). Product showed up in the sump. Complains about the odors in the building. Vault has drain holes and weep holes in the bottom. The vault is in poor condition. There is contamination below the vault. Some borings were done at the property. Contamination was found at the water table. No wells were installed. They should hire an engineer to evaluate the possibility of removing the vault. Wells should be installed. I contacted Lt. Polanco(NYPD 718-476-7524). I recommended, if it is structurally possible(from the engineering and safety standpoint) to remove the vault and all contaminated soil. AZ 8/22/2006 Received a letter from Milro and enclosed letter from Hydro Environmental Technologies. The letter from Milro stated that Mr. Douset (Hydro Environmental Technologies) inspected the site. Based on his inspection the tank vault should not be removed. I called Milro to notify them that I concur with this recommendation. Paul is out this week and I left a message for

Anthony who is covering for him. AZ 8/23/2006 Contacted Anthony Mariano (Milro). They should submit to DEC alternative remedial strategy plan. AZ 9/14/2006 Left a message for Paul (Milro). AZ 9/19/2006 Conversation with Paul (Milro). AIG thinks that there are too many unknowns to perform the excavation. They will consider other alternatives. No wells were installed in the area. One soil boring under the vault has shown signs of free phase. I recommended installing wells in the area. Milro or the insurance company (AIG) will submit investigative/remedial proposals for this site to DEC. AZ 9/20/2006 Lt. Lott NYPD 94-th Precinct 718-383-6491. We discussed the site and agreed that the site should be remediated. The tank vault could be temporarily filled in with clean back fill but this backfill could be excavated if this is necessary for future site investigation. It is not recommended to install new tanks into this vault prior to remediation/investigation. FD contact Eugene Levintov 718-999-2451. AZ 9/20/2006 I contacted Paul and told him that they must submit a work plan within five working days. AZ 9/21/2006 I contacted Larry Doucet (Hydro Tech Environmental - 914-245-5411). They will submit an investigative plan with a schedule by Tuesday. AZ 10/3/2006 Left a message for Lt. Polanko 347-672-2367. Spoke with Lt. Polanko (NYPD). Discussed with Lt. Polanko progress of the clean up. Contacted Sergio Rojas (Hydro Tech Environmental -(732)929-2900). I reviewed the submitted Work Plan. The plan did not have a site plan with existing soil borings locations and did not include a plan with proposed well locations. I requested to install wells, utilities allowing, near soil borings SB-3, SB-4, SB-5. A plan with the boring locations should be submitted to DEC. If free phase is discovered it should be pumped out. Plume should be delineated. Soil sampling and groundwater sampling are required. Hydro Tech was notified that contractors are doing the roof at the precinct and there is no access to the site for environmental consultants at the moment. AZ 11/7/2006 I contacted Anne Davis @Hydro Environmental Technologies @732-929-2900, additional phone #732-818-1800. They submitted a letter to Mr. Carey (Metro Oil) and copied NYSDEC on this letter. This submittal was discussed with Sergio on 10/3/2006. Nonew submittals were mailed to DEC. Soil borings have advanced (3) and two wells were completed. Shallow wells were installed in the garage previously. They attempted to install a new well in the garage but got refusal on a Geoprobe. No investigativeresults have been submitted to DEC so far. Wells must be surveyed. At least 3 wells must be installed. Total concentrations must be included in the report. A plan showing all the wells, borings and excavated area should be submitted. Groundwater flow should be determined. The installed wells are 2" diameter. Free phase was discovered in MW-1 and just outside of the vault. They must submit a full report to DEC ASAP. Anne stated that they will send us a report by 11/17/2006. Proposal for future installation should be included. The free phase should be delineated and pumped out as soon as possible. AZ 11/27/2006 Contacted Lt. Polanko @347-672-2367. I informed him that it's ok to temporarily backfill the excavation if necessary but they will have open it up again if needed. Hydrotech will mail DEC their proposals tomorrow. AZ 12/20/2006 I have reviewed a Remedial Investigation Report received on Dec. 7, 2006, and contacted Anne Davis @Hydro Environmental Technologies @732-929-2900. I was told that delineation has not been completed due to the construction barriers installed at the site. I requested installation of 9 delineation wells ASAP. Groundwater flow direction should be established. IRM - enhanced fluid recovery via vac truck could be started from the existing wells immediately. Anne Davis stated that the wells will be installed in mid January. Upon plume delineation completion a remedial strategy will be developed and submitted to DEC for review. AZ 1/19/2007 I contacted Anne Davis@732-818-1800 fax#732-818-1802. The vault is backfilled. 8 wells were installed (total of 10 wells on site and 3 wells are on the sidewalk). They are sampling 11 wells next week. All wells must be developed including the old wells as per DEC instructions. Product was

encountered in two wells: MW-2 - 0.2', MW-9 installed in place IP-2 (piezometer without water which was over drilled) in the garage) -0.03'. They should measure the amount of the pumped product. Enhanced fluid recovery will be performed twice a week? They do not have PID readings on the removed air and amount of product pumped out. Anne is stating that the results of the field investigation will be submitted to DEC around March 2, 2007. I requested a quicker submittal of the investigation report. AZ 1/19/2007 I contacted Lt. Polanko and requested to expedite the issuance of the investigation report. AZ 7/2/2007 Reviewed Remedial Investigation Report and Proposed Remedial Action Plan submitted by Hydro Environmental Technologies on May 8, 2007. The investigation showed 0.07' of free phase in MW-01. Groundwater samples from wells MW-2 to MW-9 all contained total BTEX ranging from 14,336 ppb to 48,520 ppb. The report stated that the southern and eastern horizontal extent of contamination was not been delineated due to the limited access imposed by raw houses located along Manhattan Avenue and Lorimer Street. Additional delineation upgradient of the spill area was attempted but not completed since groundwater was not present in the upgradient wells. The report stated that background water contamination and organic solvents are present at the site. The BTEX and BN concentrations detected in MW-9, which is located approximately 30' upgradient of the spill area, were significantly higher than those concentrations obtained immediately upgradient of the spill (MW-7 and MW-8). The source of organic solvents is not known. The consultant proposed Dual Phase Vapor Extraction (DPVE) as a remedial strategy. The DPVE recovery system will recover total fluids from eight recovery wells MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-7, and MW-8. A high vacuum total fluids pump will depress the water table to a fixed depth between 16 and 18 feet below the grade. Groundwater will be treated using an oil/water separator, sediment filters, air stripper and GACA prior to discharge to a storm sewer lateral. The system will be designed to accommodate 10 gpm. Groundwater flow direction, according to the report, is south towards the former gasoline UST at a hydraulic gradient of 0.002 feet/foot and also northeast from Lorimer Avenue towards the former gasoline UST vault at a hydraulic gradient ranging from 0.06 to 0.08 feet/foot. The submitted remedial plan did not specify capture zone radius of the remedial system. Apparently, the remedial system will not include portion of the plume located around MW-9. I called Anne Davis at (732)-818-1800. She was busy and told me that she will call right back. AZ 7-3-2007 Anne Davis has not called me back. I called Metro Oil Tom Torre (718-383-1400 Ext.#184). I discussed the remediation progress with him. On January 19 2007, DEC requested that Investigative Report should be issued no later than March 2. However, the report was issued in May 2007. I requested information regarding the contact at the insurance company handling the case in order to expedite the site remediation. Mr. Torre will call me back with this info. AZ 7-5-2007 Contacted AIG insurance company (Glen Gunkel 770-870-2132). Claim #683-092965. AIG P.O. Box 2970 Alpharetta GA 30023-2970 We discussed the progress of the remediation. The remediation of this site is delayed. AIG environmental engineer will contact me. Left a message for Lieutenant Polanko. Russ Greatorex (AIG Consultants 770-870-2079) called me regarding the status of the site. I explained to him deficiencies of the submitted report. He will contact the consultants and the deadlines will be enforced. A letter with DEC comments was sent to Hydro Environmental, Metro Oil and AIG: "The DEC comments are as the following: The DPVE recovery system could be used for the site remediation. However, the submitted remedial plan did not specify projected capture zone and radius of influence of the proposed remedial system. Apparently, the remedial system will not include portion of the plume located around well MW-9 and north of well MW-7. This area should be included in the remedial plan. The remedial plan should include a monitoring plan and implementation schedule. A schematic plan of the remedial system should be included in the proposal. Major

parameters of the remedial system such as computations of drawdown, pumping rates and radius of influence; the capture zone, system monitoring parameters and frequency, and reporting frequency should specified in the report. The plume should be delineated in the northern part in the area of wellMW-9. The responsible party should obtain all necessary permits. The submittal of the remedial plan was significantly delayed. A revised remediation plan should be submitted to DEC within two weeks of the receipt of this letter." AZ 7-5-2007 I contacted Rob Meisner @732-818-1800 (Hydro Environmental). He stated that the Precinct provided the site plan. They are looking into a getting sanitary sewer permit. They will address all report deficiencies. AZ 8-7-2007 Meeting with Hydro Environmental (Rob Meisner), AIG (Tony Vinci ph. 201-631-7118), Metro Oil (Scott Alnwick ph. 718-383-1400), John Urda and V. Brevdo took place on Aug. 3, 2007. Three new wells were installed - MW-11, MW-12 and MW-13 with Geoprobe. DEC was not informed about the well installation. No Work Plan for the well installation was submitted to DEC. Neither soil sampling nor PID screening was performed during the well installation. It was agreed at the meeting that: 1. Some delineation wells will be installed downgradient - south and east of the source; 2. Aquifer test will be performed 3. Area around MW-9 will be addressed in the design of the remedial system; 4. The amended Work Plan will be submitted to DEC by September 15, 2007. AZ END DECRemark -0513729

Assessment: Soils contaminated with metals and semi-volatile organic compounds were identified at this site. Contaminated soils have either been excavated and disposed of offsite or are covered by a concrete slab or the onsite building. Groundwater has not been impacted, however, the area is served by a public water supply. Volatile organic compounds were not detected at this site, therefore, exposures associated with soil vapor intrusion are unlikely.

Env Problems: The contaminants of concern in soil at the site were Semi Volatile Organic Compounds (SVOCs) and heavy metals. The groundwater has not been impacted by the contaminants. In 1998, the Phase I and Phase II Environmental Site Assessment have revealed that the contaminants of concern in soil were above TAGM 4046 RSCO. The SVOCs had exceedences ranging from non detected to Benzo(a)anthracene 43ppm, benzo(a)fluoranthene 1500ppm, benzo(b)fluoranthene 41ppm, benzo(k)fluoranthene 26ppm, benzo(a)pyrene 41ppm, Chrysene 38ppm, Dibenzofuran 12ppm. Some of the heavy metal exceedences were Arsenic 52ppm, Selenium 5.6ppm, Chromium 49ppm, Cadmium 12.5ppm, Lead 1930ppm, Zinc 1490ppm, Mercury 3.5ppm. The source was presumed to be in the fill material and also produced by uncontrolled dumping. During the remedial phase, the site has been excavated and the end point samples showed that the concentrations of the contaminants levels were very close to TAGM 4046 RSCO. The excavation has been backfilled with clean soil. The remediation was completed in 2002.

Site Desc: 101-105 West Street is located in the Greenpoint area of Brooklyn, NY 10310, Block 2556, Lot 58. The site is a 0.2-acre parcel used as a construction material storage yard. It is located between Kent Street and Java Street, on the west side of West Street. A commercial property borders the site to the east. The intended use of the site remains to be a construction material storage yard. The surrounding uses are mainly residential with some commercial divisions. Contamination at the site was predominantly in the soil and represented by Semi Volatile Organic Compounds and metals, and resulted from historic fill and uncontrolled dumping of oil and oil-related products from trucks loading construction materials. The Remedial Investigation work plan was approved in 1999 and the RI was completed in 2000. The groundwater is 8-10 feet below ground. The soil is sandy and it is covered with 3-4 feet of fill material. The Remedial Work Plan was approved in 2001 and the field remedial work was completed in 2002. The remedy involved excavation of the entire site and off site disposal. Clean backfill material has been placed in the former excavation. Remedial work at the site is completed.

 Assessment: Public water is provided to the area, thereby preventing exposures to groundwater. The site and surrounding area are covered with buildings or pavement, which limits or eliminates the potential for contact. DOH staff requested the volunteer assessthe presence of soil gas in the area to determine the potential for soil vapor intrusion.
 Env Problems: The soil and the groundwater are highly contaminated with VOCs from historical spills during manufacturing processes of paint. The contaminated plume has migrated under the adjacent parking lot of the adjacent ConEd Facility. In 2002, ConEd sued Fyn Paint for contaminateing their site. In March 2007, the Pump and Treatment System is in operation at low capacity until the NYCDEP permit to discharge the residue into the municipal sewer system will be obtained. The residue is now stored into 55gal drums. A soil gas intrusion investigation work plan around the facility was approved and the field work is undergoing.
 Site Desc: The site is located at the norhtwest corner of the intersection of Kent Ave with North First St., Brooklyn, NY. The current zoning is M3-1, heavy manufacturing. The site is adjacent to a ConEd Facility, Former North First St. Oil Storage Terminal. In 2002, ConEd sued Fyn Paint for contaminating their site with Volatile Organic Compounds (VOCs). Fyn Paint property is 500 ft away from the East River. In the neighbourhood there are warehouses, other manufacturing facilities and few residential buildings. The site's soil and groundwater are contaminated with elevated concentrations of VOCs as ethylbenzene, toluene, o&am;p xylenes, 2-butanone, and acetone. The site is in remedial investigation phase and an Interim Remedial Measure (IRM) is in operation at the site. The remedial investigation has not been completed. A soil gas intrusion survey is in process around the Fyn Paint property. In March 2007, the IRM consisting of a Pump and Treatment System (PTS). Design includes anactivated carbon filtration stage. The system is working at low capacity until a NYCDEP permit to discharge the residue into the municipal sewer system is obtained. At the present time, the residue is stored in 55 gal drums.

Vought received message and returned call to Lavado (cell:646-235-4800). Site was old gas station in 1950's and was vacant lot. Site will be residential construction. Phase I shows tanks still in place and tanks were removed (gasoline and waste oil). Gasoline USTs encased in concrete and waste oil tank had numerous holes. Waste oil tank was vacuumed out however after removal, gross contamination was observed above tank. Samples were collected for waste disposal. Future plans will include excavation and collection of endpoint soil samples. Lavado will return call to DEC with site contact. DEC requires: 1)PBS registration 2)collection of endpoint samples with site plan 3)future use of site 4)owners address and fax 4)delineation 5)vapor barrier and possibly SSDS 6)notificaton upon collection of endpoint samples so that site visit by DEC may be scheduled. 8/3/07 - Austin - Transferred from Vought to Rahman for further review and action - end END

DEC Field was "ROMMEL" 4/12/04-Vouight-Spill transferred from Sullivan to Rommel as per Rommel. Contacted present owner. Manny Shurka (212) 832-9100. He has no infoon followup tank test. He bought site in 1997. All tanks closed in 1999. If tanks were operated for two years after tank test failure, then tanks can be assumed to have been OK in 1997. Tanks were not suction dispensers. They used submersiblepumps. So, depending on where the tank test failure leak was, there could have been a release. Check with Manny if he did an environmental assessment when he bought the property or if Getty did one when they sold the property. END DECRemark - 9108332

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 0

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

 Site Description:

This site lies underneath the elevated Brooklyn - Queens Expressway (I-278) along Meeker Avenue between Metropolitan and Union Avenues in the Williamsburg Section of Brooklyn. It is believed that during the construction of the BQE, waste material and debris from the former Ansbacher Color & Dye Factory may have been used as fill material in the project area. A Phase II - type investigation was conducted by the New York State Department of Transportation in 1988. The investigation found hazardous levels of arsenic and lead in the soil and elevated levels of arsenic, lead and cyanide in the groundwater. During the reconstruction of the BQE in the early 1990s, the NYSDOT completed an IRM (soil removal) within the project's right-of way. The remaining contaminated soil is located beneath asphalt and concrete. A Preliminary Site Assessment was completed during the summer of 1999 to evaluate the areas outside the BQE footprint. The sampling results indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals, but the contaminated groundwater has not migrated significantly beyond the footprint of the former factory.

Environmental Problems:

The primary contaminants of concern at this site are arsenic, lead, mercury and cyanide. Investigations indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals. The site does not constitute a significant threat to the environment as the contaminated soil is covered by existing layers of asphalt and concrete, and the contaminated groundwater has not migrated significantly beyond the footprint of the former factory.

Health Problems Assesment:

Soil with residual arsenic and lead contamination remain under the BQE and is covered with several layers of concrete and asphalt. Contaminated soil also underlies several on-site buildings formerly used by Ansbacher. Contaminated groundwater is not used if any, in buildings formerly used by Ansbacher. Off-site sampling of surface soils from residential yards adjacent to the site indicated the presence of metals (particularly arsenic and lead) at concentrations above the range of concentrations typically encountered in urban neighborhoods. However, the exact source of the metals in the soils could not be determined from the data collected. The NYSDOH gave the residents advice on how to minimize their exposure to these surface soil contaminants.

 Site Description: Manhattan Adhesives is currently an empty factory building that is located at the foot of the Greenpoint Ave., Bridge in Brooklyn. Besides the Manhattan Adhesives factory, about 10 feet from the northeast wall is a manhole (not a sewer or drain) into which liquid waste was allegedly discharged. This waste came from a condemned oil storage site located at the intersection of Rt. 280, and the NJ Turnpike in NJ. The manhole is suspected of being the opening to an underground tank; however, the quantity of the waste allegedly dumped exceeds the capacity of most tanks. This information was obtained from the State Senate Committee on Crime and the Brooklyn District Attorney's office. Phase I State Superfund has been completed. A partial phase II investigation was completed during 1985 and recommended no further action. The Responsible Party has agreed to undertake an investigation in 1986. An investigation has not found hazardous waste on-site.
 Confirmed HW: Waste oil alleged to contain PCB's: Over 400,000 gal.

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

USGS TOPOGRAPHIC MAP

Target Property Map:	40073-F8 BROOKLYN, NY
Most Recent Revision:	1995

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.
