Tank Info:

Tank Number:	001
Tank Id:	65918
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

C01 - Pipe Location - Aboveground
J02 - Dispenser - Suction Dispenser
I00 - Overfill - None
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
E04 - Piping Secondary Containment - Double walled UG
F00 - Pipe External Protection - None
B00 - Tank External Protection - None
K00 - Spill Prevention - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
A00 - Tank Internal Protection - None
L02 - Piping Leak Detection - Interstitial - Manual Monitoring

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/02/1964
Capacity Gallons:	3500
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D008
Waste Description: LEAD

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Tank Info:

Tank Number:	LVN-1
Tank Id:	6641
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

DRAFT

NYCT-LIVONIA YARD (Continued) **1000338868**

Equipment Records:

G02 - Tank Secondary Containment - Vault (w/access)
E00 - Piping Secondary Containment - None
I02 - Overfill - High Level Alarm
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
F01 - Pipe External Protection - Painted/Asphalt Coating
I03 - Overfill - Automatic Shut-Off
D02 - Pipe Type - Galvanized Steel
J04 - Dispenser - On Site Heating System (Suction)
K01 - Spill Prevention - Catch Basin
L09 - Piping Leak Detection - Exempt Suction Piping
H05 - Tank Leak Detection - In-Tank System (ATG)
C01 - Pipe Location - Aboveground

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 09/01/1947
Capacity Gallons: 10000
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True
Modified By: MFLEONAR
Last Modified: 08/21/2017
Material Name: #4 fuel oil (on-site consumption)

Tank Number: LVN-2
Tank Id: 49185
Material Code: 0008
Common Name of Substance: Diesel

Equipment Records:

H05 - Tank Leak Detection - In-Tank System (ATG)
E00 - Piping Secondary Containment - None
I02 - Overfill - High Level Alarm
I04 - Overfill - Product Level Gauge (A/G)
J00 - Dispenser - None
C01 - Pipe Location - Aboveground
L00 - Piping Leak Detection - None
G01 - Tank Secondary Containment - Diking (Aboveground)
F01 - Pipe External Protection - Painted/Asphalt Coating
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D02 - Pipe Type - Galvanized Steel

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 03/01/1995
Capacity Gallons: 75

Hazardous Waste Summary:

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 05/29/04 Transfered from Tibbe To Rommel. 08/24/2004 transfered from Rommel to J. Vought. 9/26/05- file transferred from Vought to Obligado 12/22/05 - Obligado - review UST closure report submitted by PW Grosser, August 2000. A total of 30 USTs and one AST removed as part of tank upgrade project. USTs were removed from various locations across the site. All results below in ppb. TANKS 1 - 26 AREA: Approximately 5829 gallons of groundwater/floating product was removed from excavation areas. Endpoint samples along the western boundary of the excavation indicate elevated SVOCs and VOCs (up to 1,176,000 total VOCs including 8700 benzene and 103,930 SVOCs). In

DRAFT

VARSITY BUS CO (Continued) **1000295632**

the South, west and east of excavation high VOC concentrations, suggesting gasoline contamination (up to 1,432,000 total VOCs). Because the tanks in this area were designated as diesel fuel storage tanks, it is not known where the floating product (gasoline) originated. TANK 27 AREA - Tank was designated as motor oil storage. Located near the dispensers. Impacts show elevated VOC concentrations (up to 72,070 total VOCs). Suggest gasoline was at one time stored and dispnesed in this area. TANK 28, 28A, 29 AREA: - Significant SVOC and VOC concentrations. Endpoint samples indicate stained soil/landfill debris remain. (58,260 total VOCs and 42,460 SVOCs). TANK 30 AREA - Relatively low SVOC concentrations PWGC believes no further action is warranted in this area. PWGC recommends that a groundwater monitoring program be set up. At least one upgradient and two downgraident monitoring wells for each major area. Also recomends a receptor survey within quarter mile area. Called Frank Castellano at PWGrosser, (631) 589-6353. Property is owned by Paul Cooper who also owns Green Bus Lines. No additional work was done subsequent to UST excavations and upgrades. On 1/1/06, Green Bus Lines will be aquired by city (MTA?) , but property will still be owned by Cooper and MTA will be a tenant. Send due work letter with due date of 3/3/06 requiring deliniation to: Paul Cooper Green Bus Lines 444 Merrick Rd Linbrook, NY 11563 2/23/06 - Obligado - email from Frank Castellano. Requests extension. New deadline is 4/28/06. 4/06 - Obligado - Spoke to Frank Castellano. Drilling has been pushed off. New drilling date is 4/26 and 4/27. 6/26/06 - Obligado - Called Frank Castellano to iquire about Investigaiton report. Left message to call DEC. 7/12/06 - Obligado - Spoke to Frank Castellano, he said I should be receiving the Investigation Summary report shortly. 8/4/06 - Obligado - Investigation report submitted on 7/31/06. Called Frank Castelano, resheduled meeting for 8/9/06. Review Montiorng Well Installation and Baseline Sampling Report. Spill called in as a result of tank tightness failure in 1992. Feb to April 1999 30 USTs removed, 2996 tons of petroleum-impacted soils and debris excavated, and 5016 gallons of floating product and impacted groundwater from excavations. In April, six monitoring wells were installed. Wells were 4 diameter set to 15 ft bgs. On May 19, 2006 samples were collected. Wells MWs 1,2,3,5,6 had product and were not sampled. Free prodect was bailed from each well. MW 1,2,3 Product is weathered brownish fluid with a gasoline and diesel odor. MW5,6 is golden-tan colored viscous oil with petroleum odor. GW direction could not be taken due to product thicknessess. Regional gw flow is to south towards jamaica bay. Free product samples were collected and showed from #1 Fuel Oil and Gasoline Mixture in MW3 and hydraulic fluid in MW5. LNAPL thicknesses: MW1 - 1.18 ft MW2 - 3.51 ft MW3 - 0.86 ft MW4 - NM MW5 - 4.75 ft MW6 - 1.01 ft Ground water results for MW4 show ND for BTEX and MTBE. MW4 is the upgradient sample. Soil results show VOCS and/or SVOCs above SCOs in MW1, MW4, MW5, and MW6. Due to poor recovery, no soil samples were collected from MW2 and MW3. Recommendations - HI-VAc product recovery in MW1, MW2, MW3, MW5, and MW6 until product decreases to levels which can be hand bailed. Continued monitoring of LNAPL and sampling. Tightness testing of newly installed diesel fuel USTs Upgrade hydraulic lift equipment. Seal concrete trenches. Provide quarterly reports to the NYSDEC summarizing remedial, monitoring, and sampling activities. Obligado - Will discuss this site and how to proceed at meeting on 8/9/06. Will likely send Stipulation agreement. 11/28/06 - Obligado - This site is one of 6 Cooper Bus Line sites with open spill numbers. A meeting was

DRAFT

VARSITY BUS CO (Continued) **1000295632**

held between the DEC, PW Grosser, and Cooper Bus Lines on 8/9/06. They agreed to submit a Comprehensive Workplan for all 6 sites. A separate Stipulation agreement will be drafted for each site. A Comprehensive workplan was drafted which covers investigation procedures and schedule for all sites. I reviewed the Workplan in October 06 and required some modifications. I spoke to Kris Almskog today and he said the revised Workplan is complete and he will send it out today. 12/6/07 - Obligado - Approved comprehensive workplan. 2/2/07 - Obligado - STIP executed by Oliva. 5/9/07 - Obligado - Spoke with Rafael Ketani, who informed me of a 1400 gallon spill (sp0701587) at the site on 5/8/07. Called Kris Almskog to get an update on the site. He said that additional wells were installed as per the workplan 2 weeks ago and they were in the process of being surveyed. He was not aware of the new spill, but he called Anthony Mule and was told that Frank Castellano in his office had been informed about the spill. He will call me back to get more information to me. See spill #0701587. 5/24/07 - Obligado - PBS Violations hearing at which GTJ/Varsity Transit (Green Bus lines) and Sprague Energy (fuel delivery company) were present. 1400 gallons of diesel fuel were delivered to the secondary containment of a UST. The secondary containment failed and 1400 gallons entered subsurface directly. Both parties signed a consent order for the spill. As per the Compliance Schedule, VTJ/Varsity Transit must submit a expedited site assessment to me by May 30, 2007. Following completion of the expedited site assessment, a RAP will be submitted within 30 days. 5/31/07 - Obligado - Reviewed Investigation Summary Report and Work Plan, received via email on 5/30/07. Wells were installed on May 2, 2007, and sampled on May 9. 8 of the 11 wells had product. Investigation revealed 2 product plumes, one in vicinity of hydraulic lifts and one in vicinity of dispensors/tanks. Product analysis revealed a mixture of product beneath the site, including #1 and #2 fuel oil, composite motor oil, and gasoline. Thicknesses up to 4.53 ft in MW5. GW flow direction to southeast. Upgradient wells MW10 and MW4 clean or very minor impacts (6 ppb benzene). Down gradient well MW9 has 1146 ppb VOCs. VEFR IRM initiated May 17. A total of 150 gallons of product removed from all wells. Will continue twice monthly. An expedited workplan was included in the report. Proposes installing 6 initial 4 wells to delineate free product plume. If product is encountered in new wells, additional 4 wells will be installed 40-60 ft outward until all product is delineated. Also proposes 6 initial geoprobe gw sampling points and 48 hour laboratory turn around and additional geoprobe points based on laboratory results to delineate extent of dissolved plume. Sent email approval of plan with some modified boring location map with 4 additional well/geoprobe points. Required email summary of installation/geoprobes by next Friday June 8. 6/7/07 - Obligado - Site visit. Met Derek Ersbak of PWGC Grosser onsite. Did a site walk through to look at planned boring locations. They were in the 2nd day of drilling. Yesterday they installed one well (MW18) have not guaged it yet for product. Hit refusal at MW12 at about 4 locations, there is a concrete layer at ~3 ft bgs at all locations, unknown what is below concrete. During my site visit they completed MW16 and were about to move to MW17. 6/19/07 - Obligado - Received email update from Andy Lockwood dated 6/15/07. Weekly update of delineation progress. 300 gallons of product and 300 gallons of oil/water mixture recovered. 3 of the 5 new wells (MW16, MW17, MW18)installed had significant product (1.11 to 3.58 ft thickness). A contour map was

DRAFT

VARSITY BUS CO (Continued) **1000295632**

being prepared and would be emailed shortly. An additional well might be installed between MW11 and MW9. Sidwalk permits not received yet from NYSDOT, expect to receive them Tuesday. Called Andy Lockwood. He said they plan to return to the site on Thursday to continue drilling as permits should be in hand at that time. Also plan to do 2 additional onsite geoprobes east and north of GP7/8. 6/20/07 - Obligado - Received email from Andy Lockword requesting change to Consent Order compliance schedule due to workplan already submitted and approved. Received a second email from Andy with a new contour map and stating that NYCDOT permits were obtained and drilling ot resume on 6/21/07. 6/24/07 - Obligado - Called Bruce Beck to get an update on the work that National was doing. Called his office and cell. Left message to call DEC. 7/10/07 - Obligado - Email from PW Grosser - Attached is the latest summary of the data collected to date. The product plume is defined and aerial extent remains on-site. Dissolved phase results are supplied for each MW and Geoprobe location, western dissolved plume boundary defined by GP-5 and GP-6, northern dissolved plume delineated by wells MW-14, MW-10, MW-19, and MW-4, and directly south of the pump islands by GP-1 and GP-2. We do not anticipate any further delineation in these directions at this time. We have shown the proposed geoprobes east and southeast of the site to further delineate the dissolved phase plume in these directions (GP-10, 11, 12, 13, and 14). These geoprobes will be installed and sampled tomorrow. 8/2/07 - Obligado - Reviewed revised Scope of Work submitted by National on behalf of sprague energy. The plan proposed installation of 4 down gradient and 2 up gradient wells. Department required additionally 1 crossgradient well west of SP4 and recommended installation of 4 diameter wells. Bruce Beck replied that they think 2 wells would be more better at this time. 8/21/07 - Obligado - Site Assessment Report Submitted, documenting complete ground water delineation. 9/21/07 - Obligado - Received RAP deadline extension request. Approved extension from Monday 9/24 to Friday 9/28. 10/1/07 - Obligado - Received electronic RAP submission. 11/20/07 - Obligado - Complete review of RAP. The RAP proposes installation of a LNAPL recovery system. The design will consist of a linear trench which along the downgradient edge of the LNAPL plume. The proposed trench is alingned perpendicular to the ground water flow direction. The trench will be 13 ft deep and 3 ft wide and the lower most 5 feet will be gravel. The trench will have 3 product recovery wells, which will be used to skim product. Pumping wells will be placed immediately downgradient of the product skimmer wells to lower the water table and promote LNAPL migration towards wells. They estimate lowering the water table ~3 FT. GW pump well will be installed ot depth of 66 ft bgs. The estimated flow rate is 30 gallons per minute. Treated water will be discharged to NYC sewer. They also included a summary of the hydraulic line inspections and cleaning. During this inspection, the apparent source of a majority of the spill was found. Hydraulic pit #6 was found to have holes in the bottom (as part of original design) to allow drainage. This pit #6 corresponds with the location of the maximum product thickness on the contour map. Another source of contamination was found in the piping line T1. This piping is located inside a subgrade (but mostly exposed) trench. A large portion of the trench was unlined and contaminated soil was found at the bottom. The summary also proposed a list of action items for repairs of the systems. I Emailed a RAP Approval letter to Andy Lockwood and cc to Anthony Mule. I approved the RAP with the following modifications: " Tightness Testing:

DRAFT

VARSITY BUS CO (Continued) **1000295632**

Subsequent to completion of all the recommended corrective actions listed in Appendix A, and prior to Remedial System Start-up, each hydraulic lift system will be tightness tested to ensure system components (pits, piping, and tanks) are not leaking. Hydraulic lift systems which fail the tightness testing will be taken out of service until they are able to test tight. A work plan and schedule for the testing of the hydraulic systems will be submitted to the Department. " PE Certified Designs: Final design drawings will be certified by a Professional Engineer. " Recovery System Effectiveness: The site investigation has shown that the majority of the product plume is located beneath the footprint of the bus repair garage. A large portion of this plume area is outside the estimated radius of influence of the system. If periodic product thickness monitoring shows that the recovery system as designed is not effectively able to draw product from underneath the building towards the recovery trench, the Department may require additional adjustments to the system to increase product recovery, including, but not limited to, the installation of additional extraction wells and trenching within the garage footprint. " Schedule - A RAP Addendum will be submitted to the Department by January 15, 2008 for review and approval. The RAP Addendum will include the Final Design Drawings and O&M Plan, documentation of the additional hydrogeologic field testing performed, and a work plan for the hydraulic lift system tightness testing. Remedial System Start-up will occur within 6 months of Department approval of the RAP Addendum. 12/14/07 - Obligado - Conference call with PW Grosser and GTJ/Varsity Transit. We discussed the issue of hydraulic line testing. They said that the hydraulic lines are constantly under pressure, so if they leak, they would know becuase the lifts would not work. They also said that they are planning on replacing all the lifts with environmentally safer lift systems. I told them I wanted assurance that the lift systems are not leaking and will not leak. This assurance can either be via testing or replacement. We also discussed the issue of the damaged tank. They wanted Sprague to replace the tank. They said it would be feasible and they would submit a letter stating such. I said I would review this information in conjuction with the information submitted by Sprague before I approve the RAP submitted by Sprague. So they will submit 1)plan and schedule for hydraulic system line replacement 2)feasibility report for tank removal. 1/9/08 - Obligado - Received RAP Addendum extension request until the 25th. I approved the request. 2/15/08 - Obligado - Completed review of the RAP Addendum with the design documents and monitoirng plan. Sent approval of the plan with addition requirements of 1)obtain Long Island Well Permit 2) obtain any applicable NYC sewer discharge permits and if discharge is to storm drain than a NYSDEC permit may be required, 3) Air Stripper discharge limitations according to STIP guidance should be met. Required weekly email reports of system installation. 10/20/08 - Obligado - Portfolio meeting with GTJ, PWGRosser, DEC. Discussed all Cooper bus sites. For Wortman in particular, items discussed: " Discussed status of TFM-UST- UST closed-in-place, PBS updated, Sprague continuing VEFR of wells, " Install upgradient monitoring wells 11/14/08 - Obligado - Received Investigation work plan. 12/4/08 - Obligado - Approved work plan after minor adjustment of one well location. 4/21/09 - Obligado - Meeting with Cooper Bus and PW Grosser. From meeting minutes they will: 1.Continue monthly monitoring of 27 wells of the monitoring well network. 2.Sample monitoring wells on a quarterly basis for VOC (STARS list) analysis

DRAFT

VARSITY BUS CO (Continued) **1000295632**

and wells associated with the Sprague spill for VOC (STARS list) and SVOC (STARS list) analysis. 3.Preparation and submittal of a quarterly status report by June 10, 2009, documenting field observations, activities, sample analysis, results, and recommendations to the NYSDEC. 4.Complete remedial system installation following receipt of AST in mid May and start-up system. Update system O&M Manual following start up. 6/26/09 - Obligado - Review 2nd Quarter update report. Over 5 ft of product in MW-1. They recomned continued monitoring, discontinue of VEFR due to pending start up, and start-up and operate LNAPL recovery system. Final system start up to occur in June. 7 of the 10 hydraulic lifts have bene replaced with above ground electric lifts. 3 remaining lifts will be taken out of service. 10/6/09 - Obligado - Email from Dave Hermantan of PW Grosser. The system start up is scheduled for 10/6/09. 10/19/09 - Obligado - Email from Hermantin. There was a glitch in the system during startup. They will make repairs and attempt to restart. 11/10/09 - Obligado - Emailf from Kris Almskog. The system is up and running and they collected system effluent samples. Sample results were below STIP discharge limits. 11/30/09 - Obligado - Email from Hermantin. To date the system has recovered 1200 gallons of free product. Additionally, the system needs to be temporarily shut down because of repairs to the building which require shutting down the electrical system. 12/9/09 - Obligado - I called Anthony Mule to discuss the status of the building repairs and the system. He said the contractors are still working on the bulding and due to safety concerns they needed to shut down the system. He said progress on the building repairs is dependent on the weather so he could not give me an exact date but that he expects them to be completed wihtin 2 weeks. 1/12/10 - Obligado - I performed a system walk through with Dave Hermantin, James Mulvey, and Anthony Mule. The system has been restarted and is operating. Dave is currently tryin to optimize the system performance and was considering modifying the pumping rates to optimize recovery. I told him that the DEC had no problem with adjusting flow rates as long as he remained within the LI well permitted pumping rates. 3/10/10 - Obligado - I reviewed the Quarterly Monitoring Report, dated January 2010. Approximately 2,331,000 gallons of liquid have been treated and 1185 gallons of product ahve bene removed. On 11/5/09, 985 gallons of product have been removed from the recovery tank and dsiposed of at Safety-Kleen Systems In., of Bridgeport CT. I emailed James Mulvey and requested more detailed information about the system performance. I also required that the system influent/effluent sample results be included in the reports. 4/29/10 - Obligado - We had a meeting with GTJ, PW Grosser, and DEC representatives. 4000 gallons of product have been removed to date. They are having iron fouling problems in the system and may propose modifications. DEC required increased frequency of system sampling to monthly from quarterly. 6/24/10 - Obligado - I reviewed the Quarterly Monitoring report dated May 2010. According to the report, 3.75 million gallons of water have been removed and treated as of March. 4,100 gallons of free product have been recovered. The system influent/effluent results from May 2010 were submitted as a separate laboratory report. The effluent results complied with discharge limits for discharge to ground water. However, no pumping rate was submitted or detailed system performance was submitted as previosly requested. I sent an email to James Mulvey notifying him that the system was apparently not sampled during the 1rst quarter 2010, which is a violation of the Stipulation Agreement.

DRAFT

VARSITY BUS CO (Continued) **1000295632**

I also notified him that the system monitoring report contained insufficient information. I required all pumping logs and monthly monitoring sheets to date be submitted by the end of the month. I also required submission of a report within 30 days clearly documenting system operation and performance to date. If changes to the system are proposed, the report should contain proposed design changes. 7/7/10 - Obligado - Kris Almskog submitted an email with the system information, and a table showing effluent testing results. Documents confirm no compliance testing was performed during the 1st quarter 2010. I referred this violation to legal. 4/20/11 - Obligado - I reviewed the 1st quarter 2011 monitoring report. During the first quarter 2011, approximately 132 gallons of LNAPL were recovered from the recovery trench and pumped into the LNAPL recovery tank. To date, a total of 6,404 gallons of LNAPL has been removed from the recovery tanks for offsite recycling. The stripper influent/effluent was within the stipulation limits. The system is currently running product recovery only due to diffusion well clogging. 8/22/11- Obligado - I reviewed the 2nd Quarter 2011 monitoring report. The ground water recovery is off-line because they need to install 6 new diffusion wells. Product recovery via system is ongoing. The system went down on 2 occasions. PWG also using spill busters to recover product from wells. To date, 6,404 gallons of product have been removed and 13 milliion gallons of water has been treated. Air stripper influent concentrations within STIP limits. Effluent concentrations below limits as well. 10/3/11 - Obligado - I received a call from James Mulvey of PW Grosser. According to James, there was a slight exceedence on the effluent water discharge, with benzene reading 1.4 ug/L over the limit of 1.0 ug/L. They adjusted the system to bring effluent back down under 1.0 ug/L. They think it was a mainanence issue with the stripper trays and they are making repairs. The quarterly report will document the sampling and repairs. 8/1/12 - Obligado - I reviewed the OMM Report for 2nd Quarter 2012. To date, a total of 7,734 gallons of LNAPL has been removed from the LNAPL by the pump and treat system. On May 8, 2012 The groundwater system was shut off due to increased concentrations of benzene in the influent samples. The 20 foot effluent air discharge stack was replaced with a 30 foot effluent air discharge stack and the system was restarted on July 17, 2012. The total volume of groundwater treated from system start-up through May 8, 2012 was 27,000,000 gallons and the total estimated mass of removed VOCs was 46.79 lbs. System OMM will continue. 6/3/15 - Obligado - I reviewed the 1st Quarter 2015 report. To date, a total of 8188 gallons of LNAPL has been removed from teh LNAPl recover tank for off-site disposal. The LNAPL recovery system shut down on January 15, 2015 due to an issue with the air compressor and has remained off as the system is now in a pulsed operation mode. The maximum product thickness is 0.05 ft in mw-5. Maximum VOC concentrations were found in MW-21, with 3,309 ug/L total VOCs.There was no recovery of LNAPL from the recovery trench during this reporting period as there was little to no LNAPL observed in the recovery wells or throughout the majority of the site. The last significant recovery of LNAPL in the recovery trench was in July 2013. The report recommends operating the system in a pulsed mode and restart the GWET and LNAPL recovery system son September 1, 205. The report recommends continuing groundwater sampling and manual LNAPL recovery, using bailers or socks. 2/24/16 - Obligado - Reviewed 4th quarter report for 2015. Product thickness ranged from 0.17 in MW16 to 0.75 ft in MW5. Maximum VOCs were found in MW21 with 5976 ug/L

DRAFT

VARSITY BUS CO (Continued) **1000295632**

total VOCs. Product limited to area under the bus depot building and immediately east of the building. The system was shut down in February 2015 due to diminishing recovery after having recovered over 8,000 gallons of LNAPL. Manual recovery has been performed using socks or bailers. Reommends continued monitoring, bailing and sampling. During the reporting period, the project transition to management by Castleton Environmental consultants. 1/25/18 - Obligado - I reviewed the 4th Quarter 2017 report. Free phase product is still present in multiple wells. Maximum product thickness is 2.13 ft in MW17, 1.83 ft in MW7, 1.66 ft in MW5, 1.36 ft in MW6, 1.12 ft in MW8, and 1.41 ft in MW16, and 1.70 ft in SMW01. Despite the removal of 8000 gallons of product via the product recovery system, there is still a relatively large product plume beneath the site. Dissolved VOCs appear to be attenuating. Maximum total VOCs were 507 ug/L in MW21. According to the report 88 gallons of product was recovered during this quarter via manual bailing or recovery socks. 1/13/20 - Obligado - I reviewed the 4th Quarter 2019 report. Product thickness as high as 1.53 ft thick in December 2019. BTEX has high as 2316 ug/L in MW21 with 1,250 ug/L Benzene. Product present in 6 wells. The report recommends continued groundwater sampling, manual bailing and use of absorbent socks. 5/5/20 - Obligado - I reviewed the 1st Quarter 2020 report. LNAPL was observed in 6 monitoring wells with thicknesses of up to 1.98 ft in MW19. LNAPl thickness increased slightly. Maximum BTEX was found in MW21 with 1473 ug/L. The BTEX plume is relatively stable. Downgradient offsite sentinel well MW24R is ND Bimonthly Manual product recovery is on going. 19.75 gallons of product was recovered this quarter."

Remarks: "FIRST TANK (2X3000G TANKS MANFOLDED) 2ST LEAKED AT 336, SECOND GROSS LEAK-TANK AUDITOR METHOD. EXCAVATE ISOLATE & RETEST.ANTHONY WANTS A CALL BACK"

DEC Memo:	"05/22/06-Hiralkumar Patel. DEC Sangesland spoke to Anthony Mule at Varsity Bus Co. site has one diesel tank in secondary containment. there is sline water between tank and secondary container and has alarm. alarm on tank went off. Fenley & Nicol inspected site. DEC Krimgold received call from bus company. he explained that some are using sline water as leak detection system. water is filled to top between tank and secondary container and has alarm on top of container. if level of water increase or decrease due to leak in fuel tank or leak in secondary contaier, alarm goes off. as per person from bus company, they check and water was stable after couple of inches, so they assuming leak in top portion of secondary container. will investigate and repair it. Left message for Anthony. Received call from Anthony and they are fixing the it. no leakage in diesel tank. case closed."

DEC Memo:	"waste oil tank overflowed and poured out approx 30-50 gal onto cement/asphalt driveway area of a bus repair shop. Workers saw the spill and laid out absorbant pad around the tank to contain it. Safety Kleen is the company that normally drains the waste oil and they came, sucked out the rest of the tank and called Miller Environmental to do the cleanup. Miller is currently working on the cleanup. No soil or drains were impacted. Miller will prepare a closure report for the DEC. 03/11/08-Hiralkumar Patel. received email from Mr. Walsh. he mentioned that about 40-50 gal oil spilled onto at 40 ft & 50 ft asphalt/concrete area surrounding the tank. no strom drain involved. all cleaned up. DEC Memo:	"5/8/07 - Steve Sangesland. Mr Minchella of Sprage Energy says that his driver was directed to a wrong fill port and pumped 1400 gal of diesel into an Out Of Service tank which may have been broken. Fenley & Nicol is on site looking for the missing fuel Ketani went to a site visit Raphael Ketani. I met Anthony Mule (917) 270-5428, Purchaser/Manager of Varsity Bus Co. at the site. He showed me where the oil had been pumped. He pointed to the location of a 2500 gal. tank that was in a cluster of 4 tanks in front of and to the side of the bus fueling location off of Montauk Avenue. I saw a square yellow painted steel cover for the fill port. He said that the tank was fine. We went to his office and he showed me the veedaroot printout for the tank. The printout looked alright, but I couldn't tell if it was showing the 1400 gals. that was delivered overnight. Mr. Mule said that his veedaroot had been calibrated this morning and a stick test was done. He said that both the stick measurement and the instrument measurement were in good agreement. Mr. Mule added that he has been dealing with Andre Obligado of Unit B of Region 2 DER for his bus company. I was about to leave the site when I called up Raymond Minchella (cell (516) 250-8864), general manager of Sprague Energy, regarding the delivery. He said that his fleet manager, John Altieri (516) 622-7009 was on site. I walked back to the tank location and met Mr. Altieri. Though he was standing at the tank location the first time I went to see the site, he hadn't approached me or introduced himself and Mr. Mule hadn't introduced him to me either. Mr. Altieri pointed to where the oil had been pumped. This was a locked port next to the port for the veedaroot sensor for the secondary containment. Both ports were covered with a round steel plate. I asked Mr. Mule and Mr. Altieri how the driver could have taken off the locked cover and pumped the oil. They said the lock can be jimmied off. Mr. Altieri said that this port leads to the secondary containment. Mr. Mule said that Fenley & Nicol (631) 586-4900 will test the secondary thursday at the latest. I went back

DRAFT

VARSITY BUS CO (Continued) **1000295632**

to my truck and called up the acting Chief of the Spill Prevention Unit, Jake Krimgold. I told him that the secondary and primary testing would take place no later than this thursday. He said that was no good and to have it done today or tomorrow morning. I met Mr. Mule again and told him that the testing had to be today or tomorrow morning. He called up Fenley & Nicol and they agreed to come over the morning of 5/9/07. 5/9/07 - Raphael Ketani. I contacted Mike Sepe of Fenley & Nicol (516) 818-8767 who was the on site tester. He said that they tested the secondary and there was a gross failure. However, his tape indicated there was only water in the secondary. He said they were in the process of testing the tank itself. I called up Mr. Mule and told him that an investigation will have to be done to find the oil and recover it, and that the contaminated soil will have to be removed and the tank repaired or replaced. He said he understood and would do this. Next, I called up Mr. Krimgold and told him about the situation. He said that he will make a site inspection this morning. The PBS case is #2-479144. Thirty five tanks are listed as closed and removed. There are 10 tanks in service. Various products are contained. The tank in question is #4, 2500 gal. with diesel fuel. Later, I spoke with Andrew Obligado, E.G. I Unit B Region 2 DER. He is the project manager for a spill case, #9211217, involving a very large spill under the site. He said he doesn't know how many gallons are in the ground, but there is free product in many of the wells. He said the site is under a STIP agreement. At 2:30PM, Mr. Obligado, Mr. Krimgold and myself had a short impromptu meeting regarding the site. Mr. Obligado said that the tank farm was removed in 1999 and the 4 large tanks were installed. He said that wells were installed within the footprint of the site (he showed us a map). One well was some distance to the south of the tank cluster. Mr. Krimgold told me to send a CSL and not to submit a Request for Investigation to the ECOs for fines. I submitted a draft CSL to Mr. Krimgold for his approval. 5/15/07 - Raphael Ketani. He said to send it out, and so I did. 5/17/07 - Raphael Ketani. Today I received the following e-mail from Bruce Beck of National Environmental Management Associates: Raphael, Attached please find a scope of work to install 3-4 wells around the tank mat at the TFM Paratransit/Varsity Bus Facility as an interim remedial measure. We feel we if we can immediately start to recover lost product, via Vacuum Enhanced Fluid Recovery, we can limit the extent of the plume. Please review the attached Scope of work and comment ASAP. As time is critical we would like to complete this soon. This Scope of Work will not of course preclude a comprehensive investigation. We would like to get this interim measure active and then submit a comprehensive investigation work plan for your review. Should you have any questions, please feel free to call me. Thank you, Bruce Beck National Environmental Management Associates Corp. 59-18 Central Avenue Farmingdale, New York 11735 Phone: 631-843-9020 x 300 5/18/07 - Raphael Ketani. I reviewed the Interim Workplan. The work plan consisted of installing 3 wells along the west side of the tank area and 2 along the south side. Wells will not be installed to the north and east at this time due to the presence of an oil/water separator and feed and vent tank lines. Soil and water samples will be collected. The plan was found to be acceptable. I e-mailed Mr. Beck and told him to begin the work. 5/24/07 - Raphael Ketani. A meeting was held today between the below listed people to resolve the oil spill violations. Timothy Kipp, Manager of Safety for Sprague Energy Corp. Mr. Munchello, Fleet Manager for Sprague Michael Rabus, Sprague's attorney Anthony Mule,

DRAFT

VARSITY BUS CO (Continued) **1000295632**

Director of Purchasing, GTJ Co., Inc. (Varsity Bus) Dennis Connor, GTJ's attorney DEC's senior attorney from DEE, Albany Benjamin Conlon, associate attorney DEE, Albany Jacob Krimgold, EE II Spills Unit Region 2 I took rough meeting notes and left them in the paper file. The essence of the meeting was an agreement between Sprague, Varsity Bus, and DEC that the affected tank will be kept in place, cleaned out of residual product, and an extraction well will be installed through the bottom of the tank in order to extract the product. Mr. Conlon wrote up 2 Orders on Consent for the site. One was for Sprague Energy and the other was for Varsity Bus (GTJ). Both required the immediate resolution of the oil spill and the quick beginning of work to construct an extraction well through the bottom of the affected tank, with oil collection to begin immmediately. 5/25/07 - Raphael Ketani. Bruce Beck of National Environmental Management Associates (631) 843-9020, ext 300 called this morning. He said that the well construction could not take place today as there is no separate manway into the tank. He said that the only available entrance has a fuel pump with wires and piping installed in it. He said that there is no crew available right now (it's the afternoon before the Memorial Day weekend) to remove the equipment. I told him that it would be alright if the equipment removal was postponed until teusday, 5/29/07. However, I told him that the equipment removal, tank cleaning and well installation will all have to be done that teusday. He said he would get everything done. 5/29/07 - Raphael Ketani. Bruce Beck sent me the following e-mail this morning. Raphael, As you are well aware we are mobilizing this morning to the Varsity Bus Site to gain access to the 2500 gallon ruptured UST. This activity will require removal of the submersible pump and all associated piping on the man way access cover. Once that is completed we had planned to evacuate the tank of vapors, enter the tank and attempt to core through the tank to determine if product is present. In giving this a second thought with my client we have decided that, given the high water table it is very possible that groundwater will enter the tank. This of course will make the eventual removal of the tank very difficult. We would like to suggest at this time the we not core through the tank but begin procedures to removal the tank and excavate contaminated soils. This process will also allow us to remove part of the bottom slab and observe the soils below. I suggest we talk about this as soon as possible this morning. Bruce Beck National Environmental Management Associates Corp. 59-18 Central Avenue Farmingdale, New York 11735 Phone: 631-843-9020 x 300 I contacted Mr. Beck (cell (631) 236-3871) and he said they wanted to remove the tank, rather than leave it in place, as it would be very difficult to collect all of the oil as the contaminated soil and pea gravel would still be in the ground. He added that if they puncture the bottom of the tank and the water starts coming in, then it will be difficult to safely pull out the tank. He said they would put in permanent shoring to protect the 3 remaining tanks. I asked him how quickly the tank removal can take place. He said he had a contractor that will do the job as early as next week. I told him DEC will not accept such a late start as the oil has already been in the ground for almost a month now. I told him to get things started much sooner. He said that he had a crew out there right now that is removing the pump, wires and piping from the tank. I told him that was fine, but the rest of the process has to start now. He said he will talk to the contractor. He said that his client was ready to start the cleanup immediately. I called Mr. Beck back at 10:30AM and asked him whether

DRAFT

VARSITY BUS CO (Continued) **1000295632**

he had made any progress in getting the tank pulled today. He said that he has talked to the contractor and he will get back to me in a couple of hours. He added that if he can't pull the tank very soon, then he will just go ahead with the original plan of drilling through the bottom of the tank. Mr. Beck e-mailed me at 1:15PM with a new plan. The e-mail is below: Raphael, In speaking to our contractor and engineer we will need plans, drawings and permits from the NYC Fire Department and the NYC Building Department before we can cut into the tank mat. Apparently this is due to the fact we have three other active tanks in the same bed. We will be starting this process, however it will take 3-4 weeks before we will have permits and we can remove the tank. We have determined the tank bottom is within 6-8 inches of the current groundwater depth. Not only does this pose a precarious position for our contractor to drill a hole in the tank bottom but we also feel this may hinder the eventual removal of the tank, and at best, help to remove minimal product. Rather then drilling the hole in the tank bottom, our proposed scope of work is to install 3-4 additional wells around the tank bed. Specifically at least 2-3 wells to the north right next to the 2500 gallon tank (right outside the tank bed), one more to the west and one more to the south. We would then place a vacuum on these wells twice weekly to recover product and help equilibriate the spread of product. We feel this option is best due to the fact that any product released from the tank would not 'puddle' on top of the bottom tank mat but rather flow over the edges. With this in mind we feel strongly that we will have a better chance of product recovery with wells outside the tank bed. The wells can be installed this week with vacuum beginning immediately and continuing twice weekly until we are prepared to remove the tank. Again we only feel this will be an interim remedial method for recovery of product and aid in holding the further spread of product. I will be available to discuss with you today if you would like. I e-mailed Mr. Beck back and told him that groundwater flow was to the south and so any wells to the north will probably not recover much. I suggested concentrating on pumping from the south. I also told him to install the wells quickly and pump frequently and collect as much as he can. Mr. Krimgold, E.E. II Spills Unit, also thought Mr. Beck's latest plan was a good idea. Mr. Beck e-mailed me back at 1:43PM: Rafiel, Yes I agree with installing wells to the south which we will do in addtion to the northern wells. I feel the northern end of the tank bed may have been the first to be affected hence putting wells there. We will keep you up to date weekly as we progress with the well installations, product recovery and the UST removal permit process. Additionally we will be forwarding to you an Investigation Scope of Work this week for your review and approval. 5/31/07 - Raphael Ketani. I called Mr. Beck on his cell (631) 236-3871 to find out what was happening at the site. He said that they installed 3 wells already, 2 on the west side and 1 on the south side. The wells show from 1 to 3 of product. The fence around the tank mat will come down tomorrow and the other wells will be put in monday. There will be 2 more on the south side, 3 to the north right next to the tank, and 1 to the west. This will make a total of 3 wells per side, except for the east side where no wells could be put in. This was due to the presence of various utility lines. National Environmental will then VEFR the wells 2X per week. The tank will be pulled in 3 weeks. 6/12/07 - Raphael Ketani. While I was on vacation, I received a work plan for the site dated 6/8/07 from Bruce Beck of National Environmental Management Associates Corp.

DRAFT

VARSITY BUS CO (Continued) **1000295632**

I reviewed the plan and found it to be acceptable with only one comment. I e-mailed Mr. Beck that the samples have to be tested via either method 8021 + MTBE or 8260B, and method 8270C. I tried to reach Mr. Beck via his cell phone, but could only leave a message. 6/13/07 - Raphael Ketani. I reached Mr. Beck. He said that all 9 wells have been installed. Initially, there were 2 inches of product in one well. The first round/attempt at product recovery didn't produce much product. However, they have installed a vacuum on the wells and now one well has 3 feet of product and the product recovery is very good. Six (6) wells are presently showing product. Recovery is best with the wells on the north side which are close to the tank. They are VEFR twice a week and will do more if recovery remains good. DEC will be sent the guaging results for the first two rounds of collection. Geoprobing will take place in a week or two. He will meet with Varsity Transit to discuss the well array that was previously established and other issues. I had a meeting with Randall Austin, Chief Spill Prevention and Response Unit Region 2. I was instructed to change the case manager to Andre Obligado of Unit B, DER Region 2, and to transfer the case to him. Mr. Obligado is presently managing another spill case, #9211217, for the site which is much more involved. Based upon Mr. Austin's instructions, I am transfering the spill case. 6/20/07 - Obligado - This case has been transferred to me as per instructions from Brevdo. I called Bruce Beck to get an update on the site status. 6/28/07 - Obligado - Phone call from Bruce Beck. Total of 6 wells installed. 2 of the six wells have between 3.5 to 4.5 ft of product. They are VEFRing twice per week. 6 wells have been installed around the tank mat. He will send me a revised work plan. He no longer wants to geoprobe, but rather install permanent wells to better delineate product. He said they still have not removed the tank. He is working with an engineer to develop the best way to remove the tank without damaging the other tanks. 7/31/07 - Bruce Beck submits Scope of Work for additional delineation. Proposed the installation of 6 additional wells. 8/2/07 - Obligado - Approved a revised scope of work for delineation. 8/2/07 - Obligado - Reviewed revised Scope of Work submitted by National on behalf of sprague energy. The plan proposed installation of 4 down gradient and 2 up gradient wells. Department required additionally 1 crossgradient well west of SP4 and recommended installation of 4 diameter wells. Bruce Beck replied that they think 2 wells would be more better at this time. 10/1/07 - Obligado - I emailed Bruce Beck to inquire what is the progress of Sprague's investigation, as it has been now almost 2 months since I approved the plan. 10/10/07 - Obligado - Did not receive any response from Bruce Beck from above email. I Spoke to John Altieri, and I told him that I have not received any documentation that the work has been performed as per the plan I approved in august. He said he will have someone call me right away. I also spoke with Anthony Mule of Varsity Transit and he said to his kmowledge the damaged tank has not been removed and the additional wells have not been installed. 10/10/07 - Obligado - I spoke to Bruce Beck. He said he was having difficulty installing wells due to a subsurface high pressure gas line that is in the area. He said he plans to meet with a Keyspan rep on site to locate the line and install the wells on Tuesday October 6. He said he could submit a report by Mid November. I told him that was to late and I wanted a report by the end of the month. I also told him they need to do something about the damaged UST. I followed up the phone converstation with the following email to Bruce, cc to Joe Sun, John

DRAFT

VARSITY BUS CO (Continued) **1000295632**

Altieri (Sprague), Anthony Mule (Varsity), and Jacob Krimgold (due to PBS issues) Bruce, As discussed in our telephone conversation, Sprague Energy and National Environmental have fallen behind in implementing the Compliance plan which was part of the Consent Order for the above spill number. The Department approved a revised work plan on August 2, 2007 for the delineation of the spill and to date no additional wells have been installed. Additionally, the UST that was damaged during the spill event has not been addressed and is out of compliance with PBS regulations. As such, a report must be submitted to the Department by the end of the month, October 31, 2007, which will include the following: 1)Documentation of the complete delineation of the 1400 gallon diesel spill. 2)Documentation of ongoing product recovery activity. 3)Remediation Plan for the damaged UST and for the diesel spill. Please be advised that in the event that the Respondent fails to fully comply with the requirements of the Consent Order in a timely fashion, the Respondent is subject to penalties of up to $37,500 per day pursuant to ECL 71-1929, and penalties of up to $25,000 per day pursuant to the Navigation Law. 11/28/07 - Obligado - Sent comment email to Bruce Beck requiring 1)revise Table 1 to fix typos, 2) fluid level measurements for all wells, 3)VEFR frequency, 4)liquid disposal manifests, 5)product fingerprints from Sprague wells. Required submission of addendum letter within 14 days. 1/23/08 - Obligado - Email from Bruce Beck with VEFR event summary table on excel. He will submit a quarterly report shortly with gw sampling and fingerprint analysis. During the most recent VEFR event, the max product thickness was 0.05 ft. 7/3/09 - Obligado - Review 1st Quarter 2009 Monitoring Report LNAPL was present in most of the wells. During last VEFR event - 1/23/09, no product was present in recovery wells VES-1 through VES-6. A total of 22,594 gallons of liquied has been removed to date. During January 2009 monitoring event, product present in SMW1through SMW5, ranging from Trace to 0.3 ft in SMW3. SMW6 was not accessible. Recommneds bimonthly VEFR events due to decreasing product. 8/14/09 - Obligado - Review 2nd Quarter 2009 monitoring report. Free product thicknesses in VES wells decreased to as little as 0.01 ft. Free product is present in other sprague wells up to 3.24 ft. Recommends continuing VEFR events. 12/18/09 - Obligado - Had meeting with DEC Tibbe, National Bruce Beck, and Peter Hughes of Sprague in attendance. Discuss the current site status. According to National presence of significant product thicknessess in wells on site which are not related to there spill. Bruce Beck requested to reduct the VEFR frequency to monthly. DEC verbally approves this requests. DEC will reevaluate the site once the remedial system installed by PW GRosser is operating to see if it is affecting the UST area. Bruce will look into the product at SMW-6 to see if it is fresh. 4/14/10 - Obligado - I called Bruce to follow up and see if they made any observations regarding the product in SMW-6. 1/18/12 - Obligado - I reviewed a May 19, 2011 closure request and an August 29, 2011 Closure request both submitted by National on behalf of Sprague. Product levels in VES wells around the diesel tank have diminished greatly since the remedial action was implemented in 2007. During the last two gauging rounds measurable free product was not detected in VES wells. Wells with greatest free product SMW1 and SMW6 were attributable to an older release. Spill #0701587 is closed. Any residual contamination to be remediated under spill number 9211217. "

Remarks: "CALLER STATES THAT SOMEONE POINTED TO THE FILL PIPE TO FILLAND NOONE CAN FIND THE PRODUCT. ON SCENE INVESTIGATING:"

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ATLANTIC PORK AND PROVISIONS (Continued) **S110540972**

from Jack Antonici. Phone:(718)272-9550 ext.3224. He told me that he did not know of failure nor did he have any confidence in the tank test technician. He will have the tank retested by another contractor (probably A-1 Crown Leak) and update me regarding the test result. bf 07/16/13 - Spill Case is transferred from Brian Falvey (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB 11/05/2013 - V. Brevdo Called Atlantic Pork and Provisions and spoke with Mr. Jack Antinori, President of the Company (now out of business according to Mr. Antinori)who stated there was no actual leak or spill and no soil contamiantion. Tanks was retested at a later date (December 16, 2010) and passed. Mr. Antinori will be e-mailing me informaiton and re-test results. Wrote down my e-mail and telephone number. VB. 11/06/13 - V. Brevdo Jack Antinori called again and asked what information I need. Mr. Antonici explained that tank retest on December 16, 2010 (after initial failue on October 10, 2010) passed the test and that tank was subsequently closed in place and filled in with inert material. Mr. Antonici also explained that there was no oil leak and no soil contamination because they did not use the tank, it was intact, and fill line was not used. I asked Mr. Antinori to send me an e-mail describing why he is confident there was no leak and no impact to soil. Mr. Antonici said he will e-mail me be end of the day. V.B. 11/07/2013 - V. Brevdo Yesterday, 11/06 received memorandum and tank test invoices from Mr. Antionri, and reviewed them. The documents appear to support Mr. Antinori's argument that neither actual leak nor soil impacts occurred. According to tank test conducted by the Justin Group Inc., the failure was in the ullage - dry portion of the tank. After repairs tank passed the test. Fill line has not been used for about four years at the time of test as company had been using gas beginning 2006. Based on Mr. Antinori's testimony and review of the documents, the Department concluded that this TTF spill case was a dry leak and neither oil leak nor impacts to soil occurred. The on-site structure is a warehouse type building with loading dock for trucks, paved with slabs. Had there been any leaks from the tanks, exposure would be very unlikely. Spill is closed effective 11/07/2013. Spill case closure letter is issued on 11/07/13 and sent to Mr. Antinori via e-mail. VB"

Remarks: "Reporting tank test failure; upper part of tank. No spill."

DEC Memo:	"12/08/05: This spill transferred from J.Kolleeny to S.Kraszewski. 01/20/06: Called Anjali Sahni from NYCHA Planning and Development to explain about the possiblity of moving one or more MWs at this site for construction purposes. She had asked if they required any DEC permits, or guidelines that needed to be followed. I explained to her that there are no permits or guidelines for moving MWs on the site. They are the Housing Authority's wells and they can do whatever they want with them. I told her to keep in mind that the contamination still needs to be delineated on that site for future recovery efforts and monitoring. This spill will remain open until the DEC feels that the site poses no threat, and to do that MWs and investigations are necessary. I suggested that she talk to Ralph Trocchio from NYCHA Fuel Oil Remediation about this. She will get back to me next week. - SK 03/22/06: Visited on-site with NYCHA and Gannett Fleming personnel to discuss what possible remedial actions could address this site. Ivy Hidalgo-Olberding: Gannett Fleming Project Manager Cris Sawyer: NYCHA Oil Remediation Luis Ponce: NYCHA Assistant Director Ralph Trocchio: NYCHA Oil Remediation Burton Leon: NYCHA Deputy Director Four former fuel oil tanks wee removed in 1999. Each stored #4 and #6 oil during operation. Currently, two USTs containing #2 oil are in place. In 1995, a subsurface investigation found several feet of heavy oil in the vacinity of the tanks. GF was on-site to assess the area for an up-coming subsurface investigation to delineate the plume and check GW quality. I told NYCHA and GF that since this oil is thick and the smear zone would last a long time the best remediation is excavation of the contaminated soil. Construction is planned on the adjacent lot, but before they begin work the site must be closed or remedial activity performed. Since the two operation tanks were installed in 1999, Ralph and Chris are considering excavating around the tanks. Shoring would be installed around the tanks for protection. They believe that since they were installed with clean fill and lack of oil in the perimeter wells is clean they could avoid removing the tanks. I told them they will have to be certain no heavy contamination exists beneath those tanks. I asked NYCHA to keep me up

DRAFT

LINDEN/BOULEVARD HOUSES -NYCHA (Continued) **S102150012**

to speed on the site and to make sure that any work plans or documents submitted by GF reach my desk. GF will start soil borings by the end of the week and will continue on into next week. Expecting soil/GW sample results by April 15. - SK 07/20/06: Staff met with NYCHA personnel and developer staff to talk about remediation options for NYCHA. Since department staff have not been given a chance to review the investigation performed by Gannett Fleming (an investigation soley for the purpose of this development, not the entire site) it was difficult to narrow down what options are available. Overall, the Department suggested that any development extending into an area of known contamination would require a vapor barrier and sub-slab venting system. Also, NYCHA would have to take remedial step on their property to ensure that the contamination would not migrate any closer to the development. NYCHA is retaining most of the contaminated property but several parcels of the lot, which have contaminated soil, will be developed into housing. Staff would contact NYCHA once we have had a chance to review the investigation report. - SK 11/16/06: J.Kann - Staff met with NYCHA personell (Cris Sawyer) and Ivy Olberding of Gannett Fleming at the site. An ISRP was submitted and reviewed in September 2006. Delineation of the free-phase product plume was not complete. NYCHA was informed that a work plan must be submitted by November 30, 2006 which would include the delineation of the plume. Well locations were identified at the on-site meeting. 02/19/08: J.Kann - Met with HDP and NYCHA. NYCHA was informed that they need to submit a RAWP for the Linden site. They agreed to do this by spring 2008. 06/23/08: J.kann - Discsussed site RAWP in a meeting with NYCHA and GF on 6/5/08. Draft RAWP for the site was submitted via email. 06/30/08: J.Kann - email sent to NYCHA as follows: Ralph - I reviewed the draft Remedial Action Work Plan prepared by Gannett Fleming for Linden Houses. The plan does address some of the items discussed in the meeting held with GF on June 5, but it is not complete. The installation of additional wells and borings were discussed at the meeting and are fine. However, at the meeting it also was discussed that GF was to prepare a proposal for remediation for the site, along with a professional discussion on why the remediation they selected for the site was best suited for the site. It was also my understanding that a fingerprint was going to be collected before preparation of the remedial work plan, because this would aid in selection of the remedial action. Continued product removal with monthly submittals may be adequate if other remedal options are not feasible. However, a discussion on feasibility needs to be included in the work plan. 08/08/08: J.kann. Received revised RAWP on 7/14/08. Comments sent in June 30 email were not addressed. Accepted report as an IRM with an increase of product removal on 7/22/08. Received Phase II report for the development parcel from NYCHA on July 29. Steve Malenowsky of CA Rich (516-746-8844) called on August 7. Questions were asked about DECs role in the development of the parcel and he also had questions about specs that were prepared for the parcel. He wanted to know if DEP was the lead or DEC was the lead. DECs involvement is related to the open spill, and it is not clear what HUD is looking for fron the DEC. It is likely that a meeting will need to be held with NYCHA and DEC to discuss this. 10/21/08: J.Kann - Jacob Krimgold and Jennifer Kann met with NYCHA and Kretchner Developers on 9/08/08. Discussed the contamination on the 696 Stanley Avenue parcel. NYCHA expressed their need for a letter from the Department indicating that the adjacent properties are not affected. NYCHA was informed that a FOIL

DRAFT

LINDEN/BOULEVARD HOUSES -NYCHA (Continued) **S102150012**

request should be submitted. A FOIL request was submitted on 9/23 and is being processed by Fawzy Abdelsadek. Recieved a call from Kristin Pagano of techtonic engineering (845)534-5959 and an email. She is performing a phase 1 on 610 Stanley Avenue. Told her NYCHA delineated the plume and based on the information we have it has not migrated. 2/4/15: J.Kann - sent an email to Yelena requesting an update. Have not received a quarterly report in two years. 06/05/2017: J.Kann - Spill reassigned to Andre Obligado. 8/9/17 - Obligado - I reviewed the Quarterly Status Report for 1Q17. Free product was encountered in MW1, MW2, MW6, MW9, MW18 and MW21. The maximum product thickness was 0.42 ft in MW1 and MW2. DTW is about 10-11 ft. Geology is sandy fill, sand, and peat. 4 VEFR events were performed. Recovery amounts were not recorded. Recommends monthly monitoring and VEFR events and use of absorbent socks."

Remarks: "pulling 25,000 gallon tank found contaminated soil - will excavate contaminated soil - spill contained dec already aware of spill"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN See also 0013633 at the same location. 10/6/2003 Transferred from Tibbe to Sun. 10/6/2003-Sun-File review by Sun: This site was assigned two (2) separate spill numbers. Spill # 94-03246 was assigned to the site on 6/6/94 for a reported gasoline spill. On March 29, 2001, the second spill # 00-13633 was assigned to the site for the reported discovery of gasoline in MOnitoring Well #2. Prior to 1993: Two (2) tank field gasoline USTs closed-in-plac. 06/06/94: Removed 1x550 gallon waste oil UST. 04/21/99: Removed 1x4000 gallon diesel USt and Dispenser Island. -Site Assessment- 9/23/94- by Lexicon Environmental Assc.- The assessment included two (2) phases. The first phase consisted of the installation of six (6) monitoring wells and two (2) soil boreholes. Based on the results of the first phase, a second phase included the installation of two (2) additional site monitoring well and seven (7) additional soil boreholes. Soil analylytical results from the first phase of the assessment- From the northern former UST area, SB-1 has a highest total BTEX of 215,612 ppb, and highest total VOC os 127,800 ppb. From the southern former UST area, SB-6 has the highest total BTEX of 1220 ppb. SB-6 has the highest total VOC of 6,120 ppb. MTBE concentrations were all below the analytical method detection limits from all of the soil samples collected during the initial phase of the assessment. Soil analytical results from the second phase of the assessment- the results indicated elevated concentrations of PAHs and BTEX. The PAH concentrations from the northern former UST area ranged from 4240 ppb (SB-17) to a maximum of 95,900 ppb (SB-10). PAH concentrations from the southern former UST area ranged from 3,670 ppb (SB-16) to a maximum of 67,630 ppb (SB-14). Total BTEX concentrations from the northern and southern former areas ranged from below the analytical method detection limits (SB-12 & SB-17) to a maximum concentration of 288 ppb (SB-16). SB-16 has the highest concentration of 180 ppb. Ground water analytical results: The first phase of the site investigation in April 1993 indicated total BTEX concentrations rranged from below the analytical method detection limits (MW-2 and MW-3) to 371 ppb in MW-3. Total VOC concentrations ranged from below analytical method detection limts (MW-2 thru MW-5) to 2,695ppb in WM-6.MTBE concentrations ranged from 24 ppb in MW-5 to 1,300 ppb in MW-2. The ground water sample analytical results from the second phase of the investigation collected in March 1994 indicated total

DRAFT

VERIZON (Continued) **S104953734**

BTEX concentrations ranged from 1.8 ppb (MW-3 & MW-5) to 301 ppb (MW-4). MTBE concentrations ranged from 50 ppb (MW-6) to 50,000 ppb (MW-2). Total PAH concentrations ranged from below analytical method detection limits (MW-1 thru MW-3, MW-5) to 3,490 ppb (MW-6). -Underground storage tank closure report-12/21/95-by Lexicon Environmental Assoc.-This report documented the activities associated with the removal of one (1) 550-gallon used oil UST. The 550-gallon used oil tank was located on the eastern portion of the site outside of the maintenance garage. The tank was removed from the site on June 6, 1994. Lexicon collected four (4) soil samples from the sidewalls of the excavation and one (1) sample from the bottom of the excavation. Lexicon collected one (1) composite sample of the stockpiled impacted soil for disposal characterization. The post-excavation soil sample results indicated low concentrations of PAHs in samples SS-2-14 thru SS-5-14. Detected total PAH concentrations ranged from 148 ppb (SS-2-14) to 704 ppb (SS-4-14). All of the detected PAH concentrations were estimated concentrations of compounds detected below the analytical method detection limite. The only PAH compounds, from the soil samples, which exceeded the NYSDEC TCLP Extraction Alternative Guidance Values were the concentrations of bezo(a)anthracene and chrysene in samples SS-3-14, SS-4-14, and SS-5-14. The soil sample from SS-1-14 indicated no PAH concentration above the laboratory method detection limits. TPH were only detected in SS-2-14 and SS-4-14 at concentration of 18 ppm and 75 ppm, respectively. Approximately thirty-nine (39) tons of impacted soil were removed from the site. -UNderground storage tank closure report- 11/05/99-by Lexicon Environmental Assoc.-This report documented the activities associated with the removal of one (1) 4000-gallon, double-wall fiberglass, diesel UST at the subject site. The removal activities of the UST system occurred on April 21, 1999. No post-excavation soil samples were collected from within the UST excavation. The analytical results of the post-excavation soil sample (SS-1) collected below the removed diesel diapenser indicated that VOC ansd PAH compound levels were detected above their respective NYSDEC TCLP Alternative Guidance Values for fuel oil-contaminated soils. Most of the PAH concentrations were detected below their respective analytical method detection limits at estimated J values. Furthermore, many of the concentrations were above the NYSDEC TCLP Alternative Guidance Values for fuel Oil-contaminated soils due to their high detection limit for a solid matrix for these compounds. 10/17/03 This spill is being remediated under Spill # 00-13633. Closed."

Remarks: "WILL EXCAVATE CONTAMINATED SOIL, STOCKPILE, TEST, AND DISPOSE"

10/17/03 This spill is being remediated under Spill # 00-13633. Closed. 11/4/2003-Sun-File Review by Sun: -Limited Subsurface Investigation Report-6/1/2001,by Lexicon: Installed three (3) off-site boreholes/monitoring wells (SB-12/MW-12, SB-13/MW-13 and SB-14/MW-14) to determine the extent of downgradient dissolved phase hydrocarbon impact.The analysis of soil samples collected from three (3) off-site soil boreholes advanced to the south of the site indicated the absence of VOC constituent concentrations in the subsurface soil at these locations. -Semi-Annual Groundwater Monitoring Report, First Quarter 2001, dated 5/9/2001: On 3/28/2001,the NYSDEC assigned this Spill # (00-13633) to the site for the reported discovery of waste oil in Monitoring Well #2. The waste oil was confirmed at a later date to be weathered gasoline. Monitoring Wells located upgradient of the on-site source area (MW-1, MW-2, MW-9) which have consistently exhibited low VOC concentrations over the last 2 to 4 years, displayed significant SPH (MW-2) or excessive BTEX and MTBE concentrationss during this period. A minimum of 6.25 gallons of product was removed from the subsurface during this period. -Limited Subsurface Investigation Report, dated 8/1/2001 by Lexicon: In an effort to isolate potential off-site SPH pathways upgradient of MW-2, five (5) soil boreholes (SB-1A, SB-2A, SB-3A, SB-4A, SB-5A) were advanced along the northwestern property boundaries of the Verizon facility on 5/9/2001. The boreholes were advanced to depths of 16 feet. Soil borehole sample analytical results indicated that no VOC constituents were detected above NYSDEC Recommended Soil Cleanup Objectives (RSCOs) in SB-1A, SB-3A, SB-4A, and SB-5A. Nine (9) VOC constituents were detected at elevated concentrations above RSCOs in SB-2A.Total VOC concentrations ranged from 7.5 ppb in SB-4A to 344,000 ppb in SB-2A. Groundwater analytical results ranged from one (1) to ten (10) VOC constituents detected above NYSDEC Guidance Values in SB-5A, SB-4A, SB_3A, and SB-1A. Groundwater collected from SB-2A was not analyzed due to the presence of SPH. BTEX and MTBE concentrations in SB-1A were 62,300 ppb and 1,780,000 ppb, respectively. BTEX and MTBE concentrations in SB-3A were 10,700 ppb and 705,000 ppb, respectively. BTEX and MTBE concentrations in SB-4A were 13.8 ppb and 1,420 ppb, respectively. BTEX and MTBE concentrations in SB-5A were ND and 4,030 ppb, respectivrely. Total VOC concentrations ranged from 1,420 ppb (in SB-4A) to 1,850,000 ppb (in SB-1A). -Additional Subsurface Investigation, 1/31/2003, by EnviroTrac (Jeff Bohlen, 631-471-1500): The investigation included the following: 1)Tightness testing of on-site gasoline USTs, piping and dispensers; 2)Characterization of product samples; 3)The collection of soil and groundwater samples; 4)Well abandonment; and 5)Review of Sanborn maps. Based on 9/13/2003 testing results, both 2x4000 gallon USTs and product piping tested tight. On 11/4/2002, ET collected samples from the petroleum product from MW-2 and one of the active gasoline USTs located on-site (UST West). The results of the analyses indicated two differnt unleaded gasolines are represented by the MW-2 and UST product samples.Groundwater samples were collected from on-site wells on 9/13/2002. Groundwater flow direction is toward the southeast. On 10/2/2002, ET collected soil and groundwater samples from 5 boring locations (SB-1B, SB-2B, SB-3B, SB-4B,and SB-5B) using Geoprobe equipment. Groundwater samples were collected from SB-1B through SB-3B. Groundwater samples were not obtainable from SB-4B and SB-5B due to subssurface refusal. On 10/25/2002, three (3) off-site monitoring wells (MW-12, MW-14 and MW-14) were abandoned. -Updated

DRAFT

VERIZON (Continued) **S104953734**

Report following the Additional Subsurface Investigation Report, 10/24/2003, by EnviroTrac Ltd (Jeff Bohlen): The work included the following: 1) Additional Mnitoring Wells (MW-15, MW-16, MW-17, MW-18, and MW-19) and soil borings (SB-1 and SB-2) were installed hydraulically up-gradient of the site along the western sidewalk area of Logan Street. Groundwater samples were collected on 6/25/2003. Free-phase product was encountered in MW-2 at a thickness of 0.23 feet. Based on the PID readings and visual/olfactory observations, no elevated readings or petroleum observations were noted at both soil borings locations (SB-1 and SB-2). A total of approximately 4.11 gallons of petroleum product has been removed since 8/18/2003. ET recommended continuing with the IRM until no petroleum product is detected in MW-2 followed by an additional groundwater monitoring event. 06/02/04- File Update by Sun: On 06/02/04 Sun sent a letter to John Quatrale of Verizon requiring complete delineation of soil and groundwater contaminations, submittal of an Investigation Report followed by a Remedial Action PLan.The Department set a deadline of June 23, 2004 for signing the Stipulation Agreement. 12/31/04 File Update by Sun: -On 12/7/04, the Department approves the remedial system proposed by EnviroTrac dated 11/4/04; specifically the injection of Oxygen Releasing Material (ORM) for in-situ remediation of residual petroleum-impacted soil and groundwater at the subject property. 1/10/06: Reviewed the quarterly report for April - June 2005. Max BTEX 747 ppb (MW2) and max MTBE 270 ppb (MW2). ORM does not appear to be working. Will wait to review the next monitoring report before taking further action. 1/11/06: Reviewed quarterly report dated 1/10/06 for July - September 2005. Samples collected from some wells on September 14, 2005. Max BTEX 672.9 ppb (MW-2), max MTBE 137ppb (MW-2). Removal and decomissioning of the two (2) active 4,000-gallon USTs is scheduled for the fourth quarter 2005 . 2/8/06: Reveiwed the quarterly update report and the excavation report. Tanks, soil and gw removed. ORM left in excavation. Endpoint samples were clean. Three new MW installed in the excavation pit showed high concentrations (BTEX 2197 (MW-20) and MTBE 793 (MW-20)). 4/27/06: Meeting with Verizon, NYSDEC, and EnviroTrac. Newest data shows concentrations about the same. There is likely old fill material in this area. 5/11/06: Reveiwed first quarterly 2006 report. Max BTEX 2058ppb (MW2). Max MTBE 755ppb (MW21). Large increase in BTEX concentration in MW 2. Look for trend in next quarterly report. 8/25/06: Reviewed quarterly report dated 8/24/06. Wells sampled on 6/16/06. Max BTEX 902 ppb (MW22), max MTBE 150 ppb (MW7). General decreasing trend. Approved reduction of well gauging, and O2 and temperature monitoring from monthly to quarterly. 11/27/06: Received July - September 2006 monitoring report. Max BTEX 556 ppb in MW21, max MTBE 68 ppb in MW21. Decreasing trend. 2/22/07: Reviewed update report. Wells sampled on 12/15/06. Max BTEX 129 ppb (MW20). Max MTBE 79 ppb (MW3). Continue monitoring. 5/22/07: Reviewed update report. Wells sampled on 3/1/07. Max BTEX 203 ppb (MW21), max MTBE 88 ppb (MW21). MNA. 8/29/07: Reviewed update report. Wells sampled on 6/8/07. Max BTEX 60 ppb (MW22), max MTBE 59 ppb (MW3). MNA. Evaluate for closure next quarter. 3/4/08: Reviewed update report. Wells sampled on 12/18/07. Max BTEX 767 ppb (MW7), max MTBE 919 ppb (MW7). An ORM sock will be installed in MW7. 7/2/08 - Carlson: Reviewed January 2008 - March 2008 update report. ORM sock installed in MW7 on 2/20/08. Wells sampled on 3/26/08. Max BTEX 30 ppb (MW7). General decrease in contaminant concentrations. 9/3/08 - Carlson: Reviewed April - June 2008 update report. Wells sampled on 6/20/08. Low

DRAFT

VERIZON (Continued) **S104953734**

dissolved concentrations. Emailed Thomas Bosshard (Envirotrac) requesting the ORC sock be removed from MW7. 9/15/08 - Carlson: Received coverletter indicating that ORC sock was removed from MW7. 10/17/08 - Carlson: Reviewed July 2008 - September 2008 Update Report. Wells sampled on 9/29/08. Low dissolved concentrations. ORC sock removed from MW7 on August 28, 2008. 2/27/09 - Carlson: Issued letter requiring confirmatory investigation workplan. Due 3/27/09. 3/26/09 - Carlson: Approved confirmatory boring workplan. 6/8/09 - Carlson: Received update report and closure petition. Confirmatory soil borings completed. 7/6/09 - Carlson: Requested additional confirmatory soil borings be completed. 8/26/09 - Carlson: Approved work plan for installation of four additional confirmatory soil broings. 11/5/09 - Carlson: Received Additional Confirmatory Investigation. Case closed."

spill number, 9900503, was issued when the same 10,000-gallon heating oil UST failed another tightness test, so this older spill case should be closed. Also points out that tank was removed in September 2006. [See spill nos. 0509695 and 0610043 for further info regarding UST closure] I concur with Ms. Wong's recommendation; this spill case is closed to consolidate with open spill case 9900503. - J. Kolleeny"

DEC Memo:	"6/12/2008 Cross ref to #9608289 TTF on Tank #10 06/13/08: Related spill case 9608289 (also for TTF of Tank #10 at this site) closed to consolidate with this spill case. - J. Kolleeny 08/07/09: USTs involved in this spill were removed in 2006; one end-point sample had some high levels of VOCs. Ryan Piper of Spill Response was at site, directed DEP to do addt'l work; they then took 14 addt'l soil samples and 2 GW grab samples (see data in eDocs). [For add'tl info regarding this site, including UST closure rpt, see spill no. 0610043, Ryan Piper, and spill no. 0509695, Sharif Rahman.] In 2008, Takcheun Chan of DEP contacted me about closure of this spill. I asked if any of addt'l 14 soil and/or 2 GW samples were collected near hot end-pt sample, and if any kind of remediation was done. On 8/6/09, Mr. Chan submitted documents via email showing that one of 14 soil samples (sample 3B) was near hot end-pt. sample (G2), but lab result showed much lower levels of VOCs; GW samples showed no significant impact to GW. Also, docs indicated that ORC advanced was applied to open excavation to enhance bioremediation of residual contamination. Mr. Chan's email, with my earlier email to him and all supporting documents are in eDocs. Based on submitted information, no further action is warranted and spill case is closed. - JK"
Remarks:	"caller stated he received a call from dec stating that they never got a spill number for this failed tank test. caller is calling it in now per dec."

closing of spill. Called Mr. Chan and requested a third party letter explaining what happened. Mr. Chan told me manhole cover was loose causing failure. Cover fitting was tightened and then tank passed. He said he will get letter and send to me. Action Environmental did the repair work. bf 4/4/07 received call from Mr. Chin on 4/3 re:letter response regarding failure. Called him back today. letter was sent certified mail. Could not find. He will email the packege as a pdf file to me today. bf 4/9/07 reviewed letter from Mr. Chin. Tank tested and passed. Manway need new bolts and gasket. No mention of contaminated soil found or not found. Sent email to Mr. Chan requesting a third party letter regarding soil contamination. bf 4/27/07 Received call from Mr. Chin. He will email a copy of leeter from contractor regarding soil contamination. bf 5/7/07 Received phots by email from mr. Chan showing manholes which can be inspected for no petroleumn contamination. NFA. bf"

Remarks: "Ullage failure. Manway covers are not bolted down properly . Caller can hear air coming from there."

DEC Memo:	"need to send CSL to DEP PBS #2-456489 Nov 25, 2005 A Contaminated Soil Letter was sent to: Mr. Gopalakrishnan NYC-DEP Bureau of Watewater 96-05 Horace Harding Expressway Corona, NY 11368 03/06/06 Sharif Rahman- I spoke with Harold Monchik who was the spill caller from DEP. He told me the spill was cleaned up and the line was repaired but he does n't have much information about who did the work/any paper work. He suggested me to contact Paul Adams or Toma, Senior Stationary Engineers@718-642-7705. They are out on field right at this moment. Need to call back later.Later on today, I called again and left messege to Frank Sebastiano. 07/20/06 Rahman- I spoke with Maria Duran@212.860.9315/9350 who works under Joe Reddington of safety division. She will look into it and send DEC the available paper works for review. 08/11/06 Rahman- Spill ocurred due to leak on return line while doing soil borings.Approx. 800 gallons of #4 oil spilled on the ground through the damaged pipe.The spill was confined to the area above the buried encasement.There are no adjacent waterways.A total of 769 tons of oil water mixture were vacuumed to a vac truck and 59 tons of petroleum contaminated soil was removed in the vicinity of the fuel oil supply line to a depth of approx. 10 ft below the grade.One composite end point sample was taken from four locations at 15 ft spacing in the area of the spill.Soil analyticals are non detect for voc and there are slight exceedances for SVOC which do not warranty further remediation.Waste disposal manifest are attached.NFA required. 11/30/2006 Rep from Engineering firm (who?) called to say that they have rediscovered another problem at the site. The prior problem was limited to the fill line. Now they are removing the tank and the area under the old tank is heavily contaminated. They want to install a new tank vault and tank system.

DRAFT

WATER TREATMENT PLANT (Continued) **S105135339**

They need to come up with a plan as soon as possible to deal withthis problem. The rep will contact Sharif Rahman within next 1-2 days. ****Sangesland reopened this spill.**** Jerry Fragias@(718)595-4968 is the contact at DEP. Spill#0610043 was assigned as tanks were being removed.Hence, spill #0509695 is closed."

Site Description: "{see Site Code C224035 for further details as this project entered the Brownfield Cleanup Program} Location: The Former Majestic Garment Cleaners site is approximately 0.47 acres in size and is located at 740 Pine Street (a.k.a. 1151 Loring Avenue) in Brooklyn, at the northeast corner of the intersection of Loring Avenue and Pine Street in the East New York section of Brooklyn. Site Features: The property is surrounded by a chain link fence and previously contained a one-story brick building which was demolished sometime in 2008. The property is currently vacant except for construction and demolition debris and parked vehicles. Current Zoning and Land Use: The property is a vacant lot in a residential zone. It is zoned R4 (Residential) with a C1-2 (Commercial) overlay. The surrounding parcels are currently used for a mix of commercial and residential uses. Past Use of Site: The site was formerly used as an industrial laundry and dry cleaning facility from 1926 to 2007, and operated out of a large one-story brick building which was constructed in 1926. The building was later expanded with a smaller attached one-story cinder block building on its north side. In early 1999, the U. S. Environmental Protection Agency (EPA) conducted two separate inspections of the Majestic Garment Cleaners facility, one on January 25, 1999, and the other on March 29, 1999. During those inspections EPA personnel observed employees disposing of tetrachloroethene (PCE) contaminated water from steam presses onto the ground behind the facility on the western side of the property. They also noticed that the areas around the dry- cleaning equipment were visibly contaminated with PCE-contaminated lint and a dark liquid residue. EPA subsequently learned that Majestic employees regularly vacuumed PCE-contaminated lint and disposed of it in a dumpster behind the building. In the Fall of 2001, the Department conducted an investigation which showed that the groundwater underlying the site was contaminated with PCE and its breakdown products. A Phase II investigation was conducted in June 2009. Soil samples were collected and the results showed exceedances above unrestricted soil cleanup objectives (SCOs) for volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Site Geology and Hydrogeology: Much of the surface soil at the site consists of urban fill composed of mixed sand with varying amounts of gravel, brick, and concrete debris. The urban fill (i.e., debris, brick, etc.) at the site extends down to approximately 8 feet below ground surface (bgs); the fill is underlain by organic rich

DRAFT

MAJESTIC CLNRS (Continued) **S110248343**

clay and sand. The depth to groundwater has been observed to be approximately 10 feet bgs. The groundwater flow direction in the vicinity of the site is to the southwest. It appears that a local hydraulic low, which was historically observed near piezometer PZ-2, may have been due to efforts to dewater the basement of the former on-site building when the building was present and in use."

Env Problem: "Nature and Extent of Contamination: Based on the Remedial Investigation, the primary contaminants of concern (COCs) at the site include tetrachloroethylene (PCE), trichloroethylene (TCE), 1,2-dichloroethylene (1,2-DCE), vinyl chloride, and benzo(a)pyrene. Elevated levels of these constituents were found primarily in the western portion of the site. Groundwater - PCE (detected up to 260 ppb) and associated daughter products, cis-1,2-DCE (detected up to 410 ppb), TCE (detected up to 72 ppb) and vinyl chloride (detected up to 150 ppb) were identified at levels exceeding their respective groundwater standards. The groundwater standard for PCE, 1,2-DCE, and TCE is 5 ppb. The groundwater standard for vinyl chloride is 2 ppb. Soils - Soils exceeding residential soil cleanup objective (SCOs) are present only in the western portion of the site. Benzo(a)pyrene was detected in subsurface soil (in a sample collected from the 10-foot to 11-foot depth interval) at a level of 2.6 ppm which exceeded the residential use soil cleanup objective (SCO) of 1 ppm. PCE was detected in subsurface soil at 8.1 ppm in a soil boring sample collected from the 11-foot to 12-foot depth interval in the western portion of the site in the vicinity of the former loading dock area. PCE was also detected in another soil boring sample from the 10-foot to 11-foot depth interval at a concentration of 6.8 ppm. This sample was also collected in the western portion of the site. Both of these concentration levels exceeded the protection of groundwater SCO of 1.3 ppm. Soil Vapor - Elevated soil vapor concentration levels were detected in the western portion of the site in the same general area of the highest groundwater and soil contamination. The most significant results were: PCE at 640,000 g/m3; vinyl chloride at 330,000 g/m3; cis-1,2-DCE at 440,000 g/m3; trans-1,2-DCE at 4,800 g/m3; TCE at 25,000 g/m3; and 1,1-DCE at 2,000 g/m3. Based on the elevated soil vapor concentrations in the western portion of the site, additional off-site soil vapor sampling was conducted. Elevated soil vapor concentrations were observed in most of the off-site samples located west of the site including samples collected near the laundromat. The most significant results were: PCE at 310,000 g/m3; cis-1,2-DCE at 1,300 g/m3; and TCE at 7,000 g/m3. Elevated levels of gasoline-related compounds were also observed in some of the samples, but these compounds are not considered to be site-related. Environmental sampling indicates soil vapor intrusion may be a concern for on-site and off-site structures."

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. The site is fenced, which limits public access. However, part of the lot is being used for parking and storage of building materials and persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The on-site building has been demolished,

DRAFT

MAJESTIC CLNRS (Continued) **S110248343**

however the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy. Elevated concentrations of site-related contaminants were detected in soil vapor off-site. The potential for exposures in off-site buildings needs to be monitored and/or evaluated to determine if mitigation measures should be implemented. "

Site Description:	"The Former Majestic Garment Cleaners is located at the northeast corner of the intersection of Loring Avenue and Pine Street in the East New York section of Brooklyn. The property contains a 1-story brick building and a parking lot which is surrounded by a chain link fence. The site is currently occupied by a dry cleaning operation (World Cleaners). In early 1999, EPA conducted two separate inspections of the Majestic Garment Cleaners facility. During those inspections, EPA personnel observed employees disposing of tetrachloroethene (PCE) contaminated water from steam presses onto the ground behind the facility. They also noticed that the areas around the dry cleaning equipment were visibly contaminated with PCE-contaminated lint and a dark liquid residue. EPA subsequently learned that Majestic employees regularly vacuumed PCE-contaminated lint and disposed of it in a dumpster behind the building. Completed investigations include an Immediate Investigation Work Assignment (2001). In January 2004, a Voluntary Cleanup Agreement was signed, and in July 2005, the Volunteer performed fieldwork associated with the Remedial Investigation (RI). However, the Volunteer never submitted a formal RI Report documenting the results of the investigation, and in June 2006, the State terminated the agreement with the owner of the site due to their failure to respond appropriately. The site investigation and cleanup will be done under the Inactive Hazardous Waste Disposal Site remedial program-see site #224035 for more information."
Env Problem:	"The primary contaminants of concern at the site known at this time include tetrachloroethylene (PCE), trichloroethylene (TCE), 1,2-dichloroethylene (1,2-DCE)and vinyl chloride. The initial investigation indicates groundwater beneath the site has been impacted. Exceedances of standards, criteria and guidance include PCE, TCE, 1,2-DCE and vinyl chloride in groundwater."

Site Description:	"Location: The site is specifically known as 1199-1221 Sutter Avenue in a mixed residential / commercial area of Brooklyn. Site Features: The site occupies about half of a city block on the north side of Sutter Avenue. Approximately one-half of the site is occupied by a one-story building divided into five separate units used for commercial and office purposes. A dry cleaner establishment formerly occupied the eastern-most unit. The former location of the dry cleaner is presently occupied by a self-service laundromat. The laundromat unit is underlain with a basement segmented with utilities, storage and several rooms. The other units also have basements. The adjacent unit is a grocery store that uses their basement as a warehouse. Current Zoning/Use: The site is within an R5 (residential) zoned area. The site is zoned C1-2 (commercial) as are the properties along the north side of a seven-block stretch of Sutter Avenue. Historic Uses: The structures on the site were constructed in 1957 and were the original development on the property. A dry cleaning facility had operated on the site for many years. Site Geology and Hydrogeology: The property is located within the Pavement and Buildings-Flatbush-Riverhead Series Soil Map Unit, which is described as anthropogenic urban fill overlying glacial out wash deposits and characterized as a sandy loam. The groundwater table is approximately 13 feet below grade and is characterized as Class GA indicating it as a potential source of potable water. Groundwater flows south. Groundwater is not utilized as a source of potable water at site."
Env Problem:	"Nature and Extent of Contamination: A limited Phase II conducted in 2009 found the dry cleaning solvent tetrachloroethene (PCE) and its daughter products trichloroethene (TCE) and cis-1,2-dichloroethene

DRAFT

1199 SUTTER AVENUE (Continued) **S109583525**

(DCE) at elevated concentrations in groundwater. Permanent monitoring wells were constructed in 2009 and sampled before (August 2009) and after (November 2009) a remedial action consisting of potassium permanganate injections into on-site groundwater. The data are inconclusive as to the effectiveness of the injections. A site characterization investigation was conducted by Associated Environmental Services under NYSDEC oversight in July 2011. PCE and its daughter products remain above groundwater standards in the preexisting monitoring wells constructed during the Phase II investigation. PCE concentrations ranged from below its standard of 5 ppb to a maximum concentration of 470 ppb in MW-4. MW-4 is located in the basement of the former location of the dry cleaner. TCE and DCE were present in some wells and non-detect in others. The new down-gradient monitoring well (MW-5) located across Sutter Avenue had PCE, TCE and DCE at respective concentrations of 98 ppb, 5.2 ppb and 9.8 ppb. The investigation found tetrachloroethene (PCE) and trichloroethene (TCE) in indoor air in the basement of the laundromat (former dry cleaner). Elevated concentrations of PCE, TCE, cis-1,2-dichloroethene (DCE) and vinyl chloride were observed in sub-slab vapor. The indoor air sample had PCE and TCE at 68.5 micrograms per cubic meter (ug/M3) and 1.27 ug/M3 respectively. Respective sub-slab concentrations of PCE, TCE, DCE and vinyl chloride were 428,000 ug/M3, 9,730 ug/M3, 4,220 ug/M3 and 795 ug/M3. The elevated concentrations of these chlorinated VOCs in soil vapor present a significant threat to human health and indicate the presence of an on-site source. Also present in the sub-slab vapor were chloroform, dichloroethene, ethylbenzene, freon 113, styrene and toluene. The highest concentrations of contaminants in groundwater were found in a well constructed in the laundromat. PCE, TCE and DCE were dtected at the the respective concentrations of 470 parts per billion (ppm), 14 ppb and 4.3 ppb. Soil data are limited, but two soil borings behind the laundromat had PCE and TCE above their respective unrestricted soil cleanup objectives (USCOs) parts per million (ppm). DCE was also detected above its USCO in one boring. However, all were well below the commercial SCOs More soil data are needed for an accurate analysis of soil contamination at the site. Significant Threat:"

Spanish American Dry Cleaners occupied the eastern-most unit from September 1988 to May 1995. The former location of the dry cleaner is presently occupied by a self-service laundromat. Site Geology and Hydrogeology: The property is located within the Pavement and Buildings-Flatbush-Riverhead Series Soil Map Unit, which is described as anthropogenic urban fill overlying glacial out wash deposits and characterized as a sandy loam. The groundwater table is approximately 13 feet below grade and flows south. Groundwater is not utilized as a source of potable water at site. As detailed and managed under the Site Management System, the entire site is overlain by a NYSDEC approved cover system that consists of the buildings and pavement."
Env Problem:	"Remediation at the site is underway via an air sparge / soil vapor extraction (AS/SVE) system. The primary contaminants of concern are the dry cleaning solvent tetrachloroethene (PCE) and its daughter products trichloroethene (TCE) and cis-1,2-dichloroethene (DCE). Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Site

DRAFT

1199 SUTTER AVENUE (Continued) **S109583525**

	management includes operation of the AS/SVE system that will address soil and groundwater contamination under the building. A sub-slab depressurization system is also operating to prevent migration of contaminants into the occupied, on-site buildings. The SMP includes a provision to investigate off-site vapor when previously-denied access is gained, and to mitigate as necessary. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

DEC Memo:	"6/17/2009 Sangesland reviewed Phase 2 report (see e-Docs) - Summary below. Krimgold reviewed these notes and agrees with Phase 2 report Recommendation plan. Report Summary: Boring B7 contained 5100ppb of Tetrachloroethene, over the RSCO of 1400ppb. Several GW samples were above limits for VOCs, PCE, Methylene Chloride, Trichloroethene and cis-1,2-Dichloroethene - see report for details Report Recommendations: ...it is recommended that an injection program utilizing Potassium Permanganate...be implemented... In addition shallow and deep monitoring wells should be installed in several strategic locations to monitor the effectiveness of the injection event. 6/17/2009 - Krimgold gave approval for Sangesland to give direction to Associated Environmental to go forward with the Recommended Plan. 4/21/10 (JOC) - re-assigned to Joe O'Connell; - System is prompting for 17-1743 notification determination: This event was not reported pursuant to 17-1743, nor does it qualify for it. No was selected in the system to resolve the prompt; - P-site memo was distributed March 24, 2010; no responses to date; proceeding with P-site owner letter. 7/15/10 - the circumstances that were being evaluated under this spill number will be further evaluated under SSF as site #224141. No further tracking of activities will occur under this spill number. Administratively closed. See site #224141 for further information. (JOC)"
Remarks:	"CALLER STATES THAT THEY GOT TEST RESULTS BACK SHOWING CONTAMINATED GROUND WATER AND SOIL. CLEAN UP PENDING."

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/27/2021
Date Data Arrived at EDR: 05/03/2021
Date Made Active in Reports: 05/19/2021
Number of Days to Update: 16

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

DRAFT

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

DRAFT

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

DRAFT

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Northeast Map:	5940539 JAMAICA, NY
Version Date:	2013

DRAFT

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

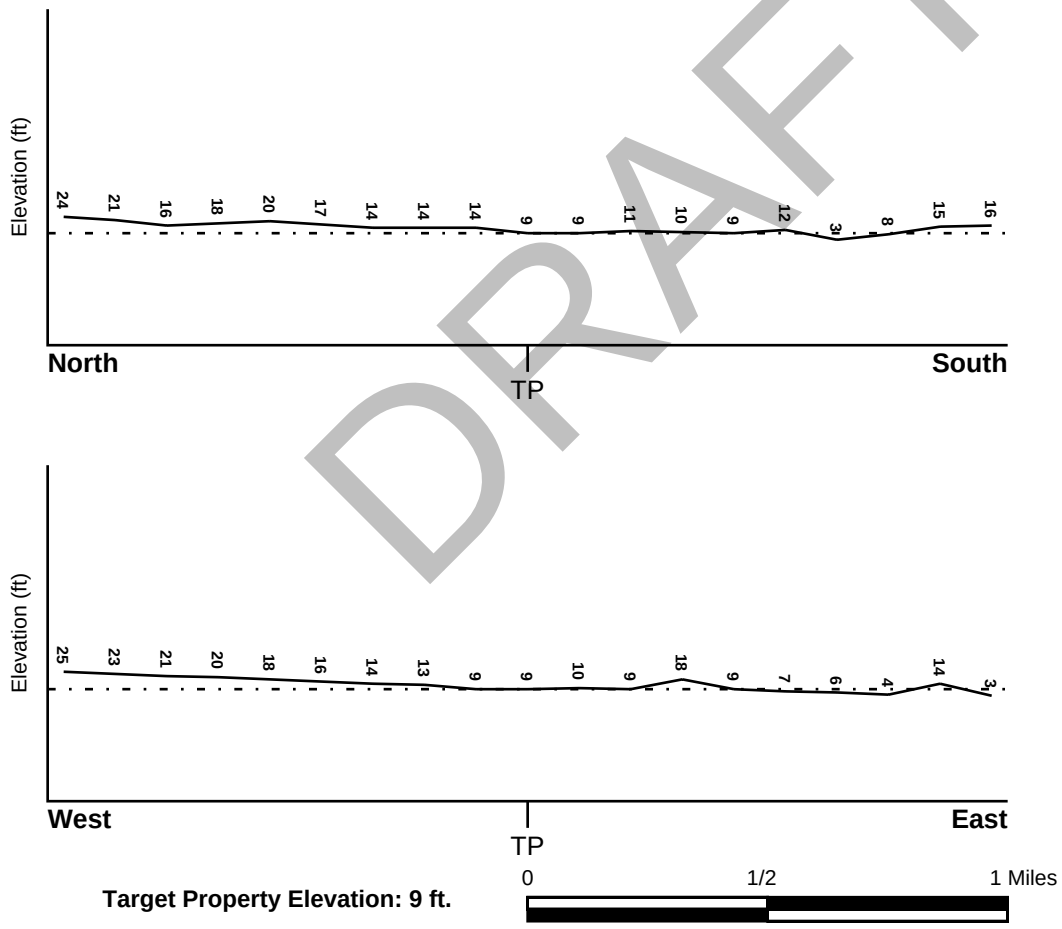
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 9 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

DRAFT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970075C	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type

3604970238F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles South
Site Name:	PENNSYLVANIA/FOUNTAIN AVE LF
Site EPA ID Number:	NY6141790018
Groundwater Flow Direction:	TOWARD JAMAICA BAY.
Measured Depth to Water:	approximately 5 to 10 feet above mean sea level.
Hydraulic Connection:	Detailed hydraulic connection information is not available. The site is underlain by silt, sand, and gravel to a depth of approximately 55 feet. The Gardiners Clay unit underlies the upper silt, sand, and gravel, and is estimated to be 20 feet thick.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

DRAFT

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

DRAFT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Pleistocene
Code:	Qp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

DRAFT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

DRAFT

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Contact: Patrick Montuori

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by HRP Associates, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Contact: Patrick Montuori

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

Year	Scale	Details	Source
2017	1"=500'	Flight Year: 2017	USDA/NAIP
2013	1"=500'	Flight Year: 2013	USDA/NAIP
2009	1"=500'	Flight Year: 2009	USDA/NAIP
2006	1"=500'	Flight Year: 2006	USDA/NAIP
1994	1"=500'	Acquisition Date: January 01, 1994	USGS/DOQQ
1985	1"=500'	Flight Date: March 16, 1985	USDA
1980	1"=500'	Flight Date: July 25, 1980	NOAA
1976	1"=500'	Flight Date: October 29, 1976	USGS
1966	1"=500'	Flight Date: February 23, 1966	USGS
1961	1"=500'	Flight Date: November 22, 1961	EDR Proprietary Aerial Viewpoint
1954	1"=500'	Flight Date: February 18, 1954	USGS
1951	1"=500'	Flight Date: April 20, 1951	EDR Proprietary Aerial Viewpoint
1924	1"=500'	Flight Date: July 01, 1924	FAIR

Farmington, CT 06032-0000
Contact: Patrick Montuori

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by HRP Associates, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# DEC1021.P2

Project: Elton Street/ Linwood Street G

Coordinates:

Latitude:	40.661297 40° 39' 41" North
Longitude:	-73.877084 -73° 52' 38" West
UTM Zone:	Zone 18 North
UTM X Meters:	594921.67
UTM Y Meters:	4501765.05
Elevation:	9.00' above sea level

Maps Provided:

Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-918188
Unit Firmware Ver	V2.22A

Running Mode	Hygiene Mode
Datalog Mode	Auto
Diagnostic Mode	No
Stop Reason	Power Down

Site ID	RAE00000
User ID	USER6601

Begin	11/15/2021 8:31
End	11/15/2021 13:12
Sample Period(s)	60
Number of Records	280

Sensor	PID(ppm)
Sensor SN	S023030226T9
Measure Type	Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	25
TWA Alarm	10
Measurement Gas	Isobutylene
Calibration Time	11/15/2021 8:31

Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-918188
Unit Firmware Ver	V2.22A

Running Mode	Hygiene Mode
Datalog Mode	Auto
Diagnostic Mode	No
Stop Reason	Power Down

DRAFT

Site ID	RAE00000
User ID	USER6601

Begin	11/17/2021 13:39
End	11/17/2021 15:38
Sample Period(s)	60
Number of Records	118

Sensor	PID(ppm)
Sensor SN	S023030226T9
Measure Type	Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	25
TWA Alarm	10
Measurement Gas	Isobutylene
Calibration Time	11/15/2021 8:31
Peak	0

Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-918188
Unit Firmware Ver	V2.22A

Running Mode	Hygiene Mode
Datalog Mode	Auto
Diagnostic Mode	No
Stop Reason	Battery Low

Site ID	RAE00000
User ID	USER6601

Begin	11/18/2021 8:22
End	11/18/2021 17:15

DRAFT

Sample Period(s)	60
Number of Records	533

Sensor	PID(ppm)
Sensor SN	S023030226T9
Measure Type	Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	25
TWA Alarm	10
Measurement Gas	Isobutylene
Calibration Time	11/15/2021 8:31
Peak	0.4
Min	0
Average	0.1

************************************************************
Summary
------------------------------------------------------------
Unit Name       MiniRAE 3000(PGM-7320)
Unit SN 592-908251
Unit Firmware Ver       V2.16
------------------------------------------------------------
Running Mode    Hygiene Mode
Datalog Mode    Manual
Diagnostic Mode No
Stop Reason     Stop by User
------------------------------------------------------------
Site ID RAE00000
User ID USER0000
------------------------------------------------------------
Begin   5/12/2022 09:42:31
End     5/12/2022 15:19:28
Sample Period(s)        60
Number of Records       336
------------------------------------------------------------
Sensor  PID(ppm)
Sensor SN       S023030104V3
Measure Type    Min; Avg; Max; Real
Span    100.0
Span 2  1000.0
Low Alarm       50.0
High Alarm      100.0
Over Alarm      15000.0
STEL Alarm      25.0
TWA Alarm       10.0
Measurement Gas Isobutylene
Calibration Time        5/4/2022 09:44
Peak    0.0
Min     0.0
Average 0.0

============================================================
22/05/13 07:54
************************************************************
Summary
------------------------------------------------------------
Unit Name       MiniRAE 3000(PGM-7320)
Unit SN 592-908251
Unit Firmware Ver       V2.16
------------------------------------------------------------
Running Mode    Hygiene Mode
Datalog Mode    Manual
Diagnostic Mode No
Stop Reason     Power Down
------------------------------------------------------------
Site ID RAE00000
User ID USER0000
------------------------------------------------------------
Begin   5/13/2022 07:54:18
End     5/13/2022 09:00:53
Sample Period(s)        60
Number of Records       66
------------------------------------------------------------
Sensor  PID(ppm)
Sensor SN       S023030104V3
Measure Type    Min; Avg; Max; Real
Span    100.0
Span 2  1000.0
Low Alarm       50.0
High Alarm      100.0
Over Alarm      15000.0
STEL Alarm      25.0
TWA Alarm       10.0
Measurement Gas Isobutylene
Calibration Time        5/4/2022 09:44
Peak    0.0
Min     0.0
Average 0.0

============================================================
22/05/23 08:29
************************************************************
Summary
------------------------------------------------------------
Unit Name       MiniRAE 3000(PGM-7320)
Unit SN 592-908251
Unit Firmware Ver       V2.16
------------------------------------------------------------
Running Mode    Hygiene Mode
Datalog Mode    Manual
Diagnostic Mode No
Stop Reason     Stop by User
------------------------------------------------------------
Site ID RAE00000
User ID USER0000
------------------------------------------------------------
Begin   5/23/2022 08:29:25
End     5/23/2022 13:22:32
Sample Period(s)        60
Number of Records       293
------------------------------------------------------------
Sensor  PID(ppm)
Sensor SN       S023030104V3
Measure Type    Min; Avg; Max; Real
Span    100.0
Span 2  1000.0
Low Alarm       50.0
High Alarm      100.0
Over Alarm      15000.0
STEL Alarm      25.0
TWA Alarm       10.0
Measurement Gas Isobutylene
Calibration Time        5/4/2022 09:44
Peak    0.0
Min     0.0
Average 0.0

************************************************************
Summary
------------------------------------------------------------
Unit Name       MiniRAE 3000(PGM-7320)
Unit SN 592-908251
Unit Firmware Ver       V2.16
------------------------------------------------------------
Running Mode    Hygiene Mode
Datalog Mode    Manual
Diagnostic Mode No
Stop Reason     Stop by User
------------------------------------------------------------
Site ID RAE00000
User ID USER0000
------------------------------------------------------------
Begin   5/23/2022 13:56:39
End     5/23/2022 14:32:43
Sample Period(s)        60
Number of Records       36
------------------------------------------------------------
Sensor  PID(ppm)
Sensor SN       S023030104V3
Measure Type    Min; Avg; Max; Real
Span    100.0
Span 2  1000.0
Low Alarm       50.0
High Alarm      100.0
Over Alarm      15000.0
STEL Alarm      25.0
TWA Alarm       10.0
Measurement Gas Isobutylene
Calibration Time        5/4/2022 09:44
Peak    0.0
Min     0.0

************************************************************
Summary
------------------------------------------------------------
Unit Name       MiniRAE 3000(PGM-7320)
Unit SN 592-908251
Unit Firmware Ver       V2.16
------------------------------------------------------------
Running Mode    Hygiene Mode
Datalog Mode    Manual
Diagnostic Mode No
Stop Reason     Stop by User
------------------------------------------------------------
Site ID RAE00000
User ID USER0000
------------------------------------------------------------
Begin   5/24/2022 08:32:23
End     5/24/2022 12:06:23
Sample Period(s)        60
Number of Records       214
------------------------------------------------------------
Sensor  PID(ppm)
Sensor SN       S023030104V3
Measure Type    Min; Avg; Max; Real
Span    100.0
Span 2  1000.0
Low Alarm       50.0
High Alarm      100.0
Over Alarm      15000.0
STEL Alarm      25.0
TWA Alarm       10.0
Measurement Gas Isobutylene
Calibration Time        5/4/2022 09:44
Peak    0.0
Min     0.0
Average 0.0

============================================================
22/05/25 09:03
************************************************************
Summary
------------------------------------------------------------
Unit Name       MiniRAE 3000(PGM-7320)
Unit SN 592-908251
Unit Firmware Ver       V2.16
------------------------------------------------------------
Running Mode    Hygiene Mode
Datalog Mode    Manual
Diagnostic Mode No
Stop Reason     Stop by User
------------------------------------------------------------
Site ID RAE00000
User ID USER0000
------------------------------------------------------------
Begin   5/25/2022 09:03:33
End     5/25/2022 11:44:14
Sample Period(s)        60
Number of Records       160
------------------------------------------------------------
Sensor  PID(ppm)
Sensor SN       S023030104V3
Measure Type    Min; Avg; Max; Real
Span    100.0
Span 2  1000.0
Low Alarm       50.0
High Alarm      100.0
Over Alarm      15000.0
STEL Alarm      25.0
TWA Alarm       10.0
Measurement Gas Isobutylene
Calibration Time        5/4/2022 09:44
Peak    0.0
Min     0.0
Average 0.0

============================================================
22/05/23 08:24
************************************************************
Summary
------------------------------------------------------------
Unit Name       MiniRAE 3000(PGM-7320)
Unit SN 592-914539
Unit Firmware Ver       V2.22A
------------------------------------------------------------
Running Mode    Hygiene Mode
Datalog Mode    Manual
Diagnostic Mode No
Stop Reason     Stop by User
------------------------------------------------------------
Site ID RAE00000
User ID 00000001
------------------------------------------------------------
Begin   5/23/2022 08:24:40
End     5/23/2022 13:16:11
Sample Period(s)        60
Number of Records       291
------------------------------------------------------------
Sensor  PID(ppm)
Sensor SN       S023030328S4
Measure Type    Min; Avg; Max; Real
Span    100.0
Span 2  1000.0
Low Alarm       50.0
High Alarm      100.0
Over Alarm      15000.0
STEL Alarm      100.0
TWA Alarm       50.0
Measurement Gas Isobutylene
Calibration Time        5/4/2022 10:18
Peak    0.0
Min     0.0
Average 0.0

Unit SN 592-914539
Unit Firmware Ver       V2.22A
------------------------------------------------------------
Running Mode    Hygiene Mode
Datalog Mode    Manual
Diagnostic Mode No
Stop Reason     Stop by User
------------------------------------------------------------
Site ID RAE00000
User ID 00000001
------------------------------------------------------------
Begin   5/23/2022 13:50:28
End     5/23/2022 14:24:43
Sample Period(s)        60
Number of Records       34
------------------------------------------------------------
Sensor  PID(ppm)
Sensor SN       S023030328S4
Measure Type    Min; Avg; Max; Real
Span    100.0
Span 2  1000.0
Low Alarm       50.0
High Alarm      100.0
Over Alarm      15000.0
STEL Alarm      100.0
TWA Alarm       50.0
Measurement Gas Isobutylene
Calibration Time        5/4/2022 10:18
Peak    0.0
Min     0.0
Average 0.0

============================================================
22/05/25 08:47
************************************************************
Summary
------------------------------------------------------------
Unit Name       MiniRAE 3000(PGM-7320)
Unit SN 592-914539
Unit Firmware Ver       V2.22A
------------------------------------------------------------
Running Mode    Hygiene Mode
Datalog Mode    Manual
Diagnostic Mode No
Stop Reason     Stop by User
------------------------------------------------------------
Site ID RAE00000
User ID 00000001
------------------------------------------------------------
Begin   5/25/2022 08:47:43
End     5/25/2022 11:31:45
Sample Period(s)        60
Number of Records       164
------------------------------------------------------------
Sensor  PID(ppm)
Sensor SN       S023030328S4
Measure Type    Min; Avg; Max; Real
Span    100.0
Span 2  1000.0
Low Alarm       50.0
High Alarm      100.0
Over Alarm      15000.0
STEL Alarm      100.0
TWA Alarm       50.0
Measurement Gas Isobutylene
Calibration Time        5/4/2022 10:18
Peak    0.0
Min     0.0
Average 0.0

============================================================
22/07/25 09:16
************************************************************
Summary
------------------------------------------------------------
Unit Name       MiniRAE 3000(PGM-7320)
Unit SN 592-910736
Unit Firmware Ver       V2.22A
------------------------------------------------------------
Running Mode    Hygiene Mode
Datalog Mode    Auto
Diagnostic Mode No
Stop Reason     Power Down
------------------------------------------------------------
Site ID 00000001
User ID 00000001
------------------------------------------------------------
Begin   7/25/2022 09:16:27
End     7/25/2022 11:05:27
Sample Period(s)        60
Number of Records       109
------------------------------------------------------------
Sensor  PID(ppm)
Sensor SN       S023030076S8
Measure Type    Min; Avg; Max; Real
Span    100.0
Span 2  100.0
Low Alarm       50.0
High Alarm      100.0
Over Alarm      15000.0
STEL Alarm      25.0
TWA Alarm       10.0
Measurement Gas Isobutylene
Calibration Time        7/19/2022 14:53
Peak    0.0
Min     0.0
Average 0.0

****

Summary

Unit Name MiniRAE 3000(PGM-7320)
Unit SN 592-910736
Unit Firmware Ver V2.22A

Running Mode Hygiene Mode
Datalog Mode Auto
Diagnostic Mode No
Stop Reason Power Down

Site ID 00000001
User ID 00000001

Begin 7/25/2022 12:20:08
End 7/25/2022 15:22:04
Sample Period(s) 60
Number of Records 181

Sensor PID(ppm)
Sensor SN S023030076S8
Measure Type Min; Avg; Max; Real
Span 100.0
Span 2 100.0
Low Alarm 50.0
High Alarm 100.0
Over Alarm 15000.0
STEL Alarm 25.0
TWA Alarm 10.0

DRAFT

Measurement Gas Isobutylene
Calibration Time 7/19/2022 14:53
Peak 0.0
Min 0.0
Average 0.0

==========

22/07/26 07:44

****

Summary

Unit Name MiniRAE 3000(PGM-7320)
Unit SN 592-910736
Unit Firmware Ver V2.22A

Running Mode Hygiene Mode
Datalog Mode Auto
Diagnostic Mode No
Stop Reason Power Down

Site ID 00000001
User ID 00000001

Begin 7/26/2022 07:44:51
End 7/26/2022 11:17:37
Sample Period(s) 60

DRAFT

Number of Records 212

Sensor PID(ppm)
Sensor SN S023030076S8
Measure Type Min; Avg; Max; Real
Span 100.0
Span 2 100.0
Low Alarm 50.0
High Alarm 100.0
Over Alarm 15000.0
STEL Alarm 25.0
TWA Alarm 10.0
Measurement Gas Isobutylene
Calibration Time 7/19/2022 14:53
Peak 0.3
Min 0.0
Average 0.0

Summary

Unit Name MiniRAE 3000(PGM-7320)
Unit SN 592-910736
Unit Firmware Ver V2.22A

Running Mode Hygiene Mode
Datalog Mode Auto
Diagnostic Mode No
Stop Reason Unknown

Site ID 00000001
User ID 00000001

Begin 7/26/2022 13:19:41
End 7/26/2022 13:19:41
Sample Period(s) 60
Number of Records 75

Sensor PID(ppm)
Sensor SN S023030076S8
Measure Type Min; Avg; Max; Real
Span 100.0
Span 2 100.0
Low Alarm 50.0
High Alarm 100.0
Over Alarm 15000.0
STEL Alarm 25.0
TWA Alarm 10.0
Measurement Gas Isobutylene
Calibration Time 7/19/2022 14:53
Peak 0.0
Min 0.0
Average 0.0

****

Summary

Unit Name MiniRAE 3000(PGM-7320)
Unit SN 592-910736
Unit Firmware Ver V2.22A

Running Mode Hygiene Mode
Datalog Mode Auto
Diagnostic Mode No
Stop Reason Unknown

Site ID 00000001
User ID 00000001

Begin 7/27/2022 07:46:48
End 7/27/2022 07:46:48
Sample Period(s) 60
Number of Records 221

Sensor PID(ppm)
Sensor SN S023030076S8
Measure Type Min; Avg; Max; Real
Span 100.0
Span 2 100.0
Low Alarm 50.0
High Alarm 100.0
Over Alarm 15000.0
STEL Alarm 25.0
TWA Alarm 10.0
Measurement Gas Isobutylene
Calibration Time 7/19/2022 14:53
Peak 0.0
Min 0.0
Average 0.0

****

Summary

DRAFT

Unit Name MiniRAE 3000(PGM-7320)
Unit SN 592-910736
Unit Firmware Ver V2.22A

Running Mode Hygiene Mode
Datalog Mode Auto
Diagnostic Mode No
Stop Reason Unknown

Site ID 00000001
User ID 00000001

Begin 7/28/2022 07:29:59
End 7/28/2022 07:29:59
Sample Period(s) 60
Number of Records 187

Sensor PID(ppm)
Sensor SN S023030076S8
Measure Type Min; Avg; Max; Real
Span 100.0
Span 2 100.0
Low Alarm 50.0
High Alarm 100.0
Over Alarm 15000.0
STEL Alarm 25.0
TWA Alarm 10.0
Measurement Gas Isobutylene
Calibration Time 7/19/2022 14:53
Peak 0.0
Min 0.0
Average 0.0

==========
22/07/25 09:17
****
Summary

Unit Name MiniRAE 3000(PGM-7320)
Unit SN 592-920033
Unit Firmware Ver V2.22A

Running Mode Hygiene Mode
Datalog Mode Auto
Diagnostic Mode No
Stop Reason Power Down

Site ID RAE00006
User ID RAE00001

Begin 7/25/2022 09:17:02
End 7/25/2022 11:05:21
Sample Period(s) 60
Number of Records 108

Sensor PID(ppm)
Sensor SN S023030211U2
Measure Type Min; Avg; Max; Real
Span 100.0
Span 2 1000.0
Low Alarm 50.0
High Alarm 100.0
Over Alarm 15000.0
STEL Alarm 25.0
TWA Alarm 10.0
Measurement Gas Isobutylene
Calibration Time 7/20/2022 11:18
Peak 0.4
Min 0.0
Average 0.0

Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-920033
Unit Firmware Ver	V2.22A

Running Mode	Hygiene Mode
Datalog Mode	Auto
Diagnostic Mode	No
Stop Reason	Power Down

Site ID	RAE00006
User ID	RAE00001

Begin	7/25/2022 12:19:32
End	7/25/2022 15:22:30
Sample Period(s)	60
Number of Records	182

Sensor	PID(ppm)
Sensor SN	S023030211U2
Measure Type	Min; Avg; Max; Real
Span	100.0
Span 2	1000.0
Low Alarm	50.0
High Alarm	100.0
Over Alarm	15000.0
STEL Alarm	25.0
TWA Alarm	10.0
Measurement Gas	Isobutylene
Calibration Time	7/20/2022 11:18

==========

22/07/26 07:41

****

Summary

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-920033

Unit Firmware Ver V2.22A

Running Mode Hygiene Mode

Datalog Mode Auto

Diagnostic Mode No

Stop Reason Power Down

Site ID RAE00006

User ID RAE00001

Begin 7/26/2022 07:41:30

End 7/26/2022 11:15:02

Sample Period(s) 60

DRAFT

Number of Records 213

Sensor PID(ppm)
Sensor SN S023030211U2
Measure Type Min; Avg; Max; Real
Span 100.0
Span 2 1000.0
Low Alarm 50.0
High Alarm 100.0
Over Alarm 15000.0
STEL Alarm 25.0
TWA Alarm 10.0
Measurement Gas Isobutylene
Calibration Time 7/20/2022 11:18
Peak 0.0
Min 0.0
Average 0.0

Summary

Unit Name MiniRAE 3000(PGM-7320)
Unit SN 592-920033
Unit Firmware Ver V2.22A

Running Mode Hygiene Mode
Datalog Mode Auto
Diagnostic Mode No
Stop Reason Power Down

Site ID RAE00006
User ID RAE00001

Begin 7/26/2022 13:20:02
End 7/26/2022 14:56:41
Sample Period(s) 60
Number of Records 96

Sensor PID(ppm)
Sensor SN S023030211U2
Measure Type Min; Avg; Max; Real
Span 100.0
Span 2 1000.0
Low Alarm 50.0
High Alarm 100.0
Over Alarm 15000.0
STEL Alarm 25.0
TWA Alarm 10.0
Measurement Gas Isobutylene
Calibration Time 7/20/2022 11:18
Peak 0.0
Min 0.0
Average 0.0

==========

22/07/27 07:47

DRAFT

****
Summary

Unit Name MiniRAE 3000(PGM-7320)
Unit SN 592-920033
Unit Firmware Ver V2.22A

Running Mode Hygiene Mode
Datalog Mode Auto
Diagnostic Mode No
Stop Reason Power Down

Site ID RAE00006
User ID RAE00001

Begin 7/27/2022 07:47:02
End 7/27/2022 11:25:23
Sample Period(s) 60
Number of Records 218

Sensor PID(ppm)
Sensor SN S023030211U2
Measure Type Min; Avg; Max; Real
Span 100.0
Span 2 1000.0
Low Alarm 50.0
High Alarm 100.0
Over Alarm 15000.0
STEL Alarm 25.0
TWA Alarm 10.0
Measurement Gas Isobutylene
Calibration Time 7/20/2022 11:18
Peak 0.0
Min 0.0
Average 0.0

************************************************************
Summary
------------------------------------------------------------
Unit Name       MiniRAE 3000 +(PGM-7320)
Unit SN 592-928503
Unit Firmware Ver       V2.22
------------------------------------------------------------
Running Mode    Hygiene Mode
Datalog Mode    Manual
Diagnostic Mode No
Stop Reason     Unknown
------------------------------------------------------------
Site ID RAE00000
User ID USER0000
------------------------------------------------------------
Begin   7/28/2022 07:34:37
End     7/28/2022 07:34:37
Sample Period(s)        60
Number of Records       158
------------------------------------------------------------
Sensor  PID(ppm)
Sensor SN       S023030429W7
Measure Type    Avg
Span    100.0
Span 2  1000.0
Low Alarm       50.0
High Alarm      100.0
Over Alarm      2000.0
STEL Alarm      100.0
TWA Alarm       50.0
Measurement Gas Isobutylene
Calibration Time        7/21/2022 16:09
Peak    N/A
Min     N/A
Average N/A

Monitoring Well Construction Logs

HRP Associates, Inc.
Monitoring Well Installation Log

WELL NO: HRP-MW-20S

PAGE 1 **OF** 1

PROJECT: Elton Street and Linwood Street SC	**SCREEN SIZE & TYPE:** 2-inch PVC Schedule 40
JOB NUMBER: DEC1021.P2	**SLOT NO.:** 0.010-inch **SETTING:** 18’ to 8’
DATE COMPLETED: 5/24/2022	**SAND PACK SIZE & TYPE:** #1 Filter Sand
DRILLING COMPANY: Island Pump and Tank	**SETTING:** 18’ to 6’
RIG TYPE: HSA, Truck Mounted Rig	**CASING SIZE & TYPE:** 2-inch PVC Schedule 40
DRILLING METHOD: 6.25” Augers	**SETTING:** 8’ to 0’
HAMMER WEIGHT/DROP:. -	**SEAL TYPE:** Bentonite
SAMPLING METHOD: -	**SETTING:** 6’ to 5’
OBSERVER: RL	**BACKFILL TYPE:** Filter Sand
REFERENCE POINT (RP): Grade	**STATIC WATER LEVEL:** -
STICK-UP: -	
SURFACE COMPLETION: Manhole Cover/ Road Box	
REMARKS: Nest with HRP-MW-20I and HRP-MW20D. Co-located with SB-24.	
ABBREVIATIONS: SS = split spoon W = wash C = cuttings G = grab ST = shelby tube REC = recovery PPM = parts per million

BROOKLYN NY 11208

Manifest Line No.: 1 **Certification:** General Certificate

Treatability Group: WW NWW

Profile Name:
Profile Number: **Approval Code:** **Approval Status:** X

A. F001 - F005 Solvent Restrictions

This restricted waste category is banned from land disposal under 40 CFR 268.30 and is subject to one or more treatment standards under 40 CFR Subpart D.

EPA Code	Hazardous Constituent	CAS	WW Standard	NWW Standard
F002	Tetrachloroethylene	127-18-4	0.056	6.0

F001, F002, F003, F004 and/or F005 solvent wastes that contain any combination of one or more of the following spent solvents: acetone, benzene, n-butyl alcohol, carbon disulfide, carbon tetrachloride, chlorinated fluorocarbons, chlorobenzene, o-cresol, m-cresol, p-cresol, cyclohexanone, o-dichlorobenzene, 2-ethoxyethanol, ethyl acetate, ethyl benzene, ethyl ether, isobutyl alcohol, methanol, methylene chloride, methyl ethyl ketone, methyl isobutyl ketone, nitrobenzene, 2-nitropropane, pyridine, tetrachloroethylene, toluene, 1,1,1-trichloroethane, 1,1,2-trichloroethane, 1,1,2-trichloro-1,2,2-trifluoroethane, trichloroethylene, trichloromonofluoromethane, and/or xylenes [except as specifically noted in other subcategories]. See further details of these listings in §261.31.

B. Other Regulated Waste Notification

This section includes all wastes restricted from land disposal not included in other sections. If any treatment standards reference 40 CFR 268.48, then all underlying hazardous constituents are listed in Section D.

EPA Code	Hazardous Constituent	Waste Description and Treatment/ Regulatory Subcategory	CAS	WW Standard	NWW Standard

C. D001 - D043

If any treatment standards reference 40 CFR 268.48, then all underlying hazardous constituents are listed in Section D.

EPA Code	Hazardous Constituent	Waste Description and Treatment/ Regulatory Subcategory	CAS	WW Standard	NWW Standard

D. Underlying Hazardous Constituents

This section contains the list of all constituents listed in 40 CFR 268.48, Table UTS - Universal Treatment Standards, except vanadium and zinc, which can reasonably be expected to be present at the point of generation of the hazardous waste, at a concentration above the constituent-specific UTS treatment standard.

Hazardous Constituent	WW Standard	NWW Standard

E. Non-Hazardous / Non-Restricted Waste

There are no EPA waste codes that are not subject to land disposal restrictions as specified in 40 CFR Subpart D or applicable prohibitions in 40 CFR 268.32 or RCRA.

I hereby notify that this shipment contains waste restricted under 40 CFR 268, Land Disposal Restrictions. I hereby certify that all information submitted in this and all attached documents is complete, contains true and accurate descriptions and is representative of the waste material, and that all relevant information regarding known or suspected hazards in the possession of the generator has been disclosed.

Manifest Line No.: 2 **Certification:** General Certificate

Treatability Group: WW NWW X

Profile Name:
Profile Number: **Approval Code:** **Approval Status:**

A. F001 - F005 Solvent Restrictions

This restricted waste category is banned from land disposal under 40 CFR 268.30 and is subject to one or more treatment standards under 40 CFR Subpart D.

EPA Code	Hazardous Constituent	CAS	WW Standard	NWW Standard
F002	Tetrachloroethylene	127-18-4	0.056	6.0

F001, F002, F003, F004 and/or F005 solvent wastes that contain any combination of one or more of the following spent solvents: acetone, benzene, n-butyl alcohol, carbon disulfide, carbon tetrachloride, chlorinated fluorocarbons, chlorobenzene, o-cresol, m-cresol, p-cresol, cyclohexanone, o-dichlorobenzene, 2-ethoxyethanol, ethyl acetate, ethyl benzene, ethyl ether, isobutyl alcohol, methanol, methylene chloride, methyl ethyl ketone, methyl isobutyl ketone, nitrobenzene, 2-nitropropane, pyridine, tetrachloroethylene, toluene, 1,1,1-trichloroethane, 1,1,2-trichloroethane, 1,1,2-trichloro-1,2,2-trifluoroethane, trichloroethylene, trichloromonofluoromethane, and/or xylenes [except as specifically noted in other subcategories]. See further details of these listings in §261.31.

B. Other Regulated Waste Notification

This section includes all wastes restricted from land disposal not included in other sections. If any treatment standards reference 40 CFR 268.48, then all underlying hazardous constituents are listed in Section D.

EPA Code	Hazardous Constituent	Waste Description and Treatment/ Regulatory Subcategory	CAS	WW Standard	NWW Standard

C. D001 - D043

If any treatment standards reference 40 CFR 268.48, then all underlying hazardous constituents are listed in Section D.

EPA Code	Hazardous Constituent	Waste Description and Treatment/ Regulatory Subcategory	CAS	WW Standard	NWW Standard

D. Underlying Hazardous Constituents

This section contains the list of all constituents listed in 40 CFR 268.48, Table UTS - Universal Treatment Standards, except vanadium and zinc, which can reasonably be expected to be present at the point of generation of the hazardous waste, at a concentration above the constituent-specific UTS treatment standard.

Hazardous Constituent	WW Standard	NWW Standard

E. Non-Hazardous / Non-Restricted Waste

There are no EPA waste codes that are not subject to land disposal restrictions as specified in 40 CFR Subpart D or applicable prohibitions in 40 CFR 268.32 or RCRA.

I hereby notify that this shipment contains waste restricted under 40 CFR 268, Land Disposal Restrictions. I hereby certify that all information submitted in this and all attached documents is complete, contains true and accurate descriptions and is representative of the waste material, and that all relevant information regarding known or suspected hazards in the possession of the generator has been disclosed.

15. GENERATOR'S/OFFEROR'S CERTIFICATION: I hereby declare that the contents of this consignment are fully and accurately described above by the proper shipping name, and are classified, packaged, marked and labeled/placarded, and are in all respects in proper condition for transport according to applicable international and national governmental regulations. If export shipment and I am the Primary Exporter, I certify that the contents of this consignment conform to the terms of the attached EPA Acknowledgment of Consent.
I certify that the waste minimization statement identified in 40 CFR 262.27(a) (if I am a large quantity generator) or (b) (if I am a small quantity generator) is true.

Generator's/Offeror's Printed/Typed Name: As Agent For NYSDEC — Signature — Month/Day/Year: 08/09/22
Vreed Lewandowski

TRANSPORTER INT'L

16. International Shipments ☐ Import to U.S. ☐ Export from U.S. Port of entry/exit:
Transporter signature (for exports only): Date leaving U.S.:

TRANSPORTER

17. Transporter Acknowledgment of Receipt of Materials
Transporter 1 Printed/Typed Name: Joseph E. Sisco — Signature — Month/Day/Year: 08/09/22
Transporter 2 Printed/Typed Name: Anore McCann — Signature — Month/Day/Year: 08/18/22

DESIGNATED FACILITY

18. Discrepancy
18a. Discrepancy Indication Space ☐ Quantity ☐ Type ☐ Residue ☐ Partial Rejection ☐ Full Rejection
Manifest Reference Number: U.S. EPA ID Number

18b. Alternate Facility (or Generator)
Facility's Phone: Month/Day/Year

18c. Signature of Alternate Facility (or Generator)

19. Hazardous Waste Report Management Method Codes (i.e., codes for hazardous waste treatment, disposal, and recycling systems)
1. 2. H141 3. 4.

20. Designated Facility Owner or Operator: Certification of receipt of hazardous materials covered by the manifest except as noted in Item 18a
Printed/Typed Name: Gino Pickens — Signature — Month/Day/Year: 8/25/22

DESIGNATED FACILITY TO DESTINATION STATE (IF REQUIRED)

Manifest Line No.: 2 **Certification:** General Certificate

Treatability Group	
WW	NWW
	X

Profile Name:
Profile Number: **Approval Code:** **Approval Status:**

A. F001 - F005 Solvent Restrictions

This restricted waste category is banned from land disposal under 40 CFR 268.30 and is subject to one or more treatment standards under 40 CFR Subpart D.

EPA Code	Hazardous Constituent	CAS	WW Standard	NWW Standard
F002	Tetrachloroethylene	127-18-4	0.056	6.0

F001, F002, F003, F004 and/or F005 solvent wastes that contain any combination of one or more of the following spent solvents: acetone, benzene, n-butyl alcohol, carbon disulfide, carbon tetrachloride, chlorinated fluorocarbons, chlorobenzene, o-cresol, m-cresol, p-cresol, cyclohexanone, o-dichlorobenzene, 2-ethoxyethanol, ethyl acetate, ethyl benzene, ethyl ether, isobutyl alcohol, methanol, methylene chloride, methyl ethyl ketone, methyl isobutyl ketone, nitrobenzene, 2-nitropropane, pyridine, tetrachloroethylene, toluene, 1,1,1-trichloroethane, 1,1,2-trichloroethane, 1,1,2-trichloro-1,2,2-trifluoroethane, trichloroethylene, trichloromonofluoromethane, and/or xylenes [except as specifically noted in other subcategories]. See further details of these listings in §261.31.

B. Other Regulated Waste Notification

This section includes all wastes restricted from land disposal not included in other sections. If any treatment standards reference 40 CFR 268.48, then all underlying hazardous constituents are listed in Section D.

EPA Code	Hazardous Constituent	Waste Description and Treatment/ Regulatory Subcategory	CAS	WW Standard	NWW Standard

C. D001 - D043

If any treatment standards reference 40 CFR 268.48, then all underlying hazardous constituents are listed in Section D.

EPA Code	Hazardous Constituent	Waste Description and Treatment/ Regulatory Subcategory	CAS	WW Standard	NWW Standard

D. Underlying Hazardous Constituents

This section contains the list of all constituents listed in 40 CFR 268.48, Table UTS - Universal Treatment Standards, except vanadium and zinc, which can reasonably be expected to be present at the point of generation of the hazardous waste, at a concentration above the constituent-specific UTS treatment standard.

Hazardous Constituent	WW Standard	NWW Standard

E. Non-Hazardous / Non-Restricted Waste

There are no EPA waste codes that are not subject to land disposal restrictions as specified in 40 CFR Subpart D or applicable prohibitions in 40 CFR 268.32 or RCRA.

I hereby notify that this shipment contains waste restricted under 40 CFR 268, Land Disposal Restrictions. I hereby certify that all information submitted in this and all attached documents is complete, contains true and accurate descriptions and is representative of the waste material, and that all relevant information regarding known or suspected hazards in the possession of the generator has been disclosed.

LOW-FLOW SAMPLING LOG

Client Name: NYSDEC

Project Location: Elton Street & Linwood Street, Brooklyn, NY

Sampler(s): PJM

Sample Pump: Bladder

Tubing Type: Bonded 0.25 x 0.25"

Monitoring Equipment: ~~HORIBA~~

Well I.D. ~~MW~~ EAR-MW-19D

Well Diameter (inches): 2

Total Depth (ft btoc): 59.20

Depth to Water (ft btoc): 10.77

Height of Water Column (ft): 48.43 One Well Volume† (gal) 7.75 Purge Volume (gal): 11

Screen Setting (ft btoc): 50 to 60

Tubing Intake (ft btoc): 56

Comments: Clear, no odor / no sheen

Well Condition:

Time (hours)	Depth to Water (ft btoc)	Evacuation Rate (ml/min)	Water Quality Monitoring Parameters: Temperature (oC)	pH	ORP (mv)	Conductivity (ms/cm)	Turbidity (NTU)	Dissolved oxygen (mg/l)

APPENDIX I
Exterior Soil Vapor Point Sampling Logs

HRP Associates 1 Fairchild Square, Suite 110 Clifton Park, NY 12065 (518) 877-7101	FIELD SOIL VAPOR SAMPLING FORM	

Project:	Multiple sites P-S.Jes	Building I.D.	
WAS #:		Vapor I.D. #:	SVI-1
Date:	5/20/22	Sampler:	RL
Location:	Elton St. Brooklyn, NY	PID Meter used:	Mini Rae 3000 11.7 BL

SUMMA Canister Record:

	SOIL VAPOR POINT		DUPLICATE SAMPLE (IF COLLECTED)
Flow Regulator No.:	4444	Flow Regulator No.:	
Canister Serial No.:	1986	Canister Serial No.:	
Start Date/Time:	5/20/22 0400	Start Date/Time:	
Start Pressure: (inches Hg)	-30	Start Pressure: (inches Hg)	
Stop Date/Time:	5/20/22 1038	Stop Date/Time:	
Stop Pressure: (inches Hg)		Stop Pressure: (inches Hg)	
Sample ID:	SVI-1_5.20.22	Sample ID:	

Other Sampling Information:

Helium percentage achieved in enclosure for Tracer Gas Test	9.7	Depth to sample point	7'
Tracer Gas test result (% of Helium):	<1	Nearest Groundwater Elevation:	10'
Noticeable Odor?	No		
Purge Volume PID Reading (ppb)	1.3		
Duplicate Sample?	No		
Outdoor Ambient Temperature:	60's		
Wind Direction:	NE	Additional Info:	

Comments:

Project:	Multiple Site P-Sizes	Building I.D.	
WAS #:		Vapor I.D. #:	SVI-2
Date:	5/20/22	Sampler:	RL
Location:	Elton St, Brooklyn, NY	PID Meter used:	MiniRae 3000 11.7 EV

SUMMA Canister Record:

SOIL VAPOR POINT		DUPLICATE SAMPLE (IF COLLECTED)	
Flow Regulator No.:	4449	Flow Regulator No.:	
Canister Serial No.:	1506	Canister Serial No.:	
Start Date/Time:	5/20/22 0845	Start Date/Time:	
Start Pressure: (inches Hg)	-30	Start Pressure: (inches Hg)	
Stop Date/Time:	5/20/22 1015	Stop Date/Time:	
Stop Pressure: (inches Hg)		Stop Pressure: (inches Hg)	
Sample ID:	SVI-2_5.20.22	**Sample ID:**	

Other Sampling Information:

Helium percentage achieved in enclosure for Tracer Gas Test	10.1	Depth to sample point	7'
Tracer Gas test result (% of Helium):	<1	Nearest Groundwater Elevation:	10'
Noticeable Odor?	No		
Purge Volume PID Reading (ppb)	11.3		
Duplicate Sample?	No		
Outdoor Ambient Temperature:	60's		
Wind Direction:	NE	Additional Info:

RE: Project: GRAB GW GROUP 11/17
Pace Project No.: 70195060

Dear Patrick Montuori:

Enclosed are the analytical results for sample(s) received by the laboratory on November 17, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Melville

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jennifer Aracri for

PROJECT NARRATIVE

Project: GRAB GW GROUP 11/17
Pace Project No.: 70195060

Method: **EPA 8260C/5030C**
Description: 8260C Volatile Organics
Client: NYDEC_HRP Associates Inc- Clifton Park, NY
Date: December 07, 2021

General Information:
10 samples were analyzed for EPA 8260C/5030C by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

QC Batch: 234029

IH: This analyte exceeded secondary source verification criteria high for the initial calibration. The reported results should be considered an estimated value.

- LCS (Lab ID: 1180591)
  - Acetone
- MS (Lab ID: 1180851)
  - Acetone

QC Batch: 234385

IH: This analyte exceeded secondary source verification criteria high for the initial calibration. The reported results should be considered an estimated value.

- LCS (Lab ID: 1182308)
  - Acetone

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

QC Batch: 234029

v1: The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.

- LCS (Lab ID: 1180591)
  - trans-1,4-Dichloro-2-butene
- MS (Lab ID: 1180851)
  - trans-1,4-Dichloro-2-butene

v3: The continuing calibration verification was below the method acceptance limit. Any detection for the analyte in the associated samples may have a low bias.

- BLANK (Lab ID: 1180590)
  - Bromomethane
  - Chloromethane
  - Dichlorodifluoromethane

QUALIFIERS

Project: GRAB GW GROUP 11/17
Pace Project No.: 70195060

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D6	The precision between the sample and sample duplicate exceeded laboratory control limits.
IH	This analyte exceeded secondary source verification criteria high for the initial calibration. The reported results should be considered an estimated value.
v1	The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.
v3	The continuing calibration verification was below the method acceptance limit. Any detection for the analyte in the associated samples may have a low bias.

RE: Project: MONITORING WELL GROUP 11/17
Pace Project No.: 70195061

Dear Patrick Montuori:

Enclosed are the analytical results for sample(s) received by the laboratory on November 17, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Melville

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jennifer Aracri for
Lea Sherman

PROJECT NARRATIVE

Project: MONITORING WELL GROUP 11/17
Pace Project No.: 70195061

Method: **EPA 8260C/5030C**
Description: 8260C Volatile Organics
Client: NYDEC_HRP Associates Inc- Clifton Park, NY
Date: December 07, 2021

General Information:
14 samples were analyzed for EPA 8260C/5030C by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

QC Batch: 234029

IH: This analyte exceeded secondary source verification criteria high for the initial calibration. The reported results should be considered an estimated value.

- LCS (Lab ID: 1180591)
  - Acetone
- MS (Lab ID: 1180851)
  - Acetone

QC Batch: 234397

IH: This analyte exceeded secondary source verification criteria high for the initial calibration. The reported results should be considered an estimated value.

- DUP-1 (Lab ID: 70195061012)
  - Acetone
- LCS (Lab ID: 1182347)
  - Acetone
- MS (Lab ID: 1182348)
  - Acetone

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

QC Batch: 234029

v3: The continuing calibration verification was below the method acceptance limit. Any detection for the analyte in the associated samples may have a low bias.

- 11.15.21 MW-16I (Lab ID: 70195061002)
  - Bromomethane
  - Chloromethane
  - Dichlorodifluoromethane

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

QC Batch: 234029

D6: The precision between the sample and sample duplicate exceeded laboratory control limits.
- DUP (Lab ID: 1180836)
  - Trichloroethene

PROJECT NARRATIVE

Project: MONITORING WELL GROUP 11/17
Pace Project No.: 70195061

Method: **EPA 8260**
Description: TIC MSV Water
Client: NYDEC_HRP Associates Inc- Clifton Park, NY
Date: December 07, 2021

General Information:
14 samples were analyzed for EPA 8260 by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

Melville, NY 11747
(631)694-3040

QUALIFIERS

Project: MONITORING WELL GROUP 11/17
Pace Project No.: 70195061

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D6	The precision between the sample and sample duplicate exceeded laboratory control limits.
IH	This analyte exceeded secondary source verification criteria high for the initial calibration. The reported results should be considered an estimated value.
v1	The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.
v3	The continuing calibration verification was below the method acceptance limit. Any detection for the analyte in the associated samples may have a low bias.

SW-846 8260D

Qualifications:

DL-01

Elevated reporting limits for all volatile compounds due to foaming sample matrix.

Analyte & Samples(s) Qualified:

21K1545-02[GW-10], 21K1545-03[GW-11], 21K1545-05[DUP-2]

L-02

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:

Bromomethane
B295464-BS1, B295464-BSD1, S065760-CCV1

L-04

Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

Chloromethane
21K1545-01[GW-9], 21K1545-02[GW-10], 21K1545-03[GW-11], 21K1545-04[GW-12], 21K1545-05[DUP-2], B295464-BLK1, B295464-BS1, B295464-BSD1, B295464-MS1, B295464-MSD1, S065760-CCV1
Methyl Acetate
21K1545-01[GW-9], 21K1545-02[GW-10], 21K1545-03[GW-11], 21K1545-04[GW-12], 21K1545-05[DUP-2], B295464-BLK1, B295464-BS1, B295464-BSD1, B295464-MS1, B295464-MSD1, S065760-CCV1

MS-09

Matrix spike recovery and/or matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a low bias for reported result or non-homogeneous sample aliquots cannot be eliminated.

Analyte & Samples(s) Qualified:

Chloromethane
B295464-MS1, B295464-MSD1

Methyl Acetate
B295464-MS1, B295464-MSD1

MS-12

Matrix spike recovery and matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a high bias for reported result or non-homogeneous sample aliquots cannot be eliminated.

Analyte & Samples(s) Qualified:

Bromomethane
B295464-MS1, B295464-MSD1

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

2-Butanone (MEK)
21K1545-01[GW-9], 21K1545-02[GW-10], 21K1545-03[GW-11], 21K1545-04[GW-12], 21K1545-05[DUP-2], B295464-BLK1, B295464-BS1, B295464-BSD1, B295464-MS1, B295464-MSD1, S065760-CCV1
Acetone
21K1545-01[GW-9], 21K1545-02[GW-10], 21K1545-03[GW-11], 21K1545-04[GW-12], 21K1545-05[DUP-2], B295464-BLK1, B295464-BS1, B295464-BSD1, B295464-MS1, B295464-MSD1, S065760-CCV1
Chloromethane
21K1545-01[GW-9], 21K1545-02[GW-10], 21K1545-03[GW-11], 21K1545-04[GW-12], 21K1545-05[DUP-2], B295464-BLK1, B295464-BS1, B295464-BSD1, B295464-MS1, B295464-MSD1, S065760-CCV1
Methyl Acetate
21K1545-01[GW-9], 21K1545-02[GW-10], 21K1545-03[GW-11], 21K1545-04[GW-12], 21K1545-05[DUP-2], B295464-BLK1, B295464-BS1, B295464-BSD1, B295464-MS1, B295464-MSD1, S065760-CCV1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Bromomethane
B295464-BS1, B295464-BSD1, B295464-MS1, B295464-MSD1, S065760-CCV1

DRAFT

V-34

Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

Analyte & Samples(s) Qualified:

Bromomethane

21K1545-01[GW-9], 21K1545-02[GW-10], 21K1545-03[GW-11], 21K1545-04[GW-12], 21K1545-05[DUP-2], B295464-BLK1, B295464-BS1, B295464-BSD1, B295464-MS1, B295464-MSD1, S065760-CCV1

Chloromethane

21K1545-01[GW-9], 21K1545-02[GW-10], 21K1545-03[GW-11], 21K1545-04[GW-12], 21K1545-05[DUP-2], B295464-BLK1, B295464-BS1, B295464-BSD1, B295464-MS1, B295464-MSD1, S065760-CCV1

DRAFT

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
DL-01	Elevated reporting limits for all volatile compounds due to foaming sample matrix.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
MS-09	Matrix spike recovery and/or matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a low bias for reported result or non-homogeneous sample aliquots cannot be eliminated.
MS-12	Matrix spike recovery and matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a high bias for reported result or non-homogeneous sample aliquots cannot be eliminated.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
V-34	Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

DRAFT

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

SW-846 8260D

Qualifications:

L-02

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:

Bromomethane

B295464-BS1, B295464-BSD1, B295465-BS1, B295465-BSD1, B295465-MS1, B295465-MSD1, S065760-CCV1, S065761-CCV1

L-04

Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

Chloromethane

21K1547-01[11-17-21 MW-16D], 21K1547-02[11-17-21 EAR-MW-17S], 21K1547-03[11-17-21 EAR-MW-17I], 21K1547-04[11-18-21 MW-14S], 21K1547-06[11-18-21 MW-14D], 21K1547-07[11-18-21 MW-13D], 21K1547-08[11-19-21 EAR-MW-19D], 21K1547-09[11-19-21 MW-12I], 21K1547-10[11-19-21 MW-12S], 21K1547-11[11-19-21 MW-12D], 21K1547-12[Trip Blank-3], 21K1547-13[11-19-21 MW-13S], 21K1547-14[11-19-21 MW-13I], B295464-BLK1, B295464-BS1, B295464-BSD1, B295464-MS2, B295464-MSD2, S065760-CCV1

Methyl Acetate

21K1547-01[11-17-21 MW-16D], 21K1547-02[11-17-21 EAR-MW-17S], 21K1547-03[11-17-21 EAR-MW-17I], 21K1547-04[11-18-21 MW-14S], 21K1547-06[11-18-21 MW-14D], 21K1547-07[11-18-21 MW-13D], 21K1547-08[11-19-21 EAR-MW-19D], 21K1547-09[11-19-21 MW-12I], 21K1547-10[11-19-21 MW-12S], 21K1547-11[11-19-21 MW-12D], 21K1547-12[Trip Blank-3], 21K1547-13[11-19-21 MW-13S], 21K1547-14[11-19-21 MW-13I], B295464-BLK1, B295464-BS1, B295464-BSD1, B295464-MS2, B295464-MSD2, S065760-CCV1

L-07

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:

Chloromethane

B295465-BS1

MS-09

Matrix spike recovery and/or matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a low bias for reported result or non-homogeneous sample aliquots cannot be eliminated.

Analyte & Samples(s) Qualified:

Chloromethane

B295464-MS2, B295464-MSD2, B295465-MS1, B295465-MSD1

Methyl Acetate

B295464-MS2, B295464-MSD2, B295465-MS1, B295465-MSD1

MS-12

Matrix spike recovery and matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a high bias for reported result or non-homogeneous sample aliquots cannot be eliminated.

Analyte & Samples(s) Qualified:

Bromomethane

B295464-MS2, B295464-MSD2, B295465-MS1, B295465-MSD1

Tetrachloroethylene

B295465-MS1, B295465-MSD1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

21K1547-02[11-17-21 EAR-MW-17S], 21K1547-03[11-17-21 EAR-MW-17I], 21K1547-08[11-19-21 EAR-MW-19D], 21K1547-09[11-19-21 MW-12I], 21K1547-13[11-19-21 MW-13S]

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.

J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
MS-09	Matrix spike recovery and/or matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a low bias for reported result or non-homogeneous sample aliquots cannot be eliminated.
MS-12	Matrix spike recovery and matrix spike duplicate recovery outside of control limits. Possibility of sample matrix effects that lead to a high bias for reported result or non-homogeneous sample aliquots cannot be eliminated.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
V-34	Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

PURCHASE ORDER NUMBER: 224250

PROJECT NUMBER: DEC 1021.P2

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 22E1045

The results of analyses performed on the following samples submitted to CON-TEST, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: Elton Street & Linwood Street

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
GW-13_5.12.22	22E1045-01	Ground Water		SW-846 8260D	
GW-14_5.12.22	22E1045-02	Ground Water		SW-846 8260D	
GW-15_5.12.22	22E1045-03	Ground Water		SW-846 8260D	
Field Blank_5.13.22	22E1045-04	Ground Water		SW-846 8260D	
GW-16_5.13.22	22E1045-05	Ground Water		SW-846 8260D

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

DRAFT

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

SW-846 8260D

Qualifications:

L-02

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:

1,1,2-Trichloro-1,2,2-trifluoroethan
B308599-BS1, B308599-BSD1

Bromomethane
B308599-BS1, B308599-BSD1

PR-06

pH of sample (pH 3) is outside of method specified preservation criteria.

Analyte & Samples(s) Qualified:

22E1045-02[GW-14_5.12.22], 22E1045-07[GW-18_5.13.22]

PR-08

pH of sample (pH 5) is outside of method specified preservation criteria.

Analyte & Samples(s) Qualified:

22E1045-06[GW-17_5.13.22]

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22E1045-01[GW-13_5.12.22]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

2-Butanone (MEK)
22E1045-01[GW-13_5.12.22], 22E1045-02[GW-14_5.12.22], 22E1045-03[GW-15_5.12.22], 22E1045-04[Field Blank_5.13.22], 22E1045-05[GW-16_5.13.22], 22E1045-06[GW-17_5.13.22], 22E1045-07[GW-18_5.13.22], B308599-BLK1, B308599-BS1, B308599-BSD1, S071824-CCV1

Chloromethane
22E1045-01[GW-13_5.12.22], 22E1045-02[GW-14_5.12.22], 22E1045-03[GW-15_5.12.22], 22E1045-04[Field Blank_5.13.22], 22E1045-05[GW-16_5.13.22], 22E1045-06[GW-17_5.13.22], 22E1045-07[GW-18_5.13.22], B308599-BLK1, B308599-BS1, B308599-BSD1, S071824-CCV1

V-06

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.

Analyte & Samples(s) Qualified:

1,1-Dichloroethylene
22E1045-01[GW-13_5.12.22], 22E1045-06[GW-17_5.13.22], B308599-BS1, B308599-BSD1, S071824-CCV1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

1,1,1,2-Tetrachloroethane
B308599-BS1, B308599-BSD1, S071824-CCV1

1,1,2-Trichloro-1,2,2-trifluoroethan
B308599-BS1, B308599-BSD1, S071824-CCV1

Bromochloromethane
B308599-BS1, B308599-BSD1, S071824-CCV1

Bromoform
B308599-BS1, B308599-BSD1, S071824-CCV1

Bromomethane
B308599-BS1, B308599-BSD1, S071824-CCV1

Chloroethane
B308599-BS1, B308599-BSD1, S071824-CCV1

Styrene
B308599-BS1, B308599-BSD1, S071824-CCV1

DRAFT

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

V-34

Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

Analyte & Samples(s) Qualified:

Bromomethane

22E1045-01[GW-13_5.12.22], 22E1045-02[GW-14_5.12.22], 22E1045-03[GW-15_5.12.22], 22E1045-04[Field Blank_5.13.22], 22E1045-05[GW-16_5.13.22], 22E1045-06[GW-17_5.13.22], 22E1045-07[GW-18_5.13.22], B308599-BLK1, B308599-BS1, B308599-BSD1, S071824-CCV1

Chloromethane

Z-01

Sample transferred into a new vial prior to analysis due to the excessive amount of sediment present.

Analyte & Samples(s) Qualified:

22E1045-07[GW-18_5.13.22]

DRAFT

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
PR-06	pH of sample (pH 3) is outside of method specified preservation criteria.
PR-08	pH of sample (pH 5) is outside of method specified preservation criteria.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-06	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
V-34	Initial calibration verification (ICV) did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.
Z-01	Sample transferred into a new vial prior to analysis due to the excessive amount of sediment present.

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 22E1261

The results of analyses performed on the following samples submitted to CON-TEST, a Pace Analytical Laboratory, are found in this report.

PROJECT LOCATION: Elton St and Linwood St

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
GW-20_5.16.22	22E1261-01	Ground Water		SW-846 8260D	

DRAFT

con-test®
A Pace Analytical® Laboratory

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

DRAFT

con-test® A Pace Analytical® Laboratory

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

SW-846 8260D

Qualifications:

L-07

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:

Chloroethane
B308817-BS1

Methyl Acetate
B308817-BSD1

MS-07A

Matrix spike and spike duplicate recovery is outside of control limits. Analysis is in control based on laboratory fortified blank recovery. Possibility of matrix effects that lead to low bias or non-homogeneous sample aliquot cannot be eliminated.

Analyte & Samples(s) Qualified:

2-Butanone (MEK)
22E1261-01[GW-20_5.16.22], B308817-MS1, B308817-MSD1

Naphthalene
B308817-MS1, B308817-MSD1

MS-15

Matrix spike and matrix spike duplicate recoveries are outside of control limits. Data validation is not affected since results for this compound in this sample are "not detected", and recovery bias is on the high side.

Analyte & Samples(s) Qualified:

1,1,2-Trichloro-1,2,2-trifluoroethan
B308817-MS1, B308817-MSD1

Chloroethane
B308817-MS1, B308817-MSD1

MS-22

Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is within method specified criteria.

Analyte & Samples(s) Qualified:

Methyl Acetate
B308817-MS1

MS-24

Either matrix spike or matrix spike duplicate is outside of control limits, but the other is within limits. Analysis is in control based on laboratory fortified blank recovery.

Analyte & Samples(s) Qualified:

Trichloroethylene
B308817-MSD1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22E1261-01[GW-20_5.16.22]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

2-Butanone (MEK)
22E1261-01[GW-20_5.16.22], B308817-BLK1, B308817-BS1, B308817-BSD1, B308817-MS1, B308817-MSD1, S071815-CCV1

Naphthalene
B308817-BLK1, B308817-BS1, B308817-BSD1, B308817-MS1, B308817-MSD1, S071815-CCV1

V-06

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.

Analyte & Samples(s) Qualified:

Tetrachloroethylene
22E1261-01[GW-20_5.16.22], B308817-BS1, B308817-BSD1, B308817-MS1, B308817-MSD1, S071815-CCV1

DRAFT

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
MS-07A	Matrix spike and spike duplicate recovery is outside of control limits. Analysis is in control based on laboratory fortified blank recovery. Possibility of matrix effects that lead to low bias or non-homogeneous sample aliquot cannot be eliminated.
MS-15	Matrix spike and matrix spike duplicate recoveries are outside of control limits. Data validation is not affected since results for this compound in this sample are "not detected", and recovery bias is on the high side.
MS-22	Either matrix spike or MS duplicate is outside of control limits, but the other is within limits. RPD between the two MS/MSD results is within method specified criteria.
MS-24	Either matrix spike or matrix spike duplicate is outside of control limits, but the other is within limits. Analysis is in control based on laboratory fortified blank recovery.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-06	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Doc# 277 Rev 5 2017

Login Sample Receipt Checklist - (Rejection Criteria Listing - Using Acceptance Policy) Any False Statement will be brought to the attention of the Client - State True or False

Client HRP

Received By MP Date 5/19 Time 929

How were the samples received? In Cooler T No Cooler _____ On Ice T No Ice _____

Direct from Sampling _____ Ambient _____ Melted Ice _____

Were samples within Temperature? 2-6°C T By Gun # 5 Actual Temp - 2.7

By Blank # _____ Actual Temp - _____

Was Custody Seal Intact? NA Were Samples Tampered with? NA

Was COC Relinquished ? T Does Chain Agree With Samples? T

Are there broken/leaking/loose caps on any samples? F

Is COC in ink/ Legible? T Were samples received within holding time? T

Did COC include all pertinent Information? Client T Analysis T Sampler Name T

Project T ID's T Collection Dates/Times T

Are Sample labels filled out and legible? T

Are there Lab to Filters? F Who was notified? _____

Are there Rushes? T Who was notified? Eric

Are there Short Holds? F Who was notified? _____

Is there enough Volume? T

Is there Headspace where applicable? F MS/MSD? T

Proper Media/Containers Used? T Is splitting samples required? F

Were trip blanks received? F On COC? F

Do all samples have the proper pH? NA Acid _____ Base _____

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260D

Qualifications:

L-02

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:

Chloromethane
B309024-BS1, B309024-BSD1

L-07

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:

Chloroethane
B308922-BS1

Methyl Acetate
B308922-BS1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22E1253-03[GW-21_5.16.22], 22E1253-06[DUP-1_5.16.22]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

2-Butanone (MEK)
22E1253-01[GW-19_5.16.22], 22E1253-03[GW-21_5.16.22], 22E1253-04[GW-22_5.16.22], 22E1253-05[GW-23_5.16.22], 22E1253-06[DUP-1_5.16.22], B308922-BLK1, B308922-BS1, B308922-BSD1, B309024-BLK1, B309024-BS1, B309024-BSD1, S071842-CCV1, S071991-CCV1

2-Hexanone (MBK)
22E1253-01[GW-19_5.16.22], 22E1253-03[GW-21_5.16.22], 22E1253-05[GW-23_5.16.22], 22E1253-06[DUP-1_5.16.22], B308922-BLK1, B308922-BS1, B308922-BSD1, S071842-CCV1

Acetone
22E1253-01[GW-19_5.16.22], 22E1253-03[GW-21_5.16.22], 22E1253-05[GW-23_5.16.22], 22E1253-06[DUP-1_5.16.22], B308922-BLK1, B308922-BS1, B308922-BSD1, S071842-CCV1

Naphthalene
22E1253-01[GW-19_5.16.22], 22E1253-03[GW-21_5.16.22], 22E1253-04[GW-22_5.16.22], 22E1253-05[GW-23_5.16.22], 22E1253-06[DUP-1_5.16.22], B308922-BLK1, B308922-BS1, B308922-BSD1, B309024-BLK1, B309024-BS1, B309024-BSD1, S071842-CCV1, S071991-CCV1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

1,1,2-Trichloro-1,2,2-trifluoroethan
B308922-BS1, B308922-BSD1, B309024-BS1, B309024-BSD1, S071842-CCV1, S071991-CCV1

Chloroethane
B308922-BS1, B308922-BSD1, B309024-BS1, B309024-BSD1, S071842-CCV1, S071991-CCV1

Chloromethane
B309024-BS1, B309024-BSD1, S071991-CCV1

Methyl Acetate
B308922-BS1, B308922-BSD1, S071842-CCV1

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

DRAFT

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

SM 2540G

Qualifications:

H-06

Sample was extracted past the recommended holding time.

Analyte & Samples(s) Qualified:

% Solids

22E1254-02[SB-20_5-10 FT BG], 22E1254-03[SB-20_10-15 FT BG], 22E1254-04[SB-20_15-20 FT BG]

SW-846 8260D

Qualifications:

L-02

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:

Bromoform

B309108-BS1, B309108-BSD1, B309260-BS1, B309260-BSD1, S071968-CCV1

Bromomethane

B309108-BS1, B309108-BSD1, B309260-BS1, B309260-BSD1, S071968-CCV1

PR-03

Sample preserved in the laboratory, not in the field as required by the method.

Analyte & Samples(s) Qualified:

22E1254-03[SB-20_10-15 FT BG], 22E1254-03RE1[SB-20_10-15 FT BG], 22E1254-04[SB-20_15-20 FT BG]

PR-15

According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.

Analyte & Samples(s) Qualified:

22E1254-02[SB-20_5-10 FT BG], 22E1254-03[SB-20_10-15 FT BG], 22E1254-04[SB-20_15-20 FT BG]

R-05

Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

Analyte & Samples(s) Qualified:

2-Butanone (MEK)

22E1254-04[SB-20_15-20 FT BG], B309260-BLK1, B309260-BS1, B309260-BSD1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22E1254-03[SB-20_10-15 FT BG], 22E1254-04[SB-20_15-20 FT BG]

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Bromoform

B309108-BS1, B309108-BSD1, B309260-BS1, B309260-BSD1, S071968-CCV1, S072093-CCV1

Bromomethane

B309108-BS1, B309108-BSD1, B309260-BS1, B309260-BSD1, S071968-CCV1, S072093-CCV1

Chloroethane

B309108-BS1, B309108-BSD1, S071968-CCV1

DRAFT

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

V-35

Initial calibration verification (ICV) did not meet method specifications and was biased on the high side for this compound. Reported result is estimated.

Analyte & Samples(s) Qualified:

2-Butanone (MEK)

B309113-BS1, B309113-BSD1, S071932-CCV1

Acetone

B309113-BS1, B309113-BSD1, S071932-CCV1

Dichlorodifluoromethane (Freon 12

B309113-BS1, B309113-BSD1, S071932-CCV1

DRAFT

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
H-06	Sample was extracted past the recommended holding time.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
PR-03	Sample preserved in the laboratory, not in the field as required by the method.
PR-15	According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.
R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
V-35	Initial calibration verification (ICV) did not meet method specifications and was biased on the high side for this compound. Reported result is estimated.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260D

Qualifications:

PR-03a

Sample preserved in the laboratory, not in the field as required by the method and outside the 48 hour holding time.

Analyte & Samples(s) Qualified:

22G1685-01[GW-20-25 FTBG], 22G1685-02[GW-25-30 FTBG]

PR-15

According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.

Analyte & Samples(s) Qualified:

22G1685-01[GW-20-25 FTBG], 22G1685-02[GW-25-30 FTBG]

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

Dichlorodifluoromethane (Freon 12
22G1685-01[GW-20-25 FTBG], 22G1685-02[GW-25-30 FTBG], B314273-BLK1, B314273-BS1, B314273-BSD1, S074666-CCV1

Vinyl Chloride
22G1685-01[GW-20-25 FTBG], 22G1685-02[GW-25-30 FTBG], B314273-BLK1, B314273-BS1, B314273-BSD1, S074666-CCV1

DRAFT

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
PR-03a	Sample preserved in the laboratory, not in the field as required by the method and outside the 48 hour holding time.
PR-15	According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

DRAFT

con-test® A Pace Analytical® Laboratory

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

SW-846 8260D

Qualifications:

L-02

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:

Vinyl Chloride

B315025-BS1, B315025-BSD1

L-06

Laboratory fortified blank/laboratory control sample recovery and/or duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the high side.

Analyte & Samples(s) Qualified:

Vinyl Chloride

B314930-BS1, B314930-BSD1, B314930-MS1, B314930-MSD1, S075201-CCV1

L-07

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:

Carbon Disulfide

B314930-BS1, B315025-BSD1

L-07A

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD outside of control limits. Reduced precision anticipated for any reported result for this compound.

Analyte & Samples(s) Qualified:

Acrylonitrile

B315025-BS1

MS-15

Matrix spike and matrix spike duplicate recoveries are outside of control limits. Data validation is not affected since results for this compound in this sample are "not detected", and recovery bias is on the high side.

Analyte & Samples(s) Qualified:

Carbon Disulfide

B314930-MS1, B314930-MSD1

Vinyl Chloride

B314930-MS1, B314930-MSD1

MS-24

Either matrix spike or matrix spike duplicate is outside of control limits, but the other is within limits. Analysis is in control based on laboratory fortified blank recovery.

Analyte & Samples(s) Qualified:

Methyl Acetate

B314930-MS1

Tetrachloroethylene

B314930-MS1

R-05

Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

Analyte & Samples(s) Qualified:

Acrylonitrile

22H0564-04[HRP-MW-21I_8.9.22], 22H0564-10[HRP-MW-20S_8.9.22], B315025-BLK1, B315025-BS1, B315025-BSD1

R-06

Matrix spike duplicate RPD is outside of control limits. Reduced precision is anticipated for reported result for this compound in this sample.

Analyte & Samples(s) Qualified:

Chloromethane

22H0564-03[HRP-MW-22S_8.9.22], B314930-MS1, B314930-MSD1

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

22H0564-03[HRP-MW-22S_8.9.22], 22H0564-10[HRP-MW-20S_8.9.22], 22H0564-12[DUP-1_8.9.22]

DRAFT

39 Spruce Street * East Longmeadow, MA 01028 * FAX 413/525-6405 * TEL. 413/525-2332

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

1,2-Dibromo-3-chloropropane (DB
22H0564-01[HRP-MW-23S_8.9.22], 22H0564-02[HRP-MW-21D_8.9.22], 22H0564-03[HRP-MW-22S_8.9.22], 22H0564-05[HRP-MW-22I_8.9.22], 22H0564-06[HRP-MW-21S_8.9.22], 22H0564-07[HRP-MW-22D_8.9.22], 22H0564-08[HRP-MW-20D_8.9.22], 22H0564-09[HRP-MW-20I_8.9.22], 22H0564- 11[Field Blank_8.9.22], 22H0564-12[DUP-1_8.9.22], B314930-BLK1, B314930-BS1, B314930-BSD1, B314930-MS1, B314930-MSD1, S075201-CCV1

tert-Butyl Alcohol (TBA)
22H0564-01[HRP-MW-23S_8.9.22], 22H0564-02[HRP-MW-21D_8.9.22], 22H0564-03[HRP-MW-22S_8.9.22], 22H0564-05[HRP-MW-22I_8.9.22], 22H0564-06[HRP-MW-21S_8.9.22], 22H0564-07[HRP-MW-22D_8.9.22], 22H0564-08[HRP-MW-20D_8.9.22], 22H0564-09[HRP-MW-20I_8.9.22], 22H0564- 11[Field Blank_8.9.22], 22H0564-12[DUP-1_8.9.22], B314930-BLK1, B314930-BS1, B314930-BSD1, B314930-MS1, B314930-MSD1, S075201-CCV1

V-06

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.

Analyte & Samples(s) Qualified:

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.

J	Detected but below the Reporting Limit (lowest calibration standard); therefore, result is an estimated concentration (CLP J-Flag).
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
L-06	Laboratory fortified blank/laboratory control sample recovery and/or duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the high side.
L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
L-07A	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD outside of control limits. Reduced precision anticipated for any reported result for this compound.
MS-15	Matrix spike and matrix spike duplicate recoveries are outside of control limits. Data validation is not affected since results for this compound in this sample are "not detected", and recovery bias is on the high side.
MS-24	Either matrix spike or matrix spike duplicate is outside of control limits, but the other is within limits. Analysis is in control based on laboratory fortified blank recovery.
R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
R-06	Matrix spike duplicate RPD is outside of control limits. Reduced precision is anticipated for reported result for this compound in this sample.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
V-06	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side for this compound.
V-20	Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Data Usability Summary Report
(DUSR)
Elton St./Linwood St. Site #224250 & #224301
New York City, New York

DRAFT

Data Validation Report Number:	70195060_DUSR
Data Validation Report Revision Number:	0
Job Number:	70195060
Sample Collection Date:	11/15/2021, 11/16/2021, 11/17/2021
Sample Matrix:	Ground Water
Laboratory Name:	Pace Analytical Services, LLC, Melville, NY
Analyses:	VOCs
Subcontractor Name:	Analytical Quality Associates, Inc.
Data Validator:	Jeanne Peterson
Validation Level:	Category B
Validation Completion Date:	02/28/2022

INTRODUCTION/OVERALL ASSESSMENT

Category B data validation was performed on the data for 10 ground water samples prepared and analyzed with approved procedures using SW846 method 8260D (volatile organic compounds [VOCs]). Data were reported for all requested analyses.

Validation was performed on Revision 0 of the data package. Any items reviewed in subsequent revisions are noted on the validation worksheets.

The analytical data were evaluated in accordance with the New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) (2015), the *Generic Quality Assurance Project Plan for Work Assignments* (August 2019) (project QAPP); and the applicable methods. Qualifiers were applied in accordance with latest EPA Region 2 standard operating procedures (SOPs) for data validation.

In general, the analytical results reported in this data package are valid and acceptable as reported with the exception of the data qualified R. *Data qualified R should be considered unusable.* Results qualified J or UJ are usable, with caution, as estimated concentrations. Data validation qualifiers were applied to the data as specified in the Data Qualifiers section below.

See attached data validation spreadsheets for supporting documentation on the data review and validation.

DRAFT

SAMPLE IDENTIFICATION

The samples included in this validation are listed below.

Sample ID	Laboratory ID	Matrix	Analysis	Validation Level
GW-1	70195060001	Ground Water	VOCs	Category B
GW-2	70195060002	Ground Water	VOCs	Category B
GW-3	70195060003	Ground Water	VOCs	Category B
GW-4	70195060004	Ground Water	VOCs	Category B
GW-5	70195060005	Ground Water	VOCs	Category B
GW-6	70195060006	Ground Water	VOCs	Category B
Field Blank-1	70195060007	Ground Water	VOCs	Category B
Trip-1	70195060008	Ground Water	VOCs	Category B

Sample ID	Laboratory ID	Matrix	Analysis	Validation Level
GW-7	70195060009	Ground Water	VOCs	Category B
GW-8	70195060010	Ground Water	VOCs	Category B

DATA QUALIFIERS (see following sections for detailed explanations)

Sample ID	Method	Analyte	Qualifier	Reason for Qualification
GW-1	8260D	1,4-Dioxane	*R*	*Low relative response factor*
		Bromomethane	UJ	High calibration verification negative bias
GW-2	8260D	1,4-Dioxane	*R*	*Low relative response factor*
		Bromomethane	UJ	High calibration verification negative bias
GW-3	8260D	1,4-Dioxane	*R*	*Low relative response factor*
		Bromomethane	UJ	High calibration verification negative bias
GW-4	8260D	1,4-Dioxane	*R*	*Low relative response factor*
		Bromomethane	UJ	High calibration verification negative bias
GW-5	8260D	1,4-Dioxane	*R*	*Low relative response factor*
		Bromomethane	UJ	High calibration verification negative bias
GW-6	8260D	1,4-Dioxane	*R*	*Low relative response factor*
		Bromomethane	UJ	High calibration verification negative bias
Field Blank-1	8260D	1,4-Dioxane	*R*	*Low relative response factor*
		Bromomethane	UJ	High calibration verification negative bias
Trip-1	8260D	1,4-Dioxane	*R*	*Low relative response factor*
		Bromomethane	UJ	High calibration verification negative bias
GW-7	8260D	1,4-Dioxane	*R*	*Low relative response factor*
		Bromomethane	UJ	High calibration verification negative bias
GW-8	8260D	1,4-Dioxane	*R*	*Low relative response factor*
		Bromomethane	UJ	High calibration verification negative bias

DRAFT

DISCUSSION

Sample Shipping/Receiving

All chain of custody (COC), analysis request, and sample receipt documentation was complete and correct.

Holding Times and Preservation

The samples were properly preserved and analyzed within the prescribed holding times.

Instrument Tune

All instrument tune requirements were met.

Calibration

All initial and continuing calibration acceptance criteria were met with the following exceptions.

The initial calibration (ICAL), initial calibration verification (ICV), and continuing calibration verification (CCV) relative response factors (RRFs) associated with all batches were < the minimum RRF for 1,4-dioxane. The associated sample results were non-detects and, therefore, were **qualified R**.

The ICAL, ICV, and CCV RRFs associated with all batches were < the ASP minimum RRF but > the EPA Region II minimum RRF for trichloroethene. A different internal standard was used to calculate the trichloroethene RRFs than specified by the method. When the specified internal standard was used, the RRFs met the minimum criteria for ASP, method, and EPA Region II with similar relative standard deviations (RSDs) and percent differences (%Ds) (see attached calculations). Therefore, no sample results were qualified based on professional judgment.

The ICV percent difference (%D) associated with all analytical batches was > the upper acceptance limit with positive bias for acetone. The associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified based on professional judgment.

The CCV %Ds associated with all analytical batches were > the upper acceptance limit with negative bias for bromomethane. The associated sample results were non-detects and, therefore, were **qualified UJ**.

DRAFT

The CCV %D associated with analytical batch 234029 was > the upper acceptance limit with positive bias for trans-1,4-dichloro-2-butene. The associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified based on professional judgment.

The CCV %D associated with analytical batch 234385 was > the upper acceptance limit with positive bias for 1,1-dichloroethene. The associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified based on professional judgment.

Blanks

No target analytes were detected in the method blanks, field blank, or trip blank.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standard responses met QC acceptance criteria.

Laboratory Control Sample (LCS)

The LCS analyses met all QC acceptance criteria.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD)

The MS analysis was performed on sample GW-2 and met all QC acceptance criteria.

Laboratory Duplicate

The duplicate analysis was performed on sample GW-5 and met all QC acceptance criteria with the following exception.

The duplicate relative percent difference (RPD) was > the acceptance limit for trichloroethene. The trichloroethene result for parent sample GW-5 was a detect and, therefore, was **qualified J**. The remaining associated sample results were not qualified based on professional judgment.

Field Duplicate

A field duplicate was not collected with the samples in this data package.

DRAFT

Reporting Limits (RLs)

All reporting limits (RLs) were properly reported. Sample GW-4 was diluted 250X for cis-1,2-dichloroethene and trichloroethene. RLs were adjusted accordingly and may not have met the project-specified RLs and/or project quantitation limit goals.

Other QC

No other specific issues that affect data quality were identified.

DRAFT

DATA VALIDATION QUALIFIER DEFINITIONS

U	=	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
J	=	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	=	The result is an estimated quantity; however, the result may be biased high.
J-	=	The result is an estimated quantity; however, the result may be biased low.
NJ	=	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.
UJ	=	The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	=	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

Validation Completion Date:	02/28/2022

INTRODUCTION/OVERALL ASSESSMENT

Category B data validation was performed on the data for 14 ground water samples prepared and analyzed with approved procedures using SW846 method 8260D (volatile organic compounds [VOCs]). Data were reported for all requested analyses.

Validation was performed on Revision 0 of the data package. Any items reviewed in subsequent revisions are noted on the validation worksheets.

The analytical data were evaluated in accordance with the New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) (2015), the *Generic Quality Assurance Project Plan for Work Assignments* (August 2019) (project QAPP); and the applicable methods. Qualifiers were applied in accordance with latest EPA Region 2 standard operating procedures (SOPs) for data validation.

In general, the analytical results reported in this data package are valid and acceptable as reported with the exception of the data qualified R. *Data qualified R should be considered unusable.* Results qualified J or UJ are usable, with caution, as estimated concentrations. Data validation qualifiers were applied to the data as specified in the Data Qualifiers section below.

See attached data validation spreadsheets for supporting documentation on the data review and validation.

DRAFT

SAMPLE IDENTIFICATION

The samples included in this validation are listed below.

Sample ID	Laboratory ID	Matrix	Analysis	Validation Level
11.15.21 MW-16S	70195061001	Ground Water	VOCs	Category B
11.15.21 MW-16I	70195061002	Ground Water	VOCs	Category B
11.16.21 MW-16S	70195061003	Ground Water	VOCs	Category B
11.16.21 MW-15I	70195061004	Ground Water	VOCs	Category B
11.16.21 MW-15D	70195061005	Ground Water	VOCs	Category B
11.16.21 EAR-MW-19S	70195061006	Ground Water	VOCs	Category B

DRAFT

DISCUSSION

Sample Shipping/Receiving

All chain of custody (COC), analysis request, and sample receipt documentation was complete and correct with the following exceptions.

There was no time of collection documented for sample DUP-1. The sample was logged in with a collection time of 00:00.

Holding Times and Preservation

The samples were properly preserved and analyzed within the prescribed holding times.

It should be noted that one of three containers for sample 11-17-21 MW-18I arrived at the laboratory broken. The remaining two containers were intact.

Instrument Tune

All instrument tune requirements were met.

Calibration

All initial and continuing calibration acceptance criteria were met with the following exceptions.

The initial calibration (ICAL), initial calibration verification (ICV), and continuing calibration verification (CCV) relative response factors (RRFs) associated with all batches were < the minimum RRF for 1,4-dioxane. The associated sample results were non-detects and, therefore, were **qualified R**.

The ICAL, ICV, and CCV RRFs associated with all batches were < the ASP minimum RRF but > the EPA Region II minimum RRF for trichloroethene. A different internal standard was used to calculate the trichloroethene RRFs than specified by the method. When the specified internal standard was used, the RRFs met the minimum criteria for ASP, method, and EPA Region II with similar relative standard deviations (RSDs) and percent differences (%Ds) (see attached calculations). Therefore, no sample results were qualified based on professional judgment.

The ICV %D associated with all analytical batches was > the upper acceptance limit with positive bias for acetone. The associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified based on professional judgment.

The CCV %Ds associated with all analytical batches were > the upper acceptance limit with negative bias for bromomethane. The associated sample results were non-detects and, therefore, were **qualified UJ**.

The CCV %D associated with analytical batch 234397 was > the upper acceptance limit with positive bias for 1,1-dichloroethene. The associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified based on professional judgment.

Blanks

No target analytes were detected in the method blanks, field blank, or trip blank.

Surrogates

All surrogate recoveries met QC acceptance criteria.

DRAFT

Internal Standards

All internal standard responses met QC acceptance criteria.

Laboratory Control Sample (LCS)

The LCS analyses met all QC acceptance criteria.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD)

The MS analysis was performed on sample DUP-1 and met all QC acceptance criteria.

It should be noted that an MS was also performed on a project sample from another data package and met all QC acceptance criteria.

Laboratory Duplicate

The duplicate analysis was performed on sample 11.17.21 MW-17 and met all QC acceptance criteria with the following exception.

It should be noted that an MS was also performed on a project sample from another data package and did not meet all QC acceptance criteria. No sample results from this data package were qualified based on professional judgment.

Field Duplicate

Sample 11.17.21 MW-18S (70195061010) was collected and analyzed in duplicate (sample DUP-1 [70195061013]). The RPDs between the sample and duplicate results are listed in the table below. Analytes not listed were non-detects for both sample and duplicate. Sample results were not qualified for outliers.

	11.17.21 MW-18S		DUP-1			
Analyte	**Result**	**RL**	**Result**	**RL**	**RPD**	**>50%/2XRL**
cis-1,2-Dichloroethene	2.6	1	1	1	88.9	Yes
Tetrachloroethene	27.8	1	17	1	48.2	
Trichloroethene	58.8	1	22.3	1	90.0	Yes
Xylenes, total						

*At least one of the results is < the RL; the absolute value of the difference between the two results is compared to 2X the LOQ.

**One result is > the MDL and one result is a non-detect (ND); RPD not evaluated.

DRAFT

Reporting Limits (RLs)

All reporting limits (RLs) were properly reported. Sample 11.17.21 MW-19 was diluted 10X for tetrachloroethene and trichloroethene. RLs were adjusted accordingly and may not have met the project-specified RLs and/or project quantitation limit goals.

Other QC

The surrogate recoveries for sample 11.17.21 MW-19 10X were not reported on the surrogate summary form. The case narrative stated that all surrogate recoveries were within acceptance limits. The recoveries were calculated for validation and are listed on the data validation worksheet.

The four compounds missing from the forms in Rev0 of the data package were added to the summaries in Rev1; however, the Form Is in the QC Raw Data section only had one of the four compounds added.

No other specific issues that affect data quality were identified.

DRAFT

DATA VALIDATION QUALIFIER DEFINITIONS

U	=	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
J	=	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	=	The result is an estimated quantity; however, the result may be biased high.
J-	=	The result is an estimated quantity; however, the result may be biased low.
NJ	=	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.
UJ	=	The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	=	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

INTRODUCTION/OVERALL ASSESSMENT

Category B data validation was performed on the data for four ground water samples prepared and analyzed with approved procedures using SW846 method 8260D (volatile organic compounds [VOCs]). Data were reported for all requested analyses.

Validation was performed on Revision 0 of the data package. Any items reviewed in subsequent revisions are noted on the validation worksheets.

The analytical data were evaluated in accordance with the New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) (2015), the *Generic Quality Assurance Project Plan for Work Assignments* (August 2019) (project QAPP); and the applicable methods. Qualifiers were applied in accordance with latest EPA Region 2 standard operating procedures (SOPs) for data validation.

In general, the analytical results reported in this data package are valid and acceptable as reported with the exception of the data qualified R. *Data qualified R should be considered unusable.* Results qualified J or UJ are usable, with caution, as estimated concentrations. Data validation qualifiers were applied to the data as specified in the Data Qualifiers section below.

See attached data validation spreadsheets for supporting documentation on the data review and validation.

DRAFT

DISCUSSION

Sample Shipping/Receiving

All chain of custody (COC), analysis request, and sample receipt documentation was complete and correct with the following exceptions.

There was no time of collection documented for sample DUP-2. The sample was logged in with a collection time of 00:00.

There were three received by signatures and only two relinquished by signatures. Chain of custody could not be confirmed.

The second receiver did not document the time of receipt.

Holding Times and Preservation

The samples were properly preserved and analyzed within the prescribed holding times.

Instrument Tune

All instrument tune requirements were met. It should be noted that Form V (Instrument Performance Check) was not submitted in the data package for the tune associated with the initial calibration (ICAL). The raw data were reviewed for validation.

Calibration

All initial and continuing calibration acceptance criteria were met with the following exceptions.

The ICAL, initial calibration verification (ICV), and continuing calibration verification (CCV) relative response factors (RRFs) were < the minimum RRF for 1,4-dioxane. The associated sample results were non-detects and, therefore, were **qualified R**.

The ICAL, ICV, and CCV RRFs associated with all batches were < the ASP minimum RRF but > the EPA Region II minimum RRF for trichloroethene. A different internal standard was used to calculate the trichloroethene RRFs than specified by the method. When the specified internal standard was used, the RRFs met the minimum criteria for ASP, method, and EPA Region II with similar relative standard deviations (RSDs) and percent differences (%Ds) (see attached calculations). Therefore, no sample results were qualified based on professional judgment.

The ICAL relative standard deviation (RSD) for bromomethane was > the acceptance limit, the ICV percent difference (%D) was > the acceptance limit with negative bias, and the CCV %D was > the acceptance limit with positive bias. The associated sample results were non-detects and, therefore, were **qualified UJ**.

The ICV and CCV %Ds were > the upper acceptance limit with negative bias for chloromethane. The associated sample results were non-detects and, therefore, were **qualified UJ**.

Blanks

No target analytes were detected in the method blank. Field blanks were not collected with the samples in this data package.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standard responses met QC acceptance criteria.

Laboratory Control Sample (LCS)

The LCS analyses met all QC acceptance criteria with the following exceptions.

The LCS/LCSD recoveries were < the lower acceptance limit but ≥20% for chloromethane and methyl acetate. The chloromethane and methyl acetate results for all associated samples were non-detects and, therefore, were **qualified UJ** based on professional judgment.

DRAFT

The LCS/LCSD recoveries were > the upper acceptance limit for bromomethane. The associated sample results were non-detects and, therefore, were not qualified based on professional judgment.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD)

The MS analysis was performed on sample GW-12 and met all QC acceptance criteria with the following exceptions.

The MS/MSD recoveries were < the lower acceptance limit but ≥20% for chloromethane and methyl acetate. The chloromethane and methyl acetate results for all associated samples were non-detects and, therefore, were **qualified UJ** based on professional judgment.

The MS/MSD recoveries were > the upper acceptance limit for bromomethane. The associated sample results were non-detects and, therefore, were not qualified based on professional judgment.

Laboratory Duplicate

The duplicate analyses (LCS/LCSD and MS/MSD) met all QC acceptance criteria.

Field Duplicate

Sample GW-11 (21K1545-03) was collected and analyzed in duplicate (sample DUP-2 [21K1545-05]). The sample and duplicate results were all non-detects.

Reporting Limits (RLs)

All reporting limits (RLs) were properly reported. Samples GW-10, GW-11, and DUP-2 were diluted 2X for all target analytes. RLs were adjusted accordingly and may not have met the project-specified RLs and/or project quantitation limit goals.

Other QC

No other specific issues that affect data quality were identified.

DRAFT

DATA VALIDATION QUALIFIER DEFINITIONS

U	=	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
J	=	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	=	The result is an estimated quantity; however, the result may be biased high.
J-	=	The result is an estimated quantity; however, the result may be biased low.
NJ	=	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.
UJ	=	The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	=	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

Data Usability Summary Report
(DUSR)
Elton St./Linwood St. Site #224250 & #224301
New York City, New York

DRAFT

Data Validation Report Number:	21K1547_DUSR
Data Validation Report Revision Number:	0
Job Number:	21K1547
Sample Collection Date:	11/17/2021, 11/18/2021, 11/19/2021
Sample Matrix:	Ground Water
Laboratory Name:	Con-Test/Pace, East Longmeadow, MA
Analyses:	VOCs
Subcontractor Name:	Analytical Quality Associates, Inc.
Data Validator:	Jeanne Peterson
Validation Level:	Category B
Validation Completion Date:	02/28/2022

INTRODUCTION/OVERALL ASSESSMENT

Category B data validation was performed on the data for 19 ground water samples prepared and analyzed with approved procedures using SW846 method 8260D (volatile organic compounds [VOCs]). Data were reported for all requested analyses.

Validation was performed on Revision 0 of the data package. Any items reviewed in subsequent revisions are noted on the validation worksheets.

The analytical data were evaluated in accordance with the New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) (2015), the *Generic Quality Assurance Project Plan for Work Assignments* (August 2019) (project QAPP); and the applicable methods. Qualifiers were applied in accordance with latest EPA Region 2 standard operating procedures (SOPs) for data validation.

In general, the analytical results reported in this data package are valid and acceptable as reported with the exception of the data qualified R. *Data qualified R should be considered unusable.* Results qualified J or UJ are usable, with caution, as estimated concentrations. Data validation qualifiers were applied to the data as specified in the Data Qualifiers section below.

See attached data validation spreadsheets for supporting documentation on the data review and validation.

DRAFT

SAMPLE IDENTIFICATION

DISCUSSION

Sample Shipping/Receiving

All chain of custody (COC), analysis request, and sample receipt documentation was complete and correct with the following exceptions.

There was no date/time of collection documented for sample DUP-3. The sample was logged in with a collection date/time of 11/19/2021 00:00.

There were three received by signatures and only two relinquished by signatures on COC page 1 of 2 and two of each on page 2 of 2. Chain of custody could not be confirmed.

The first relinquisher did not document the time samples were relinquished.

Holding Times and Preservation

The samples were properly preserved and analyzed within the prescribed holding times.

Instrument Tune

All instrument tune requirements were met. It should be noted that Form V (Instrument Performance Check) was not submitted in the data package for the tune associated with the initial calibration (ICAL). The raw data were reviewed for validation.

Calibration

All initial and continuing calibration acceptance criteria were met with the following exceptions.

The ICAL, initial calibration verification (ICV), and continuing calibration verification (CCV) relative response factors (RRFs) were < the minimum RRF for 1,4-dioxane. The associated sample results were non-detects and, therefore, were **qualified R**.

The ICAL, ICV, and CCV RRFs associated with all batches were < the ASP minimum RRF but > the EPA Region II minimum RRF for trichloroethene. A different internal standard was used to calculate the trichloroethene RRFs than specified by the method. When the specified internal standard was used, the RRFs met the minimum criteria for ASP, method, and EPA Region II with similar relative standard deviations (RSDs) and percent differences (%Ds) (see attached calculations). Therefore, no sample results were qualified based on professional judgment.

The ICAL relative standard deviation (RSD) for bromomethane was > the acceptance limit, the ICV percent difference (%D) was > the acceptance limit with negative bias, and the CCV %D was > the acceptance limit with positive bias. The associated sample results were non-detects and, therefore, were **qualified UJ**.

The ICV and CCV %Ds associated with all analytical batches were > the upper acceptance limit with negative bias for chloromethane. The associated sample results were non-detects and, therefore, were **qualified UJ**.

The CCV %D associated with analytical batch B295465 was > the upper acceptance limit with positive bias for bromochloromethane. The associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified based on professional judgment.

Blanks

Acetone was detected in the Trip Blank-3. The acetone result for sample 11-19-21 MW-12I was a detect < the reporting limit (RL) and, therefore, was **qualified 200U** (U at the RL). The remaining associated sample results were non-detects and, therefore, were not qualified.

No target analytes were detected in the method blanks or field blanks.

DRAFT

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standard responses met QC acceptance criteria.

Laboratory Control Sample (LCS)

The LCS analyses met all QC acceptance criteria with the following exceptions.

The LCS/LCSD recoveries associated with analytical batch B295464 were < the lower acceptance limit but ≥20% for chloromethane and methyl acetate. The methyl acetate results for samples 11-17-21 EAR-MW-17S, 11-19-21 MW-12I, and 11-19-21 MW-13S were detects and, therefore, were **qualified J**. The chloromethane and methyl acetate results for the remaining associated samples were non-detects and, therefore, were **qualified UJ** based on professional judgment.

The LCS recovery associated with analytical batch B295465 was < the lower acceptance limit but ≥20% for chloromethane. The chloromethane results for all associated samples were non-detects and, therefore, were **qualified UJ** based on professional judgment.

The LCS/LCSD recoveries associated with all analytical batches were > the upper acceptance limit for bromomethane. The associated sample results were non-detects and, therefore, were not qualified based on professional judgment.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD)

The MS analyses were performed on samples 11-17-21 EAR-MW-17S and 11-18-21 MW-14I and met all QC acceptance criteria with the following exceptions.

The MS/MSD recoveries associated with both parent samples were < the lower acceptance limit but ≥20% for chloromethane and methyl acetate. The methyl acetate results for samples 11-17-21 EAR-MW-17S, 11-19-21 MW-12I, and 11-19-21 MW-13S were detects and, therefore, were **qualified J**. The chloromethane and methyl acetate results for the remaining associated samples were non-detects and, therefore, were **qualified UJ** based on professional judgment.

The MS/MSD recoveries associated with both parent samples were > the upper acceptance limit for bromomethane. The associated sample results were non-detects and, therefore, were not qualified based on professional judgment.

DRAFT

The MS/MSD recoveries associated with parent sample 11-18-21 MW-14I were > the upper acceptance limit for tetrachloroethylene. The parent sample concentration was >4X the spike amount; therefore, no sample results were qualified based on professional judgment.

Laboratory Duplicate

The duplicate analyses (LCS/LCSD and MS/MSD) met all QC acceptance criteria.

Field Duplicate

Sample 11-19-21 MW-13S (21K1547-13) was collected and analyzed in duplicate (sample DUP-3 [21K1547-15]). The RPDs between the sample and duplicate results are listed in the table below. Analytes not listed were non-detects for both sample and duplicate. Sample results were not qualified for outliers.

	11-19-21 MW-13S		DUP-3			
Analyte	**Result**	**RL**	**Result**	**RL**	**RPD**	**>50%/2XRL**
2-Butanone	51	200	ND	20	**	
1,1-Dichloroethane	2.6	10	ND	1	**	
1,1-Dichloroethylene	4	10	0.2	1	*	
cis-1,2-Dichloroethylene	36	10	1.5	1	184.0	Yes
Methyl acetate	10	10	ND	1	**	
Methyl tert-butyl ether	ND	10	0.52	1		
Tetrachloroethylene	30	10	32	1	6.5	
Trichloroethylene	930	10	38	1	184.3	Yes
Vinyl chloride	2.1	20	ND	2	**	

*At least one of the results is < the LOQ; the absolute value of the difference between the two results is compared to 2X the LOQ.

**One result is > the MDL and one result is a non-detect (ND); RPD not evaluated.

Reporting Limits (RLs)

All reporting limits (RLs) were properly reported. Sample 11-17-21 EAR-MW-17S diluted 25X, sample 11-17-21 EAR-MW-17I diluted 20X, sample 11-19-21 EAR-MW-19D diluted 2X, sample 11-19-21 MW-12I diluted 4X, and sample 11-19-21 MW-13S diluted 10X for all target compounds. RLs were adjusted accordingly and may not have met the project-specified RLs and/or project quantitation limit goals.

Other QC

No other specific issues that affect data quality were identified.

DRAFT

DATA VALIDATION QUALIFIER DEFINITIONS

U	=	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
J	=	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	=	The result is an estimated quantity; however, the result may be biased high.
J-	=	The result is an estimated quantity; however, the result may be biased low.
NJ	=	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.
UJ	=	The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	=	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

Data Usability Summary Report
(DUSR)
Elton St./Linwood St. Site #224250 & #224301
New York City, New York

DRAFT

Data Validation Report Number:	22E1045_DUSR
Data Validation Report Revision Number:	0
Job Number:	22E1045
Sample Collection Date:	05/12/2022, 05/13/2022
Sample Matrix:	Ground Water
Laboratory Name:	Con-Test/Pace, East Longmeadow, MA
Analyses:	VOCs
Subcontractor Name:	Analytical Quality Associates, Inc.
Data Validator:	Jeanne Peterson
Validation Level:	Category B
Validation Completion Date:	09/28/2022

INTRODUCTION/OVERALL ASSESSMENT

Category B data validation was performed on the data for seven ground water samples prepared and analyzed with approved procedures using SW846 method 8260D (volatile organic compounds [VOCs]). Data were reported for all requested analyses.

Validation was performed on the data package dated May 24, 2022. Any items reviewed in subsequent revisions are noted on the validation worksheets.

The analytical data were evaluated in accordance with the New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) (2015), the *Generic Quality Assurance Project Plan for Work Assignments* (August 2019) (project QAPP); and the applicable methods. Qualifiers were applied in accordance with the latest EPA Region 2 standard operating procedures (SOPs) for data validation.

In general, the analytical results reported in this data package are valid and acceptable. No data were qualified R. Results qualified J or UJ are usable, with caution, as estimated concentrations. Data validation qualifiers were applied to the data as specified in the Data Qualifiers section below.

See attached data validation spreadsheets for supporting documentation on the data review and validation.

DRAFT

SAMPLE IDENTIFICATION

The samples included in this validation are listed below.

Sample ID	Laboratory ID	Matrix	Analysis	Validation Level
GW-13_5.12.22	22E1045-01	Ground Water	VOCs	Category B
GW-14_5.12.22	22E1045-02	Ground Water	VOCs	Category B

GW-18_5.13.22	22E1045-07	Ground Water	VOCs	Category B

DATA QUALIFIERS (see following sections for detailed explanations)

Sample ID	Method	Analyte	Qualifier	Reason for Qualification
GW-13_5.12.22	8260D	Chloromethane Bromomethane	UJ	High calibration verification negative bias
		Trichloroethylene	J	High calibration verification positive bias
GW-14_5.12.22	8260D	Chloromethane Bromomethane	UJ	High calibration verification negative bias
GW-15_5.12.22	8260D	Chloromethane Bromomethane	UJ	High calibration verification negative bias
Field Blank_5.13.22	8260D	Chloromethane Bromomethane	UJ	High calibration verification negative bias
GW-16_5.13.22	8260D	Chloromethane Bromomethane	UJ	High calibration verification negative bias
GW-17_5.13.22	8260D	Chloromethane Bromomethane	UJ	High calibration verification negative bias
GW-18_5.13.22	8260D	Chloromethane Bromomethane	UJ	High calibration verification negative bias
		Trichloroethylene	J	High calibration verification positive bias

DRAFT

DISCUSSION

Sample Shipping/Receiving

All chain of custody (COC), analysis request, and sample receipt documentation was complete and correct with the following exceptions.

There were three relinquished received by signatures and only two received by signatures on the COC. Maintenance of sample custody was confirmed using the FedEx documentation provided in the data package.

Holding Times and Preservation

The samples were properly preserved and analyzed within the prescribed holding times with the following exceptions.

The pH was >2 for samples GW-14_5.12.22, GW-17_5.13.22, and GW-18_5.13.22 at the time of analysis. The samples were analyzed within the holding time for unpreserved samples; therefore, no sample results were qualified.

Instrument Tune

All instrument tune requirements were met. It should be noted that Form V (Instrument Performance Check) was not submitted in the data package for the tune associated with the initial calibration (ICAL). The raw data were reviewed for validation.

Calibration

All initial and continuing calibration acceptance criteria were met with the following exceptions.

The initial calibration (ICAL), initial calibration verification (ICV), and continuing calibration verification (CCV) relative response factors (RRFs) associated with all batches were < the ASP minimum RRF but > the EPA Region II minimum RRF for trichloroethene. A different internal standard was used to calculate the trichloroethene RRFs than specified by ASP. When the specified internal standard was used, the RRFs met the minimum criteria for ASP, method, and EPA Region II with similar results (see attached calculations). Therefore, no sample results were qualified based on professional judgment.

The ICV and CCV percent differences (%Ds) were > the upper acceptance limit with negative bias for chloromethane. The associated sample results were non-detects and, therefore, were **qualified UJ**.

The ICV %D was > the upper acceptance limit with negative bias for bromomethane. The associated sample results were non-detects and, therefore, were **qualified UJ**.

The CCV %Ds were > the upper acceptance limit with positive bias for trichloroethylene; bromomethane; and 1,1,2-trichloro-1,2,2-trifluoroethane. The trichloroethylene results for samples GW-13_5.12.22 and GW-18_5.13.22 were detects and, therefore, were **qualified J**. The remaining associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified based on professional judgment.

Blanks

No target compounds were detected in the method blank or field blank.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standard responses met QC acceptance criteria.

DRAFT

Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD)

The LCS/LCSD analyses met all QC acceptance criteria with the following exceptions.

The LCS/LCSD recoveries associated with all analytical batches were > the upper acceptance limit for bromomethane and 1,1,2-trichloro-1,2,2-trifluoroethane. The associated sample results were non-detects and, therefore, were not qualified based on professional judgment.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD)

MS/MSD analyses were not performed with the samples in this SDG; therefore, matrix-specific accuracy data were not available. LCS/LCSD analyses were performed to provide precision data.

Field Duplicate

A field duplicate was not collected with the samples in this SDG.

Reporting Limits (RLs)

All reporting limits (RLs) were properly reported. Sample GW-13_5.12.22 was diluted 4X for all target compounds. RLs were adjusted accordingly and may not have met the project-specified RLs and/or project quantitation limit goals.

Other QC

No other specific issues that affect data quality were identified.

DRAFT

DATA VALIDATION QUALIFIER DEFINITIONS

U	=	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
J	=	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	=	The result is an estimated quantity; however, the result may be biased high.
J-	=	The result is an estimated quantity; however, the result may be biased low.
NJ	=	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.
UJ	=	The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	=	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

DRAFT

DISCUSSION

Sample Shipping/Receiving

All chain of custody (COC), analysis request, and sample receipt documentation was complete and correct with the following exceptions.

There were three relinquished received by signatures and only two received by signatures on COC page 1 of 2, and the signatures/date/times on COC page 2 of 2 did not correspond to those on COC page 1 of 2. Maintenance of sample custody could not be confirmed.

The headspace question on the Login Sample Receipt Checklist was marked NA. No discrepancies were noted in the case narrative; therefore, no sample results were qualified.

Holding Times and Preservation

The samples were properly preserved and analyzed within the prescribed holding times with the following exceptions.

The pH was not documented in the data package for all samples *except* sample GW-22_5.16.22. The samples were analyzed within the holding time for unpreserved samples; therefore, no sample results were qualified.

Instrument Tune

All instrument tune requirements were met. It should be noted that Form V (Instrument Performance Check) was not submitted in the data package for the tune associated with the initial calibration (ICAL). The raw data were reviewed for validation.

Calibration

All initial and continuing calibration acceptance criteria were met with the following exceptions.

The initial calibration (ICAL), initial calibration verification (ICV), and continuing calibration verification (CCV) relative response factors (RRFs) associated with all batches were < the ASP minimum RRF but > the EPA Region II minimum RRF for trichloroethene. A different internal standard was used to calculate the trichloroethene RRFs than specified by ASP. When the specified internal standard was used, the RRFs met the minimum criteria for ASP, method, and EPA Region II with similar results (see attached calculations). Therefore, no sample results were qualified based on professional judgment.

The CCV percent differences (%Ds) were > the upper acceptance limit with negative bias for naphthalene. The naphthalene result for sample GW-23_5.16.22 was a detect and, therefore, was **qualified J**. The remaining associated sample results were non-detects and, therefore, were **qualified UJ**.

The CCV %D associated with batch B309024 was > the upper acceptance limit with positive bias for chloromethane. The associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified based on professional judgment.

DRAFT

Blanks

Toluene was detected in the method blank associated with batch B308922. The toluene results for samples GW-21_5.16.22, GW-23_5.16.22, and DUP-1_5.16.22 were detects < the RL and, therefore, were **qualified U** at the RL. The remaining associated sample result was a non-detect and, therefore, was not qualified.

A field blank was not collected with the samples in this SDG.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standard responses met QC acceptance criteria.

Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD)

The LCS/LCSD analyses met all QC acceptance criteria with the following exceptions.

The LCS recoveries associated with batch B308922 were > the upper acceptance limit for chloroethane and methyl acetate. The associated sample results were non-detects and, therefore, were not qualified based on professional judgment.

The LCS/LCSD recoveries associated with batch B309024 were > the upper acceptance limit for chloromethane. The associated sample result was a non-detect and, therefore, was not qualified based on professional judgment.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD)

MS/MSD analyses were not performed with the samples in this SDG; therefore, matrix-specific accuracy data were not available. LCS/LCSD analyses were performed to provide precision data.

Field Duplicate

Sample GW-20_5.16.22 (22E1261-01) was collected and analyzed in duplicate (sample DUP-1 [22E1253-06]). The RPDs between the sample and duplicate results are listed in the table below. Analytes not listed were non-detects for both sample and duplicate. Sample results were not qualified for outliers.

DRAFT

	GW-20_5.16.22		DUP-1_5.16.22			
Analyte	Result	RL	Result	RL	RPD	>50%/2XRL
cis-1,2-Dichloroethene	17000	1000	17000	1000	0.00	
Tetrachloroethene	3400	1000	2400	1000	34.48	
Toluene	700	1000	670	1000	*	
1,1,1-Trichloroethane	200	1000	ND	1000	**	
Trichloroethene	140000	1000	120000	1000	15.38	
Trichlorofluoromethane	ND	2000	260	2000	**	
1,2,4-Trimethylbenzene	600	1000	420	1000	*	
1,3,5-Trimethylbenzene	210	1000	140	1000	*	

*At least one of the results is < the LOQ; the absolute value of the difference between the two results is compared to 2X the LOQ.

**One result is > the MDL and one result is a non-detect (ND); RPD not evaluated.

Reporting Limits (RLs)

All reporting limits (RLs) were properly reported. Sample GW-21_5.16.22 was diluted 2X and sample DUP-1_5.16.22 was diluted 1000X for all target compounds. RLs were adjusted accordingly and may not have met the project-specified RLs and/or project quantitation limit goals.

Other QC

No other specific issues that affect data quality were identified.

DRAFT

DATA VALIDATION QUALIFIER DEFINITIONS

U	=	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
J	=	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	=	The result is an estimated quantity; however, the result may be biased high.
J-	=	The result is an estimated quantity; however, the result may be biased low.
NJ	=	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.
UJ	=	The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	=	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

Data Usability Summary Report
(DUSR)
Elton St./Linwood St. Site #224250 & #224301
New York City, New York

DRAFT

Data Validation Report Number:	22E1254_DUSR
Data Validation Report Revision Number:	0
Job Number:	22E1254
Sample Collection Date:	05/16/2022, 05/17/2022
Sample Matrix:	Soil
Laboratory Name:	Con-Test/Pace, East Longmeadow, MA
Analyses:	VOCs
Subcontractor Name:	Analytical Quality Associates, Inc.
Data Validator:	Jeanne Peterson
Validation Level:	Category B
Validation Completion Date:	09/28/2022

INTRODUCTION/OVERALL ASSESSMENT

Category B data validation was performed on the data for three soil samples prepared and analyzed with approved procedures using SW846 method 8260D (volatile organic compounds [VOCs]). Data were reported for all requested analyses.

Validation was performed on the data package dated June 2, 2022. Any items reviewed in subsequent revisions are noted on the validation worksheets.

The analytical data were evaluated in accordance with the New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) (2015), the *Generic Quality Assurance Project Plan for Work Assignments* (August 2019) (project QAPP); and the applicable methods. Qualifiers were applied in accordance with the latest EPA Region 2 standard operating procedures (SOPs) for data validation.

In general, the analytical results reported in this data package are valid and acceptable as reported with the exception of the data qualified R. *Data qualified R should be considered unusable.* Results qualified J or UJ are usable, with caution, as estimated concentrations. Data validation qualifiers were applied to the data as specified in the Data Qualifiers section below.

See attached data validation spreadsheets for supporting documentation on the data review and validation.

DRAFT

SAMPLE IDENTIFICATION

The samples included in this validation are listed below.

Sample ID	Laboratory ID	Matrix	Analysis	Validation Level
SB-20_5-10 FT BG	22E1254-02	Soil	VOCs	Category B
SB-20_10-15 FT BG	22E1254-03	Soil	VOCs	Category B
SB-20_15-20 FT BG	22E1254-04	Soil	VOCs	Category B

DATA QUALIFIERS (see following sections for detailed explanations)

Sample ID	Method	Analyte	Qualifier	Reason for Qualification
SB-20_10-15 FT BG	8260D	1,4-Dioxane	R	Low response factors
SB-20_15-20 FT BG	8260D	1,4-Dioxane	R	Low response factors

DISCUSSION

Sample Shipping/Receiving

All chain of custody (COC), analysis request, and sample receipt documentation was complete and correct with the following exceptions.

There were three relinquished received by signatures and only two received by signatures on COC page 1 of 2, and the signatures/date/times on COC page 2 of 2 did not correspond to those on COC page 1 of 2. Maintenance of sample custody could not be confirmed.

The headspace question on the Login Sample Receipt Checklist was marked NA. No discrepancies were noted in the case narrative; therefore, no sample results were qualified.

Holding Times and Preservation

The samples were properly preserved and analyzed within the method-specified holding times.

Instrument Tune

All instrument tune requirements were met. It should be noted that Form V (Instrument Performance Check) was not submitted in the data package for the tune associated with the initial calibration (ICAL). The raw data were reviewed for validation.

Calibration

All initial and continuing calibration acceptance criteria were met with the following exceptions.

The initial calibration (ICAL), initial calibration verification (ICV), and continuing calibration verification (CCV) relative response factors (RRFs) associated with all batches were < the ASP minimum RRF but > the EPA Region II minimum RRF for trichloroethene. A different internal standard was used to calculate the trichloroethene RRFs than specified by ASP. When the specified internal standard was used, the RRFs met the minimum criteria for ASP, method, and EPA Region II with similar results (see attached calculations). Therefore, no sample results were qualified based on professional judgment.

The ICAL, ICV, and CCV RRFs associated with batches B309108 and B309260 were < acceptance limit for 1,4-dioxane. The associated sample results were non-detects and, therefore, were **qualified R**.

DRAFT

The ICV percent differences (%Ds) associated with batch B309113 was > the upper acceptance limit with positive bias for acetone. The associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified based on professional judgment.

The CCV %Ds associated with batches B309108 and B309260 were > the upper acceptance limit with positive bias for bromoform and bromomethane. The associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified based on professional judgment.

Blanks

No target compounds were detected in the method blanks. A field blank was not collected with the samples in this SDG.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standard responses met QC acceptance criteria.

Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD)

The LCS/LCSD analyses met all QC acceptance criteria with the following exceptions.

The LCS/LCSD recoveries associated with batches B309108 and B309260 were > the upper acceptance limit for bromoform and bromomethane. The associated sample results were non-detects and, therefore, were not qualified based on professional judgment.

The LCS/LCSD relative percent difference (RPD) associated with batch B309260 was > the laboratory acceptance limit for 2-butanone. The associated sample results were non-detects and, therefore, were not qualified based on professional judgment.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD)

MS/MSD analyses were not performed with the samples in this SDG; therefore, matrix-specific accuracy data were not available. LCS/LCSD analyses were performed to provide precision data.

Field Duplicate

A field duplicate was not collected with the samples in this SDG.

DRAFT

Reporting Limits (RLs)

All reporting limits (RLs) were properly reported. Sample SB-20_10-15 FT BG was diluted 50X for trichloroethylene and 2X for all remaining target compounds, and sample SB-20_15-20 FT BG was diluted 80X for all target compounds. RLs were adjusted accordingly and may not have met the project-specified RLs and/or project quantitation limit goals.

Other QC

No other specific issues that affect data quality were identified.

DRAFT

DATA VALIDATION QUALIFIER DEFINITIONS

U	=	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
J	=	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	=	The result is an estimated quantity; however, the result may be biased high.
J-	=	The result is an estimated quantity; however, the result may be biased low.

INTRODUCTION/OVERALL ASSESSMENT

Category B data validation was performed on the data for one ground water sample prepared and analyzed with approved procedures using SW846 method 8260D (volatile organic compounds [VOCs]). Data were reported for all requested analyses.

Validation was performed on the data package dated May 24, 2022. Any items reviewed in subsequent revisions are noted on the validation worksheets.

The analytical data were evaluated in accordance with the New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) (2015), the *Generic Quality Assurance Project Plan for Work Assignments* (August 2019) (project QAPP); and the applicable methods. Qualifiers were applied in accordance with the latest EPA Region 2 standard operating procedures (SOPs) for data validation.

In general, the analytical results reported in this data package are valid and acceptable. No data were qualified R. Results qualified J or UJ are usable, with caution, as estimated concentrations. Data validation qualifiers were applied to the data as specified in the Data Qualifiers section below.

See attached data validation spreadsheets for supporting documentation on the data review and validation.

DRAFT

SAMPLE IDENTIFICATION

The sample included in this validation is listed below.

Sample ID	Laboratory ID	Matrix	Analysis	Validation Level
GW-20_5.16.22	22E1261-01	Ground Water	VOCs	Category B

DATA QUALIFIERS (see following sections for detailed explanations)

Sample ID	Method	Analyte	Qualifier	Reason for Qualification
GW-20_5.16.22	8260D	Naphthalene	UJ	High calibration verification negative bias and low matrix spike recovery
		Tetrachloroethylene	J	High calibration verification positive bias
		2-Butanone	UJ	Low matrix spike recovery

DISCUSSION

Sample Shipping/Receiving

All chain of custody (COC), analysis request, and sample receipt documentation was complete and correct with the following exceptions.

There were three relinquished received by signatures and only two received by signatures on COC page 1 of 2. COC page 2 of 2 was not included in the data package. Maintenance of sample custody could not be confirmed.

Holding Times and Preservation

The samples were properly preserved and analyzed within the prescribed holding times with the following exceptions.

The pH was not documented in the data package for the sample. The sample was analyzed within the holding time for unpreserved samples; therefore, no sample results were qualified.

Instrument Tune

All instrument tune requirements were met.

Calibration

All initial and continuing calibration acceptance criteria were met with the following exceptions.

The initial calibration (ICAL) and initial calibration verification (ICV) relative response factors (RRFs) associated with all batches were < the ASP minimum RRF but > the EPA Region II minimum RRF for trichloroethene. A different internal standard was used to calculate the trichloroethene RRFs than specified by ASP. When the specified internal standard was used, the RRFs met the minimum criteria for ASP, method, and EPA Region II with similar results (see attached calculations). Therefore, no sample results were qualified based on professional judgment.

The continuing calibration verification (CCV) percent difference (%D) was > the upper acceptance limit with negative bias for naphthalene. The naphthalene result for sample GW-20_5.16.22 was a non-detect and, therefore, was **qualified UJ**.

The CCV %Ds were > the upper acceptance limit with positive bias for hexachlorobutadiene and tetrachloroethylene. The tetrachloroethylene result for sample GW-20_5.16.22 was a detect and, therefore, was **qualified J**. The hexachlorobutadiene result for sample GW-20_5.16.22 was a

DRAFT

non-detect and not affected by the high bias and, therefore, was not qualified based on professional judgment.

Blanks

No target compounds were detected in the method blank. A field blank was not collected with the sample in this SDG.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standard responses met QC acceptance criteria.

Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD)

The LCS/LCSD analyses met all QC acceptance criteria with the following exceptions.

The LCS recovery was > the upper acceptance limit for chloroethane. The associated sample result was a non-detect and, therefore, was not qualified based on professional judgment.

The LCSD recovery was > the upper acceptance limit for methyl acetate. The associated sample result was a non-detect and, therefore, was not qualified based on professional judgment.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD)

The MS/MSD analyses met all QC acceptance criteria with the following exceptions.

The MS and/or MSD recoveries were > the upper acceptance limit for chloroethane; methyl acetate; and 1,1,2-trichloro-1,2,2-trifluoroethane. The associated sample results were non-detects and, therefore, were not qualified based on professional judgment.

The MS/MSD recoveries were < the lower acceptance limit for naphthalene and 2-butanone. The associated sample results were non-detects and, therefore, were **qualified UJ** based on professional judgment.

The MSD recovery was < the lower acceptance limit for trichloroethylene. The parent sample concentration was >4X the spike amount; therefore, no sample results were qualified based on professional judgment.

DRAFT

Field Duplicate

Sample GW-20_5.16.22 (22E1261-01) was collected and analyzed in duplicate (sample DUP-1 [22E1253-06]). The RPDs between the sample and duplicate results are listed in the table below. Analytes not listed were non-detects for both sample and duplicate. Sample results were not qualified for outliers.

	GW-20_5.16.22		DUP-1_5.16.22			
Analyte	**Result**	**RL**	**Result**	**RL**	**RPD**	**>50%/2XRL**
cis-1,2-Dichloroethene	17000	1000	17000	1000	0.00	
Tetrachloroethene	3400	1000	2400	1000	34.48	
Toluene	700	1000	670	1000	*	
1,1,1-Trichloroethane	200	1000	ND	1000	**	
Trichloroethene	140000	1000	120000	1000	15.38	
Trichlorofluoromethane	ND	2000	260	2000	**	
1,2,4-Trimethylbenzene	600	1000	420	1000	*	
1,3,5-Trimethylbenzene	210	1000	140	1000	*	

*At least one of the results is < the LOQ; the absolute value of the difference between the two results is compared to 2X the LOQ.

**One result is > the MDL and one result is a non-detect (ND); RPD not evaluated.

Reporting Limits (RLs)

All reporting limits (RLs) were properly reported. Sample GW-20_5.16.22 was diluted 1000X for all target compounds. RLs were adjusted accordingly and may not have met the project-specified RLs and/or project quantitation limit goals.

Other QC

No other specific issues that affect data quality were identified.

DRAFT

DATA VALIDATION QUALIFIER DEFINITIONS

U	=	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
J	=	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	=	The result is an estimated quantity; however, the result may be biased high.
J-	=	The result is an estimated quantity; however, the result may be biased low.
NJ	=	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.
UJ	=	The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	=	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

Data Usability Summary Report
(DUSR)
Elton St./Linwood St. Site #224250 & #224301
New York City, New York

DRAFT

Data Validation Report Number:	22H0564_DUSR
Data Validation Report Revision Number:	0
Job Number:	22H0564
Sample Collection Date:	08/09/2022
Sample Matrix:	Groundwater
Laboratory Name:	Con-Test/Pace, East Longmeadow, MA
Analyses:	VOCs
Subcontractor Name:	Analytical Quality Associates, Inc.
Data Validator:	Jeanne Peterson
Validation Level:	Category B
Validation Completion Date:	11/13/2022

INTRODUCTION/OVERALL ASSESSMENT

Category B data validation was performed on the data for 12 groundwater samples prepared and analyzed with approved procedures using SW846 method 8260D (volatile organic compounds [VOCs]). Data were reported for all requested analyses.

Validation was performed on the data package dated August 15, 2022. Any items reviewed in subsequent revisions are noted on the validation worksheets.

The analytical data were evaluated in accordance with the New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) (2015), the *Generic Quality Assurance Project Plan for Work Assignments* (August 2019) (project QAPP); and the applicable methods. Qualifiers were applied in accordance with the latest EPA Region 2 standard operating procedures (SOPs) for data validation.

In general, the analytical results reported in this data package are valid and acceptable. No results were qualified R. Results qualified J or UJ are usable, with caution, as estimated concentrations. Data validation qualifiers were applied to the data as specified in the Data Qualifiers section below.

See attached data validation spreadsheets for supporting documentation on the data review and validation.

DRAFT

DISCUSSION

Sample Shipping/Receiving

All chain of custody (COC), analysis request, and sample receipt documentation was complete and correct with the following exceptions.

The time of receipt on the Login Sample Receipt Checklist did not match the time of receipt documented on the COC.

The Login Sample Receipt Checklist indicates that trip blanks were received but were not included on the COC. The trip blanks were not analyzed and reported with the samples.

Holding Times and Preservation

The samples were properly preserved and analyzed within the prescribed holding times.

Instrument Tune

All instrument tune requirements were met.

Calibration

All initial and continuing calibration acceptance criteria were met with the following exceptions.

The initial calibration (ICAL), initial calibration verification (ICV), and continuing calibration verification (CCV) relative response factors (RRFs) associated with all batches were < the ASP minimum RRF but > the EPA Region II minimum RRF for trichloroethene. A different internal standard was used to calculate the trichloroethene RRFs than specified by ASP. When the specified internal standard was used, the RRFs met the minimum criteria for ASP, method, and EPA Region II with similar results (see attached calculations). Therefore, no sample results were qualified based on professional judgment.

The CCV percent differences (%Ds) associated with both batches were > the upper acceptance limit for vinyl chloride. The associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified.

The CCV %D associated with batch B314930 was < the lower acceptance limit for tert-butyl alcohol. The associated sample results were non-detects and, therefore, were **qualified UJ**.

DRAFT

Blanks

No target compounds were detected in the method blanks or field blank.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standard responses met QC acceptance criteria.

Laboratory Control Sample (LCS)/Laboratory Control Sample Duplicate (LCSD)

The LCS/LCSD analyses met all QC acceptance criteria with the following exceptions.

The LCS and/or LCSD recoveries associated with both batches were > the upper acceptance limit for vinyl chloride and carbon disulfide. The associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified based on professional judgment.

The LCS recovery associated with batches B315025 was < the lower acceptance limit but ≥20% for acrylonitrile, and the corresponding LCS/LCSD relative percent difference (RPD) was > the acceptance limit. The associated sample results were non-detects and, therefore, were **qualified UJ** due to low laboratory control sample recovery based on professional judgment.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD)

MS/MSD analyses were performed on sample HRP-MW-22S_8.9.22 and met all QC acceptance criteria with the following exceptions.

The MS and/or MSD recoveries were > the upper acceptance limit for vinyl chloride, carbon disulfide, methyl acetate, and tetrachloroethylene. The tetrachloroethylene result for parent sample HRP-MW-22S_8.9.22 was a detect and, therefore, was **qualified J**. The remaining associated sample results were non-detects and not affected by the high bias and, therefore, were not qualified based on professional judgment.

The MS/MSD RPD was > the acceptance limit for chloromethane. The chloromethane result for parent sample HRP-MW-22S_8.9.22 was a non-detect and, therefore, was not qualified based on professional judgment.

DRAFT

Field Duplicate

Sample HRP-MW-22S_8.9.22 (22H0564-03) was collected and analyzed in duplicate (sample DUP-1_8.9.22 [22H0564-12]). The RPDs between the sample and duplicate results are listed in the table below. Analytes not listed were non-detects for both sample and duplicate. Sample results were not qualified for outliers.

	HRP-MW-22S_8.9.22		DUP-1_8.9.22			
Analyte	**Result**	**RL**	**Result**	**RL**	**RPD**	**>50%/2XRL**
Benzene	100	500	100	500	*	
1,1-Trichloroethylene	190	500	180	500	*	
cis-1,2-Dichloroethylene	51000	500	48000	500	6.06	
Tetrachloroethylene	1700	500	1600	500	6.06	
Trichloroethylene	63000	500	62000	1000	1.60	
Trichlorofluoromethane	120	1000	110	1000	*	

*At least one of the results is < the LOQ; the absolute value of the difference between the two results is compared to 2X the LOQ.

**One result is > the MDL and one result is a non-detect (ND); RPD not evaluated.

Reporting Limits (RLs)

All reporting limits (RLs) were properly reported. It should be noted that the acetone RL was > the CRQL provided on the ASP target compound list.

Samples HRP-MW-22S_8.9.22 and DUP-1_8.9.22 were diluted 500X and sample HRP-MW-20S_8.9.22 was diluted 100X for all target compounds. RLs were adjusted accordingly and may not have met the project-specified RLs and/or project quantitation limit goals.

Other QC

It should be noted that cyclohexane was not reported for the samples, although several compounds that were not on the ASP target compound list were reported.

No other specific issues that affect data quality were identified.

DRAFT

DATA VALIDATION QUALIFIER DEFINITIONS

U	=	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
J	=	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	=	The result is an estimated quantity; however, the result may be biased high.
J-	=	The result is an estimated quantity; however, the result may be biased low.
NJ	=	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.
UJ	=	The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	=	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.
