

Monthly Progress Report 2023 No. 11

Former NuHart West Site

65 Dupont Street, Brooklyn, NY

NYSDEC Site No. 224136

Reporting Period: November 1, 2023 – December 1, 2023

1. Introduction

In accordance with the reporting requirements for the Former NuHart West Site, located at 65 Dupont Street, Brooklyn, NY (Site), Haley & Aldrich of New York (Haley & Aldrich), has prepared this monthly progress report, on behalf of Dupont Street Owner LLC, to summarize the work performed at the Site from November 1 through December 1, 2023.

The Former NuHart West Site is located in the Greenpoint neighborhood of Brooklyn, NY and is identified as Block 2487 Lot 17 on the New York City tax map. The Site is listed in the New York State Department of Environmental Conservation (NYSDEC) Inactive Hazardous Waste Registry as a Class 2 Site (Site No. 224136). The Site is underlain by sub-grade footings, utility networks, closed underground storage tanks (USTs), and piping and trench systems. The USTs and trench systems were cleaned out and the USTs were closed in accordance with applicable regulations in 2006. Former industrial operations at the Site have impacted onsite and offsite soil and groundwater with phthalates and lubricating oil (Hecla oil), most likely released from the tank and piping/trench systems. Phthalates and a phthalate/oil mixture are present in soil and as a light non-aqueous-phase liquid (LNAPL) plume floating on the groundwater surface primarily beneath former Lots 1, 10, and 78 of the Site and extending somewhat offsite to the southwest. Groundwater is encountered at approximately 8 to 10 feet below ground surface (ft bgs). Currently, the site is a vacant 49,000-square foot lot with a concrete slab on grade undergoing excavation and remediation.

Resource Conservation and Recovery Act (RCRA) closure activities were completed at the Site in May 2022. Interim remedial measure (IRM) activities are no longer being conducted at the Site since the product recovery systems were decommissioned as part of the RCRA Closure. IRM activities concluded in February 2022. Eastern Environmental Solutions, Inc. (Eastern) previously conducted waste management activities for disposal of product from the IBC tanks at the Site. Prior to 2022, Eastern has transported and disposed an estimated 2,116 gallons of product at the CycleChem facility in Elizabeth, NJ as hazardous waste. In January 2022, ACV Environmental Services Inc. (ACV) transported and disposed a total of 2,529 gallons of product at the CycleChem facility in Elizabeth, NJ as hazardous waste.

2. Investigation or Remedial Actions Relative to the Site during this Reporting Period

During this reporting period, Haley & Aldrich oversaw the excavation, stockpiling, and loadout for offsite disposal of soil within the negative pressure enclosure on the western portion of the Site and from the ramp on the eastern portion of the Site, operation of the dewatering system, and installation of support of excavation elements.

Eleven USTs were uncovered under the current location of the negative pressure enclosure to

date and have all been cut open and cleaned by Eastern Environmental Solutions Inc.

Haley & Aldrich performed the Community Air Monitoring Program in accordance with the approved Final 100% Remedial Design during ground intrusive activities at one upwind and two downwind locations measuring volatile organic compounds (VOCs) and dust particulates. Daily reports have been submitted the following business day to the New York State Department of Environmental Conservation (NYSDEC) and New York State Department of Health (NYSDOH) case managers.

Haley & Aldrich continued the LNAPL Recovery Pilot Test in OU-2 which began on 24 October 2023. LNAPL is recovered daily from recovery wells and stored in 275-gallon IBC totes within a secondary containment on the southwestern portion of the Site. Weekly summaries of LNAPL recovery are included in daily reports submitted on Mondays. Haley & Aldrich evaluated the use of alternative methods for LNAPL recovery including vacuum enhanced fluid recovery, an impeller-driven transfer pump and a peristaltic pump. The transfer pump method has been more consistently effective in recovering LNAPL while vacuum enhanced recovery and the peristaltic pump methods were not as effective due to higher viscosity product encountered in certain wells. Additionally, an absorbent sock was installed in RW-51 which is located outside the construction fence and has LNAPL present. A table summarizing LNAPL recovery at each monitoring well for the month of November is attached. LNAPL recovery well locations are shown on Figure 1.

Dewatering permit compliance sampling data by Chicetti Engineering PLLC is attached.

3. Monthly On-Site and Off-Site Monitoring Well Gauging

Gauging of off-site monitoring wells associated with the Site was performed on 28 November 2023. On-site monitoring wells are no longer accessible due to construction activities. Gauging results are included in the attached table. Additionally, transducers are installed in MW-12, MW-14, MW-29, MW-30, and MW-38 and could not be gauged. The wells that could not be accessed are identified on Figure 2.

Due to LNAPL identified in MW-24 in previous reporting periods, an absorbent sock (New Pig) remains installed in MW-24 and is inspected on a weekly basis and replaced periodically, as needed. Absorbent socks have also been installed in all off-site monitoring wells outside the construction fence where LNAPL is present including MW-20, MW-25, and MW-26.

4. Actions Relative to the Site Anticipated for the Next Reporting Period(s)

- Continue remedy execution including removal of the slab and excavation and off-site disposal of soil on the western portion of the Site, under the negative pressure enclosure.
- Continue the full-scale LNAPL recovery demonstration test by recovering LNAPL from the off-site recovery wells.

5. Approved Activity Modifications (changes of work scope and/or schedule)

There have been no modifications to the work scope.

6. Results of Sampling, Testing and Other Relevant Data

Samples of the tank contents and tank rinsate samples were collected from 1 November to 17 November 2023. Results of the tank content samples and rinsate samples were presented in the Supplemental Contained in Request 09 and Supplemental Contained in Request 10.

No documentation samples were collected during this reporting period.

Air samples of each air handler unit utilized for the negative pressure enclosure were collected on 31 October 2023 through 2 November 2023 and were analyzed for volatile organic compounds (VOCs) using EPA method TO-15 including cis-1,2-dichloroethene, trichloroethene, and vinyl chloride, and for semi-volatile organic compounds (SVOCs) including bis(2-ethylhexyl)phthalate and diethyl phthalate using EPA Method TO-13A. A table of the air sampling results for the five air handling units and the analytical laboratory reports are attached.

7. Deliverables Submitted During This Reporting Period

The Supplemental Contained-in Request 09 was submitted to NYSDEC on 8 November 2023 and was approved on 13 November 2023. The Supplemental Contained-in Request 10 was submitted to NYSDEC on 22 November 2023 and was approved on 29 November 2023. No other deliverables were submitted during this reporting period.

8. Information Regarding Percentage of Completion

The Remedial Action is approximately 60% complete.

9. Unresolved Delays Encountered or Anticipated That May Affect the Schedule and Mitigation Efforts

None.

10. Community Participation (CP) Plan Activities during This Reporting Period

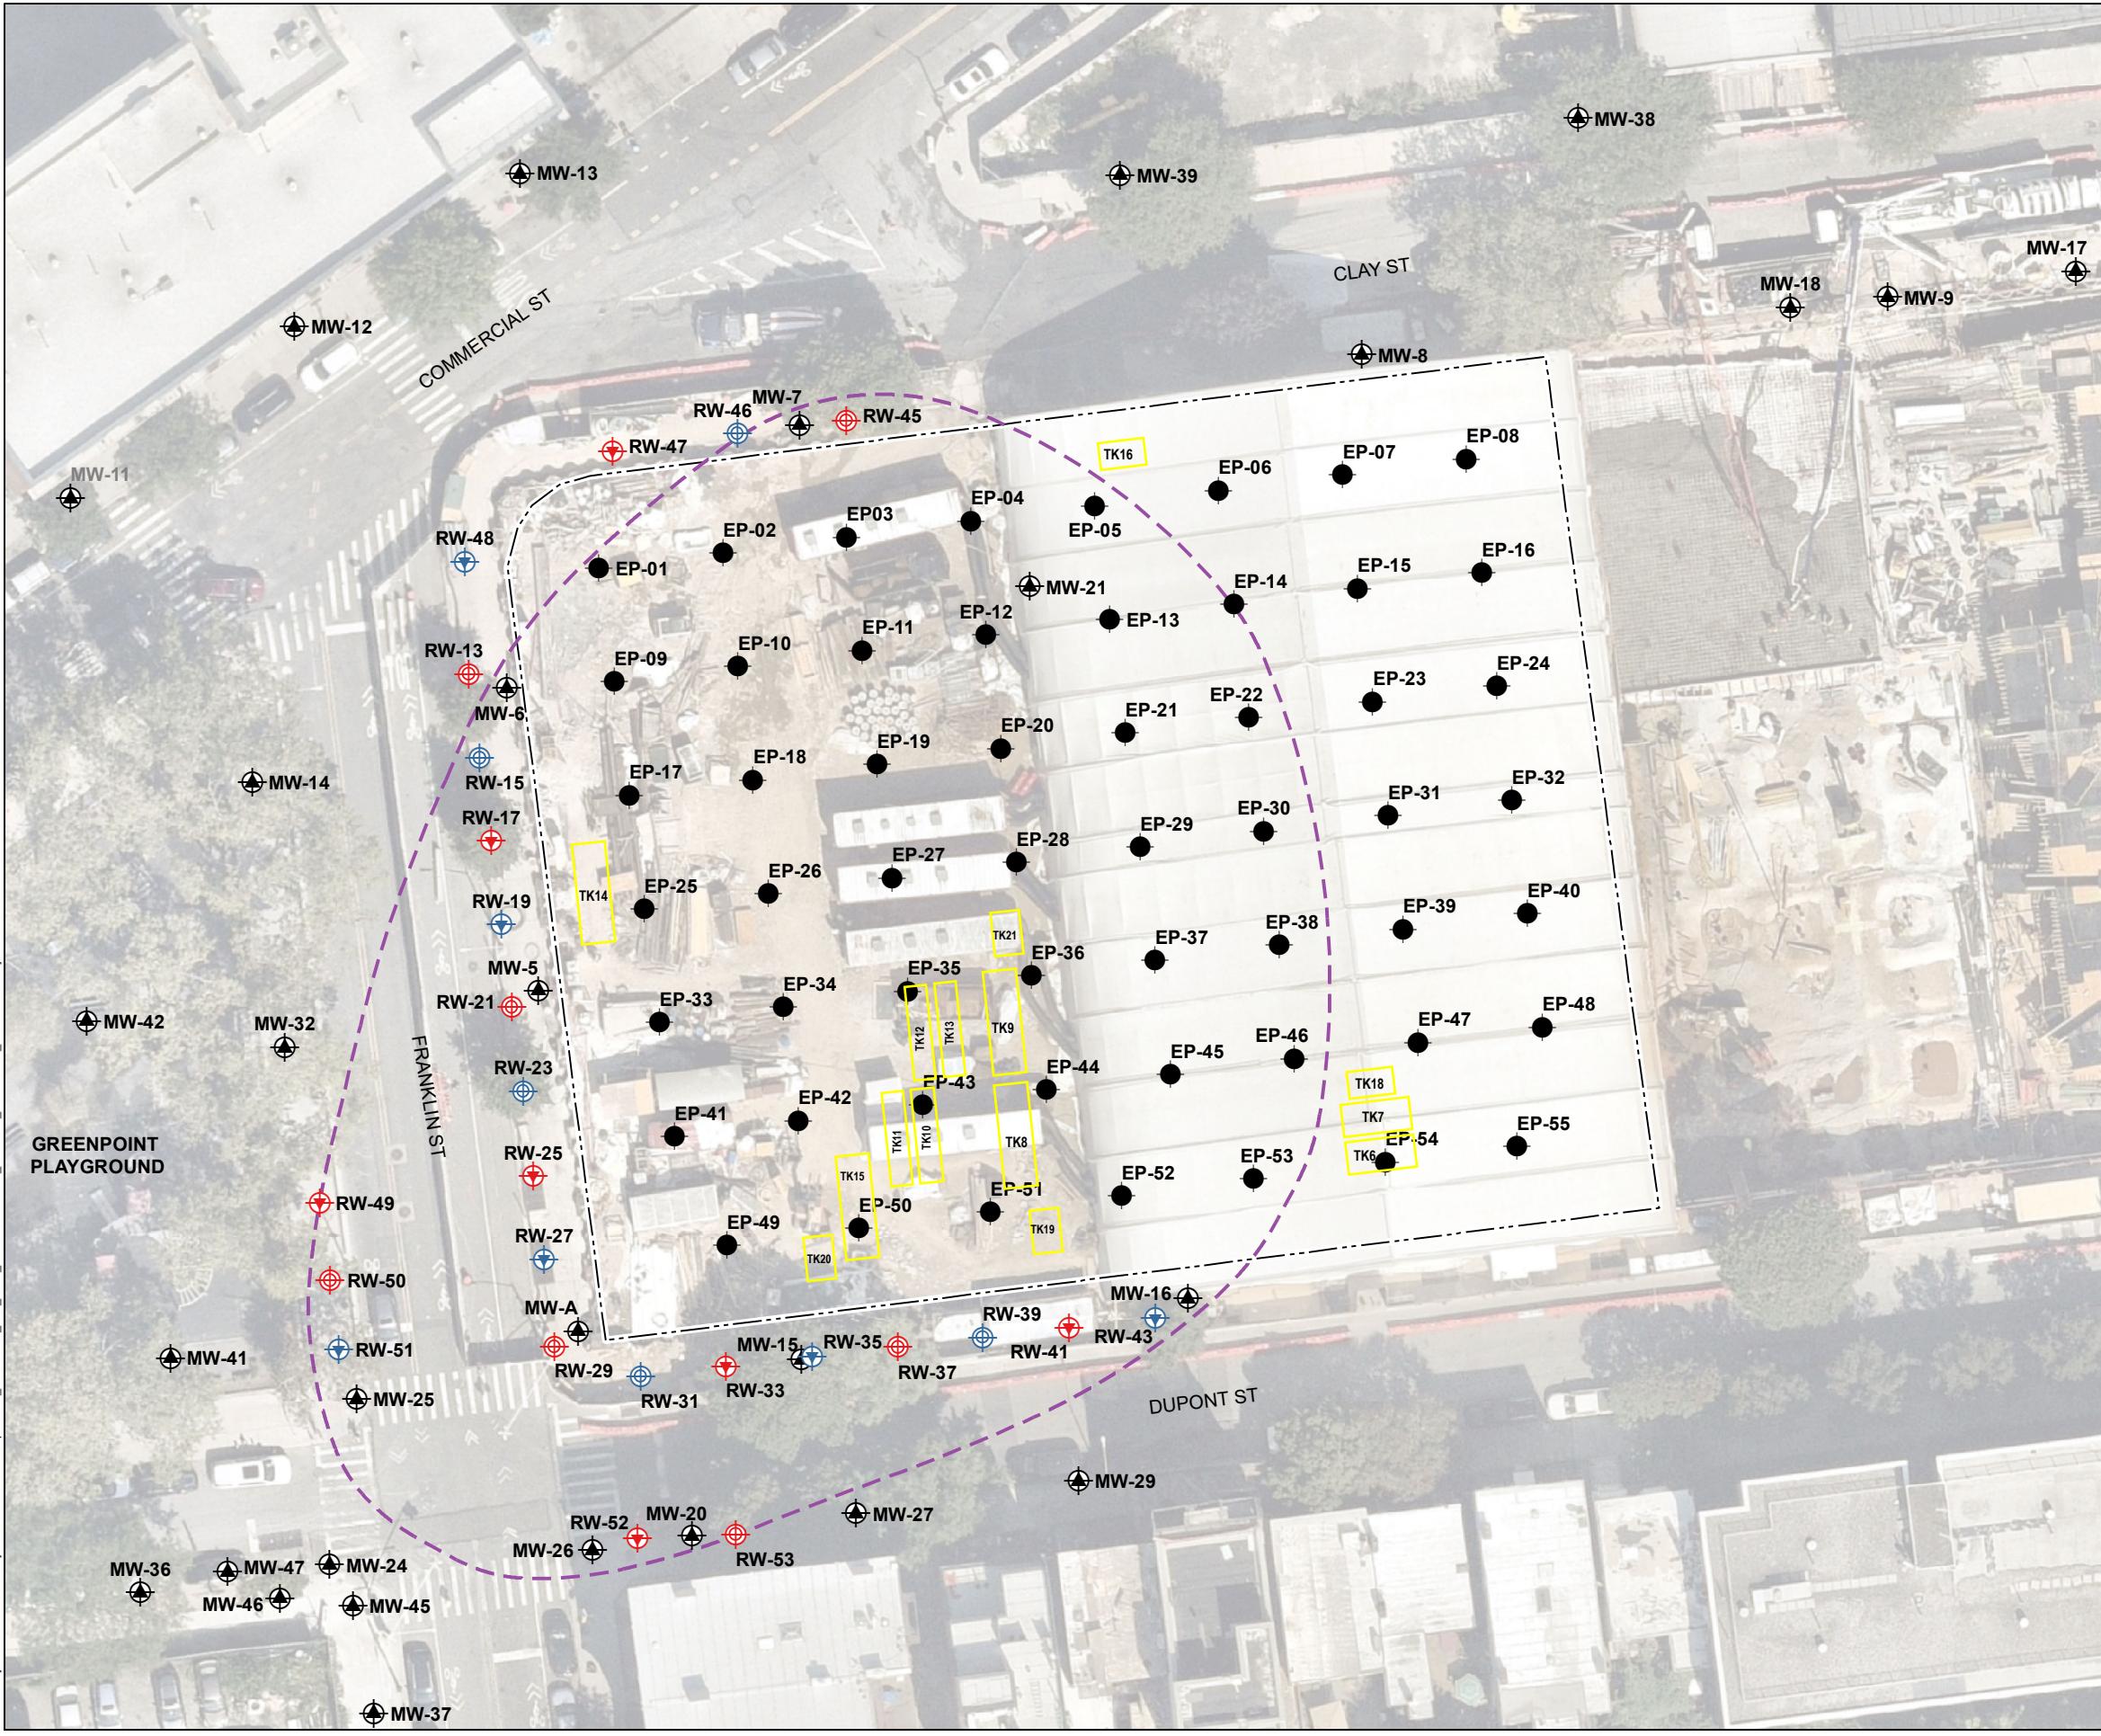

None.

11. Activities Anticipated in Support of the CP Plan for the Next Reporting Period:

None.

12. Miscellaneous Information

None.

Notes:

DAR-1: Guidelines for Evaluation and Control of Ambient Air Contaminants under 6 NYCCR Part 212

SCG- Short-term Guideline Concentration

AGC- Annual Guideline Concentration

U- Non-Detect Result

J- Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value

X- Laboratory control sample is outside acceptance limits, low biased

PUF- Polyurthane Foam

Table 1b. Air Handler Unit Potential to Emit - Treatment Determination

Air Handler Unit (AHU)	Units	AHU-1	AHU-2	AHU-3	AHU-4	AHU-5	Potential to Emit	Limit
Flow	CFM	20000	20000	20000	20000	20000	(lbs/hr)	(lbs/hr)
Volatile Organic Contaminants of Concern by TO-15 SIM								
cis-1,2-Dichloroethene	non-HTAC	lbs/hr	0.000012	0.000012	0.000012	0.000012	0.000060	0.5
Trichloroethene	HTAC	lbs/hr	0.000014	0.000014	0.000005	0.000014	0.000037	0.000085
Vinyl chloride	HTAC	lbs/hr	0.000007	0.000007	0.000007	0.000005	0.000008	0.1
Semivolatile Organic Contaminants of Concern by TO-13A								
Bis(2-ethylhexyl)phthalate	non-HTAC	lbs/hr	0.001273	0.001273	0.001273	0.001273	0.006365	0.5
Dioctyl phthalate	non-HTAC	lbs/hr	0.000621	0.000621	0.000621	0.000621	0.003107	0.5

Notes:

The estimated flow of each air handler unit is 20,000 cubic feet per minute (cfm)

The potential to emit is calculated by the following formula: concentration (ug/m3, using detection limit if non detected) x flow (ft3/min) x conversion { (60 min/hr) / [(35.3 ft3/m3) x (1,000,000 ug/g) x (454 g/lbs)]} = lbs/hr

The potential to emit is the summation of all five air handler units

HTAC: High Toxicity Air Contaminant

Potential to Emit Limit (from NYSDEC Guidance on Air Emissions of VOCs at DER Remediation Sites):

-For HTAC compounds, if the Potential to Emit is greater than 0.1 lbs/hr, then additional treatment is required.

-For HTAC compounds, if the Potential to Emit is greater than 0.5 lbs/hr, then additional treatment is required.

Yuk Yin Wong
NYSDEC – Division of Environmental Remediation

Reference : Groundwater Sampling and Gauging Report
75 Dupont Street Brooklyn, NY
DEC Permit # 224136 and C224287

Dear Mr. Wong,

Enclosed please find the groundwater sampling and gauging report for the above referenced project. The report consists of the daily logs, groundwater levels and water sample analytical results retrieved from monitoring wells 12, 14, 29, 30, 38 and 43 by Cichetti Engineering, PLLC. Water samples and gauging were retrieved as follows:

11/09: Monthly dewatering sample

The dewatering report enclosed is associated with the foundation portion of the project which is under construction by the general contractor OmniBuild and foundation contractor MonCon. Monthly groundwater sampling and gauging will continue to be performed on a monthly basis.

We've compiled a comparative summary table of the water analytical results for each monitoring well. The groundwater results were compared to New York TOGS 1.1.1 Ambient water quality standards.

Sincerely,

Matthew Cichetti, PE
Cichetti Engineering PLLC

Cichetti Engineering
P.O. Box 195
Germantown, NY 12526

DAILY PROGRESS REPORT

PROJECT NAME	DATE	WEATHER AND TEMPERATURE
75 Dupont Street	11/09/2023	Clear – 67 Degrees

TODAY'S OVERALL PROGRESS

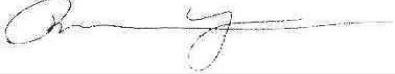

See attached Groundwater Monitoring Table for water level monitoring.

Retrieved monthly water samples from Monitoring Wells 12, 14, 29, 30, 38, 43 as follows:

1. Purged stagnant water in monitoring wells in accordance with USEPA "Low Stress" guidelines
2. Pumped monitoring wells and filled sampling bottles in accordance with USEPA "Low Stress" guidelines
3. Delivered water samples to lab facility and tested for the following: VOCs
SVOCs
Metals
NYSDEC list PFAS Compounds
1,4-Dioxane

ESTIMATED QUANTITIES

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on November 09, 2023 and listed below. The project was identified as your project: **75 Dupont Street**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 23K0609

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

23K0609-06	MW-43	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

VOA-Air	Air bubbles were present in vial upon receipt by lab.
S-08	The recovery of this surrogate was outside of QC limits.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
PFSu-L	The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
PF-LCS-H	The LCS recovery was slightly above acceptable limits for the qualified compound. However, sample results are not biased high because results are corrected for isotope recovery.
PF-CCV-L	The CCV recovery was slightly below acceptable limits for the qualified compound. However, sample results are not biased low because results are corrected for isotope recovery.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
EXT-EM	The sample exhibited emulsion formation during the extraction process. This may affect surrogate recoveries.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence . This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon current NELAC/TNI Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.
