Introduction

This Supplemental Phase II Investigation Work Plan has been developed for the above referenced site. The site is located within the Clinton Hill section of Brooklyn, NY (see **Figure 1**). The following work scope has been developed in response to a letter sent to ownership by NYSDEC on October 28, 2025, in which the agency stated that the previous OER Remedial Investigation 1) has not conclusively demonstrated that there remains a soil vapor intrusion concern within the existing building, and 2) has not conclusively demonstrated that there is not an on-site source of contamination, as identified in a 2024 soil vapor intrusion study by EBI (see **Attachment 1**).

Site Location, Current Use, and Proposed Development Plan

The Site is located in the Clinton Hill section of Brooklyn, NY, and is identified as Block 1877 and Lot 27. Currently, the Site is used for residential, commercial/retail, and art studio space, and contains a two-story slab-on-grade warehouse and commercial loft-law building (8 Grand Avenue) and an adjoining slab-on-grade seven-story mixed-use loft law building (10 Grand Avenue). The development project consists of the rehabilitation of 10 Grand Avenue in accordance with Loft Law/DOB requirements as well as an enlargement of ten units with the Bureau of Standards and Appeals. No excavation, soil disturbance, or demolition of the building slab is proposed. The water table is expected at approximately 22 feet below grade surface (bgs). Layout of the proposed site development is presented in **Figure 2**.

The site is elevation EL. 22.78' on the northwest corner, EL. 24.17 on the northeast corner, and EL. 27.52 on the southeast corner, NAVD88, with the site sloping approximately 4.74 feet down from southeast to northwest.

Previous Investigations Summary

A Limited Phase II Subsurface Investigation by Associated Environmental Services, Inc (AES) was summarized in a report dated September 18, 2013 (see **Attachment 2**) and consisted of the collection of five (5) shallow soil samples, and collection of three (3) soil vapor samples across the Site. The following is a summary of the findings of the investigation:

- No Volatile organic compounds (VOCs) were detected above NYCRR Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) in the collected shallow soil samples.
- Several semi-VOCs (SVOCs) were detected above UUSCOs, indicative of urban fill material.
- Trichloroethene (TCE) and carbon tetrachloride were detected in soil vapor at concentrations requiring "identification of sources and reduce exposures" based on the NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion guidance document. It was determined that these concentrations were more likely a result of infiltration of indoor or outdoor air, due to the low levels found in the soil vapor.
- Tetrachloroethylene (PCE) and 1,1,1-trichloroethane (1,1,1-TCA) were found at concentrations requiring "monitoring" based on the NYSDOH Guidance document.

A Phase I ESA produced by EBI Consulting (EBI), dated June 4, 2021, did not find any Recognized Environmental Conditions (REC) associated with the Site, see **Attachment 3.**

As part of the 8-10 Grand Avenue Rezoning action (24BSA010K), an Environmental Impact Statement (EIS) was performed. As part of the EIS, a Limited Phase II ESA was performed (see **Attachment 4**), which was documented in a Phase II ESA Report by EBI dated July 26, 2024. The investigation comprised of a Limited Soil Vapor Intrusion investigation, including the collection of two (2) indoor air samples, one (1) outdoor air sample, and two (2) sub-slab soil vapor samples. The following is a summary of the findings of the investigation:

- PCE in samples E-SV-1 (7,660 ug/m^3) was detected above the upper screening, warranting mitigation. PCE in E-IA-1 and E-OA-1 corresponds to the NYS DOH monitor/mitigate tier, and E-IA-2 is above the upper screening level, which warrants mitigation.

- Trichloroethene detected in sample E-SV-1 corresponds to the NYS DOH monitor/mitigate tier, and those in E-SV-2 correspond to the lowest NYS DOH monitor tier. Trichloroethene was not detected in any indoor or outdoor ambient air samples.
- Several other VOCs were detected warranting monitoring/mitigation based on the concentrations including 1,1,1-TCA, 2,24-trimethylpentane, and carbon tetrachloride.
- EBI identified sub-slab soil vapor contaminants currently above the commercial use target criteria. The detected concentrations are also above the upper threshold for mitigation, according to the NYSDOH matrix. Based on the concentrations identified, EBI recommends installing a vapor mitigation system (VIMS) to alleviate potential onsite vapor intrusion concerns. This VIMS can consist of a sub-slab depressurization system (SSDS).

A Remedial Investigation (RI) was performed under the auspices of NYSDEC and NYCOER to determine the environmental condition of the property as part of the E-Designation program requirements (see **Attachment 4**), which was documented in a Remedial Investigation Report by Impact Environmental Closures, Inc. (IEC) dated August 29, 2025. The investigation comprised of the collection of six (6) indoor air samples, one (1) outdoor air sample, four (4) sub-slab soil vapor samples, sixteen (16) soil samples, and three (3) groundwater samples. The following is a summary of the findings of the investigation:

<u>Soil Vapor/Indoor Air</u>

- The total concentration of petroleum-related compounds Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) ranged from 6.55 µg/m3 within SV-3 to 51.13 µg/m3 within SV-4.
- The chlorinated-VOC tetrachloroethene (PCE) was detected in all samples ranging from 2.24 µg/m3 within SV-4 to 58.0 µg/m3 within SV-3. Trichloroethene (TCE) [max. of 18.5 µg/m3 in SV-1], carbon tetrachloride (max. of 7.67 µg/m3 in SV-2), and 1,1,1-trichloroethane (max. of 905 µg/m3 in SV-2) were detected at SV-1 and SV-2. Cis-1,2-dichloroethene was detected at 2.12 µg/m3 within SV-1. Methyl chloride, 1,1-dichloroethene, and vinyl chloride were not detected in any of the samples.
- Based on the NYSDOH Decision Matrices, 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene are both listed under identify sources, and carbon tetrachloride is listed under monitor for SV-1/IA-1. Cyclohexane is listed under identify sources, and carbon tetrachloride is listed as monitor for SV-2/IA-2. No further action is recommended for all detections associated with SV-3/IA-3 and SV-4/IA-4.

<u>Soil</u>

- Volatile Organic Compounds (VOCs): VOCs were not detected above UUSCOs or RRSCOs in any soil sample collected during this RI. Minor concentrations of acetone, ethylbenzene, m&p-xylene, naphthalene, o-xylene, and toluene were detected in various soil samples across the site.
- Polychlorinated Biphenyls (PCBs): PCBs were not detected in any soil sample collected during this RI.
- Semi-Volatile Organic Compounds (SVOCs): Benz(a)anthracene [max. of 24,000 µg/kg in SB-5 (21-23)], benzo(a)pyrene [max. of 21,000 µg/kg in SB-5 (21-23)], benzo(b)fluoranthene [max. of 28,000 µg/kg in SB-5 (21-23)], chrysene [max. of 22,000 µg/kg in SB-5 (21-23)], and indeno(1,2,3-cd)pyrene [max. of 8,800 µg/kg in SB-5 (21-23)] were detected above UUSCOs and RRSCOs in soil samples SB-3 (0-2), SB-5 (0-2), SB-5 (21-23), SB-6 (0-2), SB-7 (0-2), and SB-8 (0-2). Benzo(k)fluoranthene [max. of 5,400 µg/kg in SB-5 (21-23)] and Dibenz(a,h)anthracene pyrene [max. of 2,100 µg/kg in SB-5 (21-23)] were detected above UUSCOs in soil samples SB-5 (0-2), SB-5 (21-23), SB-6 (0-2), and SB-7 (0-2).
- Metals: In the original SB-1 (0-2) boring location, in which refusal was encountered, the following metals were detected above CSCOs: arsenic (75.2 mg/kg), barium (5,440 mg/kg), copper (208,000 mg/kg), lead (11,100 mg/kg), and nickel (892 mg/kg). These results were believed to be either anomalous or erroneous, and SB-1 was reinstalled on August 5, 2025, and called SB-1R (see Table 1b). The following are the remaining soil sample results: Nickel (31.7 mg/kg) was detected above UUSCOs in sample SB-1R

(0-2'), and trivalent Chromium (43.26 mg/kg) was detected above RSCOs in sample SB-1R (18-21'). In addition, copper [max. of 89.7 mg/kg in SB-6 (0-2)], lead [max. of 259 mg/kg in SB-3 (0-2)], mercury [max. of 0.76 mg/kg in SB-6 (0-2)], silver [max. of 2.5 mg/kg in SB-1 (0-2)], trivalent chromium [max. of 168 mg/kg in SB-1 (0-2)], and zinc [max. of 634 mg/kg in SB-1 (0-2)] were detected above UUSCOs in soil samples SB-1 (0-2), SB-2 (0-2), SB-3 (0-2), SB-4 (0-2), SB-5 (0-2), SB-6 (0-2), SB-6 (12-14), SB-7 (0-2), SB-8 (0-2), and SB-8 (11-13).

- Pesticides: 4,4'-DD (21.0 µg/kg) was detected above UUSCOs in soil sample SB-6 (0-2). In addition, 4,4'-DDT [max. of 14.0 µg/kg in SB-6 (0-2)] was detected above UUSCOs in soil samples SB-6 (0-2) and SB-8 (0-2).
- Total Emerging Contaminants: No PFAS contaminants were detected within the soil samples.

Groundwater

- Volatile Organic Compounds (VOCs): VOCs were not detected above AWQS in any of the groundwater samples.
- Polychlorinated Biphenyls (PCBs): PCB-1248 (0.68 µg/L) was detected above AWQS in groundwater DUP-MW (MW-2 was the parent sample).
- Semi-Volatile Organic Compounds (SVOCs): Benz(a)anthracene (max. of 0.21 µg/L in MW-3) and benzo(b)fluoranthene (max. of 0.15 µg/L in MW-3) were detected above AWQS in all of the groundwater samples. Benzo(a)pyrene (max. of 0.15 µg/L in MW-3), benzo(k)fluoranthene (max. of 0.13 µg/L in MW-3), chrysene (max. of 0.16 µg/L in MW-3), and indeno(1,2,3-cd)pyrene (max. of 0.11 µg/L in MW-3) were detected above AWQS in MW-2 and MW-3. In addition, phenol (1.4 µg/L) was detected above AWQS in MW-2.
- Metals (Total): Manganese (max. of 3.62 mg/L in MW-3) was detected above AWQS in all groundwater samples. Chromium (max. of 0.129 mg/L in MW-3) was detected above AWQS in MW-2 and MW-3. Lead (0.066 mg/L) was detected above AWQS in MW-3.
- Metals (Dissolved): Manganese (1.25 mg/L) was detected above AWQS in MW-1.
- Pesticides: Dieldrin (0.01 µg/L) was detected above AWQS in groundwater sample DUP-MW (MW-2 is the parent sample).
- Total Emerging Contaminants: Perfluorooctanesulfonic Acid (PFOS) [max. of 16.3 ng/L in MW-2] and perfluorooctanoic acid (PFOA) [max. of 64.7 ng/L in MW-2] were detected above AWQS in all groundwater samples.

Phase II Investigation Work Scope

Geophysical Survey

A geophysical survey will not be performed inside the building due to the building slab being approximately a minimum of 12" thick, which will severely impact the accuracy of the survey.

Soil and Soil Vapor Summary

An investigation of soil and soil vapor is being performed to supplement the previous RI, properly characterize the site for potential environmental impacts from historic on-site/off-site uses, operations, etc., and potential off-site contaminant sources from a former printing facility adjoining to the southwest. The proposed sampling event will provide more localized characterization of shallow soil and soil vapor/indoor air proximal to the previous elevated PCE concentrations detected in soil vapor samples during the EBI 2024 SVI Study, and to determine if previously detected soil vapor contamination is related to an onsite or off-site source. The sampling procedures of this investigation will be performed in accordance with the NYSDEC Technical Guidance for Site Investigation and Remediation DER-10.

Three (3) test borings will be completed at the site. Please see attached site plan (**Figure 3**) depicting sample point locations, where soil and soil vapor samples will be collected relative to the former 2024 EBI soil vapor sample. At a minimum, two (2) soil samples will be collected from each boring location, for a total of approximately six (6) samples collected from the three (3) test borings. A total of one (1) sub-slab soil vapor sample as well as one (1) indoor air sample will be collected. The depth of groundwater is expected to be encountered at approximately 22 feet bgs and general groundwater flow direction is expected to be northwest. Each sample point location at the site will be accurately measured to fixed benchmarks (i.e., select properly lines, adjacent structures, etc.) or by a precision GPS that is capable of coordinating a fixed point with within +/- 1 foot.

Soil Sampling

A geologist/engineer/QEP will screen the soil samples during borehole advancement for organic vapors with a photo-ionization detector (PID) and evaluated for visual and olfactory impacts prior to collecting environmental samples. All field work will be recorded in a field log. A mobile tripod core drill and/or GeoProbe 420 mobile direct push drilling equipment will be used for interior borings. One (1) shallow (0-2' bgs), sub-slab soil sample will be collected from each test borings (for a total of 3 shallow soil samples) for laboratory analysis. One (1) intermediate soil sample, from approximately 8-10 feet bgs, will be collected from each test boring (for a total of 3 intermediate soil samples) for laboratory analysis. Discrete (grab) samples will be taken from the sampling intervals to determine the presence, or lack-thereof, of an onsite contaminant source which may be contributing to the soil vapor contamination detected during the July 2024 EBI investigation. If possible, a third deeper soil sample will be collected from each boring location at a depth of between 17-20' bgs, or at the terminal depth of each boring (if deeper than the intermediate sample).

Soil Vapor Sampling

Soil vapor samples will be collected in accordance with the Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (NYSDOH October 2006). Conditions in the field may require adjustment of sampling locations. Groundwater is expected to be encountered at a depth of 22 feet.

One (1) sub-slab soil vapor and one (1) indoor air samples will be collected. The sub-slab vapor implant (Vapor Pin® technology) will be installed in accordance with manufacturer specifications using a 2-foot long 5/8" diameter concrete drill bit. The 5/8" core will be advanced through the entire building slab until the underlying soils are encountered. The Vapor Pin will then be fitted with a silicone sleeve, installed into the core hole with a dead blow hammer, and fitted with a rubber cap. Once installed the Vapor Pin creates an airtight seal in the slab. Indoor air samples will be collected concurrently with and for the duration of the sub-slab soil vapor samples. Indoor air sample collection will be conducted 3-5 feet above the ground to represent the breathing zone. Sub-slab soil vapor and indoor air will be sampled concurrently, and sampling will occur for the duration of 24 hours.

Samples will be collected in appropriately sized Summa canisters that have been certified clean by the laboratory and samples will be analyzed by using USEPA Method TO-15. Flow rate for both purging and sampling will not exceed 0.2 L/min. 24-hours following soil vapor probe installation, one to three implant volumes shall be purged prior to the collection of any soil-gas samples. A sample log sheet will be maintained summarizing sample identification, date and time of sample collection, sampling depth, identity of samplers, sampling methods and devices, soil vapor purge volumes, volume of the soil vapor extracted, vacuum of canisters before and after the samples are collected, apparent moisture content of the sampling zone, and chain of custody protocols.

As part of the vapor intrusion evaluation, a tracer gas will be used in accordance with NYSDOH protocols to serve as a quality assurance/quality control (QA/QC) device to verify the integrity of the soil vapor probe seal. A container (box, plastic pail, etc.) will serve to keep the tracer gas in contact with the probe during testing. A portable monitoring device will be used to analyze a sample of soil vapor for the tracer gas prior to sampling. If

the tracer sample results show a significant presence of the tracer, the probe seals will be adjusted to prevent infiltration. At the conclusion of the sampling round, tracer monitoring will be performed a second time to confirm the integrity of the probe seals.

Sample Analysis

Soil samples will be submitted to a NYSDOH Environmental Laboratory Accreditation Program (ELAP)-certified laboratory for analysis of the following compounds:

- Part 375 List VOCs by EPA Method 8260.

Soil vapor and indoor air samples will be submitted to a NYSDOH Environmental Laboratory Accreditation Program (ELAP)-certified laboratory for analysis of the compounds of concern, as detected during previous investigations:

- VOCs by using USEPA Method TO-15.

The analytical methods above should include all compounds included in NYSDEC Part 375-6.8 and CP-51 for soil and NYSDOH October 2006 Final Guidance for Evaluating Soil Vapor Intrusion Matrices for soil vapor.

Quality Assurance/Quality Control Procedures

QA/QC procedures will be used to provide performance information with regard to accuracy, precision, sensitivity, representation, completeness, and comparability associated with the sampling and analysis for this investigation. Field QA/QC procedures will be used (1) to document that samples are representative of actual conditions at the Site and (2) identify possible cross-contamination from field activities or sample transit. Laboratory QA/QC procedures and analyses will be used to demonstrate whether analytical results have been biased either by interfering compounds in the sample matrix, or by laboratory techniques that may have introduced systematic or random errors to the analytical process. QA/QC samples (field and trip blanks, duplicates, etc.) will be collected and analyzed at an ELAP-certified laboratory.

Investigation Derived Waste

Cuttings may be disposed at the site within the borehole that generated them to within 24 inches of the surface unless:

- Free product or grossly contaminated soil, are present in the cuttings;
- The borehole has penetrated an aquitard, aquiclude or other confining layer; or extends significantly into bedrock;
- Backfilling the borehole with cuttings will create a significant path for vertical movement of contaminants. Soil additives (bentonite) may be added to the cuttings to reduce permeability;
- The soil cannot fit into the borehole.

Those soil cuttings needing to be managed on-site will be containerized in properly labeled DOT approved 55-gallon drums for future off-site disposal at a permitted facility. All boreholes which require drill cuttings disposal would ultimately be filled with bentonite chips (hydrated) and asphalt/concrete capping. Disposable sampling equipment including, spoons, gloves, bags, paper towels, etc. that came in contact with environmental media will be double bagged and disposed as municipal trash in a facility trash dumpster as non-hazardous trash.

Reporting

A Supplemental Remedial Investigation Report (SRIR) will be prepared following completion of the field activities and receipt of the laboratory data. The report will provide detailed summaries of the investigative findings. Soil analytical results will be compared to the NYSDEC Part 375-6.8(a) Unrestricted Used Soil Cleanup Objectives, appropriate Part 375-6.8(b) Restricted Soil Cleanup Objectives and supplemental cleanup objectives in NYSDEC CP-51 Soil Cleanup Guidance. Soil vapor analytical results will be compared to NYSDOH October 2006 Final Guidance for Evaluating Soil Vapor Intrusion Matrices, updated May 2017.

The report will include an updated sampling plan, spider diagrams, analytical data tables for all reported constituent compounds (including non-detectable concentrations) and remedial recommendations, as warranted. Site grade varies as much as 4.74 feet across the site. In the SRIR, all applicable documentation (site map, conceptual building plans, soil boring and sampling intervals) will be prepared from a single grade reference point as well as in terms of elevation.

The report will also include all sampling logs and photos taken during the investigation.

Investigation HASP

An OSHA compliant Health and Safety Plan that meets all OSHA HAZWOPER requirements will be implemented during the site work to protect worker safety. The Site Safety Coordinator will ensure full compliance of the HASP in accordance with applicable health and safety laws and regulations. All field personnel involved in investigation activities will participate in training required under OSHA HAZWOPER 29 CFR 1910.120, including 40-hour hazardous waste operator training and annual 8-hour refresher training. Emergency telephone numbers will be posted at the site location before any work begins. A safety meeting will be conducted before each shift begins. Topics to be discussed include task hazards and protective measures (physical, chemical, environmental); emergency procedures; PPE levels and other relevant safety topics including a highlighted route map to the nearest hospital/emergency room. Meetings will be documented in a log book or specific form. Potential on-site chemicals of concern include VOCs, SVOCs, Pesticides/PCBs, and Metals (specifically arsenic, lead, and mercury at a minimum). Information fact sheets and/or summary tables for each contaminant group are included in the HASP. A copy of this HASP will be on-site during each sampling event.

Re: 8-10 Grand Avenue, Brooklyn, NY 11211
NYSDEC Site No. 224446

Dear Amir Nour:

On October 1, 2025, the New York State Department of Environmental Conservation's (NYSDEC) issued a letter notifying you that the above-referenced site requires investigation and, depending on the results of the investigation, remediation and/or mitigation of any contaminants identified on the site. This site was referred to NYSDEC from the New York City Office of Environmental Remediation (OER) as required under the NYSDEC Memorandum of Agreement.

As discussed during an October 15, 2025, conference call among your team, NYSDEC, and OER, the results of the 2025 Remedial Investigation conducted under OER's oversight have not conclusively demonstrated whether: (a) there remains a soil vapor intrusion (SVI) concern with the existing on-site building; or (b) whether there is an on-site source of the contaminants identified in previous SVI sampling performed in 2024.

Please submit a Supplemental RIWP to OER within 30 days. OER will coordinate with NYSDEC as needed to facilitate prompt completion of the additional investigation activities outlined above. Based on the results of the additional investigation, NYSDEC will determine whether any additional actions are required. Please note that this coordination is being provided solely for purposes of this specific case and does not alter or waive NYSDEC's standard policy requiring execution of an Order on Consent prior to technical review.

If you have any questions, please contact me at jane.oconnell@dec.ny.gov.

Sincerely,

Jane H. O'Connell, P.G.
Regional Remediation Engineer

Laboratory Analytical Report and Chain of Custody ……Appendix A

1.0 INTRODUCTION

Associated Environmental Services, Ltd. has prepared the following report to document the results of the Limited Phase II Subsurface Investigation performed at 8-10 Grand Avenue in Brooklyn, New York. The site location is provided on **Figure 1.0**. A recent Phase I Environmental Site Assessment prepared by Advanced Cleanup Technologies, Inc. (ACT) identified the following Recognized Environmental Conditions (RECs) at the subject property:

- Historical industrial usage of the subject property; and
- An Inactive Hazardous Waste Disposal Site at the adjacent property to the north.

Based on the presence of the RECs listed above, a Phase II Subsurface Investigation was recommended to determine if environmental quality of the subject property has been impacted. The subsurface investigation was performed at the subject property on September 11, 2013 to assess the possible presence of environmental impacts in the soil, groundwater, and soil vapor beneath the subject property. The following report summarizes the findings of the Limited Phase II Subsurface Investigation activities.

1.1 Scope of Work

The scope of work entailed the following:

- Drill five (5) borings in selected locations utilizing Geoprobe direct-push rig in order to obtain representative soil and/or groundwater samples. Groundwater in this area of Brooklyn is located approximately twenty (20) feet below grade;
- A total of five (5) soil samples were submitted for laboratory analysis to evaluate potential environmental impacts. Groundwater samples were not submitted for laboratory analysis due to the shallow refusal (i.e., less than 15.5 feet below grade) encountered in the soil borings drilled at the subject property; and
- Sub-slab soil vapor samples were collected from three locations throughout the subject property to evaluate the potential of adverse vapor intrusion into the building. One (1) indoor air sample was also collected and submitted for laboratory analysis along with the sub-slab vapor samples.

The methodology and equipment employed during the investigative activities are described in depth in Section 3.0.

2.0 SITE DESCRIPTION

2.1 Site Location

The subject property is located at 8-10 Grand Avenue in Brooklyn, New York. The subject property is a rectangular-shaped parcel of land situated in a commercial/residential area of the Bushwick Section of Brooklyn, New York. The current use of the property is commercial and multi-family residential.

2.2 Site Improvements

The Property is improved with a two (2) story commercial building, reportedly containing a paper goods and household supplies store and a metal shop, and a seven (7) story mix-use apartment building, reportedly containing residential apartments above an art studio on the ground floor. The building footprint encompasses the entire subject property. The Phase I ESA reported the current site usage would not appear to impact environmental quality of the subject property. The subject property and the relevant site features are depicted on **Figure 2.0** - Site Diagram.

2.3 Hydrogeologic Setting

During the Limited Phase II investigation, representative soil samples were collected to refusal within each soil boring, which ranged from three (3) to fifteen (15) feet below grade. The subsurface soil was noted to consist of a brown, medium to fine sand encountered to the terminal depth of the borings SB-1 and SB-2. In soil borings SB-3, SB-4, and SB-5, the subsurface was comprised of urban fill made up of a fine sand mixed with concrete and brick rubble.

Groundwater was not encountered in the soil boring during the investigation. Based upon the regional topography and hydrology, the groundwater beneath the property is located approximately 20 feet below grade and is flowing to the north. Groundwater is not utilized as a source of potable water at the subject property. Potable water for the subject property is supplied by New York City Department of Environmental Protection.

3.0 PHASE II SUBSURFACE INVESTIGATION ACTIVITIES

The Limited Phase II Subsurface Investigation activities were conducted at the subject site on September 11, 2013. The investigation was conducted in conformance with the NYSDEC Division of Environmental Remediation (DER) DER-10/Technical Guidance for Site Investigation and Remediation. The following sections summarize the field activities, the field data collected, laboratory analytical data, as well as any other pertinent information obtained.

3.1 Soil Characterization

Soil boring locations were selected to evaluate potential environmental impacts from past manufacturing operations and the adjacent inactive hazardous waste site. A site plan of the subject property showing the locations of significant site features and soil boring locations is provided on **Figure 2.0** - Site Diagram.

A Geoprobe Model 6610 was used to drill the soil borings SB-1 through SB-5. Representative soil samples were collected in continuous four (4) -foot intervals from ground surface to a terminal depth of approximately fifteen and one half (15.5) feet in SB-1, ten (10) feet in SB-2, four (4) feet in SB-3, and three (3) feet in SB-4 and SB-5. The soil samples were collected in a disposable single-use acetate sheaths. The subsurface lithology was relatively homogenous within each of the parcels at the subject property, consisting of a brown, medium to fine sand encountered in SB-1 and SB-2 drilled within the 10 Grand Avenue parcel, and urban fill made up of a fine sand mixed with concrete and brick rubble in soil borings SB-3, SB-4, and SB-5 drilled within the 8 Grand Avenue parcel. The soil samples were inspected for visual and/or olfactory evidence of contamination. No odor or staining was evident in the soil samples. In addition, the soil samples were field screened with a photo-ionization detector (PID), for the presence of volatile organic compounds (VOCs). PID readings were observed between 0.1 and 1.2 parts per million (PPM) in the soil samples.

Based on the depth of sample or PID reading, the soil sample intervals from the soil borings which exhibited the greatest likelihood of contamination (i.e., staining or highest PID reading) were submitted for laboratory analysis. The soil samples were submitted to Alpha Analytical (Alpha), which is a New York State Department of Health (NYDOH) certified laboratory located in Westborough, Massachusetts. The NYDOH certification number for the laboratory is 11148. The soil samples SB-1 (1-6'), SB-2 (1-6'), SB-3 (0-4'), SB-4 (0-3'), and SB-5 (0-3') were submitted for analysis of volatile organic compounds (VOCs) using USEPA Method 8260 and semi-volatile organic compounds (SVOCs) using USEPA Method 8270.

Soil Sample Results

The analytical results were compared to the 6NYCRR Part 375 Table 375-6.8(a) Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Table 375-6.8(b) Restricted Use Soil Cleanup Objectives for Commercial applications (RCUSCOs). The UUSCOs are based on the most conservative criteria established by the NYSDEC and NYSDOH for the protection of Public Health, Ecological Resources, and Groundwater, and provide "use without imposed restrictions, such as environmental easements or other land use controls" as defined under 6NYCRR Part 375. The RCUSCOs are based on the protection of Public Health under the scenario of a commercial establishment (such as its recent use), and would require and environmental easement and institutional or engineering controls to manage contamination remaining at the property. A summary of the soil analytical results is provided on **Table 1**. A complete copy of laboratory analytical results is provided in **Appendix A**.

The analytical results of the soil samples detected concentrations of three (3) VOCs; acetone, naphthalene, and 4-ethyltoluene, above the minimum detectable limit (MDL) in soil sample SB-3 (0-4'). Concentrations of acetone and naphthalene were detected above the MDLs in sample SB-4 (0-3'), and a concentration of acetone was also detected in sample SB-1 (1-6'). However, the concentrations of VOCs in the soil samples are well below the UUSCOs for these compounds. No concentrations of VOCS were detected above the MDLs in samples SB-2 (1-6') and SB-5 (0-3').

Concentrations of numerous SVOCs were detected above the MDLs in four (4) of the five (5) soil samples, with only one SVOC, bis(2-ethylhexyl)phthalate, detected in sample SB-5 (0-3'). The SVOCs detected in the SB-1, SB-2, SB-3, and SB-4 soil samples consisted of polynuclear aromatic hydrocarbons (PAHs) typically found in petrochemical products. Of note, concentrations of benzo(a)anthracene at 5.5 milligrams per kilogram (mg/kg) in SB-3 (0-4') and 2.3 mg/kg in SB-4 (0-3'), chrysene at 5.7 mg/kg in SB-3 (0-4'), benzo(b)fluoranthene at 6.4 mg/kg in SB-3 (0-4') and 2.1 mg/kg in SB-4 (0-3'), benzo(k)fluoranthene at 2.2 mg/kg in SB-3 (0-4'), benzo(a)pyrene at 5.3 mg/kg in SB-3 (0-4') and 1.9 mg/kg in SB-4 (0-3'), and indeno(1,2,3-cd)pyrene at 3.5 mg/kg in SB-3 (0-4') and 1.0 mg/kg in SB-4 (0-3') were detected in exceedance of the respective NYSDEC Part 375 UUSCOs. Further, the concentrations of benzo(b)fluoranthene in SB-3 (0-4') and of benzo(a)pyrene in SB-3 (0-4') and SB-4 (0-3') were in contravention of the Part 375 RCUSCOs. No other concentrations of SVOCs were detected in exceedane of the NYSDEC Part 375 soil cleanup objectives.

3.2 Sub-Slab Vapor Investigation

Three (3) sub-slab soil vapor samples were collected beneath the poured concrete slab-on-grade at roughly equal distant locations within the subject property. The location and designation of the sub-slab soil vapor samples are provided on **Figure 2**. The sub-slab soil vapor samples were collected in compliance with the New York Department of Health (NYSDOH) *Guidance for Evaluating Soil Vapor Intrusion in the State of New York* issued in October of 2006 (hereinafter, the NYSDOH Guidance Document). The sub-slab soil vapor samples were collected to assess potential vapor intrusion into the building as well as to indicate potential unidentified subsurface

contamination.

The sub-slab soil vapor sampling points were installed using hand-held power tools. The soil vapor points consisted of one-quarter inch polyethylene tubing set no greater than two (2) inches beneath the bottom of the concrete floor slab. The annular space surrounding the tubing was filled with washed #1 crushed stone as a filter pack and bentonite clay was installed atop of the filter pack to prevent atmospheric air infiltration.

Once installed, the bentonite seal for the vapor sample points were checked by introducing helium into a closed/sealed space surrounding the sampling tube as a tracer gas to confirm the integrity of the sample point seal. Helium was not detected in the three (3) sub-slab sample points confirming the integrity of the sample point seals. The sub-slab soil vapor sampling points were purged of three tubing volumes at a flow rate no greater than 0.2 liters per minute (L/m), and a laboratory-supplied Summa vacuum canister was connected to the polyethylene tubing. The samples were collected at a flow rate of approximately 0.0125 L/m over approximately one (1) hour using a flow regulators calibrated by the laboratory. The sampling tubing was connected to the Summa canister using laboratory-supplied air-tight compression fitting.

Additionally, one (1) indoor air quality sample was collected concurrently and over the same duration as the sub-slab soil vapor samples. The indoor air sample was collected using laboratory-supplied Summa vacuum canisters set atop a three (3) -foot tall stand in order to represent the air quality within the typical breathing zone (as required in the NYSDOH Guidance Document). The sample was collected to establish indoor air ambient conditions at the subject property. The sub-slab vapor and air samples were submitted for laboratory analysis of VOCs using USEPA Method TO-15.

Sub-Slab Vapor Results

A summary of the sub-slab vapor and indoor air sample data is provided in **Table 2**. Analysis of the sub-slab vapor sample SV-1 detected concentrations of 28 VOCs, and analysis of samples SV-2 and SV-3 detected concentrations of 25 VOCs. The indoor air sample, IA-1, detected concentrations of 24 VOCs within the building. A total of 20 VOCs were detected in both the sub-slab vapor samples and the indoor air sample IA-1.

The NYSDOH Guidance Document does not provide referenced guidance for a broad array of VOCs. Therefore, the concentrations of the VOCs not discussed in the NYSDOH Guidance Document were compared to the Target Shallow Soil Gas Concentrations (TSSGCs) provided under Question 4: Generic Screening Levels of the United States Environmental Protection Agency (USEPA) OSWER Draft Guidance for Evaluating the Vapor Intrusion into Indoor Air Pathway from Groundwater and Soils (Subsurface Vapor Intrusion Guidance), November 2002. The comparison of VOC concentrations not discussed in the NYSDOH Guidance Document detected one (1) VOC, 1,2,4-trimethylbenzene, slightly above the respective TSSGC. Concentrations of 1,2,4-trimethylbenzene were detected at 130 micrograms per cubic meter

(ug/m^3) in SV-1, 111 ug/m^3 in SV-2 and 106 ug/m^3 in SV-3, which are above the TSSGC of 60 ug/m^3.

Of note, the compounds trichloroethene (TCE), tetrachloroethene (PCE), carbon tetrachloride (carbon tet), vinyl chloride (VC), 1,1,1-trichloroethane (1,1,1-TCA), 1,1-dichloroethene (1,1-DCE), and cis-1,2-dichloroethene (c-1,2-DCE) are referenced in the NYSDOH Guidance Document. Concentrations of TCE were detected in two sub-slab vapor samples, at 13.0 ug/m^3 in SV-1 and at 2.04 ug/m^3 in SV-3. Concentrations of PCE were detected between 16.4 ug/m^3 and 127 ug/m^3 in the three sub-slab vapor samples. Concentrations of 1,1,1-TCA were detected between 4.62 ug/m^3 and 436 ug/m^3 in the three sub-slab vapor samples. One concentration of carbon tet was detected in sample SV-1 at 3.74 ug/m^3. No concentrations of VC, 1,1-DCE, and c-1,2-DCE were detected above the MDLs in the sub-slab vapor samples. Concentrations of TCE, PCE, 1,1,1-TCA and carbon tet, VC, 1,1-DCE, and c-1,2-DCE were not detected above the MDLs in the indoor air sample IA-1.

The concentrations of TCE, PCE, 1,1,1-TCA, and carbon tet reported in the sub-slab soil vapor samples were compared to the Decision Matrices provided in the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006. The TCE and carbon tet concentrations fall within the Response Item 2. - "Take reasonable and practicable actions to identify source(s) and reduce exposures" provided in Decision Matrix 1. The PCE and 1,1,1-TCA concentrations fall within the Response Item 5.- "Monitor" in Decision Matrix 2.

4.0 CONCLUSIONS AND RECOMMENDATIONS

4.1 Soil Characterization

The results of the field investigation and laboratory analysis did not detect concentrations of VOCs above the NYSDEC Part 375 UUSCOs. Concentrations of six (6) petroleum-related SVOCs in SB-3 (0-4') and four (4) petroleum-related SVOCs in SB-4 (0-3') were detected above the NYSDEC Part 375 UUSCOs. Concentrations of benzo(a)pyrene and benzo(b)fluoranthene were detected, primarily beneath the northern portion of the property, in contravention of the respective RCUSCOs. No concentrations of SVOCs were detected above the Part 375 UUSCOs in samples SB-1 (1-6') and SB-2 (1-6') collected beneath the southern portion of the subject property.

Soil quality, primarily beneath the northern portion of the subject property, is not compliant with NYSDEC criteria for unrestricted reuse. However, with the exception of the aforementioned chemical concentrations, the property is compliant with NYSDEC regulations for its current use as a commercial establishment.

The poor soil quality found beneath the northern portion of the subject property is indicative of the urban fill identified in the soil borings, which also commonly exhibit the aforementioned adverse impacts due to anthropogenic effects. The type and concentrations of the SVOCs detected in the subsurface soil are consistent with asphalt, roofing, and paving construction materials which are also typical components within urban fill.

Further assessment of the soil sampling results under the 6NYCRR Part 375 regulations indicate that with the exception of isolated concentrations of individual constituents, the concentrations of SVOCs detected in exceedance of the UUSCOs are related to the Protection of Ecological Resources, which are not truly a viable concern in the region surrounding the property. The occurrence of SVOCs at concentrations above the 6 NYCRR RCSCOs is related to the potential adverse impacts to human health. However, as these conditions are isolated, beneath an impermeable surface cover (i.e., concrete or asphalt), the soil is not in contact from the occupants (i.e., the workers), whereby the concentrations of the two (2) SVOCs above the commercial objectives do not pose a risk to human health.

4.2 Sub-Slab Vapor

The TCE and carbon tet concentrations fall within the Response Item 2. - "Take reasonable and practicable actions to identify source(s) and reduce exposures" provided in Decision Matrix 1. As stated in the NYSDOH Guidance Document, "the concentration detected in the indoor air sample is likely due to indoor and/or outdoor sources rather than soil vapor intrusion given the concentration detected in the sub-slab vapor sample."

The PCE and 1,1,1-TCA concentrations fall within the Response Item 5.- "Monitor" in Decision Matrix 2. As stated in the NYSDOH Guidance, "Monitoring, including sub-slab vapor, basement air, lowest occupied living space air, and outdoor air sampling, is needed to determine

whether concentrations in the indoor air or sub-slab vapor have changed. Monitoring may also be needed to determine whether existing building conditions (e.g., positive pressure heating, ventilation and air-conditioning systems) are maintaining the desired mitigation endpoint and to determine whether changes are needed. The type and frequency of monitoring is determined on a site-specific and building-specific basis, taking into account applicable environmental data and building operating conditions. Monitoring is an interim measure required to evaluate exposures related to soil vapor intrusion until contaminated environmental media are remediated."

4.3 Recommendations

The soil conditions at the property would not facilitate residential redevelopment. To do so, the historic urban fill should be excavated and removed for proper off-site disposal. Field observations indicated the urban fill apparently associated with elevated SVOC concentrations are limited to the northern portion of the property. Therefore supplemental testing of the soil beneath the northern portion of the subject property should be conducted during preliminary stages of potential future property redevelopment to ascertain the appropriate disposal of soil to be removed.

Further, construction and maintenance workers may potentially contact the soil as part of the redevelopment and subsequent operation of the property and should do so using appropriate health and safety procedures and personnel protective equipment. AES recommends any proposed subsurface work be conducted under an appropriate Construction Health and Safety Plan to inform workers of the subsurface conditions and establish appropriate monitoring guidelines to mitigate any potential worker exposure.

Current site conditions do not indicate sub-slab vapor intrusion is occurring. However, concentrations of the VOCs noted in the NYSDOH Guidance Document are significant enough to warrant "monitoring". Further testing would not appear warranted under the subject property's current configuration, however, AES recommends additional sub-slab vapor and indoor air sampling and analysis be conducted should significant repair to the existing foundation be required or in conjunction with future redevelopment of the property that may disturb the subsurface soil.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples.

Please contact Client Services at 800-624-9220 with any questions.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.
C	- Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
D	- Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
E	- Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
G	- The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.
H	- The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
I	- The lower value for the two columns has been reported due to obvious interference.

Report Format: Data Usability Report

Project Name:	8 + 10 GRAND AVENUE	**Lab Number:**	L1317894
Project Number:	Not Specified	**Report Date:**	09/17/13

Data Qualifiers

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the reporting limit (RL) for the sample.

Report Format: Data Usability Report

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised August 3, 2012 – Mansfield Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Connecticut Department of Public Health Certificate/Lab ID: PH-0141.

Wastewater/Non-Potable Water (Inorganic Parameters: pH, Turbidity, Conductivity, Alkalinity, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Suspended Solids (non-filterable). Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Acid Extractables, Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, PAHs, Haloethers, Chlorinated Hydrocarbons, Volatile Organics.)

Solid Waste/Soil (Inorganic Parameters: pH, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Titanium, Vanadium, Zinc, Total Organic Carbon, Corrosivity, TCLP 1311, SPLP 1312. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Volatile Organics, Acid Extractables, Benzidines, Phthalates, Nitrosamines, Nitroaromatics & Cyclic Ketones, PAHs, Haloethers, Chlorinated Hydrocarbons.)

Florida Department of Health Certificate/Lab ID: E87814. ***NELAP Accredited.***

Non-Potable Water (Inorganic Parameters: SM2320B, SM2540D, SM2540G.)

Solid & Chemical Materials (Inorganic Parameters: 6020, 7470, 7471, 9045. Organic Parameters: EPA 8260, 8270, 8082, 8081.)

Air & Emissions (EPA TO-15.)

Louisiana Department of Environmental Quality Certificate/Lab ID: 03090. ***NELAP Accredited.***

Non-Potable Water (Inorganic Parameters: EPA 180.1, 245.7, 1631E, 3020A, 6020A, 7470A, 9040, 9050A, SM2320B, 2540D, 2540G, 4500H-B, Organic Parameters: EPA 3510C, 3580A, 3630C, 3640A, 3660B, 3665A, 5030B, 8015D, 3570, 8081B, 8082A, 8260B, 8270C, 8270D.)

Solid & Chemical Materials (Inorganic Parameters: EPA 1311, 3050B, 3051A, 3060A, 6020A, 7196A, 7470A, 7471B, 7474, 9040B, 9045C, 9060. Organic Parameters: EPA 3540C, 3570, 3580A, 3630C, 3640A, 3660, 3665A, 5035, 8015D, 8081B, 8082A, 8260B, 8270C, 8270D.)

Biological Tissue (Inorganic Parameters: EPA 6020A. Organic Parameters: EPA 3570, 3510C, 3610B, 3630C, 3640A, 8270C, 8270D.)

Air & Emissions (EPA TO-15.)

New Hampshire Department of Environmental Services Certificate/Lab ID: 2206. ***NELAP Accredited.***

Non-Potable Water (Inorganic Parameters: EPA 180.1, 1631E, 6020A, 7470A, 9040B, 9050A, SM2540D, 2540G, 4500H+B, 2320B, 3020A, . Organic Parameters: EPA 3510C, 3630C, 3640A, 3660B, 8081B, 8082A, 8270C, 8270D, 8015D.)

Solid & Chemical Materials (Inorganic Parameters: SW-846 1311, 3050B, 3051A, 6020A, 7471B, 9040B, 9045C. Organic Parameters: SW-846 3540C, 3580A, 3630C, 3640A, 3660B, 3665A, 8270C, 8015D, 8082A, 8081B.)

New Jersey Department of Environmental Protection Certificate/Lab ID: MA015. ***NELAP Accredited.***

Non-Potable Water (Inorganic Parameters: SW-846 1312, 3020A, SM2320B, SM2540D, 2540G, 4500H-B, EPA 180.1, 1631E, SW-846 7470A, 9040C, 6020A, 9050A. Organic Parameters: SW-846 3510C, 3580A, 3630C, 3640A, 3660B, 3665A, 8015D, 8081B, 8082A, 8270C, 8270D)

Solid & Chemical Materials (Inorganic Parameters: SW-846 1311, 1312, 3050B, 3051A, 6020A, 7471B, 7474, 9040B, 9040C, 9045C, 9045D, 9060. Organic Parameters: SW-846 3540C, 3570, 3580A, 3630C, 3640A, 3660B, 3665A, 8081B, 8082A, 8270C, 8270D, 8015D.)

Atmospheric Organic Parameters (EPA 3C, TO-15, TO-10A, TO-13A-SIM.)

Biological Tissue (Inorganic Parameters: SW-846 6020A. Organic Parameters: SW-846 8270C, 8270D, 3510C, 3570, 3610C, 3630C, 3640A)

New York Department of Health Certificate/Lab ID: 11627. ***NELAP Accredited.***

Non-Potable Water (Inorganic Parameters: SM2320B, SM2540D, 6020A, 1631E, 7470A, 9050A, EPA 180.1, 3020A. Organic Parameters: EPA 8270C, 8270D, 8081B, 8082A, 3510C.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 6020A, 7471B, 7474, 9040C, 9045D. Organic Parameters: EPA 8270C, 8270D, 8081B, 8082A, 1311, 3050B, 3580A, 3570, 3051A.)

Air & Emissions (EPA TO-15, TO-10A.)

Pennsylvania Certificate/Lab ID: 68-02089 ***NELAP Accredited***

Non-Potable Water (Inorganic Parameters: 1312, 1631E, 180.1, 3020A, 6020A, 7470A, 9040B, 9050A, 2320B, 2540D, 2540G, SM4500H+-B. Organic Parameters: 3510C, 3580A, 3630C, 3640A, 3660B, 3665A, 8015D, 8081B, 8082A, 8270C, 8270D .)

Solid & Hazardous Waste (Inorganic Parameters: EPA 1311, 3051A, 6020A, 7471B, 7474 9040B, 9045C, 9060. Organic Parameters: EPA3050B, 3540C, 3570, 3580A, 3630C, 3640A, 3660B, 3665A, 8270C, 8270D, 8081B, 8015D, 8082A.)

Rhode Island Department of Health Certificate/Lab ID: LAO00299. ***NELAP Accredited via NJ-DEP.***

Refer to NJ-DEP Certificate for Non-Potable Water.

Texas Commission of Environmental Quality Certificate/Lab ID: T104704419-08-TX. ***NELAP Accredited.***

Solid & Chemical Materials (Inorganic Parameters: EPA 6020, 7470, 7471, 1311, 9040, 9045, 9060. Organic Parameters: EPA 8015, 8270, 8081, 8082.)

Air (Organic Parameters: EPA TO-15)

Virginia Division of Consolidated Laboratory Services Certificate/Lab ID:460194. ***NELAP Accredited.***

Non-Potable Water (Inorganic Parameters:EPA 3020A, 6020A, 245.7, 9040B. Organic Parameters: EPA 3510C, 3640A, 3660B, 3665A, 8270C, 8270D, 8082A, 8081B, 8015D.)

Solid & Chemical Materials (Inorganic Parameters: EPA 6020A,7470A,7471B,9040B,9045C,3050B,3051, 9060. Organic Parameters: EPA 3540C, 3580A, 3630C, 3640A, 3660B, 3665A, 3570, 8270C, 8270D, 8081B, 8082A, 8015D.)

Washington State Department of Ecology Certificate/Lab ID: C954. *Non-Potable Water* (Inorganic Parameters: SM2540D, 180.1, 1631E.)

Solid & Chemical Materials (Inorganic Parameters: EPA 6020, 7470, 7471, 7474, 9045C, 9050A, 9060. Organic Parameters: EPA 8081, 8082, 8015, 8270.)

U.S. Army Corps of Engineers

Department of Defense, L-A-B Certificate/Lab ID: L2217.01.

Non-Potable Water (Inorganic Parameters: EPA 6020A, SM4500H-B. Organic Parameters: 3020A, 3510C, 8270C, 8270D, 8270C-ALK-PAH, 8270D-ALK-PAH, 8082A, 8081B, 8015D-SHC, 8015D.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 1311, 3050B, 6020A, 7471A, 9045C, 9060, SM 2540G, ASTM D422-63. Organic Parameters: EPA 3580A, 3570, 3540C, 8270C, 8270D, 8270C-ALK-PAH, 8270D-ALK-PAH 8082A, 8081B, 8015D-SHC, 8015D.

Air & Emissions (EPA TO-15.)

Analytes Not Accredited by NELAP

Certification is not available by NELAP for the following analytes: **8270C:** Biphenyl. **TO-15:** Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 2-Methylnaphthalene, 1-Methylnaphthalene.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples.

Please contact Client Services at 800-624-9220 with any questions.

Project Number: Not Specified **Report Date:** 09/17/13

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

Any reported concentrations that are below 200 ug/kg may be biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

Semivolatile Organics

L1317887-03 has elevated detection limits due to the dilution required by the matrix interferences encountered during the concentration of the sample and the analytical dilution required by the sample matrix.
The surrogate recoveries for L1317887-03 are below the acceptance criteria for 2-fluorophenol, phenol-d6, nitrobenzene-d5, 2-fluorobiphenyl, and 4-terphenyl-d14 (all at 0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.
The WG635726-2/-3 LCS recoveries, associated with L1317887-02 through -05, are below the acceptance criteria for benzoic acid (0%/0%); however, it has been identified as a "difficult" analyte. The results of the associated samples are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.
C	- Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
D	- Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
E	- Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
G	- The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.
H	- The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
I	- The lower value for the two columns has been reported due to obvious interference.

Report Format: DU Report with "J" Qualifiers

Project Name:	8+10 GRAND AVENUE	**Lab Number:**	L1317887
Project Number:	Not Specified	**Report Date:**	09/17/13

Data Qualifiers

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with "J" Qualifiers

Project Name: 8+10 GRAND AVENUE
Project Number: Not Specified
Lab Number: L1317887
Report Date: 09/17/13

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised August 29, 2013 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Connecticut Department of Public Health Certificate/Lab ID: PH-0574. ***NELAP Accredited Solid Waste/Soil.***

Drinking Water (Inorganic Parameters: Color, pH, Turbidity, Conductivity, Alkalinity, Chloride, Free Residual Chlorine, Fluoride, Calcium Hardness, Sulfate, Nitrate, Nitrite, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Nickel, Selenium, Silver, Sodium, Thallium, Zinc, Total Dissolved Solids, Total Organic Carbon, Total Cyanide, Perchlorate. Organic Parameters: Volatile Organics 524.2, Total Trihalomethanes 524.2, 1,2-Dibromo-3-chloropropane (DBCP) 504.1, Ethylene Dibromide (EDB) 504.1, 1,4-Dioxane (Mod 8270). Microbiology Parameters: Total Coliform-MF mEndo (SM9222B), Total Coliform – Colilert (SM9223, Enumeration and P/A), E. Coli. – Colilert (SM9223, Enumeration and P/A), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D), Fecal Coliform-EC Medium (SM 9221E).

Wastewater/Non-Potable Water (Inorganic Parameters: Color, pH, Conductivity, Acidity, Alkalinity, Chloride, Total Residual Chlorine, Fluoride, Total Hardness, Silica, Sulfate, Sulfide, Ammonia, Kjeldahl Nitrogen, Nitrate, Nitrite, O-Phosphate, Total Phosphorus, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Dissolved Solids, Total Suspended Solids (non-filterable), BOD, CBOD, COD, TOC, Total Cyanide, Phenolics, Foaming Agents (MBAS), Bromide, Oil and Grease. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Acid Extractables (Phenols), Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, Polynuclear Aromatic Hydrocarbons, Haloethers, Chlorinated Hydrocarbons, Volatile Organics, TPH (HEM/SGT), CT-Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH. Microbiology Parameters: Total Coliform – MF mEndo (SM9222B), Total Coliform – MTF (SM9221B), E. Coli – Colilert (SM9223 Enumeration), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D), Fecal Coliform – A-1 Broth (SM9221E), Enterococcus - Enterolert.

Solid Waste/Soil (Inorganic Parameters: pH, Sulfide, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Tin, Vanadium, Zinc, Total Cyanide, Ignitability, Phenolics, Corrosivity, TCLP Leach (1311), SPLP Leach (1312 metals only), Reactivity. Organic Parameters: PCBs, PCBs in Oil, Organochlorine Pesticides, Technical Chlordane, Toxaphene, CT-Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH, Dicamba, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Dalapon, Volatile Organics (SW 8260), Acid Extractables (Phenols) (SW 8270), Benzidines (SW 8270), Phthalates (SW 8270), Nitrosamines (SW 8270), Nitroaromatics & Cyclic Ketones (SW 8270), PAHs (SW 8270), Haloethers (SW 8270), Chlorinated Hydrocarbons (SW 8270).)

State of Illinois Certificate/Lab ID: 003155. ***NELAP Accredited.***
Drinking Water (Inorganic Parameters: SM2120B, 2320B, 2510B, 2540C, SM4500CN-CE, 4500F-C, 4500H-B, 4500NO3-F, 5310C, EPA 200.7, 200.8, 245.1, 300.0. Organic Parameters: EPA 504.1, 524.2.)

Wastewater/Non-Potable Water (Inorganic Parameters: SM2120B, 2310B, 2320B, 2340B, 2510B, 2540B, 2540C, 2540D, SM4500CL-E, 4500CN-E, 4500F-C, 4500H-B, 4500NH3-H, 4500NO2-B, 4500NO3-F, 4500P-E, 4500S-D, 4500SO3-B, 5210B, 5220D, 5310C, 5540C, EPA 120.1, 1664A, 200.7, 200.8, 245.1, 300.0, 350.1, 351.1, 353.2, 410.4, 420.1. Organic Parameters: EPA 608, 624, 625.)

Hazardous and Solid Waste (Inorganic Parameters: EPA 1010A, 1030, 1311, 1312, 6010C, 6020A, 7196A, 7470A, 7471B, 9012B, 9014, 9038, 9040C, 9045D, 9050A, 9065, 9251. Organic Parameters: 8011 (NPW only), 8015C, 8081B, 8082A, 8151A, 8260C, 8270D, 8315A, 8330.)

Maine Department of Human Services Certificate/Lab ID: 2009024.
Drinking Water (Inorganic Parameters: SM9215B, 9222D, 9223B, EPA 180.1, 353.2, SM2120B, 2130B, 2320B, 2510C, 2540C, 4500Cl-D, 4500CN-C, 4500CN-E, 4500F-C, 4500H+B, 4500NO3-F, 5310C, EPA 200.7, EPA 200.8, 245.1, EPA 300.0. Organic Parameters: 504.1, 524.2.)

Wastewater/Non-Potable Water (Inorganic Parameters: EPA 120.1, 1664A, 300.0, 350.1, 351.1, 353.2, 410.4, 420.1, 8315A, 9010C, SM2120B, 2310B, 2320B, 2510B, 2540B, 2540C, 2540D, 426C, 4500Cl-E, 4500CN-C, 4500CN-E, 4500F-B, 4500F-C, 4500H+B, 4500Norg-C, 4500NH3-B, 4500NH3-H, 4500NO2-B, 4500NO3-F, 4500P-B, 4500P-E, 4500S2-D, 4500SO3-B, 5540C, 5210B, 5220D, 5310C, 9010B, 9030B, 9040C, 7470A, 7196A, 2340B, EPA 200.7, 6010C, 200.8, 6020A, 245.1, 1311, 1312, 3005A, Enterolert, 9223B, 9222D. Organic Parameters: 608, 624, 625, 8011, 8081B, 8082A, 8330, 8151A, 8260C, 8270D, 3510C, 3630C, 5030B, ME-DRO, ME-GRO, MA-EPH, MA-VPH.)

Solid Waste/Soil (Inorganic Parameters: 9010B, 9012A, 9014, 9040B, 9045C, 6010C, 6020A, 7471B, 7196A, 9050A, 1010, 1030, 9065, 1311, 1312, 3005A, 3050B, 9038, 9251. Organic Parameters: ME-DRO, ME-GRO, MA-EPH, MA-VPH, 8260C, 8270D, 8330, 8151A, 8081B, 8082A, 3540C, 3546, 3580A, 3620C, 3630C, 5030B, 5035.)

Massachusetts Department of Environmental Protection Certificate/Lab ID: M-MA086.
*Drinking Water (*Inorganic Parameters: (EPA 200.8 for: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl) (EPA 200.7 for: Ba,Be,Ca,Cd,Cr,Cu,Na,Ni) 245.1, (300.0 for: Nitrate-N, Fluoride, Sulfate); (EPA 353.2 for: Nitrate-N, Nitrite-N); (SM4500NO3-F for: Nitrate-N and Nitrite-N); 4500F-C, 4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, 2320B, SM2540C, SM4500H-B. Organic Parameters: (EPA 524.2 for: Trihalomethanes, Volatile Organics); (504.1 for: 1,2-Dibromoethane, 1,2-Dibromo-3-Chloropropane), EPA 332. Microbiology Parameters: SM9215B; ENZ. SUB. SM9223; ColilertQT SM9223B; MF-SM9222D.)

*Non-Potable Water (*Inorganic Parameters:, (EPA 200.8 for: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn); (EPA 200.7 for: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn); 245.1, SM4500H,B, EPA 120.1, SM2510B, 2540C, 2340B, 2320B, 4500CL-E, 4500F-BC, 426C, SM4500NH3-BH, (EPA 350.1 for: Ammonia-N), LACHAT 10-107-06-1-B for Ammonia-N, SM4500NO3-F, 353.2 for Nitrate-N, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, 4500P-B,E, 5220D, EPA 410.4, SM 5210B, 5310C, 4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.
Organic Parameters: (EPA 624 for Volatile Halocarbons, Volatile Aromatics),(608 for: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT,Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs-Water), (EPA 625 for SVOC Acid Extractables and SVOC Base/Neutral Extractables), 600/4-81-045-PCB-Oil. Microbiology Parameters: (ColilertQT SM9223B; Enterolert-QT: SM9222D-MF.)

New Hampshire Department of Environmental Services Certificate/Lab ID: 200307. ***NELAP Accredited.***
Drinking Water (Inorganic Parameters: SM 9222B, 9223B, 9215B, EPA 200.7, 200.8, 300.0, SM4500CN-E, 4500H+B, 4500NO3-F, 2320B, 2510B, 2540C, 4500F-C, 5310C, 2120B, EPA 332.0. Organic Parameters: 504.1, 524.2.)

Non-Potable Water (Inorganic Parameters: SM9222D, 9221B, 9222B, 9221E-EC, EPA 3005A, 200.7, 200.8, 245.1, SW-846 6010C, 6020A, 7196A, 7470A, SM3500-CR-D, EPA 120.1, 300.0, 350.1, 350.2, 351.1, 353.2, 410.4, 420.1, 426C, 1664A, SW-846 9010B, 9010C, 9030, 9040B, 9040C, SM2120B, 2310B, 2320B, 2340B, 2540B, 2540D, 4500H+B, 4500CL-E, 4500CN-E, 4500NH3-H, 4500NO3-F, 4500NO2-B, 4500P-E, 4500-S2-D, 4500SO3-B, 5210B, 5220D, 2510B, 2540C, 4500F-C, 5310C, 5540C, LACHAT 10-204-00-1-A, LACHAT 10-107-06-2-D, 3060A. Organic Parameters: SW-846 3510C, 3630C, 5030B, 8260C, 8270D, 8330, EPA 624, 625, 608, SW-846 8082A, 8081B, 8015C, 8151A, 8330, 8270D-SIM.)

Solid & Chemical Materials (Inorganic Parameters: SW-846 6010C, 6020A, 7196A, 7471B, 1010, 1010A, 1030, 9010C, 9012B, 9014, 9030B, 9040C, 9045C, 9045D, 9050, 9065, 9251, 1311, 1312, 3005A, 3050B, 3060A. Organic Parameters: SW-846 3540C, 3546, 3050B, 3580A, 3620D, 3630C, 5030B, 5035, 8260C, 8270D, 8270D-SIM, 8330, 8151A, 8015B, 8015C, 8082A, 8081B.)

New Hampshire Department of Environmental Services Certificate/Lab ID: 2064. ***NELAP Accredited.***
Drinking Water (Organic Parameters: **EPA 524.2:** Di-isopropyl ether (DIPE), Ethyl-t-butyl ether (ETBE), Tert-amyl methyl ether (TAME)).

Non-Potable Water (Organic Parameters: **EPA 8260C:** 1,3,5-Trichlorobenzene. **EPA 8015C(M):** TPH.)

Solid & Chemical Materials (Organic Parameters: **EPA 8260C:** 1,3,5-Trichlorobenzene.)

New Jersey Department of Environmental Protection Certificate/Lab ID: MA935. ***NELAP Accredited.***
Drinking Water (Inorganic Parameters: SM9222B, 9221E, 9223B, 9215B, 4500CN-CE, 4500NO3-F, 4500F-C, EPA 300.0, 200.7, 200.8, 245.1, 2540C, SM2120B, 2320B, 2510B, 5310C, SM4500H-B. Organic Parameters: EPA 332, 504.1, 524.2.)

Non-Potable Water (Inorganic Parameters: SM5210B, EPA 410.4, SM5220D, 4500Cl-E, EPA 300.0, SM2120B, 2340B, SM4500F-BC, EPA 200.7, 200.8, 351.1, LACHAT 10-107-06-2-D, EPA 353.2, SM4500NO3-F, 4500NO2-B, EPA 1664A, SM5310B, C or D, 4500-PE, EPA 420.1, SM510ABC, SM4500P-B5+E, 2540B, 2540C, 2540D, EPA 120.1, SM2510B, SM15 426C, 9222D, 9221B, 9221C, 9221E, 9222B, 9215B, 2310B, 2320B, 4500NH3-H, 4500-S D, EPA 350.1, 350.2, SW-846 1312, 7470A, 5540C, SM4500H-B, 4500SO3-B, SM3500Cr-D, 4500CN-CE, EPA 245.1, SW-846 9040B, 9040C, 3005A, 3015, EPA 6010B, 6010C, 6020, 6020A, 7196A, 3060A, SW-846 9010C, 9030B. Organic Parameters: SW-846 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 3510C, EPA 608, 624, 625, SW-846 3630C, 5030B, 8011, 8015C, 8081A, 8081B, 8082, 8082A, 8151A, 8330, 1,4-Dioxane by NJ Modified 8270, 8015B, NJ EPH.)

Solid & Chemical Materials (Inorganic Parameters: SW-846, 6010B, 6010C, 6020, 6020A, 7196A, 3060A, 9030B, 1010, 1010A, 1030, 1311, 1312, 3005A, 3050B, 7471A, 7471B, 9010C, 9012B, 9014, 9038, 9040B, 9040C, 9045C, 9045D,

9050A, 9065, 9251. Organic Parameters: SW-846 8015B, 8015C, 8081A, 8081B, 8082, 8082A, 8151A, 8330, 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 3540C, 3546, 3580A, 3620C, 3630C, 5030B, 5035L, 5035H, NJ EPH.)

New York Department of Health Certificate/Lab ID: 11148. ***NELAP Accredited.***
Drinking Water (Inorganic Parameters: SM9223B, 9222B, 9215B, EPA 200.8, 200.7, 245.1, SM5310C, EPA 332.0, SM2320B, EPA 300.0, SM2120B, 4500CN-E, 4500F-C, 4500NO3-F, 2540C, SM 2510B. Organic Parameters: EPA 524.2, 504.1.)

Non-Potable Water (Inorganic Parameters: SM9221E, 9222D, 9221B, 9222B, 9215B, 5210B, 5310C, EPA 410.4, SM5220D, 2310B, 2320B, EPA 200.7, 300.0, SM4500CL-E, 4500F-C, SM15 426C, EPA 350.1, SM4500NH3-BH, EPA 351.1, LACHAT 10-107-06-2, EPA 353.2, SM4500-NO3-F, 4500-NO2-B, 4500P-E, 2340B, 2540C, 2540B, 2540D, EPA 200.8, EPA 6010C, 6020A, EPA 7196A, SM3500Cr-D, EPA 245.1, 7470A, SM2120B, 4500CN-CE, EPA 1664A, EPA 420.1, SM14 510C, EPA 120.1, SM2510B, SM4500S-D, SM5540C, EPA 8315A, 3005A, 3015, 9010C, 9030B. Organic Parameters: EPA 624, 8260C, 8270D, 8270D-SIM, 625, 608, 8081B, 8151A, 8330, 8082A, EPA 3510C, 5030B, 8015C, 8011.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 1010A, 1030, EPA 6010C, 6020A, 7196A, 7471B, 8315A, 9012B, 9014, 9065, 9050A, 9038, 9251, EPA 1311, 1312, 3005A, 3050B, 9010C, 9030B, 9040C, 9045D. Organic Parameters: EPA 8260C, 8270D, 8270D-SIM, 8015C, 8081B, 8151A, 8330, 8082A, 3540C, 3546, 3580A, 5035A-H, 5035A-L.)

North Carolina Department of the Environment and Natural Resources Certificate/Lab ID : 666. (Inorganic Parameters: SM2310B, 2320B, 4500Cl-E, 4500Cn-E, 9012B, 9014, Lachat 10-204-00-1-X, 1010A, 1030, 4500NO3-F, 353.2, 4500P-E, 4500SO4-E, 300.0, 4500S-D, 5310B, 5310C, 6010C, 6020A, 200.7, 200.8, 3500Cr-B, 7196A, 245.1, 7470A, 7471B, 1311,1312. Re: Phase II Environment Site Assessment (ESA) Report
8 Grand Avenue
Brooklyn, New York
EBI Project No. 015515-PR

Dear Amir Nour:

EBI Consulting (EBI) is pleased to present the Phase II ESA Report findings for 8-10 Grand Avenue, Brooklyn, New York (the Subject Property).

Background Information

The Subject Property comprises a two-story commercial and seven-story mixed-use commercial and residential apartment building. The combined footprint of the buildings is 15,805 square feet (sf). Previous environmental reports had been completed at the Subject Property, which include a September 2013 Limited Phase II Subsurface Investigation (Phase II) prepared by Associated Environmental Services, Ltd (AET), a June 2021 Phase I Environmental Site Assessment (ESA) prepared by EBI, and a February 2024 Environmental Assessment Statement prepared by Matrix New World Engineering (Matrix).

The 2013 Phase II ESA was completed in the lowest level of the building, identified as 8-10 Grand Avenue, to investigate the historical industrial usage of the Subject Property and an inactive hazardous waste disposal site at the adjacent property to the north. The Phase II ESA consisted of installing the four soil borings to attempt to get to groundwater using a Geoprobe Model 6610. Four soil samples were collected for laboratory analysis, revealing contaminants typically associated with historic fill material. In addition to the four soil samples, three sub-slab soil vapor samples were collected. Low levels of CVOCs were detected in the sub-slab soil vapor samples; however, the concentrations did not exceed the NYSDOH Decision Matrices for mitigation. The Phase II ESA concluded that the site conditions warranted "monitoring" and that vapor intrusion was not occurring.

A 2021 Phase I ESA was completed, which did not warrant additional recommendation; however, the New York City Department of Environmental Protection, Bureau of Sustainability (NYCDEP) requested in a letter dated April 11, 2024, that additional soil vapor, indoor air, and ambient air samples should be collected due to the potential for a vapor concern, and based on the age of the only environmental sampling from the 2023 Phase II ESA (11 years old).

EBI completed a Health and Safety Plan and Phase II Work Plan to cover the scope of work, which consisted of sub-slab soil vapor sampling and indoor air sampling to assess the potential vapor concern. Both reports were submitted to the NYCDEP for review before field mobilization. The NYCDEP approved the Revised June 17, 2024 Work Plan in a letter to the client dated June 24, 2024.

This Phase II ESA was completed in accordance with the approved Work Plan.

Pre-Sampling Air Survey

Before sampling, the tenant spaces were surveyed for any indoor sources of chemical release, and any such source will be removed if practical. EBI noted that various paints were stored and are occasionally utilized in the art studio space. These paints were oil-based or low volatile organic compounds-containing paint. An inventory of oils and other chemicals used or stored within 50 feet of the indoor air sampling locations was completed, as summarized in the table below.

Sample Location	**Chemicals in use or stored within 50 feet**	
E-OA-1	NA	NA
E-IA-1	Spent Mineral Spirits	2 x 1-gallon containers
	Mineral Spirits	6 x 1-gallon containers
	Murphy's Oil Soap	3 x 1-gallon containers
	Terpenoid	1 x 1-gallon container
	Goo Gone degreaser	1 x 1-gallon container
	Turpentine	1 x 1-gallon container
	Polymer varnish	2 x 8-ounce container
	Liquitex Spray Paint – water-based	48 x 400 ml canisters
	Ronan Aquacote – water-based	36 x 8-ounce containers
	Golden Artist Colors acrylic retarder	2 x 32-ounce containers
	Golden Artist Colors acrylic fluid	9 x 1-gallon containers
	Sign Painters 1 Shot - enamel paint	24 x 1-gallon containers
		24 x 16-ounce containers
	Gamblin Artist Oil Colors	5 x 1-gallon containers
	Gamblin Artist Oil Colors	36 x 8-ounce containers
E-IA-2	Behr Latex Paint	1 x 5-gallon bucket
	Acetone	1 x half gallon container

An exhaust fan was employed in the studio for sanding operations during the indoor air and sub-slab sampling events. The exhaust fan draws air from the studio to the exterior, creating negative pressure. EBI considers the fan operation to possibly adversely affect the vapor intrusion within the building by creating a negative vacuum that may pull sub-slab concentrations through the slab into the air space faster. Therefore, the indoor air sample in the art studio may be biased high. Based on the leak testing completed with the sub-slab air sampling, this fan operation would not affect the sub-slab sampling.

Air Sampling and Analysis

EBI collected two indoor air and one ambient outdoor sample on July 10, 2024. Indoor air sample IA-1 was collected within the art studio tenant space, and IA-2 within the electric meter room on the lowest level of the building. The outdoor sample (E-OA-1) was deployed along the Grand Ave side of the Subject Building. The samples were collected approximately four to six feet above the floor using laboratory-provided passivated Summa canisters with flow controllers. The flow controllers were set to draw the samples over 24 hours.

Indoor air sampling results revealed several VOCs above the laboratory method detection limits. The following constituents were detected above the applicable EPA Residential and Commercial Target EPA Default Residential and Commercial Target Indoor Air Concentrations concentration (RTIAC and CTIAC) screening levels.

E-IA-1 collected from inside the electric panel room:

- 1,3-Butadiene was detected in sample E-IA-1 (0.104 milligrams per cubic meter (µg/m^3) above the RTIAC VISL (0.0936 µg/m^3).
- Chloroform was detected in sample E-IA-1 (0.83 µg/m^3) above the RTIAC VISL (0.533 µg/m^3).
- Benzene was detected in sample E-IA-1 (1.4 µg/m^3) above the RTIAC VISL (0.36 µg/m^3).
- Ethylbenzene was detected in sample E-IA-1 (1.26 µg/m^3) above the RTIAC VISL (1.12 µg/m^3).
- Benzene was detected in sample E-IA-1 (1.4 µg/m^3) above the RTIAC VISL (0.36 µg/m^3).
- 1,2-Dichlorobenzene was detected in sample E-IA-1 (3.61 µg/m^3) above the RTIAC VISL (1.11 µg/m^3).
- Naphthalene was detected in sample E-IA-1 (0.792 µg/m^3) above the CTIAC VISL (0.361 µg/m^3).

E-IA-2 collected within the art studio tenant space:

- Chloroform was detected in sample E-IA-2 (1.85 µg/m^3) above the CTIAC VISL (0.533 µg/m^3).
- Benzene was detected in samples E-IA-2 (1.41 u µg/m^3) above the RTIAC VISL (0.36 µg/m^3).
- 1,4-Dichlorobenzene was detected in sample E-IA-2 (1.32 µg/m^3) above the CTIAC VISL (1.11 µg/m^3).
- Naphthalene was detected in sample E-IA-2 (1.09 u µg/m^3) above the CTIAC VISL (0.361 µg/m^3.

E-OA-1 was collected along the Grand Avenue Side of the Subject Property on July 10, 2024:

- Benzene was detected in samples E-OA-1 (0.795 µg/m^3) above the RTIAC VISL (0.36 µg/m^3).

Sub-slab Soil Vapor Sampling

After collecting the indoor air samples, EBI installed two soil vapor monitoring points in the same areas as the indoor air sampling locations. One ambient exterior sample (E-OA-2) was also collected during the same sampling period.

Before sampling, East Coast Geophysics of Bensalem, Pennsylvania, marked out the soil vapor sampling points for private utilities. The vapor points were installed by drilling a small-diameter hole (5/8 inch in diameter) through the concrete floor slab. The sub-slab holes were advanced ten to twelve inches below the slab. Following boring advancement, temporary soil vapor probes were constructed using ¼-inch diameter tubing with a permeable probe tip. After a sand pack had been installed to minimize airflow disruption to the sampling tip, the probe tip was placed midway in the sand pack. The annular borehole space was filled with dry granular bentonite above the base of the concrete foundation. Hydrated bentonite was placed above the dry granular bentonite to the surface to ensure proper sealing.

EBI notes that the concrete slab contained several piping penetrations, including sewer and water pipes that service the building. The probes were adjusted to sample the vapor approximately 12 inches beneath the concrete slab.

Sampling was performed after allowing two hours to elapse following the probes' installation and after successful helium leak and shut-in testing. Following the soil vapor assembly tests, sub-slab soil vapor samples were collected from each soil vapor sampling point and submitted to a New York State-certified laboratory for VOC analysis via the United States Environmental Protection Agency (EPA) Method Toxic Organic (TO)-15. The flow controllers of the sub-slab soil vapor samples were set to draw samples over 24 hours.

The soil vapor samples were analyzed for a list of VOCs via EPA Method TO-15. Table 2 presents a summary of the analytical results. The results below summarize detections above the EPA screening levels:

E-SV-1 collected within the Art Studio Tenant space:

- Tetrachloroethene in sample E-SV-1 (3,190 µg/m^3 and 7,660 µg/m^3, rerun) above the CTSSGC screening levels (1,570 µg/m^3).
- Naphthalene in sample E-SV-1 (4.72 µg/m^3) above the RTSSGC screening levels (4.25 µg/m^3).

E-OA-2 collected along the Grand Avenue Side of the Subject Property on July 11, 2024:

- Naphthalene was detected in sample E-IA-2 (1.4 µg/m^3) above the CTIAC VISL (0.361 µg/m^3).

NYSDOH Decision Matrix Comparison

The results were compared to the New York State Department of Health Decision Matrices (NYS DOH Matrix A, B, C, D, E, and F) Indoor Air and Sub-slab Vapor Concentrations Criteria per

Guidance for Evaluating Soil Vapor Intrusion, October 2006, Decision Matrices updated in May 2017 and updated February 2024.

- PCE in samples E-SV-1 was detected above the upper screening, warranting mitigation. PCE in E-IA-1 and E-OA-1 corresponds to the NYS DOH monitor/mitigate tier, and E-IA-2 is above the upper screening level, which warrants mitigation.
- Trichloroethene detected in sample E-SV-1 corresponds to the NYS DOH monitor/mitigate tier, and those in E-SV-2 correspond to the lowest NYS DOH monitor tier. Trichloroethene was not detected in any indoor or outdoor ambient air samples.
- 1,1,1-trichloroethane was detected in sample E-SV-1 corresponding to the NYS DOH monitor/mitigate level but was not detected in the associated ambient sample E-IA-1. 1,1,1-trichloroethane was detected in samples E-SV-2 (3.393 µg/m^3), which corresponds to the monitor level (<100 µg/m^3). The associated ambient sample E-IA-2 (0.12 µg/m^3) was also in the monitor level (<3 µg/m^3). 1,1,1-trichloroethane was not detected in either outdoor ambient sample.
- 2,2,4-trimethylpentane was detected in sample E-IA-2 corresponding to the monitor/mitigate NY DOH tier and was detected in both outdoor ambient samples corresponding to the lowest NYS DOH monitor tier. 2,2,4-trimethylpentane was not detected in either soil vapor sample.
- Carbon tetrachloride was detected in all ambient indoor and outside air samples corresponding to the mitigate tier. Low-level carbon tetrachloride was detected in E-SV-2 corresponding to the NYS DOH monitor tier.
- Cyclohexane was detected in soil vapor samples and E-IA-2 below the lowest NYS DOH tiers.
- Benzene and hexane detections corresponded to the NY DOH monitor screening levels for all samples.
- Methylene chloride detections corresponded to the NYS DOH monitor/mitigate screening level in the indoor air samples but were not detected in the soil vapor samples.
- Heptane, toluene, ethylbenzene, p/m-xylene, o-xylene, 1,3,5-trimethylbenzene, 1,2,4-trimethylbenzene, and naphthalene detections corresponded to the NYS DOH monitor tier in both soil vapor samples. All these constituents were applicable to the NY DOH tier for monitoring or the monitor/mitigate tier in both indoor air samples. Toluene and p/m-xylene were detected in the corresponding outdoor ambient air sample.

According to the NYSDOH Decision Matrices, mitigation is required. The NYSDOH states, *"We recommend mitigation to minimize current or potential exposures associated with soil vapor intrusion. The most common mitigation methods are sealing preferential pathways in conjunction with installing a sub-slab depressurization system and changing the pressurization of the building in conjunction with monitoring. The type, or combination of types, of mitigation is determined on a building-specific basis, taking into account building construction and operating conditions. Mitigation*

is considered a temporary measure implemented to address exposures related to soil vapor intrusion until contaminated environmental media are remediated."

Sample locations are shown in Figure 1 (Attachment A), laboratory data is summarized in Table 1 (Attachment B), and laboratory data sheets and chain-of-custody documentation are presented in Attachment C.

Conclusions and Recommendations

EBI identified sub-slab soil vapor contaminants currently above the commercial use target criteria. The detected concentrations are also above the upper threshold for mitigation, according to the NYSDOH matrix.

Based on the concentrations identified, EBI recommends installing a vapor mitigation system (VIMS) to alleviate potential onsite vapor intrusion concerns. This VIMS can consist of a sub-slab depressurization system (SSDS).

Thank you for the opportunity to be of service. Please call Jim Klinder at 201-220-2679 with any comments or questions.

Respectfully submitted,

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on July 8, 2024. The canister certification data is provided as an addendum.

L2438780-02D: Prior to sample analysis, the canisters were pressurized with UHP Nitrogen in order to perform a screen analysis. The pressurization resulted in a dilution of the samples. The reporting limits have been elevated accordingly.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Project Name:	8-10 GRAND ST	**Lab Number:**	L2438780
Project Number:	015515-PR	**Report Date:**	07/17/24

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

Report Format: Data Usability Report

Project Name:	8-10 GRAND ST	**Lab Number:**	L2438780
Project Number:	015515-PR	**Report Date:**	07/17/24

Data Qualifiers

ND - Not detected at the reporting limit (RL) for the sample.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Report Format: Data Usability Report

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625.1: alpha-Terpineol
EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol, Azobenzene; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Nonpotable Water: EPA RSK-175 Dissolved Gases
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on July 8, 2024. The canister certification data is provided as an addendum.

L2439059-02D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L2439059-02: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

L2439059-03D: Prior to sample analysis, the canisters were pressurized with UHP Nitrogen in order to perform a screen analysis. The pressurization resulted in a dilution of the samples. The reporting limits have been elevated accordingly.

The WG1946790-3 LCS recovery for chlorodifluoromethane (136%), 1,1,2,2-tetrachloroethane (132%), benzyl chloride (134%), 1,3-dichlorobenzene (134%) and 1,2,4-trichlorobenzene (131%), associated with L2439059-02D, is above the upper 130% acceptance limit. All samples associated with this LCS do not have reportable amounts of this analyte.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Jennifer Jerome

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Project Name:	8-10 GRAND ST.	**Lab Number:**	L2439059
Project Number:	015515-PR	**Report Date:**	07/17/24

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

Report Format: Data Usability Report

Project Name:	8-10 GRAND ST.	**Lab Number:**	L2439059
Project Number:	015515-PR	**Report Date:**	07/17/24

Data Qualifiers

ND - Not detected at the reporting limit (RL) for the sample.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Report Format: Data Usability Report

CERTIFICATION

I, **Kevin Kleaka**, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 8-10 Grand Avenue Site, (NYC VCP Site No. 25TMP1163K, 25EHAZ221K). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Kevin Kleaka 8/29/25

Qualified Environmental Professional Date Signature

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance. The Remedial Investigation Work Plan, dated May 27, 2025, produced by Impact Environmental Closures, Inc, was developed with direct guidance from, and approved by NYC OER and NYSDEC, and was also established to be in accordance with NYSDEC DER-10 Technical Guidance.

Site Location and Current Usage

The Site is located at 8-10 Grand Avenue in the Clinton Hill section of Brooklyn, New York and is identified as Block 1877 and Lot 27 on the New York City Tax Map. **Figure 1** shows the Site location. The Site is 16775-square feet and is bounded by Flushing Avenue to the north, a multi-story mixed use building to the south, Grand Avenue to the east, and a paved parking area to the west. A map of the site boundary is shown in **Figure 2.** Currently, the Site is used for residential, commercial/retail, and art studio space, and contains a two-story slab-on-grade warehouse and commercial loft-law building (8 Grand Avenue) and an adjoining slab-on-grade seven-story mixed-use loft law building (10 Grand Avenue).

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of the rehabilitation of 10 Grand Avenue in accordance with Loft Law/DOB requirements as well as an enlargement of ten units with the Bureau of Standards and Appeals. No excavation, soil disturbance, or demolition of the building slab is proposed. The water table is expected at approximately 22 feet below grade surface (bgs). Layout of the proposed site development is presented in **Figure 3**. The current zoning designation is M1-2 indicating light manufacturing. The proposed use is consistent with existing zoning for the property.

Summary of Past Uses of Site and Areas of Concern

A Previous Phase 1 Environmental Site Assessment was completed by EBI Consulting in June 2021 to identify recognized environmental conditions associated with the Site. Past uses of the

Site based on the results of this investigation primarily consist of commercial and industrial warehouses since the late 1800s prior to current commercial and residential uses in recent years. Historical operations include but are not limited to knitting mills, wool storage, and cast fittings manufacturing.

Summary of the Work Performed under the Remedial Investigation

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.).
2. Installed eight (8) soil borings across the entire project Site and collected 16 soil samples for chemical analysis from the soil borings to evaluate soil quality (one soil boring, SB-1, was redrilled at a later date due to refusal during initial investigation).
3. Installed three (3) permanent groundwater monitoring wells throughout the Site to establish groundwater flow and collected three (3) groundwater samples for chemical analysis to evaluate groundwater quality.
4. Installed four (4) soil vapor probes around Site perimeter and collected four (4) samples for chemical analysis.
5. Collected six (6) indoor air and one (1) outdoor air samples simultaneously with the above soil vapor samples.

Summary of Environmental Findings

1. Elevation of the property ranges from 27.48’ on the southeast corner of the site, to 22.78 feet on the northwest corner.
2. Depth to groundwater ranges from 22.68 to 18.25 feet at the Site.
3. Groundwater flow is generally from southwest to northeast beneath the Site.
4. Depth to bedrock is unknown at the Site.
5. The stratigraphy of the site, from surface down, consists of fill material from surface grade to depths ranging from approximately 5 feet bgs to 16 feet bgs, composed with brown fine to medium sand with trace silt, and concrete, brick and gravel. The fill layer

was underlain by a native sand layer consisting of brown fine to medium sand with trace clay and gravel.

6. Soil/fill samples collected during the RI showed no volatile organic compounds (VOCs), poly chlorinated biphenyl's (PCBs), or emerging contaminants (PFAS/PFOA/1,4-dioxane) at concentrations exceeding the NYCRR Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs). Several semi-volatile organic compounds (SVOCs), primarily poly aromatic hydrocarbons (PAHs) were detected above UUSCOs and Restricted Residential SCOs (RRSCOs) predominantly in shallow (0-2') soil samples, with a few exceedances in deeper soil samples. Pesticides were also detected, mostly above only UUSCOs, in predominantly shallow soil samples, with two heavy metal detections found in a deeper samples. It should be noted that the initial soil sample SB-1 was collected from a boring that encountered significant refusal at less than 2 feet below the slab. Due to lack of recovery, the sample collected was comprised of some soil mixed with concrete dust and rubble from the impenetrable sub-surface object. The analysis showed high concentrations of several heavy metals above Commercial Soil Cleanup Objectives (arsenic, barium, copper, lead, and nickel). IEC believed these results to be either anomalous or erroneous. After a discussion with NYCOER, it was agreed that this soil boring be reinstalled in an attempt to get a true representative soil sample. On August 5, 2025, soil boring SB-1R was successfully installed approximately 1-foot south of the original boring location, to a terminal depth of approximately 23-feet below grade. The analysis showed nickel in the shallow (0-2') soil sample, slightly above UUSCOs, and trivalent chromium in the deeper soil sample (18-21') above Residential SCOs. No other heavy metals, or indeed VOCs, SVOCs, PCBS, or pesticides were detected above UUSCOs. The compounds detected in soil, their existence across the majority of the site, and their primarily shallow depths are indicative of the presence of historical fill material beneath the site.

7. Groundwater samples collected during the RI showed VOCs and PCBs were not detected above AWQS. A number of SVOC PAHs were detected above AWQS in MW-2 and MW-3. Dissolved manganese was detected above AWQS in MW-1. Finally, both PFOA and PFAS

were detected above AWQS in all three monitoring wells (MW-1, MW-2, and MW-3). The presence of emerging contaminants in groundwater, and the lack of detections in soil samples, indicate the PFAS/PFOAs present in groundwater are migrating onsite from an offsite source, or are regional background levels.

8. Soil vapor samples collected during the RI showed the total concentration of petroleum-related compounds Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) ranged from 6.55 µg/m^3 within SV-3 to 51.13 µg/m^3 within SV-4. The chlorinated-VOC tetrachloroethene (PCE) was detected in all soil vapor samples ranging from 2.24 µg/m^3 within SV-4 to 58.0 µg/m^3 within SV-3. Trichloroethene (TCE) [max. of 18.5 µg/m^3 in SV-1], carbon tetrachloride (max. of 7.67 µg/m^3 in SV-2), and 1,1,1-trichloroethane (max. of 905 µg/m^3 in SV-2) were detected at SV-1 and SV-2. Cis-1,2-dichloroethene was detected at 2.12 µg/m^3 within SV-1. Methyl chloride, 1,1-dichloroethene, and vinyl chloride were not detected in any of the samples. Based on the NYSDOH Decision Matrices, 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene are both listed under identify sources, and carbon tetrachloride is listed under monitor for SV-1/IA-1. Cyclohexane is listed under identify sources, and carbon tetrachloride is listed as monitor for SV-2/IA-2. No further action is recommended for all detections associated with SV-3/IA-3 and SV-4/IA-4.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

8-10 Grand Avenue Owner LLC has enrolled in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.17-acre site located at 8-10 Grand Avenue in the Clinton Hill section of Brooklyn, New York. The development project consists of the rehabilitation of 10 Grand Avenue in accordance with Loft Law/DOB requirements as well as an enlargement of ten units with the Bureau of Standards and Appeals. The RI work was performed between June 16, 2025, and August 8, 2025. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f). The Remedial Investigation Work Plan, dated May 27, 2025, produced by Impact Environmental Closures, Inc, was developed with direct guidance from, and approved by NYC OER and NYSDEC, and was also established to be in accordance with NYSDEC DER-10 Technical Guidance.

1.1 Site Location and Current Usage

The Site is located at 8-10 Grand Avenue in the Clinton Hill section of Brooklyn, New York and is identified as Block 1877 and Lot 27 on the New York City Tax Map. **Figure 1** shows the Site location. The Site is 16775-square feet and is bounded by Flushing Avenue to the north, a multi-story mixed use building to the south, Grand Avenue to the east, and a paved parking area to the west. A map of the site boundary is shown in **Figure 2**. Currently, the Site is used for residential, commercial/retail, and art studio space, and contains a two-story slab-on-grade warehouse and commercial loft-law building (8 Grand Avenue) and an adjoining slab-on-grade seven-story mixed-use loft law building (10 Grand Avenue).

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of the rehabilitation of 10 Grand Avenue in accordance with Loft Law/DOB requirements as well as an enlargement of ten units with the Bureau of Standards and Appeals. No excavation, soil disturbance, or demolition of the building

slab is proposed. The water table is expected at approximately 22 feet below grade surface (bgs). Layout of the proposed site development is presented in **Figure 3**. The current zoning designation is M1-2 indicating light manufacturing. The proposed use is consistent with existing zoning for the property.

1.3 Description of Surrounding Property

The Site is bound to the north by Flushing Avenue and a naval cemetery landscaped area, to the east by Grand Avenue and a bus depot, to the south by several mixed use commercial and residential buildings and Park Avenue, and to the west by a large apartment building a Ryerson Street. There are no sensitive receptors such as day care centers, parks, or hospitals within 500-feet of the Site.

Figure 2 shows the surrounding land usage.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

A Previous Phase 1 Environmental Site Assessment was completed by EBI Consulting in June 2021 to identify recognized environmental conditions associated with the Site. Past uses of the Site based on the results of this investigation primarily consist of commercial and industrial warehouses since the late 1800s prior to current commercial and residential uses in recent years. Historical operations include but are not limited to knitting mills, wool storage, and cast fittings manufacturing.

2.2 Previous Investigations

A Limited Phase II Subsurface Investigation by Associated Environmental Services, Inc (AES) was summarized in a report dated September 18, 2013 (see **Appendix A**) and consisted of the collection of five (5) shallow soil samples, and collection of three (3) soil vapor samples across the Site. The following is a summary of the findings of the investigation:

- No Volatile organic compounds (VOCs) were detected above NYCRR Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) in the collected shallow soil samples.
- Several semi-VOCs (SVOCs) were detected above UUSCOs, indicative of urban fill material.
- Trichloroethene (TCE) and carbon tetrachloride were detected in soil vapor at concentrations requiring “identification of sources and reduce exposures” based on the NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion guidance document. It was determined that these concentrations were more likely a result of infiltration of indoor or outdoor air, due to the low levels found in the soil vapor.
- Tetrachloroethylene (PCE) and 1,1,1-trichloroethane (1,1,1-TCA) were found at concentrations requiring “monitoring” based on the NYSDOH Guidance document.

A Phase I ESA produced by EBI Consulting (EBI), dated June 4, 2021, did not find any Recognized Environmental Conditions (REC) associated with the Site, see **Appendix B.**

Finally, as part of the 8-10 Grand Avenue Rezoning action (24BSA010K), an Environmental Impact Statement (EIS) was performed. As part of the EIS, a Limited Phase II ESA was performed

(see **Appendix C**), which was documented in a Phase II ESA Report by EBI dated July 26, 2024. The investigation comprised of a Limited Soil Vapor Intrusion investigation, including the collection of two (2) indoor air samples, one (1) outdoor air sample, and two (2) sub-slab soil vapor samples. The following is a summary of the findings of the investigation:

- PCE in samples E-SV-1 (7,660 ug/m³) was detected above the upper screening, warranting mitigation. PCE in E-IA-1 and E-OA-1 corresponds to the NYS DOH monitor/mitigate tier, and E-IA-2 is above the upper screening level, which warrants mitigation.

- Trichloroethene detected in sample E-SV-1 corresponds to the NYS DOH monitor/mitigate tier, and those in E-SV-2 correspond to the lowest NYS DOH monitor tier. Trichloroethene was not detected in any indoor or outdoor ambient air samples.

- Several other VOCs were detected warranting monitoring/mitigation based on the concentrations including 1,1,1-TCA, 2,24-trimethylpentane, and carbon tetrachloride.

- EBI identified sub-slab soil vapor contaminants currently above the commercial use target criteria. The detected concentrations are also above the upper threshold for mitigation, according to the NYSDOH matrix. Based on the concentrations identified, EBI recommends installing a vapor mitigation system (VIMS) to alleviate potential onsite vapor intrusion concerns. This VIMS can consist of a sub-slab depressurization system (SSDS).

2.3 Site Inspection

On May 2, 2025, Mr. Christopher Connolly, Project Manager/Environmental Scientist, and QEP, performed a walkthrough of the Site to determine optimal / attainable sampling locations and potential areas of concern (AOC). Other than those identified during previous investigations (high PCE in soil vapor in southwest corner of the Site and former metal shop in northeast corner of Site), no additional areas of concern were observed during the investigation. The primary AOC, the location of elevated PCE concentrations found in soil vapor, was located in an occupied, high sensitivity active art studio, where access and space were restricted. A discussion with the art studio tenants provided reasonable access to the vicinity of the AOC for collection of soil and soil vapor samples.

2.4 Areas of Concern

AOCs identified for this site include:

1. High concentrations of PCE detected in soil vapor in the art studio space in the 2024 subsurface investigation, located in the southwest unit of the first floor.
2. The northeast corner commercial space, now a boxing gym, was previously identified as a metal shop in Sanborn fire insurance maps.
3. Most of the site appears to have been utilized for light manufacturing and / or textile work at some point during its history.

Previous reports are presented in **Appendix A, B, and C**. A map showing areas of concern is presented in **Figure 4**.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Christopher Connolly.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

Impact Environmental Closures, on behalf of 8-10 Grand Avenue Owner LLC, performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.).
2. Installed eight (8) soil borings across the entire project Site and collected 16 soil samples for chemical analysis from the soil borings to evaluate soil quality (one soil boring, SB-1, was redrilled at a later date due to refusal during initial investigation).
3. Installed three (3) permanent groundwater monitoring wells throughout the Site to establish groundwater flow and collected three (3) groundwater samples for chemical analysis to evaluate groundwater quality.
4. Installed four (4) soil vapor probes around Site perimeter and collected four (4) samples for chemical analysis.
5. Collected six (6) indoor air and one (1) outdoor air samples simultaneously with the above soil vapor samples.

4.1 Geophysical Investigation

A geophysical survey was not conducted prior drilling activities being performed throughout the site. All exterior boring/well locations were precleared to a depth of six feet below grade surface with hand tools to avoid damaging any sub-grade utilities or other potential obstructions/anomalies.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

A total of eight (8) soil boring were advanced from June 16, 2025, to June 19, 2025, identified as SB-1/SB-1R through SB-8. The borings were installed by PG Environmental via direct push utilizing a GeoProbe 420M for interior restricted locations with limited access, and a track-mounted GeoProbe 7822DT for accessible areas. The borings were to be advanced to

groundwater, which is approximately at 22 feet bgs throughout the site, or until refusal was met. Due to obstructions, the terminal depth of the borings varied from 2 feet bgs in SB-1 to 28 feet bgs in SB-5. It should be noted that the initial soil sample SB-1 was collected from a boring that encountered significant refusal at less than 2 feet below the slab. Due to lack of recovery, the sample collected was comprised of some soil mixed with concrete dust and rubble from the impenetrable sub-surface object. The analysis showed high concentrations of several heavy metals above Commercial Soil Cleanup Objectives (arsenic, barium, copper, lead, and nickel). IEC believed these results to be either anomalous or erroneous. After a discussion with NYCOER, it was agreed that this soil boring be reinstalled in an attempt to get a true representative soil sample. On August 5, 2025, soil boring SB-1R was installed as a second attempt at the SB-1 location in order to advance deeper than 2 feet bgs, and it was able to reach 23 feet bgs. A total of two (2) samples were collected from each soil boring location, one at the surface interval (0-2 feet bgs), and at either the interval exhibiting the highest PID reading or other evidence of contamination, or in the absence of such evidence, at the deepest non-saturated interval above the groundwater table.

Boring logs were prepared by an environmental scientist, and are attached in **Appendix D**. A map showing the location of soil borings and monitor wells is shown in **Figure 5**.

Groundwater Monitoring Well Construction

A total of three (3) permanent monitoring wells were installed during this remedial investigation throughout the site. The wells are constructed with a 10-foot schedule 40 PVC 0.010 slot screen intersecting the groundwater interface, and the wells are completed to the surface with schedule 40 riser, a locking J-plug, and a steel manhole cover. MW-1 is a two-inch diameter monitoring well located in the northern sidewalk adjacent to Flushing Avenue installed to a depth of approximately 29 feet bgs. MW-2 is a two-inch diameter monitoring well located in the loading dock area in the northwest corner of the site installed to a depth approximately of 29 feet bgs. MW-3 is a one-inch diameter monitoring well located in the eastern sidewalk around the site adjacent to Grand Avenue to a depth of approximately 30 feet bgs. Monitoring well locations are shown in **Figure 5**.

Survey

The groundwater monitoring wells have not yet been surveyed. However, IEC was provided a site survey depicting benchmark elevations proximal to each of the installed monitoring wells. Based on the measured depth to water during field sampling activities, and relative elevations, groundwater is estimated to flow to the north-northeast, see **Figure 6**.

Water Level Measurement

The water level was measured throughout the site by gauging the installed monitoring wells with a Heron Instruments Oil/Water Interface Meter. Depth to water ranged from 18.25 feet bgs in MW-2 to 22.11 feet bgs in MW-3. Water level data is included in **Table 4.**

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Soil samples were extracted using 4-foot dual-tube samplers (when using the GeoProbe 420 mobile rig) or 5-foot macro core samplers (with track mounted rig). In each case, soil cores were sequestered in clean acetate liners, which were then cut open to enable headspace analysis soil screening and lithology logging (every 6- to 12-inches), and eventually collection of soil sample volumes. Soil sample volumes were placed directly into clean laboratory provided glassware, stored on ice, and delivered to Phoenix Environmental Laboratories of Manchester, CT, by lab courier under proper chain of custody protocols. If and when required, drill equipment was cleaned with an Alconox solution to prevent cross contamination. For every 20

soil samples IEC collected one Duplicate, one matrix spike (MS), one matrix spike duplicate (MSD), and one equipment blank.

Seventeen (17) soil samples were collected for chemical analysis during this RI. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in **Tables 1a, 1b, and 1c**. **Figure 5** shows the location of samples collected in this investigation. Laboratories and analytical methods are shown below.

Groundwater Sampling

Groundwater samples were collected using a variable speed stainless steel, PFAS free Monsoon Pump connected to 5/8" HPDE tubing. The pump was placed down the monitoring well, approximately 2 feet from the bottom of the well, and water was pumped through an in-line Horiba water quality multi-meter to collect measurements while purging approximately 3 well volumes prior to sampling. Samples were collected using low-flow sampling techniques. Groundwater sample volumes were placed directly into clean laboratory provided glassware, stored on ice, and delivered to Phoenix Environmental Laboratories of Manchester, CT, by lab courier under proper chain of custody protocols. If and when required, sampling equipment was cleaned with an Alconox solution to prevent cross contamination. IEC collected one Duplicate, one matrix spike (MS), one matrix spike duplicate (MSD), and one equipment blank.

Three (3) groundwater samples were collected for chemical analysis during this RI. Groundwater sample collection data is reported in **Tables 2a and 2b**. Sampling logs with information on purging and sampling of groundwater monitor wells is included in **Appendix E**. **Figure 5** shows the location of groundwater sampling. Laboratories and analytical methods are shown below.

Soil Vapor Sampling

The sub-slab vapor implants (Vapor Pin® technology) were installed in accordance with manufacturer specifications using a 2-foot long 5/8" diameter concrete drill bit. The 5/8" core was advanced through the entire building slab until the underlying soils were encountered. The Vapor Pin was then be fitted with a silicone sleeve, installed into the core hole with a dead blow hammer, and fitted with a rubber cap. Once installed the Vapor Pin creates an airtight seal in the slab. IEC performed a helium tracer test on each vapor pin, and zero helium was detected.

Indoor and ambient air samples were collected concurrently with and for the duration of the sub-slab soil vapor samples. Indoor and ambient air sample collection was conducted 3-5 feet above the ground to represent the breathing zone. Sub-slab soil vapor and indoor / ambient air were sampled concurrently, and sampling occurred for the duration of 24 hours. One duplicate soil vapor and one duplicate indoor air samples were also collected. Soil vapor, indoor air, and ambient air sample volumes were collected in clean laboratory provided 6-liter summa canisters, and delivered to Phoenix Environmental Laboratories of Manchester, CT, by lab courier under proper chain of custody protocols.

Four (4) soil vapor probes were installed, and four (4) soil vapor, six (6) indoor air, and one (1) ambient air samples were collected for chemical analysis during this RI. Soil vapor sampling locations are shown in **Figure 5**. Soil vapor sample collection data is reported in **Tables 3a-3d**. Soil vapor sampling logs are included in **Appendix F**. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006.*

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Christopher Connolly
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and were Phoenix Environmental Laboratories of Manchester CT
Chemical Analytical Methods	Soil analytical methods: • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); • Two (2) soil samples were also analyzed for: Part 375 List Per- and Polyfluoroalkyl Substances (PFAS) by EPA Method 1633, and 1,4-dioxane by EPA Method 8270E-SIM. Groundwater analytical methods:

	• TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); • Part 375 List Per- and Polyfluoroalkyl Substances (PFAS) by EPA Method 1633. • 1,4-dioxane by EPA Method 8270E-SIM. Soil vapor analytical methods: • VOCs by TO-15 VOC parameters.

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in **Tables 1a** through **3d**, respectively. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in **Appendix G**.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

The stratigraphy of the site, from surface down, consists of fill material from surface grade to depths ranging from approximately 5 feet bgs to 16 feet bgs, composed with brown fine to medium sand with trace silt, and concrete, brick and gravel. The fill layer was underlain by a native sand layer consisting of brown fine to medium sand with trace clay and gravel. Bedrock was not encountered during this investigation.

Hydrogeology

A table of water level data for all monitor wells is included in **Table 4**. The average depth to groundwater is 20.27 feet bgs and the range in depth is 18.25 feet bgs to 22.11 feet bgs. A map of groundwater level elevations with groundwater contours and inferred flow lines is shown in **Figure 6.** Groundwater flow is from southeast to northwest.

5.2 Soil Chemistry

Soil/fill samples were collected from June 16 to 18, 2025, and August 5, 2025, and results were compared to NYSDEC Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Soil Cleanup Objectives (RRSCOs) as presented in 6NYCRR Part 375-6.8 and CP-51. Soil/fill samples showed the following:

- Volatile Organic Compounds (VOCs): VOCs were not detected above UUSCOs or RRSCOs in any soil sample collected during this RI. Minor concentrations of acetone, ethylbenzene, m&p-xylene, naphthalene, o-xylene, and toluene were detected in various soil samples across the site.
- Polychlorinated Biphenyls (PCBs): PCBs were not detected in any soil sample collected during this RI.
- Semi-Volatile Organic Compounds (SVOCs): Benz(a)anthracene [max. of 24,000 µg/kg in SB-5 (21-23)], benzo(a)pyrene [max. of 21,000 µg/kg in SB-5 (21-23)], benzo(b)fluoranthene [max. of 28,000 µg/kg in SB-5 (21-23)], chrysene [max. of 22,000 µg/kg in SB-5 (21-23)], and indeno(1,2,3-cd)pyrene [max. of 8,800 µg/kg in SB-5 (21-23)] were detected above UUSCOs and RRSCOs in soil samples SB-3 (0-2),

SB-5 (0-2), SB-5 (21-23), SB-6 (0-2), SB-7 (0-2), and SB-8 (0-2). Benzo(k)fluoranthene [max. of 5,400 µg/kg in SB-5 (21-23)] and Dibenz(a,h)anthracene pyrene [max. of 2,100 µg/kg in SB-5 (21-23)] were detected above UUSCOs in soil samples SB-5 (0-2), SB-5 (21-23), SB-6 (0-2), and SB-7 (0-2).

- Metals: In the original SB-1 (0-2) boring location, in which refusal was encountered, the following metals were detected above CSCOs: arsenic (75.2 mg/kg), barium (5,440 mg/kg), copper (208,000 mg/kg), lead (11,100 mg/kg), and nickel (892 mg/kg). These results were believed to be either anomalous or erroneous, and SB-1 was reinstalled on August 5, 2025, and called SB-1R (see **Table 1b**). The following are the remaining soil sample results: Nickel (31.7 mg/kg) was detected above UUSCOs in sample SB-1R (0-2'), and trivalent Chromium (43.26 mg/kg) was detected above RSCOs in sample SB-1R (18-21'). In addition, copper [max. of 89.7 mg/kg in SB-6 (0-2)], lead [max. of 259 mg/kg in SB-3 (0-2)], mercury [max. of 0.76 mg/kg in SB-6 (0-2)], silver [max. of 2.5 mg/kg in SB-1 (0-2)], trivalent chromium [max. of 168 mg/kg in SB-1 (0-2)], and zinc [max. of 634 mg/kg in SB-1 (0-2)] were detected above UUSCOs in soil samples SB-1 (0-2), SB-2 (0-2), SB-3 (0-2), SB-4 (0-2), SB-5 (0-2), SB-6 (0-2), SB-6 (12-14), SB-7 (0-2), SB-8 (0-2), and SB-8 (11-13).
- Pesticides: 4,4'-DD (21.0 µg/kg) was detected above UUSCOs in soil sample SB-6 (0-2). In addition, 4,4'-DDT [max. of 14.0 µg/kg in SB-6 (0-2)] was detected above UUSCOs in soil samples SB-6 (0-2) and SB-8 (0-2).
- Total Emerging Contaminants: No PFAS contaminants were detected within the soil samples.

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in **Tables 1a, 1b, and 1c**. **Figure 7** shows the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Track 2 Soil Cleanup Objectives.

5.3 Groundwater Chemistry

Laboratory analytical results were compared to NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (AWQS) for Class GA water.

- Volatile Organic Compounds (VOCs): VOCs were not detected above AWQS in any of the groundwater samples.
- Polychlorinated Biphenyls (PCBs): PCB-1248 (0.68 µg/L) was detected above AWQS in groundwater DUP-MW (MW-2 was the parent sample).
- Semi-Volatile Organic Compounds (SVOCs): Benz(a)anthracene (max. of 0.21 µg/L in MW-3) and benzo(b)fluoranthene (max. of 0.15 µg/L in MW-3) were detected above AWQS in all of the groundwater samples. Benzo(a)pyrene (max. of 0.15 µg/L in MW-3), benzo(k)fluoranthene (max. of 0.13 µg/L in MW-3), chrysene (max. of 0.16 µg/L in MW-3), and indeno(1,2,3-cd)pyrene (max. of 0.11 µg/L in MW-3) were detected above AWQS in MW-2 and MW-3. In addition, phenol (1.4 µg/L) was detected above AWQS in MW-2.
- Metals (Total): Manganese (max. of 3.62 mg/L in MW-3) was detected above AWQS in all groundwater samples. Chromium (max. of 0.129 mg/L in MW-3) was detected above AWQS in MW-2 and MW-3. Lead (0.066 mg/L) was detected above AWQS in MW-3.
- Metals (Dissolved): Manganese (1.25 mg/L) was detected above AWQS in MW-1.
- Pesticides: Dieldrin (0.01 µg/L) was detected above AWQS in groundwater sample DUP-MW (MW-2 is the parent sample).
- Total Emerging Contaminants: Perfluorooctanesulfonic Acid (PFOS) [max. of 16.3 ng/L in MW-2] and perfluorooctanoic acid (PFOA) [max. of 64.7 ng/L in MW-2] were detected above AWQS in all groundwater samples.

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in **Tables 2a and 2b**. Exceedence of applicable groundwater standards are shown.

Figure 8 shows the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards.

5.4 Soil Vapor Chemistry

Four (4) soil vapor and accompanying indoor air samples were collected during this RI indicated concentrations of petroleum and solvent related compounds. Soil vapor results from this investigation were compared to the compounds listed in Table 3.1 Air guidance Values derived by the New York State Department of Health (NYSDOH) located in the NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion, dated October 2006 and the revised NYSDOH Decision Matrices dated May 2017 and February 2024. Results showed the following:

- The total concentration of petroleum-related compounds Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) ranged from 6.55 µg/m^3 within SV-3 to 51.13 µg/m^3 within SV-4.
- The chlorinated-VOC tetrachloroethene (PCE) was detected in all samples ranging from 2.24 µg/m^3 within SV-4 to 58.0 µg/m^3 within SV-3. Trichloroethene (TCE) [max. of 18.5 µg/m^3 in SV-1], carbon tetrachloride (max. of 7.67 µg/m^3 in SV-2), and 1,1,1-trichloroethane (max. of 905 µg/m^3 in SV-2) were detected at SV-1 and SV-2. Cis-1,2-dichloroethene was detected at 2.12 µg/m^3 within SV-1. Methyl chloride, 1,1-dichloroethene, and vinyl chloride were not detected in any of the samples.
- Based on the NYSDOH Decision Matrices, 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene are both listed under identify sources, and carbon tetrachloride is listed under monitor for SV-1/IA-1. Cyclohexane is listed under identify sources, and carbon tetrachloride is listed as monitor for SV-2/IA-2. No further action is recommended for all detections associated with SV-3/IA-3 and SV-4/IA-4.

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in **Table 3a through 3d**.

Figure 9 shows the location and posts the values for soil vapor samples with detected concentrations.

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

5.6 Impediments to Remedial Action

The existing property is expected to remain as it is, with only minor interior renovations proposed for the benefit of the existing commercial and residential tenants. The building also occupies the entirety of the tax parcel, and any significant remediation would be challenging due to access restrictions and the aforementioned occupancies.

Site-Specific Standards, Criteria and Guidance

- 6 NYCRR Part 371 - Identification and Listing of Hazardous Wastes
- 6 NYCRR Part 375 - Inactive Hazardous Waste Disposal Sites
- 6 NYCRR Parts 700-706 - Water Quality Standards (June 1998)
- STARS #1 - Petroleum-Contaminated Soil Guidance Policy
- TOGS 1.1.1 - Ambient Water Quality Standards & Guidance Values and Groundwater Effluent Limitations
- Fish and Wildlife Impact Analysis for Inactive Hazardous Waste Sites (October 1994)
- Technical Guidance for Screening Contaminated Sediments (January 1999)
- NYSDOH Indoor Air Sampling & Analysis Guidance (August 8, 2001 or subsequent update)
- NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York (draft October 2004 or subsequent final draft)
- DER Interim Strategy for Groundwater Remediation at Contaminated Sites in New York State
- 6 NYCRR Part 612 - Registration of Petroleum Storage Facilities (February 1992)
- 6 NYCRR Part 613 - Handling and Storage of Petroleum (February 1992)
- 6 NYCRR Part 614 - Standards for New and Substantially Modified Petroleum Storage Tanks (February 1992)
- 40 CFR Part 280 - Technical Standards and Corrective Action Requirements for Owners and Operators of Underground Storage Tanks

Qualifiers

U — The compound was anlayzed for but not detected at or above the MDL.
The number immediately preceding the "U" represents the PQL reporting level
corrected for percent solids, weight and/or volume calculations, and dilution factors.

Qualifiers

U	The compound was anlayzed for but not detected at or above the MDL. The number immediately preceding the "U" represents the PQL reporting level corrected for percent solids, weight and/or volume calculations, and dilution factors.
J	The value is estimated. This flag is used a) on form 1 when the compound is reported above the MDL, but below the PQL, and b) on the Tentatively Identified Compounds (TIC) form for all compounds identified.
N	The concentration is based on the response fo the nearest internal. This flag is used on the TIC form for all compounds identified.
S	This compound is a solvent that is used in the laboratory. Laboratory contamination is suspected if concentration is less than five times the reporting level.
D	The reported concentration is the result of a diluted analysis.
Q	For TICS, this compound was quantitated using a calibration curve.
(*)	See report for comment.

Qualifiers

U	The compound was anlayzed for but not detected at or above the MDL. The number immediately preceding the "U" represents the PQL reporting level corrected for percent solids, weight and/or volume calculations, and dilution factors.
J	The value is estimated. This flag is used a) on form 1 when the compound is reported above the MDL, but below the PQL, and b) on the Tentatively Identified Compounds (TIC) form for all compounds identified.
N	The concentration is based on the response fo the nearest internal. This flag is used on the TIC form for all compounds identified.
S	This compound is a solvent that is used in the laboratory. Laboratory contamination is suspected if concentration is less than five times the reporting level.
D	The reported concentration is the result of a diluted analysis.
Q	For TICS, this compound was quantitated using a calibration curve.
(*)	See report for comment.

Qualifiers

U	The compound was anlayzed for but not detected at or above the MDL. The number immediately preceding the "U" represents the PQL reporting level corrected for percent solids, weight and/or volume calculations, and dilution factors.
J	The value is estimated. This flag is used a) on form 1 when the compound is reported above the MDL, but below the PQL, and b) on the Tentatively Identified Compounds (TIC) form for all compounds identified.
N	The concentration is based on the response fo the nearest internal. This flag is used on the TIC form for all compounds identified.
S	This compound is a solvent that is used in the laboratory. Laboratory contamination is suspected if concentration is less than five times the reporting level.
D	The reported concentration is the result of a diluted analysis.
Q	For TICS, this compound was quantitated using a calibration curve.
(*)	See report for comment.

NFA: No Further Actions recomended to address human exposures

IDENTIFY SOURCES, RESAMPLE, AND/OR MITIGATE: We recommend that reasonable and practical actions be taken to identify the source(s) affecting the indoor air quality and that actions be implemented to reduce indoor air concentrations to within background ranges. For example, if an indoor or outdoor air source is identified, we recommend the appropriate party implement actions to reduce the levels. In the event that indoor or outdoor sources are not readily identified or confirmed, resampling (which might include additional sub-slab vapor and indoor air sampling locations) is recommended to demonstrate that SVI mitigation actions are not needed. Based on the information available, mitigation might also be recommended when soil vapor intrusion cannot be ruled out.

MONITOR: We recommend monitoring (sampling on a recurring basis), including but not necessarily limited to sub-slab vapor, basement air and outdoor air sampling, to determine whether concentrations in the indoor air or sub-slab vapor have changed and/or to evaluate temporal influences. Monitoring might also be recommended to determine whether existing building conditions (e.g., positive pressure heating, ventilation and air -conditioning systems) are maintaining the desired mitigation endpoint and to determine whether changes are needed. The type and frequency of monitorin g is determined based on site-, building- and analyte-specific information, taking into account applicable environmental data and building operating conditions. Monitoring is an interim measure required to evaluate exposures related to soil vapor intrusion until contaminated environmental media are remediated.

MITIGATE: We recommend mitigation to minimize current or potential exposures associated with soil vapor intrusion. The most common mitigation methods are sealing preferential pathways in conjunction with installing a sub-slab depressurization system and changing the pressurization of the building in conjunction with monitoring. The type, or combination of types, of mitigation is determined on a building -specific basis, taking into account building construction and operating conditions. Mitigation is considered a temporary measure implemented to address exposures related to soil vapor intrusion until contaminated environmental media are remediated.

Qualifiers

U	The compound was anlayzed for but not detected at or above the MDL. The number immediately preceding the "U" represents the PQL reporting level corrected for percent solids, weight and/or volume calculations, and dilution factors.
J	The value is estimated. This flag is used a) on form 1 when the compound is reported above the MDL, but below the PQL, and b) on the Tentatively Identified Compounds (TIC) form for all compounds identified.
N	The concentration is based on the response fo the nearest internal. This flag is used on the TIC form for all compounds identified.
S	This compound is a solvent that is used in the laboratory. Laboratory contamination is suspected if concentration is less than five times the reporting level.
D	The reported concentration is the result of a diluted analysis.
Q	For TICS, this compound was quantitated using a calibration curve.
(*)	See report for comment.

1.0 INTRODUCTION

Associated Environmental Services, Ltd. has prepared the following report to document the results of the Limited Phase II Subsurface Investigation performed at 8-10 Grand Avenue in Brooklyn, New York. The site location is provided on **Figure 1.0**. A recent Phase I Environmental Site Assessment prepared by Advanced Cleanup Technologies, Inc. (ACT) identified the following Recognized Environmental Conditions (RECs) at the subject property:

- Historical industrial usage of the subject property; and
- An Inactive Hazardous Waste Disposal Site at the adjacent property to the north.

Based on the presence of the RECs listed above, a Phase II Subsurface Investigation was recommended to determine if environmental quality of the subject property has been impacted. The subsurface investigation was performed at the subject property on September 11, 2013 to assess the possible presence of environmental impacts in the soil, groundwater, and soil vapor beneath the subject property. The following report summarizes the findings of the Limited Phase II Subsurface Investigation activities.

1.1 Scope of Work

The scope of work entailed the following:

- Drill five (5) borings in selected locations utilizing Geoprobe direct-push rig in order to obtain representative soil and/or groundwater samples. Groundwater in this area of Brooklyn is located approximately twenty (20) feet below grade;
- A total of five (5) soil samples were submitted for laboratory analysis to evaluate potential environmental impacts. Groundwater samples were not submitted for laboratory analysis due to the shallow refusal (i.e., less than 15.5 feet below grade) encountered in the soil borings drilled at the subject property; and
- Sub-slab soil vapor samples were collected from three locations throughout the subject property to evaluate the potential of adverse vapor intrusion into the building. One (1) indoor air sample was also collected and submitted for laboratory analysis along with the sub-slab vapor samples.

The methodology and equipment employed during the investigative activities are described in depth in Section 3.0.

2.0 SITE DESCRIPTION

2.1 Site Location

The subject property is located at 8-10 Grand Avenue in Brooklyn, New York. The subject property is a rectangular-shaped parcel of land situated in a commercial/residential area of the Bushwick Section of Brooklyn, New York. The current use of the property is commercial and multi-family residential.

2.2 Site Improvements

The Property is improved with a two (2) story commercial building, reportedly containing a paper goods and household supplies store and a metal shop, and a seven (7) story mix-use apartment building, reportedly containing residential apartments above an art studio on the ground floor. The building footprint encompasses the entire subject property. The Phase I ESA reported the current site usage would not appear to impact environmental quality of the subject property. The subject property and the relevant site features are depicted on **Figure 2.0** - Site Diagram.

2.3 Hydrogeologic Setting

During the Limited Phase II investigation, representative soil samples were collected to refusal within each soil boring, which ranged from three (3) to fifteen (15) feet below grade. The subsurface soil was noted to consist of a brown, medium to fine sand encountered to the terminal depth of the borings SB-1 and SB-2. In soil borings SB-3, SB-4, and SB-5, the subsurface was comprised of urban fill made up of a fine sand mixed with concrete and brick rubble.

Groundwater was not encountered in the soil boring during the investigation. Based upon the regional topography and hydrology, the groundwater beneath the property is located approximately 20 feet below grade and is flowing to the north. Groundwater is not utilized as a source of potable water at the subject property. Potable water for the subject property is supplied by New York City Department of Environmental Protection.

3.0 PHASE II SUBSURFACE INVESTIGATION ACTIVITIES

The Limited Phase II Subsurface Investigation activities were conducted at the subject site on September 11, 2013. The investigation was conducted in conformance with the NYSDEC Division of Environmental Remediation (DER) DER-10/Technical Guidance for Site Investigation and Remediation. The following sections summarize the field activities, the field data collected, laboratory analytical data, as well as any other pertinent information obtained.

3.1 Soil Characterization

Soil boring locations were selected to evaluate potential environmental impacts from past manufacturing operations and the adjacent inactive hazardous waste site. A site plan of the subject property showing the locations of significant site features and soil boring locations is provided on **Figure 2.0** - Site Diagram.

A Geoprobe Model 6610 was used to drill the soil borings SB-1 through SB-5. Representative soil samples were collected in continuous four (4) -foot intervals from ground surface to a terminal depth of approximately fifteen and one half (15.5) feet in SB-1, ten (10) feet in SB-2, four (4) feet in SB-3, and three (3) feet in SB-4 and SB-5. The soil samples were collected in a disposable single-use acetate sheaths. The subsurface lithology was relatively homogenous within each of the parcels at the subject property, consisting of a brown, medium to fine sand encountered in SB-1 and SB-2 drilled within the 10 Grand Avenue parcel, and urban fill made up of a fine sand mixed with concrete and brick rubble in soil borings SB-3, SB-4, and SB-5 drilled within the 8 Grand Avenue parcel. The soil samples were inspected for visual and/or olfactory evidence of contamination. No odor or staining was evident in the soil samples. In addition, the soil samples were field screened with a photo-ionization detector (PID), for the presence of volatile organic compounds (VOCs). PID readings were observed between 0.1 and 1.2 parts per million (PPM) in the soil samples.

Based on the depth of sample or PID reading, the soil sample intervals from the soil borings which exhibited the greatest likelihood of contamination (i.e., staining or highest PID reading) were submitted for laboratory analysis. The soil samples were submitted to Alpha Analytical (Alpha), which is a New York State Department of Health (NYDOH) certified laboratory located in Westborough, Massachusetts. The NYDOH certification number for the laboratory is 11148. The soil samples SB-1 (1-6'), SB-2 (1-6'), SB-3 (0-4'), SB-4 (0-3'), and SB-5 (0-3') were submitted for analysis of volatile organic compounds (VOCs) using USEPA Method 8260 and semi-volatile organic compounds (SVOCs) using USEPA Method 8270.

Soil Sample Results

The analytical results were compared to the 6NYCRR Part 375 Table 375-6.8(a) Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Table 375-6.8(b) Restricted Use Soil Cleanup Objectives for Commercial applications (RCUSCOs). The UUSCOs are based on the most conservative criteria established by the NYSDEC and NYSDOH for the protection of Public Health, Ecological Resources, and Groundwater, and provide "use without imposed restrictions, such as environmental easements or other land use controls" as defined under 6NYCRR Part 375. The RCUSCOs are based on the protection of Public Health under the scenario of a commercial establishment (such as its recent use), and would require and environmental easement and institutional or engineering controls to manage contamination remaining at the property. A summary of the soil analytical results is provided on **Table 1**. A complete copy of laboratory analytical results is provided in **Appendix A**.

The analytical results of the soil samples detected concentrations of three (3) VOCs; acetone, naphthalene, and 4-ethyltoluene, above the minimum detectable limit (MDL) in soil sample SB-3 (0-4'). Concentrations of acetone and naphthalene were detected above the MDLs in sample SB-4 (0-3'), and a concentration of acetone was also detected in sample SB-1 (1-6'). However, the concentrations of VOCs in the soil samples are well below the UUSCOs for these compounds. No concentrations of VOCS were detected above the MDLs in samples SB-2 (1-6') and SB-5 (0-3').

Concentrations of numerous SVOCs were detected above the MDLs in four (4) of the five (5) soil samples, with only one SVOC, bis(2-ethylhexyl)phthalate, detected in sample SB-5 (0-3'). The SVOCs detected in the SB-1, SB-2, SB-3, and SB-4 soil samples consisted of polynuclear aromatic hydrocarbons (PAHs) typically found in petrochemical products. Of note, concentrations of benzo(a)anthracene at 5.5 milligrams per kilogram (mg/kg) in SB-3 (0-4') and 2.3 mg/kg in SB-4 (0-3'), chrysene at 5.7 mg/kg in SB-3 (0-4'), benzo(b)fluoranthene at 6.4 mg/kg in SB-3 (0-4') and 2.1 mg/kg in SB-4 (0-3'), benzo(k)fluoranthene at 2.2 mg/kg in SB-3 (0-4'), benzo(a)pyrene at 5.3 mg/kg in SB-3 (0-4') and 1.9 mg/kg in SB-4 (0-3'), and indeno(1,2,3-cd)pyrene at 3.5 mg/kg in SB-3 (0-4') and 1.0 mg/kg in SB-4 (0-3') were detected in exceedance of the respective NYSDEC Part 375 UUSCOs. Further, the concentrations of benzo(b)fluoranthene in SB-3 (0-4') and of benzo(a)pyrene in SB-3 (0-4') and SB-4 (0-3') were in contravention of the Part 375 RCUSCOs. No other concentrations of SVOCs were detected in exceedane of the NYSDEC Part 375 soil cleanup objectives.

3.2 Sub-Slab Vapor Investigation

Three (3) sub-slab soil vapor samples were collected beneath the poured concrete slab-on-grade at roughly equal distant locations within the subject property. The location and designation of the sub-slab soil vapor samples are provided on **Figure 2**. The sub-slab soil vapor samples were collected in compliance with the New York Department of Health (NYSDOH) *Guidance for Evaluating Soil Vapor Intrusion in the State of New York* issued in October of 2006 (hereinafter, the NYSDOH Guidance Document). The sub-slab soil vapor samples were collected to assess potential vapor intrusion into the building as well as to indicate potential unidentified subsurface

contamination.

The sub-slab soil vapor sampling points were installed using hand-held power tools. The soil vapor points consisted of one-quarter inch polyethylene tubing set no greater than two (2) inches beneath the bottom of the concrete floor slab. The annular space surrounding the tubing was filled with washed #1 crushed stone as a filter pack and bentonite clay was installed atop of the filter pack to prevent atmospheric air infiltration.

Once installed, the bentonite seal for the vapor sample points were checked by introducing helium into a closed/sealed space surrounding the sampling tube as a tracer gas to confirm the integrity of the sample point seal. Helium was not detected in the three (3) sub-slab sample points confirming the integrity of the sample point seals. The sub-slab soil vapor sampling points were purged of three tubing volumes at a flow rate no greater than 0.2 liters per minute (L/m), and a laboratory-supplied Summa vacuum canister was connected to the polyethylene tubing. The samples were collected at a flow rate of approximately 0.0125 L/m over approximately one (1) hour using a flow regulators calibrated by the laboratory. The sampling tubing was connected to the Summa canister using laboratory-supplied air-tight compression fitting.

Additionally, one (1) indoor air quality sample was collected concurrently and over the same duration as the sub-slab soil vapor samples. The indoor air sample was collected using laboratory-supplied Summa vacuum canisters set atop a three (3) -foot tall stand in order to represent the air quality within the typical breathing zone (as required in the NYSDOH Guidance Document). The sample was collected to establish indoor air ambient conditions at the subject property. The sub-slab vapor and air samples were submitted for laboratory analysis of VOCs using USEPA Method TO-15.

Sub-Slab Vapor Results

A summary of the sub-slab vapor and indoor air sample data is provided in **Table 2**. Analysis of the sub-slab vapor sample SV-1 detected concentrations of 28 VOCs, and analysis of samples SV-2 and SV-3 detected concentrations of 25 VOCs. The indoor air sample, IA-1, detected concentrations of 24 VOCs within the building. A total of 20 VOCs were detected in both the sub-slab vapor samples and the indoor air sample IA-1.

The NYSDOH Guidance Document does not provide referenced guidance for a broad array of VOCs. Therefore, the concentrations of the VOCs not discussed in the NYSDOH Guidance Document were compared to the Target Shallow Soil Gas Concentrations (TSSGCs) provided under Question 4: Generic Screening Levels of the United States Environmental Protection Agency (USEPA) OSWER Draft Guidance for Evaluating the Vapor Intrusion into Indoor Air Pathway from Groundwater and Soils (Subsurface Vapor Intrusion Guidance), November 2002. The comparison of VOC concentrations not discussed in the NYSDOH Guidance Document detected one (1) VOC, 1,2,4-trimethylbenzene, slightly above the respective TSSGC. Concentrations of 1,2,4-trimethylbenzene were detected at 130 micrograms per cubic meter

(ug/m^3) in SV-1, 111 ug/m^3 in SV-2 and 106 ug/m^3 in SV-3, which are above the TSSGC of 60 ug/m^3.

Of note, the compounds trichloroethene (TCE), tetrachloroethene (PCE), carbon tetrachloride (carbon tet), vinyl chloride (VC), 1,1,1-trichloroethane (1,1,1-TCA), 1,1-dichloroethene (1,1-DCE), and cis-1,2-dichloroethene (c-1,2-DCE) are referenced in the NYSDOH Guidance Document. Concentrations of TCE were detected in two sub-slab vapor samples, at 13.0 ug/m^3 in SV-1 and at 2.04 ug/m^3 in SV-3. Concentrations of PCE were detected between 16.4 ug/m^3 and 127 ug/m^3 in the three sub-slab vapor samples. Concentrations of 1,1,1-TCA were detected between 4.62 ug/m^3 and 436 ug/m^3 in the three sub-slab vapor samples. One concentration of carbon tet was detected in sample SV-1 at 3.74 ug/m^3. No concentrations of VC, 1,1-DCE, and c-1,2-DCE were detected above the MDLs in the sub-slab vapor samples. Concentrations of TCE, PCE, 1,1,1-TCA and carbon tet, VC, 1,1-DCE, and c-1,2-DCE were not detected above the MDLs in the indoor air sample IA-1.

The concentrations of TCE, PCE, 1,1,1-TCA, and carbon tet reported in the sub-slab soil vapor samples were compared to the Decision Matrices provided in the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006. The TCE and carbon tet concentrations fall within the Response Item 2. - "Take reasonable and practicable actions to identify source(s) and reduce exposures" provided in Decision Matrix 1. The PCE and 1,1,1-TCA concentrations fall within the Response Item 5.- "Monitor" in Decision Matrix 2.

4.0 CONCLUSIONS AND RECOMMENDATIONS

4.1 Soil Characterization

The results of the field investigation and laboratory analysis did not detect concentrations of VOCs above the NYSDEC Part 375 UUSCOs. Concentrations of six (6) petroleum-related SVOCs in SB-3 (0-4') and four (4) petroleum-related SVOCs in SB-4 (0-3') were detected above the NYSDEC Part 375 UUSCOs. Concentrations of benzo(a)pyrene and benzo(b)fluoranthene were detected, primarily beneath the northern portion of the property, in contravention of the respective RCUSCOs. No concentrations of SVOCs were detected above the Part 375 UUSCOs in samples SB-1 (1-6') and SB-2 (1-6') collected beneath the southern portion of the subject property.

Soil quality, primarily beneath the northern portion of the subject property, is not compliant with NYSDEC criteria for unrestricted reuse. However, with the exception of the aforementioned chemical concentrations, the property is compliant with NYSDEC regulations for its current use as a commercial establishment.

The poor soil quality found beneath the northern portion of the subject property is indicative of the urban fill identified in the soil borings, which also commonly exhibit the aforementioned adverse impacts due to anthropogenic effects. The type and concentrations of the SVOCs detected in the subsurface soil are consistent with asphalt, roofing, and paving construction materials which are also typical components within urban fill.

Further assessment of the soil sampling results under the 6NYCRR Part 375 regulations indicate that with the exception of isolated concentrations of individual constituents, the concentrations of SVOCs detected in exceedance of the UUSCOs are related to the Protection of Ecological Resources, which are not truly a viable concern in the region surrounding the property. The occurrence of SVOCs at concentrations above the 6 NYCRR RCSCOs is related to the potential adverse impacts to human health. However, as these conditions are isolated, beneath an impermeable surface cover (i.e., concrete or asphalt), the soil is not in contact from the occupants (i.e., the workers), whereby the concentrations of the two (2) SVOCs above the commercial objectives do not pose a risk to human health.

4.2 Sub-Slab Vapor

The TCE and carbon tet concentrations fall within the Response Item 2. - "Take reasonable and practicable actions to identify source(s) and reduce exposures" provided in Decision Matrix 1. As stated in the NYSDOH Guidance Document, "the concentration detected in the indoor air sample is likely due to indoor and/or outdoor sources rather than soil vapor intrusion given the concentration detected in the sub-slab vapor sample."

The PCE and 1,1,1-TCA concentrations fall within the Response Item 5.- "Monitor" in Decision Matrix 2. As stated in the NYSDOH Guidance, "Monitoring, including sub-slab vapor, basement air, lowest occupied living space air, and outdoor air sampling, is needed to determine

whether concentrations in the indoor air or sub-slab vapor have changed. Monitoring may also be needed to determine whether existing building conditions (e.g., positive pressure heating, ventilation and air-conditioning systems) are maintaining the desired mitigation endpoint and to determine whether changes are needed. The type and frequency of monitoring is determined on a site-specific and building-specific basis, taking into account applicable environmental data and building operating conditions. Monitoring is an interim measure required to evaluate exposures related to soil vapor intrusion until contaminated environmental media are remediated."

4.3 Recommendations

The soil conditions at the property would not facilitate residential redevelopment. To do so, the historic urban fill should be excavated and removed for proper off-site disposal. Field observations indicated the urban fill apparently associated with elevated SVOC concentrations are limited to the northern portion of the property. Therefore supplemental testing of the soil beneath the northern portion of the subject property should be conducted during preliminary stages of potential future property redevelopment to ascertain the appropriate disposal of soil to be removed.

Further, construction and maintenance workers may potentially contact the soil as part of the redevelopment and subsequent operation of the property and should do so using appropriate health and safety procedures and personnel protective equipment. AES recommends any proposed subsurface work be conducted under an appropriate Construction Health and Safety Plan to inform workers of the subsurface conditions and establish appropriate monitoring guidelines to mitigate any potential worker exposure.

Current site conditions do not indicate sub-slab vapor intrusion is occurring. However, concentrations of the VOCs noted in the NYSDOH Guidance Document are significant enough to warrant "monitoring". Further testing would not appear warranted under the subject property's current configuration, however, AES recommends additional sub-slab vapor and indoor air sampling and analysis be conducted should significant repair to the existing foundation be required or in conjunction with future redevelopment of the property that may disturb the subsurface soil.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: 8 + 10 GRAND AVENUE **Lab Number:** L1317894
Project Number: Not Specified **Report Date:** 09/17/13

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on September 11, 2013. The canister certification results are provided as an addendum.

Sample L1317894-04 results for Acetone should be considered estimated due to co-elution with a non-target peak.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Christopher J. Anderson

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.
C	- Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
D	- Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
E	- Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
G	- The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.
H	- The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
I	- The lower value for the two columns has been reported due to obvious interference.

Report Format: Data Usability Report

Project Name:	8 + 10 GRAND AVENUE	**Lab Number:**	L1317894
Project Number:	Not Specified	**Report Date:**	09/17/13

Data Qualifiers

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the reporting limit (RL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised August 3, 2012 – Mansfield Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Connecticut Department of Public Health Certificate/Lab ID: PH-0141.

Wastewater/Non-Potable Water (Inorganic Parameters: pH, Turbidity, Conductivity, Alkalinity, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Suspended Solids (non-filterable). Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Acid Extractables, Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, PAHs, Haloethers, Chlorinated Hydrocarbons, Volatile Organics.)

Solid Waste/Soil (Inorganic Parameters: pH, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Titanium, Vanadium, Zinc, Total Organic Carbon, Corrosivity, TCLP 1311, SPLP 1312. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Volatile Organics, Acid Extractables, Benzidines, Phthalates, Nitrosamines, Nitroaromatics & Cyclic Ketones, PAHs, Haloethers, Chlorinated Hydrocarbons.)

Florida Department of Health Certificate/Lab ID: E87814. ***NELAP Accredited.***

Non-Potable Water (Inorganic Parameters: SM2320B, SM2540D, SM2540G.)

Solid & Chemical Materials (Inorganic Parameters: 6020, 7470, 7471, 9045. Organic Parameters: EPA 8260, 8270, 8082, 8081.)

Air & Emissions (EPA TO-15.)

Louisiana Department of Environmental Quality Certificate/Lab ID: 03090. ***NELAP Accredited.***

Non-Potable Water (Inorganic Parameters: EPA 180.1, 245.7, 1631E, 3020A, 6020A, 7470A, 9040, 9050A, SM2320B, 2540D, 2540G, 4500H-B, Organic Parameters: EPA 3510C, 3580A, 3630C, 3640A, 3660B, 3665A, 5030B, 8015D, 3570, 8081B, 8082A, 8260B, 8270C, 8270D.)

Solid & Chemical Materials (Inorganic Parameters: EPA 1311, 3050B, 3051A, 3060A, 6020A, 7196A, 7470A, 7471B, 7474, 9040B, 9045C, 9060. Organic Parameters: EPA 3540C, 3570, 3580A, 3630C, 3640A, 3660, 3665A, 5035, 8015D, 8081B, 8082A, 8260B, 8270C, 8270D.)

Biological Tissue (Inorganic Parameters: EPA 6020A. Organic Parameters: EPA 3570, 3510C, 3610B, 3630C, 3640A, 8270C, 8270D.)

Air & Emissions (EPA TO-15.)

New Hampshire Department of Environmental Services Certificate/Lab ID: 2206. ***NELAP Accredited.***

Non-Potable Water (Inorganic Parameters: EPA 180.1, 1631E, 6020A, 7470A, 9040B, 9050A, SM2540D, 2540G, 4500H+B, 2320B, 3020A, . Organic Parameters: EPA 3510C, 3630C, 3640A, 3660B, 8081B, 8082A, 8270C, 8270D, 8015D.)

Solid & Chemical Materials (Inorganic Parameters: SW-846 1311, 3050B, 3051A, 6020A, 7471B, 9040B, 9045C. Organic Parameters: SW-846 3540C, 3580A, 3630C, 3640A, 3660B, 3665A, 8270C, 8015D, 8082A, 8081B.)

New Jersey Department of Environmental Protection Certificate/Lab ID: MA015. ***NELAP Accredited.***

Non-Potable Water (Inorganic Parameters: SW-846 1312, 3020A, SM2320B, SM2540D, 2540G, 4500H-B, EPA 180.1, 1631E, SW-846 7470A, 9040C, 6020A, 9050A. Organic Parameters: SW-846 3510C, 3580A, 3630C, 3640A, 3660B, 3665A, 8015D, 8081B, 8082A, 8270C, 8270D)

Solid & Chemical Materials (Inorganic Parameters: SW-846 1311, 1312, 3050B, 3051A, 6020A, 7471B, 7474, 9040B, 9040C, 9045C, 9045D, 9060. Organic Parameters: SW-846 3540C, 3570, 3580A, 3630C, 3640A, 3660B, 3665A, 8081B, 8082A, 8270C, 8270D, 8015D.)

Atmospheric Organic Parameters (EPA 3C, TO-15, TO-10A, TO-13A-SIM.)

Biological Tissue (Inorganic Parameters: SW-846 6020A. Organic Parameters: SW-846 8270C, 8270D, 3510C, 3570, 3610C, 3630C, 3640A)

New York Department of Health Certificate/Lab ID: 11627. ***NELAP Accredited.***

Non-Potable Water (Inorganic Parameters: SM2320B, SM2540D, 6020A, 1631E, 7470A, 9050A, EPA 180.1, 3020A. Organic Parameters: EPA 8270C, 8270D, 8081B, 8082A, 3510C.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 6020A, 7471B, 7474, 9040C, 9045D. Organic Parameters: EPA 8270C, 8270D, 8081B, 8082A, 1311, 3050B, 3580A, 3570, 3051A.)

Air & Emissions (EPA TO-15, TO-10A.)

Pennsylvania Certificate/Lab ID: 68-02089 ***NELAP Accredited***

Non-Potable Water (Inorganic Parameters: 1312, 1631E, 180.1, 3020A, 6020A, 7470A, 9040B, 9050A, 2320B, 2540D, 2540G, SM4500H+-B. Organic Parameters: 3510C, 3580A, 3630C, 3640A, 3660B, 3665A, 8015D, 8081B, 8082A, 8270C, 8270D .)

Solid & Hazardous Waste (Inorganic Parameters: EPA 1311, 3051A, 6020A, 7471B, 7474 9040B, 9045C, 9060. Organic Parameters: EPA3050B, 3540C, 3570, 3580A, 3630C, 3640A, 3660B, 3665A, 8270C, 8270D, 8081B, 8015D, 8082A.)

Rhode Island Department of Health Certificate/Lab ID: LAO00299. ***NELAP Accredited via NJ-DEP.***

Refer to NJ-DEP Certificate for Non-Potable Water.

Texas Commission of Environmental Quality Certificate/Lab ID: T104704419-08-TX. ***NELAP Accredited.***

Solid & Chemical Materials (Inorganic Parameters: EPA 6020, 7470, 7471, 1311, 9040, 9045, 9060. Organic Parameters: EPA 8015, 8270, 8081, 8082.)

Air (Organic Parameters: EPA TO-15)

Virginia Division of Consolidated Laboratory Services Certificate/Lab ID:460194. ***NELAP Accredited.***

Non-Potable Water (Inorganic Parameters:EPA 3020A, 6020A, 245.7, 9040B. Organic Parameters: EPA 3510C, 3640A, 3660B, 3665A, 8270C, 8270D, 8082A, 8081B, 8015D.)

Solid & Chemical Materials (Inorganic Parameters: EPA 6020A,7470A,7471B,9040B,9045C,3050B,3051, 9060. Organic Parameters: EPA 3540C, 3580A, 3630C, 3640A, 3660B, 3665A, 3570, 8270C, 8270D, 8081B, 8082A, 8015D.)

Washington State Department of Ecology Certificate/Lab ID: C954. *Non-Potable Water* (Inorganic Parameters: SM2540D, 180.1, 1631E.)

Solid & Chemical Materials (Inorganic Parameters: EPA 6020, 7470, 7471, 7474, 9045C, 9050A, 9060. Organic Parameters: EPA 8081, 8082, 8015, 8270.)

U.S. Army Corps of Engineers

Department of Defense, L-A-B Certificate/Lab ID: L2217.01.

Non-Potable Water (Inorganic Parameters: EPA 6020A, SM4500H-B. Organic Parameters: 3020A, 3510C, 8270C, 8270D, 8270C-ALK-PAH, 8270D-ALK-PAH, 8082A, 8081B, 8015D-SHC, 8015D.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 1311, 3050B, 6020A, 7471A, 9045C, 9060, SM 2540G, ASTM D422-63. Organic Parameters: EPA 3580A, 3570, 3540C, 8270C, 8270D, 8270C-ALK-PAH, 8270D-ALK-PAH 8082A, 8081B, 8015D-SHC, 8015D.

Air & Emissions (EPA TO-15.)

Analytes Not Accredited by NELAP

Certification is not available by NELAP for the following analytes: **8270C:** Biphenyl. **TO-15:** Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 2-Methylnaphthalene, 1-Methylnaphthalene.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples.

Please contact Client Services at 800-624-9220 with any questions.

Project Number: Not Specified **Report Date:** 09/17/13

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

Any reported concentrations that are below 200 ug/kg may be biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

Semivolatile Organics

L1317887-03 has elevated detection limits due to the dilution required by the matrix interferences encountered during the concentration of the sample and the analytical dilution required by the sample matrix.
The surrogate recoveries for L1317887-03 are below the acceptance criteria for 2-fluorophenol, phenol-d6, nitrobenzene-d5, 2-fluorobiphenyl, and 4-terphenyl-d14 (all at 0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.
The WG635726-2/-3 LCS recoveries, associated with L1317887-02 through -05, are below the acceptance criteria for benzoic acid (0%/0%); however, it has been identified as a "difficult" analyte. The results of the associated samples are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature:  Lisa Westerlind

GLOSSARY

Acronyms

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NI - Not Ignitable.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

Report Format: DU Report with "J" Qualifiers

Project Name:	8+10 GRAND AVENUE	**Lab Number:**	L1317887
Project Number:	Not Specified	**Report Date:**	09/17/13

Data Qualifiers

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with "J" Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised August 29, 2013 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Connecticut Department of Public Health Certificate/Lab ID: PH-0574. ***NELAP Accredited Solid Waste/Soil.***

Drinking Water (Inorganic Parameters: Color, pH, Turbidity, Conductivity, Alkalinity, Chloride, Free Residual Chlorine, Fluoride, Calcium Hardness, Sulfate, Nitrate, Nitrite, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Nickel, Selenium, Silver, Sodium, Thallium, Zinc, Total Dissolved Solids, Total Organic Carbon, Total Cyanide, Perchlorate. Organic Parameters: Volatile Organics 524.2, Total Trihalomethanes 524.2, 1,2-Dibromo-3-chloropropane (DBCP) 504.1, Ethylene Dibromide (EDB) 504.1, 1,4-Dioxane (Mod 8270). Microbiology Parameters: Total Coliform-MF mEndo (SM9222B), Total Coliform – Colilert (SM9223, Enumeration and P/A), E. Coli. – Colilert (SM9223, Enumeration and P/A), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D), Fecal Coliform-EC Medium (SM 9221E).

Wastewater/Non-Potable Water (Inorganic Parameters: Color, pH, Conductivity, Acidity, Alkalinity, Chloride, Total Residual Chlorine, Fluoride, Total Hardness, Silica, Sulfate, Sulfide, Ammonia, Kjeldahl Nitrogen, Nitrate, Nitrite, O-Phosphate, Total Phosphorus, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Dissolved Solids, Total Suspended Solids (non-filterable), BOD, CBOD, COD, TOC, Total Cyanide, Phenolics, Foaming Agents (MBAS), Bromide, Oil and Grease. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Acid Extractables (Phenols), Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, Polynuclear Aromatic Hydrocarbons, Haloethers, Chlorinated Hydrocarbons, Volatile Organics, TPH (HEM/SGT), CT-Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH. Microbiology Parameters: Total Coliform – MF mEndo (SM9222B), Total Coliform – MTF (SM9221B), E. Coli – Colilert (SM9223 Enumeration), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D), Fecal Coliform – A-1 Broth (SM9221E), Enterococcus - Enterolert.

Solid Waste/Soil (Inorganic Parameters: pH, Sulfide, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Tin, Vanadium, Zinc, Total Cyanide, Ignitability, Phenolics, Corrosivity, TCLP Leach (1311), SPLP Leach (1312 metals only), Reactivity. Organic Parameters: PCBs, PCBs in Oil, Organochlorine Pesticides, Technical Chlordane, Toxaphene, CT-Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH, Dicamba, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Dalapon, Volatile Organics (SW 8260), Acid Extractables (Phenols) (SW 8270), Benzidines (SW 8270), Phthalates (SW 8270), Nitrosamines (SW 8270), Nitroaromatics & Cyclic Ketones (SW 8270), PAHs (SW 8270), Haloethers (SW 8270), Chlorinated Hydrocarbons (SW 8270).)

State of Illinois Certificate/Lab ID: 003155. ***NELAP Accredited.***
Drinking Water (Inorganic Parameters: SM2120B, 2320B, 2510B, 2540C, SM4500CN-CE, 4500F-C, 4500H-B, 4500NO3-F, 5310C, EPA 200.7, 200.8, 245.1, 300.0. Organic Parameters: EPA 504.1, 524.2.)

Wastewater/Non-Potable Water (Inorganic Parameters: SM2120B, 2310B, 2320B, 2340B, 2510B, 2540B, 2540C, 2540D, SM4500CL-E, 4500CN-E, 4500F-C, 4500H-B, 4500NH3-H, 4500NO2-B, 4500NO3-F, 4500P-E, 4500S-D, 4500SO3-B, 5210B, 5220D, 5310C, 5540C, EPA 120.1, 1664A, 200.7, 200.8, 245.1, 300.0, 350.1, 351.1, 353.2, 410.4, 420.1. Organic Parameters: EPA 608, 624, 625.)

Hazardous and Solid Waste (Inorganic Parameters: EPA 1010A, 1030, 1311, 1312, 6010C, 6020A, 7196A, 7470A, 7471B, 9012B, 9014, 9038, 9040C, 9045D, 9050A, 9065, 9251. Organic Parameters: 8011 (NPW only), 8015C, 8081B, 8082A, 8151A, 8260C, 8270D, 8315A, 8330.)

Maine Department of Human Services Certificate/Lab ID: 2009024.
Drinking Water (Inorganic Parameters: SM9215B, 9222D, 9223B, EPA 180.1, 353.2, SM2120B, 2130B, 2320B, 2510C, 2540C, 4500Cl-D, 4500CN-C, 4500CN-E, 4500F-C, 4500H+B, 4500NO3-F, 5310C, EPA 200.7, EPA 200.8, 245.1, EPA 300.0. Organic Parameters: 504.1, 524.2.)

Wastewater/Non-Potable Water (Inorganic Parameters: EPA 120.1, 1664A, 300.0, 350.1, 351.1, 353.2, 410.4, 420.1, 8315A, 9010C, SM2120B, 2310B, 2320B, 2510B, 2540B, 2540C, 2540D, 426C, 4500Cl-E, 4500CN-C, 4500CN-E, 4500F-B, 4500F-C, 4500H+B, 4500Norg-C, 4500NH3-B, 4500NH3-H, 4500NO2-B, 4500NO3-F, 4500P-B, 4500P-E, 4500S2-D, 4500SO3-B, 5540C, 5210B, 5220D, 5310C, 9010B, 9030B, 9040C, 7470A, 7196A, 2340B, EPA 200.7, 6010C, 200.8, 6020A, 245.1, 1311, 1312, 3005A, Enterolert, 9223B, 9222D. Organic Parameters: 608, 624, 625, 8011, 8081B, 8082A, 8330, 8151A, 8260C, 8270D, 3510C, 3630C, 5030B, ME-DRO, ME-GRO, MA-EPH, MA-VPH.)

Solid Waste/Soil (Inorganic Parameters: 9010B, 9012A, 9014, 9040B, 9045C, 6010C, 6020A, 7471B, 7196A, 9050A, 1010, 1030, 9065, 1311, 1312, 3005A, 3050B, 9038, 9251. Organic Parameters: ME-DRO, ME-GRO, MA-EPH, MA-VPH, 8260C, 8270D, 8330, 8151A, 8081B, 8082A, 3540C, 3546, 3580A, 3620C, 3630C, 5030B, 5035.)

Massachusetts Department of Environmental Protection Certificate/Lab ID: M-MA086.
*Drinking Water (*Inorganic Parameters: (EPA 200.8 for: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl) (EPA 200.7 for: Ba,Be,Ca,Cd,Cr,Cu,Na,Ni) 245.1, (300.0 for: Nitrate-N, Fluoride, Sulfate); (EPA 353.2 for: Nitrate-N, Nitrite-N); (SM4500NO3-F for: Nitrate-N and Nitrite-N); 4500F-C, 4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, 2320B, SM2540C, SM4500H-B. Organic Parameters: (EPA 524.2 for: Trihalomethanes, Volatile Organics); (504.1 for: 1,2-Dibromoethane, 1,2-Dibromo-3-Chloropropane), EPA 332. Microbiology Parameters: SM9215B; ENZ. SUB. SM9223; ColilertQT SM9223B; MF-SM9222D.)

*Non-Potable Water (*Inorganic Parameters:, (EPA 200.8 for: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn); (EPA 200.7 for: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn); 245.1, SM4500H,B, EPA 120.1, SM2510B, 2540C, 2340B, 2320B, 4500CL-E, 4500F-BC, 426C, SM4500NH3-BH, (EPA 350.1 for: Ammonia-N), LACHAT 10-107-06-1-B for Ammonia-N, SM4500NO3-F, 353.2 for Nitrate-N, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, 4500P-B,E, 5220D, EPA 410.4, SM 5210B, 5310C, 4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.
Organic Parameters: (EPA 624 for Volatile Halocarbons, Volatile Aromatics),(608 for: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT,Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs-Water), (EPA 625 for SVOC Acid Extractables and SVOC Base/Neutral Extractables), 600/4-81-045-PCB-Oil. Microbiology Parameters: (ColilertQT SM9223B; Enterolert-QT: SM9222D-MF.)

New Hampshire Department of Environmental Services Certificate/Lab ID: 200307. ***NELAP Accredited.***
Drinking Water (Inorganic Parameters: SM 9222B, 9223B, 9215B, EPA 200.7, 200.8, 300.0, SM4500CN-E, 4500H+B, 4500NO3-F, 2320B, 2510B, 2540C, 4500F-C, 5310C, 2120B, EPA 332.0. Organic Parameters: 504.1, 524.2.)

Non-Potable Water (Inorganic Parameters: SM9222D, 9221B, 9222B, 9221E-EC, EPA 3005A, 200.7, 200.8, 245.1, SW-846 6010C, 6020A, 7196A, 7470A, SM3500-CR-D, EPA 120.1, 300.0, 350.1, 350.2, 351.1, 353.2, 410.4, 420.1, 426C, 1664A, SW-846 9010B, 9010C, 9030, 9040B, 9040C, SM2120B, 2310B, 2320B, 2340B, 2540B, 2540D, 4500H+B, 4500CL-E, 4500CN-E, 4500NH3-H, 4500NO3-F, 4500NO2-B, 4500P-E, 4500-S2-D, 4500SO3-B, 5210B, 5220D, 2510B, 2540C, 4500F-C, 5310C, 5540C, LACHAT 10-204-00-1-A, LACHAT 10-107-06-2-D, 3060A. Organic Parameters: SW-846 3510C, 3630C, 5030B, 8260C, 8270D, 8330, EPA 624, 625, 608, SW-846 8082A, 8081B, 8015C, 8151A, 8330, 8270D-SIM.)

Solid & Chemical Materials (Inorganic Parameters: SW-846 6010C, 6020A, 7196A, 7471B, 1010, 1010A, 1030, 9010C, 9012B, 9014, 9030B, 9040C, 9045C, 9045D, 9050, 9065, 9251, 1311, 1312, 3005A, 3050B, 3060A. Organic Parameters: SW-846 3540C, 3546, 3050B, 3580A, 3620D, 3630C, 5030B, 5035, 8260C, 8270D, 8270D-SIM, 8330, 8151A, 8015B, 8015C, 8082A, 8081B.)

New Hampshire Department of Environmental Services Certificate/Lab ID: 2064. ***NELAP Accredited.***
Drinking Water (Organic Parameters: **EPA 524.2:** Di-isopropyl ether (DIPE), Ethyl-t-butyl ether (ETBE), Tert-amyl methyl ether (TAME)).

Non-Potable Water (Organic Parameters: **EPA 8260C:** 1,3,5-Trichlorobenzene. **EPA 8015C(M):** TPH.)

Solid & Chemical Materials (Organic Parameters: **EPA 8260C:** 1,3,5-Trichlorobenzene.)

New Jersey Department of Environmental Protection Certificate/Lab ID: MA935. ***NELAP Accredited.***
Drinking Water (Inorganic Parameters: SM9222B, 9221E, 9223B, 9215B, 4500CN-CE, 4500NO3-F, 4500F-C, EPA 300.0, 200.7, 200.8, 245.1, 2540C, SM2120B, 2320B, 2510B, 5310C, SM4500H-B. Organic Parameters: EPA 332, 504.1, 524.2.)

Non-Potable Water (Inorganic Parameters: SM5210B, EPA 410.4, SM5220D, 4500Cl-E, EPA 300.0, SM2120B, 2340B, SM4500F-BC, EPA 200.7, 200.8, 351.1, LACHAT 10-107-06-2-D, EPA 353.2, SM4500NO3-F, 4500NO2-B, EPA 1664A, SM5310B, C or D, 4500-PE, EPA 420.1, SM510ABC, SM4500P-B5+E, 2540B, 2540C, 2540D, EPA 120.1, SM2510B, SM15 426C, 9222D, 9221B, 9221C, 9221E, 9222B, 9215B, 2310B, 2320B, 4500NH3-H, 4500-S D, EPA 350.1, 350.2, SW-846 1312, 7470A, 5540C, SM4500H-B, 4500SO3-B, SM3500Cr-D, 4500CN-CE, EPA 245.1, SW-846 9040B, 9040C, 3005A, 3015, EPA 6010B, 6010C, 6020, 6020A, 7196A, 3060A, SW-846 9010C, 9030B. Organic Parameters: SW-846 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 3510C, EPA 608, 624, 625, SW-846 3630C, 5030B, 8011, 8015C, 8081A, 8081B, 8082, 8082A, 8151A, 8330, 1,4-Dioxane by NJ Modified 8270, 8015B, NJ EPH.)

Solid & Chemical Materials (Inorganic Parameters: SW-846, 6010B, 6010C, 6020, 6020A, 7196A, 3060A, 9030B, 1010, 1010A, 1030, 1311, 1312, 3005A, 3050B, 7471A, 7471B, 9010C, 9012B, 9014, 9038, 9040B, 9040C, 9045C, 9045D,

9050A, 9065, 9251. Organic Parameters: SW-846 8015B, 8015C, 8081A, 8081B, 8082, 8082A, 8151A, 8330, 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 3540C, 3546, 3580A, 3620C, 3630C, 5030B, 5035L, 5035H, NJ EPH.)

New York Department of Health Certificate/Lab ID: 11148. ***NELAP Accredited.***
Drinking Water (Inorganic Parameters: SM9223B, 9222B, 9215B, EPA 200.8, 200.7, 245.1, SM5310C, EPA 332.0, SM2320B, EPA 300.0, SM2120B, 4500CN-E, 4500F-C, 4500NO3-F, 2540C, SM 2510B. Organic Parameters: EPA 524.2, 504.1.)

Non-Potable Water (Inorganic Parameters: SM9221E, 9222D, 9221B, 9222B, 9215B, 5210B, 5310C, EPA 410.4, SM5220D, 2310B, 2320B, EPA 200.7, 300.0, SM4500CL-E, 4500F-C, SM15 426C, EPA 350.1, SM4500NH3-BH, EPA 351.1, LACHAT 10-107-06-2, EPA 353.2, SM4500-NO3-F, 4500-NO2-B, 4500P-E, 2340B, 2540C, 2540B, 2540D, EPA 200.8, EPA 6010C, 6020A, EPA 7196A, SM3500Cr-D, EPA 245.1, 7470A, SM2120B, 4500CN-CE, EPA 1664A, EPA 420.1, SM14 510C, EPA 120.1, SM2510B, SM4500S-D, SM5540C, EPA 8315A, 3005A, 3015, 9010C, 9030B. Subject: Phase I Environmental Site Assessment
8-10 Grand Avenue, Brooklyn, New York
EBI Project No. 1121003412

Dear Ms. Brill:

Attached please find our *Phase I Environmental Site Assessment* (the report) for the above-mentioned asset (the Subject Property). During the survey and research, our surveyor met with agents representing the Subject Property, or agents of the owner, and reviewed the Subject Property and its history. The report was completed according to the terms and conditions authorized by you, the Client. This report has been completed in conformance with the ASTM Standard E 1527-13 and the Glacier Equities Scope of Work Standard Terms and Conditions for Third Party Due Diligence Services between Glacier Equities and EnviroBusiness, Inc. dated May 12, 2021

The purpose of this report is to assist Glacier Equities in its underwriting of a proposed mortgage loan on the Subject Property described herein.

This report is addressed to Glacier Equities and their respective successors and assigns.

The purpose of this report is to acquire environmental information, observe the general condition and maintenance status of the Subject Property, to suggest remediation and/or maintenance practices considered customary for the Subject Property to continue in its current operation, compared to properties of similar age and condition, and to identify recognized environmental conditions in connection with the Subject Property described in this report.

Reliance on the report and the information contained herein shall mean (i) the report may be relied upon by a lender to be selected by Glacier Equities, in determining whether to make a loan evidenced by a note secured by the Subject Property ("the Mortgage Loan"); (ii) the report may be relied upon by any purchaser in determining whether to purchase the Mortgage Loan (but not the Subject Property) from that lender, or an interest in the Mortgage Loan or securities backed or secured by the Mortgage Loan, and any rating agency rating securities representing an interest in the Mortgage Loan or backed or secured by the Mortgage Loan; (iii) the report may be referred to in and included, in whole or in part, with materials offering for sale the Mortgage Loan or an interest in the Mortgage Loan or securities backed or secured by the Mortgage Loan; (iv) the report speaks only as of its date in the absence of a specific written update of the report signed and delivered by EBI Consulting.

There are no intended or unintended third party beneficiaries to this report, except as expressly stated herein.

EBI is an independent contractor, not an employee of either the issuer or the borrower, and its compensation was not based on the findings or recommendations made in the report or on the closing of any business transaction.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We

EXECUTIVE SUMMARY

At the request of Glacier Equities, EBI has performed a Phase I Environmental Site Assessment (ESA) of the property located at 8-10 Grand Avenue in Brooklyn, New York, herein referred to as the Subject Property. The main objective of this ESA was to identify *recognized environmental conditions* in connection with the Subject Property, defined in ASTM Practice E 1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment, 2) under conditions indicative of a release to the environment, or 3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions. This ESA also includes a preliminary evaluation of certain potential environmental conditions that are outside the scope of ASTM Practice E 1527-13.

The Subject Property includes two, contiguous rectangular-shaped parcels, totaling approximately 0.39 acres. The Subject Property is currently improved with one, two-story, mixed-use building reportedly constructed in 1994 (8 Grand Avenue) and one, seven-story, mixed-use building reportedly constructed in 1916 and renovated in 1935 (10 Grand Avenue). Tenants at the Subject Property include numerous commercial, office and artist tenant spaces and approximately 40 multi-family units; however, EBI was not provided the current building mix or current unit square footages. There are currently no manufacturing or industrial operations conducted at the Subject Property and there are basements beneath both buildings.

Below is the Assessment Summary Table presenting our recommended actions for the Subject Property. EBI's Findings and Opinions are presented in Section 8.0, and recommendations for further action or investigation are presented in Section 9.0.

Report Section		No Further Action	REC	HREC	CREC	Other	Recommended Action	Estimated Cost
2.3	**Current Use of the Subject Property**	X						
2.5	**Adjoining Properties**	X						
4.1	**Standard Environmental Records**	X						
4.1.3	**Vapor Migration**	X						

Report Section		No Further Action	REC	HREC	CREC	Other	Recommended Action	Estimated Cost
4.2	**Historical Use of the Subject Property and Adjoining Properties**					X	Since non-homogenous soil impacts in the fill material underlying the site is common throughout New York City and NYSDEC and NYCDEP recognize that these impacts typically do not require delineation or remediation, any fill material distributed during future subsurface activities be handled as regulated waste and sampled appropriately. Specifically, any disturbance of structures that are in contact with the fill be conducted in accordance with a site specific Health and Safety Plan. Soil and groundwater sampling should be conducted in conjunction with any future development activities.	Estimated cost unknown at this time and to be determined at a later date, if needed
5.2	**Hazardous Substances and Petroleum Products**	X

7.4	**Lead in Drinking Water**	X						

1.0 INTRODUCTION

This report documents the findings, opinions, and conclusions of a Phase I Environmental Site Assessment (ESA) of the property located at 8-10 Grand Avenue in Brooklyn, New York.

1.1 PURPOSE

The purpose of this ESA was to identify *recognized environmental conditions* and certain environmental conditions outside the scope of ASTM Practice E 1527-13 in connection with the property at the time of the property reconnaissance.

1.2 SCOPE-OF-SERVICES

This ESA was conducted utilizing a standard of good commercial and customary practice that was consistent with the ASTM Practice E 1527-13. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1527-13 are noted below or in the corresponding sections of this report. The scope-of-work for this assessment included an evaluation of the following:

- Physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils and hydrologic data.
- Subject Property history through a review of referenced sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports, and interviews.
- Current Subject Property conditions, including observations and interviews regarding the following: the presence or absence of hazardous substances or petroleum products; generation, treatment, storage, or disposal of hazardous, regulated, or biomedical waste; equipment that utilizes oils which potentially contain PCBs; and storage tanks (aboveground and underground).
- Usage of surrounding area properties and the likelihood for releases of hazardous substances and petroleum products (if known and/or suspected) to migrate onto the Subject Property.
- Information in referenced environmental agency databases and local environmental records, within specified minimum search distances.
- Past ownership through a review of available prior reports and local municipal file review.

The scope-of-work also included consideration of the following potential environmental conditions that are outside the scope of ASTM Practice E 1527-13: asbestos-containing materials (ACM), lead-based paint (LBP), lead in drinking water, and radon.

1.3 ASSUMPTIONS, LIMITATIONS AND EXCEPTIONS

This Phase I Environmental Site Assessment (the report) has been prepared for the use of Glacier Equities, in accordance with our Standard Terms and Conditions for Third Party Due Diligence Services approved and signed by Glacier Equities (the Agreement), and with the limitations described below, all of which are integral parts of this report. A copy of the signed Standard Terms and Conditions for Third Party Due Diligence Services is maintained at the EBI Consulting office in Burlington, Massachusetts. To the extent any provisions of this report conflict with the terms of the Agreement, the Agreement will control.

EBI has performed this Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. This report was prepared with no exceptions or deletions from ASTM Standard E 1527-13.

This Phase I Environmental Site Assessment has been prepared to assess a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and petroleum products. As such, this practice is intended to permit Glacier Equities to satisfy one of the requirements to qualify for the innocent landowner,

contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability: that is, the practices that constitute "all appropriate inquiry into the previous ownership and uses of the Subject Property consistent with good commercial or customary practice" as defined in 42 U.S.C. §9601(35)(B).

In defining a standard of good commercial and customary practice for conducting an environmental site assessment of a parcel of property, the goal of the processes established by this practice is to identify *recognized environmental conditions*. The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property (1) due to a release to the environment, (2) under conditions that indicate an existing release or a past release, or (3) under conditions that pose a material threat of a future release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term does not include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The information reported was obtained through sources deemed reasonably ascertainable, as defined in ASTM Standard E 1527-13; a visual site survey of areas readily observable, easily accessible or made accessible by the Subject Property contact and interviews with owners, agents, occupants, or other appropriate persons involved with the Subject Property and a review of standard federal, state, and tribal environmental record sources. Municipal information was obtained through review of reasonably ascertainable standard government record sources and interviews with the authorities having jurisdiction over the Subject Property. Findings, conclusions, and recommendations included in the report are based on our visual observations in the field, the standard environmental record sources and municipal information reasonably obtained, information provided by the Client, and/or a review of readily available and supplied documents and drawings. EBI relies completely on the information, whether written, graphic, or verbal, provided by the Subject Property contact or as shown on any documents reviewed or received from the Subject Property contact, owner or agent, or municipal source, and assumes that information to be true and correct unless the information is known to be inaccurate or if it is obvious, based on other information obtained as part of the assessment, that the information is not accurate. Although there may have been some degree of overlap in the information provided by these various sources, EBI did not attempt to verify independently the accuracy or completeness of all information reviewed or received during the course of these environmental services.

The information reported, as well as EBI's findings, conclusions, and recommendations are based upon sources deemed reasonably ascertainable, as defined in ASTM Standard E 1527-13; a visual site survey of areas readily observable, easily accessible or made accessible by the Subject Property contact and interviews with owners, agents, occupants, or other appropriate persons involved with the Subject Property and a review of standard federal, state, and tribal environmental record sources. Municipal information was obtained through review of reasonably ascertainable standard government record sources and interviews with authorities having jurisdiction over the Subject Property. Glacier Equities agrees that EBI has no obligation to independently verify the accuracy or completeness of the information reviewed or received during the course of these environmental services.

EBI renders no opinion as to the presence of hazardous substances or petroleum products in, on or under un-surveyed and/or inaccessible portions of the Subject Property. Unsurveyed and inaccessible portions of the Subject Property are described below. In addition, EBI renders no opinion as to the presence of hazardous substances or petroleum products in, on or under the Subject Property where direct observation of the interior walls, floor, or ceiling of a structure was obstructed by objects or coverings on or over these surfaces.

EBI Services and opinions are based on the scientific or technical tests or procedures specifically set forth in the scope of the Services described in this report. The ASTM Standard E 1527-13 does not encompass analytical testing to evaluate asbestos containing materials, radon, lead-based paint, drinking water quality, indoor air quality, stored chemicals, debris, fill materials, surface water, or subsurface samples (soil and groundwater) as part of a Phase I ESA. Because geologic and soil formations are inherently random, variable, and indeterminate in nature, the Services and opinions provided under this Agreement are not guaranteed to be a representation of actual conditions on the Subject Property, which are also subject to change with time as a result of natural or man-made processes, including water permeation. In performing the Services, EBI used that degree of care and skill ordinarily exercised by environmental consultants or engineers performing similar services in the same or similar locality at the same time and under similar circumstances. No other representation, expressed or implied, and no warranty or guarantee is included or intended. The report speaks only as of its date, in the absence of a specific written update of the report, signed and delivered by EBI.

Additional information that becomes available after our survey and draft submission concerning the Subject Property should be provided to EBI so that our conclusions may be revised and modified if necessary, at additional cost.

Client and EBI agree that to the fullest extent permitted by law, EBI shall not be liable to Client for any special, indirect, consequential, punitive, exemplary, incidental or indirect damages or losses whatsoever, whether caused by EBI's negligence, errors, omissions, strict liability, breach of contract, breach of warranty or other cause or causes whatsoever.

The assessment was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession, and in accordance with generally accepted practices of other consultants currently practicing in the same locality under similar conditions.

1.4 SPECIAL TERMS AND CONDITIONS

This Phase I Environmental Site Assessment (the report) has been prepared to assist a lender to be selected by Glacier Equities in determining whether to make a loan evidenced by a note secured by the Subject Property. This report can be relied upon by only the parties stated in the transmittal letter at the front of this report. In the event that EBI provides a purchaser written permission to use this report, EBI's liability to such purchaser is limited to the cost of the report. Amendments to EBI's limitations as stated herein that may occur after issuance of the report are considered to be included in this report. EBI's liability to a purchaser wishing to use this report is limited to the cost of the report. Payment for the report is made by, and EBI's contract and report extends to Glacier Equities only, in accordance with our Standard Terms and Conditions for Third Party Due Diligence Services.

1.5 DATA GAPS

Any data gaps identified herein, as defined by ASTM Practice E 1527-13 § 3.2.20, are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the Subject Property and do not alter the conclusions of this report.

2.0 SUBJECT PROPERTY DESCRIPTION

2.1 OWNERSHIP AND LOCATION

According to the New York City Department of Finance, the Subject Property is currently owned by Workable Grand LLC.

The Subject Property is located at 8-10 Grand Avenue in Brooklyn, Kings County, New York. The Subject Property includes two contiguous rectangular-shaped parcels, identified by the New York City Department of Finance as Parcel # 2-1877-27 and 2-1877-30, totaling approximately 0.39 acres. The Subject Property is located in the southwest quadrant of the intersection of Grand Avenue and Flushing Avenue. Figure 1 depicts the location of the Subject Property on a street map of Brooklyn, New York. Figure 2 depicts the location of the Subject Property on the Brooklyn, New York United States Geological Survey (USGS) 7.5 Minute Topographic Quadrangle. Figure 3 depicts the configuration of the Subject Property and adjoining properties.

2.2 SUBJECT PROPERTY IMPROVEMENTS

The Subject Property is currently improved with one, two-story, mixed-use building reportedly constructed in 1994 (8 Grand Avenue) and one, seven-story, mixed-use building reportedly constructed in 1916 and renovated in 1935 (10 Grand Avenue). There are basements beneath both buildings. The existing buildings fully occupy the Subject Property with no parking areas or landscaped areas.

2.3 CURRENT USE OF THE SUBJECT PROPERTY

The Subject Property is currently improved with one, two-story, mixed-use building (8 Grand Avenue) and one, seven-story, mixed-use building (10 Grand Avenue). Tenants at the Subject Property include numerous commercial, office and artist tenant spaces and approximately 40 multi-family units; however, EBI was not provided the current building mix or current unit square footages. There are currently no manufacturing or industrial operations conducted at the Subject Property.

2.4 MUNICIPAL SERVICES & UTILITIES

The Subject Property is serviced by the following municipal services and utilities:

MUNICIPAL SERVICES AND UTILITIES	
Utility	**Provider/Source**
Potable Water Supply	New York City Department of Environmental Protection
Sewage Disposal System	New York City Department of Environmental Protection
Electrical Service	Con Edison
Natural Gas Service	Not provided
Oil Service	Not provided
Heating/Cooling Systems	The buildings are heated by electric HVAC units. The buildings are cooled by tenant owned window air conditioning units. Supplemental heating and cooling are provided to the elevator rooms via electric split systems.
Emergency Power	Not provided

2.5 ADJOINING PROPERTIES

Property use in the vicinity of the Subject Property is primarily characterized by residential and retail/commercial development.

ADJOINING PROPERTIES	
Direction	**Findings**
North	The Subject Property is bound to the north by Flushing Avenue beyond which is the New York City Navy Yard.
South	The Subject Property is bound to the south by a multi-story residential/commercial building (20 Grand Ave).

Direction	Findings
East	The Subject Property is bound to the east by Grand Avenue beyond which are several commercial/industrial warehouses (11 - 17 Grand Ave, 280 Flushing Ave)
West	The Subject Property is bound to the west by a vacant lot and a multi-story commercial building (24 Ryerson St).

No visual evidence of adverse environmental conditions was observed during the survey of the adjoining properties.

2.6 PHYSICAL SETTING

2.6.1 Topography

The Subject Property is located at an elevation of approximately 25feet above mean sea level (msl). The topography of the Subject Property is relatively flat and slopes gently to the north. The Subject Property is located in a relatively flat area, and the general slope of the surrounding region is to the north (see Figure 2, which depicts the location of the Subject Property on the Brooklyn, New York USGS 7.5 Minute Topographic Quadrangle).

2.6.2 Geology and Soils

No bedrock outcroppings were observed at the Subject Property. Information concerning the geology of the Subject Property was obtained from the USGS Ground Water Atlas of the United States, New York region (1997). The Subject Property is located within the Embayed section of the Coastal Plain physiographic province, which is characterized by areas of low relief and consists of Cretaceous Coastal Plain sediments, primarily clay, sand, and gravel, that overlie igneous and metamorphic rocks that crop out in Connecticut. The surface of these rocks slopes to the southeast, and the overlying Coastal Plain sediments slope and thicken in the same direction. Quaternary glacial deposits, primarily out-wash sand and gravel, cover the Coastal Plain sediments on Long Island to depths of as much as 600 feet.

According to the Natural Resources Conservation Service (NRCS) Web Soil Survey (WSS) website (http://websoilsurvey.nrcs.usda.gov/app/), the dominant soil composition in the vicinity of the Subject Property is classified as Urban fill, till substratum, 0 to 3 percent slopes (UtA). This soil consists of asphalt over human transported material.

2.6.3 Hydrogeology and Hydrology

No natural surface water bodies were identified on or adjacent to the Subject Property. The nearest downgradient surface water body is the East River, located approximately 3,000 feet northwest of the Subject Property.

Local groundwater gradient is expected to follow surface topography; therefore, groundwater flow near the Subject Property is expected to flow to the northwest. Groundwater depths and flow gradients are best evaluated by a subsurface investigation involving the installation of at least three groundwater monitoring wells and precise measurements of hydrostatic pressure. Monitoring wells were not observed on the Subject Property.

3.0 USER PROVIDED INFORMATION

The following section summarizes information provided by Glacier Equities, the User, with regard to this Phase I Environmental Site Assessment. Additionally, a User Questionnaire was forwarded to the designated client contact. The User Questionnaire has not been completed and returned to our offices. The information requested in the User Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Subject Property. Relevant documentation referenced below is presented in Appendix C.

3.1 TITLE RECORDS

Title record information associated with the Subject Property has not been provided to EBI by the User. A detailed discussion regarding review of information obtained from other sources is presented in Section 4.2.3 of this report.

3.2 ENVIRONMENTAL LIENS AND ACTIVITY AND USE LIMITATIONS

The User has provided no information regarding environmental liens or activity and use limitations in connection with the Subject Property. A discussion regarding environmental liens is presented in Section 4.2.5 of this report. A detailed discussion regarding activity and use limitations is presented in Sections 4.1.1 and 4.1.2 of this report.

3.3 SPECIALIZED KNOWLEDGE

The User provided no specialized knowledge that is material to recognized environmental conditions in connection with the Subject Property. EBI was not provided with or made aware of previous environmental assessments or other documentation that is material to recognized environmental conditions in connection with the Subject Property, except as presented in Section 4.2.6 of this report.

3.4 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

The User has provided no commonly known or reasonably ascertainable information within the local community about the Subject Property that is material to recognized environmental conditions in connection with the Subject Property.

3.5 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

The User has provided no information regarding valuation reduction for environmental issues in connection with the Subject Property.

3.6 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

The User provided contact information for the Subject Property owner, manager and/or occupants.

3.7 REASON FOR PERFORMING PHASE I ESA

The User retained EBI to complete this Phase I Environmental Site Assessment in connection with a real estate transaction.

4.0 RECORDS REVIEW

4.1 STANDARD ENVIRONMENTAL RECORDS

A review of standard environmental databases maintained by federal, state, and tribal offices was completed through Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut. The databases were searched for properties with reported environmental conditions located within approximate minimum search distances as specified by ASTM Standard E 1527-13, by using geocoding information that identified the coordinates of the properties in the databases or by checking the street addresses of practically reviewable non-geocoded "orphan" properties within the same zip code. The database report is presented in Appendix E.

The database report identified 17 "orphan sites." Orphan sites are those sites that could not be accurately mapped or geocoded due to inadequate location information. EBI attempted to locate these sites via vehicular reconnaissance and interviews with personnel familiar with the area. Based on this research, EBI did not identify listed orphan sites within the approximate minimum search distances that may be considered likely to have impacted conditions at the Subject Property.

It should be noted that plotted locations of listed sites are not always accurate. With regard to listings that are determined or suspected to be inaccurate, based on information from other sources such as direct observation or consultation with individuals familiar with the property, EBI uses the best available data when evaluating the location of listed sites discussed below.

The following table provides a summary of the findings of the environmental database report. Specific properties identified within the database report are further discussed in the sections below. Properties that are identified within the database report that are not discussed further in the sections below are not considered to be a concern to the Subject Property based on one or more of the following rationale: absence of reported releases, current regulatory status, distance, presumed hydrogeologic gradient and/or nature/extent of contamination.

4.1.1 Federal, State and Tribal Agency Database Records

National Priority List (NPL)
The NPL database, also known as the Superfund List, is a subset of CERCLIS and identifies sites that are ranked as high priority for remedial action under the Federal Superfund Act and is searched to 1.0 mile.

Delisted National Priority List (NPL)
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. The Delisted NPL database is searched to 0.5 mile.

Superfund Enterprise Management System (SEMS)
SEMS tracks federal hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of the USEPA's Superfund Program. The list was formerly known as CERCLIS and was renamed at the end of 2015. The list contains data regarding potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies, and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). SEMS also contains sites that are either proposed to or on the National Priority List (NPL), as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. SEMS is searched to 0.5 mile.

SEMS - ARCHIVE
SEMS - ARCHIVE tracks sites that have been removed from the SEMS list. This list was formerly known as the CERCLIS- NFRAP list and was renamed SEMS - Archive at the end of 2015. SEMS-ARCHIVE sites may be sites where, following an initial investigation, no contamination was found, contamination was removed without the need for the site to be placed on the NPL, or the contamination was not considered sufficient to warrant Federal Superfund action or NPL consideration. SEMS - Archive is searched to 0.5 mile.

Resource Conservation and Recovery Act (RCRA) - Corrective Action Tracking System (CORRACTS)
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information regarding sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. The RCRA-CORRACTS database identifies TSD facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA and is searched to 1.0 mile.

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) Facilities
RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) facilities are required to register hazardous waste activity under the Resource Conservation and Recovery Act (RCRA), and the database is searched to 0.5 mile.

RCRA Hazardous Waste Generators
Hazardous waste generators tracked under the Resource Conservation and Recovery Act (RCRA) are classified as either Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQG). A RCRA-LQG is defined as a facility that generates over 1,000

kilograms (Kg) of hazardous waste, or over 1 Kg of acutely hazardous waste per month. A RCRA-SQG is defined as a facility that generates between 100 Kg and 1,000 Kg of hazardous waste per month. A RCRA-CESQG is defined as a facility that generates less than 100 Kg of hazardous waste, or less than 1 Kg of acutely hazardous waste per month. RCRA Hazardous Waste Generator listings are searched for the Subject Property and adjacent properties only.

Federal Engineering Control / Institutional Control Registries
The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. Federal Engineering Control / Institutional Control Registries are searched to 0.5 mile.

Emergency Response Notification System (ERNS)
ERNS is a national database used to collect information regarding reported releases of petroleum products and/or hazardous substances. The database contains information from spill reports submitted to Federal agencies, including the EPA, the U.S. Coast Guard, the National Response Center, and the U.S. Department of Transportation. A review of this database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property.

State and Tribal equivalent NPL Sites and CERCLIS Sites
State and tribal equivalent NPL and CERCLIS databases were searched for sites located within 1.0 mile and 0.5 mile of the Subject Property, respectively.

State and Tribal Spills Sites (Spills)
A review of available Spills databases was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property.

State and Tribal Landfill Sites and Solid Waste Disposal Sites
The state and tribal landfill and solid waste disposal site databases identify active or inactive landfill and transfer station facilities, as well as open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites and are searched to 0.5 mile.

State and Tribal Registered Storage Tank Sites
The State Registered Storage Tank database is a listing of sites with registered above ground and/or underground storage tanks and is searched for Subject Property listings and adjoining property listings.

State and Tribal Leaking Storage Tank Sites
Leaking Storage Tank Sites are properties where releases of hazardous substances or petroleum products from underground storage tanks (USTs) and/or aboveground storage tanks (ASTs) have been identified and reported to state, tribal, or local agencies. State and Tribal Leaking Storage Tank databases are searched to 0.5 mile.

Voluntary Cleanup Program (VCP) Properties
The Voluntary Cleanup Program (VCP) database identifies sites that are undergoing self-directed investigation/cleanups under the guidance of the state regulatory agency. The VCP database is searched to 0.5 mile.

State and Tribal Engineering Control / Institutional Control Registries
The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. State and Tribal Engineering Control / Institutional Control Registries are searched to 0.5 mile.

State and Tribal Brownfields Sites

Brownfields are properties for which the expansion, redevelopment, or reuse may be complicated by the presence or potential presence of a hazardous substance, pollutant or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Listing as a Brownfield site or a property that may be within a larger designated Brownfield area, does not necessarily indicate the property itself is contaminated. State and Tribal Brownfield databases were searched to 0.5 mile.

Detail Summary	
Site Name:	376 EAST 94 REALTY ASSOC. LLC + 20 GRAND LLC
Databases:	UST
Address:	20 GRAND AVE
Distance:	Adjacent
Direction:	South
Gradient:	Upgradient
ID No.:	2-335002
Comments:	One, 5,000-gallon No. 2 Fuel Oil UST, closed 2/15/2002. No indication of release was identified. Based on the absences of a reported release, this listing does not represent a REC to the Subject Property.

Site Name:	CERTIFIED MOVING & STORAGE CO., INC.
Databases:	AST, SPILLS
Address:	29 RYERSON STREET
Distance:	Adjacent
Direction:	South-southwest
Gradient:	Crossgradient to Downgradient
ID No.:	2-206881 9708952
Comments:	One, 20,000-gallon No. 2 Fuel Oil AST, Closed 6/22/2017. A de minimis spill was reported when 25 gallons of No. 4 fuel oil was discharged onto the sidewalk from a faulty gauge in 1997. The Spill was granted a case closed status by the NYSDEC the same day it was opened. Based on the regulatory closure and nature of the spill, these listings do not represent a REC to the Subject Property.

Site Name:	NAVAL STATION-BROOKLYN, TRANSFORMER AREA
Databases:	INST CONTROL, SHWS
Address:	FLUSHING AVENUE
Distance:	Adjacent across Flushing Avenue
Direction:	North-northwest
Gradient:	Downgradient
ID No.:	55915
Comments:	There are two working electrical substations at this Navy Station which have three transformers employing dielectric fluid which formerly contained PCBs. Each of the substations is contained within an area surrounded by concrete walls and are reportedly located in the northern portion of this property property, which is over 1,000 feet away from the Subject Property. Remedial work began in the summer of 1994 and concluded in 1995 and included power-washing the transformers and stained slabs and removing hazardous levels of PCB contaminated soils. The areas were then backfilled with crushed stone and secured. Three monitoring wells were installed to determine whether PCBs had contaminated the groundwater beneath the site at Building 7. Three rounds of groundwater samples collected in September 1996, December 1996, and March 1997, showed no detectable concentrations of PCBs. It was determined that further monitoring at this site was not warranted. In July 2012 NYSDEC placed an Environmental Notice on the Transformer Area which requires written approval from NYSDEC prior to any disturbance or excavation of the soil, proper management and/or disposal of any contaminated materials exposed or removed, and prior approval by NYSDEC for any change in use. Based on the details, distance, and hydrogeologic relationship with the Subject Property, as well as the details of the on-site subsurface investigations, these listings do not represent a REC to the Subject Property.

Site Name:	SUPSHIP BROOKLYN US NAVY
Databases:	SEMS-ARCHIVE
Address:	FLUSHING & WASHINGTON AVES
Distance:	Adjacent across Flushing Avenue
Direction:	Northwest
Gradient:	Downgradient
ID No.:	NY5170022250
Comments:	Discovery: 1/10/1989 Preliminary Assessment: 9/27/1989 Status: NFRAP - Not on NPL Archived: 1/31/1997 Based on the details, distance, and hydrogeologic relationship with the Subject Property, as well as the details of the on-site subsurface investigations, these listings do not represent a REC to the Subject Property.

Federal, State and Tribal Agency Database Records Summary

The above-listed and remaining identified Federal, State and Tribal Agency Database listings are not considered an environmental concern to the Subject Property based on one or more of the following rationale: absence of reported releases, current regulatory status, distance, presumed hydrogeologic gradient and/or nature/extent of contamination.

4.1.2 Local Regulatory Agency Records

Local municipal offices consulted during the completion of this assessment included the following:

Fire Department New York City
EBI submitted a written request to FDNY for information regarding the generation, transportation, storage, treatment, disposal, and/or spills or releases of hazardous substances or petroleum products at the Subject Property, in accordance with the Freedom of Information Act (FOIA). EBI had not yet received a response to this inquiry as the response time exceeds 30 calendar days and typically extends longer than eight weeks from acknowledgement of receipt of the request making these files not reasonably ascertainable.

New York City Building Inspection System (BIS)
EBI reviewed available information regarding the Subject Property on the City of New York Building Information System for information regarding past uses of the Subject Property. The certificates of occupancy for the 8 Grand Ave building was dated April 20, 1965 and indicates the original block and lot number as 1877 lot 26 at 274 Flushing Ave. This building was reported as a three story warehouse with the upper floors noted as vacant. The COO for 10 Grand Ave is dated April 24, 1928 and is listed as a one-story public garage and repair shop. According to the BIS information, 8 Grand Ave has two open violations and nine open ECB violations and 10 Grand Ave has 29 open violations and 45 open ECB violations. According to the online BIS system, these violations are associated with building and unit renovations and are not indicative of an environmental condition at the Subject Property or within the subsurface. A copy of the BIS Property Profile Overview report is included in Appendix C.

New York City Housing Department (HPD)
EBI reviewed available information regarding the Subject Property on the City of New York Housing Department Building Information database for information regarding past uses of the Subject Property. According to the HDP database, the Subject Property has no overdue lead-based paint violations. A copy of the HPD Building Information report is included in Appendix C.

4.1.3 Vapor Migration

EBI conducted a vapor migration screening survey of the Subject Property. EBI's site observations and review of the environmental database report (cited in Section 4.1) did not identify any conditions on the Subject Property or on adjoining properties that would indicate a REC relative to vapor migration at the Subject Property. See Section 4.2.6 for more discussion.

This vapor migration screening was conducted in accordance with ASTM E1527-13 and is not intended to satisfy the requirements of ASTM E2600-15. The scope of this screening was limited to visual observations and review of the environmental database report and did not include the collection and laboratory analysis of air samples to confirm or refute the presence of airborne contaminants by vapor intrusion.

4.2 HISTORICAL USE OF THE SUBJECT PROPERTY AND ADJOINING PROPERTIES

EBI attempted to determine the history of the Subject Property dating back to 1940 or first developed use.

No environmentally significant conditions were identified on the Subject Property or surrounding properties during the historical review. The Subject Property appears to have been used for commercial and industrial warehouses since at least the late 1800's prior to use as commercial and residential in recent years. The historical use of the Subject Property and surrounding area is summarized in the following sections.

4.2.1 Aerial Photographs and Maps

Historical aerial photographs and historical fire insurance maps may be used to evaluate changes in land use and to identify visible/labeled areas of potential environmental concern. Historical topographic maps provide information related to physical land configuration such as elevation, ground slope, surface water and other features. While most buildings in densely developed urban centers are not depicted, topographic maps typically show structures equal to or larger than the size of a single-family residence in rural areas. Other notable features such as woods, pipelines, municipal boundaries, and areas of filled land are often marked on topographic maps.

A search for historical aerial photographs, historical fire insurance maps and historical topographic maps depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). Historical images depicting the Subject Property reviewed are summarized in the following table. Copies of the images are presented in Appendix F.

AERIAL PHOTOGRAPH AND MAP SUMMARY			
Period	**Subject Property Historical Uses**	**Surrounding Area Historical Uses**	**Source(s)**
1887	The Subject Property is shown as four single family dwellings with outbuildings on the 8 Grand Ave property and a planing mill and lumber yard on 10 Grand Ave.	Grand Ave borders the site to the east beyond which are dwellings and a storefront. The planing mill extends to the south adjacent property. Properties to the east include an office with outbuildings, a dwelling, and undeveloped land. Flushing Ave appears to the north beyond which is a hospital.	Fire Insurance Maps
1897, 1898, 1900	The Subject Property is shaded to represent development. No structures are depicted.	Surrounding properties are shaded to represent urban development with the Navy Yard located adjacent and north.	Topographic Maps
1904	The 10 Grand Ave property is occupied by a portion of a larger lumber yard. 8 Grand Ave is occupied by a coffee roaster, office, a linotype company storage, and horse shoeing shop.	Properties to the south are occupied by a lumber yard, to the east by dwellings, a wagon house, and a storefront, the west by a lumber yard and office with out buildings, and to the north by a hospital.	Fire Insurance Maps
1915	The 8 Grand Ave portion of the Subject Property is shown as a horse shoe shop, corrugated paper manufacture, and Superior Construction Coffee Roasting. 10 Grand Ave is shown as a small office and outbuildings.	A vacant building appears to the south. Dwellings, hay and feed store, a wagon shed, auto house, and dwellings appear to the east. The west adjacent properties are vacant land and a livery and boarding stable. The area to the north is not depicted.	Fire Insurance Maps

1918	The Subject Property is not depicted.	The area to the north is shown as a hospital. Areas to the east, west, and south are not depicted.	Fire Insurance Maps
1924	The Subject Property is shown occupied by two commercial and/or industrial buildings.	Surrounding properties are shown as residential and commercial to the east, commercial/industrial to the south and west, and institutional to the north. A port is shown farther northwest.	Aerial Photographs
1935	The Subject Property is not depicted.	The area to the north is shown as a hospital. Areas to the east, west, and south are not depicted.	Fire Insurance Maps
1938	Santini Storage Warehouse occupies the 10 Grand Ave portion of the Subject Property and noted as built in 1916. The 8 Grand Ave property is shown as a rag warehouse, bunting storage, and a horse shoe shop.	The area to the north is not depicted. East adjacent properties are shown as a coal yard, vacant land, tire service, auto wrecking, and empty crates storage. A vacant factory occupies the south adjacent property with a 25,000-gallon AST inside the building. The east adjacent property is shown as a linotype company.	Fire Insurance Maps
1947	The Subject Property is shaded to represent development. No structures are depicted.	Surrounding properties are shaded to represent urban development with the Navy Yard located adjacent and north.	Topographic Maps
1947	The Subject Property is not depicted.	A hospital occupies the north adjacent property. Areas to the east, south, and west are not depicted.	Fire Insurance Maps
1950	Conditions on the Subject Property appear similar to those depicted on the 1947 map with the 8 Grand Ave buildings noted as storage.	Conditions in the surrounding area appear similar to those depicted on the 1947 map with the east adjacent properties shown as saw dust bagging, tire service, and a parking lot.	Fire Insurance Maps
1951, 1954	Conditions on the Subject Property appear similar to those depicted on the 1924 photograph.	Conditions in the surrounding area appear similar to those depicted on the 1924 photograph.	Aerial Photographs
1956	The Subject Property is shaded to represent development. No structures are depicted.	Surrounding properties are shaded to represent urban development with the Navy Yard located adjacent and north.	Topographic Maps
1965	The Subject Property is not depicted.	The north adjacent property is shown as a hospital. The east, south, and west adjacent properties are not depicted.	Fire Insurance Maps
1966	Conditions on the Subject Property appear similar to those depicted on the 1954 photograph.	Conditions in the surrounding area appear similar to those depicted on the 1954 photograph with the Navy Yard on the north adjacent properties.	Aerial Photographs
1967	The Subject Property is shaded to represent development. No structures are depicted.	Surrounding properties are shaded to represent urban development with the Navy Yard located adjacent and north.	Topographic Maps
1969	The 8 Grand property is shown as a parking lot and 10 Grand is shown as flats.	The north adjacent property is not depicted. Properties to the west are shown as the NYC Dept of Social Services office and a linotype company. The southern property is	Fire Insurance Maps

		occupied by an industrial building. East adjacent properties are shown as metal storage, commercial, and a parking lot.	
1974, 1976	The Subject Property is shown as a parking lot on the 8 Grand Ave property and a commercial/residential building on the 10 Grand Ave property.	Conditions in the surrounding area appear similar to those depicted on the 1966 photograph.	Aerial Photographs
1977, 1979	Conditions on the Subject Property appear similar to those depicted on the 1969 map.	Conditions in the surrounding area appear similar to those depicted on the 1969 map with the linotype facility noted as the Dept of Social Services and the north adjacent property as part of the larger US Naval Station	Fire Insurance Maps
1979	The Subject Property is shaded to represent development. No structures are depicted.	Surrounding properties are shaded to represent urban development with the Navy Yard located adjacent and north.	Topographic Maps
1980	Conditions on the Subject Property are similar to those depicted on the 1976 photograph.	Conditions in the surrounding area appear similar to those depicted on the 1976 photograph with a parking lot shown to the east.	Aerial Photographs
1980, 1981, 1982	Conditions on the Subject Property appear similar to those depicted on the 1979 map.	Conditions in the surrounding area appear similar to those depicted on the 1979 map.	Fire Insurance Maps
1984	The Subject Property is not depicted.	The north adjacent property is shown as the US Naval Station. Properties to the east, south, and west are not depicted.	Fire Insurance Maps
1984	Conditions on the Subject Property are similar to those depicted on the 1980 photograph.	Conditions in the surrounding area appear similar to those depicted on the 1976 photograph with several structures at the northern Navy yard razed.	Aerial Photographs
1986, 1987, 1988, 1989	Conditions on the Subject Property appear similar to those depicted on the 1982 map.	Conditions in the surrounding area appear similar to those depicted on the 1982 map with the vacant/parking lots to the east shown as commercial warehouses.	Fire Insurance Maps
1991	Conditions on the Subject Property are similar to those depicted on the 1984 photograph.	Conditions in the surrounding area appear similar to those depicted on the 1984 photograph.	Aerial Photographs
1991, 1992, 1993	Conditions on the Subject Property appear similar to those depicted on the 1989 map.	Conditions in the surrounding area appear similar to those depicted on the 1989 map.	Fire Insurance Maps
1994	Conditions on the Subject Property are similar to those depicted on the 1991 photograph.	Conditions in the surrounding area appear similar to those depicted on the 1991 photograph.	Aerial Photographs
1995	The Subject Property is shaded to represent development. No structures are depicted.	Surrounding properties are shaded to represent urban development with the Navy Yard located adjacent and north.	Topographic Maps
1995, 1996, 2001, 2002, 2003, 2004, 2005, 2006	The Subject Property is shown as flats at 10 Grand and a warehouse at 8 Grand Ave.	Conditions in the surrounding area appear similar to those depicted on the 1993 map.	Fire Insurance Maps
2006	A small commercial structure appears on the 8 Grand Ave property.	Conditions in the surrounding area appear similar to those depicted on the 1994 photograph.	Aerial Photographs

2007	Conditions on the Subject Property are similar to those depicted on the 2006 map.	Conditions in the surrounding area appear similar those depicted on the 2006 map.	Fire Insurance Maps
2009, 2013	Conditions on the Subject Property are similar to those depicted on the 2006 photograph.	Conditions in the surrounding area appear similar to those depicted on the 2006 photograph.	Aerial Photographs
2013	The Subject Property is shaded to represent development. No structures are depicted.	Surrounding properties are shaded to represent urban development with the Navy Yard located adjacent and north.	Topographic Maps
2017	Conditions on the Subject Property are similar to those depicted on the 2013 photograph.	Conditions in the surrounding area appear similar to those depicted on the 2013 photograph.	Aerial Photographs

4.2.2 Street Directories

Street directories are commercial publications containing names and addresses, and in many cases, occupations of the occupants of a particular community. The directories may also contain information pertaining to business processes conducted within a community. A search for historical street directories was conducted by Environmental Data Resources, Inc. (EDR). Historical street directories were reviewed and are summarized in the following table. Copies of the street directories are presented in Appendix F.

STREET DIRECTORY SUMMARY		
Year	**Issues Noted**	**Occupants**
1934	No	Individual residential tenant listing (8 Grand)
1940	No	Office & Warehouse, Santini MP Inc moving & storage (8 Grand) Gluckson Jacob wooln rags, Gluckson Wool Stock Corp (274 Flushing)
1945	No	Office & Warehouse, Santini MP Inc moving & storage (8 Grand)
1949	No	Office & Warehouse, Santini MP Inc moving & storage (8 Grand)
1960	No	Fireman Bros Inc Fcty, Liberty Sample Promotion Inc, Metro Brush Co Inc, Midway Exprt Packing & Forwdg Co, Sahtihi MP Inc moving & storage office & warehouse (8 Grand)
1970	No	Accurate Wire Prods, Cast Fittings Corp fcty, Fleurette Mfg Co Inc, Jaclyn Shoes Inc, Jimenez Wire Prods Corp, Lemand Inc, Metro Brush Co Inc, Original Knitg Mills Corp, Original Knitting Mills Corp, Portage Draperies Co, Portages Draperies Co Inc., Reliable Pillow Mfg Co Inc, Slipperella Inc. (8 Grand)
1973	No	Cassy Max, Coat Fittings Corp fcty, Fleurette Mf Co Inc, Jaclyn Shoes INc, Metro Brush Co Inc, Original Knitg Mills Corp, Original Knitting Mills Corp, Reliable Pillow Mfg Co Inc, Woodco Fabricators Inc. (8 Grand)
1976	No	Cast Fittings Corp Fcty, Favorite Knitting Mill Inc, Fleurette Mfg Co Inc, Jaclyn Shoes Inc, Original Knitg Mills Corp, Original Knitting Mills Corp, Reliable Pillow Mfg Co Inc. (8 Grand)
1980	No	Jaclyn Shoe Inc. (8 Grand)
1985	No	Favorite Knitting Mills INc, Fleurette MFG Co Inc, Metro Finishers Inc, Peoples Knit Inc, Reliable Pillow MFG Co Inc, S&G Finishers Inc. (8 Grand)
1994	No	Favorite Knitting Mill Inc, People Knits, Peoples Knit INc, Tech Knit Inc, Tech Knits Inc (8 Grand)
1997	No	Peoples Knit Inc, Tech Knit Inc, Techknits Inc. (8 Grand)
1999	No	Numerous residential tenant listings, 10 Grand Fabrication, Lovely Knitwear, Peoples Knit, Peoples Knit Incorporated, Techknits Incorporated. (8 Grand)
2000	No	Numerous residential tenant listings, Lovely Knitwear, Peoples Knit Inc, SturdyStr Dsplys, Tech Knit Inc, Techknits Inc (8 Grand)
2004	No	Numerous residential tenant listings, TWA Trading Inc, Williamsburg Developers & Rntl Inc. (8 Grand)
2005	No	Numerous residential tenant listings, Docs Antiques, Hold End Distributors, Kea Farm Inti LLC, Modern American Woodwork, Ring & Bring, Ten Grand Ave LLC (8 Grand)
2009	No	Numerous residential tenant listings, Autonomous Astronauts Creative Corp, Hold End Distributors, Mr. Sound, Peoples Knit, Tech Knits Ten Grand Avenue Realty, Professional Environmental Systems (8 Grand)
2014	No	Numerous residential tenant listings, Dan Yante Incorporated, Dantech Mechanical Incorporated, Groovemaster Entertainment Inc, Ring & Bring Inc, Ten Grand Avenue Realty (8 Grand)

Year	Issues Noted	Occupants
2017	No	10 Grand Holding LLC, Groovemaster Entertainment Inc, Ring & Bring Inc, Ten Grand Ave Realty (8 Grand)

4.2.3 Recorded Land Title Records

Land title records provide information on previous ownership of a property. Typically, deeds signifying transfer of a land parcel are recorded in county files and can be researched to determine the identity of past owners. A "chain of title" is a continuous record of ownership for a specific parcel. A 50-year chain of title search was not included in the scope of work for this assessment.

4.2.4 Property Tax Records

The property card for the Subject Property was obtained at the New York City Department of Finance. The property card identifies the current owner as Workable Grand LLC, which acquired the Subject Property in 2019. Assessor's Office records indicate that the existing buildings were constructed in 1935 and 1994. A listing of the former Subject Property owners was not available for review. Copies of the property tax records are presented in Appendix C.

4.2.5 Environmental Liens and Activity and Use Limitations

EBI retained Land Title Inquiries, Inc. to conduct a search for Environmental Liens and Activity and Use Limitations for the Subject Property. The search was completed by a title professional from Land Title Inquiries, Inc. and included review of reasonably ascertainable Land Title and Judicial records. The Environmental Lien Search Report indicated that no Environmental Liens or Activity and Use Limitations were found of record. A copy of the Environmental Lien Search Report and accompanying documentation is presented in Appendix C.

4.2.6 Previous Environmental Reports

EBI was provided with the following previous environmental reports performed for the Subject Property. Relevant information from the previous reports is discussed in the appropriate sections of this report, and portions of the previous reports are presented in Appendix G.

Phase I Environmental Site Assessment, 8-10 Grand Avenue, Brooklyn, New York, prepared by Advanced Cleanup Technologies, Inc (ACTI) of Hicksville, New York, dated August 29, 2013

The ACTI Report was completed in general conformance with ASTM Standard E 1527-05. The following information was presented in the ACTI Report:

- At the time of the ACTI Report, the Subject Property was improved with a two-story commercial building and a seven-story mixed-use apartment building. The two-story building is occupied by a paper goods and household supplies store, and a metal shop. The seven-story building contains apartments above an art studio on the ground floor. The buildings contain 50 residential apartments and three commercial units. The buildings have a combined footprint of approximately 15,805 square feet, and the property is approximately16,775 square feet in area.

- ACTI reported that the Subject Property occupants included Ring & Bring, a paper goods and household supplies store, and a metal shop at 8 Grand Ave. Apartments and an art studio occupied 10 Grand Ave.

- Based upon review of historical resources dating back to 1938 (aerial photographs, fire insurance maps, USGS topographical maps, city directories, municipal records, and property deeds), ACTI reported that the Subject Property was historically used for industrial purposes.

- ACTI did not identify evidence of existing or former underground storage tanks (USTs) or aboveground storage tanks (ASTs) at the Subject Property.

- Based upon review of the environmental database report, ACTI identified the north-adjacent property as an inactive hazardous waste disposal site.

Based upon the findings of the Phase I Environmental Site Assessment, ACTI identified the following recognized environmental conditions (RECs) associated with the Subject Property.

- Historical industrial usage of the Subject Property
- Inactive hazardous waste disposal site at adjacent property to the north

ACTI offered the following recommendation:

- ACTI recommended that a Phase II Subsurface Investigation should be performed to determine whether historical industrial usage of the Subject Property and an inactive hazardous waste site at the adjoining property to the north have impacted the environmental quality of the Subject Property. The investigation should include soil, soil vapor and ground water sampling, laboratory analysis and report preparation.

Limited Phase II Environmental Site Assessment, 8-10 Grand Avenue, Brooklyn, New York, prepared by Associated Environmental Services, Ltd (AES) of Hauppauge, New York, dated September 18, 2013

AES conducted a Limited Phase II Subsurface Investigation based on the presence of the RECs listed in the ACTI August 2013 Phase I ESA. The purpose of the Limited Phase II was to determine if the environmental quality of the Subject Property had been impacted. The subsurface investigation was performed on September 11, 2013 to assess the possible presence of environmental impacts in the soil, groundwater, and soil vapor beneath the Subject Property.

The Scope of Work included advancement of five borings utilizing Geoprobe direct-push technology in order to obtain representative soil and/or groundwater samples. Submit a total of five soil samples for laboratory analysis to evaluate potential environmental impacts. Groundwater samples were not submitted for laboratory analysis due to the shallow refusal (i.e., less than 15.5 feet below grade) encountered in the soil borings drilled at the Subject Property. The collection of sub-slab soil vapor samples from three locations throughout the Subject Property to evaluate the potential of adverse vapor intrusion into the building was also performed. One indoor air sample was also collected and submitted for laboratory analysis along with the sub-slab vapor samples.

AES stated that the results of the field investigation and laboratory analysis found that the soil quality, primarily beneath the northern portion of the Subject Property, is not compliant with NYSDEC criteria for unrestricted reuse. However, AES stated that with the exception of the limited chemical concentrations, the Subject Property is compliant with NYSDEC regulations for its current use as a commercial establishment. The poor soil quality found beneath the northern portion of the Subject Property is indicative of the "historic fill" (urban fill) identified in the soil borings. The type and concentrations of the SVOCs detected in the subsurface soil are consistent with asphalt, roofing, and paving construction materials which are typical components within urban fill located within NYC.

AES stated that the occurrence of SVOCs at elevated concentrations is considered a potential adverse impact to human health. However, as these conditions are isolated, beneath an impermeable surface cover (i.e., concrete or asphalt), the soil is not in contact from the Subject Property occupants. AES further stated that the concentrations of the two SVOCs above the commercial objectives do not pose a risk to human health.

AES concluded that the soil conditions at the Subject Property would not facilitate residential redevelopment. To do so, the historic urban fill should be excavated and removed for proper off-site disposal. Field observations indicated the urban fill apparently associated with elevated SVOC concentrations are limited to the northern portion of the Subject Property. Therefore supplemental testing of the soil beneath the northern portion of the Subject Property should be conducted during preliminary stages of potential future property redevelopment to ascertain the appropriate disposal of soil to be removed. Further, construction and maintenance workers should use appropriate health and safety procedures and personnel protective equipment. AES recommended that any proposed subsurface work be conducted under an appropriate Construction Health and Safety Plan to inform workers of the subsurface conditions and establish appropriate monitoring guidelines to mitigate any potential worker exposure.

AES also reported that site conditions did not indicate sub-slab vapor intrusion is occurring. However, concentrations of the VOCs noted in the NYSDOH Guidance Document are significant enough to warrant "monitoring" at that time. AES stated that further testing would not appear warranted under the Subject Property's current configuration, however, AES recommended additional sub-slab vapor and indoor air sampling and analysis be conducted should significant repair to the existing foundation be required or in conjunction with future redevelopment of the Subject Property that may disturb the subsurface soil.

Summary and Update of Environmental Due Diligence Documents, 8-10 Grand Avenue, Brooklyn, New York, prepared by Tenen Environmental (Tenen) of New York, New York, dated May 8, 2018

This letter report summarizes review of the Phase I and Limited Phase II ESA reports discussed above and updates the site visit and records review for the Subject Property.

Tenen reported that at the time of their report, the Subject Property was occupied by a two-story commercial building containing a fitness studio, and a seven-story mixed use commercial/residential building with an art studio on the first floor and residential apartments above.

Based on review of the previous reports, Tenen summarized that the detected concentrations are consistent with those associated with typical historic fill (urban fill) material in New York City; however, the presence of historic fill material on the Subject Property is considered a REC. Additionally, Tenen stated that revised NYSDOH matrices were issued in May 2017, and as such, the previously detected compounds in soil vapor as detected in 2013, require no further action. Tenen stated that the detected concentrations in soil vapor are not considered a REC.

In regard to the north adjacent Brooklyn Navy Yard, Tenen stated that the area of concern at the Navy Yard appears to be approximately 500 feet cross/downgradient in relation to the Subject Property and not considered a REC.

Tenen concluded that the only existing REC is the historic fill (urban fill) located beneath the Subject Property. However, the historic fill is capped by the existing concrete slabs, which are in good condition.

Based on the above, it appears that the Subject Property is characterized by fill of unknown source and environmental quality. Unspecified fill material and historic industrial/commercial use results in non-homogeneous soil and groundwater impacts that are characteristic of urban industrial areas throughout New York City. The NYSDEC and the New York City of Department of Environmental Protection (NYCDEP) recognize these impacts and typically do not require delineation or remediation of same. Moreover, the NYSDEC does not typically consider properties exhibiting urban fill impacts as eligible under the New York State Brownfield Cleanup legislation. Based on the foregoing, the Subject Property's fill appears to be a de minimis condition in accordance with ASTM E 1527-13 Standard Practice for Environmental Site Assessments' definition of Recognized Environmental Conditions. Typically, the primary concerns of urban fill are the potential impact to human health that may result from direct contact or disturbance and/or additional costs to depose of fill spoils. Since non-homogenous soil impacts in the fill material underlying the site is common throughout New York City and NYSDEC and NYCDEP recognize that these impacts typically do not require delineation or remediation, it is our recommendation that fill material distributed during future subsurface activities be handled as regulated waste by default and sampled appropriately. Specifically, we recommend that any disturbance of structures that are in contact with the fill or the fill itself be conducted in accordance with a site specifically prepared Health and Safety Plan. Soil and groundwater sampling should be conducted in conjunction with any future development activities (foundation demolition, excavation for new foundations, etc.). The results will permit the identification of soil and groundwater handling and disposal requirements.

4.2.7 Other Historical Records and Interviews

Mr. John Barney and Mr. Zachary Redding, Brokers with B6 Real Estate, were interviewed to obtain information regarding the history of the Subject Property. Mr. Barney and Mr. Redding reported that they have been familiar with the Subject Property for approximately one year and that the existing buildings were constructed in the 1900's and renovated in 1935 and 1994. Mr. Barney and Mr. Redding reported that the Subject Property has been occupied by various commercial and residential tenants. Mr. Barney and Mr. Redding were unaware of the use or occupants of the Subject Property prior to 1994.

5.0 SUBJECT PROPERTY RECONNAISSANCE

The Subject Property reconnaissance was conducted by Ms. Anya Chase, EBI Field Assessor, on May 21, 2021. Ms. Chase was accompanied by and interviewed Mr. John Barney and Mr. Zachary Redding, Brokers, B6 Real Estate.

5.1 METHODOLOGY AND LIMITING CONDITIONS

The Subject Property reconnaissance consisted of visual and/or physical observations of the Subject Property and improvements, adjoining properties as viewed from the Subject Property boundaries, and the surrounding area based on visual observations made from adjacent public thoroughfares. Building exteriors were observed along the perimeter from the ground, unless described otherwise. Building interiors were observed as they were made safely accessible, unless described otherwise.

At the time of the survey, the weather was sunny and approximately 75 degrees Fahrenheit. During the survey, representative common areas, apartment units, mechanical spaces, and/or equipment and building components were observed. There were no significant portions of the Subject Property that were inaccessible or excluded from this survey.

5.2 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

5.2.1 Hazardous Substances and Petroleum Products (Identified Uses)

Notable hazardous substances or petroleum products in connection with identified uses observed at the Subject Property are described below.

HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS			
General Type of Material	**Approximate Quantity / Container / Material**	**Location**	**Storage Condition**
Cleaning Compounds and Janitorial Supplies	Various sized containers, ranging from aerosol cans to five-gallon pails	First floor storage room	Good: No leaks or spills

EBI did not identify evidence of significant leaks, spills, or the improper handling of petroleum or hazardous substances that might impact the environmental condition of the Subject Property.

5.2.2 Hazardous Substances and Petroleum Products (Unidentified Uses)

EBI did not observe evidence of hazardous substance or petroleum products containers at the Subject Property that were not in connection with identified uses.

5.2.3 Unidentified Substances Containers

EBI did not observe evidence of unidentified substances containers at the Subject Property.

5.3 WASTE GENERATION, STORAGE, AND DISPOSAL

EBI identified the following waste streams generated at the Subject Property:

WASTE GENERATION, STORAGE, AND DISPOSAL			
Classification	**Type of Waste / Generation Process**	**Type of Storage / Location**	**Disposal Method / Contractor**
Non-regulated Solid Waste	Municipal Solid Waste/ Routine Site Operations	Dumpster/ First Floor	Best Way
Non-regulated Liquid Waste	Municipal Sewage/ Routing Site Operations	NA (Municipal Sewer System)	NYC Department of Environmental Protection

No evidence of improper solid waste management or the improper disposal of hazardous substances or petroleum products was observed at the time of reconnaissance.

5.4 UNDERGROUND STORAGE TANKS (USTS) & ABOVEGROUND STORAGE TANKS (ASTS)

5.4.1 Existing Storage Tanks

Based upon site reconnaissance, interviews, and a review of state and local records, EBI identified no evidence of existing USTs or ASTs located at the Subject Property.

5.4.2 Former Storage Tanks

Based upon site reconnaissance, interviews, and a review of state and local records, EBI identified no evidence of former USTs or ASTs located at the Subject Property.

5.5 OIL-CONTAINING EQUIPMENT AND POLYCHLORINATED BIPHENYLS (PCBS)

Polychlorinated biphenyls (PCBs) are a chemical component of many dielectric fluids, heat transfer fluids, hydraulic fluids, lubricating oils, paints, or coatings manufactured prior to July 2, 1979. Equipment that may potentially contain PCBs includes electrical equipment such as transformers or capacitors or hydraulically operated equipment, such as elevators, compaction equipment, or manufacturing equipment. The manufacture and distribution in commerce of PCBs was banned for use in 1979 by the United States Congress, which enacted the Toxic Substance and Control Act (TSCA). In accordance with US Code of Federal Regulations Title 40 - Protection of Environment, Chapter 1 - Environmental Protection Agency, Subchapter R - Toxic Substance Control Act (TSCA), Part 761 - Polychlorinated Biphenyls (PCBs) Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions, the owner of a transformer or other PCB-containing equipment is responsible for equipment maintenance and remediation in the event of a leak or release.

No oil-containing equipment was identified at the Subject Property. Of note, one traction elevator was located at 10 Grand Avenue.

5.6 ADDITIONAL SITE CONDITIONS

The following is a summary of visual and/or physical observations of the Subject Property on the day of the site visit. Photographs of pertinent Subject Property features are presented in Appendix A.

ADDITIONAL SITE CONDITIONS	
Condition	**Identified**
Interior Drains, Trenches, or Sumps	Yes
Interior Stains or Corrosion	No
Unusual Odors	No
Interior Pools of Liquid	No
Stained Soil or Pavement	No
Stressed Vegetation	No
Indications of Solid Waste Disposal	No
Exterior Pits, Ponds, or Lagoons	No
Wastewater or Stormwater Discharge/Disposal	No
Oil-Water Separators or Clarifiers	No
Septic Systems or Cesspools	No
Wells (Drinking Water Wells, Monitoring Wells, Agricultural/Irrigation Wells, or Process Water Wells)	No
Petroleum or Natural Gas Pipelines/Easements	No

Floor drains were observed in the first floor storage room. The floor drains reportedly discharge to the municipal sewer system. No staining or other evidence of a release of hazardous substances or petroleum products was observed in the vicinity of the floor drains.

6.0 INTERVIEWS

The site contact or Key Site Manager was contacted to be interviewed to obtain information regarding recognized environmental conditions in connection with the property. Additionally, a Pre-Survey Questionnaire was forwarded to the designated Subject Property contact. The Pre-Survey Questionnaire has not been completed and returned to our offices. The information requested in the Pre-Survey Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Subject Property. The Pre-Survey Questionnaire and any accompanying documentation is presented in Appendix C.

INTERVIEWS			
Contact / Affiliation	**Date of Communication**	**Years Associated with the Subject Property**	**Telephone No.**
Mr. John Barney Broker B6 Real Estate	05/21/2021	1	(570) 574-9015
Mr. Zachary Redding Broker B6 Real Estate	05/21/2021	1	(646) 933-2646

Pertinent information from the interviews is presented in applicable sections of this report.

7.0 CONSIDERATIONS OUTSIDE THE SCOPE OF ASTM PRACTICE E 1527-13

The following sections address environmental issues or considerations at the Subject Property that parties may wish to assess in connection with commercial real estate that are outside the scope of ASTM Practice E 1527-13 (non-scope considerations).

7.1 ASBESTOS-CONTAINING MATERIAL (ACM)

Asbestos is a term used to describe a group of six naturally occurring crystalline fiber minerals. Asbestos has excellent thermal stability, a high degree of tensile strength, and has been used extensively in the textile, insulation, and building industries, particularly as a component in fireproofing, decorative coatings, insulation materials, and as reinforcement for plaster binders in building products. Asbestos-containing building materials are generally classified as friable or non-friable. Friable materials are those that can be crumbled, pulverized, or reduced to powder by hand pressure, or by normal use or maintenance can be expected to emit asbestos fibers into the air. Non-friable ACM is a potential concern if it is damaged by maintenance work, demolition, or other activities, at which time it may be considered friable.

EBI conducted a limited visual screening survey for the presence of ACM at the Subject Property. EBI identified friable suspect ACM in the form of sheetrock/joint compound composite material and spray-on fireproofing and non-friable suspect ACM in the form of resilient flooring and associated mastic, various construction mastics, wallboard, caulking and roofing materials. These materials were observed to be undamaged and in good condition at the time of assessment. Please note that this survey was limited to visual observations of accessible areas and that the scope of work for this assessment did not include the collection and laboratory analysis of bulk samples of undamaged suspect ACM. Additional suspect ACM may be present in inaccessible areas, including, but not limited to, roofs, pipe chases behind solid walls and ceilings, concealed floor coverings, the interior of machinery or equipment, or water and sewer systems.

It should be noted that the limited visual screening survey conducted under the scope of work for this assessment does not constitute a full asbestos inspection, in which all areas of the buildings would have been thoroughly surveyed and sampled. The possibility exists for ACM to be present in areas of the buildings not accessed or sampled by EBI personnel. Based on the limited scope of this assessment, additional suspect ACM may also be present in areas of the buildings that were accessed as part of this assessment.

Due to the continued distribution of a wide variety of asbestos-containing building materials, asbestos may be present in some of the roofing, flooring, wall and ceiling materials, caulking/putties, adhesives, spackling compounds, and insulation materials, as well as other building materials that may be used at the Subject Property. Sampling many of these materials requires techniques that may be destructive to subject facilities, and in the case of roofing material, may void warranties. It is recommended that an asbestos inspection be performed in accordance with all applicable federal, state, and local regulatory requirements prior to renovation, demolition, or other activities that could cause a material disturbance. Any removal or disturbance of ACM or suspect ACM should be performed by properly trained personnel and in compliance with federal, state, and local regulations.

7.2 RADON

Radon is a naturally-occurring, colorless and odorless radioactive gas that is generated during the breakdown (radioactive decay) of Uranium that is found in soil and rock throughout the United States. The United States Surgeon General has published information that radon is a cause of lung cancer. Radon usually enters a building through openings in the foundation, and therefore the greatest health concern to residents of the lowest level of a building.

The EPA Map of Radon Zones indicates that Kings County is located within a Zone 3 radon area. Zone 3 is defined as an area that has a low potential for radon gas, with a predicted average indoor radon screening level less than 2.0 picoCuries per liter (pCi/L). The EPA recommended Action Level for radon is 4.0 pCi/L.

Based on propensity and in accordance with the scope of work, radon sampling was not conducted as part of this assessment.

7.3 LEAD-BASED PAINT (LBP)

Use of lead in household paint was banned by the U.S. Environmental Protection Agency (EPA) effective January 1, 1978. The EPA and the U.S. Department of Housing and Urban Development (HUD) consider lead-based paint as containing a lead concentration equal to or greater than 1.0 milligram per square centimeter (mg/cm) or 0.5% lead by weight, as defined by Title X of the 1992 Housing and Community Development Act.

In New York City, Local Law 1 of 2004 requires landlords to identify and fix lead paint hazards in the apartments of young children. This law applies to apartments if the building was built before 1960 (or between 1960 and 1978 if the owner knows that the building has lead paint), and if the building has 3 or more apartments, and if a child under the age of 6 lives in the apartment. In buildings covered by Local Law 1, landlords must find out if any children younger than 6 years live in the building and inspect those apartments for lead paint hazards every year. Landlords must use safe work practices and trained workers when fixing lead paint hazards and when doing general repair work that disturbs lead paint. Local Law 1 requires landlords to use firms certified by the U.S. Environmental Protection Agency when disturbing more than 100 square feet of lead paint, replacing windows, or fixing violations issued by the New York City Department of Housing Preservation and Development (HPD). Landlords must repair lead paint hazards before a new tenant moves into an apartment. Landlords must keep records of all notices, inspections, repairs of lead paint hazards, and other matters related to the law.

Based on the original date of construction, there is the potential that LBP is present at the Subject Property. EBI conducted a visual assessment of the painted surfaces in areas accessed at the Subject Property. The painted surfaces observed were noted to be in generally good condition with no significant chipping or peeling paint observed at the time of assessment. The painted surfaces appeared to have had new paint applied within the past 10 years. In accordance with the scope of work for this assessment, no testing of the painted surfaces was conducted.

7.4 LEAD IN DRINKING WATER

Lead has historically been used in pipes, solder, and brass fixtures used in water distribution systems and building plumbing systems. In 1986, EPA banned the use of lead at concentrations exceeding 0.2% lead in solder and 8% lead in other plumbing materials. Lead in drinking water results primarily from corrosion of lead containing materials in service lines or from corrosion of lead containing materials in building plumbing systems such as lead solder, brass, bronze, and other lead containing alloys. The EPA Action Level for lead in public drinking water supplies is 0.015 parts per million (ppm) or 0.015 milligrams per liter (mg/L).

Based upon review of the New York City Department of Environmental Protection (NYC DEC) 2020 Drinking Water Supply and Water Quality Report, the municipal water supply meets all current criteria established by the Safe Drinking Water Act (SDWA) and local municipal drinking water standards, including those for lead. Based upon the existing municipal water service and in accordance with the scope of work for this assessment, EBI did not conduct lead-in-drinking water sampling at the Subject Property.

8.0 FINDINGS, OPINIONS AND CONCLUSIONS

EBI has performed this Phase I Environmental Site Assessment of the Subject Property in conformance with the scope and limitations of ASTM Standard E 1527-13. Any exceptions to, or deletions from, this practice are described in Section 1 of this Report.

This assessment has identified no evidence of *recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), or controlled recognized environmental conditions (CRECs)* in connection with the Subject Property.

However, the following *de minimis condition* was identified in connection with the Subject Property:

- Previous subsurface investigations conducted at the Subject Property have identified historic fill (urban fill) located beneath the Subject Property. However, the historic fill is capped by the existing concrete slabs, which are in good condition. As such, it appears that the Subject Property is characterized by fill of unknown source and environmental quality. Unspecified fill material and historic industrial/commercial use results in non-homogeneous soil and groundwater impacts that are characteristic of urban industrial areas throughout New York City. The NYSDEC and the New York City of Department of Environmental Protection (NYCDEP) recognize these impacts and typically do not require delineation or remediation of same. Moreover, the NYSDEC does not typically consider properties exhibiting urban fill impacts as eligible under the New York State Brownfield Cleanup legislation. Based on the foregoing, the Subject Property's fill appears to be a de minimis condition in accordance with ASTM E 1527-13 Standard Practice for Environmental Site Assessments' definition of Recognized Environmental Conditions. Typically, the primary concerns of urban fill are the potential impact to human health that may result from direct contact or disturbance and/or additional costs to depose of fill spoils.

In addition, the following *considerations outside the scope of ASTM Practice E 1527-13* were identified in connection with the Subject Property:

- EBI conducted a limited visual screening survey for the presence of ACM at the Subject Property. EBI identified friable suspect ACM in the form of sheetrock/joint compound composite material and spray-on fireproofing and non-friable suspect ACM in the form of resilient flooring and associated mastic, various construction mastics, wallboard, caulking and roofing materials. These materials were observed to be undamaged and in good condition at the time of assessment. Please note that this survey was limited to visual observations of accessible areas and that the scope of work for this assessment did not include the collection and laboratory analysis of bulk samples of undamaged suspect ACM. Additional suspect ACM may be present in inaccessible areas, including, but not limited to, roofs, pipe chases behind solid walls and ceilings, concealed floor coverings, the interior of machinery or equipment, or water and sewer systems. Based on the condition of suspect ACM, these materials do not currently pose a significant environmental threat to the occupants of the Subject Property. Suspect ACM do not present a problem when maintained in good condition. However, additional sampling, removal, and disposal arrangements may be necessary should building construction or renovation activities be conducted. Asbestos is a consideration outside the scope of ASTM E 1527-13 and is not considered a recognized environmental condition (REC).

- Based on the original date of construction, there is the potential that LBP is present at the Subject Property. EBI conducted a visual assessment of the painted surfaces in areas accessed at the Subject Property. The painted surfaces observed were noted to be in generally good condition with no significant chipping or peeling paint observed at the time of assessment. The painted surfaces appeared to have had new paint applied within the past 10 years. In accordance with the scope of work for this assessment, no testing of the painted surfaces was conducted.

9.0 RECOMMENDATIONS

Based upon the findings of this investigation, EBI offers the following:

- Since non-homogenous soil impacts in the fill material underlying the site is common throughout New York City and NYSDEC and NYCDEP recognize that these impacts typically do not require delineation or remediation, it is our recommendation that fill material distributed during future subsurface activities be handled as regulated waste by default and sampled appropriately. Specifically, we recommend that any disturbance of structures that are in contact with the fill or the fill itself be conducted in accordance with a site specific Health and Safety Plan. Soil and groundwater sampling should be conducted in conjunction with any future development activities (foundation demolition, excavation for new foundations, etc.). The results will permit the identification of soil and groundwater handling and disposal requirements.

- EBI recommends the development and implementation of an Asbestos Operations and Maintenance (O&M) Plan for the Subject Property. This O&M Plan provides the procedures and guidelines that, when used during facility cleaning, maintenance, and general operations, will minimize human exposure to asbestos fibers and minimize release of asbestos fibers to the environment. This O&M Plan is a long-term management approach. Estimated cost: $500. EBI additionally recommends that a comprehensive asbestos inspection be conducted prior to significant renovation or demolition of the buildings.

- EBI recommends the development and implementation of a Lead-Based Paint Operations and Maintenance (O&M) Plan for the Subject Property. This O&M Plan provides the procedures and guidelines that, when used during facility cleaning, maintenance, and general operations, will minimize human exposure to lead and minimize release of lead to the environment. This O&M Plan is a long-term management approach. Estimated cost: $500.

DEPARTMENT OF BUILDINGS

ck BOROUGH OF Brooklyn , THE CITY OF NEW YORK

ate APR 20 1965 No. 191523

CERTIFICATE OF OCCUPANCY

O CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

This certificate supersedes C. O. No.

THIS CERTIFIES that the ~~new~~ altered—~~existing~~—building—premises located at

274 Flushing Avenue Block 1877 Lot 26

That the zoning lot and premises above referred to are situated, bounded and described as follows:

EGINNING at a point on the southeast ~~side~~ ~~line~~ formed by the intersection of Flushing Avenue and Grand Avenue

nning thence south 89°11" feet; thence east 70°9" feet;

ence north 76°17" feet; thence east 75°4" feet;

nning thence feet; thence feet;

the point or place of beginning, conforms substantially to the approved plans and specifications, and to the requirements of the Building Code, the Zoning Resolution and all other laws and ordinances, and of the rules of the Board of tandards and Appeals, applicable to a building of its class and kind at the time the permit was issued; and

CERTIFIES FURTHER that, any provisions of Section 646e of the New York Charter have been complied ith as certified by a report of the Fire Commissioner to the Borough Superintendent.

~~Comm~~ No.— Alt. 1806-1963 Construction classification— class 3 nonfireproof

ccupancy classification— see occupancy below . Height 3 stories, 35 feet.

ate of completion— const. 4-13-65 . Located in M 1 - 2 Zoning District.

time of issuance of permit. plumb. 12-15-64

This certificate is issued subject to the limitations hereinafter specified and to the following resotions of the Board of Standards and Appeals:

New York City Fire Department Fuel Tank Special Report

The New York City Fire Department issues New York City Fire Code Fuel Tank Inspection Reports and issues violations for bulk fuel storage tanks within New York City. The FDNY does not maintain copies of Fuel Tank Inspection Report records for bulk fuel storage tanks located outside of New York City.

Where do I obtain a copy of my FDNY Fuel Tank Special Report?

- You can perform an on-line search for a summons, see a copy of the summons, find your NYC Office of Administrative Trials and Hearings (OATH) Environmental Control Board (ECB) hearing date, hearing results, and make payments. You can search for this information by name, address or the summons number. You can search for this information by name, address or the summons number by going to the Summons Finder.
- You may obtain copies from the FDNY Public Records Unit through the following methods,
    - In Person
    - By Mail
    - Online

If you are picking your Report up in person or want to request the records by mail, please either visit or mail requests to:

FDNY Public Records Unit
9 MetroTech Center- First Floor
Brooklyn, N.Y. 11201
Use the FLATBUSH AVENUE ENTRANCE
Hours of Operation: Monday - Friday 9:00am to 4:00pm (except Holidays)
(718) 999-1998 or 1999

Who is eligible to obtain a copy of a FDNY Fuel Tank Special Report?

- Anyone may obtain a copy of a FDNY Fuel Tank Special Report.

What is the fee for a copy of an FDNY Fuel Special Tank Report?

- The fee is $10.00 per Report.
- Payments for Mail or Online requests may be made by check or money order payable to the New York City Fire Department - **Do not send cash**.
    - *NOTE: Payments submitted from foreign countries must be made by a check drawn on a United States bank or by international money order.*

Re: Property Condition Report & Environmental Site Assessment Questionnaire for property known as or located at

8-10 GRAND AVENUE

We have been requested by:	Subject:	EBI Project #:
Glacier Equities	**To complete an Engineering and Environmental survey of the above mentioned property.**	**1121003412**

1. **Please read these instructions and those on the following page carefully.**
2. **Please assemble this original questionnaire and one copy of pertinent property documents, and forward all information to the site or the site contact for the Engineer and/or Scientist to use during the site visit. This documentation will be included in our reports.**
3. **Please fill out this questionnaire to the best of your knowledge and email or fax it back to us within three business days.**
4. **The Engineer and/or Scientist will contact you directly to schedule the site visit.**
5. **This information is extremely time sensitive and necessary to provide your lender with accurate and timely reports.**

EBI Consulting
environmental | engineering | due diligence

Please fill out and sign this questionnaire to the best of your knowledge for the Engineer's/Scientist's site visit. Email to **Kim Holland** at REResearchGroup@ebiconsulting.com or fax to 781-425-3623, for our report files, and keep the original to provide to the Engineer or Scientist.

PROPERTY CONDITION REPORT PRE-SURVEY QUESTIONNAIRE

Additional plans and documentation (see page 4) must be forwarded to the site for the Engineer during the survey. For questions not applicable please respond "N/A." Attach additional pages if necessary. This questionnaire and your responses will be included as an exhibit in the Engineer's report. Accurate and full completion is critical to a timely completion of our reports, and timely loan closing.

LOCAL JURISDICTIONAL INFORMATION

1. What is the property ID #, Lot and Block, or Township/Range ID #?
2. What is the legal Municipality or County that has jurisdiction over the property?
3. What is the assessors file ID number and tax file ID number if available?

PROPERTY INFORMATION

4. What is the size of the subject property lot or lots, in acres?
5. How many parking spaces (and HCP parking spaces) are present at the property?
6. How many buildings comprise the subject property?
   a. If the property is a mall or large retail center, please confirm and list ownership of each building.
7. What is the gross and net rentable square footage of the building(s)?
8. What is the date of construction of the building(s)? When was the building(s) first occupied?
9. How many tenant spaces or apartments are at the Subject Property?
   a. If the property is apartments, please provide a unit and type count by bedroom and square feet.
10. Please list, to the best of your knowledge, any deficiencies or problems with the site, parking area, amenities or utilities.
11. Please list, to the best of your knowledge, any structural, water infiltration, mold, roof, plumbing, HVAC, Fire Alarm or electrical deficiencies or problems.
12. During the last five years, have any major capital improvements been made to the site or building(s)? If so, please explain, with the approximate cost.

13.

Does the property have	Y or N	Does the property have	Y or N
Polybutylene piping		Compressed wood or composite board siding	
Galvanized steel water lines		EIFS exterior finishes	
ABS sanitary lines		Fire Retardant Treated plywood	
Aluminum branch wiring		Cadet/Encore electric heaters installed 1982-99	
Omega (Central or CSC) brand sprinkler heads		GE or Hotpoint dishwashers installed 1983-89	

14. Please list any deficiencies noted during any Building, Fire or Health Department inspections in the last three years.___

_____

15. When were the fire alarm systems and/or sprinkler system (if any) last tested?_____

16. Please list the following utility providers:

Electricity:_____

Water:_____ Storm Drainage:_____

Sanitary Sewer:_____ Natural Gas or Oil:_____

Trash Hauler:_____ and, Frequency of Pick-ups:_____

17. If you are performing or planning any repairs or replacement work to the property that will exceed an aggregate cost of $2,000 please explain, with the approximate cost._____

18. Please list the responsible party for tenant improvements and maintenance of major systems (if applicable).

_____

18. Please attach a brief history of the property. This information helps us properly assess, evaluate and understand your property, and will assist in the financial analysis. The information should include:

- The date of approvals and construction, the contractor who built the property
- History of major capital improvements, repairs, additions or modifications
- History of fires or violations
- A list of any ongoing maintenance issues
- Tenant history, approximate turnover rate

DOCUMENT AND INFORMATION CHECKLIST

Please provide the following information (as much as possible in electronic format) so the Engineer or Scientist can proceed with the survey of the property. Asterisk (*) items are critical to report completion. The documents will become exhibits in the Consultant's report.

A. Plans	B. Municipal Documents	C. Additional Information
▪ ALTA Survey or Site Plan* ▪ Architectural Building Plans* - plans, elevations, wall section, foundation, HVAC & elec. schedules ▪ Reduced scale Site and Building Plans ▪ ***Extremely critical for properties in Seismically active zones 3 and 4**** *STRUCTURAL PLANS – **Seismic Assessments are required for these properties. Structural drawings must be provided at the time of the site visit. If no drawings are provided, the report will be delayed and the Seismic Assessment may be overly conservative.*** ▪	▪ Certificate of Occupancy* ▪ Building Permit* ▪ Façade inspection compliance* ▪ Copy of tax cards ▪ Copy of violations **B.1 NYC Projects** ▪ Department of Building Violations* ▪ Environmental Control Board Violations* ▪ Local Law 11 Facade Reports*	▪ Capital expense report for 1 to 3 years* ▪ Tenant Rent Roll* ▪ Roof warranty ▪ History of recent improvements ▪ Schedule of Floor Area Measurements - Gross and Rentable Square Feet ▪ Previous Due Diligence or Building Component Reports, including, but not limited to, façade*, roof*, mechanical*, electrical, elevator, sprinkler, fire alarm or life safety equipment, or pavement. ▪ Copy of most Recent Appraisal

EBI ACCESS REQUIREMENTS

At the time of the site visit the Consultant is required to gain access to all areas of the property. This includes:

- All building roofs, unless pitched asphalt shingles. This may require you to obtain and provide a ladder.
- All building perimeters

- All site amenities
- All building interiors, including as applicable, common areas, lobbies, a representative sampling of offices, retail spaces, manufacturing or assembly areas, or apartments, community rooms, exercise rooms, pool areas, storage rooms, attics and basements, garages.
- All mechanical, electric, sprinkler, HVAC, utility, service, elevator, storage and equipment rooms

ENVIRONMENTAL SITE ASSESSMENT PRE- SURVEY QUESTIONNAIRE

1. Describe the current uses of the property noting tenant names and oil/chemical usage.

2. Describe the past uses of the property noting tenant names and oil/chemical usage.

3. (Y) (N) Has a previous environmental site assessment report been prepared for the property? If yes, for what reason? Can EBI have a copy?

4. (Y) (N) Has a subsurface investigation (Phase II) ever been conducted on the property, including soil sampling, groundwater sampling, or installation of groundwater monitoring wells? If yes, for what reason? What were the results? Can EBI have a copy of the report? Are there any groundwater monitoring wells currently located on the property?

5. (Y) (N) Has contamination been identified at the Subject Property? Describe the nature of the contamination (i.e., source, media impacted, location, sampling, cleanup activities, regulatory status, etc.). Can EBI have copies of related documentation?

6. (Y) (N) Has a spill or surficial release occurred at the Subject Property? Describe the nature of the spill/surficial release (i.e., source, location, response/cleanup actions, regulatory status, etc.). Can EBI have copies of related documentation?

7. (Y) (N) Is the Subject Property listed with the USEPA and/or the state environmental regulatory agency as a contaminated site? If yes, please describe. Can EBI have copies of related documentation?

8. (Y) (N) Has there ever been previous sampling for Asbestos, Lead-Based Paint, Lead in Water, or Radon? If yes, please describe. Can EBI have copies of related documentation?

9. (Y) (N) Has there been any Asbestos or Lead-Based Paint abatement or Radon mitigation conducted at the Subject Property? Are there Asbestos and/or Lead-Based Paint Operations and Maintenance Plans for the Subject Property? If yes, please describe. Can EBI have copies of related documentation?

10. (Y) (N) Any known environmental liens, deed restrictions, or use limitations for the Property? If yes, please describe. Can EBI have copies of related documentation?

11. (Y) (N) Any permitted or regulated activities (Hazardous waste generator, air) on the Property? If yes, please describe.

12. (Y) (N) Are there any transformers or other electrical equipment, which may contain PCBs? If yes, please describe. Where are they? Who owns the transformer(s)? Who services them?

13. (Y) (N) Has an industrial or manufacturing operation, gas station, motor repair facility, commercial printing facility, dry cleaners, photo-developing laboratory, junk yard, landfill or waste, treatment, storage, disposal processing or recycling facility ever been located at **or** adjacent to the property? If yes, please describe.

14. (Y) (N) Are there any discarded drums, barrels or containers, construction debris, damaged or discarded automobile or industrial batteries, or pesticides, paints or other chemicals in individual containers or drums of greater than five gallons or fifty gallons in aggregate located on the property? If yes, please describe.

15. (Y) (N) Have there ever been any waste storage or treatment lagoons, pits, ponds, or surface impoundments on the property? If yes, please describe.

16. (Y) (N) Does the property have floor drains not discharging to a sewer? Septic System? If yes, please describe.

17. (Y) (N) Are there currently and/or have there been previously aboveground or underground storage tanks at the property? If yes, complete table.

Type of Tank	Size	Content	Installation Date	Spill/Leak Detection? Y or N
Above or Underground	gal			

Above or Underground	gal			
Above or Underground	gal			
Above or Underground	gal			

18. Are you aware of any information to indicate that the Subject Property was sold for substantially below its fair market value? If so, please provide an explanation: _____

_____

19. Additional comments and/or pertinent information relevant to this Phase I ESA:_____

_____

NYC Environmental Protection

Vincent Sapienza, P.E.
Commissioner

Dear Friends:

This past year has presented our agency, our city, and our nation with historic challenges. The work we do at the Department of Environmental Protection (DEP) has never been more vital to protecting the health of New Yorkers.

Despite the challenges presented by the COVID-19 global pandemic, we have remained focused and disciplined in our commitment to being a world-class water utility and building a sustainable future for all New Yorkers. At DEP, we are no strangers to confronting situations that require quick thinking and innovative solutions. Through all the challenges we faced in 2020, I am proud to report that each day we continued to deliver one billion gallons of the best tap water in the world to more than 9.3 million New Yorkers.

In this report, you will see that New York City's drinking water continued to meet or surpass every national and state standard for quality. These data are based on 43,600 samples that were collected by DEP scientists throughout our reservoir system, and at nearly 1,000 street-side sampling stations in every neighborhood across the city. Those samples were analyzed 530,000 times by scientists working in our four water quality laboratories. Robotic monitoring stations on our reservoirs provided another 2.7 million tests to ensure DEP was sending the best-quality water to New York City at all times.

I want to especially thank the many DEP employees who went above and beyond in 2020, putting their commitment to public service before themselves, and truly embodying DEP's core values. And, as we embark on a new decade, I also want to thank each of you for entrusting DEP with your drinking water supply. We take great pride in delivering the best water to millions of New Yorkers every day.

Sincerely,

Vincent Sapienza, P.E.
Commissioner

Throughout the COVID-19 pandemic, DEP's 6,000 dedicated scientists, engineers, and other professionals continued to protect, operate, and maintain New York City's water supply system, delivering high-quality drinking water to millions of New Yorkers around the clock, without interruption

NEW YORK CITY'S WATER SUPPLY SYSTEM

New York City's water supply system provides more than one billion gallons of safe drinking water every day to more than 8.3 million residents of New York City and one million people living in the counties of Westchester, Putnam, Orange, and Ulster. In 2020, we delivered 104 million gallons per day to 74 communities and institutions outside NYC. In all, this system provides nearly half the population of New York State with high-quality drinking water.

New York City gets its drinking water from 19 reservoirs and three controlled lakes spread across a nearly 2,000-square-mile watershed. The watershed is located upstate in portions of the Hudson Valley and Catskill Mountains that are as far as 125 miles north of the city. New York City's water supply system is comprised of two primary surface water supplies called the Catskill/Delaware and Croton. The city also has a permit to operate a groundwater supply in Southeast Queens, although water from that system has not been delivered to customers in many years.

In 2020, New York City received a blend of drinking water from the Catskill/Delaware and Croton supplies. The Catskill/Delaware provided approximately 96 percent of the water, and approximately 4 percent was supplied by Croton. An estimated 10 percent of the water supply was lost due to distribution system leakage.

TREATING OUR DRINKING WATER

CATSKILL/DELAWARE SUPPLY

Due to the very high quality of our Catskill/Delaware supply, New York City is one of only five large cities in the country with a surface drinking water supply that does not utilize filtration as a form of treatment. The Catskill/Delaware supply operates under a filtration waiver, referred to as the "Filtration Avoidance Determination" (FAD), and the water from this supply is treated using two forms of disinfection to reduce microbial risk.

Water is disinfected with chlorine, a common disinfectant added to kill germs and stop bacteria from growing on pipes, and then with ultraviolet (UV) light at the Catskill/Delaware UV Disinfection Facility. The facility, located in Westchester County, is the largest of its kind in the world and is designed to disinfect more than two billion gallons of water per day. At the UV Disinfection Facility, exposure to UV light inactivates potentially harmful microorganisms without changing the water.

DEP also adds food grade phosphoric acid, sodium hydroxide, and fluoride to the water before sending it into distribution. Phosphoric acid is added because it creates a protective film on pipes that reduces the release of metals, such as lead, from service lines and household plumbing. Sodium hydroxide is added to raise the pH which reduces corrosion of household plumbing. Fluoride is added to improve dental protection and is effective in preventing cavities at a federally-approved level of 0.7 mg/L. During 2020, only 0.2 percent of the water produced by Catskill/Delaware supply was not fluoridated.

CROTON SUPPLY

The Croton supply is filtered by the Croton Water Filtration Plant, located underground in the Bronx. The plant has the ability to treat up to 290 million gallons of drinking water each day, which helps to ensure a large enough supply of water for the city to withstand droughts, periodically shut down other parts of the water supply, and respond to the potential effects of climate change. The Croton Water Filtration Plant first began operating in May 2015.

Once water arrives at the filtration plant it undergoes treatment to remove impurities. The treatment processes include coagulation, dissolved air flotation, filtration, and disinfection. During coagulation, chemicals are added to untreated water, causing any particulates to bunch together and become larger particles called floc. Then injected air bubbles float the floc to the top where it is skimmed off using a process called dissolved air flotation. Finally, the water flows through a filter bed removing any remaining particles. Just like the Catskill/Delaware supply, Croton water is disinfected with chlorine and UV light to protect against potentially-harmful microorganisms, and is treated with food grade phosphoric acid, sodium hydroxide, and fluoride. In 2020, DEP upgraded the material in the filter beds from anthracite to granular activated carbon (GAC) to improve the plant's performance. Once the change was completed, the plant resumed operations on October 27 to December 31, during which time, only 0.6 percent of the water produced by the plant was not fluoridated.

The New Croton Reservoir Dam

TESTING FOR QUALITY

DRINKING WATER SAMPLING AND MONITORING

DEP monitors the water in the distribution system, upstate reservoirs and feeder streams, and wells that are potential sources for New York City's drinking water supply. We continuously sample and conduct analyses for numerous water quality parameters, including microbiological, chemical, and physical measures, throughout the watershed and as the water enters the distribution system. DEP also regularly tests water quality at nearly 1,000 water quality sampling stations throughout New York City. In 2020, DEP performed over 363,200 analyses on 31,300 samples from the distribution system, meeting all state and federal monitoring requirements. These data are summarized in tables starting on page 11. Additionally, DEP performed over 166,800 analyses on 12,300 samples from the upstate reservoir watersheds and took more than 2.7 million robotic monitoring measurements to support FAD watershed protection programs and to optimize water quality.

DEP's water quality monitoring program—far more extensive than required by law—demonstrates that the quality of New York City's drinking water remains high and meets all state and federal drinking water standards

REGULATION OF DRINKING WATER

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activities. Contaminants that may be present in source water include microbial contaminants, inorganic contaminants, pesticides and herbicides, organic chemical contaminants, and radioactive contaminants.

To ensure that tap water is safe to drink, the New York State Department of Health (NYSDOH) and the United States Environmental Protection Agency (EPA) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The NYSDOH and the federal Food and Drug Administration's (FDA) regulations establish limits for contaminants in bottled water, which must provide the same protection for public health. The presence of contaminants does not necessarily indicate that water poses a health risk. These regulations also establish the minimum amount of testing and monitoring that each system must undertake to ensure that the tap water is safe to drink.

Visit **epa.gov/safewater** or **health.ny.gov** for more information about drinking water.

PROTECTING OUR WATER AT THE SOURCE

10-YEAR FILTRATION AVOIDANCE DETERMINATION (FAD)

DEP funds and administers a number of watershed protection and pollution prevention programs to maintain the high quality of our drinking water. These science-based strategies are designed to protect New York City's drinking water at its source by keeping pollution out of our reservoirs and the streams, creeks, and rivers that feed them.

NYSDOH issued the most current FAD in 2017 that allows DEP to continue operating the Catskill/Delaware supply without filtration through at least 2027. DEP will commit an estimated $1 billion over the coming decade to comply with the FAD, which will go towards our watershed programs that conserve watershed lands, upgrade wastewater infrastructure, implement clean water strategies on watershed farms, and manage streams, forests, and other natural resources that affect water quality.

SOURCE WATER ASSESSMENT PROGRAMS

Federal regulations require states to develop and implement source water assessment programs to identify the areas that supply public tap water, inventory contaminants, assess water system susceptibility to contamination, and inform the public of the results. The states are given a great deal of flexibility on how to implement source water assessment programs. These assessments are created using available information to help estimate the potential for source water contamination. Higher susceptibility ratings do not mean that source water contamination has occurred or will occur in a water supply; rather, they indicate the need for water suppliers to implement additional precautionary measures. Because of DEP's extensive watershed protection and pollution prevention programs, NYSDOH does not find it necessary to perform a source water assessment on the New York City water supply.

Water quality monitoring at Bear Kill which leads to Schoharie Reservoir

CONSERVING OUR SUPPLY

Although New York City has grown by more than 1.3 million people since 1980, demand for water has dropped by approximately 35 percent—making it one of the most water-efficient large cities in the country.

The average single-family household in New York City uses approximately 70,000 gallons of water each year at a cost of $3.99 per 100 cubic feet of water (748 gallons), or about $373 a year. Since nearly all customers also receive wastewater collection and treatment services, which cost about $594, the combined annual water and sewer charge for the typical New York City household using 70,000 gallons per year is $967, calculated at fiscal year 2021 rates.

Advances in technology have played a key role in the drop of water consumption, from the replacement of thousands of inefficient toilets through DEP's toilet replacement program, to an automated leak detection program, which helps our customers save both money and water by alerting homeowners to unusual spikes in water consumption. DEP has also partnered with other city agencies, colleges, and businesses to help conserve water by installing more than 400 spray shower timers in NYC Parks playgrounds, 34,000 efficient bathroom fixtures in 402 New York City public schools, and a water reuse station at the Fire Department of the City of New York's (FDNY) Fire Training Academy on Randall's Island which includes a 40,000-gallon underground water storage tank used for calibrating equipment on pumper apparatus.

These, and other recent investments, have reduced overall demand for water by more than 11.2 million gallons per day. By 2022, we plan to nearly double that by conserving 20 million gallons per day through new and ongoing initiatives.

The DOs & DON'Ts of Water Conservation

BATHROOM

✔ Do take shorter showers and fill the tub halfway.

✖ Don't run water while washing your hands & brushing your teeth.

KITCHEN & LAUNDRY

✔ Do run the dishwasher & washing machine only when full.

✖ Don't let the water run while washing dishes. Kitchen faucets use 2 to 3 gallons a minute. Filling a basin only takes 10 gallons to wash and rinse.

EVERYWHERE

✔ Do install water-saving fixtures.

✖ Don't ignore water leaks. Turn taps off tightly.

OUTDOORS

✔ Do use a self-closing nozzle on your hose.

✖ Don't open fire hydrants.

REPORT LEAKS & WATER WASTE
Call 311

PLANNING FOR THE FUTURE

We are continuing to build upon DEP's legacy of long-term planning and have made significant progress on keystone projects already underway. In 2020, we completed the third year of an all-important capital project to rehabilitate the Catskill Aqueduct. Skilled workers replaced century-old valves along the northern 74 miles of the aqueduct and repaired minor leaks to ensure the aqueduct continues to deliver water from the Catskills to New York City after more than a century in service.

In May 2020, the final segment of steel lining was lowered into the Delaware Aqueduct Bypass Tunnel, marking another significant milestone in our project to repair the longest tunnel in the world. The last of 230 massive steel liners was lowered down an access shaft in the Town of Newburgh. Each steel segment is 16 feet in diameter, 40 feet long, and weighs 106,000 pounds. DEP expected to complete the installation of steel liners by August 2020, but laborers finished this vital portion of the $1 billion project several months ahead of schedule. In addition to meeting this milestone, we also placed more than 70 percent of the tunnel's finished concrete liner.

This summer, DEP announced the start of subsurface analyses for the future upgrades to the dam and dikes at Ashokan Reservoir. Field work began in August to support future upgrades to the dam and dikes that impound water at the reservoir. The work focuses on gathering soil and bedrock samples that are needed for the engineering and design of upgrades at each structure. The subsurface investigations are connected to the Ashokan Century Program, a comprehensive, multi-year capital program to upgrade the dam, dikes, chambers and other infrastructure at Ashokan Reservoir. The program comprises the largest public works project in the Catskills in more than 50 years.

Work on steel liners for the Delaware Aqueduct Bypass Tunnel (each liner section is 16' in diameter and 40' long)

CRYPTOSPORIDIUM AND *GIARDIA*

DEP maintains a comprehensive program to monitor its source waters and watersheds for the presence of *Cryptosporidium* and *Giardia*, microscopic organisms that can cause disease. In 2020, DEP collected weekly samples of water leaving Kensico Reservoir, prior to chlorination and UV disinfection, and leaving Hillview Reservoir, prior to secondary disinfection with chlorine. Water leaving New Croton Reservoir was sampled quarterly. Samples were analyzed using EPA Method 1623.1. The *Cryptosporidium* and *Giardia* data for water leaving the Kensico, Hillview, and New Croton reservoirs are presented in the table on page 14 of this report.

While there is no evidence that any cases of cryptosporidiosis or giardiasis have been caused by the New York City water supply, federal and state law requires all water suppliers to notify their customers about the potential risks from *Cryptosporidium* and *Giardia*. Cryptosporidiosis and giardiasis are intestinal illnesses caused by microscopic pathogens, which can be waterborne. Symptoms of infection include nausea, diarrhea, and abdominal cramps. Some people may be more vulnerable to disease causing microorganisms, or pathogens in drinking water than the general population. Immuno-compromised persons, such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly individuals, and infants, can be particularly at risk from infections. These people should seek advice from their health care providers about their drinking water. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium*, *Giardia*, and other microbial contaminants are available from EPA's Safe Drinking Water Hotline at 1-800-426-4791.

New York City's Waterborne Disease Risk Assessment Program (WDRAP), a partnership between DEP and DOHMH, helps assess and ensure the microbial safety of NYC's tap water. Under WDRAP, NYC conducts disease surveillance for *Cryptosporidium* and *Giardia* to track incidence and to examine patterns and potential risk exposures in the population. The city also conducts syndromic surveillance for gastrointestinal symptoms to monitor trends to ensure identification of any waterborne disease outbreak, should one occur. Disease and syndromic surveillance continued to indicate that there have been no outbreaks of *Cryptosporidium* and *Giardia* attributed to tap water consumption in New York City.

Throughout the COVID-19 pandemic, DEP scientists continued their work to insure the high-quality of New York City's drinking water supply

LEAD IN DRINKING WATER: FREQUENTLY ASKED QUESTIONS

IS THERE LEAD IN MY DRINKING WATER?

New York City's award-winning tap water is delivered virtually lead-free through 7,000 miles of lead-free aqueducts, tunnels, and water mains in the city's water supply system. However, homes built prior to 1961 may have lead service lines (which connect your house to the city's water main in the street), and some homes, regardless of the year they were built, could have household plumbing and internal fixtures that contain lead. Although New York City takes extensive steps to protect water in homes that may have lead in their plumbing, lead from plumbing may still be released into a home's drinking water. It is possible that lead levels at your home may be higher than at other homes in the community as a result of materials used in your home's plumbing. DEP is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components.

HOW CAN I FIND OUT IF I HAVE A LEAD SERVICE LINE?

Visit nyc.gov/leadfree to view an interactive map. This map offers historical information largely based on third-party plumbing records, supplemented, in some cases by information gathered during inspections.

HOW CAN I TEST THE WATER IN MY HOME?

DEP offers free lead test kits to all New York City residents. Call 311 or visit nyc.gov/apps/311 to request a free lead test kit. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4791) or at epa.gov/safewater/lead.

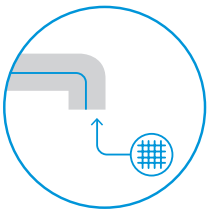
WHAT ARE THE HEALTH EFFECTS OF LEAD?

Exposure to lead can cause serious health problems, especially for pregnant women, infants, and young children. For more information, visit nyc.gov/lead.

How can I limit my lead exposure?

Run Your Tap
for 30 seconds to 2 minutes before using water for drinking or cooking, when your water has been sitting for several hours.

Use Cold Water
for cooking, drinking, or preparing infant formula. Hot tap water is more likely to contain lead and other metals.



Remove & Clean
the faucet screen monthly (also called an aerator), where small particles can get trapped.

Hire
a licensed plumber to identify and replace plumbing fixtures and/or service line that contain lead.

DEP scientist performing water testing at the NYC Water Quality Distribution Laboratory

HOW TO READ THE NEW YORK CITY 2020 DRINKING WATER QUALITY TESTING RESULTS

The following section of this report compares the quality of your tap water to federal and state standards for each parameter (if applicable). The monitoring results show that New York City's drinking water met all drinking water standards in 2020.

The following tables reflect the compliance monitoring results for all regulated and non-regulated parameters, the number of samples collected, the range of values detected, the average of the values detected, and the possible sources of the parameters, unless otherwise footnoted. The monitoring frequency of each parameter varies and is parameter specific. Data presented are for the Catskill/Delaware and Croton supplies, which were the only sources of water in 2020. The table on page 15 represents those parameters monitored for, but not detected in any sample.

Most of our data are representative of 2020 testing; concentrations of parameters or contaminants do not change frequently.

THE NEW YORK CITY
2020 DRINKING WATER QUALITY TESTING RESULTS

DETECTED CONVENTIONAL PHYSICAL AND CHEMICAL PARAMETERS

PARAMETER	NYSDOH MCL (Highest Level Allowed)	EPA MCLG (Ideal Goal)	# SAMPLES	RANGE	AVERAGE	MCL VIOLATION	LIKELY SOURCES IN DRINKING WATER
Alkalinity (mg/L $CaCO_3$)	-		297	14 - 76	20	No	Erosion of natural deposits
Aluminum (µg/L)	50 - 200 (1)		300	8 - 40	13	No	Erosion of natural deposits
Barium (mg/L)	2	2	300	0.01 - 0.04	0.02	No	Erosion of natural deposits
Bromide (µg/L)	- (2)		8	8 - 35	20	No	Naturally occurring
Calcium (mg/L)	-		300	5 - 27	7	No	Erosion of natural deposits
Chloride (mg/L)	250		297	11- 75	17	No	Naturally occurring; road salt
Chlorine Residual, Free (mg/L)	4 (3)		14,855	0.0 - 1.2	0.6 (3)	No	Water additive for disinfection
Chromium (µg/L)	100		300	ND - 4	ND	No	Erosion of natural deposits
Color - distribution system (color units - apparent)	-		13,651	3 - 47	6	No	Presence of iron, manganese, and organics in water
Color - entry points (color units - apparent)	15 (4)		1,207	3 - 12	6	No	Presence of iron, manganese, and organics in water
Copper (mg/L)	1.3 (5)	1.3	300	ND - 0.052	0.007	No	Corrosion of household plumbing; erosion of natural deposits
Corrosivity (Langelier index)	- (6)		76	-2.76 to -1.96	-2.31	No	
Fluoride (mg/L)	2.2 (4)	4	1,930	0.4 - 0.8	0.7	No	Water additive which promotes strong teeth; erosion of natural deposits
Hardness (mg/L $CaCO_3$)	-		300	16 - 106	24	No	Erosion of natural deposits
Hardness (grains/gallon[US] $CaCO_3$) (7)	-		300	0.9 - 5.9	1.4	No	Erosion of natural deposits
Iron (µg/L)	300 (4) (8)		300	ND - 881 (8)	33	No	Naturally occurring
Lead (µg/L)	15 (5)	0	300	ND - 2 (9)	ND	No	Corrosion of household plumbing; erosion of natural deposits
Magnesium (mg/L)	-		300	1 - 9.3	1.7	No	Erosion of natural deposits

DETECTED CONVENTIONAL PHYSICAL AND CHEMICAL PARAMETERS (continued)

PARAMETER	NYSDOH MCL (Highest Level Allowed)	EPA MCLG (Ideal Goal)	# SAMPLES	RANGE	AVERAGE	MCL VIOLATION	LIKELY SOURCES IN DRINKING WATER
Manganese (µg/L)	300 [4] [8]		300	ND - 38	18	No	Naturally occurring
Nickel (µg/L)	-		300	ND - 2 [9]	ND	No	Erosion of natural deposits
Nitrate (mg/L nitrogen)	10	10	297	0.04 - 0.17	0.10	No	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
pH (pH units)	6.8 - 8.2 [10]		14,854	6.9 - 8.0	7.4	No	
Phosphate, Ortho- (mg/L)	1-4 [10]		14,855	1.2 - 3.5	2.1	No	Water additive for corrosion control
Potassium (mg/L)	-		300	0.4 - 2.5	0.7	No	Erosion of natural deposits
Silica [silicon oxide] (mg/L)	-		200	1.8 - 5.2	2.5	No	Erosion of natural deposits
Sodium (mg/L)	NDL [4] [11]		300	9 - 44	12	No	Naturally occurring; road salt; water softeners; animal waste
Specific Conductance (µS/cm)	-		14,858	80 - 461	109	No	
Strontium (µg/L)	-		300	16 - 84	23	No	Erosion of natural deposits
Sulfate (mg/L)	250		297	3 - 19	4	No	Naturally occurring
Temperature (°F)	-		14,854	38 - 82	56	No	
Total Dissolved Solids (mg/L)	500 [1]		77	53 - 89	71	No	Metals and salts naturally occurring in the soil; organic matter
Total Organic Carbon (mg/L)	-		378	0.7 - 3.0	1.6	No	Organic matter naturally present in the environment
Total Organic Carbon - source water (mg/L)	- [2]		8	2.1 - 4.2	3.1	No	Organic matter naturally present in the environment
Turbidity [12] - distribution system (NTU)	5 [13]		13,651	ND - 9.2	0.8 [13]	No	Soil runoff
Turbidity [12] - source water (NTU)	5 [14]		-	-	1.3 [14]	No	Soil runoff
Turbidity [12] - filtered water (NTU)	TT [15]		-	-	0.07 [15]	No	Soil runoff
UV 254 (absorbance/cm)	-		307	0.009 - 0.073	0.029	No	Organic matter naturally present in the environment
Zinc (mg/L)	5 [4]		300	ND - 0.019	ND	No	Naturally occurring

DETECTED ORGANIC PARAMETERS

PARAMETER	NYSDOH MCL (Highest Level Allowed)	EPA MCLG (Ideal Goal)	# SAMPLES	RANGE	AVERAGE	MCL VIOLATION	LIKELY SOURCES IN DRINKING WATER
Bis(2-Ethylhexy)phthalate (µg/L)	6		74	ND - 0.6 [9]	ND	No	Probable source is sample contamination from plastic gloves or air particulates
Bromochloroacetic Acid (µg/L)	50		293	ND - 4	1	No	By-product of drinking water chlorination
Bromodichloroacetic Acid (µg/L)	50 [2]		80	1 - 5	3	No	By-product of drinking water chlorination
t-Butyl alcohol	50		318	ND - D [16]	ND	No	Used in dyes, drugs, and explosives
Chlorodibromoacetic Acid (µg/L)	50 [2]		80	ND - 0.6	ND	No	By-product of drinking water chlorination
Dalapon (µg/L)	50		293	ND - 1.2	ND	No	By-product of drinking water chlorination
Haloacetic Acid 5 (HAA5) (µg/L)	60 [17]		293	4 - 72	51 [17]	No	By-product of drinking water chlorination
Haloacetic Acid Brominated (HAA6Br) (µg/L)	- [2]		80	2 - 9	4	No	By-product of drinking water chlorination
Haloacetic Acid 9 (HAA9) (µg/L)	- [2]		80	31 - 82	53	No	By-product of drinking water chlorination
Total Organic Halogen (µg/L)	-		56	157 - 227	187	No	By-product of drinking water chlorination
Total Trihalomethanes (TTHM) (µg/L)	80 [17]		300	7 - 75	51 [17]	No	By-product of drinking water chlorination

DETECTED MICROBIAL PARAMETERS

PARAMETER	NYSDOH MCL (Highest Level Allowed)	EPA MCLG (Ideal Goal)	# SAMPLES	RANGE	# SAMPLES POSITIVE	AVERAGE	HIGHEST MONTH % POSITIVE	MCL VIOLATION	LIKELY SOURCES IN DRINKING WATER
Total Coliform Bacteria (% of samples positive/month)	5%	0	9,806	-	33	-	1.1%	No	Naturally present in the environment
E. coli (MPN/100mL)	- [18]	0	9,806	-	0	-	0.0%	No	Animal fecal waste
Heterotrophic Plate Count (CFU/mL)	TT	-	8,571	ND - 95	92	ND	-	No	Naturally present in the environment

LEAD AND COPPER RULE SAMPLING AT RESIDENTIAL WATER TAPS

PARAMETER	NYSDOH AL	EPA MCLG (Ideal Goal)	90% OF YOUR LEVELS WERE LESS THAN	RANGE	# SAMPLES EXCEEDING AL	Exceedance	LIKELY SOURCES IN DRINKING WATER
Copper (mg/L)	1.3	1.3	0.204	0.005 - 0.640	0 out of 411	No	Corrosion of household plumbing
Lead (µg/L)	15	0	11	ND - 120	28 out of 411	No	Corrosion of household plumbing

CRYPTOSPORIDIUM AND *GIARDIA* SAMPLING FROM SOURCE WATER LEAVING RESERVOIRS (19)

PARAMETER	RESERVOIR	# SAMPLES	# SAMPLES POSITIVE	RANGE	LIKELY SOURCES IN DRINKING WATER
Cryptosporidium (oocysts/50L)	Kensico	52	3	0 - 1	Animal fecal waste
	Hillview	52	2	0 - 1	
	Croton	4	0	0	
Giardia (cysts/50L)	Kensico	52	35	0 - 17	Animal fecal waste
	Hillview	52	17	0 - 5	
	Croton	4	3	0 - 8	

UNITS AND ABBREVIATIONS

$CaCO_3$ = calcium carbonate
CFU/mL = colony forming units per milliliter
/cm = per centimeter
D = detected parameter
°F = degrees Fahrenheit
µg/L = micrograms per liter (10^{-6} grams per liter)
µS/cm = microsiemens per centimeter
mg/L = milligrams per liter (10^{-3} grams per liter)
MPN/100mL = most probable number per 100 milliliters
ND = parameter is not detected
NDL = no designated limits
NTU = nephelometric turbidity units
/50L = per 50 liters

DEFINITIONS

Action Level (AL):
The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum Contaminant Level (MCL):
The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible, using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG):
The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL):
The highest level of a disinfectant allowed in drinking water. The addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG):
The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contamination.

Treatment Technique (TT):
A required process intended to reduce the level of a contaminant in drinking water.

90th Percentile Value:
The values reported for lead and copper represent the 90th percentile. A percentile is a value on a scale of 100 that indicates the percent of a distribution that is equal to or below the value. The 90th percentile is equal to or greater than 90 percent of the lead and copper values detected at your water system.

NOT DETECTED PARAMETERS

Conventional Physical and Chemical Parameters:

Antimony, Arsenic, Asbestos, Beryllium, Cadmium, Cyanide, Gross alpha, Lithium, Mercury, Nitrite, Selenium, Silver, Thallium, Uranium

Principal Organic Contaminants:

Benzene, Bromobenzene, Bromochloromethane, Bromomethane, n-Butylbenzene, sec-Butylbenzene, tert-Butylbenzene, Carbon tetrachloride, Chlorobenzene, Chloroethane*, Chloromethane, 2-Chlorotoluene, 4-Chlorotoluene, Dibromomethane, 1,2-Dichlorobenzene, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, Dichlorodifluoromethane, 1,1-Dichloroethane, 1,2-Dichloroethane, 1,1-Dichloroethene, cis-1,2-Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane, 1,3-Dichloropropane, 2,2-Dichloropropane*, 1,1-Dichloropropene, cis-1,3-Dichloropropene, trans-1,3-Dichloropropene, total 1,3-Dichloropropene, Ethylbenzene, Hexachlorobutadiene, Isopropylbenzene, p-Isopropyltoluene, Methylene chloride, n-Propylbenzene, Styrene, 1,1,1,2-Tetrachloroethane, 1,1,2,2-Tetrachloroethane, Tetrachloroethylene, Toluene, 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, 1,1,1-Trichloroethane, 1,1,2-Trichloroethane, Trichloroethene, Trichlorofluoromethane, 1,2,3-Trichloropropane, 1,3,5-Trimethylbenzene, m,p-Xylene, o-Xylene, total Xylene

Specified Organic Contaminants:

Alachlor, Aldicarb (Temik), Aldicarb sulfone, Aldicarb sulfoxide, Aldrin, Atrazine, Benzo(a)pyrene, Butachlor, Carbaryl, Carbofuran (Furadan), Chlordane, 2,4-D, 1,2-Dibromo-3-chloropropane, Di(2-ethylhexyl)adipate, Dicamba, Dieldrin, Dinoseb, 1,4-Dioxane, Diquat, Endothall, Endrin, Ethylene dibromide (EDB), Glyphosate, Heptachlor, Heptachlor epoxide, Hexachlorobenzene, 3-Hydroxycarbofuran, Lindane, Methomyl, Methoxychlor, Methyl-tertiary-butyl-ether (MTBE), Metolachlor, Metribuzin, Oxamyl (Vydate), Pentachlorophenol, Perfluorooctanesulfonic acid (PFOS), Perfluorooctanoic acid (PFOA), Picloram, Polychlorinated biphenyls (PCBs), PCB 1016 Aroclor, PCB 1221 Aroclor, PCB 1232 Aroclor, PCB 1242 Aroclor, PCB 1248 Aroclor, PCB 1254 Aroclor, PCB 1260 Aroclor, Propachlor, Simazine, 2,3,7,8-TCDD (Dioxin), Toxaphene, 2,4,5-TP (Silvex), Vinyl chloride

Unspecified Organic Contaminants:

Acenaphthene, Acenaphthylene, Acetochlor, Acetone, Acifluorfen, Allyl chloride, Ametryn, t-amyl ethyl ether, tert-Amyl methyl ether, Anthracene, Atraton, Bentazon, Benzo[a]anthracene, Benzo[b]fluoranthene, Benzo[g,h,i]perylene, Benzo[k]fluoranthene, beta-BHC, Bromacil, Bromoethane, 1,3-Butadiene, 2-Butanone (MEK), Butylate, Butylated hydroxytoluene (BHT), Butylbenzylphthalate, tert-Butyl ethyl ether, Caffeine, Carbon Disulfide, alpha-Chlordane, gamma-Chlordane, trans-Chlordane, Chlorfenvinphos, Chlorobenzilate, 2-Chlorobiphenyl, 4-Chlorobiphenyl, 1-Chlorobutane, Chlorodifluoromethane, Chloroneb, Chlorothalonil (Draconil,Bravo), Chlorpropham, Chlorpyrifos (Dursban), Chrysene, Cyanazine, Cycloate, 2,4-DB, DCPA (Dacthal), 2,4-DDD, 4,4'-DDD, 2,4-DDE, 4,4'-DDE, 2,4-DDT, 4,4'-DDT, DEET, Diazinon, Dibenz[a,h]anthracene, 3,5-Dichlorobenzoic acid, 2,4'-Dichlorobiphenyl, Dichlorprop, Dichlorvos (DDVP), Diethyl ether, Diethylphthalate, Di-isopropyl ether, Diisopropyl methylphosphonate, Dimethipin, Dimethoate, Dimethylphthalate, Di-n-Butylphthalate, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, Di-N-octylphthalate, Diphenamid, Disulfoton, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin aldehyde, Endrin Ketone, EPTC, Ethion, Ethoprop, Ethyl methacrylate, Etridiazole, Fenarimol, Fluoranthene, Fluorene, Fluridone, alpha-HCH, beta-HCH, delta-HCH, 2,2',3,4,4',5,5'-Heptachlorobiphenyl, 2,2',3,4,4',5'-Hexachlorobiphenyl, 2,2',3,4',5',6-Hexachlorobiphenyl, 2,2',4,4',5,5'-Hexachlorobiphenyl, Hexachloroethane, Hexachlorocyclopentadiene, Hexazinone, Indeno[1,2,3-cd]pyrene, Isophorone, Malathion, Methiocarb, Methyl acetate, Methyl iodide, Methyl parathion, 4-Methyl-2-pentanone (MIBK), Mevinphos, MGK264 - isomer a, MGK264 - isomer b, Molinate, Naphthalene, Napropamide, Nitrofen, cis-Nonachlor, trans-Nonachlor, Norflurzon, Oxyfluorfen, Paraquat, Parathion, Pebulate, Pendimethalin, 2,3,3',4',6-Pentachlorobiphenyl, 2,3',4,4',5-Pentachlorobiphenyl, Pentachloroethane, Perfluorobutanesulfonic acid, Perfluorodecanoic acid, Perfluorododecanoic acid, Perfluoroheptanoic acid, Perfluorohexanesulfonic acid, Perfluorohexanoic acid, Perfluorononanoic acid, Perfluorotetradecanoic acid, Perfluorotridecanoic acid, Perfluoroundecanoic acid, cis-Permethrin & trans-Permethrin, Permethrin (mixed isomers), Phenanthrene, Phorate, Phosphamidon, Profenofos, Prometon, Prometryn, Pronamide, Propazine, Propoxur (Baygon), Pyrene, Simetryn, 2,4,5-T, Tebuconazole, Tebuthiuron, Terbacil, Terbuthylazine, Terbutryn, 2,2',3,5'-Tetrachlorobiphenyl, 2,2',5,5'-Tetrachlorobiphenyl, 2,3',4',5-Tetrachlorobiphenyl, Tetrachlorovinphos, Tetrahydrofuran, Thiobencarb, Triademefon, Tribufos, 2,2',5-Trichlorobiphenyl, 2,4,4'-Trichlorobiphenyl, Trichlorotrifluoroethane(Freon 113), Trifluralin, 1,2,4-Trimethylbenzene, Vernolate, Vinclozolin

2020 MONITORING DATA FOOTNOTES

(1) EPA Secondary MCL: NYSDOH has not set an MCL for this parameter.

(2) Monitored for under the Fourth Unregulated Contaminant Monitoring Rule (UCMR4) in 2018 and 2019. UCMR4 included source water monitoring for bromide and total organic carbon; no MCL has been established for these parameters.

(3) Value represents MRDL, which is a level of disinfectant added for water treatment that may not be exceeded at the consumer's tap without an unacceptable possibility of adverse health effects. The MRDL is enforceable in the same manner as an MCL and is the calculated running annual average. Data presented are the range of individual sampling results and the highest of the four quarterly running annual averages.

(4) Determination of MCL violation: If a sample exceeds the MCL, a second sample must be collected from the same location within two weeks, or as soon as practical. If the average of the two results exceeds the MCL, then an MCL violation has occurred.

(5) Action Level (not an MCL) measured at-the-tap. The data presented in this table were collected from sampling stations at the street curb. For at-the-tap monitoring, see the Lead and Copper Rule Sampling at Residential Water Taps table.

(6) A Langelier Index of less than zero indicates corrosive tendencies.

(7) Hardness of up to 3 grains per gallon is considered soft water; between 3 and 9 is moderately hard water.

(8) If iron and manganese are present, the total concentration of both should not exceed 500 µg/L. One exceedance of the iron MCL occurred at site 30150 (East Village, 10009) on 7/7/20 following an emergency shutdown of the water main.

(9) Only detected in one sample: lead was detected at site 11750 (City Island, 10464) on 6/2/20, nickel was detected at site 22950 (Clinton Hill, 11205) on 7/7/20, and Bis(2-Ethylhexy)phthalate was detected at site 1SCL1 (Van Cortlandt Village, 10463) on 11/17/20 at the method reporting limit. In all other samples the parameter was not detected.

(10) NYSDOH established Optimal Water Quality Parameters (OWQP) under the Lead and Copper Rule which includes a range for pH and ortho-phosphate which are presented here. The reported average value for pH is the median value.

(11) Water containing more than 20 mg/L of sodium should not be used for drinking by people on severely restricted sodium diets. Water containing more than 270 mg/L of sodium should not be used for drinking by people on moderately restricted sodium diets.

(12) Turbidity is a measure of cloudiness of the water. Turbidity is monitored because it is a good indicator of water quality, because high turbidity can hinder the effectiveness of disinfection, and because it is a good indicator of the effectiveness of our filtration system.

(13) This MCL for turbidity is the monthly average rounded off to the nearest whole number. Data presented are the range of individual sampling results and the highest monthly average from distribution sites.

(14) This MCL for turbidity is on individual readings taken every four hours at the unfiltered Catskill/Delaware source water entry point. Value presented is the highest individual sampling result.

(15) This is a Treatment Technique performance standard for the Croton Filtration Plant. The value presented is the highest single combined filter effluent turbidity measurement which occurred on 11/25/20. In 2020, 100% of turbidity results were <0.3 NTU.

(16) Results for t-Butyl alcohol are only reported as detected (D) or not detected (ND).

(17) The MCLs for HAA5 and TTHMs are the calculated locational running annual average. The data in the Range column are the minimum and maximum values of all sample sites monitored in the distribution system whether for compliance purposes or not. The values in the Average column are the highest locational running annual averages under the Stage 2 Disinfectant and Disinfection By-Products Rule.

(18) If a sample and its repeat sample are both positive for coliform bacteria and one of the two samples is positive for *E. coli*, then an MCL violation has occurred.

(19) Samples are collected prior to final disinfection or filtration. Positive results indicate (oo)cyst detection, not viability or infectivity.

* Chloroethane and 2,2-Dichloropropane were incorrectly reported as having been monitored for in 2015 to 2019 in those year's reports. Monitoring for these two parameters, prior to 2020, last occurred in 2014 when they were not detected.

HILLVIEW RESERVOIR CONSENT JUDGEMENT

The Hillview Reservoir is the final stop for drinking water from the Catskill/Delaware System before it enters the city's distribution system. The City and DEP entered into a Consent Decree and Judgement with the United States and New York State, effective May 15, 2019, which sets forth a schedule of compliance for the City to cover the Hillview Reservoir as required by the Long Term 2 Enhanced Surface Water Treatment Rule (40 C.F.R §141.714). DEP and the City timely complied with all scheduled commitments due under the Decree in 2020.

CONTAMINANTS QUESTIONS
Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at 1-800-426-4791.

Professional Qualifications

Nancy Repetto
Project Scientist
6876 Susquehanna Trail South
York, PA 17403
Mobile: 610.858.6701

SUMMARY OF EXPERIENCE

Ms. Repetto is a project scientist specializing in Phase I and Phase II Environmental Site Assessments in the commercial real estate industry. Ms. Repetto has conducted hundreds of pre-acquisition/due diligence environmental assessments for a wide range of properties throughout the mid-Atlantic region. These assessments have been performed to evaluate site conditions, potential off-site liabilities, historic site and vicinity usage, environmental control systems, and site remediation costs in order to advise prospective buyers, lenders, current operators, and owners of potential and existing environmental concerns. Sites inspected include multi-family residential, commercial, agricultural, open space/green acres, retail and industrial properties, and ISRA Preliminary Assessments.

Additionally, Ms. Repetto has 20 years of experience in the environmental industry performing tasks ranging from due diligence, soil and groundwater investigation, fate and transport modeling, emergency response, remedial investigation, remediation design and oversight, and project management.

RELEVANT PROJECT EXPERIENCE

PHASE I ENVIRONMENTAL SITE ASSESSMENTS: Ms. Repetto has conducted ASTM Phase I Environmental Site Assessments for a variety of properties located within the mid-Atlantic. These properties have included -family residential, commercial, agricultural, open space/green acres, retail and industrial properties and ISRA Preliminary Assessments. ASTM investigations include correspondence and consultation with Federal, state, and local government offices.

PHASE II SUBSURFACE INVESTIGATION: Ms. Repetto has completed numerous Phase II and Phase III subsurface investigation and remediation projects, with extensive field and project management experience associated with the following: soil, groundwater, asbestos, mold, lead paint and construction monitoring; UST closure; ISRA Preliminary Assessments; monitoring well design and installation oversight, elevation surveys; XRF Lead-based paint surveys; design and oversight of soil and groundwater remediation projects, and technical writing. Nancy has prepared project proposals, budgets, schedules, work plans, and health and safety plans.

EDUCATION

B.A. Geography/Land Use, Shippensburg University, Shippensburg, PA, 1992
M.S. Geoenvironmental studies, Shippensburg University, Shippensburg, PA, 1995

PROFESSIONAL AFFILIATIONS

- Commercial Real Estate Women, Philadelphia Chapter, Board of Directors 2003-2004
- American Women in Science, Philadelphia Chapter
- Society of Women Environmental Professionals, Philadelphia Chapter
- Girl Scouts of America/Girl Scouts of Eastern Pennsylvania
- Wagontown Fire Company, West Caln Station 35, Nationally Certified Firefighter and State Certified Vehicle Rescue Technician
- **PROFESSIONAL TRAINING/REGISTRATIONS**

- Pennsylvania certified lead inspector/risk assessor
- Pennsylvania lead inspector initial training course
- Pennsylvania lead risk assessor initial training course
- OSHA 40 hour HAZWOPER safety training
- OSHA 8 hour HAZWOPER safety refresher
- Asfe project manager training class
- Njdep subchapter 8 – the septic rule
- New jersey underground storage tank class
- New jersey industrial site recovery act class
- New jersey site remediation basics class
- New jersey remedial action plan workplan workshop
- OSHA supervisor training
- OSHA hazmat first responder awareness course
- OSHA hazmat first responder operations course
- Confined space/structural rescue
- National fire protection association (NFPA) self-contained breathing apparatus training
- National fire protection association (NFPA) firefighter I training
- Pennsylvania department of health certified vehicle rescue technician
- Padep land recycling workshop

Anya Chase
Project Engineer
21 B Street
Burlington, MA 01803
Mobile: 518.231.8019
achase@ebiconsulting.com

Summary of Experience

Mrs. Chase has 5 years' of experience in Due Diligence and Construction Monitoring of commercial and residential properties. Mrs. Chase specializes in Property Condition Assessment Real Estate Due Diligence services, which includes reviewing and conducting walk-through surveys, identifying physical deficiencies and environmental hazards, providing descriptions and recommendations, estimating repairs and replacement reserves, documenting and reviewing municipal documents, and writing reports for commercial properties intended for a variety of clients and client-specific scopes of work.

EBI CONSULTING- Burlington, MA
Job Title – *February 2019 – Present*

Relevant Project Experience

Mrs. Chase was previously an Environmental Analyst for a consulting firm. During that time, she was involved in the real estate consulting industry conducting over 1,000 inspections including structural assessments, construction loan monitoring, ESAs, Phase IIs and property condition assessments at a large range of commercial and multi-family types for financial institutions.

Education

Bachelor of Science, Natural Resource Management/Policy; Sustainability; Biology with minor in GIS – Paul Smiths College 2015

Training

HAZWOPER
10-Hour Occupational Safety and Health Administration Certification

EBI Consulting

Richard Stytzer
Program Manager
21 B Street
Burlington, MA 01803
Mobile: (781) 825-3032

Summary of Experience

Mr. Stytzer is a Program Manager with 15 years of environmental industry experience specializing in performing and managing environmental investigations and site assessments on all types of commercial properties. Mr. Stytzer gives guidance and support to his clients while maintaining report deliverables. Mr. Stytzer also has experience conducting and managing subsurface investigations, as well as performing asbestos, radon, lead paint and lead-in-water surveys. Mr. Stytzer has also led a team of Project Managers/Project Scientists and has trained numerous new associates on the preparation of ESAs.

Relevant Project Experience

Environmental Site Assessments

Mr. Stytzer has conducted and has been a Senior Reviewer on thousands of Phase I Environmental Site Assessments (ESAs) across North America giving his technical expertise to the clients he serves. In addition, Mr. Stytzer has provided senior review for Environmental Transaction Screens, FannieMae/FreddieMac ESAs, Environmental Database Reviews, Third Party Reviews and Small Balance Loans (SBLs/SMLs) representing clients from the commercial, retail, manufacturing and industrial sectors as well as for multi-family properties for all types of property transfers, loans and other financial matters.

Mr. Stytzer has also managed various site-specific surveys associated with the ESAs including asbestos, radon, lead paint and lead-in-water surveys and has guided his clients through these delicate processes. Mr. Stytzer has developed the proper rapport with his clients explaining the needs to properly fulfill the ESA requirements.

Subsurface Investigations

Mr. Stytzer has completed subsurface investigations at various types of properties ranging from multi-family complexes to industrial facilities. Subsurface investigations have included the installation of soil borings and groundwater monitoring wells, subsequent sampling of soil and groundwater, contamination delineation, soil removal, floating product monitoring in groundwater and hazardous waste surveys. In addition, Mr. Stytzer has participated in electromagnetic ground penetrating radar surveys and underground storage tank abandonment and removals and has worked with regulators to properly close out the environmental concerns.

Education

Bachelor's Degree, Geology, Hofstra University

Professional Registrations

NYS Certified Asbestos Inspector

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/30/2020 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/14/2020 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 9

RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 02/09/2021 has revealed that there are 11 NY SHWS sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/09/2021 has revealed that there are 43 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 17 NY UST sites within approximately 0.25 miles of the target property.

NY ERP: In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

A review of the NY ERP list, as provided by EDR, and dated 02/09/2021 has revealed that there is 1 NY ERP site within approximately 0.5 miles of the target property.

Other Ascertainable Records

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 02/11/2021 has revealed that there are 4

FUDS sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MERG LINOTYPE CO		SSE 0 - 1/8 (0.049 mi.)	B30	62
NAVY BARRACKS BKLYN		W 1/4 - 1/2 (0.306 mi.)	AI210	687

NEW YORK NAV SHIPYAR		WNW 1/2 - 1 (0.550 mi.)	268	896

NY DRYCLEANERS: A listing of all registered drycleaning facilities.

A review of the NY DRYCLEANERS list, as provided by EDR, and dated 12/02/2020 has revealed that there is 1 NY DRYCLEANERS site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
PRESTIGE/GANZ CLEANE Facility Id: 2-6101-00932	16 WAVERLY AVENUE	W 1/8 - 1/4 (0.189 mi.)	R137	355

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
NAVAL STATION-BROOKL	FLUSHING AVENUE	NW 0 - 1/8 (0.090 mi.)	49	110

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 01/01/2019 has revealed that there are 77 NY MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 8 EDR MGP sites within approximately 1 mile of the target property.

Equal/Higher Elevation	**Address**	**Direction / Distance**	**Map ID**	**Page**
NASSAU GAS	SKILLMAN AVE	E 1/4 - 1/2 (0.391 mi.)	AN231	756

BROOKLYN GAS AND LIG	MARSHALL ST., ST. JO	WNW 1/2 - 1 (0.912 mi.)	273	913

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 9 EDR Hist Auto sites within approximately 0.25 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

NY RGA HWS: The EDR Recovered Government Archive State Hazardous Waste database provides a list of SHWS incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Conservation in New York.

A review of the NY RGA HWS list, as provided by EDR, has revealed that there is 1 NY RGA HWS site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
K - BROOKLYN GAS LIG	MARSHALL ST. & HUDSO	WNW 1/2 - 1 (0.963 mi.)	AW277	937

NY RGA LF: The EDR Recovered Government Archive Landfill database provides a list of landfills derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Conservation in New York.

A review of the NY RGA LF list, as provided by EDR, has revealed that there is 1 NY RGA LF site within approximately 0.5 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"5/13/16-Zhune spoke to Chris Kendrog 646-584-4642. Chris said they found hydraulic oil onto the driveway and the street. They applied absorbent material over the spill, but it was not cleanup. She could not find out the caused of the spill because the business is closed. 5/16/16-Zhune visited the site on 5/13/16. I observed little bit of absorbent material and a rainbow sheen on the street. I determined that there has been a good effort to clean up the spill. Any residual contamination would not be a threat to the public or the environment. Spill Closed. "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MOISHE MINI STORAGE (Continued) **S104279121**

Environmental. - Maloney Status of site needs to be confirmed with consultant. - Maloney Albany review (above) - kamalone 1/29/07 - Austin - Transferred from Albany assignment to Patel in R-2 office for further work - end 03/05/07-Hiralkumar Patel. visited site on 03/02/07. spoke with Mr. Balinco, property manager. he doesn't know anything about contamination soil at site. this proeprty occupies block between Ryerson st and Grand Ave (main office). building area along Ryerson st is vacant since 1999, which was found with contaminated soil. asked Mr. Balinco to find out tank closure report. Yaniv Balinco Moishe's Self Storage 32 Grand Avenue Brooklyn, NY 11205 Ph. (718) 237-9735 Fax (718) 237-9771 email: ybalinco@moishesselfstorage.com 03/08/07-Hiralkumar Patel. tried to reach Mr. Balinco but he is on vacation and will be back on 03/27/07. 06/14/07-Hiralkumar Patel. PBS #: 2-602131. as per PBS record, site had two 5000 gal #2 oil USTs and were removed in 2000. from city records, property owner: Ryerson Street Realty Corp. 450 W 15th Street New York, NY 10011-7097 and alternate addresses: 35-57 Ryerson street, 315-333 Park Avenue, 32 Grand Avenue. sent letter to Mr. Balinco at 32 Grnad Avenue and also to Ryerson St Realty corp requiring soil/groundwater investigation in area of previously removed tanks. letter emailed to Mr. Balinco. 06/26/07-Hiralkumar Patel. letter, that was sent to Ryerson St REalty corp address, came back undelivered. 07/25/07-Hiralkumar Patel. spoke with Mr. Balinco. he didn't received any letter. sent copy of previously sent letter to Mr. Balinco at different email address (brooklynstorage@moishes.com). 08/20/07-Hiralkumar Patel. received call from Mr. Bartley from Accutech. he mentioned about tank closure report dated Oct. 18, 2000. asked Mr. Bartley to submit that report. James Bartley Accutech Environmental Services Ph. (732) 739-6444 Ext. 14 08/27/07-Hiralkumar Patel. received report from James. abstract: - report prepared on Oct. 18, 2000 - Accutech removed one 12,000 gal #2 UST and one hydraulic lift and abandoned one 12,000 #2 oil UST - western UST (UST #1) was located immediately adjacent to the footings of a loading dock existing on the adjacent property - was determined that the removal of UST #1 would seriously undermine the footings of loading dock, so UST #1 was abandoned-in-place with cement slurry - eastern UST (UST #2) was removed - stained soil was observed around the fill pipes of both USTs and on the bottom of the UST's excavation - groundwater was not encountered in the bottom of the UST's common excavation at approx. 16 ft bg - 8 inch thick concrete anchor slab, on which the USTs were installed, was found on the bottom of the UST's excavation - sandy clay found from 2 ft to 10 ft and silty clay was found from 10 ft to 16 ft depth - tops of the UST's were located approx. 3.5 ft bg - no holes were found in UST #2 - stained soil was removed from the northern, eastern and southern sidewalls and the bottom of the excavation - excavated was extended vertically to approx. 16 ft bg in the eastern portion of the excavation, between the edge of the anchor slab and the buildng foundations - UST #1 was inspected in place. no holes were observed on the exposed top and eastern side of UST #1 - hydraulic lift, located immeidately adjaced to the eastern sidewall of the UST's excavation, was corroded and stained sol was observed on top, around and beneath the hydraulic lift - total of 113.47 tons of contamianted soil was removed - collected a total of 14 post-excavation soil samples from sidewalls and bottom of the UST's and hydraulic lift's common excavation - samples were analyzed via TCLP methods - found SVOC contamination in all samples and VOC contamination in one sample P-1, bottom sample

MOISHE MINI STORAGE (Continued) **S104279121**

under hydraulic lift discussed with DEC Krimgold. as excavation done below tank bottom and no groundwater was encoutnered, after reviewing analytical data, Krimgold asked to close the case. case closed."

Remarks: "THEY HAVEN'T GOT WATER SAMPLES YET JUST SOIL SAMPLES - CONTAMINATED SOIL PROBABLY DUE TO TANK FAILURE - UNK TYPE FUEL OIL - SENT OUT PROPSALS FOR CLEAN UP & EXCAVATION"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNEL 11/8/02, 11:30 AM - left message for Keith Baruch (B/Q EH&S): - what oil filled equipment is in hole? - source of high PCBs? 11/8/02, 3:00 PM - call from Ron James. There was a cut, uncapped cable end in manhole which is probable source of high PCBs (PILC cable). Hole was cleaned as >500 ppm. Wipe samples to be taken. (JHO) e2mis no. 145-950: 11/7/02 2105hrs - while on location to do Newtown Creek feeder work 1B93 found 2 qts unknown oil on 50 gallons water in MH830. No fire/smoke involved. No sewers or waterways affected. No private property affected. Sample taken marked E priority. Clean up pending test results. LAB RESULT RECEIVED 11/8/02 - 0330. 02-10504. 684 PPM. Update - 11/8/02 - 0540 hrs - EPA # NYP 004104485 UPDATE @ 1237 HRS 11/08 ALL SOLID DEBRIS REMOVED FROM STRUCTURE. FOUND 3 OUNCES OF INSULATUM IN STRUCTURE. PLACED BIO GEN 760 TO SOAK. TAG REMAINS IN PLACE PENDING FINAL CLEANUP.ASTORIA TANKER REMOVED 200 GALLONS OF LIQUIDS FROM STRUCTURE. Update - 11/8/02 - 1404hrs G. Williams OS reports while on location found open 3c500 end of cable which had attached to it a plastic bag which had 2 qts of cable oil in it. #9 removed bag and sealed end of cable. Oil was removed with

MANHOLE #830 (Continued) **S106009117**

>50 tanker. No other leaking equipment in this structure. UPDATE 11/14/02 17:25 HRS. DOUBLE-WASHED WITH 4 CONTAINERS OF BIOGEN 760. ONE DRUM OF WASTE WAS GENERATED AND BROUGHT BACK TO YARD UNDER ONE-TRIP RULE. TANKER REMOVED 260 GAL. OF LIQUID. #9 PLACED D FAULT TAG DUE TO 2 EMPTY JOINT REGULATOR TANKS & A LEAKING 3C STRAIGHT JOINT. #9 ALSO REMOVED 6 FT. OF ASBESTOS ARC-PROOFING TO CHECK FOR OTHER LEAKS. ENV. STOP TAG REMAINS IN PLACE PENDING REPAIR OF D FAULT AND FINAL CLEANUP. UPDATE 11/25/02 00:15 HRS FDR 6B55 IS A C-FAULT. THIS FDR WAS NOT CONNECTED TO THE TANK WITH THE 4 WAY, THIS FDR WAS CONNECTED TO THE TANK THAT HAD OIL IN IT. THE OIL IN THE TANK WAS TESTED FOR DIELECTRIC STRENGTH AND PASSED. PCB RESULTS # 02-10996-00 OIL FROM FDR 6B55 < 1 PPM. FDR 6B56 IS STILL D-FAULTED WAS CONNECTED TO THE TANK WITH NO OIL AND THE 4 WAY. THE FDR NEEDS TO BE RETAKEN OFF LINE TO FIX THE D-FAULT. #9 SPEARED AND CUT AND DISCONNECTED 3 DEAD FDRS. UPDATE 12-2-02 1200 HRS DOUBLE WASH STRUCTURE WITH BIO-JEN 5 & 760. THEY ALSO SODA BLASTED STRUCTURE . THEY REMOVED ALL LIQUIDS WITH AND OVER 50 PPM TANKER. THEY FOUND NO SUMP. CHEM LAB GRID AND TOOK SAMPLE FROM STRUCTURE. FOD ID AND MARK PHASE ON D-FAULT JOINTS AND UG STARTED THERE CUTS AND SPLICING. HOT ZONE WAS SET UP FOR UG CREWS. E.S.TAG WAS LEFT IN PLACE UNTIL GRID SAMPLE COME BACK. UPDATE 12-2-02 1920 HRS PER FDR REP D-FAULT HAS BEEN REMOVED. UPDATE - 05-DEC-2002 17:55 HRS. ALL WIPE SAMPLES PASSED."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"200289. Breen responded to site on 5-30-06 and spoke to Leon Paretsky. Release was discovered during a routine manhole inspection. Dielectric fluid was totally contained in the vault - there was no release to the environment. Repair crew responding to initial report observed a slow leak in a 3/4 inch bypass pipe that is connected hydraulically to the feeder, but not electrically. The emergency

MANHOLE # 61599 (Continued) **S107788559**

repair crew was successful in applying a clamp to the leaking bypass pipe. The feeder was never taken out of service. Con Edison had Allstate on site to pump out the vault. Con Ed will then wash the vault and apply a permanent (welded) repair patch. 11/16/06 - closed - see eDocs for closure info. (JHO)"

Remarks: "LEAKED FROM CABLE FEEDER: NOP TO 5 QUESTIONS AND IS CONTAINED AND CLEAN UP IN PROGRESS. 200289"

Spiller Company:	999
Contact Name:	RICCARDO KUANG
DEC Memo:	"8/27/13-Zhune spoke to Ricardo Kuang from DEP 516-537-3063. He said the compressor for the hydraulic oil failed and spilled few drops onto the soil. The contractors cleaned the spill. 9/19/13-Ricardo sent the following email: As per our conversation this morning. As per the initial report, only few drops reached soil. Area of soil removed is approximately 10 long x 8 wide x 3/4 deep. Attached are photos for reference. The excavated soil was put in a bag, labeled and remove from the site. The cause of the incident was due to equipment failure (a fitting failed). The contractor Welkin Mechanical cleaned up the spill. Spill Closed."
Remarks:	"Compressor spilled onto soil. Cleanup is complete."

Record Add:	11/18/1999
Record Upd:	11/13/2012
Updated By:	BXANDERS

Site Description: "Location: Naval Station - Brooklyn is located in a flat industrial area within the New York Naval Shipyard in the Williamsburg section of Brooklyn, north of Flushing Avenue, between Clinton Avenue and Williamsburg Place. Site Features: The East River is 1500 feet west of the site. There are two working electrical substations at the site which have three transformers employing dielectric fluid which formerly contained PCBs. Each of the substations is contained within an area surrounded by concrete walls. They are located in the northern portion of the property, adjacent to the property line. Current Zoning/Use(s): Industrial Historic Use(s): A 1987 Phase I investigation showed that the PCB content of the dielectric fluid in the transformers ranged from 250 to 590 parts per million (ppm). Transformer spills stained slabs and soil located beneath the transformers, with soil contamination ranging from 0.5 to 870 ppm. The PCB containing transformers were subsequently retro-filled. Remedial work began in the summer of 1994 and concluded in 1995 and included power-washing the transformers and stained slabs and removing hazardous levels of PCB contaminated soils. The areas were then backfilled with crushed stone and secured. Three monitoring wells were installed to determine whether PCBs had contaminated the groundwater beneath the site at Building 7. Three rounds of groundwater samples collected in September 1996, December 1996, and March 1997, showed no detectable concentrations of PCBs. It was determined that further monitoring at this site was not warranted. In July 2012 NYSDEC placed an Environmental Notice on the Transformer Area which requires written approval from NYSDEC prior to any disturbance or excavation of the soil, proper management and/or disposal of any contaminated materials exposed or removed, and prior approval by NYSDEC for any change in use. The Transformer Area has been delisted from the Registry of Inactive Hazardous Waste Disposal Sites in New York State."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete, to extent that the Navy was able to work around the active transformers. The primary contaminants of concern at the site, PCB's, were addressed by the removal action completed in 1995. Due to the location in a walled transformer yard beneath the crushed stone site cover, and the limited amounts remaining in the soil, residual PCB contamination in the soils will not impact the East River. Three rounds of groundwater samples were non-detect for PCBs. Special Resources Impacted/ Threatened: None "

NAVAL STATION-BROOKLYN, TRANSFORMER AREA (Continued) **S105586295**

Health Problem:	"Since some contaminated soils remain at the site below concrete or clean backfill, people will not come in contact with contaminated soils unless they dig below the surface materials. In addition, the site is fenced, which restricts public access. "

The Transformer Area has been delisted from the Registry of Inactive Hazardous Waste Disposal Sites in New York State."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete, to extent that the Navy was able to work around the active transformers. The primary contaminants of concern at the site, PCB's, were addressed by the removal action completed in 1995. Due to the location in a walled transformer yard beneath the crushed stone site cover, and the limited amounts remaining in the soil, residual PCB contamination in the soils will not impact the East River. Three rounds of groundwater samples were non-detect for PCBs. Special Resources Impacted/ Threatened: None "

Health Problem: "Since some contaminated soils remain at the site below concrete or clean backfill, people will not come in contact with contaminated soils unless they dig below the surface materials. In addition, the site is fenced, which restricts public access. "

Site Description: "Location: Naval Station - Brooklyn is located in a flat industrial area within the New York Naval Shipyard in the Williamsburg section of Brooklyn, north of Flushing Avenue, between Clinton Avenue and Williamsburg Place. Site Features: The East River is 1500 feet west of the site. There are two working electrical substations at the site which have three transformers employing dielectric fluid which formerly contained PCBs. Each of the substations is contained within an area surrounded by concrete walls. They are located in the northern portion of the property, adjacent to the property line. Current Zoning/Use(s): Industrial Historic Use(s): A 1987 Phase I investigation showed that the PCB content of the dielectric fluid in the transformers ranged from 250 to 590 parts per million (ppm). Transformer spills stained slabs and soil located beneath the transformers, with soil contamination ranging from 0.5 to 870 ppm. The PCB containing transformers were subsequently retro-filled. Remedial work began in the summer of 1994 and concluded in 1995 and included power-washing the transformers and stained slabs and removing hazardous levels of PCB contaminated soils. The areas were then backfilled with crushed stone and secured. Three monitoring wells were installed to determine whether PCBs had contaminated the

NAVAL STATION-BROOKLYN, TRANSFORMER AREA (Continued) **S105586295**

groundwater beneath the site at Building 7. Three rounds of groundwater samples collected in September 1996, December 1996, and March 1997, showed no detectable concentrations of PCBs. It was determined that further monitoring at this site was not warranted. In July 2012 NYSDEC placed an Environmental Notice on the Transformer Area which requires written approval from NYSDEC prior to any disturbance or excavation of the soil, proper management and/or disposal of any contaminated materials exposed or removed, and prior approval by NYSDEC for any change in use. The Transformer Area has been delisted from the Registry of Inactive Hazardous Waste Disposal Sites in New York State."

DEC Memo:	"1/7/04 - This spill was reassigned from DEC Sigona to Rommel 3/24/06 Diaz - Next steps-additional followup required. Spill transferred back to Region 2 3/10/08 - Austin - Spill assigned to Patel for followup - end 09/04/08-Hiralkumar Patel. went to brooklyn navy yard. security guard doesn't know the location. he asked to contact their environmental contractor, Nicholas Mann. Nicholas Mann Quay Consulting LLC Ph. (845) 721-0284 email: nm@quayllc.com email: nmann@brooklynnavyyard.com 06/29/10-Hiralkumar Patel. 11:18 AM:- sent email to Mr. Mann with copy of spill report and asked to submit any available information. 12:00 PM:- received email from Mr. Mann. he

FLOYD BENNETT FIELD (Continued) **1000788022**

mentioned that the Naval Station is the 26-acre site that the Brooklyn Navy Yard Development Corporation took over from the Department of Navy in May 2001. the site is contiguous to the remainder of the Brooklyn Navy Yard. at the Naval Station there was a gasoline station that was owned and operated by the Dept of Navy along Kent Avenue. prior to transfer, the Dept. of Navy working with DEC (David Harrington - up in Albany) closed the gasoline station by removal of the tanks at the location, and obviously any impacted soil. prior to transfer of the site to BNYDC the Dept of Navy completed all environmental closures through their Base Realignment and Closure Act Environmental Restoration activities process. Mr. Mann mentioned that 1995 would have been the time that the Dept of Navy was undergoing the BRAC process and 207 Flushing Avenue was the mailing address of the Dept. of Navy at the Naval Annex. 07/01/10-Hiralkumar Patel. 9:21 AM:- left message for (and sent email to) DEC Dave Harrington requesting any information on this case. 10:30 AM:- received call from DEC Dave. he mentioned that he was working with Dept. of Navy in terms of property transfer. and part of that was to clean site for easy transfer. Dave was not involved in any remediation work. he mentioned that gas station was at the end of hill along Kent ave and currently is empty lot for parking. 10:39 AM:- spoke with Mr. Mann. he mentioned that tanks were removed by Dept. of Navy and they were in total incharge. Brooklyn navy yard development corp. has no documents regarding tanks removal, but part of transfer was to clean site before transfer. Mr. Mann mentioned that there was no other area with gasoline tanks in 1995 other than gas station along Kent ave. asked Mr. Mann to submit site map with gasoline station area in 1995. 11:08 AM:- received email from Mr. Mann including map showing area of previous gas station. gas station was located at the corner of Flushing ave and Williamsburg Street West. 09/13/10-Hiralkumar Patel. 1:05 PM:- sent email to Mr. Mann asking to provide person’s contact info who is current in-charge of former gas station along Kent ave. 09/14/10-Hiralkumar Patel. 8:57 AM:- received email from Mr. Mann. he doesn’t know who is incharge, but asked to contact Debora Felton. he provided number from old records. Debora Felton US Dept of Navy BRAC Cleanup. Ph. (610) 595-0567 x 165 DSN 443 email: feltondl@efnorth.navfac.navy.mil 09/15/10-Hiralkumar Patel. tried number for Debora Felton, but number is non-working number. 07/01/14-Hiralkumar Patel. received email from Ms. Piettro (at 1:59 PM on 06/30/14) from U.S. Army Corps of Engineers including an investigation work plan for multiple locations on Floyd Bennett Field site. as per the work plan, the subject spill case is related to the removal of three (3) 5,000 gal gasoline USTs on 08/09/1995 from Ranger Road Station at Floyd Bennett Field. work plan proposes installation of multiple borings at each location and collection of two soil sample from each boring. it also proposes installation of one or more monitoring wells based on field observations during investigation. Sandra L. Piettro FUDS Project Manager, Environmental Branch U.S. Army Corps of Engineers, NY District Jacob K. Javits Federal Building 26 Federal Plaza; Room 1811 New York, NY 10278-0098 Ph. (917) 790-8487 (O) (917) 324-3522 (C) Fax (212) 264-0563 email: Sandra.L.Piettro@usace.army.mil 11:31 AM:- spoke with Ms. Piettro. informed her that the listed spill number in the work plan does not match with DEC record. as per DEC record, the subject spill is related to 207 Flushing Ave (which is Brooklyn Navy Yard). she mentioned that histroical data is available in report prepared by company called Clean Up The Environment (CUTE). asked her

FLOYD BENNETT FIELD (Continued) **1000788022**

to submit copy of the report. informed her that the department conditionally approves the submitted work plan and may require additional investigation based upon review of historical data and result of planned investigation. 08/26/14-Hiralkumar Patel. received report dated 03/17/1997. abstract: - report prepared by CUTE (Clean Up The Environment) - tanks removal information is listed on page 174 of the report - three (3) 5,000 gal gasoline USTs (G1, G2 and G3) were removed on 08/09/1995 - tank dimensions were 6 ft by 23.5 ft - gasoline contaminated soil noted at top of the tanks at fill pipe areas - depth of stained, discolored and/or contaminated soil noted to groundwater - groundwater was found at 8.5 ft bg - strong gasoline odors noted during tank removal - 50 to 150 ppm recorded on PID - approx. 50 cubic yard of contaminated soils removed - tank bottoms were in groundwater at time of removal - four endpoint soil samples were collected from excavation sidewalls at 7.5 ft bg; 1 ft above grounwater interface - no groundwater samples were collected - no contamination noted in endpoint samples based on following, address changed from 207 Flushing Ave to Floyd Bennett Field : - information available in CUTE's report dated 03/17/1997 - spill caller: CUTE - tank removal date: 08/09/1995 - call received date: 08/10/1995 refer to spill #: 9506406 for further details and documents. 01/15/15-Hiralkumar Patel. 3:04 PM:- received spill closure report from Ms. Piettro. 01/16/15-Hiralkumar Patel. based on available information, case closed. 9:35 AM:- sent spill closure letter to Ms. Piettro. letter emailed to Ms. Piettro. refer to spill #: 9506406 for closure report and other documents. **other spills on Floyd Bennett Field, investigated/remediated by U.S. Army Corps of Engineers: 9503586, 9503603, 9506032, 9506090, 9506406.**"

Remarks: "OLD NAVAL AIR STATION - COMPANY DOING TANK REMOVAL - FOUND SOIL CONTAMINATION - REMOVING SOIL - DOING SAMPLES"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	415
Tank Id:	2987
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	H05 - Tank Leak Detection - In-Tank System (ATG)
	G03 - Tank Secondary Containment - Vault (w/o access)
	A00 - Tank Internal Protection - None
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	B00 - Tank External Protection - None
	C00 - Pipe Location - No Piping
	F00 - Pipe External Protection - None
	I04 - Overfill - Product Level Gauge (A/G)
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Tank Converted to Non-Regulated Use
Pipe Model:	Not reported
Install Date:	12/01/1946
Capacity Gallons:	4000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	04/01/1995

Tank Info:

Tank Number:	001
Tank Id:	1511
Material Code:	0008
Common Name of Substance:	Diesel

Equipment Records:

H00 - Tank Leak Detection - None
K01 - Spill Prevention - Catch Basin
E00 - Piping Secondary Containment - None
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
G02 - Tank Secondary Containment - Vault (w/access)
L00 - Piping Leak Detection - None
I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground
J02 - Dispenser - Suction Dispenser

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	10/01/1982
Capacity Gallons:	3000

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major

PRESTIGE VALET & CONCIERGE (Continued) **1001460185**

redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Tank Info:

LOCKWAY STORAGE (Continued) **U003387620**

Tank Number: 001
Tank Id: 12301
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

H00 - Tank Leak Detection - None
A00 - Tank Internal Protection - None
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
D00 - Pipe Type - No Piping
I04 - Overfill - Product Level Gauge (A/G)
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: Not reported
Capacity Gallons: 5000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 01/01/1993
Register: True

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY PMS/Shaw investigated site and recommended a dual-phase extraction system to address free product, soil contamination and

NYCDEP (Continued) **S103272814**

dissolved-phase groundwater contamination. The system was installed in summer of 2005, and after delays caused by DEP site personnel, started up in the fall of '05, however, there were problems with electrical service and the system was shut down in October '05. It may have been re-started in November and run through December, but never received any system start-up report or data. PMS/Shaw ceased activity at the site in late 2005, and site was transferred to Greyhawk in early 2006. - J. Kolleeny 05/30/06: NYCDDC Consent Order Bi-Monthly Site Status Rpt indicates that Greyhawk/Roux performed gauging and sampling of monitoring wells in April 2006. A sheen was observed in MW-16, 0.9 ft. of product in DPE-8, and 0.45 ft. of product in MW-21 (this well is upgradient of site and product was ID'ed by Shaw as no. 2/no. 6 fuel oil, which they suspected was from an off-site source). GW sampling showed high levels of dissolved-phase contamination in MW-3 (11,146 ppb TVOCs), MW-8 (1,385 TVOCs), MW-9 (5,150), MW-10 (815), MW-13 (646) and MW-16 (1,193). Rpt notes that DPE system is currently inactive. Sent email (in eDocs) to Andy Ledins of Greyhawk asking that they re-start system (making any needed repairs and/or improvements), or if they believe system to be inadequate, that they prepare and submit an alternative plan to expedite cleanup of site. - JK 07/09/07: A DPE system has been installed at this site but start-up and operation of system have been prevented by NYCDEP who have repeatedly requested changes to the system and its treated water discharge location. Every time DDC consultants have met their demands, new demands are made. Meanwhile, on-going site monitoring (see reports in eDocs) continues to show free product in several wells and relatively high levels of dissolved-phase GW contamination in some wells. At meeting on 5/30/07 with DDC, Greyhawk & Roux, monitoring report for Oct. '06 - Mar. '07 was hand-delivered (in eDocs). I approved recommendations for removal of SVOCs from sampling program (due to general absence in samples), change in well gauging frequency from monthly to quarterly, and removal of wells MW-01, MW-04, MW-14, MW-15, MW-17 and MW-18 from monitoring/sampling program (well MW-06 was also requested for removal, but I asked that it be included in one more sampling round, after which if it is again ND, it can be dropped from program. Also agreed that DEC would look into setting up conference call involving DEC and DDC legal staff to discuss how to handle NYCDEP's lack of cooperation and resolve impasse. After meeting, Andy Ledins of Greyhawk mentioned that one possible way around problem would be to operate system primarily in slurping mode, so groundwater discharge would not be an issue. On 7/9/07, I sent an email to Brian Morrissey of Roux and Andy Ledins asking if this was ever implemented, and for name of DEP contact. - J. Kolleeny 10/20/08: Reviewed April-Sept.'07 mon rpt, dated 12/21/07, and Oct.'07-June'08 mon rpt, dated 10/16/08, both by Roux (both in eDocs). April-Sept.'07 rpt confirms removal of wells MW-01, MW-04, MW-14, MW-15 MW-17 & MW-18 from GW sampling program as approved by DEC at meeting on 5/30/07; gives results of April '07 and Aug. '07 GW sampling events, showing high or moderate levels of VOCs in several wells and free product in 4 and 2 wells, resp.; rpt notes that operation of on-site DPE system will resume once sewer discharge connection is approved by DEP and built, and recommends removing wells MW-05, MW-06, MW-12 and MW-21 from sampling program. Oct.'07-June'08 rpt gives results of Dec.'07, March'08 and June'08 GW sampling events, showing high or moderate levels of VOCs in several wells and free product in 2, 3, and 3 wells, resp. During June'08 event, product was purged from MW-16 (0.4 gals) and DPE-08

NYCDEP (Continued) **S103272814**

(2.1 gals), absorbent sock was reinstalled in MW-21. Rpt recommends resuming operation of DPE system after repairs & modifications to system and after proposed sewer discharge pipe is connected to 12-inch sewer near intersect of Kent Ave & Little Nassau St., and recommends removing wells MW-05, MW-06 and MW-27/DPE-03 from GW sampling program. Sent email to Afsar Samani of DDC, cc's to Fatemeh Ashkan of DDC, Brian Morrissey of Roux, and Andris Ledins of Greyhawk: I have reviewed monitoring report for period October '07 through June '08 for this site, prepared by Roux Assoc. and dated 10/16/08. Report recommends (1) removing wells MW-05, MW-06 and MW-27/DPE-03 from GW sampling program, and (2) resuming operation of on-site DPE system after system modifications are complete and proposed system discharge pipe is connected to local sewer main near intersection of Kent Avenue and Little Nassau Street. These recommendations are approved. Please continue to keep me updated on status of remedial system at this site, and feel free to contact me if you have any questions. - J. Kolleeny 08/13/09: Reviewed monitoring rpt for July 2008 through April 2009, by Roux, dated 5/22/09 (in eDocs). Rpt states that on-site DPE system has been operating continuously since 4/1/09, after new transfer pump was installed. GW sampling in Dec.'08 showed moderate to high VOC levels in 7 wells, with worst contam in MW-03: 10,680 ug/L TVOCs. Free product was detected in 4 wells during rpt period, with greatest thickness obserbed in well MW-26/DPE-15 during Sept.'08 gauging event: 1.20 ft. Roux will continue to operate/monitor DPE system and continue quarterly GW sampling/gauging. Changed spill priority to P2. - J. Kolleeny 10/01/09: On 9/14/09, received email from Hassan Hussein of DEC R2 Div of Solid/Haz materials: Please provide details of remediation project at this facility. Info is needed to complete our recent haz waste compliance inspection. We need to know when remed system was installed, what waste streams are generated, what caused site contam, and where recovered materials are stored. I sent reply: Remed system at DEP Kent Avenue Shop is dual-phase extraction system. It is located in basement (equipment shed is in SE corner of basement). Construction of system began in 2003. System was started up in '05, but was shut down due to issues with NYCDEP, most notably their insistence that City construct dedicated line to carry system's treated water discharge to sewer main in street (rather than combining their discharge with facility's sewer discharge). System was started briefly several times since then and shut down after short periods, but has been running continuously since April '09. Site contam was caused by gasoline & kerosene USTs, which leaked based on sampling of soil & GW in areas of tanks. Free petroleum product, I.D.'ed as mineral spirits, is present in several wells at site. System removes liquids and vapors from subsurface; these fluids are separated by moisture condenser. Recovered vapors are treated by passing through granular activated carbon & discharged to atmosphere. Vapor discharge is monitored with PID & sampled for lab analysis to ensure compliance with benzene discharge std. Recovered liquids go thru oil-water separator; free product goes to product holding tank, which is pumped out by vac truck when nearly full and transported to recycling facility. Water from oil-water separator passes thru GAC and is discharged to City's municipal sewer system. City's consultant has DEP permit for this discharge. You can find addt'l info about project in spills database. Hassan and I spoke on phone, he sent photos of 2 tanks at facility (in eDocs image folder), and I forwarded his questions/issues to Brian Morrissey of Roux Assoc.,

NYCDEP (Continued) **S103272814**

DDC's consultant. In response to questions about system, assoc. tanks, and vapors in equipment shed, Brian sent reply with attached IT Corp. RAP & design drawings (in eDocs): As requested, here is March 2001 Design Analysis Rpt & Remedial Design Work Plan by IT. Recovered product is periodically removed by AARCO with vac truck. Product recovery amount has not been substantial recently. Plans for replacement of vapor-phase carbon are in progress. I sent email to Brian: Thanks for RAP & diagrams. I have couple of questions: is product holding tank located in equipment enclosure in SE corner of basement? If so, is vent pipe routed to outdoors in some fashion? On 9/16/09, Brian sent email reply: Here are responses to questions in your email and our subsequent discussion: 1. Product recovered in oil/water separator is conveyed to & stored in tank T-1, 500-gal capacity AST, located in building but outside of treatment enclosure. AST is connected to vent line that runs to building exterior. 2. Recovered product that accumulates in T-1 is periodically removed with vac truck and taken to recycling facility. Copy of Jan. 2009 non-haz waste manifest is attached [in eDocs image folder]. Contact info for recycling facility: New York Oil Recovery Co., 94 Hausman St, Brooklyn, NY 11222,(718) 599-5120. 3. I spoke with Greyhawk regarding uncovered oil/water separator. We believe cover was temporarily removed for maintenance and operator neglected to reinstall cover at completion of activity. Greyhawk will direct its O&M subcontractor to ensure that cover will be on separator at all times except during maintenance tasks. 4. Since system commenced continuous operation, Greyhawk & Roux have not received any reports re: NYCDEP's concerns with vapors/odors. Treatment enclosure fan, which exhausted vapors out to garage area, has been shut off. There are no current plans to further address this issue. 5. I heard that DEC inspector inquired about registration status of 500-gallon AST and oil/water separator. Normally, process tanks including oil/water separators are not subject to tank registration requirements nor requirements of 6 NYCRR Parts 613 & 614. Based on my understanding of regs, there is no NYS requirement to register remedial system's AST or oil/water separator. Do you agree? On 9/22/09, I replied: Thanks for addt'l info and answers. About item 5, based on conversations with Jacob Krimgold, head of PBS Unit, I agree that process tanks storing petrol product recovered by remed system need not be registered. However, regarding vapors/odors, Haz Waste inspector was not so much concerned by complaints of vapors and odors from DEP staff at facility, he was concerned by strong and potentially combustible petroleum vapors within system enclosure. I assume that if cover is kept on oil-water separator this would be less of problem, and that all electronics in system enclosure are non-sparking, or whatever appropriate term is. Is there anything else typically done to reduce vapors within such enclosure, and do you think that such vapors in this case are any cause for concern? On 10/01/09, Brian wrote back: Here is some info in response to your concerns regarding vapors & odors generated by operation of remed system at Kent Ave: 1. Equipment in treatment room is XP, that is rated for Class 1, Div. 2 atmosphere. 2. Current plan is to install carbon-based filter on room exhaust fan for odor control. 3. Greyhawk is at site today working with their subcontractor to ensure that maintenance of oil-water separator and waste generation/storage issues are properly attended to. Please let me know if you have any other questions. - J. Kolleeny 09/07/10: Reviewed Site Turn-Over Status Rpt by LiRo, dated 6/24/10 (in eDocs). Rpt states that DPE

NYCDEP (Continued) **S103272814**

system had significant downtime between Nov. 2008 and March 2009; on 4/1/09, system resumed operation running on only one leg to reduce water influent flow. In Feb. 2010, LiRo replaced Greyhawk/Roux as CM/Consultant. Info provided to LiRo by Greyhawk in April 2010 indicated DPE system operated thru much of 2009; system air & water influent & effluent sampling was performed in Dec. 2009. O&M info indicated excessive bio-fouling of oil/water separator, must be cleaned regularly to keep system running. Rpt notes that last soil sampling was done in 2003, and states that addt'l sampling is needed to determine current conditions and evaluate system effectiveness. Free product is present in several wells and is recovered manually during quarterly monitoring. GW sampling in Jan. 2010 showed worst contam persists in SW area of site (although most wells in NE part of site weren't sampled), with MW-03 having 7,220 ug/L total VOCs (down from 10,680 ug/L in Dec. 2008), MW-09 having 2,783 ug/L tVOCs (up from 1,862 ug/L in Dec. 2008), MW-10 having 2,355 ug/L tVOCs (down from 2,719 ug/L in Dec. 2008), and MW-08 having 548 ug/L tVOCs (down from 1,123 ug/L in Dec. 2008). Rpt recommends continuing quarterly product recovery and semi-annual GW sampling; preparation of 6-month summary rpt and annual rpt with recommendations for changes as needed; performing a supplemental soil investigation to determine current soil conditions, providing data for evaluating system effectiveness and trunk line options; and submitting letter rpt with results of soil investig and system evaluation. - J. Kolleeny
12/13/10: Reviewed Quarterly Monitoring Rpt (June-Aug. 2010) by LiRo, dated 10/28/10 (in eDocs). GW data for June 2010 show high levels of dissolved-phase contam persist in southwest part of site. Well MW-03 had 9,612 ug/L total VOCs (up from 7,220 ug/L in Jan. 2010), MW-09 had 4,978 ug/L tVOCs (up from 2,783 ug/L in Jan. 2010), MW-10 had 1,961 ug/L tVOCs (down from 2,355 ug/L in Jan. 2010). On east side of site, well DPE-08 had 768 ug/L tVOCs (up from 110 ug/L in Jan. 2010) and MW-26 had 638 ug/L tVOCs (not sampled in Jan. 2010, but had 27 ug/L tVOCs in Dec. 2008). LiRo states that pre-remediation baseline soil data from July 2003 should be updated to evaluate DPE system effectiveness and help focus system operation, and rpt includes supplemental investigation work plan proposing 8 soil borings, with 3 possibly to be converted to monitoring wells, based on field observation of contam. I sent letter (in eDocs) to Afsar Samani of DDC, cc's to Fatemeh Ashkan of DDC and Steve Frank of LiRo, approving invest plan, but asking that one boring be moved to DPE-18 (which had high levels of VOCs in soil), that GW samples be collected from wells MW-14, MW-15, MW-16 & MW-18 to supplement June 2010 GW data, and that system O&M data be included in summary rpt to help evaluate system's effectiveness and need for system modifications. - J. Kolleeny
12/23/10: [JK] Received System Shutdown Notification email from John Proios of LiRo: Site Name: DEP-Kent Ave Shop Date and Time of Shutdown: 12/22/10, 10:00 am Reason for Shutdown: Excessive iron fouling in moisture separator, oil/water separator, and filter canisters Corrective Action Required: Pressure washing and scrubbing at moisture separator, oil/water separator, and filter canisters Estimated Duration of Shutdown: 5 days 12/29/10: [JK] Received System Shutdown Notification email from Ian Hoffman of Envt'l Assessment and Remediations: Site Name: DEP-Kent Ave Shop Date and Time of Shutdown: 12/22/10, 10:00 am Reason for Shutdown: Excessive iron fouling in moisture separator, oil/water separator, and filter canisters Corrective Action Required: Pressure washing and scrubbing at moisture separator, oil/water separator, and filter canisters.

NYCDEP (Continued) **S103272814**

Corrective action delayed due to weather delays, logistical constraints regarding vacuum truck access. Estimated Duration of Shutdown: 14 days 05/12/11: Reviewed Quarterly Mon Rpt & System Performance Rpt for period Sept.-Nov. 2010, dated 2/22/11, by LiRo (in eDocs). On-site DPE system operated ~86% of time, vapor and GW discharges were in compliance with discharge limits. No free product was detected in wells. Sept./Oct. 2010 GW sampling showed worst contam in several wells in vicinity of former USTs: MW-03 had 9,592 ug/L total VOCs (had 9,612 ug/L in June 2010), MW-09 had 3,356 ug/L tVOCs (down from 4,978 ug/L in June 2010), MW-10 had 2,944 ug/L tVOCs (up from 1,961 ug/L in June 2010). LiRo will conduct soil investig to obtain current data in Feb. 2011. Rpt recommends continued system O&M and GW Mon; rpt includes no proposals requiring DEC approval. - J. Kolleeny 08/22/11: Received System Shutdown Notification email from Ian Hoffman of Envt'l Assessment and Remediations: Site Name: DEP-Kent Avenue Shop Date and Time of Shutdown: Reported by LIRO 8/12/11 14:45:00 Reason for Shutdown: high level alarm at moisture separator and high level alarm at product tank (false alarm at product tank) Corrective Action Required: troubleshooting scheduled for Monday, 8/15 Estimated Duration of Shutdown: 2.5 days 08/29/11: Reviewed Quarterly Mon Rpt & System Performance Rpt for period Dec. 2010 thru Feb. 2011, dated 6/29/11, by LiRo (in eDocs). On-site DPE system operated ~82% of time, vapor and GW discharges were in compliance with discharge limits. Two wells in SE corner of site had measurable free product in Jan. 2011: DPE-01 had 0.02 ft, and DPE-08 had 0.05 ft. Soil investigation in Feb. 2011 found overall lower total VOC levels and smaller area of impact compared with July 2003 soil sampling data; however, sigificant levels of soil contam remain, esp. along E side of site. GW sampling in Jan. & Feb. 2011 showed worst contam in several wells in vicinity of former USTs in SW part of site: MW-03 had 9,020 ug/L total VOCs (down from 9,592 ug/L in Sept. 2010), MW-09 had 5,731 ug/L tVOCs (up from 3,356 ug/L in Oct. 2010), MW-10 had 2,296 ug/L tVOCs (down from 2,944 ug/L in Oct. 2010). Outlier well MW-15 (in NE corner of site) had 2,620 ug/L tVOCs in Feb. 2011, up from ND in Jan. 2011 and ~2 ug/L in Oct. 2010; LiRo suspects this result may be anomalous. Rpt proposes to reconfigure operation of DPE system by shutting off vapor extraction component of system in west and northeast areas of site, to focus vapor extraction in areas with high residual soil contam based on results of Feb. 2011 soil investigation. Specifically, LiRo proposes to shut off air vacuum component at wells DPE-06, DPE-07, DPE-11, DPE-17, and DPE-18 (rpt also proposes to shut off DPE-16, however, figures indicate that well has been destroyed, and this was confirmed by Steve Frank of LiRo on 8/29/11). I sent email (in eDocs) approving proposed system changes to Afsar Samani of DDC, cc's to Fatemeh Ashkan of DDC and Steve Frank of LiRo. - J. Kolleeny 01/17/12: Reviewed Qtrly Monitoring and System Performance Rpt for March-May 2011 by LiRo, dated 9/6/11 (in eDocs). On-site DPE system operated ~93.5% of rpting period. Vapor & GW discharges were in compliance with limits. Free product was observed in only one well, MW-09, but not enough to measure thickness (well was not sampled for dissolved VOCs). Feb. 2011 soil sampling showed high VOC levels in SE part of site, but total mass and extent of VOCs have decreased compared with historical maximums & distribution. May 2011 GW sampling showed highest dissolved VOCs persisting in wells near closed-in-place USTs. Well MW-03 had 9,514 ug/L total VOCs (up from 9,020 ug/l in Jan. 2011); well MW-10 had 2,730 ug/L tVOCs (up from 2,296 ug/L in Jan. 2011);

NYCDEP (Continued) **S103272814**

all other wells sampled in May 2011 had less than 1,000 ug/L tVOCs (with several being ND). LiRo concludes DPE system is effectively reducing contam at site. LiRo will continue quarterly GW gauging & sampling, maintain DPE system ops & monitoring, continue to submit quarterly rpts, and reconfigure operation of system to focus on remaining areas with high VOC levels (as approved by DEC in Aug. 2011). - JK 05/11/12: Reviewed Qtrly Mon and Syst Performance Rpt for June-Aug. 2011 by LiRo, dated 1/4/12 (in eDocs). On-site DPE system operated ~76% of rpting period. Vapor & GW discharges were in compliance with limits. No measurable free product was detected in any wells during this period. August 2011 GW sampling showed high VOC levels persist in wells near closed USTs: MW-03 had 8,570 ug/L total VOCs (down from 9,514 in May 2011); MW-09 had 6,249 ug/L tVOCs (not sampled in May 2011 due to visible NAPL); MW-10 had 3,783 ug/L tVOCs (up from 2,730 ug/L in May 2011). LiRo concludes DPE system is effectively reducing contam at site. LiRo will continue quarterly GW gauging & sampling, maintain DPE system ops and monitoring, continue to submit quarterly rpts, and enact DEC approved changes to DPE system. - J. Kolleeny 07/24/12: Reviewed Qtrly Mon and Syst Performance Rpt for Sept. 2011 - Feb. 2012 by LiRo, dated 4/6/12 (in eDocs). On-site DPE system operated ~58% of time from Sept-Nov 2011, and ~70% of time from Dec. 2011 thru Feb. 2012. Vapor & GW discharges were in compliance with limits. No measurable free product was detected in any wells during this period. GW sampling performed in Nov./Dec. 2011 and again in Jan. 2012 showed high VOC levels persisting in wells near closed USTs: MW-03 had 7,393 ug/L total VOCs in Nov. 2011 (down from 8,570 ug/L in Aug. 2011), but went back up to 8,709 ug/L tVOCs in Jan. 2012; MW-09 had 3,952 ug/L tVOCs in Dec. 2011 (down from 6,249 ug/L in Aug. 2011), but went back up to 7,078 ug/L tVOCs in Jan. 2012; MW-10 had 1,558 ug/L tVOCs in Dec. 2011 (down from 3,783 ug/L in Aug. 2011) and decreased further to 801 ug/L tVOCs in Jan. 2012. LiRo concludes DPE system is operating effectively. They will continue quarterly GW gauging & sampling, maintain DPE system ops and monitoring (replacement of blower in progress), and continue to submit quarterly rpts. - J. Kolleeny 12/06/12: Reviewed Qtrly Mon and Syst Performance Rpt for March-May 2012 by LiRo, dated 8/21/12 (in eDocs). On-site DPE system operated only ~42% of rpting period, mainly due to 49-day shutdown caused by blower malfunction. Vapor & GW discharges were in compliance with limits. No measurable free product was detected in any wells during this period. GW sampling in April continued to show high VOC levels in wells near closed USTs: MW-03 had 9,398 ug/L total VOCs (up from 8,709 ug/L in Jan. 2012); MW-09 had 5,038 ug/L tVOCs (down from 7,078 ug/L in Jan. 2012); and MW-10 had 3,127 ug/L tVOCs (up from 801 ug/L in Jan. 2012). LiRo concludes DPE system is operating effectively. They will continue to do quarterly GW gauging & sampling, maintain DPE system ops and monitoring, and submit quarterly rpts. - J. Kolleeny 06/10/13: Reviewed Qtrly Mon and Syst Performance Rpt for June 2012 to Feb. 2013 by LiRo, dated 5/6/13 (in eDocs). Rpt states that NYCDDC & NYCDEP have notified LiRo of site building reconstruction program scheduled for 2014, during which on-site DPE system will temporarily be shut down and place in secure storage. DPE system operated ~99% of this rpting period. Vapor & GW discharges were in compliance with limits. No measurable free product was detected in any wells during this period. GW sampling in June & Sept. 2012 and Jan. 2013 showed well MW-03 had 12,710 ug/L total VOCs in June 2012 (up from 9,398 ug/L in April 2012), increased to 14,790

NYCDEP (Continued) **S103272814**

ug/L tVOCs in Sept. 2012, and decreased to 7,815 ug/L tVOCs in Jan. 2013; MW-09 had 8,978 ug/L tVOCs in June 2012 (up from 5,038 ug/L in April 2012), decreased to 8,644 ug/L tVOCs in Sept. 2012, and decreased to 5,092 ug/L tVOCs in Jan. 2013; MW-10 had 3,159 ug/L tVOCs in June 2012 (up from 3,127 ug/L in April 2012), decreased to 2,581 ug/L tVOCs in Sept. 2012, and decreased to 130 ug/L tVOCs in Jan. 2013. LiRo concludes DPE system is operating effectively. They will continue quarterly GW gauging & sampling, DPE system O&M, submission of quarterly rpts, and will continue to gauge and sample accessible wells during upcoming building reconstruction and temporary DPE system shutdown scheduled for 2014. - J. Kolleeny 10/07/13: Reviewed Quarterly Mon and Syst Performance Rpt for March to May 2013 by LiRo, dated 8/12/13 (in eDocs). On-site DPE system was operation for ~72% of reporting period. System's vapor discharge was in compliance with air discharge std. No free product was detected in any wells during this period. Rpt states that due to NYCDDC budgetary constraints, no GW samples were collected during this monitoring period. I sent email to Steve Frank of LiRo, cc to Fatemeh Ashkan of DDC: Steve, I'm reviewing quarterly mon rpt for March to May 2013 for this site, dated 8/12/13. Rpt states (on page 10): Due to NYCDDC budgetary constraints, no GW samples were collected during this monitoring period. Was I notified about this? I don't seem to have any recollection of GW sampling having been suspended at any of my sites due to budget problems. This site has an active remedial system and several wells with relatively high levels of contam (in Jan. 2013, well MW-03 had 7,815 ug/L total VOCs and well MW-09 had 5,092 ug/L tVOCs). Continuing with regularly scheduled quarterly GW sampling at this site seems to me like a fairly high priority. Has funding for sampling at this site been restored? Has GW been sampled since January 2013? Please let me know status of this site, and please let me know when situations like this arise. Received email reply from Steve Frank: John, Our analytical services subcontract is now funded and Kent Ave Site was sampled in August. Results are attached [in eDocs as brief]. I apologize for not sending notification. There may be other sites of yours that we missed a sample event at. I will send you a list if there are others. If there are any future issues that will result in interruption of monitoring, we will send notification. Aug. 2013 GW data show well MW-03 had 10,487 ug/L total VOCs (up from 7,815 ug/L in Jan. 2013), well MW-09 had 6,525 ug/L tVOCs (up from 5,092 ug/L in Jan. 2013). I asked Steve Frank why well MW-10 was not sampled in Aug. 2013, he said because it went dry during purging and did not recharge. - J. Kolleeny 02/26/14: Reviewed Quarterly Mon Rpt & System Performance Rpt for June to August 2013 by LiRo, dated 11/19/13 (in DecDocs). Rpt states that on-site DPE system only operated 6 days out of mon period; system has leak in oil/water separator and was shut down on 6/7/13. Rpt presents results of well gauging in July & Aug. 2013 and GW sampling in Aug. 2013. No free product was detected during this mon period. GW sampling showed MW-03 (worst well) had 10,487 ug/L total VOCs (up from 7,815 ug/L in Jan. 2013), MW-08 had 83 ug/L tVOCs (down from 124 ug/L in Jan. 2013), MW-09 had 6,525 ug/L tVOCs (up from 5,092 ug/L in Jan. 2013), and MW-13 had 436 ug/L tVOCs (down from 556 ug/L in Jan. 2013). Rpt concludes that tVOC concentrations remain high in area of MW-03 and MW-09, but overall, dissolved-phase plume remained stable; absence of measurable free product suggests DPE system has been effective in removing product, and system has prevented off-site migration of dissolved plume. Rpt states that following actions will

NYCDEP (Continued) **S103272814**

be conducted as part of routine monitoring program: Continue quarterly well gauging & sampling; prepare DPE system for temporary shutdown & storage pending site Bldg reconstruction; continue to prepare/submit quarterly mon rpts; continue to gauge & sample accessible mon wells during upcoming site Bldg reconstruction and temporary DPE system shutdown scheduled for 2014. Rpt has no proposals requiring DEC response. - J. Kolleeny 05/05/14: Reviewed Quarterly Mon Rpt & System Performance Rpt for Sept. to Nov. 2013 by LiRo, dated 1/8/14 (in DecDocs). Rpt states that for Sept.-Nov. 2013 mon period, no system O&M data were collected due to system being shut down for duration of quarter, and well gauging & GW sampling were conducted on Dec. 4th & 5th due to scheduling issues. Dec. 2013 GW elevation data indicate GW flow is still towards center of site, preventing off-site migration of contam plume. Dec. 2013 GW sampling results show well MW-03 had 8,997 ug/L total VOCs (down from 10,487 ug/L in Aug. 2013), well MW-08 was inaccessible and not sampled, well MW-09 had 4,950 ug/L tVOCs (down from 6,525 ug/L in Aug. 2013), well MW-10 had 4,576 ug/L tVOCs (up from 130 ug/L in Jan. 2013, not sampled in Aug. 2013), and well MW-13 had 583 ug/L tVOCs (up from 436 ug/L in Aug. 2013). Rpt states that LiRo will continue to gauge & sample accessible site wells during upcoming bldg construction and anticipated DPE system shutdown scheduled for 2014; replace DPE system's oil/water separator and operate system until shutdown is required for pending bldg construction; and prepare/submit quarterly mon rpts. - J. Kolleeny 08/08/14: Reviewed Quarterly Monitoring Rpt & System Performance Rpt for Dec. 2013 to Feb. 2014 by LiRo, dated 4/8/14 (in DecDocs). Rpt states that on-site DPE system was operational for 72 of 90 days during rpt period; oil-water separator was replaced on 12/5/13, allowing re-start of system on 12/18/13. PID screening and lab sampling/analysis of vapor effluent showed system air discharge in compliance with State stds. A GW effluent sample collected in Jan. 2014 was in compliance with NYCDEP discharge criteria. Avg system flow rate was 0.55 gpm, and total GW discharge for rpt period was 58,270 gals. Well gauging showed no free product in any wells during this rpt period. GW sampling in Feb. 2014 showed well MW-03 had 6,533 ug/L total VOCs (down from 8,997 ug/L in Dec. 2013), well MW-09 had 5,101 ug/L tVOCs (up from 4,950 ug/L in Dec. 2013), well MW-10 had 3,561 ug/L tVOCs (down from 4,576 ug/L in Dec. 2013), and well MW-13 had 978 ug/L tVOCs (up from 583 ug/L in Dec. 2013). LiRo will continue to gauge & sample accessible site mon wells during upcoming site bldg reconstruction (scheduled for 2014), operate DPE system until temporary shutdown is required for upcoming bldg reconstruction, & prepare/submit quarterly mon rpts. - J. Kolleeny 11/10/14: Reviewed Quarterly Mon & System Performance Rpt for March-May 2014 by LiRo, dated 8/6/14 (in DecDocs). Rpt states that on-site DPE system was operational 92 out of 92 days during rpt period (100% of time). PID screening and lab analysis of vapor effluent showed system air discharge in compliance with State stds. Avg system flow rate was 0.65 gpm, total GW discharge during rpt period was 86,276 gals. GW sampling in April 2014 showed well MW-03 had 10,190 ug/L total VOCs (up from 6,533 ug/L in Feb. 2014), well MW-09 had 5,047 ug/L tVOCs (had 5,101 ug/L in Feb. 2014), well MW-10 had 2,942 ug/L tVOCs (down from 3,561 ug/L in Feb. 2014). LiRo will continue to gauge & sample accessible site mon wells during upcoming site bldg reconstruction (scheduled for 2014), operate DPE system until temporary shutdown is required for upcoming bldg reconstruction, and prepare/submit quarterly mon rpts. - J. Kolleeny

NYCDEP (Continued) **S103272814**

01/22/15: Reviewed Quarterly Mon & System Performance Rpt for June-Aug. 2014 by LiRo, dated 10/24/14 (in DecDocs). Rpt states that on-site DPE system was operational 86 out of 92 days (92.5%). PID screening and lab analysis of vapor effluent showed system air discharge was in compliance with State stds during rpt period. Avg system flow rate was 0.61 gpm, total GW discharge during rpt period was 75,705 gals. GW sampling in July 2014 showed well MW-03 had 10,274 ug/L total VOCs (up from 10,190 ug/L in April 2014), well MW-09 had 6,437 ug/L tVOCs (up from 5,047 ug/L in April 2014), well MW-10 had 6,063 ug/L tVOCs (up from 2,942 ug/L in April 2014). LiRo concludes that overall, GW data indicate dissolved-phase contaminant plume is similar to previous monitoring periods with no signficant changes in plume configuration. LiRo will continue to gauge & sample accessible site monitoring wells during upcoming site bldg reconstruction (scheduled for 2014), operate DPE system until temporary shutdown is required for upcoming bldg reconstruction, and prepare/submit quarterly mon rpts. - J. Kolleeny 03/16/15: Reviewed Quarterly Monitoring & System Performance Rpt for Sept.-Nov. 2014 by LiRo, dated 2/3/15 (in DecDocs). Rpt states that on-site DPE system was operation 86 of 91 days (94.5%); on 11/14/14, system was shut down, dismantled and placed in storage for duration of site reconstruction program. PID screening & lab analysis of vapor effluent showed system air discharge was in compliance with State stds during rpt period. Avg system GW recovery flow rate was 0.61 gpm, total GW discharge during rpt period was 75,705 gals [? data not updated from previous quarterly rpt? Sent email inquiry to Steve Frank of LiRo]. GW sampling in Oct. 2014 showed well MW-03 had 9,919 ug/L total VOCs (down from 10,274 ug/L in July 2014), well MW-09 had 7,117 ug/L tVOCs (up from 6,437 ug/L in July 2014), well MW-10 had 5,863 ug/L tVOCs (down from 6,063 ug/L in July 2014). LiRo will continue to gauge & sample accessible mon wells during upcoming site reconstruction (scheduled for 2015) and prepare & submit quarterly mon rpts. I sent email to Steve Frank of LiRo: Steve, I have a question about LiRo s Qtrly Mon Rpt & System Performance Rpt for Sept.-Nov. 2014 for this site. On Page 7, rpt states that system was operational for 86 out of 91 calendar days in this rpting period. However, on Page 8 text states For rpting period (92 days), average system flow rate& was 0.61 gpm and, Total net system GW effluent discharge for rpting period was 75,705 gals. These flow rate & discharge numbers are identical to numbers in previous qtrly rpt (June-Aug. 2014), and since text here gives rpting period as 92 days (rather than 91, as stated on previous page), I m wondering if flow rate & discharge data presented here are holdovers from previous qtrly rpt, and were inadvertently not updated for this rpt? Please let me know if this is true, and if so, please provide correct system flow rate in gpm and GW effluent discharge in gals, if those data are available. - J. Kolleeny 03/17/15: Received email reply from Steve Frank of Liro: Jon, Your guess was correct. We will send you a new pdf of rpt with corrected flow rate/discharge numbers. - J. Kolleeny 03/24/15: Received email from Steve Frank of LiRo with revised Quarterly Monitoring & System Performance Rpt for Sept.-Nov. 2014, uploaded to DecDocs. - J. Kolleeny 07/23/15: Reviewed Quarterly Monitoring & System Performance Rpt for Dec. 2014 to Feb. 2015 by LiRo, dated 5/14/15 (in DecDocs). Rpt notes that on-site DPE system was shut down and put into storage on 11/20/14, in preparation for site construction work. In addition, due to interruption of DDC funding, no GW sampling was performed this quarter. Therefore, site

NYCDEP (Continued) **S103272814**

activities during this quarter were limited to gauging of all accessible wells, which was performed in Jan. and Feb. 2015. No LNAPL was observed in any wells. GW contour maps based on gauging measurements show GW flowing radially inward toward center of site, altho this pattern appears to be less pronounced in Feb. 2015 map. Rpt states that quarterly GW sampling at site resumed on 4/13/15 (results will be in next quarterly rpt). - J. Kolleeny 10/30/15: Reviewed Quarterly Monitoring & System Performance Rpt for March to May 2015 by LiRo, dated 8/26/15 (in DecDocs). Rpt notes that on-site DPE system was shut down and put into storage in Nov. 2014 in preparation for site construction work. GW sampling was performed in April 2015; results show well MW-03 had 11,071 ug/L total VOCs (up from 9,919 ug/L in Oct. 2014), well MW-08 had 161 ug/L tVOCs (up from 70 ug/L in Oct. 2014), well MW-09 had 3,839 ug/L tVOCs (down from 7,117 ug/L in Oct. 2014), well MW-10 had 1,717 ug/L tVOCs (down from 5,863 ug/L in Oct. 2014), well MW-13 had 323 ug/L tVOCs (down from 421 ug/L in Oct. 2014), and well DPE-13 had 109 ug/L tVOCs (up from 28 ug/L in Oct. 2014). Other wells had minimal VOCs or were ND, or were not sampled. Rpt states that generally reduced VOC concentrations in site perimeter wells and absence of free product indicate that DPE system was effective and functioned as designed by removing free product and preventing off-site migration of dissolved-phase GW plume. Rpt states that LiRo will continue quarterly well gauging and sampling to extent feasible during building reconstruction, will initiate monthly EFR events at accessible wells to remove contaminated GW during site reconstruction, and will continue to prepare/submit quarterly monitoring rpts. - J. Kolleeny 03/23/16: Reviewed Quarterly Monitoring & System Performance Rpt for June to Aug. 2015 by LiRo, dated 12/18/15 (in DecDocs). Rpt notes that on-site DPE system was shut down & put into storage in Nov. 2014 in preparation for site construction work. GW sampling was performed in June 2015; results show well MW-03 had 12,133 ug/L total VOCs (up from 11,071 ug/L in April 2015), well MW-08 had 137 ug/L tVOCs (down from 161 ug/L in April 2015), well MW-09 had 5,144 ug/L tVOCs (up from 3,839 ug/L in April 2015), well MW-10 had 4,283 ug/L tVOCs (up from 1,717 ug/L in April 2015), well MW-13 had 227 ug/L tVOCs (down from 323 ug/L in April 2015), well DPE-13 had 101 ug/L tVOCs (down from 109 ug/L in April 2015. Other wells had minimal VOCs or were ND, or were not sampled. No LNAPL was observed in any wells during rpt period. Rpt states that tVOCs in several wells remain high, but overall dissolved-phase plume is similar to previous monitoring periods. On 8/26/15, LiRo initiated EFR on six wells (MW-03, MW-09, MW-10, MW-13, DPE-01 & DPE-13) as an IRM; ~235 gals total fluids were recovered. Rpt states that LiRo will continue to gauge & sample accessible wells on a quarterly basis, will continue to do monthly EFR events as an IRM, and will continue to prepare/submit quarterly rpts. - J. Kolleeny 06/10/16: Reviewed Quarterly Monitoring & System Performance Rpt for Sept. to Nov. 2015 by LiRo, dated 3/24/16 (in DecDocs). Rpt notes that on-site DPE system was shut down & put into storage in Nov. 2014 in preparation for site construction work; states that when construction activities are complete LiRo will evaluate remedial requirements and determine if DPE system should be re-commissioned and reactivated. EFR events were performed on 5 wells (MW-03, MW-09, MW-13, DPE-01, DPE-13) in Sept. 2015, removing ~35-40 gals from each well, then on same 5 wells in Oct. 2015, removing ~53-54 gals from each well, then from first 3 of those wells in Nov. 2015 (DPE wells

NYCDEP (Continued) **S103272814**

were blocked), removing from 50 to 65 gals from wells. GW sampling in Sept/Oct 2015 showed well MW-03 had 12,255 ug/L (up from 12,133 ug/L in June 2015), well MW-08 had 187 ug/L tVOCs (up from 137 ug/L in June 2015), well MW-10 had 6,149 ug/L tVOCs (up from 4,283 ug/L in June 2015), well DP-12 had 282 ug/L tVOCs (had 4 ug/L when last sampled in Oct. 2014), well DP-13 had 42 ug/L tVOCs (down from 101 ug/L in June 2015). Well MW-09, which had 5,144 ug/L tVOCs in June 2015, was not sampled and no explanation is provided in text or tables. Rpt notes that a number of wells saw increases in VOCs this quarter, but states that overall, there was no significant change in plume configuration. LiRo will continue to gauge & sample accessible wells on a quarterly basis, will continue to do monthly EFR events as an IRM, and will continue to prepare/submit quarterly rpts. I contacted Steve Frank of LiRo regarding well MW-09 not being sampled this quarter; he responded that MW-09 was inaccessible at time of sampling due to parked vehicle over well, which was noted in well purge logs but not in text or well gauging data table. - J. Kolleeny 07/08/16: Reviewed Quarterly Monitoring & System Performance Rpt for Dec. 2015 to Feb. 2016 by LiRo dated 4/29/16 (in DecDocs). Rpt notes that on-site DPE remedial system is shut down while site building undergoes renovations, but that monthly EFR on impacted, accessible wells continues to be performed as an interim measure to address GW contam. In this quarter, EFR events were performed in Jan. & Feb. of 2016, removing ~267 gals total fluids, bringing total since IRM began to 1,133 gals total fluids removed. GW sampling in Jan. 2016 showed well MW-03 had 15,871 ug/L total VOCs (up from 12,255 ug/L in Sept. 2015), well MW-09 had 6,138 ug/L tVOCs (up from 5,144 ug/L when last sampled in June 2015), well MW-13 had 217 ug/L tVOCs (up from 42 ug/L in Sept. 2015); other wells sampled were either ND or had very low tVOCs. Wells MW-08 & MW-10 were not sampled; well purge logs indicate they were blocked by construction equipment. LiRo concludes that high tVOC levels remain in vicinity of MW-03, MW-09 & MW-10, but that plume is similar to previous monitoring periods. LiRo will continue to gauge & sample accessible wells on a quarterly basis, perform monthly EFR at select wells to remove contaminated GW as an IRM, & prepare/submit quarterly monitoring rpts. - J. Kolleeny 09/09/16: Reviewed Quarterly Monitoring & System Performance Rpt for March-May 2016, dated 7/20/16 (in DecDocs). Rpt notes that while DPE system is shut down for site bldg renovations, monthly EFR continues to be performed on accessible wells with high levels of dissolved VOCs (MW-03, MW-09, MW-13, DPE-01, DPE-13) as an IRM. In this quarter, EFR events were performed in March, April & May 2016, removing total of ~321 gals total fluids, bringing total since IRM began to 1,454 gals total fluids removed. No LNAPL was detected during rpt period. For April 2016 GW sampling event, only two wells were accessible for sampling: LMW-01 and MW-19, both of which were ND for VOCs. LiRo will continue to gauge & sample accessible wells quarterly, do monthly EFR at impacted wells as an IRM, & submit qtrly mon rpts. I sent email to Steve Frank of LiRo: Steve, I reviewed LiRo s Qtrly Mon & System Performance Rpt for March-May 2016 for Kent Ave Shop, and I see that only 2 monitoring wells were accessible for GW sampling on 4/11/16 neither of which is among highly contaminated wells at site. Yet EFR summary table indicates EFR events were performed on all of those wells in April and on most of those wells in May 2016, so they must have been accessible at those times. Why weren t critical wells (MW-03, MW-09, MW-13, DPE-01, DPE-13) sampled when they were accessible on EFR visit dates? Please let me know. - J. Kolleeny

NYCDEP (Continued) **S103272814**

09/12/16: Received email reply from Steve Frank of LiRo: Jon, Thanks for your note and I understand your concern. Construction conditions are in a constant state of flux at Kent Shop. We tried to sample wells on April 11 and found them blocked. We returned next week and found wells still blocked and unfortunately, we moved on from trying to sample those wells in April. Different LiRo crews & equipment are required to complete sampling vs EFR & there is a subcontractor involved & work scheduled at other sites. We always go out in advance of attempting EFR & we did that on April 26th. Wells were accessible & we completed EFR on 27th. Going forward, I think we can coordinate our sampling & EFR events more closely when we scout for EFR & see wells are accessible, we will scramble a sampling crew to try & hit site to sample within a day or two. Just to give you an idea of what we are up against, I attached photos of conditions inside. June 2016 photo is from area of MW-03, 09 & 13& Stuff (not technical term) is piled up there because it was in way somewhere else. It could sit there for 2 days or 2 months we have no say in that. In ramp removed photo ramp got torn out, so until that gets rebuilt we cannot get personnel in there at all. We are not currently able to complete EFR or sampling but we continue to scout site monthly. Next time we see well access, we will get a sampling crew there ASAP. I sent email reply: Steve, Thanks for explanation & photos I can better see what you re up against. It occurs to me that there could be a quarterly period during which your staff will be unable to either sample/gauge wells or perform EFR on wells at this site. In that case, perhaps it makes sense to reduce reporting frequency from quarterly to semi-annual, at least for duration of site renovations? If/when remedial system is re-started, LiRo could resume submission of quarterly rpts. I m not sure whether or not to also suggest a reduction of GW sampling frequency, and of course I d prefer to see EFR events continue monthly as approved IRM while DPE system is off, assuming wells are accessible. Please let me know what you think. - J. Kolleeny 09/15/16: Received email reply from Steve Frank of LiRo: Jon, I think switch to semi-annual reporting until system is back on-line is a fine idea. We will continue to visit site and try for monthly EFR (as construction conditions permit) and I think it would be best to stick with quarterly GW sampling. I fear that if we dial back to semi-annual sampling and catch a period with no well access we could end up with no data. I sent email reply: Steve, Sounds good, so I will consider reporting schedule for this site to be changed to semi-annual for duration of building reconstruction project, while EFR and GW sampling schedules will remain same, at monthly & quarterly, resp. (with understanding that there may be months/quarters in which EFR/GW sampling of certain wells is not possible to do access constraints). - J. Kolleeny 03/31/17: Reviewed Semi-Annual Monitoring & System Performance Rpt for June to Nov. 2016, by LiRo, dated 1/30/17 (in DecDocs). On-site DPE system was shut down in Nov. 2014 for building renovations. Monthly EFR was performed in June & July 2016 as required IRM during system down time, removing ~205 gals of total fluids (volume of total fluids removed since start of IRM is ~1,659 gals). LiRo made site visits in Sept. & Oct. 2016 to attempt EFR & GW sampling, but was unable to do either due to construction activities. Based on discussions with site personnel, EFR in basement will not be possible until after Spring 2017. However, in early Nov. 2016 LiRo was able to collect GW samples from 10 out of 16 wells in monitoring program. No free product was detected in wells. Sampling results showed well MW-3 had 11,191 ug/L

NYCDEP (Continued) **S103272814**

total VOCs (down from 15,871 ug/L in Jan. 2016), well MW-10 had 957 ug/L tVOCs (down from 6,149 ug/L in Sept. 2015, well MW-13 had 5 ug/L tVOCs (down from 217 ug/L in Jan. 2016), well DPE-13 had 201 ug/L tVOCs (up from 42 ug/L in Sept. 2015); well MW-9 (historically high impacts) could not be sampled. LiRo will continue to do quarterly well gauging & GW sampling, & monthly EFR events as an IRM on accessible wells as permitted by site conditions, & will continue to submit semi-annual mon rpts. - JK 11/27/17: Reviewed Semi-Annual Monitoring Rpt for Dec. 2016 to May 2017 by LiRo, dated 8/31/17 (in DecDocs). On-site DPE system remains shut down for bldg renovations. Rpt states LiRo conducted gauging of accessible site wells & sampling of 12 wells in Feb. 2017 (5 wells couldn't be sampled due to access blocked by construction), and gauging of accessible wells & sampling of 13 wells in May 2017 (4 wells couldn't be sampled due to access blocked by construction). In March 2017, LiRo resumed EFR events, regaining access to basement wells after reconstruction of access ramp & basement floor was completed. EFR was performed on 5 wells in March, April & May 2017, recovering ~268 gals of total fluids, bringing total recovered since EFR began to ~1,725 gals total fluids. No measurable LNAPL was detected in this rpt period. GW sampling showed well MW-03 had 16,775 ug/L total VOCs in Feb. 2017 (up from 11,191 ug/L in Nov. 2016) and had 10,806 ug/L tVOCs in May 2017; well MW-09 had 4,801 ug/L tVOCs in Feb. 2017 (not accessible in Nov. 2016; had 6,138 ug/L tVOCs in Jan. 2016) and had 3,708 ug/L tVOCs in May 2017; well MW-10 was not accessible in Feb. 2017 (had 957 ug/L tVOCs in Nov. 2016) and had 1,698 ug/L tVOCs in May 2017; well MW-13 was not sampled in Feb. 2017 (had 5 ug/L tVOCs in Nov. 2016) and had 117 ug/L tVOCs in May 2017; well DPE-12 had 78 ug/L tVOCs in Feb. 2017 (down from 282 ug/L when last sampled in Sept. 2015) and had 59 ug/L tVOCs in May 2017; well DPE-13 had 171 ug/L tVOCs in Feb. 2017 (down from 201 ug/L in Nov. 2016) and had 120 ug/L tVOCs in May 2017. LiRo will continue quarterly gauging/sampling of accessible site wells to extent feasible during bldg reconstruction activities, continue monthly EFR at accessible wells as an IRM during reconstruction, & will prepare/submit semi-annual monitoring rpts. - J. Kolleeny 07/19/18: Reviewed Semi-Annual GW Monitoring Rpt (June 2017 to Jan. 2018) by LiRo dated 5/16/18 (in DecDocs). GW sampling in Oct. 2017 & Jan. 2018 showed (main wells of concern) MW-03 had 8,271 ug/L total VOCs in Oct. 2017 (down from 11,850 ug/L in Aug. 2017) and had 8,921 ug/L tVOCs in Jan. 2017; well MW-09 had 2,858 ug/L tVOCs in Oct. 2017 (down from 3,708 ug/L in Aug. 2017) and had 1,541 ug/L tVOCs in Jan. 2017; well MW-10 had 1,905 ug/L tVOCs in Oct. 2017 (up from 1,068 ug/L in Aug. 2017) and had 939 ug/L tVOCs in Jan. 2018; well MW-13 had 305 ug/L tVOCs in Oct. 2017 (up from 11 ug/L in Aug. 2017) and had 154 ug/L tVOCs in Jan. 2018; well DPE-13 had 167 ug/L tVOCs in Oct. 2017 (same as in Aug. 2017) and had 119 ug/L tVOCs in Jan. 2018. EFR was performed monthly during rpt period, recovering ~982 gals total fluids (bringing total fluids recovered since start of IRM to ~2,707 gals). In Dec. 2017, LiRo drilled 16 soil borings to obtain current soil data for evaluation of remedial alternatives to inactive on-site DPE system; 47 soil samples were collected and results ranged from ND in 25 samples to 173,410 ug/kg total VOCs. Based on Dec. 2017 soil data, areas of residual vadose zone soil impacts are located in SW & E portions of site. Rpt states that data shows a general overall decrease in total mass of VOCs in soil. Rpt includes an evaluation of remedial alternatives including MNA with EFR, GWET, S-ISCO, and In-Situ Biorem (IB) with MNA. Rpt concludes best alternative for site

NYCDEP (Continued) **S103272814**

would be IB, which would involve application of bacteria & nutrients into existing site wells by gravity feed, possibly supplemented with oxygen. Rpt states that quarterly well gauging & GW sampling and monthly EFR will continue, pending DEC approval of proposed changes. Proposals requiring DEC approval are: discontinue and decommission DPE system, discontinue monthly EFR, reduce well gauging & GW sampling to semi-annual and analyze GW samples only for VOCs, prepare & submit an IB design/treatment study work plan to evaluate this technology as remedial approach for site. - J. Kolleeny 07/19/18 (cont.): I sent email to Steve Frank of LiRo: Steve, I m reviewing Semi-Annual Mon Rpt for this site dated 5/16/18. Rpt recommends reducing GW sampling frequency from quarterly to semi-annual, and includes latest GW data from a Jan. 2018 sampling event. Since site is currently on quarterly schedule, I was wondering if you have any addt'l GW data, perhaps from April or May 2018?I always like to see latest available GW data when reviewing remedial proposals. Also, since LiRo is recommending a new remedial approach (In-Situ Bioremediation, or IB), are you sure you want to reduce GW sampling frequency? Won t that delay your ability to evaluate effectiveness of new approach? Finally, I see IB proposal recommends injection of bacteria & nutrients into existing wells. Since those wells are screened to straddle water table, with screens presumably extending only a few ft above water table, how would injections into those wells address residual vadose zone soil impacts at site? Please feel free to call to discuss. - J. Kolleeny 07/27/18: Received email from Steve Frank of LiRo with answers to my 7/19/18 email: JK - Rpt recommends reducing GW sampling frequency from quarterly to semi-annual, and includes latest GW data from Jan. 2018 sampling event. Since it s currently on quarterly schedule, do you have any addt'l GW data for April or May 2018? SF - We have quarterly data from April & June. Latest GW data is attached. [In Decdocs.] JK - Seeing as LiRo is recommending a new remedial approach (In-Situ Bioremediation, or IB), wouldn't reducing GW sampling frequency delay ability to evaluate effectiveness of new approach? SF - Proposed reduction is for long-term routine sampling. We will develop an IB design/study work plan that will specify more frequent monitoring of wells in treatment area to evaluate effectiveness. JK - IB proposal recommends injection of bacteria & nutrients into existing wells, screened to straddle water table, with screens extending only a few feet above GW; how would injections into those wells address residual vadose zone soil impacts at site? SF - Water table is extremely shallow in treatment area and most soil contamination is in capillary fringe or below water table. IB design/treatment study proposed in our rpt will include an evaluation of potential effectiveness in capillary fringe. Reviewed addt'l GW data; well MW-3 had 11,742 ug/L total VOCs in April and had 8,199 ug/L tVOCs in June; well MW-9 had 2,059 ug/L tVOCs in April and 1,122 ug/L in June; well MW-10 had 1,257 ug/L tVOCs in April and 2,373 ug/L in June; other wells had low to moderate VOC levels. I sent letter (in DecDocs) approving proposals in LiRo's SAMR for June 2017 to Jan. 2018, to Jerry Aliberti of DDC, cc's to Marco Chen of DDC, Steve Frank & Martha DeLozier of LiRo. - J. Kolleeny 02/07/19: Reviewed Semi-Annual Monitoring Rpt for Monitoring Period (February to July 2018) by LiRo dated 12/11/18 (in DecDocs). Rpt presents results of GW sampling in April & June 2018; these are same data sent in July 2018 and reviewed in above 7/27/18 entry. Rpt notes that on 7/27/18 DEC approved LiRo's proposals to cease operating & decommission on-site DPE system,
