discontinue EFR as an IRM, and reduce well gauging & GW sampling frequency from quarterly to semi-annual, and that DEC requested preparation/submittal of an in-situ bioremediation work plan. Rpt states that LiRo will continue to gauge & sample accessible site wells on semi-annual basis, prepare/submit semi-annual rpts, and will prepare/submit in-situ bio-rem work plan in Jan. 2019 monitoring rpt. - JK 04/04/19: Reviewed Semi-Annual Monitoring Rpt for Monitoring Period (Aug. 2018 to Jan. 2019) by LiRo dated 2/28/19 (in DecDocs). One monitoring event was conducted during rpt period, in Oct. 2018. Well gauging showed no LNAPL in any site well. GW sampling showed well MW-03 had 6,327 ug/L total VOCs (down from 8,199 ug/L in June 2018), well MW-09 had 176 ug/L tVOCs (down from 1,122 ug/L in June 2018), well MW-10 had 3,811 ug/L tVOCs (up from 2,373 ug/L in June 2018), well MW-13 had 174 ug/L tVOCs (up from 78 ug/L in June 2018), well DPE-13 had 102 ug/L tVOCs (up from 63 ug/L in June 2018); other wells sampled were either ND or had very low to moderately low (below 100 ug/) levels of tVOCs. Worst GW impacts remain in SW area of site. Rpt notes that contaminant plume appears to be confined to site. LiRo will continue to gauge & sample accessible site wells and submit monitoring rpts on semi-annual basis; they will also prepare a preliminary design for a bioremediation system and draft a Remedial Action Work Plan. - J. Kolleeny 09/30/19: Received email from Steve Frank of LiRo: Hi Jon, I wanted to give you a heads-up on our findings at Kent Ave shop. Some product appeared in LMW-01 back in April & unfortunately (and I am sorry for this) no one immediately recognized this as an unusual condition. However, given that LMW-01 is an up-gradient well which has historically not shown contamination, I believe it is unusual. We tested product for fingerprint and it came back as mineral spirits (confirmed with a second ID sample). We started EFR on well and as of this morning, thickness was 0.13 ft. There is no record of mineral spirits storage at site and considering well location it is possible that there is an off-site source. We ordered Sanborn maps and an EDR database rpt (I attached a Sanborn map) and records indicate that there was a fairly large dry-cleaning plant (with 6 solvent tanks called out) from 1940s thru 90s or maybe a little later even. From our mineral spirits findings at Brooklyn 3/3A, we learned that a type of mineral spirit (Stoddard Solvent) was an early dry-cleaning chemical. Former dry-cleaning building (380 Flushing Ave) appears to have been demolished (probably in 2018) and property has an E-designation. I could not find addt'l info on property in City s OER database. I was thinking that we could continue to do EFR for a couple of months and if product goes away, pursue source no further. If product persists, I think we would need to put in some addt'l up-gradient wells along Kent Ave to further evaluate source. Let us know what you think of my suggestions or if there are any other things you would like us to do. I sent email reply: Steve, Thanks for bringing this to my attention. I would suggest continuing to do EFR to see if product disappears in a month or two. I believe that property at 380 Flushing Ave which formerly was a dry cleaning plant is now a BCP site; I will follow up on that to try to find out if they have detected any mineral spirits in wells and/or if they have knowledge of mineral spirits or Stoddard Solvent having been stored at that site. I ll also find out what sort of remediation they have done or will be doing, and if they have done any off-site investigation. Thanks again for heads-up on this, and please let me know how it goes with EFR efforts to eliminate product. I checked Remediation database, found that former dry cleaning plant

NYCDEP (Continued) **S103272814**

at 380 Flushing Ave is a BCP project, no. C224264, off-site investigation under no. C22426A, being managed by Wendy Zheng of R2 Remediation Section A. According to notes in database, GW flow at site is to E (away from Kent Ave Shop), and main impacts at site are from fuel oil. - J. Kolleeny 11/26/19: Discussed this site with LiRo at 11/21/19 DDC Consent Order semiannual status meeting, told them Wendy Zheng said main site contaminant is fuel oil, and off-site investigation will only be done to N and E, based on GW flow. Steve Frank and Martha DeLozier of LiRo stated that Stoddard Solvent contamination in soil resembles fuel oil. They also stated that EFR events have greatly reduced product in impacted well, they will evaluate product rebound. On 11/26/19, Martha DeLozier sent follow-up email: Jon, As discussed in our meeting last Thursday, attached is an excerpt from document titled Toxicological Profile for Stoddard Solvent, US Dept. of Health & Human Services, Agency for Toxic Substances and Disease Registry, dated June 1995. Excerpt discusses chemical and physical info for Stoddard solvent which is similar in chemical composition to white spirits / mineral spirits. Also attached is soil data from solvent tank (mineral spirit) excavation work related to DSNY-Former Brooklyn North 3 site (314 Rutledge St parcel). As you can see from results, 1,2,4-Trimethylbenzene was detected at highest percentage concentration levels. - JK 01/17/20: Reviewed Semi-Annual GW Monitoring Rpt for Monitoring Period (Feb. to July 2019) by LiRo dated 12/4/19 (in DecDocs). Well gauging on April 8-9, 2019 showed well LMW-01 had 0.22 ft of LNAPL, later identified as mineral spirits (i.e., Stoddard Solvent) (see above entries for 9/30/19 & 11/26/19); well gauging on 6/25/19 again showed 0.21 ft of LNAPL in well LMW-01. GW sampling in April 2019 showed well MW-03 had 11,066 ug/L total VOCs (up from 6,327 ug/L in Oct. 2018), well MW-09 had 2,002 ug/L tVOCs (up from 176 ug/L in Oct. 2018), well MW-10 had 1,089 ug/L tVOCs (down from 3,811 ug/L in Oct. 2018), well MW-13 had 113 ug/L tVOCs (down from 174 ug/L in Oct. 2018); other wells sampled had very low to ND levels of VOCs. Rpt states that on 9/30/19, LiRo informed DEC of presence of mineral spirits in well LMW-01 and of LiRo's intent to perform EFR on this well for two months to evaluate any increases/decreases in mineral spirit thickness. Rpt notes that well LMW-01 is located up-gradient of former on-site UST system, that this well never had mineral spirits before, and there is no record of mineral spirits being used or stored at site. Rpt also states that with measurement of LNAPL ID'ed as mineral spirits in LMW-01 in April and verified in June 2019, LiRo conducted EFR on 9/19/19 and 9/30/19; after two EFR events product thickness was reduced to 0.13 ft. Based on this reduction, EFR was discontinued. Rpt states that LiRo will continue semiannual gauging & sampling of accessible site wells and will perform EFR as required by SMP, and for next monitoring period will gauge wells monthly to evaluate presence of LNAPL. Rpt also includes a RAWP proposing Biological Augmentation, which I will review separately. - JK 01/22/20: Reviewed RAWP included as attachment in LiRo's Semi-Annual GW Mon Rpt for Feb. to July 2019 (in DecDocs). RAWP proposes biological augmentation to address residual petroleum impacts at site. RAWP states there is an area of residual soil contam in a smear zone at water table, and this contam soil is acting as an ongoing source of GW contamination. To address soil contam, LiRo will implement a GW recirculation, mixing and oxygenation system. Proposed system will utilize conduits and extraction wells from former on-site DPE system. Two extraction wells (DPE-11 & DPE-13) located up-gradient of presumed contam soil mass

NYCDEP (Continued) **S103272814**

will remove GW, which will be pumped to a treatment system where nutrients & oxygen will be added, with volume of additives and mixing rates controlled by Biological Oxygen Supply System (BOSS). Treated/amended water will then be gravity fed to 3 re-circulation wells (DPE-06, DPE-12 & DPE-17) located down-gradient of contam soil. Bio-augmentation program will extend over 12 months, with quarterly sampling of GW for bio parameters, semi-annual sampling of GW for petroleum contaminants (as per current monitoring schedule), and confirmation soil sampling after 9 months to evaluate progress of soil remediation. Operation and performance monitoring of bio-augmentation system will be summarized in usual semi-annual rpts, and results of bio-augmentation program will be summarized in a single rpt in first semi-annual monitoring rpt after receipt of confirmation soil sampling data. RAWP states that LiRo will not implement bio-augmentation program until there are no more measurable product (mineral spirits) in any site well. In quarter following no observation of product at site, after bid document prep and USEPA notification, program will be initiated. I sent letter (in DecDocs) approving RAWP to Jerry Aliberti of NYCDDC, cc's to Ricardo Walton of DDC; Steve Frank, Martha DeLozier & John Proios of LiRo, but suggesting that bio-program be implemented when there is no more product in wells located within proposed bio treatment area. - J. Kolleeny 06/04/20: Reviewed Semi-Annual Monitoring Rpt for Aug. 2019 to Jan. 2020 by LiRo, dated 4/23/20. Rpt notes that on 9/30/19, LiRo notified DEC of the presence of product ID'ed as mineral spirits in well LMW-01 and of LiRo's intent to do EFR on that well for 2 months to evaluate changes in product thickness. LiRo gauged site wells multiple times in Sept., Oct., Nov. & Dec. 2019 and Jan. 2020; product was identified intermittently in wells LMW-01, DPE-08, MW-06, MW-03 and DPE-03, and product thicknesses detected during this period ranged from 2.01 ft (LMW-01) to 0.01 (several wells). LiRo performed EFR on well LMW-01 on Sept. 19 & 30, 2019 and on wells LMW-01 and DPE-08 on Jan. 17 & 31, 2020. A total of 151.21 gals of fluids were removed from these wells during rpt period. LiRo installed an absorbent sock in LMW-01 on 10/10/19 and in MW-06 and DPE-08 on 11/21/19. A product sample from DPE-08 taken on 11/8/19 was ID'ed as possibly mineral spirits or weathered gasoline. Rpt notes that on 1/22/20, DEC approved LiRo's RAWP for biological augmentation (included in previous semiannual rpt), with caveat that RAWP will not be implemented until no free product is observed within treatment area. Site-wide GW sampling performed in Nov. 2019 showed well MW-03 had 7,412 ug/L total VOCs (down from 11,066 ug/L in April 2019), well MW-08 had 148 ug/L tVOCs (not sampled in April 2019, had 525 ug/L tVOCs in Aug. 2017), well MW-09 had 968 ug/L tVOCs (down from 2,002 ug/L in April 2019), well MW-10 had 797 ug/L tVOCs (down from 1,089 ug/L in April 2019), well MW-13 had 169 ug/L tVOCs (up from 113 ug/L in April 2019), well DPE-08 had 525 ug/L tVOCs (not analyzed in April 2019; had 153 ug/L tVOCs in June 2018), well LMW-01 had 391 ug/L tVOCs (not sampled in April 2019 due to free product; had 9 ug/L tVOCs in Oct. 2018), well DPE-13 had 110 ug/L tVOCs (up from 43 ug/L in April 2019). Rpt states that LiRo will continue semi-annual GW sampling, perform EFR as required by SMP, perform monthly gauging of accessible wells for next monitoring period to evaluate presence and migration of product, and will implement approved biological augmentation RAWP when there is no more product observed within treatment area. - J. Kolleeny 12/28/20: Reviewed Semi-Annual Monitoring Rpt for Feb. to July 2020 by LiRo, dated 11/13/20. During

NYCDEP (Continued) **S103272814**

rpt period, LiRo completed semiannual GW sampling on 4/6/20 and 6/24-25/20; time gap was due to DEP restricting access to site interior due to COVID-19; LiRo collected free product and product/water mix samples from LMW-01 & DPE-14 on 7/30/20 and submitted for lab analysis of target VOCs; LiRo performed 11 addt'l well gauging events for product, installed & maintained absorbent socks in wells MW-06 & DPE-8, and conducted 4 rounds of EFR (twice in Feb., once in March and once in July 2020). Product thickness ranged up to 0.52 ft (in DPE-08). A total of 36 gals of product were recovered from LMW-01, MW-09, DPE-08 & DPE-14 by EFR this period, bringing cumulative total recovered to 187.71 gals since 4/8/19. Rpt states that EFR seems to have short-term effect in reducing product thicknesses, but long-term effectiveness will require further monitoring. Rpt states that LiRo will not implement approved biological augmentation program until no more free product is observed within treatment area. June 2020 well gauging data appear to show GW flow to ENE across site, instead of usual inward radial flow toward site center. GW sample results show well LMW-01 had 85 ug/L total VOCs (down from 391 ug/L in Nov. 2019), well MW-03 had 7,582 ug/L tVOCs (up from 7,412 ug/L in Nov. 2019), well MW-08 had 1,451 ug/L tVOCs (up from 148 ug/L in Nov. 2019), well MW-09 had 890 ug/L tVOCs (down from 968 ug/L in Nov. 2019), well MW-10 had 161 ug/L tVOCs (down from 797 ug/L in Nov. 2019), well DPE-08 was not sampled due to LNAPL (had 525 ug/L tVOCs in Nov. 2019), well DPE-13 had 13 ug/L tVOCs (down from 110 ug/L in Nov. 2019), well DPE-14 had 3,958 ug/L tVOCs (no earlier sampling data available). Other wells sampled were ND or had very low tVOCs. Rpt notes that GW contam plume has expanded beyond bldg footprint to include well LMW-01 and for 1st time includes on-site well DPE-14; this differs from historical data showing no off-site migration, and LiRo states this trend will require further monitoring. LiRo will continue monthly gauging of select wells for LNAPL and EFR as required by SMP, and semiannual gauging and sampling of all accessible site wells. LiRo will implement approved biological augmentation program when no LNAPL is observed in treatment area and funding constraints are removed. - J. Kolleeny "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"05/28/10-HRAHMED-Responded to the site as Day-Time-Runner. Met with Bryan Shaw (917 547 0926) from Warren Panzer who are the environmental Consultant for the site and Greg Folk (631 466 6405) from CowDay who are doing the excavation at the site. During excavation they ruptured top of an old abundoned 1080 gal heating oil UST. The tank has some residual oil inside. Noticed no visible contaminated soil. Ask them to hire a contractor to pump out the residual oil from the tank immidiately. Afterwards they will pullout the tank excavate the contaminated soil and collect end point samples to confirm the cleanup. A CSL was sent to PRATT institute with the following requirements: 1) Collect endpoint samples from the excavation 2) Register the tank properly 06/16/10-Received closure report from Bryan Shaw of Warrenpanzer. As per the report, on 5/28/10 one 1080 gal tank was discovered 4 ft below grade. The tank was partially filled with oily water mix. Some oily water mix did spill into soil beneath. The tank was pumped out empty the same day. On 6/1/10 the tank was pulled out from the ground. As per visual, olfactory and PID screening the side wall of the excavation was not impacted by oil. they took three endpoint samples from three side walls. They could not collect soil sample from the fourth side because it was a brick wall. To remove the impacted soil from beneath the tank they extend the excavation upto 26 ft below grade and collected a bottom soil sample. All of the end point samples were analyzed for stars 8260 and 8270. All the soil sample analyticals were below TAGM limits. Warrenpanzer will forward the contaminated material manifest as they are available. They will update the PBS registration by including the 1080 gal tank as removed. PBS registration # 2-269751 This case is closed. "
Remarks:	"excavation ruptured tank - cleanup in progress"

DEC Memo: "3/14/03 REASSIGNED FROM ROMMEL TO VOUGHT. 9/26/03 SHAR addendum for installation of extraction well, EW-1, and monitoring well, MW-5 received. 11/25/03 Reassigned from Vought to Foley. 12/8/03 Received Feasibility Pilot Testing, Analysis, and Report for SVE (Delta, 12/3/03) which concludes SVE is a viable option. 3/19/04 3Q2003 monitoring report received. DTW 7-10'bgs. Total BTEX from ND(MW-6, MW-7) to 231,200ppb(MW-3). MTBE from 5.1ppb to 77,100ppb(MW-3). 0.76' LNAPL in MW-3 and 0.02' in MW-4. 3/19/04 4Q2003 monitoring report received. Total BTEX from ND(MW-6) to 106,670(MW-3). MTBE from 4ppb(MW-7) to 77,500ppb(MW-3). 0.82' LNAPL in MW-3 and 0.16' in MW-4. 4/16/04 1Q2004 monitoring report received. Total BTEX from ND(MW-6 and MW-8) to 111,640ppb(MW-3). MTBE from ND(MW-8) to 77,500ppb(MW-3). 0.55' LNAPL detected in MW-3. 5/7/04 Portfolio meeting: Tanks were abandoned in place and found to be filled with concrete slurry. Adajcent to grade school. Pilot performed on MW-5 for MPE. Tight soils. Off-site wells, MW-7 and MW-8 OK. To submit RAP in a couple weeks. 0.3-0.6' of LNAPL detected. Install SVE first to address potential vapors to school. 5/26/04 Mailed stip. Due back 6/28/04. 6/29/04 Stip fully executed by T. Kunkel. 8/6/04 Received 2Q04 monitoring report. 0.37' LNAPL in MW-3. BTEX from ND(MW-6,7,8) to 74,490(MW-4). 8/31/04 Received Investigation Summary Report dated 8/27/04. 10/8/04 Mailed response to ISR. Requested borings/wells along Hewes Street, crossgradient of MW-4 and MW-5 and along the east side of Kent Avenue, downgradient of MW-3. Report due 12/15/04. 10/18/04 Cross-reference spill #9903413 for waste oil tank failure. Waste oil added to material spilled. 10/29/04 Received RAP and pilot test data for SVE. RAP does not address groundwater impacts. 10/29/04 Issued sidewalk access letter for installation of three monitoring wells 1) one along the east side of Kent Ave.(MW-9) 2) two on the south side of Hewes St.(MW-10, MW-11). Report due 12/15/04. 12/16/04 Received Subsurface Assessment Report for three additional wells installed on 11/15/04. Contaminated soils detected in MW-9 at 9.5-10.5'bgs. MW-10 and MW-11 had clean soil and gw. DTW 9.5-12.5'bgs. On 10/21/04, a round of GW samples were collected. MW-1 (0.5') and MW-3 (0.24') both contained LNAPL. DTW 7.17-9.67'bgs during 12/10/04 survey. Total BTEX ranged from ND(MW-7, MW-10, MW-11) to 415600ppb(MW-3). MTBE from ND(MW-8, MW-10, MW-11) to 272000ppb(MW-3). 1/3/05 Spoke to A. Lapine. Will send me a letter as an addendum to the RAP addressing groundwater concerns (will install PRBs to address free product simultaneously). Would like to install SVE and monitor groundwater. 1/17/05 B. Fisher will send out RAP addendum letter 1/18. 1/20/05 Received RAP addendum dated 1/18/05. The addendum addresses Delta's proposal to passively collect LNAPL from on-site MWs and to evaluate the potential need to address on-site dissolved-phase impacts in GW upon effective operation of the SVE system. A passive skimmer will be installed in MW-1(4 well). MW-3 and MW-4 are 1 wells and LNAPL recovery is not practical. However, LNAPL thickness will be monitored quarterly to ensure LNAPL thickness does not change. 1/21/05 Issued letter approving RAP and RAP addendum. 3/28/05 Update from B. Fisher: SVE blower is on order and should be here within the next week or so. Have begun construction of the SVE shed in the shop. Once the blower is received, they will complete the trenching of the extraction wells. Installed the passive skimmer in MW-1. System to be installed by mid to late April. 4/27/05

HEWES SERVICE STATION (Continued) **U001839388**

Portfolio meeting- Across from Brooklyn Navy Yard. Contamination discovered during divestment. New owner (Mark Sapozhnikov) in 3/01. Source is tank mat (abandoned tanks with concrete slurry). Grace school is upgradient but adjacent. Currently constructing SVE system. System should be operting within the next two weeks. Passive skimmer operating in MW-1. 6/28/05 4Q04- 0.50' LNAPL detected in MW-1 and 0.24' in MW-3. BTEX from ND(MW-6,7,10,11) to 103750ppb(MW-3). MTBE from ND(MW-10,11) to 64500ppb(MW-3). 10/4/05 1Q05- DTW 7.24 to 9.55'bgs. 0.36' LNAPL detected in MW-1 and 0.11' in MW-3. BTEX from ND(MW-6,10,11) to 113890ppb(MW-3). MTBE from ND(MW-10,11) to 75400ppb(MW-3). 2Q05- DTW 6.69-8.96'bgs. 0.05' LNAPL detected in MW-3. BTEX from ND(MW-6,8,10,11) to 120740ppb(MW-3). MTBE from ND(MW-8,10,11) to 50300ppb(MW-3). 12/6/05 3Q05 - DTW 7.09-9.02'bgs. 0.03' LNAPL in MW-1. BTEX from ND(MW-6,8,10,11) to 124500ppb. MTBE from ND(MW-8,10,11) to 48900ppb(MW-3). 3/16/06 Met with BP and Delta. Divested in 2001. Abandoned tanks were not removed due to proximity to adjacent grade school building. Historically, MW-3 produced 3-4gal LNAPL which was extracted and hasn't reappeared since. In 1Q05, the owner detected product in the interstitial space of the mid-grade tank and sampled. Delta suspects that the tanks are out of compliance. Start-up of SVE is pending Con Ed upgrade within the next couple of weeks. 4/26/06 4Q05 - DTW 6.6-9.11'bgs. 0.05' LNAPL in MW-1 and 0.03' LNAPL in MW-3. BTEX from ND(MW-6,8) to 153020ppb(MW-3). MTBE from ND(MW-10) to 36100ppb(MW-3). 6/8/2006 - Feng - project reassigned to RJFeng. (RJF) 12/27/2006 - Feng - 2Q2006, 11/21/2006, by Delta. Groundwater sampled and gauged 4/14/2006. 11/14 monitoring wells were sampled. DTW 6.63' to 9.32' bg. Flows West-Northwest. LNAPL in MW-1 (0.31'), and MW-3 (0.27'). MW-1, 24,374 ppb BTEX, 277 ppb MTBE. MW-2, 1,163 ppb BTEX, 6,160 ppb MTBE. MW-3, 122,800 ppb BTEX, 45,000 ppb MTBE. MW-4, 93,660 ppb BTEX, 147 ppb MTBE. MW-5, 1,857 ppb BTEX, 24.1 ppb MTBE. MW-6, BTEX ND, 11.6 ppb MTBE. MW-7 was destroyed 1Q2005. MW-8, Dry. MW-9, destroyed 1Q2006. MW-10, 16.2 ppb BTEX, less than 1 ppb MTBE. MW-11, 605 ppb BTEX, less than 1 ppb MTBE. MW-12, 1,212 ppb BTEX, 65.2 ppb MTBE. MW-13, 934 ppb BTEX, 32.1 ppb MTBE. MW14, 22,950 ppb BTEX, 3,320 ppb MTBE. (RJF) 12/28/2006 - Feng - 3Q2006, 12/11/2006, by Delta. Groundwater sampled and gauged 7/27/2006. 11/14 monitoring wells were sampled. DTW 6.72' to 9.01' bg. Flows West-Northwest. LNAPL in MW-1 (0.14'), and MW-3 (0.09'). MW-1, 21,886 ppb BTEX, 334 ppb MTBE. MW-2, 1,239 ppb BTEX, 3,880 ppb MTBE. MW-3, 136,520 ppb BTEX, 18,200 ppb MTBE. MW-4, 75,610 ppb BTEX, 3,030 ppb MTBE. MW-5, 1,478 ppb BTEX, 13.3 ppb MTBE. MW-6, BTEX ND, 12.9 ppb MTBE. MW-7 was destroyed 1Q2005. MW-8, Dry. MW-9, destroyed 1Q2006. MW-10, ND, less than 1 ppb MTBE. MW-11, 4.95 ppb BTEX, 0.60 ppb MTBE. MW-12, 102 ppb BTEX, 4.2 ppb MTBE. MW-13, 1,750 ppb BTEX, 21.4 ppb MTBE. MW14, 15,782 ppb BTEX, 1,950 ppb MTBE. (RJF) 3/6/2007 - Feng - 4Q2006, 2/15/2007. Groundwater sampled and gauged 10/19/2006. 12/12 monitoring wells were sampled. DTW 5.80' to 10.73' bg. Flows north-northwest. No LNAPL. MW-1, 23,637 ppb BTEX, 276 ppb MTBE. MW-2, 1,008 ppb BTEX, 905 ppb MTBE. MW-3, 123,860 ppb BTEX, 17,900 ppb MTBE. 36,210 ppb BTEX, 310 ppb MTBE. MW-5, MW-6, MW-8, and MW-10 are low in BTEX and MTBE. MW-12, 2,326 ppb BTEX, 37 ppb MTBE. MW-13, 782 ppb BTEX, 9.5 ppb MTBE. MW-14, 12,791 ppb BTEX, 1,160 ppb MTBE. Email Delta for the updates and status of the SVE system. (RJF) 3/6/3007 - email from D. Taylor. It's been some difficulties running the SVE. Multiple site visits were required to refine the system operation to the point that could maintain operation for more than a few days after each O&M visit. It is now running at both wells (SVE-1

HEWES SERVICE STATION (Continued) **U001839388**

and SVE-2) on a consistent basis without the shutdown issues that had in the past. O&M report will be submitted in 2 weeks. (RJF) 4/19/2007 - Feng - Portfolio meeting with BP and Delta. The site was excavated and installed new tanks in the south and north portion. Plan to excavate more soil source. The SVE only to address the vapor issue for the school. It was used to have LNAPL in MW-1 and EFR events performed until no recovery. Delta will wait until the completion of the new gas station and will re-install the well-network. RAP addendum will be submitted. (RJF) 7/24/2007 - Feng - Tank Closure Report, 5/18/2007, by LongShore Environmental Inc.. On April 24, 2007, 4 (4,000-gallon) gasoline double-wall steel USTs and 1 single-wall steel 550-gallon Waste Oil UST were removed. The USTs were located in the west and northwest portion of the property. The tanks were in good condition. For the 4,000-gallon USTs excavation, 6 composite sidewall soil samples and 1 bottom sample were collected. Soil sample 4K-South Sidewall (east) at 7 feet bg, 500 ppb Benzene, 11,000 ppb Ethylbenzene, 24,000 ppb Toluene, 83,000 ppb Xylenes, 2,500 ppb MTBE, 300,300 ppb Total VOCs. 4K-West Sidewall, 20,690 ppb Total VOCs. Following endpoint sampling, the excavation was expanded both vertically and horizontally for the installation of the new tanks. Approximately 594.7 tons of soil was removed from the site. For the 550-gallon waste oil UST excavation, no impact was observed and all soils were returned to the excavation. 4 composite sidewall samples and 1 bottom sample were taken. Some slight exceedance of SVOCs were detected. LongShore recommended that the residual impacted soils be managed under the ongoing remediation effort under spill 00-09318. Email KE (BP) for updates of the site. (RJF) 7/27/2007 - Feng - 1Q2007, 5/3/2007. Groundwater sampled 1/5/2007. All 11 monitoring wells were sampled. DTW 6.55' to 9.18' bg. Flows to north-northwest. No LNAPL. MW-1, 9,721 ppb BTEX, 87.5 ppb MTBE. MW-2, 964 ppb BTEX, 912 ppb MTBE. MW-3, 103,250 ppb BTEX, 10,200 ppb MTBE. MW-4, 25,460 ppb BTEX, 50 ppb MTBE. MW-5, 729 ppb BTEX, 9.3 ppb MTBE. MW-6, BTEX ND, 9.3 ppb MTBE. MW-10, MW-11, ND. MW-12, 544 ppb BTEX, 26.2 ppb MTBE. MW-13, 1,240 ppb BTEX, 19.6 ppb MTBE. MW-14, 8,887 ppb BTEX, 1,070 ppb MTBE. (RJF) 11/28/2007 - Feng - 2Q2007, 8/29/2007. Groundwater sampled 4/5/2007. 10/11 monitoring wells were sampled. DTW 6.42' to 9.13' bg. Flows to northwest. LNAPL in MW-1 (0.03'). BTEX range ND to 101,490 ppb (MW-3). MTBE range ND to 5,230 ppb (MW-3). 3Q2007, 10/29/2007. Groundwater sampled 7/12/2007. 8/11 monitoring wells were sampled. DTW 6.90' to 9.29' bg. Flows to northwest. LNAPL in MW-1 (0.31'). BTEX range ND to 70,040 ppb (MW-3). MTBE range ND to 3,520 ppb (MW-3). 4Q2007, 11/16/2007. Groundwater sampled 10/4/2007. 9/11 monitoring wells were sampled. DTW 6.99' to 9.29' bg. Flows to north-northwest. LNAPL in MW-1 (0.28'). BTEX range ND to 73,790 ppb (MW-3). MTBE range ND to 3,150 ppb (MW-3). Remedial Action Plan Addendum, 11/2/2007, submitted by Delta. Between 5/31 and 6/5/2007, EnviroTrac, under the observation of Delta and on behalf of BP, performed soil over-excavation activiites on the southern portion of the subject site. The soil was over-excavated to a depth of 10.5 feet bgs, and the over-excavation measured approximately 27 feet long by 20 feet wide. The location of over-excavation was determined based on known soil impacts in the area and due to the ineffectiveness of the on-site SVE system. Groundwater depth was measured in the excavation to be 10.5 feet bg. Total of 297.52 tons of soil was disposed at the Clean Earth of Philadelphia as non-hazardous waste, manifests provided. 6 endpoint samples were collected at 8.5'-9' bg. SW-14, 471,060 ppb BTEX, 723,350 ppb total VOCs. SW-15, 204,810 ppb

HEWES SERVICE STATION (Continued) **U001839388**

BTEX, 367,570 ppb total VOCs. SW-16, 37,141 ppb BTEX, 89,975 ppb total VOCs. No bottom sample was collected due to the presence of groundwater. Spoke with David Greffenius (Delta). The abandoned tanks may still in place, they were not removed due the structural restriction. The SVE system is shutdown because it has low/none recovery and that's why the soil excavation at that area was performed. Biweekly bailing of the LNAPL in MW-1 is performing, will be confirmed later on. DEC required additional delineation of downgradient of MW-1 to see the movement of LNAPL. Once the investigation is done, RAP for the entire site will be required. (RJF) 11/29/2007 - Feng - Letter to Kevin Endriss (BP). DEC requires LNAPL recovery, further downgradient delineation, RAP for the entire site. A brief investigation work plan to be submitted by 1/14/2008. (RJF) 1/2/2008 - Feng - Investigation Work Plan submitted by Delta via email. (RJF) 1/22/2008 - Feng - Reviewed Investigation Work Plan. EFR events will be conducted on MW-1 to remove LNAPL. 2 additional monitoring wells will be installed at the former MW-4 and MW-9 locations respectively. And a revised RAP will be submitted upon the completion of groundwater sampling of the newly installed monitoring wells. There is a building located north to the site and no groundwater monitoring wells can be installed to the north of MW-1. DEC emailed to Delta and required the EFR event to be started immediately. (RJF) 1/23/2008 - Feng - Email from Igor Goldstein (Delta). Monthly EFR events will be conducted. Investigation Work Plan is approved. Letter to BP and Delta. Required RIR and RAP to be submitted by 3/24/2008. (RJF) 2/1/2008 - Feng - sidewalk permit letter to Delta for installation of MW-16. (RJF) 2/13/2008 - Feng - 1Q2008, 2/7/2008. Active service station. The monitoring well network was gauged and sampled on 1/18/2008 as part of the quarterly sampling shedule. The site is being remediated via the current operation of an installed SVE system. 10 wells were gauged. DTW 6.48' to 9.07' bg. Flows to north-northeast. LNAPL in MW-1 (0.06'). 8 wells were sampled. BTEX range ND to 57,100 ppb (MW-3). MTBE range ND to 4,900 ppb (MW-3). (RJF) 4/15/2008 - Feng - Reviewed the Remedial Investigation Report, dated 3/24/2008, by Delta, pdf copy. On February 20 and 27, 2008, Associated Environmental installed two 2-inch diameter monitoring wells MW-15 and MW-16. MW-15 located southwest to the former tank field area and MW-16 at the sidewalk along Kent Ave. MW-15, final well depth at 18 feet, DTW 9 feet, 10 feet of 0.01-inch slotted schedule screen, set screen bottom at 16.5 feet. MW-16, final well depth at 15 feet, DTW 5 feet, 10 feet of screen set screen bottom at 12 feet. No soil sample taken. On 3/12/2008, the wells were gauged and no LNAPL detected. Two groundwater samples were collected. MW-15, ug/L, 2,100 benzene, 8,300 toluene, 3,700 ethylbenzene, 13,000 xylenes, 27,100 total BTEX, 430 MTBE. MW-16, 510 benzene, 15,000 toluene, 2,300 ethylbenzene, 10,000 xylenes, 27,810 BTEX, 57 MTBE. LNAPL in MW-1 recovery were conducted. 1/30/2008, EFR event, 0.5 gallon of LNAPL and 1,450 gallons of petroleum impacted groundwater was extracted. 2/18/2008, hand bailing, 0.01 feet of LNAPL. 2/26/2008, EFR event, 2,005 gallon of petroleum impacted groundwater was extracted. 3/19/2008, hand bailing, no LNAPL. RAP will be submitted 4/18/2008. (RJF) 5/5/2008 - Feng - Reviewed Revised Remedial Action Plan, dated April 18, 2008. The Revised RAP calls for monthly EFR events on MW-1 and MW3. EFR effluent air will be sampled on monthly basis. Groundwater gauging and sampling will be quarterly. Letter to K. Endriss (BP) requiring the revised RAP to include the MW-15 and MW-16 area. Revision to be

HEWES SERVICE STATION (Continued) **U001839388**

submitted 6/5/2008 (30 days). (RJF) 5/8/2008 - Feng - Conference call with K. Endriss (BP), G. Hinshalwood and I. Goldstein (Delta). The proposed revised RAP only for treating the source area. Delta will see 2 more quarters of sampling of MW-15 and MW-16 as well as the geochemical sampling to decide what remedy to propose. Delta will submit an addendum letter for conditionally approve the revised RAP. (RJF) 5/9/2008 - Feng - Reviewed the Revised RAP Addendum Letter, dated 5/8/2008 by Delta. Approve Revised RAP with the Addendum Letter. Approval letter to BP and Delta. (RJF) 6/16/2008 - Feng - Letter from Delta, 6/12/2008. On 5/29/2008, EFR event was conducted at MW-1 and found MW-3 to be an 1-inch diameter well and the size is not suitable for use in EFR events. Delta will continue EFR at MW-1 and install a 2-inch or 4-inch well in the MW-3 area. Schedule of well installation will be informed. (RJF) 6/18/2008 - Feng - Portfolio meeting with BP and Delta. The new well will put in as near the MW-3 as possible, will be 4-inch well. Utility will be marked out next week. (RJF) 10/27/2008 - Remedial Progress Report, dated 9/29/2008, by Delta. On 7/16/2008, MW-17 was installed. 4-inch diameter, closed to MW-3. Total depth 19 feet, groundwater was encountered at 10 feet. 15 feet of 0.02 slotted schedule 40 PVC screen. Monthly EFR events from May to 8/2008 on MW-1. Monthly EFR on MW-17 from 7/2008 to 8/2008. A total of 5,255 gallons of water was extracted and disposed. No measurable LNAPL in MW-1 during bailing event from 3/2008 to 9/2008. Groundwater was sampled for bio-parameters. Delta will propose RAP for bio-stimulation by 10/15/2008. They will provide work plan to EPA for their approval also. (RJF) 10/29/2008 - 2Q2008, 4/25/2008, by Delta, by Delta. Active service station. the monitoring well network was gauged and sampled 4/17/2008. The site is being remediated via monthly EFR events. First round of gauging and sampling event of the two new monitoring wells MW-15 and MW-16. 12 wells were gauged. Trace LNAPL in MW-1. DTW 6.66' to 8.88' bg. Flows to north-northeast. 10 wells were sampled. BTEX range ND to 62,900 ug/L (MW-3). MTBE range ND to 6,200 ug/L (MW-3). (RJF) 3/4/2009 - 3Q2008, 11/13/2008, by Delta. Active Service Station. The monitoring well network was gauged and sampled on 7/21 and 7/25/2008 as part of the quarterly sampling schedule. The site is being remediated via monthly EFR events. Also worth noting that this was the first round of gauging and sampling of one new monitoring wells (MW-17) which was installed on 7/18/2008. In addition, groundwater samples for geochemical parameters were also collected during this monitoring event. 13 wells were gauged. LNAPL in MW-1 (0.02'). DTW 5.64' to 9.34' bg. Flows to north-northeast. 9 wells were sampled. 4 wells were not sampled, MW-1 with LNAPL, MW-10, MW-12 and MW-16 insufficient sample volume. BTEX range ND to 57,100 ug/L (MW-3). MTBE range ND to 6,200 (MW-3). 4Q2008, 11/20/2008, by Delta. Active service station. The monitoring well network was gauged and sampled on 10/14/2008. The site is being remediated via Multi Fluid Recovery events. 13 wells were gauged. No LNAPL. DTW 7.11' to 9.80' bg. Flows to north-northeast. 13 wells were sampled. BTEX range ND to 68,900 ug/L (MW-3). MTBE range ND to 6,000 ug/L (MW-3). (RJF) 3/23/2009 - Reviewed the Work Plan Bio-Stimulation Remediation Pilot Study, dated 10/15/2008, by Delta. The Work Plan calls for the application of 1,760 pounds of magnesium sulfate at a starting concentration of 55,000 mg/L in a single monitoring well MW-15. Monitoring program including gauge for the DTW, sulfate, sulfide, DO and pH immediately upon completion of the addition activities and 3 days after the addition, and weekly for 5 weeks. Groundwater will be

HEWES SERVICE STATION (Continued) **U001839388**

monitored biweekly following the current procedure for 2 rounds and then continue quarterly. The Work Plan is approved. Report summarizing the pilot study and the recommendation for further corrective action will be submitted by 6/2009. Letter to BP and Dleta. (RJF) 7/24/2009 - 2Q2009, 7/17/2009, by EnviroTrac. BP Service station. The monitoring well network was gauged and sampled on 4/20/2009. 12 wells were gauged. LNAPL in MW-3 (0.10'). DTW 6.20 to 9.37 feet bgs. Flows to north-northeast. 11 wells were sampled. MW-3 with product and MW-6 were not sampled. Max benzene 2,500 ug/L (MW-17). Max BTEX 27,930 ug/L (MW-15). Max MTBE 1,900 ug/L (MW-17). 7/24/2009 - Reviewed Drilling and Well Abandonment Work Plan, dated June 25, 2009, by Delta. Delta proposes to abandon EW-1 and install MW-18 close to EW-1. Email to Delta for another well at the proximity of EW-2. Revised work plan due within 30 days. (RJF) 8/20/2009 - send email to Gordon Hinshalwood (Delta) letting them go ahead with the installation of 2 wells to replace EW-1 and EW-2 as we agreed to during the meeting with BP on 7/30/2009. SHARA due 11/2009. (RJF) 12/15/2009 - reviewed the Drilling and Well Abandonment Work Plan revision, dated 9/10/2009, by Delta. Delta will abandon 2 extraction wells EW-1 and EW-2, and will replace them with 2 new monitoring wells. SHARA will be in by 11/2009. (RJF) 4Q2009, 1/12/2010, by EnviroTrac. BP service station. The monitoring well network was gauged and sampled on 10/26/2009. 15 wells were gauged. LNAPL in MW-3 (0.26'). DTW 7.11-9.46' bg. Flows to north-northeast. 14 wells were sampled. MW-3 was not sampled due to product. Max benzene 1,400 ug/L (MW-17). Max BTEX 31,330 ug/L (MW-19). Max MTBE 1,100 ug/L (MW-17) 1Q2010, 4/9/2010, by EnviroTrac. The monitoring well network was gauged and sampled on 1/15/2010. 15 wells were gauged. LNAPL in MW-3 (0.02'). DTW 7.30-9.56' bg. Flows to north-northeast. 14 wells were sampled. Max benzene 2,400 ug/L (MW-17). Max BTEX 24,870 ug/L (MW-19). Max MTBE 710 ug/L (MW-17). 4/21/2010 - Reviewed Subsurface Hydrocarbon Assessment Report Addendum, dated 12/3/2009, by Delta. On October 11, 2009, EnviroTrac advanced 2 soil borings MW-18 and MW-19 to depth of 16 feet using Geoprobe 6620 DT hollow stem auger and direct push macro core sampling unit. 3 soil samples were collected. unit in ug/kg. MW-18 (9.5-10'), PID 13.4 ppm, 76J benzene, 4,500 xylenes, 14,471 total VOCs, 2,600 benzo(b)fluoranthene, 1,600 benzo(k)fluoranthene, 2,300 chrysene, 38,360 total SVOCs. MW-18 (12.5-13'), PID 59.4 ppm, 100J benzene, 1,557 total VOCs, 114 total SVOCs. MW-19 (12.5-13'), PID 1,195 ppm, 3,600 toluene, 16,700 xylenes, 26,000 1,2,4-trimethylbenzene, 9,500 1,3,5-trimethylbenzene, 64,190 total VOCs, 2,313 total SVOCs. The 2 wells were set and developed on 10/12/2009, and the wells were surveyed on 12/1/2009. On 10/26/2009, all the monitoring wells were gauged. LNAPL in MW-3 (0.18'). DTW 7.11' (MW-6) to 9.46' (MW-13). All the wells were sampled. BTEX range 0.53 ug/L (MW-11) to 31,330 ug/L (MW-19). MTBE range ND (MW-6, MW-10, MW-11 and MW-16) to 1,100 ug/L (MW-17). unit in ug/L. MW-18, 130 benzene, 760 toluene, 100 ethylbenzene, 1,220 xylenes, 2,210 BTEX, 110 MTBE, 12J n-propylbenzene, 240 1,2,4-trimethylbenzene, 91 1,3,5-trimethylbenzene, 580 naphthalene, 3,243 total VOCs, 0.42J benzo(a)anthracene, 0.31J benzo(a)pyrene, 0.45J benzo(b)fluoranthene, 0.16J benzo(k)fluoranthene, 0.13J indeno(1,2,3-cd)pyrene, 360 naphalene, 406 total SVOCs. MW-19, 430 benzene, 20,000 toluene, 1,700 ethylbenzene, 9,200 xylenes, 31,330 BTEX, 16 MTBE, 140 isopropylbenzene, 440 n-propylbenzene, 22J p-isopropyltoluene, 3,700 1,2,4-trimethylbenzene, 1,100 1,3,5-trimethylbenzene, 86J n-butylbenzene, 1,200 naphthalene, 38,034

HEWES SERVICE STATION (Continued) **U001839388**

total VOCs, 960 naphalene, 963 total SVOCs. 4/23/2010 - email comments on SHARA to Delta. 1) rose diagram; 2) surrounding sketch; 3) check possible delineation at the commercial building and the school, and definite delineation around MW-19. work plan due 5/2010. 6/2/2010 - 2Q2010, 5/18/2010, by EnviroTrac. The monitoring well network was gauged and sampled on 4/14/2010. 15 wells were gauged. NO LNAPL. DTW 6.50-8.73' bg. Flows to north-northeast. 15 wells were sampled. Max benzene 1,000 ug/L (MW-3). Max BTEX 47,700 ug/L (MW-3). Max MTBE 2,100 ug/L (MW-3). 7/29/2010 - Enhanced Bioremediation Pilot Summary, dated May 31, 2010, by Delta. On October 26, 2009, all the wells were gauged for DTW, and presense of lNAPL. Note that 0.18 feet of lNAPL in MW-3. All the wells were sampled for baseline. On 11/3/2009, 460 lbs of magnesium sulfate was mixed with 1,000 gallons of water and gravity feed into MW-15 over a four hour period. 11/4/2009, sulfate sampled. MW-15, 5,420 mg/L. MW-18, 1,520 mg/L. MW-12, MW-16 and MW-14 also exhitbited elevated sulfate concentrations compared to the baseline analysis, while the other wells MW-2, MW-5, MW-6, MW-10, MW-11 and MW-19 did not. The sulfate ncentration in application monitoring well MW-15 initially spiked from less than 1.5 mg/L to 5,420 mg/L within the first 24 hours, and then gradually decreased to 75.2 mg/L after 80 days. In conclusion, the application was not exceed the boundary limit of 250 mg/L sulfate; the increase of sulfate in MW-10 was most likely indicative of background sulfate concentrations; only 6 wells were affected from the application point; elevated concentrations of sulfate in the application well consistently dissipated during the 80 days. 8/2/2010 - email comments on the pilot summary. 1) product in MW-3; 2) full scale work plan by 8/2010; 3) keep monitoring all the wells to ensure that there is no exceedances of the 250 mg/L criteria. 08/06/2010: This spill was temporarily (for 6 months) transferred to A. Doronova. - AD 08/09/2010: Received an e-mail: Ms. Doronova: Attached please find a work plan for the above-referenced site detailing our plans for a full-scale sulfate solution application. Please let me know if you have any questions. gh Gordon Hinshalwood, PhD- North American Operations Delta Consultants, an Oranjewoud N.V. Multiple wells with high level of BTEX and relatively high MTBE. The next scheduled sampling for April 2012. 6/29/2012 - reviewed Drilling Work Plan, dated 6/11/2012, by Antea Group. Proposed 2 additional monitoring wells and 6 soil borings. The borings are to assess the soil quality in areas where historical data showed hydrocarbon impacts and/or soil data has not been evaluated. 2 wells are proposed to enhance the well network and further delineate the gw impacts previously identified at the site, intended to target those area adjacent to existing monitoring well MW-19 and former MW-8, as well as to the east of formerly abandoned USTs. Email with 14 comments to BP/Antea. see eDoc. Revised work plan by the end of July 2012. 8/27/2012 - 2Q2012, 6/29/2012, by Antea Group. The groundwater was sampled on April 9, 2012. The next sampling will be in July 2012. MW-1, 1,111 BTEX, 16 MTBE. MW-3, 45,800 BTEX, 1,100 MTBE. MW-5, 297 BTEX, 14 MTBE. MW-12, 123 BTEX, 9.9 MTBE. MW-14, 386 BTEX, 2.1 MTBE. MW-15, 11,420 BTEX, 47 MTBE. MW-16, 4,302 BTEX, 2.3 MTBE. MW-17, 7,920 BTEX, 250 MTBE. MW-18, 1,550 BTEX, 49 MTBE. MW-19, 19,620 BTEX, less than 10 MTBE. 10/10/2012 - Reviewed the Addendum to Work Plan for Additional Delineation, dated 7/31/2012, by Antea Group. 5 soil borings and 3 wells are proposed. Email to BP/Antea I am confused about which work plan do you want me to approve? Your email still attached the one dated 6/11/2012. And I have the revised one dated 7/31/2012 which you responded to our comments. Let me know. I am ok with your response on most of the parts. But I still insist to see delineation in those two buildings area next to the station as I put in the comment 2 and comment 7. MW-7 is far from the station which located across Kent Ave from the station but it still had shown MTBE during the monitoring of its time. I was just trying to say that distance might not a problem for the contaminant to migrate in this case. And if you look at the history of MW-1, MW-2 and MW-12 which located at the edge of the station property, they had high hit in their history. And one of these two building is a 3-story school . So yes, I insist to see the delineation to be done there. 11/30/2012 - 3Q2012, 09/27/2012, by Antea Group. The groundwater was sampled on July 26, 2012. The next sampling will be in October 2012. MW-1, 1,570 BTEX, 30 MTBE. MW-3, 48,300 BTEX, 1,200 MTBE. MW-5, 434 BTEX, 20 MTBE. MW-12, 231 BTEX, 16 MTBE. MW-13, 1,276 BTEX, 22 MTBE. MW-14, 1,457 BTEX, 2.7 MTBE. MW-15, 15,830 BTEX, 57 MTBE. MW-16, 2,753 BTEX, less than 2.5 MTBE. MW-17, 8,300 BTEX, 220 MTBE. MW-18, 1,539 BTEX, 52 MTBE. MW-19, 18,790 BTEX, less than 5.0 MTBE. 1/8/2013 - call from Chris Meyer of Antea Group. They did the drilling work according to the work plan except the PMW-20 and former MW-7 area due to the utilities/subsurface infrastructure. Will submit the investigation report. 12/17/2012 - email from Chris Meyer of Antea Group We are currently planning to conduct the indoor air survey and inventory at the school this Wednesday. In addition to collecting the PID readings you ve requested, we will also be completing the attached building questionnaire. 8/5/2013 - 4Q2012, 2/28/2013, by Antea Group. The monitoring was done on 12/11/2012. MW-1, 894 BTEX, 44 MTBE. MW-3,

A Mr. Miller (847.538.9294) contacted Antea Group, by way of the neighboring gas station 677-87 Kent Avenue, Brooklyn NY when he observed what he believed to be fuel oil in the basement of the building. As 677-87 Kent Avenue is the location of active NYSDEC case number 00-09318, he was concerned whether the material in his basement was attributed to that open case. We ve been out to his property, gauged the nearby wells, screened the rooms with a PID, and we collected a few samples of the material, which have been sent to a lab for forensic analysis. NYSDEC case number 00-09318, has been associated with a historical gasoline release at the retails station. Based on an overall absence of the elevated PID readings that would accompany gasoline-range hydrocarbons, and absent this update forensics data, we have yet to find a link between this material and the open spill number. Note that the current owner/operator of the retail station does have a permitted 6,000 gallon Fuel Oil UST. That said, we intend to work with the tenant of 33 Hewes Street, to clean out the basement of the accumulated

HEWES SERVICE STATION (Continued) **U001839388**

material so that we might be able to further understand its origin. We thought you should be aware of this. Please give me a call with any questions. We ll let you know more as this develops. DEC Feng spoke to Mr. Chan Miller (347-538-9294) at 35 Hewes Street. The building is used as a Jewish elementary school. About 1 month ago, he found oil in his basement. His basement is about 15'x 15' and the oil was about 1-2 inches in depth flooded in the basement. He contacted BP and BP responded to the incident Wednesday last week. Between the incident and the time BP came, Mr. Miller had some guy from a lab took a few samples on 1/7/2016 and lab results show it is fuel oil/diesel/#2 oil. The basement is used for boiler room and sprinkler system. There are sumps/drain/sewage in the basement. He and his people cleaned up the basement today with mops and wipes. There is no smell/odor in the basement or the entire building. There is no tank at all for this building. He is in the school during the day 9:00am to 4:00pm if inspection is needed. Discussed with J. Vought and sent email to BP Nick Onufrak and Antea Gorup Chris Meyer Nick and Chris, I just spoke with the owner, Mr. Chan Miller (347-538-9294). He stated that there was 1 to 2 inches of oil in his basement which is used for boiler room and sprinkler system. He indicated that the building is used for elementary school. He stated that there were no vapors in the basement or in the entire building. The basement was cleaned up by Mr. Miller and his people today with mops and wipes. As the site is an elementary school, we want to ensure timely investigation/remediation. We are sending a responder, possibly Kumar Patel (copied above, 646-201-1488) tomorrow for a site inspection. Please let us know the schedule to monitor and clean up the basement. If possible, please have the current tenant/owner provide the tightness test data for the 6,000-gallon fuel oil UST at the location of the BP retail station. Please provide the forensic sampling report as soon as it is available. We are also be discussing this site with our PBS unit who may visit the BP station as well to ensure all is in working order. email to K. Patel the PBS record, 2013 inspection report and the 4Q2015 monitoring report of the BP station at 677-87 Kent Ave for tomorrow's inspection. 1/27/2016 - As per J. Vought, spill 15-10501 is added into UIS for 35 Hewes Street, Brooklyn. Conference call among Nick Onufrak of BP, Kumar Patel, Jeff Vought and June Feng. K. Patel stated that during this inspection this morning he did not see any oil drops. The basement is filled with sewage smell. The building kitchen is in the area and he suspected that is the kitchen grease trap. Mr. Miller will hire a plumber to check the sewage system. Nick has concern regarding the old abandoned USTs that near the school area but could not be removed due to structural integrity. Nick shall have the forensic report by Friday and he will share that with DEC as soon as it becomes available. email from Kumar Patel to DEC Vought and Feng I inspected site 35 Hewes Street this morning and met Mr. Miller. We walked through dining area and kitchen on first floor on our way to the basement. No petroleum odors noted in dining area or kitchen, but noted sewage/grease trap odors at the basement hatch which is inside the kitchen area. Found water on basement floor with strong sewage kind smell. No sign of petroleum product (sheen or odors) noted in the basement. Mr. Miller confirmed absence of petroleum odors in the building. Based on field observations, recommended him to have grease and sewer trap checked by a plumber. email to NYSDOH and NYCDOH Dear Mike, Nathan, and Chris, On 1/26/2016, we received an email from BP and their consultant, Antea Group, stating that they had been

HEWES SERVICE STATION (Continued) **U001839388**

contacted by a tenant of 35 Hewes Street who had observed fuel oil in the basement of their building. The building is used as a Jewish elementary school. BP and Antea Group is managing a long term petroleum remediation project of gasoline contamination associated with an active BP gas station located at 677-87 Kent Ave which is immediately adjacent to 35 Hewes Street. Antea Group has gauged nearby monitoring wells at the BP station, screened 35 Hewes Street with PID meter, and collected product samples from 35 Hewes Street for forensic analysis. Antea Group noted that they had not found to date that they were the source of the seepage but still intended to clean up the basement for further inspection of the possible seepage source. We spoke with the school representative who noted that there were no odors in the basement or the entire building. According to BP, the forensic report shall be available this Friday. Kumar Patel from our Unit inspected the site this morning and met with the school representative. He noted no petroleum odor but did note sewage/grease trap odors at the basement hatch which is inside the kitchen area. Water on the basement floor was found with strong sewage smell. No sign of petroleum product (sheen or odors) were noted in the basement. The school representative also confirmed the absence of petroleum odors in the building during his inspection. Kumar recommended the school have the grease and sewer trap be checked by a plumber and the representative agreed to have it performed. Kumar noted the address on the building is 35 Hewes Street. I checked the NYCDOB database and alternative addresses for this location included 33-39 Hewes Street, 35 Hewes Street and 671 Kent Ave. I also checked ACRIS and the address in the deed and mortgage agreement is 33 Hewes Street. Let us know if you have any questions/comments, need additional information, or think a NYCDOH inspection is warranted Thank you as always, 2/29/2016 - 1Q2016, 2/29/2016. Groundwater was sampled 1/21/2016. LNAPL in MW-3 (0.4') and MW-17 (0.04'). MW-1, 190 BTEX. MW-5, 170 BTEX, 25 MTBE. MW-8A, 6,340 BTEX. MW-13, 402 BTEX, 11 MTBE. MW-15, 8,480 BTEX, 42 MTBE. In addition, ARCADIS is currently planning logistics to implement EFR events in MW-3 and MW-17 to address LNAPL in the first quarter of 2017. 5/8/2017 - Feng - 1Q2017, 4/7/2017, by ARCADIS. Monitoring on

HEWES SERVICE STATION (Continued) **U001839388**

1/25/2017. DTW 5.91 (MW-10) and 11.13 (MW-3). Flows to northwest. LNAPL in MW-3 and MW-17, bailed and stored in a 55-gallon drum onsite. MW-1, 63 BTEX, 4 MTBE. MW-8A, 6,647 BTEX. MW-13, 16 BTEX, 5 MTBE. MW-14, 65 BTEX, 4 MTBE. MW-15, 10,830 BTEX, 50 MTBE. MW-16, 917 BTEX. MW-18, 1,780 BTEX, 33 MTBE. MW-19, 29 BTEX. MW-24, 2,604 BTEX, 16 MTBE. 5/31/2017 - Feng - This spill is transferred from June Feng to Jeffrey Vought as per Jeffrey Vought. 12/12/17 - Austin - Assigned from Vought to Feng - end 1/30/2018 - Feng - Reviewed Monitoring Report 4Q2017, 1/24/2018, by ARCADIS. MW-22 was detected with product the first time, 1.89 feet. Arcadis is doing investigation to find the source of the product. email to Sahithi Rondla Sahithi, I reviewed the monitoring report and noticed that MW-22 was detected with product the first time. Regarding the findings of the investigation for the source of the product, you mentioned spill 15-10501. As I know, the school building did not have any tank back then. I checked the PBS record, no registration as of today. Back then, when DEC inspected the site when the incident occurred, the inspector noted there was sewage odor in the basement but no sign of petroleum. He then recommended for the grease trap be checked by a plumber. As you said, the product was estimated to be 6-7 years (+/- 2 years) old. It seems not matches the new unweathered product. You mentioned the product from upgradient of MW-22, Manhole 59638. The spill number is 05-06675. According to DEC notes, it is a Con Ed spill. 2 gallons of unknown oil on top of 60 gallons of water. It has been cleaned up by removing the product and re-capping the leaking 3c cable. The spill was then reclassified as dielectric fluid spill. Spill was closed on 1/10/2008. Have you checked to make sure that the monitoring well detected with product is the MW-22? Confirmed the monitoring well was not damaged or unlocked when it was gauged/sampled? MW-22 has been non-detected almost all the time since its installation in 2013. However, there is a closed-in-place tank field in the southeast corner of the site. The monitoring wells, MW-4, MW-15, MW-19, MW-8A, around the abandoned tank field have been either had product or high dissolved of VOCs concentration. MW-22 is located near the area. MW-22 is not upgradient all the time, if you check the flow direction, it varied or you may say it has been flowed to all direction. It shouldn t be surprised if you see detection in that monitoring well MW-22. Have you compared this product to the product from other wells that currently have product, e.g. MW-3 and MW-17, and the diesel product the station is selling? Have you done any product removal since its discovery to see if there is any return of the product? I recommend to do the product removal immediately before it migrates and dissolves more in groundwater while you continue to investigate for the source of the product. Email from Sahithi Rondla Ms. Feng, We are pretty sure about identification of the well,MW-22. The well was found to be intact with manhole cover and J-plug. I agree this well is in close proximity to former abandoned tankfield. However based on Antea s Soil Boring investigation in April 2016, a total of four soil borings were advanced (SB-20, SB-21, SB-22, SB-23) to assess the subsurface soils between the adjacent property to the northeast(school) and the subject site and two temporary monitoring wells (SB-20 and SB-22) were installed to further assess groundwater conditions . VOC concentrations in excess of NYSDEC CP-51 Soil Cleanup Guidance for Gasoline Impacted Sites were identified in one of the borehole locations (SB-20); SVOC concentrations in excess of NYSDEC CP-51 Soil Cleanup Guidance for Fuel Oil Contaminated Sites were not identified in any of the four borehole locations. Laboratory

HEWES SERVICE STATION (Continued) **U001839388**

results indicated that soil impacts identified along the northeast property boundary in the area of SB-20 are likely attributed to current BP assigned spill number 00-09318. Laboratory analysis performed on the two groundwater samples collected from temporary wells SB-20 and SB-22 identified several VOC concentrations above the GWQS in SB-20, but no GWQS exceedances in SB-22. Laboratory analysis identified several SVOC concentrations above the GWQS in the groundwater samples collected from SB-20 and SB-22. LNAPL was not detected in temporary monitoring wells (SB-20 and SB-22) during the assessment. Note that SB-23 is the closest boring to MW-22.Soil analytical data from SB-23 was clean. We compared the fingerprinting results from MW-22 to onsite historic LPH . LPH samples collected at MW-1 (Oct. 2004), MW-3 (March 2001 and Jan. 2013), and MW-8A (Jan. 2013) characterized by Torkelson Geochemistry in Antea Report as moderately weathered to weathered premium grade gasoline (no mention of diesel being present in any sample). However to clarify your question, we did not analyze diesel from existing service operations as we do not believe is required due to the location of current tank field. Coincidentally we are the site today performing 1st Qtr 2018 GW monitoring event. Per your suggestion, we will bail the LPH from MW-22. However I would like to clarify that though we are bailing, Arcadis on behalf of our client ,BP is not accepting the responsibility of LPH in MW-22 ,as we believe is not related to current open spill number 00-09318 at this time. Arcadis is still conducting further investigation into this. As I mentioned on the call, I will summarize the results of the chromatograms in a letter next week for your review. 5/7/2018 - Feng - 1Q2018, 4/24/2018, by Arcadis. Monitoring on 1/30/2018. DTW 7.26 (MW-24) and 13.75 (MW-23). MW-3, 1.08'. MW-15, 0.13', for the first time, 22,030 BTEX, 28 MTBE. MW-17, 0.05'. MW-22, 1.5'. So technically ,first DPE event should have been conducted before January 7,2019 -However due to upcoming holiday season, subcontractor scheduling and other logistics, Arcadis will delay this implementation by a week. Arcadis

HEWES SERVICE STATION (Continued) **U001839388**

is scheduled to conduct this work during week of January 13,2019. I hope NYSDEC has no objection to our extension request by a week s time. Feng replied no objection. 3/20/2020 - email from Sahithi Rondla Ms. Feng, Per RAWP dated July 2019, Arcadis conducted 2 of 5-day DPE events so far in January & February 2020. However we are having to suspend March 2020 event because of ongoing global Covid-19 crisis. As you know this site operates as gas station in NY where the epicenter for Covid-19 currently is and we are having difficulty with staffing and dealing with logistics related to maintaining the separation distance based on the scope of work & on site business operations. I hope you understand our current situation and be assured that Arcadis will immediately mobilize to the site to conduct 3rd week long DPE event as soon as conditions improve. I will continue to keep you posted about our plans. In the meantime, please do not hesitate to let me know if you have any questions or concerns. Feng reply to Sahithi Rondla Sahithi, I understand. Everybody please stay healthy and safe! 4/2/2020 - Feng - 4Q2019, 1/27/2020, by Arcadis. Monitoring on 10/24/2019. DTW 7.70 (MW-24) to 15.45 (MW-23). LPH was recovered from MW-3, MW-17 and MW-22. The recovered LPH was stored in an onsite drum for subsequent offsite disposal at a EPA approved disposal facility. MW-2, 117 BTEX, 11 MTBE. MW-3, 0.66' LNAPL. MW-5, 90.6 BTEX. MW-8A, dry. MW-18, 343 BTEX, 11 MTBE. MW-19, 3.7J BTEX, 2 MTBE. MW-22, less than 8.7 BTEX, less than 1 MTBE. NO LNAPL. MW-23, less than 9 BTEX, less than 1 MTBE. MW-24, 2,478 BTEX, 12 MTBE. DPE-1, 550 BTEX, 21 MTBE. DPE-2, 557 BTEX, 10 MTBE. 6/22/2020 - Feng - Reviewed VTE Event Summary. -Between November 6 and November 7, 2019, Arcadis oversaw the installation of 2 extraction wells (DPE-1 and DPE-2) by Hawk Drilling. -Drilled using hollow stem auger drill rig to 25 feet. -4-inch diameter, 15 feet of 0.02-inch slotted screen, 5 feet riser. -Each DPE wells includes a 5-foot sump so that pump intake can be adjusted during the VTE events to maximize mass recovery -2 multi-day VTE events were conducted in first quarter 2020, 1/20-23/2020, and 2/24-28/2020. -MW-3, MW-5, MW-8A, MW-15, MW-17, MW-18, MW-19 and MW-22 were used as observation -interface probe was used to collect depth to water and depth to product reading -a top-loading pneumatic pump was installed in each extraction well with the pump intake positioned near the bottom of the well screen. -the pneumatic pumps were turned on to begin groundwater extraction -vacuum blower was turned on to begin soil vapor extraction -reading were collected every 60 min throughout the day -water discharge line from each pneumatic pump was run to a 250-gallon water storage tank and will be

HEWES SERVICE STATION (Continued) **U001839388**

pumped to vac truck for disposal once it is full by Lorco Petroleum in Elizabeth, NJ. -the truck-mounted vacuum blower effluent line was connected to (2) 375-lb vapor-phase granular activated carbon (VGAC) units in series to allow extracted soil vapor to be treated before discharge to atmosphere. -DPE-1 recharge rate 5 gallons per minute -DPE-1 drawdown was limited to 1 ft -DPE-2 recharge less than 0.5 gpm -higher recharge rate in DPE-1 may be due to its presence of a former excavation -DPE-2 may be the representative of actual groundwater recharge rate at the site. -total 12,775 gallons of groundwater was extracted during the two VTE events. -max drawdown DPE-1 (1.2 feet), DPE-2 (6.1 feet), MW-15 (0.5 feet), MW-18 (1.0 feet), MW-3 (dry), MW-17 (0.4 feet), MW-5 (0.1 feet). MW-19 (0.4 feet), MW-8A (dry), MW-22 (0.0 feet). -vacuum applied in DPE-1 and DPE-2 from 4.9 in Hg to 6.3 in Hg. -air flow rates in DPE-1 and DPE-2 from 87 scfm to 132 scfm -all the monitoring wells, except MW-22, recorded induced vacuum during the VTE. -ROI is 35 feet. -DPE-1 mass recovery ranged 41 to 51 lbs/day -DPE-2 mass recovery ranged 16 to 25 lbs/day -total 196 lbs of vapor phase TPH were removed during the 2 VTE events Based on the high soil vapor mass recovery rates observed in DPE-1 and DPE-2 during the 2nd VTE event, Arcadis proposes additional VTE events at the site to continue removal of VOC mass from the subsurface. "

Remarks: "SOIL AND GROUND WATER DETECTED DURING GEO-PROBE INVESTIGATION."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 01/07/2004. Also See Spill Nos. 8902747 and 9611420 for further site history. On 5/17/2001, DEC Sigona & Rossan perfromed a site inspection at 569 Myrtle Avenue, PBS No. 2-600866. The site was under construction, and being developed into a new state-of-the art gas station. Met with Mike Buscemi, Maximum Distributors, 556 Central Avenue, Bethpage, New York, 11714 (516)933-0700. Mike said the tank removal and installation was supervised by a Licensed NYFD, contractor and plans were filed an approved by NYFD by Charles Nalbone of Maximum Distributors. The owner of the the station is Ivan Muller (718)871-0097. Mike's been working on the station for 8-9 months. They removed a number of 550's and 4,000 gallon USTs in 2000. Phoenix Environmental supervised closure activities and documented a closure report on tank removal. 631-864-4200. Ivan Muller, 1616 48th Street, Brooklyn, N.Y. 718-366-2259. Mike Buscelli toured the site and showed where the tanks were installed and piping systems. The tanks were reportedly double walled FRP with leak detectors. Mr. Buscelli will send copy of plans and results of Phoenix site assessment to DEC. DEC Sigona called Mike Buscemi on Monday May 21, 2001, and left message requesting an update on status of site assessment/tank closure report and copy of installation plans. They said he would be contacted and would replay ASAP. On May 23, 2001, the DEC (Sigona) received a copy of the engineering plans for the new tanks and a laboratory test report from EcoTest Laboratories, dated June 16, 2000. The test results indicate that petroleum contaminated soils were found during the field sampling performed by Phoenix Environmental. The information submitted by Maximum Distributors does not include all of the information we requested. Mr. Buscemi suggested that we contact the owner for additional information. At this point, the DEC has determined that the EcoTest Laboratory report along with the notification by Phoenix Environmental to the DEC Spill hotline will satisfy one of the requirements of a site assessment under EPA 40 CFR 280.72: identification of the release of a regulated

WINDHORSE GAS STATION INC (Continued) **U001854648**

substance by an owner or operator closing an UST. However, additional investigation is warranted and required by Article 12 of the Navigation Law (NL) because the report indicates that the groundwater may have been contaminated following the closure of the gasoline and used oil USTs. The EcoTest laboratory test results cannot be used in place of a complete tank closure report or a site assessment. On May 23, 2001, The DEC (Sigona) sent a letter to Ivan Muller requiring the facility owner to hire a qualified environmental consultant to prepare a valid tank closure and site assessment report, if they have not done so already. These reports must be developed in accordance with 40 CFR 280.72 and DEC's SPOTS Memo No. 14, entitled, Site Assessments at Bulk Storage Facilities , dated August 1, 1994. The DEC plans to inspect this facility after the tanks have been installed to ensure that the plans have been properly implemented. DEC requested that 569 Myrtle LLC submit a copy of the tank closure report, a complete site assessment, and waste manifests for the disposal of petroleum contaminated soils, by June 15, 2001. 12/05 - Further investingation needs to be performed. 4/1/09 - Austin - Transferred from Needs Reassignment to Patel for further work to remediate and close - end 04/17/09-Hiralkumar Patel. visited site. its a citgo gas station with a store at the intersection of Myrtle Ave and Classon Ave. owner was not available at the site. Ivan **property owner** Ph. (718) 871-0097 Amna Kirmani **store manager** Ph. WINDHORSE GAS STATION INC (Continued) **U001854648**

Paul at Phoenix. 12:35 PM:- spoke with Paul. asked him to submit site map with proposed well locations for review. also asked him about Phase I work. Paul mentioned that site was gas station for long time and so no need for Phase I. explained Paul that Phase I will provide important information about old tank system locations. asked him to include site history info (not the complete Phase I) in Phase II report. 12:51 PM:- sent email to Paul and asked to submit work schedule and site map with proposed well locations. email copied to Mr. Muller. 06/29/10-Hiralkumar Patel. 12:57 PM:- left message for Paul. 12:58 PM:- spoke with Mr. Muller. he mentioned that he has paid advance to contractor and waiting for work done. he asked to contact his brother, George Muller (917-337-6083) who is handling this matter. 1:00 PM:- left message for George Muller. 1:06 PM:- received call from George Muller. he has submitted as-built plan to Phoenix and waiting for response. asked him to contact Phoenix regarding investigation work. 06/30/10-Hiralkumar Patel. 3:33 PM:- received email from Paul with work plan. proposes to install three 2 inch monitoring wells, surrounding existing tank system, with 20 ft of screen. based on regional topographic maps, groundwater under the site is believed to be at 35 ft bg and flowing to the north. 07/01/10-Hiralkumar Patel. 11:11 AM:- sent work plan approval letter to Mr. Muller requiring to submit investigation report by the end of 08/31/10. letter emailed to Mr. Muller and Paul. 09/13/10-Hiralkumar Patel. 10:55 AM:- left message for Mr. Muller. 10:56 AM:- left message for Paul. 10:58 AM:- sent email to Mr. Muller requiring to submit a investigation report by end of 09/17/10. email copied to Paul. 03/23/11-Hiralkumar Patel. 4:08 PM:- spoke with Paul. he mentioned that no work has done yet. he will talk to Mr. Muller to schedule a work. asked Paul to submit work schedule by 03/30/11. 4:11 PM:- sent email to Paul requiring to submit work schedule by 03/30/11. email copied to Mr. Muller. 05/18/11-Hiralkumar Patel. 3:05 PM:- sent letter (via certified mail: 7009 1680 0000 7007 9910) to Mr. Muller and asked him to submit phase I and phase II reports, according to the letter dated 07/08/09, by end of 06/10/11. informed him that if reports are not available by 06/10/11 then case will be referred to legal. letter emailed to Mr. Muller and Paul with copy of letter dated 07/08/09. 06/06/11-Hiralkumar Patel. 3:49 PM:- received email from Paul stating that well installation has been scheduled for 06/08/11 and report will be available by 07/11/11. 06/09/11-Hiralkumar Patel. 11:10 AM:- spoke with Paul. he was at the site installing wells. one well has been installed. groundwater found at 38-39 ft bg. they found boulders in ground. he will submit report by 07/11/11. also discussed about phase I report. Paul mentioned that this is the only gas station in the area and surrounding properties are mostly residential and small commercial buildings. as they don't suspect any other source of contamination, if any, they are not planning for phase I investigation at this point. informed him that after reviewing the investigation report, the department may require Phase I investigation. 06/16/11-Hiralkumar Patel. certified letter sent on 05/18/11 came back undelivered. 02/08/12-Hiralkumar Patel. 3:48 PM:- spoke with Paul. he mentioned that work was done, but report was not prepared due to some payment issues. but now other issues are resolved, he will prepare report and submit soon. 3:51 PM:- spoke with Mr. Muller and asked him to submit report by the end of 02/17/12. 08/17/12-Hiralkumar Patel. 3:30 PM:- spoke with Paul. he will submit report. asked him to submit report by 08/31/12. 3:31 PM:- sent email to Paul and asked to submit report by 08/31/12. email

WINDHORSE GAS STATION INC (Continued) **U001854648**

copied to Mr. Muller. 08/31/12-Hiralkumar Patel. 4:59 PM:- received email from Paul including report. abstract: - installed three 2-inch wells - during well installation, split spoon samples were collected at five ft intervals - soil consisted primarily of silty sand with varying amounts of clay and gravel - at varying levels cobbles and boulders were encountered - from each boring location, the sample collected just above the groundwater interface - additional soil sample was collected from 9-11 ft depth from well MW-2 as found high PID readings (1,167 ppm) - found PID readings only in well MW-2 - wells installed with 15-20 ft screen - well MW-3 was dry during gauging/sampling - found contamination in soil sample from 9-11 ft in MW-2, but no contamination in deeper soil (29-31 ft) from MW-2 - found contamination in groundwater sample from MW-2 - as per groundwater sample result table 3, groundwater found at 37-38 ft depth -------- soil analyticals: ----------MW-2 (9-11 ft) Toluene----------450 Ethylbenzene----------2,000 Xylene----------14,500 1,2,4-Trimethylbenzene------29,000 1,3,5-Trimethylbenzene-------7,800 Naphthalene----------5,300 groundwater analyticals: ----------MW-2 Ethylbenzene----------270 Xylene----------1,910 1,2,4-Trimethylbenzene-------1,600 1,3,5-Trimethylbenzene---------430 Naphthalene----------310 MTBE----------6 09/04/12-Hiralkumar Patel. tried Mr. Muller's numbers, but no answer and no voicemail system. 2:14 PM:- spoke with Paul. informed him that the department requires re-sampling of groundwater from existing wells. he will talk to Mr. Muller. 2:18 PM:- spoke with George Muller. informed him that the department requires re-sampling of groundwater from the existing wells and the report must be submitted by the end of 10/05/12. 2:39 PM:- sent email to Paul. asked him to submit groundwater sampling report by 10/05/12. also asked him to provide site-specific groundwater flow direction, if water found in well MW-3. 01/08/13-Hiralkumar Patel. 4:14 PM:- spoke with Paul regarding groundwater sampling results. he will check record and will call back tomorrow. 01/11/13-Hiralkumar Patel. 3:49 PM:- spoke with Paul. he is preparing report and will submit next week. asked him to send sample results for review. 3:54 PM:- received email from Paul including results of groundwater sample from MW-1 and MW-2. groundwater analyticals: ----------MW-2 Ethylbenzene----------170 1,2,4-Trimethylbenzene---110 02/11/13-Hiralkumar Patel. 2:21 PM:- sent email to Paul inquiring about report for re-sampling. email copied to Mr. Muller. discussed with DEC Austin. based on available soil and groundwater analyticals, the Department requires determination of site-specific groundwater flow direction, which requires installation of additional monitoring well as well MW-3 is dry. 03/19/13-Hiralkumar Patel. 1:50 PM:- spoke with Paul and asked to submit re-sampling report by the end of 03/22/13. 04/08/13-Hiralkumar Patel. 1:14 PM:- left message for Paul. 1:16 PM:- spoke with Mr. Muller. he will call back. 4:20 PM:- sent email to Paul and asked to submit re-sampling report. email copied to Mr. Muller. 04/12/13-Hiralkumar Patel. 12:26 PM:- left message for Paul. 04/23/13-Hiralkumar Patel. 12:52 PM:- spoke with Mr. Muller who asked to call his brother George who owns the property. 1:41 PM:- spoke with George Muller. he mentioned that he and his brother own the property. he will talk to Paul regarding re-sampling report. informed him that the department requires further investigation. George Muller asked to send letter to Ivan Muller's address. George

WINDHORSE GAS STATION INC (Continued) **U001854648**

Muller Ph. (917) 337-6083 05/01/13-Hiralkumar Patel. 3:26 PM:- received email from Paul including resampling report (sampling results submitted earlier on 01/11/13). 12/07/15-Hiralkumar Patel. discussed with DEC Vought and DEC DeMeo. after reviewing available information, case closed administratively based on following: - source removal (tank and possibly some contaminated soil) in 2000 (15 years ago) - no contamination in deeper soil sample - results of groundwater resampling during Oct. 2012 - no change in site use"

Remarks: "CALLER STATES WHILE DOING A DIG FOR A NEW TANK CONTAMINATED SOIL WAS FOUND."

Program: BCP
Site Code: 555285
Acres: 0.882
HW Code: C224264
SWIS: 2401
Town: New York City
Record Added Date: 07/25/2017
Record Updated Date: 12/30/2020
Update By: AMSERVIS
Site Description: "Location: The Former NY Cleaning and Dyeing Site is located in an urban area located in the Bedford Stuyvesant section of Brooklyn (Kings County), New York. The site is comprised of two tax parcels (Block 1884, Lots 40 and 48) totaling 0.8822 acres. The site fronts on Flushing Avenue to the north, Franklin Avenue to the east, and Little Nassau Street to the south. Site Features: The site is being

FORMER NY CLEANING AND DYEING SITE (Continued) **S122449226**

redeveloped into a mixed commercial-residential building. Previously, Lot 40 was a one-story commercial building approximately 13,250 sqft in size, occupied by a door and molding company. Lot 48 was a three 2-story commercial buildings occupied by a catering hall, a warehouse for the door and molding company on Lot 40, and office space. According to the NYC Department of Buildings, the current buildings were constructed in 1924 (Lot 48) and 1966 (Lot 40). Current Zoning and Land Use: The site is currently zoned R7A for residential use, with a C2-4 overlay which allows for commercial use. The area immediately surrounding site consists of a three-story commercial building to the southeast and a residential apartment building to the west. Past Use of the Site: The buildings present on the site are in use as a wood door and molding manufacturer and warehouse (Lot 40, p/o Lot 48) and a catering hall (p/o Lot 48). Lot 40 appears to have been redeveloped by 1928 with the existing one-story building identified as Priemo Garage. By 1945 the building was used by Metropolitan Distributers for the storage of ice cream and delivery trucks. From 1928 to 1934, 380 Flushing Avenue (Lot 48) was used as an auto body fabricator while two 1-story buildings, identified as an auto body repair and a paper company, were located in the western portion of the Lot. A sheet metal works was identified on a portion of Lot 48 from 1928-1940. By 1940, a commercial dry cleaning plant (NY Cleaners and Dyeing) occupied all of Lot 48. Based on the 1966 Certificate of occupancy, describing Lot 40 as being used for commercial vehicle storage and trucking terminal, the lack of city directory listings for this lot between 1949 and 1992 and the history of common ownership with Lot 48 by Uniform Rentals Inc., it is probable that both lots were part of the NY Cleaners-Uniform Rental operation with lot 40 being used to store and service the company's vehicle fleet from 1949 through 1986-1987. Although not reflected in the Sanborn Maps, the City Directory listings identify 376 Flushing Ave. (lot 40) as Alexander Supply (door and molding warehouse) in 1997 and 378 Flushing Ave (portion of lot 48) as Exclusive millwork in 1992. Exclusive Door and molding currently occupies both 376 and 378 Flushing Avenue. Therefore, the laundry operations and fleet maintenance garage vacated prior to these dates, most likely in 1986-1987 when Uniform Rentals sold the lots. Site Geology and Hydrology: The elevation of the site is approximately 16 feet above the National Geodetic Vertical Datum (NGVD). The area topography gradually slopes to the west. The depth to groundwater beneath the Site, as determined from field measurements, is approximately 9 to 13 feet below grade. Local groundwater flow is to the east. The nearest surface water body is Wallabout Channel, which is located approximately 0.5 miles from the site. "

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soil and groundwater consist of petroleum related VOCs. Low levels of chlorinated solvents were found in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Short-term groundwater monitoring is being managed under a Site Management Plan. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with any residual contamination."

BROWNFIELDS:
Name: FORMER NY CLEANING AND DYEING SITE - OFF-SITE
Address: 376-378 FLUSHING AVENUE
City,State,Zip: BROOKLYN, NY 11205
Program: BCP
Site Code: 568007
Acres: Not reported
HW Code: C224264A
SWIS: 2401
Town: New York City
Record Added Date: 03/16/2018
Record Updated Date: 06/17/2020
Update By: JHOCONNE
Site Description: "The area of concern subject to this work is considered off-site from BCP site No. C224264 Former NY Cleaning and Dyeing and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224264 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The Site includes properties around the BCP Site (C224264) located at 376-378 Flushing Avenue. This Site is an off-site project associated with the on-site BCP project as well as Spill No. 1609531. Site Features: The Site does not have definite boundaries since it is an off-site project associated with an on-site BCP project. Potentially impacted areas from the BCP Site Former NY Cleaning and Dyeing include the residential apartment building to the west and the three story commercial building to the east. The off-site areas are not necessarily limited to these areas. Current Zoning and Land Use: The Site is currently zoned M1-2 for manufacturing. The potentially impacted areas from the Former NY Cleaning and Dyeing Site (BCP: C224264) include a residential apartment building to the west and a three story commercial building to the east. Potential for further migration include downgradient impacts from the on-site BCP Site. Past Use of the Site: The Site has not yet been identified for its past historic use. The property potentially impacting the Site but not limited to, The Former NY Cleaning and Dyeing BCP site was historically used for several manufacturing and commercial processes including auto repair shops, storage facilities, and sheet metal works that occupied the BCP site from 1928-1940s. By the 1940s, a commercial dry cleaning plant (NY Cleaning and Dyeing) occupied Lot 48; vehicle storage and NY Cleaners-Uniform Rental services occupied Lot 40 of the site until the late 1980s. Currently, the site is occupied by a door and molding warehouse and a catering hall. Site Geology and Hydrology: Based on the information collected during the investigation of C224264, the soil beneath the site includes silt, sand non-native fill with brick, concrete, coal and other rubble associated with historic fill approximately 5 feet below grade. A

FORMER NY CLEANING AND DYEING SITE - OFF-SITE (Continued) **S126369652**

	native sand and clay layer is present below the historic fill to depths of approximately 12 feet below grade. The evaluation of the surrounding area is approximately 16 feet above the National Geodetic Vertical Datum (NGVD). The areas topography gradually slopes to the west. The depth to groundwater beneath the Site is approximately 9 to 13 feet below grade. Local groundwater flow is to the east. The nearest surface water body is Wallabout Channel, which is approximately 0.5 miles northwest. "
Env Problem:	"During the on-site Remedial Investigation for site C224264, soil and groundwater samples were collected and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the results of the RI, the primary contaminants of concern for on-site include vinyl chloride, trichloroethene (TCE) and tetrachloroethene (PCE). Contamination can likely be attributed to activities associated with the historic use of the site for manufacturing activities. Further investigation is needed to fully delineate the extent of off-site contamination. "
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

DEC Memo:	"8/26/15 - Obligado - Follow up on this line test failure. I spoke with TJ Connolly who said it was a product line between a dispenser and a 6000 gallon diesel tank. He has not yet been retained to do the repairs or retest. I called Steve 614-593-2736 at Business Brinks and left a message to call back the DEC. According to the PBS #2-034401, the site has 4 4000 gallon diesel tanks. Mail correspondence - Brinks Incorporated 652 Kent Avenue Brooklyn, NY 11211 718-260-2195 Site Owner First Jefferson 24 West 57 Street, STE 504 NY, NY 10019 I also called the Site Contacts - Gary Raff 917-939-1571. I left a message to call back the DEC. or 718-260-2195. Steve Boroski - steve.borkoski@brinksinc.com garry.raff@brinksinc.com Tank has been taken out of service. Steve Boroski - steve.borkoski@brinksinc.com 614-593-2736 Scott - sein2woh.com 8/22/16-Scott Fein sent the following email Ms. Zhune, the Company has retained a consultant and

PRIVATE RESIDENCE (Continued) **U003074285**

is evaluating, contact the NYCFD authorization to proceed and is evaluating remedial options. I will keep you apprised of all developments. If you have any questions, please contact me. Thank you. 12/16/16-Scott sent the following email Ms. Zhune, in order to fully comp0let the project (remediation and tank decommissioning) the Company is required to obtain several permits from the NYCFD. WE hope to have the permits within the next six weeks. 4/25/18-Scott sent the following email Ms. Zhune, in response to your question, an overview follows. Brink s transports and safeguards currency and negotiable instruments in New York City. A secure facility was constructed for Brink s in Brooklyn to allow Brink s armored trucks to unload cash and negotiable instruments. Since security measures prevent armored trucks from being fueled outside the facility, two diesel dispensing pumps were installed inside the facility when the facility was first constructed. Each dispensing pump is (was) connected by a narrow underground pipe to an underground diesel storage tanks located immediately exterior to the building. At some point there was a pressure fluctuation in one of the underground pipes connected to one of the two diesel dispensers inside the facility. The pressure fluctuation was detected by the facility s Veeder-Root pressure monitoring system. As soon as the pressure fluctuation was detected, the dispenser was shut down and oil no longer flowed from the pipe that triggered the Veeder-Root system. The pressure fluctuation was promptly reported to NYSDEC and the FDNY. In an effort to identify the issue, the exterior tanks were tightness was tested by a state certified consultant (the tanks held pressure and passed the test). The facility then contacted the FDNY and NYC agencies and sought authorization to, (i) remove the exterior tanks and underground pipes and, (ii) allow a fuel company to fuel trucks inside the building from a mobile tank truck operated by Diesel Direct, a third-party vendor. Internal fueling of armored truck would obviate the need for underground tanks, interior dispensers and underground pipes, which for environmental reasons was desirable. FDNY advised that interior fueling would require an FDNY issued variance. A variance application was submitted to the FDNY. Over the past seven months in furtherance of the variance application, FDNY inspected the facility several times, and sought a considerable volume of information including engineering plans. Two weeks ago, FDNY advised that justification for a variance was not sufficient and a variance would not issue. The facility has decided after obtaining the necessary permit to have the exterior underground tanks and all associated piping completely removed in and outside the facility (and of course any remediation conducted subject to NYSDEC supervision) and, proceed with an alternate fueling process for its armored vehicles. We anticipate that the existing tanks and piping will be removed within the next two months. In the event there is evidence of a release, remediation will be conducted by a certified environmental consultant, and overseen by Tenen Environmental Consulting and NYSDEC. We will keep you apprised of all progress. If you have any questions, please contact me. 1/10/2019 - Feng - Duty Desk. Received spill 18-10357 at the same site reported by Tenen Environmental. Spoke to Kristin Meisner of Tenen Environmental. They have filed a pre-work notification to DEC PBS unit for tanks and piping closure and removal. Today they exposed the piping and found there was minor stain underneath the piping and had PID reading, so they reported the spill. There are (4) 4,000-gallon diesel USTs located in the parking lot and the piping are running to inside of the building. They

PRIVATE RESIDENCE (Continued) **U003074285**

haven't exposed the USTs yet. They have already flushed the pipes and the tanks, so no product right now. The tanks have been in services since 1985. No pre-classification soil samples have been done. Unsure if there was any other investigation has been done. Sometime next week they will start the tank removal process. They plan to overexcavate the soil and will collect soil endpoint samples. No plan for installation of new tanks, and no plan to develop the site. Kristin Meisner Tenen Environmental 646-606-2332 Ext. 104 KMeisner@Tenen-Env.com Searched database and found spill 15-05623 which was reported for line test failure. Briefed to and discussed with Veronica Zhune. The two spills will be consolidated under the old spill 15-05623. 5/14/19-Kristin Meisner from Tenen Environmental emailed the Spill and Tank Closure report dated 5/14/19. Based on the above tank closure activities, remedial activities and the results of the post remedial soil and groundwater samples, Tenen concludes the fallowing: . Four 4,000-gallon diesel USTs and two dispensers were properly decommissioned, accessible piping was removed and a portion of the underground piping was abandoned in place. . Petroleum impacted soil in the area of the dispensers was removed and disposed off-site; . All VOCs in soil were below the commercial Use SCOs and only one 1,2,3trichlorobenzene, was detected above the protection of groundwater SCOs; this compound was not detected in groundwater above the AWQS; . All SVOCs in soil are related to historic fill material; . All VOCs in groundwater were below the AWQS with the exception of five components at low concentrations that are associated with degraded petroleum releases; and, . two SVOCs in groundwater above the AWQS are not releated to a petroleum release. Spill Closed. "

Remarks: "failed line test - repair and retest clean up pending"

Town:	New York City
Record Added Date:	01/25/2013
Record Updated Date:	08/03/2020
Update By:	SMQUANDT
Site Description:	"Location: The site is located at 74 Wallabout Street in Brooklyn, Kings County. The site extends from Wallabout Street on the north to Flushing Avenue to the south, and is approximately 0.89 acres in size. Site Features: The site formerly contained an approximately 44,700 square foot 2 to 3 story warehouse, an accessory at-grade parking and loading area at the northwest corner of the lot and a smaller fenced-in parking area at the southwest corner of the lot. The site is currently undergoing redevelopment, and the majority of the site is now covered by a building foundation. Current Zoning and Land Use: The subject site is zoned R7-1 (residential zoning district) with a C1-5 commercial overlay, permitting residential, commercial and community facility uses. The proposed use is for residential and commercial for the majority of the parcel, with a planned school expansion from the adjoining parcel. Past Use of the Site: The site was utilized in the past by a chemical manufacturer, furniture manufacturer, shelving company, paint and varnish manufacturer, lumber company, cable and rope company, packaging company, plastic processing company, and a housewares and household chemicals distributing company. Site Geology and Hydrogeology: Shallow soils, ranging from 0-8 feet below ground surface (bgs) were characterized as mostly non-native, historic fill material consisting of brown silty sands. Deeper soils, ranging from 8-15 feet bgs were characterized as mostly gray, low-plasticity, silty clay. Groundwater occurs at the site at a depth of approximately 10 feet below ground surface. The flow is in a west/northwest direction."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds in soil, and floating petroleum product atop the groundwater table. Remedial action resulted attainment of the site specific cleanup objectives throughout the parcel, as well as the removal of all petroleum product within the site boundaries. Resdiual contamination in soil, and soil vapor, if any, is being managed under a Site Management Plan. Remediation associated with Spill #1213721 is being handled by Region 2 Spills."
Health Problem:	"People are not expected to come into contact with site related contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by public water supply that is not affected by this contamination. Because the site is vacant and undergoing remedial activities, soil vapor intrusion does not represent a current exposure pathway. Measures are in place to minimize the potential for vapor intrusion in buildings constructed at the site in the future and sampling indicates that soil vapor intrusion is not a concern for off-site buildings."

Site Description:	"Location: The site is located at 74 Wallabout Street in Brooklyn, Kings County. The site extends from Wallabout Street on the north to Flushing Avenue to the south, and is approximately 0.89 acres in size. Site Features: The site formerly contained an approximately 44,700 square foot 2 to 3 story warehouse, an accessory at-grade parking and loading area at the northwest corner of the lot and a smaller fenced-in parking area at the southwest corner of the lot. The site is currently undergoing redevelopment, and the majority of the site is now covered by a building foundation. Current Zoning and Land Use: The subject site is zoned R7-1 (residential zoning district) with a C1-5 commercial overlay, permitting residential, commercial and community facility uses. The proposed use is for residential and commercial for the majority of the parcel, with a planned school expansion from the adjoining parcel. Past Use of the Site: The site was utilized in the past by a chemical manufacturer, furniture manufacturer, shelving company, paint and varnish manufacturer, lumber company, cable and rope company, packaging company, plastic processing company, and a housewares and household chemicals distributing company. Site Geology and Hydrogeology: Shallow soils, ranging from 0-8 feet below ground surface (bgs) were characterized as mostly non-native, historic fill material consisting of brown silty sands. Deeper soils, ranging from 8-15 feet bgs were characterized as mostly gray, low-plasticity, silty clay. Groundwater occurs at the site at a depth of approximately 10 feet below ground surface. The flow is in a west/northwest direction."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds in soil, and floating petroleum product atop the groundwater table. Remedial action resulted attainment of the site specific cleanup objectives throughout the parcel, as well as the removal of all petroleum product within the site boundaries. Resdiual contamination in soil, and soil vapor, if any, is being managed under a Site Management Plan. Remediation associated with Spill #1213721 is being handled by Region 2 Spills."
Health Problem:	"People are not expected to come into contact with site related contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by public water supply that is not affected by this contamination.

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

Because the site is vacant and undergoing remedial activities, soil vapor intrusion does not represent a current exposure pathway. Measures are in place to minimize the potential for vapor intrusion in buildings constructed at the site in the future and sampling indicates that soil vapor intrusion is not a concern for off-site buildings."

Site Code: 478229
Site Description: "Location: The site is located at 74 Wallabout Street in Brooklyn, Kings County. The site extends from Wallabout Street on the north to Flushing Avenue to the south, and is approximately 0.89 acres in size. Site Features: The site formerly contained an approximately 44,700 square foot 2 to 3 story warehouse, an accessory at-grade parking and loading area at the northwest corner of the lot and a smaller fenced-in parking area at the southwest corner of the lot. The site is currently undergoing redevelopment, and the majority of the site is now covered by a building foundation. Current Zoning and Land Use: The subject site is zoned R7-1 (residential zoning district) with a C1-5 commercial overlay, permitting residential, commercial and community facility uses. The proposed use is for residential and commercial for the majority of the parcel, with a planned school expansion from the adjoining parcel. Past Use of the Site: The site was utilized in the past by a chemical manufacturer, furniture manufacturer, shelving company, paint and varnish manufacturer, lumber company, cable and rope company, packaging company, plastic processing company, and a housewares and household chemicals distributing company. Site Geology and Hydrogeology: Shallow soils, ranging from 0-8 feet below ground surface (bgs) were characterized as mostly non-native, historic fill material consisting of brown silty sands. Deeper soils, ranging from 8-15 feet bgs were characterized as mostly gray, low-plasticity, silty clay. Groundwater occurs at the site at a depth of approximately 10 feet below ground surface. The flow is in a west/northwest direction."
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds in soil, and floating petroleum product atop the groundwater table. Remedial action resulted attainment of the site specific cleanup objectives throughout the parcel, as well as the removal of all petroleum product within the site boundaries. Resdiual contamination in soil, and soil vapor, if any, is being managed under a Site Management Plan. Remediation associated with Spill #1213721 is being handled by Region 2 Spills."
Health Problem: "People are not expected to come into contact with site related contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by public water supply that is not affected by this contamination. Because the site is vacant and undergoing remedial activities, soil vapor intrusion does not represent a current exposure pathway. Measures are in place to minimize the potential for vapor intrusion in buildings constructed at the site in the future and sampling indicates that soil vapor intrusion is not a concern for off-site buildings."

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

Site Description: "Location: The site is located at 74 Wallabout Street in Brooklyn, Kings County. The site extends from Wallabout Street on the north to Flushing Avenue to the south, and is approximately 0.89 acres in size. Site Features: The site formerly contained an approximately 44,700 square foot 2 to 3 story warehouse, an accessory at-grade parking and loading area at the northwest corner of the lot and a smaller fenced-in parking area at the southwest corner of the lot. The site is currently undergoing redevelopment, and the majority of the site is now covered by a building foundation. Current Zoning and Land Use: The subject site is zoned R7-1 (residential zoning district) with a C1-5 commercial overlay, permitting residential, commercial and community facility uses. The proposed use is for residential and commercial for the majority of the parcel, with a planned school expansion from the adjoining parcel. Past Use of the Site: The site was utilized in the past by a chemical manufacturer, furniture manufacturer, shelving company, paint and varnish manufacturer, lumber company, cable and rope company, packaging company, plastic processing company, and a housewares and household chemicals distributing company. Site Geology and Hydrogeology: Shallow soils, ranging from 0-8 feet below ground surface (bgs) were characterized as mostly non-native, historic fill material consisting of brown silty sands. Deeper soils, ranging from 8-15 feet bgs were characterized as mostly gray, low-plasticity, silty clay. Groundwater occurs at the site at a depth of approximately 10 feet below ground surface. The flow is in a west/northwest direction."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds in soil, and floating petroleum product atop the groundwater table. Remedial action resulted attainment of the site specific cleanup objectives throughout the parcel, as well as the removal of all petroleum product within the site boundaries. Resdiual contamination in soil, and soil vapor, if any, is being managed under a Site Management Plan. Remediation associated with Spill #1213721 is being handled by Region 2 Spills."

Health Problem: "People are not expected to come into contact with site related contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by public water supply that is not affected by this contamination. Because the site is vacant and undergoing remedial activities, soil vapor intrusion does not represent a current exposure pathway. Measures are in place to minimize the potential for vapor intrusion in buildings constructed at the site in the future and sampling indicates that soil vapor intrusion is not a concern for off-site buildings."

DEC Memo:	"12/19/2012-Potential BCP candidate. Subsurface investigation is being done to collect more data for BCP application.Andy Lockwood from P.W Grosser indicated that they had a prequalification meeting with DEC BCP few weeks ago. Andy Lockwood will send the report to VZ.(sr) 03/25/13-Zhune called amd spoke to Andy Lockwood from PW Grocery Consult 631-589-6353. He said they submitted the aplication to Brownfield program. They will know by Apri 10, 2013 weather or not they are going to be accepted. 06/13/13 Jonathan Greco sent the following email: The referenced spill site at 74 Wallabout Street in Brooklyn has been accepted into the Brownfield Cleanup Program as site #C224172. With your permission, I would like to reference this

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

in the DEC Remarks section of the UIS and change myself to the project manager for the spill site. 07/09/14 The source of the spill has been determined to be a leaking UST located on the western portion of the site. The UST and free product located on-site will be addressed under the BCP (Site Code C224172). Off-site remediation of the floating product is at least being partially remedied by the BCP Volunteer, but it is expected that their efforts will not fully resolve the off-site issue, and further work may be conducted by the State and/or the RP under the Spills program following completion of the BCP. 11/7/14 On-site work has been completed and site construction is underway. Though bailing of product was conducted at two wells on many occassions, product is still present. Any further actions will be undertaken under Spills program. (Greco 11/7/14) 4/4/16 - Callout to determine off-site extent and address product off-site to be done FY 2016/17. 09/18/17-Hiralkumar Patel. DEC Austin assigned this case for remediation of off-site groundwater impact from a BCP site. 10/27/17-Hiralkumar Patel. searched current and former tax lot maps and noted that the subject site was on Block #: 2261 / Lot #: 1. the subject site was owned by B.C.G. Sales, Inc. from July 1977 to Aug. 2012. alternate address: 74-88 Wallabout Street, 743-755 Kent Ave, 377-391 Flushing Ave PBS #: 2-612240. as per PBS record, the site had nine (9) 1,000 gal diesel USTs, removed in Jan. 2014. but as per reports included in BCP file, PBS application was submitted to register following tanks: - seven (7) 1,000 gal diesel USTs - one (1) 550 gal gasoline UST - one (1) 3,000 gal #2 oil UST other spill # 0307065 was reported on 10/04/2003 due to discharge of natural gas line condensate as old gas main punctured during installation of a new gas line. case closed. summary of available investigation reports from BCP #: C224172: 1) Phase I Environmental Site Assessment Report dated 10/12/2006: - review of available Sanborn maps did not indicate the presence of any buried tanks on the subject site - the subject site was utilized in the past by a bakery shop, a soap company, a wood working company, a lumber company, a shelving company, a chemical company, a paint and varnish manufacturing company, a rope manufacturing company, a plastic processing company, a cleaner industries company and warehouse and household chemical distributing company - in 2006, there were four (4) possible fill ports noticed inside the northern portion of the warehouse area on the main floor of the building - in 2006, there was a capped fill port and a vent pipe noticed along the western exterior wall of the building. according to the property owner, the capped fill port and the vent pipe were associated with an AST that was removed from the building in the past - in 2006, there was a hydraulic elevator motor noticed inside the northern portion of the warehouse area on the main floor of the building. there was hydraulic oil staining and speedi dry noticed in the vicinity of the hydraulic elevator motor 2) Supplemental Phase II Environmental Site Assessment dated Jan. 2013: - review of historical Sanborn map performed as part of Phase I ESA indicated that two gasoline UST existed inside the building ---------- Phase I report states that no buried tanks were noted on Sanborn maps - a limited Phase II investigation was conducted in northern half of the site in Jan. 2007 - in Dec. 2006, a geophysical survey was conducted. GPR profiles collected within northeast corner of the building appeared to be consistent with the size and shape of six (6) 550 gal USTs. additionally, six vent lines (connected to the suspected USTs) were located on the northeast corner of the building - in Dec. 2006, eight (8) soil borings (SB-1

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

through SB-8) were installed in the vicinity of the suspected USTs on the northeast corner of the building, in the storage area and the asphalt parking lot - boring SB-1 was installed to 6 ft bg where fuel oil odors were detected and refusal encountered - boring SB-2 was installed to 16 ft bg - boring SB-3, SB-4 and SB-6 were installed to 12 ft bg - boring SB-5 and SB-7 were installed to 5 ft bg where refusal encountered - boring SB-8 was installed to 6 ft bg, where slight odors were detected and refusal encountered - one soil sample was collected from each boring, except borings SB-5 and SB-7 (as per table 1, samples were collected from depths between 6 and 11 inches, boring logs suggest that samples may have collected from depths between 6 and 11 ft) ---------- - in Jan. 2007, groundwater samples (GW-1, GW-2 and GW-3) were collected from borings SB-2, SB-3 and SB-4 (11-13 ft bg) ---------- - no contamination found in soil or groundwater samples collected in Dec. 2006 - supplemental Phase II investigation was conducted in Dec. 2012 - in Dec. 2012, eight (8) soil borings (SB009 through SB016) were installed - shallow soils, ranging from 0-8 ft bg were characterized as mostly non-native, historic fill material consisting of brown silty sands. deeper soils, ranging from 8-20 ft bg were characterized as mostly gray, low-plasticity, silty clay ---------- - petroleum like odor was observed in soil from SB009 (4-16 ft), SB014 (0-12 ft), SB015 (0-12 ft) and SB016 (0-12 ft) - visual staining was observed in soils from SB016 (8-12 ft) - in Dec. 2012, two groundwater samples (GW011 and GW013) were collected - in Dec. 2012, three (3) 2-in monitoring wells (MW001, MW002 and MW003) were installed with 10 ft of screen. screens were set 7 ft into and 3 ft above the water table at the time of installation - approx. 1 ft of LNAPL, similar to gasoline, was detected and observed in MW002, located on the southwestern corner of the site ------ - groundwater samples were collected from two wells MW001 and MW003 - in Dec. 2012, three soil vapor samples were collected - no contamination found in soil, groundwater or soil vapor samples - well MW002 was installed near boring SB009 where strong petroleum odors were noted below 8 ft depth - as per well logs, screen in wells MW001 and MW003 were installed below water table 3) Progress Report No. 3 dated 02/27/2014: - nine USTs were removed between 01/08/14 and 01/21/14 - as per tank removal affidavit dated 01/16/14, total of eight (8) 1,000 gal #2 oil USTs and one (1) 3,000 gal #6 oil UST were removed, but as per PBS application dated 05/20/14 shows seven (7) 1,000 gal diesel USTs, one (1) 550 gal gasoline UST and one (1) 3,000 gal #2 oil UST - the seven (7) 1,000 gal USTs were in group located in northeast corner of the site - the 550 gasoline UST was located along northern property line in western portion of the site - the 3,000 gal (#2 or #6 oil) UST was located in west-central portion of the site - 3,060 gal of residual liquid and 14 drums of tank bottoms removed - total of 21 endpoint samples (EP001 to EP 021) were collected from northeast corner of the site where 7 USTs were located in group - four endpoint sidewall samples were collected from location of tank #8 (gasoline UST - SW005 to SW008) and tank #9 (#2 or #6 oil UST - SW001 to SW004) - all samples were collected at 6 ft depth - no contamination found in endpoint samples, but detection limits were high for sidewall sample SW004 which was taken from west sidewall of #2/#6 oil tank excavation 4) Remedial Investigation Report dated 04/30/14: - a geophysical survey conducted on 07/09/13 - due to reinforced concrete, suspect tanks could not be confirmed within eastern interior of the building - cut and capped fill/vent lines were noted on west exterior wall.

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

there was no indication that the lines went beneath the building slab and were likely connected to an AST at one time - an anomaly consistent with a UST was located in the north parking lot perpendicular to the sidewalk of Wallabout street (tank # 8) - on 08/28/13, during removal of the former buildings concrete foundation, one additional anomaly (tank #9) was identified in the southwestern portion of the property ---------- - total of fifteen (15) pits and one concrete vault were identified - fourteen of the fifteen pits were determined to have concrete walls and bottoms - FD016 was determined to have and earthen bottom - several of the structures appeared to discharge into the large concrete vault and several of the structures were piped in the direction of the municipal sewer system - seven (7) soil borings (SB017 through SB023) were installed to a depth of 16 ft bg - shallow soils, ranging from 0 to 8 ft bg were characterized as mostly non-native, historic fill material consisting of brown silty sands. deeper soils, ranging from 8 to 15 ft bg were characterized as mostly gray, low-plasticity, silty clay - no contamination noted in soil samples - four (4) 2-in observation wells (OB001 through OB004), with 10 ft of screen, were installed to determine horizontal extent of LNAPL in the vicinity of MW002 - two (2) 2-in monitoring wells (MW004 and MW005), with 10 ft of screen, were installed - based on well gauging results, groundwater beneath the site flows towards the west-northwest ---------- - groundwater samples were collected from three temporary groundwater sampling points (SB020, SB021 and SB022), two monitoring wells (MW004 and MW005) and one observation well (OB003) - on 09/18/13, LNAPL found in two monitoring wells and three observations wells - source of LNAPL is likely related to UST identified in the southwest portion of the property - no contamination noted in groundwater samples - four (4) soil vapor sampling points (SV004 through SV007) were installed - found Benzene (821 ug/m3) and TCE (143 ug/m3) in soil-vapor samples product thickness on 09/18/13: MW002------2.48 ft MW005------4.95 ft OB001------4.91 ft OB002------sheen OB004------0.02 ft 5) Site Management Plan dated Dec. 2014: - nine USTs were removed - seven USTs (Tank 1 through 7) were identified within a subsurface concrete encasement in the northeast corner of the property - Tank 8 was located in the northwest corner (as per site map, tank was along northern property line in western portion) of the property and found to be encased in concrete --------- - Tank 9 was located in southwest corner (as per site map, tank was in west-central portion) of the property ---------- - the USTs were found to be in poor condition with corrosion holes visually observed in Tanks # 4, 6 and 9 ranging in size up to 1/2 inch in diameter - groundwater was encountered beneath Tank #8 and 9 and LNAPL was visually observed on the water table - there was no signs of petroleum impact beneath the northeast tanks - since there was no evidence of a discharge and there was no groundwater beneath the USTs in the northeast corner of the property, discrete center line soil samples were collected from beneath the former location of the USTs (total 21 samples) - since there was evidence of a discharge and groundwater was encountered beneath Tank # 8 and 9, sidewall samples were collected (total 8 samples) - soils were excavated to a minimum depth of 10 ft bg within the footprint of the proposed building - soils were excavated to 8 ft bg in the portion of the site to be used for the future school expansion ---------- - LNAPL removed through dewatering and VEFR events - LNAPL migration mitigated through the use of the steel sheeting installed at the

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

property's perimeter ---------- - installed a vapor barrier/water proofing membrane under the building's foundation as per Final Engineering Report/Construction Completion Report dated 12/10/14, total of 18,900 gal of LNAPL/groundwater was removed from (excavation and wells) the site. DEC issued a Certificate of Completion on 12/23/14. Andy Lockwood PW Grosser **BCP consultant** Ph. (631) 589-6353 (516) 315-9238 email: AndyL@pwgrosser.com B.C.G. Sales, Inc. **owner from July 1977 to Aug. 2012** Moshe Gewurtz / Dov Kurland **info from online records** 751 Kent Avenue Brooklyn, NY 11211 Ph. (718) 596-4000 Northland LLC. / Starwood LLC. / 74 Wallabout LLC. **property owners/developers** review of Phase I report (dated 10/12/2006), Supplemental Phase II ESA (dated January 2013) and RIR (dated 04/30/2014) suggests that presence of heating oil (#2 or #6) UST in west-central portion of the site was not known until removal of former building concrete foundation. ---------- phase I report from Middleton Env. mentioned that review of available Sanborn Fire Insurance Maps did not indicate the presence of any buried tanks on the subject site. but site history section of supplemental Phase II report from PWGC states that a review of historical Sanborn Fire Insurance Map performed as part of the Phase I ESA indicated that two gasoline underground storage tank (UST) existed inside the building. ========== 1:57 PM:- spoke with Andy at PW Grosser and inquired him about well gauging data. Andy believes that off-site wells were free of product after on-site remediation/dewatering and all wells have been closed. he will send documents for review. 2:33 PM:- received email from DEC Forster including daily reports 07/23/14 to 09/1/14. 3:08 PM:- received email from Ryan Morley (ryanm@pwgrosser.com) including two daily reports (both dated 09/16/14)and a site map (dated 09/18/13). both daily reports have same date (09/16/14) at top, bottom of pages include different dates (09/16/14 and 09/17/14). Ryan mentioned that last two gauging events occurred in Sep. 2014 before work was completed in Dec. 2014. product thickness (in ft):

10/30/17-Hiralkumar Patel. 8:54 AM:- spoke with Andy. he confirmed that daily reports submitted on 10/27/17 are from two different days and last well gauging occurred in Sept. 2014. 11/01/17-Hiralkumar Patel. received email from Ryan Morley (at 1:41 PM on 10/31/17) from PW Grosser stating that wells MW005, OB003 and OB004 are currently viable at the site. 11/13/17-Hiralkumar Patel. 4:08 PM:- sent email to Jennifer Lawrence at Environmental Assessment & Remediation including a standby contractor authorization form for gauging of three existing off-site wells, removal of any LNAPL found, sampling of groundwater for VOC/SVOC analyses and report preparation/submission. asked Jennifer to schedule well gauging work.

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

4:21 PM:- sent email to Melissa Hass at TestAmerica including a standby contractor authorization form for VOC/SVOC and fingerprint analyses of groundwater/product samples. 11/15/17-Hiralkumar Patel. 12:21 PM:- received email from Jennifer. she mentioned that Erin Quell will be managing this project, and well gauging has been scheduled for tomorrow. 11/16/17-Hiralkumar Patel. 12:30 PM:- visited site with DEC Lin and met Michael Ford (EAR technician). three monitoring wells (MW005, OB003 and OB004) were gauged and found product in well MW005. product thickness could not be found due to it's viscosity. product samples have been collected for waste characterization/fingerprint analyses. 1:11 PM:- spoke with Erin. based on field observations, asked Erin to schedule three weekly VEFRing followed by well regauging. also asked her to replace damaged well cap (OB003) and well cover plate (MW005). Erin mentioned that weekly VEFRing will be scheduled after receiving product sample results. 12/01/17-Hiralkumar Patel. 9:31 AM:- received email from Erin including waste characterization sample results. report did not include result of fingerprint analysis. 12/06/17-Hiralkumar Patel. 11:14 AM:- received email from Erin. she mentioned that first VEFRing will occur tomorrow by Island Pump and Tank. 12/07/17-Hiralkuamr Patel. 9:46 AM:- received call from Erin. she mentioned that vacuum truck is in area, but could not remove product from the impacted well due to parked vehicles. asked Erin to have crew wait for sometime and pump out well if parking space become available. also asked her about result of fingerprint analysis and replacement of damaged well cap/cover. Erin mentioned that product sample collected on 11/16/17 was not analyzed for fingerprinting. she will check with on-site tech and ask to collect product sample today, if necessary tools are available, otherwise product sample will be collected next time. she will also schedule well repair during next visit. 12:30 PM:- received call form Erin. she mentioned that crew was able to remove product from well MW-5. crew used interface probe capable of gauging thick product and noted 6.5 ft product in the well prior to pump out. crew conducted multiple pump outs with approx. 15 minutes intervals in-between and gauged well between pump outs. total of 6 pump outs were conducted. at the end, 0.4 ft of product noted in the well. asked Erin to schedule next pump out in afternoon on 12/14/17. 1:13 PM:- left message in general mail box at Rabsky Development, entity listed as owner in DOB permit application filed on 06/19/13. Rabsky Development **owner listed in DOB application submitted in 2013. 505 Flushing Avenue Brooklyn, NY 11205 Attn.: Simon Dushinsky / Raphael Ph. (718) 246-4762 email: rabskygroup@thejnet.com 1:22 PM:- sent email to Erin and asked her to schedule next pump in afternoon on 12/14/17. also asked her to collect product sample for fingerprint analysis and repair damaged wells during next pump out. email copied to Jennifer. 12/08/17-Hiralkumar Patel. 9:52 AM:- spoke with Sam (347-761-2185), building super and requested assistance to reserve some parking spots near well MW5 on 12/14/17. Top Quality Management **building management** 199 Lee Avenue #286 Brooklyn, NY 11211 Attn.: Esty **property manager** Ph. (718) 522-6582 Ext. 103 10:02 AM:- spoke with Erin. she confirmed next pump out on 12/14/17. 3:38 PM:- received email from Erin including data tables summarizing groundwater gauging data and VEFRing event on 12/07/17. Erin mentioned that manhole covers can not be secured because the tabs have been broken of the rings and they have to replace the entire manhole to fix it. 12/12/17-Hiralkumar Patel. 2:56 PM:- approved invoice (# 46288085) from TestAmerica for waste characterization

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

analysis. 12/14/17-Hiralkumar Patel. 1:40 PM:- received message from Erin. 1:42 PM:- spoke with Erin. she mentioned that 2.8 ft of product was noted in well MW005 at beginning. product sample has been collected for fingerprint analysis. the well was vacuumed out for about 30 minutes. crew has been gauging well for 40 minutes after pump out and found no more product accumulation. asked Erin not to continue pump out today and to schedule weekly pump out until further notice. 12/15/17-Hiralkumar Patel. 3:07 PM:- received email from Erin including updated table summarizing data collected to date. 12/21/17-Hiralkumar Patel. 1:10 PM:- received call from Erin. Island Pump gauged wells and found 1.41 ft product in well MW005. after VEFRring for 45 minutes, no more product noted in the well. based on decreased amount of product in the well, next VEFRring will occur after two weeks. 12/27/17-Hiralkumar Patel. 9:25 AM:- received email from Erin including updated table summarizing data collected to date. she mentioned that Island Pump will be at site at noon on 01/04/18. 12/28/17-Hiralkumar Patel. 1:25 PM:- received email from Erin including fingerprint result. lab report indicates that sample contained a petroleum product within most closely resembles degraded #4 oil. ---------- 01/03/18-Hiralkumar Patel. 1:45 PM:- received call from Erin. she mentioned that tomorrow's VEFR event has been cancelled due to snow forecast. 01/08/18-Hiralkumar Patel. 1:24 PM:- received email from Erin stating that next vacuum event has been scheduled for 01/11/18. 01/10/18-Hiralkumar Patel. 1:38 PM:- approved invoice (# 46289471) from TestAmerica for fingerprint analysis. 01/11/18-Hiralkumar Patel. 12:15 PM:- visited site and met Mike (EAR). on-site wells were gauged and found 0.75 ft of product in well MW-5. well MW-5 was VEFRred for approx. 30 minutes. no product noted in well when re-gauged 15 minutes after VEFRring. well MW-5 will be VEFRred again today. 2:03 PM:- received call from Erin. asked her to continue weekly VEFRring. 01/16/18-Hiralkumar Patel. received email from Erin (at 4:17 PM on 01/15/18) including updated table summarizing data collected to date. next gauging will occur on 01/18/18. 01/22/18-Hiralkumar Patel. 12:59 PM:- received call from Erin. 0.75 ft of product was found in well MW-5 prior to VEFRing on 01/18/18. after 45 minutes of VEFRing, well was recharged with 0.05 ft of product. 01/25/18-Hiralkumar Patel. received email from Erin (at 9:57 AM on 01/24/18) including updated table summarizing data collected to date. 02/01/18-Hiralkumar Patel. 1:37 PM:- received call from Erin. she mentioned that crew from EAR and Island Pump responded were on-site to gauge and VEFR the well. EAR technician noted upto 0.47 ft of product in the well at the beginning. no product was noted in the well 15 minutes after first round of VEFRring. Erin mentioned that towards the end of work, an another vehicle struck the vacuum truck. driver of the other vehicle tried to escape after the accident. no-one was hurt in the accident, but the vacuum truck was damaged and need to be towed. Erin also mentioned that crew had to park vacuum truck in the 'no parking' zone due to parking issues near the well location. 1:44 PM:- spoke with DEC Karen Quinn who handles contract payments. informed Karen about accident at the site and damaged vacuum truck. 1:56 PM:- approved invoice (# 121292-121299) from EAR for work performed (project review, well gauging/product recovery, and lab coordination) between 11/14/17 and 11/30/17. 02/09/18-Hiralkumar Patel. 9:49 AM:- approved invoice (# 121685-121704) from EAR for work performed (project review, well gauging/product recovery, and coordination) between 12/01/17 and 12/31/17. 02/12/18-Hiralkuamr Patel. 9:46 AM:- sent email to Erin and

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

Jennifer including a revised standby contractor authorization form. 1:23 PM:- received email from Erin stating that next well gauging/VEFRring will occur on 04/14/18. 02/14/18-Hiralkumar Patel. 10:10 AM:- received email from Erin including groundwater gauging data table. 12:33 PM:- received call from Erin. she mentioned that wells at the site will not be gauged today as crew working at another site. asked Erin to gauge/VEFR wells next week. 03/05/18-Hiralkumar Patel. 12:44 PM:- approved invoice (# 122366-122379) from EAR for work performed (project review, well gauging/product recovery, and coordination) between 01/01/18 and 01/31/18. 03/14/18-Hiralkumar Patel. 3:11 PM:- received email from Erin stating that well gauging/VEFRing will occur tomorrow. 03/22/18-Hiralkumar Patel. received email from Erin (at 11:56 AM on 03/21/18). VAC event scheduled for today has been cancelled due to weather. 03/30/18-Hiralkumar Patel. 10:59 AM:- received email from Erin including well gauging data table. 0.48 ft of product noted in well MW-5 on 03/29/18. 04/02/18-Hiralkumar Patel. discussed available well gauging data with DEC Austin. due to continuous accumulation of product in well MW-5, he asked to review available reports under BCP # C224172 to find details about soil profile and site-specific groundwater flow direction. based on review of available on-site investigation data, more monitoring well(s) may be needed downgradient of the site. 04/03/18-Hiralkumar Patel. 12:09 PM:- spoke with Erin and asked to hold future well gauging/VEFRing activities until further notice. 04/05/18-Hiralkumar Patel. 2:38 PM:- approved invoice (# 123114-123127) from EAR for work performed (project review, well gauging/product recovery, and coordination) between 2/1/18 and 2/28/18. 05/10/18-Hiralkumar Patel. 9:18 AM:- approved invoice (# 123783-123802) from EAR for work performed (project review, well gauging/product recovery, coordination and waste disposal) between 02/21/18 to 03/30/18. 2:33 PM:- sent email to Erin including revised standby contractor authorization form. 06/11/18-Hiralkumar Patel. 10:56 AM:- approved invoice (# 124479-124486) from EAR for project review/coordination between 04/01/18 and 04/30/18. 06/19/18-Hiralkumar Patel. review of available reports indicates presence of degraded #4 oil in monitoring well MW005 which is located down-gradient of former on-site heating oil tank #9. there is conflicting info about grade of fuel oil stored in tank #9: tank removal affidavit shows storage f #6 oil, but PBS application shows storage of #2 oil. 9:58 AM:- sent email to Erin and asked her to schedule well gauging/VEFRring (last gauging was three months ago on 03/29/18). 06/28/18-Hiralkumar Patel. 12:50 PM:- received email from Erin. they gauged wells today and found approx. 1.2 ft of product in well MW-5. 06/29/18-Hiralkumar Patel. discussed with DEC Obligado. based on review of available information, Obligado agreed with replacement of existing well MW-5 with a larger diameter well and passive product recovery using absorbent socks. 07/02/18-Hiralkumar Patel. discussed with DEC Austin. instead of expanding existing well MW-5, he asked to install three additional wells: one on east sidewalk of Kent Ave and south of existing well MW-5, one on east sidewalk on Kent Ave north of existing well MW-5, and one on west sidewalk of Kent Ave down-gradient of existing well MW-5. 07/09/18-Hiralkumar Patel. 12:39 PM:- sent email to Erin including a site map with possible off-site well location markings. 12:39 PM:- spoke with Erin. informed her that the department requires off-site wells to further delineate groundwater impact. asked her to install 4 inch diameter wells to a depth of at least 20 ft bg, with

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

15 ft of screen. as current PIN lab contracts have expired and new contracts are being negotiated, asked Erin to install wells now only if they can find lab as sub-contractor, otherwise wells should be installed once PIN lab contracts are approved. informed her that soil must be screened and sampled (# of soil samples will depends of field indication of impact) for 8260/8270 analysis. based on findings of product on groundwater, either groundwater samples should be collected for 8260/8270 analyses or product sample should be collected for fingerprint analysis. Erin mentioned that they may request for sidewalk closing permit (if possible) due to parking issues in the area. 07/10/18-Hiralkumar Patel. received email from Erin (at 4:31 PM on 07/09/18) summarizing off-site groundwater investigation discussed yesterday. she inquired if groundwater from well development needs to be drummed. 9:11 AM:- spoke with DEC Lisa Lewis about status on approval of lab contracts. she mentioned that lab contracts are being reviewed and approval may occur in couple of months. 9:19 AM:- sent email to Erin and asked her to proceed with off-site well installation as discussed yesterday. asked her to drum and properly dispose groundwater from well development. 07/11/18-Hiralkumar Patel. 8:28 AM:- approved invoice (# 125307-125308) from EAR for project review/coordination in May 2018. 08/17/18-Hiralkumar Patel. 1:14 PM:- approved invoice (# 126103-126106) from EAR for project review/coordination/VEFR in June 2018. 09/11/18-Hiralkumar Patel. 9:21 AM:- approved invoice (# 126789-126797) from EAR for planning for additional well installation work. 10/05/18-Hiralkumar Patel. 2:11 PM:- approved invoice (# 127774-127780) from EAR for disposal of contaminated water. (DEC Karen OKed typo in work date on page # 18). 10/11/18-Hiralkumar Patel. 9:59 AM:- received call from Erin inquiring about following: - need for trip blank/field blank: yes during new well installation - type of container for VOC analysis: asked Erin to use simple glass jars for VOC analysis (any result less than 200 ppb will be flagged biased low) - # of product sample: product sample from each new well (if found) and from one existing wells (to compare results between existing and new well) - need for TICs for VOCs/SVOCs: no 10/12/18-Hiralkumar Patel. 10:17 AM:- sent email to Melissa at TestAmerica including a revised standby contractor authorization form (due to a new contract #). 10/18/18-Hiralkumar Patel. 12:16 PM:- sent email to Erin including a sidewalk permit request letter. 10/29/18-Hiralkumar Patel. 2:00 PM:- visited site and met Joy Sauer (516-983-6549) and crew from ADT drilling. EAR completed well (MW-6) installation west side of Kent Ave. no high PID readings were noted but some stained soil (not necessarily petroleum impacted) was noted below water table. 10/30/18-Hiralkumar Patel. 9:30 AM:- visited site and met Joy. at the time of inspection, crew was installing well (MW-7) east side of Kent Ave, north of existing well MW-5. no PID readings were noted until 7.5 ft bg, but noted more than 15,000 ppm on PID between 7.5 and 12.5 ft depth. petroleum odors were noted in soil below 7.5 ft depth. asked Joy to collect multiple soil samples (one above water table, one at groundwater interface and one towards end of boring) from each boreholes. based on high PID readings during installation of well MW-7, inspected site 12 Franklin Ave which is located up-gradient of well MW-5 and has oil tank. site 12 Franklin Ave has an AST on saddles and no signs of spill noted from the tank. building representative mentioned that the tank was installed prior to 1983. also inspected sump pit located in underground garage at the subject site. the sump pit is located along Wallabout St (site's

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

northern boundary), in central section. no product/sheen was noted in the sump. no petroleum odors were noted in the garage. 1:07 PM:- received call from Erin. she mentioned that crew completed drilling of the third well (MW-8) on east side of Kent Ave, south of existing well MW-5. less than 300 ppm was recorded on PID in soil below 7.5 ft depth, but free phase product was noted in soil. Erin mentioned that the PID meter was recalibrated prior to installation of well MW-8. based on field observations and PID readings during installation of MW-8, Erin suspects some sort of issue with PID meter during installation of well MW-7 (meter read more than 15,000 ppm in soil in MW-7, but less than 300 ppm in soil in MW-8 even with free product in MW-8). based on available information, asked Erin for following: - multiple soil samples from each boreholes (sampling depths were discussed based on PID values and boring depth) - groundwater sample from all wells where no product noted - product sample from all wells where noted - VEFRring of impacted wells next week
11/02/18-Hiralkumar Patel. received email from Erin (at 6:06 PM on 10/31/18). she mentioned that EAR plans to return to the site the week of November 12 for fingerprinting and groundwater sampling. the plan is to gauge for DTW/DTP and collect groundwater samples from OB003, OB004, MW005, MW006, MW007 and MW008. fingerprinting samples will be collected from all wells with product. she inquired about well survey and groundwater samples from wells with product. sent email to Erin (at 7:00 AM on 11/01/18) and informed her that no need for well survey at this time, and not to collect groundwater samples from wells with product. 11/14/18-Hiralkumar Patel. 12:42 PM:- received email from Erin. they gauged and sampled on-site wells and noted product in well MW005 (1.75 ft) and sheen on purged water from OB003 and OB004. 3:08 PM:- received email from Erin including result of soil samples collected during installation of well MW006 (5-10 ft and 10-12.5 ft bg) on 10/29/18. no contamination noted in soil samples from MW006. 3:13 PM:- received email from Erin including result of soil samples collected during installation of wells MW007 and MW008. two soil samples were collected from both wells. no contamination noted in soil samples except 1,600 ppb Benzene in soil sample from 5-7.5 ft depth in MW008. 11/19/18-Hiralkumar Patel. 2:41 PM:- received email from TestAmerica including result of product fingerprint analysis. product sample was collected from well MW005 on 11/08/18. sample contained petroleum product which most closely resembles #6 fuel oil. 11/23/18-Hiralkumar Patel. 2:49 PM:- approved invoice (# 128471-128476) from EAR for project coordination in Sept. 2018. 11/27/18-Hiralkumar Patel. 2:36 PM:- received email from Erin including result of groundwater samples collected on 11/08/18. groundwater samples were collected from wells MW-X (blind duplicate sample as per email from Erin dated 12/07/18), OB003, OB004, MW006, MW007 and MW008. minor contamination noted in wells MW-X (1,033 ppb total BTEX) and OB003 (247 ppb total BTEX). 11/30/18-Hiralkumar Patel. 1:22 PM:- sent email to Erin including a revised standby contractor authorization form with increased budget.
12/07/18-Hiralkumar Patel. 1:44 PM:- sent email to Erin. asked her to gauge on-site wells (no product recovery at this time) and collect product sample, if noted in wells other than MW005. also asked her to submit detailed logs (including PID/visual/olfactory observations, soil type etc.) for recently installed monitoring wells. 1:57 PM:- approved invoice (# 129500-129517) from EAR for project coordination, mark-out and installation of wells MW006/MW007/MW008.
12/11/18-Hiralkumar Patel. 11:34 AM:- received call from Erin. she

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

mentioned that technician went to site to gauge (no VEFRring) existing wells and noted product in wells MW005 (2 ft), MW007 (0.03 ft) and MW008 (0.01 ft). as last VEFR occurred in June 2018, asked Erin to VEFR existing wells next week. 12/12/18-Hiralkumar Patel. 1:36 PM:- approved invoice (# 4600006924M) from TestAmerica for analysis of soil samples collected during installation of wells MW006/MW007/MW008 (10/29/18 and 10/30/18), product sample from MW005 (11/08/18) and groundwater samples from existing wells (11/08/18). 12/13/18-Hiralkumar Patel. 11:12 AM:- spoke with Erin. asked her to submit an update report, after next week's VEFR event, including summary of work performed to date. 01/09/19-Hiralkumar Patel. 9:11 AM:- approved invoice (# 129959-129973) from EAR for project coordination and groundwater/product sampling work conducted in month of Nov. 2018. 02/06/19-Hiralkumar Patel. 1:09 PM:- approved invoice (# 131267-131279) from EAR for report preparation, well gauging and VEFRring conducted in month of Dec. 2018. 03/01/19-Hiralkumar Patel. 2:48 PM:- approved invoice (# 131833-131841) from EAR for report preparation. 03/15/19-Hiralkumar Patel. received email from Joy (at 2:38 PM on 03/14/19) including site summary report. report includes summary of field activities conducted between Nov. 2017 and Dec. 2018. groundwater purging and field screening were not conducted on OB003, OB004 and MW005 due to sheen in well OB003/OB004 and measureable LNAPL in MW005. product sample from MW005 was collected for fingerprint analysis on 12/14/17 and 11/08/18. on 12/1/17, sample contained a petroleum product which most closely resembles degraded #4 fuel oil. on 11/08/18, sample contained a petroleum product which most closely resembles #6 fuel oil. silty clay was noted below 5 ft depth during installation of wells MW006, MW007 and MW008. lab report shows higher VOC detection in duplicate groundwater sample (MW-X: 1,033 ppb total BTEX) from well OB003 (247 ppb total BTEX). also, there was sheen noted on groundwater sample from OB003. during well gauging and VEFRring in Dec. 2018, product was noted in wells MW005 (1.5 to 2 ft), MW007 (0.03 to 0.13 ft) and MW008 (0.01 to 0.02 ft). 03/25/19-Hiralkumar Patel. 10:14 AM:- sent email to Joy and asked her to schedule weekly vac events for four weeks, beginning with first week of Apr. email copied to Jennifer and Robert. 04/11/19-Hiralkumar Patel. 10:25 AM:- approved invoice (# 132579-132588) from EAR for waste disposal and report preparation/submission, conducted in month of Feb. 2019. 05/06/19-Hiralkuma Patel. representative of property at 376-378 Flushing Ave (BCP #: C224264) submitted permit application for dewatering at their site. site 376 Flushing Ave is located south of Flushing Ave, across the street from the subject site (74 Wallabout St). the department staff (legal, spills and section A) discussed proposed dewatering plans internally and with the applicant due to possibility of migration of free phase product noted on east side of Kent Ave (in wells MW005, MW007 and MW008). DEC legal issued a letter on 05/03/19 to representative of 376 Flushing Ave with following comments (in reference to free phase product at 74 Wallabout St): - the department will undertake all NAPL recovery and vacuum recovery activities in existing well MW005 - the volunteer (BCP applicant for 376 Flushing Ave) will install a sentinel monitoring well on north side of Flushing Ave approx. 75 ft east of the corner of the new building constructed on the Former Arkansas Site (74 Wallabout St). the well should be screened across the observed water table and should be constructed with at least 15 ft of screen below the water table. the well should be 4 in. in dia. to allow for NAPL recovery if necessary. - should NAPL be observed to

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

have migrated into the sentinel well following the initiation of dewatering on the site (376 Flushing Ave), the department will identify any specific actions to abate or mitigate the movement of contamination, which shall be undertaken by the volunteer (376 Flushing Ave) 05/13/19-Hiralkumar Patel. 7:57 AM:- approved invoice (# 133002-133007) from EAR for project review/coordination conducted in month of Mar. 2019. 05/15/19-Hiralkumar Patel. 11:56 AM:- received email from Joy including summary of well gauging/vac event conducted on 04/04/19, 04/11/19, 04/18/19, 05/02/19 and 05/09/19. no gauging activities occurred between 12/20/18 and 04/04/19. after Dec. 2018, product noted in wells MW005 (0.58 to 1.68 ft), MW007 (0.01 to 0.16 ft) and MW008 (0.03 to 0.58 ft). discussed available well gauging/product recovery data with DEC Austin, and decided to continue monthly well gauging/VEFRring. 3:08 PM:- sent email to Joy and asked her to continue monthly well gauging/vacuum recovery and data submission until further notice. 06/05/19-Hiralkumar Patel. 8:48 AM:- received email from DEC Zheng stating that sentinel well (under BCP #: C224264) will be installed on 06/07/19. 06/06/19-Hiralkumar Patel. 9:18 AM:- approved invoice (# 133932-133944) from EAR for project coordination/VEFR conducted in month of Apr. 2019. 06/07/19-Hiralkumar Patel. 11:17 AM:- received email from Joy including summary of well gauging/vac event conducted on 06/06/19. found product in well MW005 (0.81 ft) and MW008 (0.04 ft). 07/05/19-Hiralkumar Patel. 12:51 PM:- approved invoice (# 134788-134802) from EAR for project coordination/VEFR conducted in month of May 2019. 08/26/19-Hiralkumar Patel. received email from Joy (at 2:06 PMon 08/05/19) including summary of well gauging/vac event conducted on 07/11/19 and 08/01/19. on 07/11/19, product noted in wells MW005 (0.93 ft), MW007 (0.31 ft) and MW008 (0.31 ft). on 08/01/19, product noted in wells MW005 (0.82 ft), MW007 (0.19 ft) and MW008 (0.16 ft). DEC Jane sent email (at 4:07 PM on 08/13/19) to Joy approving weekly gauging of wells MW006, MW008, OB003 and OB004; in reference to dewatering activities at adjacent BCP site (C224264). 9:34 AM:- approved invoice (# 135328-135337) from EAR for project coordination/VEFR conducted in month of June 2019. 2:56 PM:- sent email to Joy and asked her to gauge all monitoring wells weekly using interface probe. 08/30/19-Hiralkumar Patel. 2:33 PM:- received email from Joy including weekly gauging data for Aug. 2019. during weekly gauging, all wells were gauged except MW005 and MW007. found product in well MW008 during all four weekly gauging (between 0.16 and 0.29 ft). 09/03/19-Hiralkumar Patel. 9:40 AM:- spoke with Joy and asked her to continue weekly gauging of all wells and monthly VAC of impacted wells. 09/10/19-Hiralkumar Patel. received email from Joy (at 4:52 PM on 09/09/19) including well gauging data table/hydrographs. data suggests that wells OB-003, OB-004, MW-005 and MW-008 are being influenced by the nearby dewatering. received email from Joy (at 5:09 PM on 09/09/19) including well gauging data/VAC recovery summary. all wells were gauged on 09/05/19 and product was noted in wells MW005 (1.10 ft), MW007 (0.61 ft) and MW008 (0.29 ft). product was recovered using vacuum from three affected wells. 09/16/19-Hiralkumar Patel. received email from Joy (at 6:44 PM on 09/13/19) including weekly well gauging data. all wells were gauged on 09/13/19 and product was noted in wells MW005 (0.96 ft), MW007 (0.61 ft) and MW008 (0.26 ft). 9:28 AM:- approved invoice (# 136185-136193) from EAR for project coordination/VEFR conducted in month of July 2019. 09/23/19-Hiralkumar Patel. received email from Joy (at 6:14 PM on 09/20/19) including weekly well gauging data. all

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

wells were gauged on 09/20/19 and product was noted in wells MW005 (0.98 ft), MW007 (0.59 ft) and MW008 (0.19 ft). Pat Benedetto EAR Ph. (631) 447-6400 Ext. 159 email: benedetto@enviro-asmnt.com 10/03/19-Hiralkumar Patel. 2:58 PM:- received call from Pat. he mentioned that they visited the site today for well gauging/VEFRing, but could only gauge the wells due to parking issue. asked Pat to VEFR wells during next weekly event. 10/07/19-Hiralkumar Patel. received email from Pat (at 4:01 PM on 10/04/19) including weekly gauging data. he mentioned that wells MW006, MW007 and MW008 were removed from hydrographs as these wells were never surveyed and casing elevations have not been established. all wells were gauged on 09/26/19 and 10/03/19. on 09/26/19, product was noted in wells MW005 (1.04 ft), MW007 (0.63 ft) and MW008 (0.28 ft). on 10/03/19, product was noted in wells MW005 (0.05 ft), MW007 (0.60 ft) and MW008 (1.12 ft). 8:53 AM:- sent email to Pat and asked him to survey missing wells. email copied to Jennifer (EAR), Robert (EAR), DEC O'Connell, DEC Zheng and DEC Martinkat. 10/10/19-Hiralkumar Patel. 10:01 AM:- approved invoice (# 137125-137145) from EAR for project coordination/well gauging/VEFR conducted in month of Aug. 2019. 10/24/19-Hiralkumar Patel. 2:59 PM:- received email from Pat including weekly gauging data. all wells were gauged on 10/10/19 and 10/18/19. on 10/10/19, product was noted in wells MW005 (1.04 ft), MW007 (1.12 ft) and MW008 (0.52 ft). on 10/18/19, product was noted in wells MW005 (1.20 ft), MW007 (0.79 ft) and MW008 (0.13 ft). 10/31/19-Hiralkumar Patel. received email from Pat (at 4:45 PM on 10/30/19) including weekly gauging data. all wells were gauged on 10/24/19 when product was noted in wells MW005 (1.49 ft), MW007 (0.86 ft) and MW008 (0.13 ft). 11/01/19-Hiralkumar Patel. received email from DEC Jane (at 3:43 PM on 10/31/19). she mentioned that owner of site 347 Flushing Ave has applied for dewatering permit. as this site is not part of BCP, Section A will not be monitoring dewatering activities at site 347 Flushing Ave which may affect groundwater quality at 74 Wallabout St. site 347 Flushing Ave is approx. 425 ft west of site 74 Wallabout St. 11/12/19-Hiralkumar Patel. received email from Pat (at 4:10 PM on 11/07/19) including weekly gauging data. all wells were gauged on 10/31/19 when product was noted in wells MW005 (1.48 ft), MW007 (0.76 ft) and MW008 (0.26 ft). received email from DEC Caitlyn Nochols (at 1:23 PM on 11/08/19) including copy of dewatering permit (# 2-6101-01394/00001) for site 347 Flushing Ave. the permit requires: 1) installation of sentinel monitoring wells (4 inch diameter wells with at least 15 ft of screen across the water table) on west side of Kent Ave, approx. 50 and 100 ft north of corner of Flushing Ave to monitor drawdown between 347 Flushing Ave and 74 Wallabout St 2) monitoring of water table elevation in wells prior to commencing dewatering activities, and then daily during dewatering activities 3) weekly submission of groundwater monitoring results 4) plan to abate or mitigate movement of contamination, if observed in sentinel wells following initiation of dewatering 11/18/19-Hiralkumar Patel. received email from Pat (at 3:40 PM on 11/15/19) including weekly gauging data. all wells were gauged on 11/07/19 and 11/13/19. on 11/07/19, product was noted in wells MW005 (1.32 ft), MW007 (0.76 ft) and MW008 (0.09 ft). on 11/13/19, product was noted in wells MW005 (1.28 ft), MW007 (0.78 ft) and MW008 (0.08 ft). 1:13 PM:- approved invoice (# 137660-137677) from EAR for project coordination/well gauging/VEFR conducted in month of Sept. 2019. 11/25/19-Hiralkumar Patel. 2:59 PM:- received email from Pat including weekly gauging data. all wells were gauged

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

on 11/20/19 when product was noted in wells MW005 (1.59 ft), MW007 (1.21 ft) and MW008 (0.23 ft). 12/03/19-Hiralkumar Patel. received email from Pat (at 3:38 PM on 12/02/19) including weekly gauging data. all wells were gauged on 11/27/19 when product was noted in wells MW005 (2.34 ft), MW007 (1.01 ft) and MW008 (0.12 ft). 12/26/19-Hiralkumar Patel. 3:02 PM:- approved invoice (# 138437-138460) from EAR for project coordination/well gauging/VEFR conducted in month of Oct. 2019, and invoice from Island Pump & Tank for VEFR/disposal between 04/04/19 to 11/07/19. 01/13/20-Hiralkumar Patel. 9:32 AM:- approved invoice (# 139131-139152) from EAR for project coordination/well gauging/VEFR conducted in month of Nov. 2019. 01/16/20-Hiralkumar Patel. 3:24 PM:- received email from Pat including weekly gauging data collected in month of Dec. 2019. during four weekly gauging events, wells OB003 and OB004 were found dry. no product was noted in well MW006. product was noted between 1.46 to 1.74 ft in MW005, 1.05 to 1.06 ft in MW007, and 0.19 to 0.28 ft in MW008. 01/24/20-Hiralkumar Patel. 2:29 PM:- received email from Pat including well gauging and vacuum summary tables. wells MW005, MW007 and MW008 were vacuumed on 01/16/20. 01/30/20-Hiralkumar Patel. 3:25 PM:- received email from Pat including weekly gauging data collected in month of Jan. 2020. during four weekly gauging events, wells OB003 and OB004 were found dry. no product was noted in well MW006. product was noted between 1.18 to 1.89 ft in MW005, 0.61 to 1.57 ft in MW007 and 0.08 to 0.26 ft in MW008. 02/03/20-Hiralkumar Patel. 1:26 PM:- spoke with Mr. Brunner, representative of site 347 Flushing Ave. inquired him about status on installation of sentinel wells as part of dewatering permit (# 2-6101-01394/00001). he mentioned that the work has not begun yet and asked to contact Luzey Weiss who manages the site. Joseph Brunner Flushing Avenue Realty Holdings, LLC. Ph. (718) 302-2171 email: byd321@yahoo.com 1:28 PM:- spoke with Mr. Weiss. he mentioned that the sentinel wells have not been installed yet. asked him to provide contact details for the environmental contractor who will be managing well installation/monitoring. Luzey Weiss Ph. (718) 599-1105 Ext. 259 (347) 489-6234 email: luzey@empirebrooklyn.com 2:08 PM:- sent email to Mr. Weiss and asked to provide contact info for environmental contractor who will be installing/monitoring sentinel wells required under dewatering permit # 2-6101-01394/00001. email copied to Mr. Brunner, Pat and DEC Atiqur Rahman. 02/04/20-Hiralkumar Patel. 2:02 PM:- spoke with Ariel at AMC Engineering who may be managing dewatering activities at 347 Flushing Ave. Ariel stated that piles being driven at 347 Flushing Ave and dewatering activities may not begin for another 2-3 months. 02/12/20-Hiralkumar Patel. 1:45 PM:- approved invoice (# 139730-139748) from EAR for project coordination/well gauging conducted in month of Dec. 2019. 02/13/20-Hiralkumar Patel. 1:46 PM:- received email from Pat including weekly gauging data collected on 01/30/20 and 02/06/20 and summary of VEFR conducted on 02/06/20. well OB003 was inaccessible and OB004 was found dry. no product was noted in well MW006. product was noted in well MW005 (0.94 and 0.85 ft), MW007 (0.33 and 1.04 ft) and MW008 (0.12 and 0.02 ft). 02/25/20-Hiralkumar Patel. received email from Pat (at 9:40 AM on 02/24/20) including weekly gauging data collected on 02/12/20. well OB003 was inaccessible and OB004 was found dry. no product was noted in well MW006. product was noted in well MW005 (0.60 ft), MW007 (0.50 ft) and MW008 (0.03 ft). 03/04/20-Hiralkumar Patel. received email from Pat (at 4:27 PM on 03/03/20) including weekly gauging data collected on 02/20/20 and 02/27/20. wells OB003 and OB004 were found

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

dry. no product was noted in well MW006. product was noted in well MW005 (0.92 and 0.96 ft), MW007 (0.67 and 0.71 ft) and MW008 (0.21 and 0.25 ft). 03/06/20-Hiralkumar Patel. 11:20 AM:- approved invoice (# 140625-140648) from EAR for project coordination/well gauging conducted in month of Jan. 2020. 2:07 PM:- received email from Pat including weekly gauging data collected on 03/05/20. wells OB003 and OB004 were found dry. no product was noted in well MW006. product was noted in well MW005 (1.49 ft), MW007 (0.20 ft) and MW008 (0.15 ft). impacted wells were pumped out. 03/20/20-Hiralkumar Patel. 12:35 PM:- received email from Pat including weekly gauging data collected on 03/11/20. wells OB003 and OB004 were found dry. no product was noted in well MW006. product was noted in well MW005 (1.09 ft), MW007 (0.31 ft) and MW008 (0.06 ft). 03/25/20-Hiralkumar Patel. received email from Pat (at 4:41 PM on 03/24/20) including weekly gauging data collected on 03/19/20. wells OB003 and OB004 were found dry. no product was noted in well MW006. product was noted in well MW005 (0.65 ft), MW007 (0.53 ft) and MW008 (0.12 ft). 03/30/20-Hiralkumar Patel. 3:20 PM:- received email from Pat inquiring if they should continue well monitoring/VEFRring. 04/01/20-Hiralkumar Patel. 1:04 PM:- spoke with DEC Jane who mentioned that construction at nearby BCP site (376 Flushing Ave) is considered essential as affordable housing building is being built at the site. as such, dewatering at the BCP site will continue. 1:14 PM:- sent email to Pat and informed him that dewatering at BCP site will continue. as such, asked him to continue weekly well monitoring/monthly VEFRring, only if it is done as per applicable guidance in reference to COVID-19. email copied to DEC Jane, DEC Wendi, DEC Austin and Jennifer (EAR). 03/27/20-Hiralkumar Patel. 3:07 PM:- received email from Pat including weekly gauging data collected on 03/25/20. wells OB003 and OB004 were found dry. no product was noted in well MW006. product was noted in well MW005 (1.71 ft), MW007 (0.48 ft) and MW008 (0.05 ft). 04/15/20-Hiralkumar Patel. 2:15 PM:- received email from Pat including weekly gauging data collected on 04/03/20 and 04/09/20. wells OB003 and OB004 were found dry. no product was noted in well MW006. product was noted in well MW005 (0.89 ft and 0.92 ft), MW007 (0.42 ft and 0.29 ft) and MW008 (0.07 ft and 0.04 ft). 04/16/20-Hiralkumar Patel. 11:15 AM:- approved invoice (# 140775) from EAR for project coordination/well gauging conducted in month of Feb. 2020. 04/24/20-Hiralkumar Patel. 2:20 PM:- received email from Pat including weekly gauging data collected on 04/17/20 and 04/22/20. wells OB003 and OB004 were found dry. no product was noted in well MW006. product was noted in well MW005 (1.18 ft and 1.41 ft), MW007 (0.54 ft and 0.89 ft) and MW008 (0.03 ft and 0.16 ft). 05/04/20-Hiralkumar Patel. 2:22 PM:- received email from Pat including weekly gauging data collected on 04/29/20. well OB003 was inaccessible and OB004 was found dry. no product was noted in well MW006. product was noted in well MW005 (1.24 ft), MW007 (0.40 ft) and MW008 (0.03 ft). 05/08/20-Hiralkumar Patel. 2:10 PM:- received email from Pat including weekly gauging data collected on 05/06/20. well OB003 was inaccessible and OB004 was found dry. no product was noted in well MW006. product was noted in well MW005 (0.85 ft), MW007 (0.40 ft) and MW008 (0.03 ft). 05/11/20-Hiralkumar Patel. 12:02 PM:- approved invoice (# 140848) from EAR for project coordination/well gauging conducted in month of Mar. 2020. 05/15/20-Hiralkumar Patel. 2:03 PM:- received email from Pat including weekly gauging data collected on 05/14/20. well OB003 was inaccessible. no product was noted in wells OB004 and MW006. product was noted in well MW005 (0.98

ft), MW007 (0.42 ft) and MW008 (0.06 ft). 05/27/20-Hiralkumar Patel. 1:41 PM:- received email from Pat including weekly gauging data collected on 05/21/20. no product was noted in wells OB003, OB004 and MW006. product was noted in well MW005 (0.13 ft), MW007 (0.71 ft) and MW008 (1.09 ft). 06/01/20-Hiralkumar Patel. 2:12 PM:- received call from Erin Quell from EAR. she mentioned that due to current COVID-19 situation and parking issues in the area, they were not able to vacuum out wells since 03/05/20. Erin inquired if they should call vacuum truck from Island during next visit. suggested Erin to have EAR technician visit the site in morning to confirm parking availability for the vacuum truck and then call the truck, if Island Pump can respond on short notice. 06/10/20-Hiralkumar Patel. 9:47 AM:- received email from Erin including weekly gauging data collected on 05/28/20. well OB003 was not accessible due to garbage pile, well OB004 was found dry and no product was noted in well MW006. product was noted in well MW005 (1.21 ft), MW007 (0.63 ft) and MW008 (0.11 ft). 06/15/20-Hiralkumar Patel. 10:41 AM:- approved invoice (# 140914) from EAR for project coordination/well gauging conducted in month of Apr. 2020. 07/07/20-Hiralkumar Patel. 2:36 PM:- received email from Erin including weekly gauging data collected on 06/05/20, 06/10/20, 06/18/20, 06/25/20 and 07/01/20. wells OB003 and OB004 were either found dry or no product. no product was noted in well MW006. product was noted in well MW005 (between 0.80 and 1.39 ft), MW007 (between 0.27 and 1.04 ft) and MW008 (between 0.02 and 0.12 ft). 07/10/20-Hiralkumar Patel. 10:10 AM:- approved invoice (# 140981) from EAR for project coordination/well gauging conducted in month of May 2020. 07/16/20-Hiralkumar Patel. 1:25 PM:- received email from Erin including weekly gauging data collected on 07/09/20. well OB003 was not accessible. no product was noted in wells OB004 and MW006. product was noted in well MW005 (1.30 ft), MW007 (0.85 ft) and MW008 (0.11 ft). Erin mentioned that they were able to schedule a VAC event on 07/09/20, but did not VAC from MW008 due to safety concerns. EAR technician had to repeatedly ask residents, including children, to leave the vicinity of the work zone as they were just curious, but they were not adhering to social distancing and kept trying to look into the wells while tech was working. 07/30/20-Hiralkumar Patel. received email from Erin (at 4:28 PM on 07/29/20) including weekly gauging data collected on 07/15/20 and 07/21/20. no product was noted in wells OB003, OB004 and MW006. product found in well MW005 (0.78 and 1.28 ft), MW007 (0.25 and 0.61 ft) and MW008 (0.05 and 0.07 ft). 08/13/20-Hiralkumar Patel. 10:40 AM:- approved invoice (# 141048) from EAR for project coordination/well gauging conducted in month of June 2020. 08/06/20-Hiralkumar Patel. 9:36 AM:- received email from Erin including weekly gauging data collected on 07/31/20. well OB003 was inaccessible. no product was noted in wells OB004 and MW006. product found in well MW005 (1.11 ft), MW007 (0.55 ft) and MW008 (0.13 ft). 08/06/20-Hiralkumar Patel. 3:18 PM:- received email from Erin including weekly gauging data collected on 08/05/20 and 08/13/20. no product was noted in wells OB003, OB004 and MW006. product found in well MW005 (1.11 ft both times), MW007 (0.48 and 0.88 ft) and MW008 (0.05 and 0.10 ft). 08/24/20-Hiralkumar Patel. 1:06 PM:- received email from Erin including a form requesting approval to use AB Env. (instead of Island Pump & Tank due to some payment conflicts) as subcontractor for well vacuum events. 08/25/20-Hiralkumar Patel. received email from Erin (at 5:00 PM on 08/24/20) including weekly gauging data collected on 08/19/20. no product was noted in wells OB003, OB004 and MW006. product found in

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

well MW005 (1.41 ft), MW007 (0.58 ft) and MW008 (0.09 ft). 08/27/20-Hiralkumar Patel. 12:42 PM:- sent email to Erin including signed form authorizing use of AB Env. as subcontractor for well vacuum events. 09/01/20-Hiralkumar Patel. 9:40 AM:- received email from Erin including weekly gauging data collected on 08/26/20. well OB003 was inaccessible. no product was noted in wells OB004 and MW006. product found in well MW005 (1.34 ft), MW007 (0.49 ft) and MW008 (0.06 ft). Erin mentioned that they will be on-site tomorrow (09/02/20) with AB Oil to conduct vacuum event. 09/04/20-Hiralkumar Patel. 10:15 AM:- received email from Erin including weekly gauging/VEFRring data collected on 09/02/20. no product was noted in wells OB003, OB004 and MW006. product found in well MW005 (0.68 ft), MW007 (1.43 ft) and MW008 (0.10 ft). 09/09/20-Hiralkumar Patel. 12:32 PM:- approved invoice (# 141112) from EAR for project coordination/well gauging conducted in month of July 2020. 09/10/20-Hiralkumar Patel. 2:40 PM:- received email from Erin including weekly gauging/VEFRring data collected on 09/09/20. no product was noted in wells OB003, OB004 and MW006. product found in well MW005 (0.02 ft), MW007 (0.10 ft) and MW008 (0.09 ft). 09/28/20-Hiralkumar Patel. 8:07 AM:- received email from Erin including weekly gauging data collected on 09/17/20 and 09/23/20. no product was noted in wells OB003 (not accessible on 09/17/20), OB004 and MW006. product found in well MW005 (0.76 and 1.52 ft), MW007 (0.26 and 0.72 ft) and MW008 (0.15 and 0.12 ft). 10/09/20-Hiralkumar Patel. 2:31 PM:- approved invoice (# 141171) from EAR for project coordination/well gauging conducted in month of Aug. 2020. 10/14/20-Hiralkumar Patel. 11:56 AM:- received email from Erin including weekly gauging data collected on 10/01/20 and 10/07/20. no product was noted in wells OB003 (not accessible on 10/07/20), OB004 and MW006. product found in well MW005 (0.57 and 0.51 ft), MW007 (0.31 and 0.25 ft) and MW008 (0.03 and 0.04 ft). wells were VEFRred on 10/07/20. 10/21/20-Hiralkumar Patel. 9:07 AM:- received email from Erin including weekly gauging data collected on 10/14/20. well OB003 was inaccessible. no product was noted in wells OB004 and MW006. product found in well MW005 (0.46 ft), MW007 (0.18 ft) and MW008 (0.17 ft). 10/30/20-Hiralkumar Patel. 12:15 PM:- received email from Erin including weekly gauging data collected on 10/21/20 and 10/28/20. well OB003 was inaccessible both times due to garbage. no product was noted in wells OB004 and MW006. product found in well MW005 (0.48 and 0.22 ft), MW007 (0.24 and 0.53 ft) and MW008 (0.11 and 0.15 ft). 11/02/20-Hiralkumar Patel. 2:26 PM:- DEC Jane forwarded email from Ariel Czemerinski of AMC Engineering regarding site 347 Flushing Ave. owner of site 347 Flushing Ave (which is approx. 425 ft west of the subject site) applied for a dewatering permit. DEC Division of Permits issued the dewatering permit on 11/08/2019 with following condition: Additional Permit Conditions: The following activities will be completed and monitoring implemented prior to beginning pumping operations and will continue until pumping operations cease: A.Install Sentry Wells " The applicant will install sentinel monitoring wells on the west side of Kent Avenue approximately 50 feet and 100 feet north of the corner of Flushing Avenue to monitor drawdown between 347 Flushing Avenue and the Former Arkansas Company, Inc. BCP site. The wells should be screened across the observed water table and should be constructed with at least 15 feet of screen below the observed water table. The wells should be 4 in diameter to allow for NAPL recovery if necessary. Applicant will arrange for surveying of the well elevation in the same datum as the

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

existing wells. B.Daily Monitoring Using Sentry Wells: " The applicant will monitor the water table elevation in the monitoring well prior to commencing dewatering activities, and then daily during dewatering activities. Monitoring results will be reported on a weekly basis to: Hiralkumar Patel, NYSDEC Division of Environmental Remediation, Spill Response Section hiralkumar.patel@dec.ny.gov C.Contingency Plan: " Should NAPL be observed to have migrated into the sentinel wells following the initiation of dewatering on the site, the Department will identify any specific actions to abate or mitigate the movement of contamination, which shall be undertaken by the applicant. Ariel stated that the driller attempted to install the sentry wells today (11/02/20), but found a sewer pipe (which are not regularly marked up by the 811 service) along the way. the sidewalk was marked out with electric and gas lines, many of which feed the buildings. 11/09/20-Hiralkumar Patel. 3:02 PM:- spoke with Ariel at AMC Eng. he stated that the driller tried to install wells along the curb line. asked him to check site for possibility of well installation closer to building on west sidewalk of Kent Ave. also asked him to provide their client's contact info. 11/12/20-Hiralkumar Patel. received email from Erin (at 3:48 PM on 11/11/20) including weekly gauging data collected on 11/04/20. wells OB003, OB004 and MW006 were not gauged. product found in well MW005 (0.26 ft), MW007 (1.37 ft) and MW008 (0.19 ft). impacted wells were VEFRred on 11/04/20. 11/19/20-Hiralkumar Patel. received email from Ariel (at 7:02 PM on 11/18/20) including well logs. two (2) 4-inch wells (MW-1 and MW-2) were installed (for dewatering at 347 Flushing Ave) to a depth of 20.5 ft bg, with 15 ft of screen from 5.5-20.5 ft depth. 1:37 PM:- approved invoice (# 141233) from EAR for project coordination/well gauging conducted in month of Sept. 2020. 1:57 PM:- sent email to Ariel and asked him to submit scaled site map with well locations and well locations pics (if available). 11/24/20-Hiralkumar Patel. 10:09 AM:- received email from Pat including weekly gauging data collected on 11/11/20 and 11/16/20. no product was noted in wells OB003 (not accessible on 11/16/20), OB004 and MW006. product was found in well MW005 (0.63 and 0.68 ft), MW007 (0.09 and 0.11 ft) and MW008 (0.07 and 0.14 ft). 12/01/20-Hiralkumar Patel. received email from Ariel (at 3:47 PM on 11/30/20) including a well location map and daily log. two 4-inch wells (MWN and MWS) were installed along west side of Kent Ave. both wells were gauged daily (except weekends) since 11/17/20 and no product was found in both wells. wells MWS, MWN and MW-006 are located on west sidewalk of Kent Ave. wells MWS and MWN were installed by AMC Engineering as part of dewatering activities at site 347 Flushing Ave. well MW-006 was installed by EAR (DEC contractor) as part of groundwater delineation for the subject site. from the northwest corner of the intersection of Flushing Ave and Kent Ave, the well MWS is 43 ft north of the intersection corner, well MWN is 102 ft north of the intersection corner and well MW-006 is approx. 162 ft north of the intersection corner. groundwater was found around 8 ft bg in well MW-006, around 11 ft bg in MWN and around 13 ft bg in MWS. 12/03/20-Hiralkumar Patel. 1:41 PM:- received email from Pat including weekly gauging data collected on 11/25/20 and 12/02/20. well OB003 was not accessible both times due to garbage. no product was noted in wells OB004 and MW006. product was found in well MW005 (0.68 and 0.48 ft), MW007 (0.26 and 0.09 ft) and MW008 (0.25 and 0.19 ft). 12/07/20-Hiralkumar Patel. received email from Ariel (at 6:33 PM on 12/04/20) including daily well log for period 11/17/20 to 12/06/20.

FORMER ARKANSAS COMPANY, INC. SITE (Continued) **S112138864**

both wells were gauged daily (except weekends) and no product was found in both wells. 12/15/20-Hiralkumar Patel. 8:21 AM:- approved invoice (# 141296) from EAR for project coordination/well gauging conducted in month of Oct. 2020. 12/28/20-Hiralkumar Patel. received email from Ariel (at 6:16 PM on 12/26/20) including daily well log for period 12/06/20 to 12/25/20. both wells were gauged daily (except weekends) and no product was found in both wells. 12/30/20-Hiralkumar Patel. 9:32 AM:- received email from Erin including weekly gauging data collected on 12/09/20. well OB003 was not accessible due to garbage. no product was noted in wells OB004 and MW006. product was found in well MW005 (0.69 ft), MW007 (0.39 ft) and MW008 (0.27 ft). impacted wells were VEFRred on 12/09/20. 01/13/21-Hiralkumar Patel. 1:55 PM:- approved invoice (# 141369) from EAR for project coordination/well gauging conducted in month of Nov. 2020. 01/05/21-Hiralkumar Patel. 1:14 PM:- received email from Erin including weekly gauging data collected on 12/23/20. well OB003 was not accessible due to garbage. no product was noted in wells OB004 and MW006. product was found in well MW005 (0.37 ft), MW007 (0.28 ft) and MW008 (0.18 ft). 01/11/21-Hiralkumar Patel. received email from Ariel (at 5:55 PM on 01/08/21) including daily well log for period up to 01/06/21. both wells were gauged daily (except weekends) and no product was found in both wells. 01/20/21-Hiralkumar Patel. 11:27 AM:- received email from Erin including weekly gauging data collected on 01/04/21 and 01/13/21. well OB003 was not accessible on 01/04/21 due to garbage. no product was noted in wells OB003, OB004 and MW006. product was found in well MW005 (0.49 and 0.55 ft), MW007 (0.25 and 0.43 ft) and MW008 (0.09 and 0.23 ft). impacted wells were VEFRred on 01/13/21. **impacted well is located exactly down-gradient of former heating oil (possibly #6 oil) UST. historic backfill material from 0 to 8 ft bg and silty clay from 8 to 15 ft bg.** DEC requires: 1) weekly gauging of all wells (to note effect of dewatering on adjacent site), 2) monthly VAC"

NPL Status:	Not on the NPL
Property History:	As per Declaration of Taking dated 29 January 1941, the Department of the Navy obtained 2.638 acres fee. On 15 April 1975, the Department of the Navy conveyed 2.638 acres fee to GSA. As per quitclaim deed dated 4 June 1979, GSA conveyed 0.294 acre fee to the Department of Health and Hospitals Corporation (HHC) of the City of New York. Said deed did not contain any recapture or restoration clauses but did contain a restrictive clause (to be used public health purposes for a period of thirty years -from the date of conveyance). As per quitclaim deed dated 22 February 1985, GSA conveyed 2.344 acres fee to the City of New York. Said deed did not contain any recapture, restoration or restrictive clauses. On 8 September 1986, the 0.294 acre fee reverted back to GSA because of a breach of contract by HHC. GSA is still the owner of record of the 0.2 94 acre fee.

Description:	The Navy Barracks are located in the County of Kings, Borough of Brooklyn, City of New York, State of New York. The site is bounded on the North by Flushing Avenue, on the South by Park Avenue, on the East by Vanderbilt Avenue and on the West by Clermont Avenue. The site was improved by a six story concrete building utilized as a military prison and three story brick building used as barrack and for administrative purposes. The NYC Department of Corrections is used as the Brooklyn Correctional Facility. The former military prison building and associated utilities are beneficially used by the present

NAVY BARRACKS BKLYN (Continued) **1024899202**

owner the New York City Department of Corrections. The former Navy barrack and administrative building is abandoned and owned by GSA. There are number of underground storage tanks, which were never used by the present owner.

History: As per Declaration of Taking dated 29 January 1941, the Department of the Navy obtained 2.638 acres fee. On 15 April 1975, the Department of the Navy conveyed 2.638 acres fee to GSA. As per quitclaim deed dated 4 June 1979, GSA conveyed 0.294 acre fee to the Department of Health and Hospitals Corporation (HHC) of the City of New York. Said deed did not contain any recapture or restoration clauses but did contain a restrictive clause (to be used public health purposes for a period of thirty years -from the date of conveyance). As per quitclaim deed dated 22 February 1985, GSA conveyed 2.344 acres fee to the City of New York. Said deed did not contain any recapture, restoration or restrictive clauses. On 8 September 1986, the 0.294 acre fee reverted back to GSA because of a breach of contract by HHC. GSA is still the owner of record of the 0.2 94 acre fee.

LECLAIRE INSTITUTE (Continued) **S118953494**

TIPPLE 4/14/04 Tipple conducted a site visit,the tank was in the process of being cut for removal, contaminated soils were stockpiled for removal, excavation exhibited brown soils with occasional bits of coal mixed in with the soil. Tipple had the bachhoe operator grab a bucket of soil in an area of what appeared to be coal and the black pieces were indeed coal. Tipple proceeded to screen the soil and attained a reading of 0 on the PID. Documentation will follow. 06/19/06: This spill is transferred from Mr. Koon Tang to Q. Abidi. Called Tony Gilber at (212)647-7422 left message to call me back regarding information of spill. 11/06/06: Called Mr. Tony Gilder and talked about information of spill. He said he will find by Environmental Group and he will call me back -QA 11/07/06: Mr. Ron Leclair called me and said As soon as he will get the report and documents regarding spill he will fax it to me for closing the spill. -QA 11/17/06: Mr. Ron LeClair (ENSR CO) called and said to me that he is going to send me waste manifest report and soil sample report by mail. -QA 12/06/06: Called Mr. Ron LeClair at (718)636-3579 and left message to call me back regarding spill information. -QA 02/20/07: Called Mr. Ron Leclaire to discuss regarding the spill. I asked him to take soil sample at the fill port (because in previous soil sample, xylene was very high) and to take groundwater sample around the tank. If they don't take soil and groundwater sample spill will remain open. Mr. Ron Leclaire said he will take soil and groundwater samples and lab results will come back he will fax me all the analytical results. -QA 04/12/07: Sent letter to owner Mr. Kevin Tassey and also sent a copy of the letter to Mr. Ron LeClair (ENSR) to resolve open spill case. The Department requires collection of a groundwater sample near the former tank location, to evaluate potential impacts to groundwater. Either a permanent well should be installed, or a temporary well. Soil sampling for lab analysis should be performed during well installation. A report summarizing the soil and groundwater sampling results should be prepared and submitted. The report should provide a scaled site diagram indicating the North direction, and should include an appropriate recommendation for further action. Entered letter in e-Doc. -QA 05/04/07: Received e-mail from Mr. LeClair regarding spill about conservative estimate for installing the groundwater monitoring well in pratt institute. I have discussed this spill case with my supervisors Mr. Jon Kolleeny and Mr. Vadim Brevdo. After considering the 85-foot depth to groundwater and the fact that only one compound was found to exceed TAGM 4046 in the end-point samples, it seems unlikely that the residual soil contamination from # 6 fuel oil could have caused a significant impact to groundwater. Therefore, I closed this spill and replied to Mr. LeClair by e-mail that this spill is closed. -QA "

DEC Memo: "7/30/13 - Austin - We received a report of a cable installation contractor working for Pratt Institute hitting a Con Ed Electrical Feeder line in the location of Ryerson Ave and Willoughby Ave in Brooklyn (the neighborhood just south of the Brooklyn Navy Yard, outside the Con Ed Greenwood sub-station). The damaged dielectric fluid (non-PCB)-cooled power supply line released approximately 18,000 gals of this fluid to the ground, street, and adjoining sewers. NYCDEP is on scene assessing the routes of the sewers (to a treatment plant or direct storm?). Con Ed is bringing out its contractors to conduct the line repair and contain/clean up the spill. DEC Spills staff (Patel) is en route to the location. 1700 hr. update from DEC Patel, who is at the scene: Westmoreland Construction, a contractor hired by Pratt Institute to install a sub-surface fiber optic cable in a courtyard between two Pratt Insitute buildings, first excavated and then drilled to conduct this installation. When they drilled adjacent to a trench they dug, at approximately 11:40 this morning, they hit a 138 kV jacketed oil cooled feeder line owned by Con Edison. Oil escaped under pressure, and migrated into the adjoining trench. From there it permeated the soil and migrated into a manhole chimney of a NYCDEP combined sewer. That sewer either goes to the Newtown Creek or the Red Hook municipal STPs (NYCDEP said the impacted sewer was in a drainage area border zone, so it could go to either plant). The dielectric fluid migrating into the manhole is dripping into it at the rate of 2 gals/hour. The dielectric fluid did not run onto the roadway, or impact any street catch basins, as was originally reported. Nor is the 18,000 gal reported release quantity been confirmed at this point. No injuries occurred from this event, nor did any power outages occur (the feeder goes to another sub-station from the Greenwood facility). Con Edison has brought on vacuum trucks, and have already filled one 1500 gal tanker with dielectric fluid from the excavated trench. They are also staging operations to open up the ground along the feeder line, and will work this evening to place the clamp on the leak point. DEC Spills staff has left the scene, but will return later this evening to inspect the excavated damaged pipeline, and to get a better sense for how for the fluid permeated the soil in the vicinity of the leak. DLE has indicated that they may have an ECO investigate the cause of this event. - end 07/30/13-Hiralkumar Patel. 3:30 PM:- visited site. met Michael Pillig (ConEd), Robert Duffy (ConEd), Anthony Natale (ConEd) and Glenn Gordon (Pratt Institute). Pratt Institute was installing a fiber optic cable between two buildings, located on east (North Hall) and west (ISC Building) side of the Ryerson Street (brick alleyway). Ryerson Street is located within Pratt's facility. as part of the project, contractor dug two trenches: one on east side and one on west side of the Ryerson Street. to install cable under the street, contractor started horizontal drilling at about 5 ft bg. horizontal drilling started from western trench (on ISC Building side). prior to drilling/excavation, area was maked out by company named Premier. Premier was hired by Pratt, but it is also ConEd's vendor. ConEd confirmed that area was marked out clearly. ConEd mentioned that there are two high pressure 138 kV feeder lines run under the Ryerson Street, in north-south direction, between two sub-stations: Vernon Blvd and Greenwood. at 11:40 AM, ConEd's control room received alert regarding oil spill from the western feeder line

CON EDISON (Continued) **S113819679**

31232. the automated system reduced pressure on leaking line. during horizontal drilling, the western feeder line was hit and started leaking. as feeder line was not far from the western trench, leaked oil started accumulating into the western trench. some of the oil overflowed into nearby surface drain on Ryerson Street, which ends into sewer system in middle of the street. ConEd responded and started pumping oil from the western trench. ConEd checked the sewer manhole and found dripping from the drain pipe (about 2 gal/hour). they immediately put boom in sewer and hung bucket underneath the drain pipe to collect dripping oil. cable was immediately put out of service, but flow of dielectric fluid was not stopped to prevent any damage to internal cable. so oil is still leaking at this point. as these feeder lines connects two sub-stations and are not supply lines to any facility, there was no power outage in any of the Pratt's building. ConEd crew started excavating western side of the street to locate leaking pipe. after hand clearing top surface, crew started soil removal using guzzler truck. one 1,500 gal vac truck was filled with oil. product removal, from western trench, was continued using second vac truck. the North Hall is at lower elevation that the ISC Building. based on surface elevation, Mike and Mr. Gordon inspected basement cafeteria in North Hall. no impact noted inside the building. no oil noted in eastern trench either. met with Alex Castro of NYC DEP. he mentioned that the sewer line on Ryerson Street, close to leak area, is a combined sewer line that ends into sewer treatment plant. as the area is near border line between two zone (Newtown Creek and Red Hook), Alex was not sure which treatment plant receives sewer fluid from this area. Glenn Gordon Executive Director Planning, Design, Construction & Facilities Management Pratt Institute 200 Willoughby Avenue Brooklyn, NY 11205 Ph. (718) 399-4435 (O) (732) 213-5440 (C) Fax (718) 399-4412 email: ggordon3@pratt.edu 9:22 PM:- spoke with Mike. he confirmed that leak was located and clamped at 5:45 PM. they will excavate further for permanent repair. 07/31/13-Hiralkumar Patel. 10:15 AM:- spoke with Mike. he mentioned that further investigation needed prior to permanent repair. they need to check for any damage to cable inside the leaking feeder line. Mike mentioned that they will freeze portion of the feeder line and will do further testing. feeder line will be freezed using liquid nitrogen. this investigation may take upto a week. soil remediation will begin only after permanent repair to the line. Mike mentioned that they recovered total of 2,520 gal of oil. ConEd will do inventory to find out total amount of oil released. 10:17 AM:- received email from Bob from ConEd including pics. one of the pic shows bucket under the drain pipe, into sewer. 3:10 PM:- visited site. met ConEd crew. they were excavating at the instersection of Ryerson St and Willoughby Ave and intersection of Ryerson Street and De Kalb Ave. feeder line at these two intersections will be freezed via circulating liquid nitrogen around it. once pipe freezes at two points, internal cable will be inspected for any damage. no oil oil found in western trench. inspected small alley at basement level, between cafeteria in North Hall and outside building yard towards Ryerson St. no oil seepage noted in sub-grade alley. found heavily impacted soil within western trench. observed drain pipe within excavation to feeder line. also found other pipes, in and outside of the feeder line excavation area. based on available information, changed spill address from Ryerson St and Willoughby Ave to 200 Willoughby Ave - I/F/O North Hall Building . 08/07/13-Hiralkumar Patel. 12:52 PM:- spoke with Dennise at ERT. sample results shows

CON EDISON (Continued) **S113819679**

less than 1 ppm PCB. no other update in emis report. 12:55 PM:- left message for Mike. 1:28 PM:- spoke with Mike. they freeze the section of the feeder line and checked internal cable which was found damaged. for cable repair and permanent repair to feeder line, they expanded excavation around the leak area. currently, excavation around leak area is 20 ft long by 8 ft wide and about 8 ft deep. to expand excavation around leak point, ConEd had to backfill the western trench for fiber optic cable. after repairing the internal cable and completing permanent repair to the leaking feeder line, freeze will be removed and pipe will be filled with oil. after necessary socking period, further testing will be conducted prior to restoring power. this process will take another week. once the line is back in-service, ConEd will re-open the western trench for soil remediation. Mike has took some samples from the final excavation around leak point and waiting for results. 08/09/13-Hiralkumar Patel. 9:30 AM:- visited site. ConEd crew was conducting permanent repair to leaking line. inspected basement cafeteria. no signs of oil seepage noted in cafeteria. 08/14/13-Hiralkumar Patel. 1:29 PM:- left message for Bob Duffy. 1:43 PM:- spoke with Harman at ERT. asked him to submit results of soil samples collected from leak area excavation. 08/15/13-Hiralkumar Patel. 2:01 PM:- received call from Bob. they finished repair of leaking line. they are planning to start soil remediation in western trench where leak noted initially. Bob mentioned that total of 3,982 gal of oil was leaked out of the line and they recovered total of 2,520 gal of liquid from excavation. asked Bob to submit results of soil samples collected from excavation for leak repair. 2:23 PM:- received email from Bob including sample results. soil samples were collected from east, north and south sidewalls and from bottom of the excavation around the leak area. bottom soil sample was collected at 8 ft depth. found less than 1,910 ppm THC in soil samples. 09/11/13-Hiralkumar Patel. 7:20 AM:- received email from Bob. he mentioned that remediation is completed. he will submit report. 10/02/13-Hiralkumar Patel. 11:04 AM:- left message for Bob. asked him to submit cleanup report. 02/07/14-Hiralkumar Patel. 3:23 PM:- received email from Bob including cleanup report. based on available information, case closed."

Remarks: "feeder line leak NCR # 1055535 - 2nd report 1055548 leak discovered in Brooklyn at Ryerson St and Willoughby Ave due to contractor damage - Westmoreland Construction - excavating on Campus at Pratt Institute in Brooklyn - unknown amount to sewer"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. This spill site has been consolidated under Spill No. 9712610. 2/5/04 Current PBS owner Cumberland Farms. 6/14/05: This spill case transferred from Rommel to J. Kolleeny. - JK 03/05/07: Spoke with Bill Simmons of ECS about this site. He said ECS will prepare a closure request; I said to put in as much supporting data and history of site as possible so I can evaluate closure request. - J. Kolleeny 03/14/14: On 3/12/14, I sent email to Bill Simmons of ECS: Bill, I've had an inquiry about this site from NYC Office of Envt'l Remediation. My last notes in our database are from March 2007, and state that you would be putting together a spill closure request rpt. Do you have any update on site? Please let me know. On 3/14/14, Bill sent email reply: Jon, I do have some info for you on this site. It is for sale and potential buyer had their envt'l consultant perform a 1-day Phase II drilling & sampling investigation on Jan. 21, 2014. Which I am sure is why NYCOER contacted you, because they must have submitted a permit for some type of site development plan. We were on-site to document this Phase II investigation. They performed 9 borings, collected soil for field screening (nothing of any concern was found), submitted certain samples for lab analysis, collected soil gas samples from some boring locations for lab analysis, and attempted to install some wells but were unable to set any new wells with their rig since geology was very dense and gravelly to 16 . They did find 2 old wells that they said they were going to come back and sample at some point and depth to water was around 57 - 59 . No sheen, odor or free product was on GW in these wells. This week, CFI requested if data can be provided to them that we can forward to you and/or use for closure. I will let you know if we hear back, hopefully soon. - J. Kolleeny 04/07/14: Spoke with Shaminder Chawla and Hannah Moore of NYCOER, who informed me that gas station will be dismantled and site redeveloped. We discussed spill closure requirements, they said they would forward to me a 2003 closure rpt for waste oil UST (subject of this spill rpt), and a Feb. 2014 Remedial Investigation Rpt (prepared for potential buyer). They also stated that a RAWP would be prepared to document station decommissioning, removal of all USTs, piping, dispensers,

EXXON GAS STATION (Continued) **S104619744**

etc. Later, received email from Hannah: Jon nice speaking with you earlier. I m attaching Waste Oil UST Closure Rpt, and RIR we received with most recent data. I m also attaching a figure that shows sampling locations, tanks, and proposed sampling locations. Also, just to recap our conversation, under their proposed development plan, entire Site will be excavated to 11-12 ft bg. All remaining tanks will be removed, and a vapor barrier will be installed. Thanks, and let us know if you need anything else from them at this time. I sent reply: Nice speaking with you as well, and thanks for documents. I think Shaminder mentioned on phone that a Remedial Action Work Plan would be prepared to detail decommissioning of gas station; is that still true? Hannah sent reply: Yes we will get a RAWP before they proceed with redeveloping Site. After reviewing figure, I sent email to Hannah and Shaminder: I looked quickly at figure, and have a couple of comments: 1) If any USTs have remote fill ports in sidewalk, as opposed to direct fills, remote fills should be investigated, with borings and possibly wells (if borings show significant impacts). 2) I'm assuming that currently active gasoline USTs are double-walled FRP tanks. However, if there were formerly a number of single-walled steel 550-gal gasoline tanks in a different location on site, their location should be investigated with borings or wells, if this was not done during recent Phase II investigation. Also, any 550-gal gasoline USTs would likely have had remote fill ports in sidewalk that should be investigated. Thanks again. - JK 04/09/14: Reviewed UST Closure Rpt dated 8/8/2003 by ATC Associates (in eDocs). Rpt documents removal of one 550-gal waste oil UST from site in June 2003. Soils above/below UST yielded slight PID hits; about 15 tons of soil were removed. Four sidewall soil samples and one bottom soil sample were collected; sample results showed no VOCs above TAGM 4046 RCOs, but some SVOCs were detected above stds, as were metals arsenic, barium and lead. ATC concluded that metals and SVOCs detected are indicative of historical fill materials, and that no contam associated with former waste oil UST system remains. Also reviewed Feb. 2014 Remedial Investig Rpt by Envt'l Business Consultants (EBC), in eDocs. In Jan. 2014, 9 soil borings were advanced with 18 soil samples collected, GW was sampled from 3 existing wells, and 6 soil vapor probes were installed and 6 soil vapor samples collected. Soil samples showed low detections of some gasoline-related VOCs, but below unrestricted use SCOs. Some SVOCs and metals lead and mercury were detected above restricted residential use SCOs; these were attributed to historical fill materials. GW samples showed no petroleum-related VOCs, but low levels of chlorinated VOCs were detected in two samples, including PCE (up to 8 ug/L), chloroform (up to 7 ug/L), and TCE (up to 1.5 ug/L). Soil vapor samples showed low levels of BTEX and chlorinated compounds. Rpt states that site is currently an active Getty [Gulf?] svc station but there are plans to redevelop site with 5-story mixed-use bldg with full cellar; entire site will be excavated to depth of 12 ft below grade. Rpt states that depth to GW at site is 57 ft, and that GW flow direction is assumed to be to NW. Site plan figure by EBC shows 3 existing wells are in south part of site, up-gradient of UST field; fig. shows 2 proposed well locations, to NE and SW of UST field. - J. Kolleeny 05/01/14: On 4/29/14, received email from Bill Simmons of ECS: Jon, Attached is RIR performed by EBC that ECS was on-site to observe in Jan. 2014. This rpt provides those data results, current proposed development plan for Site, as well as copies of historical envt'l documents submitted to NYSDEC. Please

EXXON GAS STATION (Continued) **S104619744**

review and let me know if this data is adequate for open Spill# closure(s). We will also keep you updated on any changes in Site development if applicable. Thanks. On 4/30/14, I sent email reply: Bill, I've already received & reviewed Feb. 2014 RIR rpt by EBC. NYCOER also sent me a site plan showing two addt'l proposed wells (closer to tank field than three existing wells), and they said that a RAP for station decommissioning will be submitted, so I'd like to wait until two new wells are installed and station is decommissioned before closing spill, just in case anything more significant comes to light. On 5/1/14, Bill sent email asking that I call him to discuss. When I did, he indicated that RP Cumberland Farms was unaware of any plan to install two addt'l wells, or to have RAP prepared and submitted prior to decommissioning gas station; in fact, they plan to remove all tanks/piping/dispenders in about two weeks. I said I would talk to NYCOER and suggest that their applicant (potential buyer/developer) coordinate better with owner/RP. - JK 05/07/14: I received BC of email from Hannah Moore of NYCOER with cc's to Chawla Shaminder and Amanda Duchesne of OER: New York City Office of Envt'l Remediation is providing attached Fact Sheet pursuant to New York City Voluntary Cleanup Program (VCP). SYG Realties has applied to enroll in City VCP. 140 Vanderbilt Ave site is located in Fort Greene section of Brooklyn, New York and consists of a 14,770-square ft lot currently developed with a Gulf service station. Proposed future use of property will be a new 5-story mixed-use building with a full cellar across entire property. Public comment period on 140 Vanderbilt Avenue site runs through June 5, 2014. Direct link to Document Repository is: http://www.nyc.gov/html/oer/html/repository/RBrooklyn.shtml. I uploaded two Fact Sheets (one translated into several languages) into DecDocs. - J. Kolleeny 05/08/14: Spoke with Hannah Moore of NYCOER, asked that she have developer's consultant EBC coordinate better with owner/RP Cumberland Farms and their consultant ECS regarding install'n of addt'l mon wells and preparation of RAP for station decommissioning. She indicated she was aware that removal of USTs etc. will happen in near future; I said I would most likely require UST closure rpt from RP, and based on data in that rpt I will either close spill or require those 2 addt'l wells. She said developer's consultant will be preparing RAP detailing excavation of entire property to 11 ft, install'n of vapor barrier, etc. I suggested that if UST closure does not reveal significant impacts, then it may be developer's responsibility to install any addt'l wells required by NYCOER, but that if site excavation during redevelopment turns up impacts related to old 550-gal USTs known to have been on-site, Cumberland Farms would be responsible for any addt'l investigation/cleanup; she agreed to discuss this with developer and their consultant. Then I spoke with Bill Simmons of ECS, who said they'd been contacted by developer's consultant EBC and had already discussed these same issues. He said they will probably do some test pits during station decommissioning to investigate for old 550s. Bill also said that a pre-construction meeting will happen in a couple of weeks and he will let me know when UST removal is scheduled. - J. Kolleeny 05/22/14: After receiving notice from ECS that UST removal is underway, I visited site. Site is surrounded by 8-ft tall plywood fence. Personnel on site included Charles Jones of ECS, Sonny Chen of EBC (developer's consultant), and workers with Island Pump & Tank, UST removal contractor. Site has five 4,000-gal gasoline USTs, made of double-walled steel coated with fiberglass. At time of visit, two

EXXON GAS STATION (Continued) **S104619744**

tanks had been removed and were staged on pavement. Tanks appeared to be in good condition, with no obvious holes or cracks. Work activities had ended when I arrived, except for cleaning up & putting away equipment, so I could not evaluate whether excessive dust was being generated during work. However, there were no noticeable petroleum odors coming from tank pit or at site in general. There was a small stockpile of segregated soil which had slight to mild petroleum odor (if held up to your nose). According to Jones of ECS, this soil probably was impacted when they cut pipes and some residual product drained out. Three remaining tanks will be removed tomorrow, and then contractor will begin removing bottom concrete slab. End-point sampling is anticipated to occur early next week. Fuel dispensers had already been dismantled, but secondary containment units under dispensers were still there and will be removed, and samples will be collected at those locations. ECS also plans to dig two or three test pits to look for potential impacts from earlier generation of 550-gal USTs that were formerly on site. (PBS form indicates there were 12 or 13 550s installed in 1963 which appear to have been removed or closed in place in 1989; form is unclear about their final status. Nine borings were advanced at various locations during a Phase II performed earlier this year and found no signs of any 550s or significantly contaminated soil.) Overall, site appeared to be in good condition, removed tanks looked good, no obvious petroleum odors on site (no odors were evident from outside fence). - JK 05/29/14: Received update email from Bill Simmons of ECS: Jon, We discovered some impacted soil around remote fills from 3 -7 that field screened between 40-400 ppm - it appears to cleanup around 8 but we will find out more later when we get back to this area and complete excavation and we will collect post-ex as usual. - J. Kolleeny 06/04/14: I sent email to Bill Simmons of ECS: Bill, Can you give me an update on UST removal work at this site? Was bottom concrete slab successfully removed? Has end-point sampling been performed? Any more impacted soil encountered? Please let me know. Bill sent reply: Jon, Yes entire bottom slab was removed did not find any impacted soil under slab. Still have not worked in remote fill impacted area yet since they have removed all product and vent lines and now are concentrating on removing 3 concrete canopy footings which are very large. I ll let you know when they get to remote fill excavation. - J. Kolleeny 6/12/14: On 6/10/14, received email from Bill Simmons of ECS: Jon, Here is remote fill excavation status: Attached is a remote fill excavation photo. At 13 we have a PID TOV of 700 ppm. Sand does not look that contaminated (no staining or saturation etc.) however and appears older. They cannot excavate any deeper or further to east towards sidewalk as they are 12 away from it now and they have to adhere to 1:1 sloping ratio. Also attached is a photo of material excavated to 12 this glacial till and rock material makes it impossible to drive sheet shoring along east wall near sidewalk to allow for further vertical excavation at this time. We know developer plans to dig at least 12 deep across site in future, and we expect that if they plan to excavate to sidewalk limits, they would have to shore walls using other methods. Tomorrow June 11, contractor will continue impacted soil excavation laterally and vertically to limits in all directions feasible, and ECS will collect samples for field screening analysis and submit post-ex samples for lab analysis. We propose that any necessary addt'l impacted soil excavation, based on post-ex data evaluation, can occur in conjunction with site development. Previously discussed test pits

EXXON GAS STATION (Continued) **S104619744**

will be performed in next few days. Please let us know your comments. On 6/12/14, I sent email reply: Bill, Thanks for site update. Is remote fill port area in northeast part of site? I'm thinking that, based on PID reading at 13 ft (a depth which will not be exceeded during site redevelopment), I may ask for a well to be installed in former fill port area to evaluate potential GW impacts. I know there are already several wells on site (I think 3), but when I was at site it became clear that they are on uphill portion of site, and that site slopes fairly significantly toward north. Since it's pretty clear that there was a release or releases from either tanks, piping or fill ports (or maybe just overfills at fill ports), I feel I would be remiss in my job if I didn't ask that GW be investigated on down-gradient edge of site, where tanks and fill ports were located. Please let me know what you think. - J. Kolleeny 10/21/14: Reviewed UST Closure and Subsurface Investigation Summary Rpt by ECS, dated 8/28/14 (in DecDocs). Rpt summarizes removal of all USTs, dispensers, piping, fill ports, hydraulic lifts, etc. during decommissioning of gas station in May/June 2014, and presents results of end-point soil samples. Rpt also summarizes install'n of 4th monitoring well at site in response to my request for a well in area of former remote fill port, and presents results of soil & GW samples from well. Total of 34 end-point samples were collected. Relatively minor impacts with low to moderate PID readings were encountered in pea gravel in UST excavation (PID up to 198 ppm), which was removed. Samples from excavation sidewalls and from beneath bottom concrete pad showed no significant impacts. Main impacts at site were identified in area of former remote fill port in NE area of site (east of UST field), with PID readings of 1,300 ppm at 13 ft below grade, at which point they couldn't dig further due to sloping requirements of excavation. Two bottom samples from center of remote fill excavation area showed VOCs above soil cleanup objectives: Sample 19 had 4,300 ug/kg toluene, 3,230 ug/kg ethylbenzene, 37,100 ug/kg total xylenes, 27,100 ug/kg 1,2,4-trimethylbenzene and 9,250 ug/kg 1,3,5-trimethylbenzene; Sample 24 showed only an exceedance for xylenes, with 701 ug/kg. Soil beneath dispensers, canopy footings, and piping runs did not show significant residual impacts. Soil beneath hydraulic lifts showed some SVOCs and metals attributable to historical fill materials at site. In addition, three test pits were dug at my request to look for any older USTs at site; no USTs or soil impacts were found in test pits. A total of 220.63 tons of impacted soil were removed from site and transported to Clean Earth of Carteret, NJ for recycling. In July 2014, ECS returned to site and installed well MW-4 in former remote fill port area; soil samples from 13-15 and 15-18 ft bgs showed impacts (PID readings, xylene exceedances). Water table was encountered at ~53 ft bgs; GW sample showed no VOCs above lab detection limits. Rpt notes that site will be developed with 5-story bldg with full basement, and that entire property will be excavated to ~12 ft bgs; rpt states that CFI and new owner will develop plan to remove residual soil impacts left behind in remote fill port area from 13 to 18 ft bgs, if feasible. Once soil excavation for site development is complete, ECS will prepare status rpt summarizing any addt'l excavation of impacted soil, with recommendations for further remedial actions if warranted or petitioning for spill closure. - J. Kolleeny 01/09/20: I sent email to Bill Simmons, formerly of ECS, now with ATC Group Svcs: Bill, I was going through my spill cases and came across this Cumberland Farms spill, which is still open in our database. My last entry in spill rpt is dated 10/21/14. That entry

EXXON GAS STATION (Continued) **S104619744**

was a review of ECS s UST Closure and Subsurface Investigation Summary Rpt dated 8/28/14. According to my review notes, rpt stated that: Once soil excavation for site development is complete, ECS will prepare a status rpt summarizing any addt'l excavation of impacted soil, with recommendations for further remedial actions if warranted or petitioning for spill closure. Can you provide an update on this site? Was addt'l soil excavation performed, has site been redeveloped? Can you submit something that will help get this spill case closed out? Please let me know, feel free to call to discuss. Bill sent reply: Jon, We drive by this Site a few times per year and it has remained vacant and fenced off since Fall-2014. We do not have any news on any re-development plans. On 7/16/14, we used a sonic drill rig to perform a soil boring to 65 in that same location to delineate vertical extent of soil impact and install a well. Results of 13 -15 soil sample had total VOCs of 3,760 ppb, consisting mostly of total xylenes at 3,260 ppb which is above standard (no other VOCs exceeded standards), and 15 -18 soil sample had only total xylenes at 286 ppb. On 7/24/14 GW sampling of that well indicated depth to GW at 52.8 and had no VOCs. So interval of minor impacted soil in former remote fill area exists from 13 -18 deep. This area is located adjacent to sidewalk and utilities along Vanderbilt Ave., and we cannot feasibly excavate estimated 25 tons of soil safely which is why we have been waiting for property development. Please let me know your thoughts. I sent reply: Bill, This is what I suggest: If you believe available data support spill closure, you should prepare a brief spill closure petition (was there any GW contamination elsewhere on site?), summarizing available soil and GW data, including a site plan showing GW flow direction. Assuming I agree with rpt, I will close spill case. Then, if/when site is developed, developer should have an envt'l consultant on hand to evaluate soil conditions, and any impacted soil should be properly handled and disposed of. If impacts encountered are relatively consistent with what you already know about residual soil contamination, then there is no need to call in a new spill. On the other hand, if significant amounts of grossly contaminated soil (i.e., petroleum-saturated, or visibly stained with strong odors and high PID readings) are encountered, then a new spill should be reported. Contaminated soil should be excavated to extent feasible, and end-point samples should be collected. If end-points still show significant impacts, it may be necessary to re-investigate GW. Either way, any new development at site should incorporate a vapor barrier at a minimum, and a sub-slab depressurization system is recommended (especially if grossly contaminated soil scenario occurs). My spill closure letter would include a caveat to that effect. Let me know if that seems reasonable. - J. Kolleeny "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 12/26/2001 - Tank test failure. DEC required the owner to file a new PBS form (signed by the owner) stating that the tank would be removed. Kevin O'Connor from Action Remediation (516-781-3000 ext 2421) stated that the tank would be pulled on Thursday Dec 27th, while the school is closed for Christmas vacation. Sangesland requested Action Remediation to take endpoint samples from the excavation and to take several color photos of the tank and excavation area. A proper Tank Closure report must be submitted to the DEC. 1/11/2002 - Sangesland received a Draft version of the report. Apparently only a single composite sidewall sample was taken along with a bottom endpoint sample. Sangesland called Kevin O'Connor to discuss the format and content of the Tank Closure report and requested several additional items. This Tank Closure report should include: 1) Discussion of what the tank problem was, what was done to solve/clean it, how the close out went. 2) Discuss the end point sampling - What was found, did it exceed limits (compare results to TAGM). 3) If anything exceeds limits, state how it will be remediated, or justify why this level of contamination is acceptible to be left on site. 4) Photos of the excavation. 2/1/02 - Sangesland received another package of information from Kevin O'Connor at Action Remediation. This package included the same information submitted earlier, plus photos. MISSING FROM THIS REPORT WAS: 1) THE SPILL NUMBER 2) THE NARRATIVE OF WHAT HAS BEEN DONE ON THE SITE AND WHY 3) THE CONSULTANTS REVIEW AND INTERPRETATION OF THE LAB RESULTS 2/7/2002 Protest sent a letter dated 1/30/2002 (Mailed 2/4/2002) Which included the information listed above (1/2/02 notes). Minor contamination continues to exist, but structural problems limit the ability to excavate any further. (Use of biologicals was not suggested by Protest). Spill Status - No Further Action "

Update By:	JHOCONNE
Site Description:	"Location: The Former East Coast Industrial Uniform Site is located in the City of New York, Borough of Brooklyn (Kings County) at 35, 43 and 49 (formerly 39) Skillman Street. It is currently identified as

Actual:
23 ft.

FORMER EAST COAST INDUSTRIAL UNIFORM (Continued) **S116041497**

Section 7, Block 1886, Lots 10, 11 and 12 on the NYC tax map. Site Features: The site was vacant and was formerly developed with three attached buildings and a parking area. The site is now occupied by three new 6-story residential apartment buildings. Each building consists of 16 apartments with a mix of 3, 4 and 5 bedroom units to better serve the needs of the community. Each building features a full basement level with utility rooms, residential living space, and 8-9 parking spaces and outdoor recreation areas on the roof. Current Zoning/Uses: The site has historically been zoned for light industrial/commercial applications. In 2001, the area was rezoned as a Special Mixed Use district (MX4) which added an R-6A residential zoning to the area. The surrounding land use includes 3 new multi-family residential buildings to the east, four new multi-family residential buildings and a vacant commercial building to the west, older multi-family walk up style buildings to the south and a community/office building to the north. Past Use of the Site: The Site was developed prior to 1887 with a Brooklyn Union Gas Gasometer (gas holder) in the northern third of the property and multiple residential homes and stores on the southern portion. The holder was operated solely as a gas distribution holder; no gas production facilities were present. By 1935, the holder was removed and the northern section was vacant until approximately 1941 when it was a parking lot and then a furniture/framing company. From 1974 to 2008, East Coast Industrial Uniform, an industrial dry-cleaning operation, was operating on the site. There are several concrete lined trenches cut through the southeast end of the building which were likely used to contain wash water from numerous washing machines prior to discharge through the small aboveground oil water separator located in the southeast corner and finally to public sewer. An abandoned-in-place underground storage tank is located near the roll-up gate entrance to the building. The underground storage tank (UST)is believed to be the 3,000-gallon No. 2 fuel oil tank identified on the NYSDEC PBS database. The UST was subsequently removed as part of the IRM. Site Geology and Hydrogeology: Subsurface soils at the Site consist of brown sand with some gravel to approximately 15 feet below grade. Native fine brown sand with a trace amount of silt is present immediately below this layer. The water table is approximately 20 feet below grade and groundwater flows generally to the west-northwest. "

Env Problem:

"Nature and Extent of Contamination Prior to Remediation: Based on the results of the Remedial Investigation, known contaminants including volatile organic compounds (VOCs) consisting primarily of petroleum compounds and chlorinated solvents, semi-volatile organic compounds (SVOCs) and metals are presented in the subsurface. These contaminants are impacting soil, groundwater and soil vapor. Groundwater - Petroleum VOCs and chlorinated VOCs were reported in groundwater above TOGS standards. For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 290 ppb (standard is 5 ppb). Tetrachloroethene (PCE) was detected at a maximum concentration of 540 ppb (standard is 5 ppb). Trichloroethene (TCE) was detected at a maximum concentration of 53 ppb (standard is 5 ppb). Soil - Petroleum VOCs were detected in soil above their corresponding NYSDEC Part 375.6 unrestricted soil cleanup objectives (UUSCOs). For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 16 ppm (UUSCO is 3.6 ppm). Naphthalene was detected at a maximum concentration of 18 ppm (UUSCO is 12 ppm). Soil Vapor Elevated concentrations of several chlorinated VOCs were detected on

FORMER EAST COAST INDUSTRIAL UNIFORM (Continued) **S116041497**

	the site. For example, PCE was detected at a maximum concentration of 3,510 ug/m3 and TCE was detected at 687 ug/m3. Significant Threat: NYSDEC and NYSDOH determined that this site does not pose a significant threat to human health or the environment. Post Remediation: Remediation at the site has been completed. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan."
Health Problem:	"Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination."

Site Description:	"Location: The Skillman Street Holder Station is located in an urban area, at 7 Skillman Street, Brooklyn, NY. Site Features: The 7 Skillman Street parcel is completely covered by a two-story building. This building is used as a banquet/catering hall. Current Zoning/Use: The property is currently in active use as a banquet hall, and is zoned for mixed use, which includes residential, commercial, and light industrial uses. The surrounding parcels are currently used for a combination of commercial and residential purposes. The nearest residential building is approximately 150 feet to the southwest. Past Use of the Site: Two manufactured gas storage holders were constructed at the site between 1887 and 1904. These holders were operated solely as gas distribution holders, and no gas production facilities were present. At some point prior to 1935, gas storage operations ceased and the holders were demolished. The site remained under the ownership of the Brooklyn Union Gas Company until sometime prior to 1947. Upon being sold the property was used for automobile parking and storage. By 1950, the site was used as an automobile repair facility which remained until at least 1993. In 2003, the existing building was developed into a catering hall, which is presently in operation. Site Geology and Hydrogeology: The site is underlain by fill material, alluvial sands, glacial outwash and bedrock at depth. Groundwater is typically found at approximately 7 to 16 feet below ground surface (bgs), and flows generally to the west-northwest. "
Env Problem:	"Based upon investigations conducted to date, the primary contaminants of concern are the volatile organic compounds (VOCs) benzene, toluene, ethylbenzene and xylene (together known as BTEX), and styrene; polycyclic aromatic hydrocarbons (PAHs); and metals. Soil- The subsurface soil exceedances for on-site VOCs (BTEX) were

K - SKILLMAN ST. STATION (Continued) **S109321184**

slightly above unrestricted soil cleanup objectives (USCOs), though no samples exceed the restricted residential SCOs. However sampling of soil beneath the site was limited due to the inability to access much of the property with a drill rig, and a source area of higher contaminant concentrations may be present beneath the buildings. Adjacent to the site, in a sample collected beneath Skillman Street at a depth of approximately 27 feet where evidence of coal tar was observed, the concentration of toluene was 160 ppm, ethylbenzene was 220 ppm, and xylenes were 840 ppm in subsurface soil. Styrene was also detected at this location at a concentration of 400 ppm. There were no detections of chlorinated solvents or total cyanide in soil above unrestricted SCOs either on or off-site. The PAH exceedances above unrestricted SCOs consisted of benzo(b)fluoranthene, benz(a)anthracene, benzo(a)pyrene, chrysene, indeno(1,2,3-cd)pyrene, and naphthalene. Adjacent to the site the concentration of naphthalene was 1000 ppm (at 27 feet below ground surface). The only inorganics to exceed unrestricted SCOs were lead and mercury, although neither exceeded the restricted residential SCOs in soil. Groundwater - Samples collected from monitoring wells located both on-site (temporary sampling points) and off-site exceeded groundwater quality standards (GWQS) for benzene, toluene, ethylbenzene, xylenes (BTEX) compounds, naphthalene, chlorinated VOCs, cyanide, and metals. On-site, benzene ranged from 13 to 5,600 ppb (GWQS of 1 ppb), toluene at 20,000 ppb (GWQS of 5 ppb), ethylbenzene at 12,000 ppb (GWQS of 5 ppb), xylenes at 9,400 ppb (GWQS of 5 ppb), isopropyl benzene at 420 ppb (GWQS of 5 ppb), styrene at 82 ppb (GWQS of 5 ppb), cis-1,2-dichloroethene at 9.2 ppb (GWQS of 5 ppb), naphthalene at 5,600 ppb (GWQS of 10 ppb), total cyanide at 240 ppb (GWQS of 200 ppb), chromium at 380 ppb (GWQS of 50 ppb), and lead at 280 ppb (GWQS of 25 ppb). Elevated BTEX and napthalene also indicate the possible presence of MGP-related contaminants in the subsurface beneath the building. Off-site, detections of benzene range from 100 ppb to 410 ppb; toluene from 79 ppb to 1,100 ppb; ethylbenzene from 32 ppb to 930 ppb; xylenes from 100 ppb to 3,900 ppb; tetrachloroethene (PCE) from 5.6 to 9,400 ppb; trichloroethene (TCE) from 140 to 1,900 ppb; vinyl chloride from 200 to 380 ppb; cis-1,2-dichloroethene from 600 ppb to 8,000 ppb; isopropyl benzene from 64 ppb to 420 ppb; styrene from 82 ppb to 1,800 ppb; and naphthalene from 62 ppb to 5,600 ppb. There were also eight inorganic compounds that exceeded the groundwater standards in both on-site and off-site wells. These compounds were copper, iron, magnesium, manganese, nickel, selenium, sodium, and thallium, all of which are not associated with the former MGP operations. Soil Vapor - Soil vapor samples collected from the site contained elevated levels of both MGP-related and non-MGP-related compounds. The MGP-related detections included benzene at 35 ug/m3; toluene at 96 ug/m3; ethylbenzene at 12 ug/m3; xylenes at 40 ug/m3; 1,2,4-trimethylbenzene at 12 ug/m3; and nonane at 8.4 ug/m3. The non-MGP constituents included PCE at 12,000 ug/m3, TCE at 1,200 ug/m3, and cis-1,2-dichloroethene at 1,500 ug/m3. Indoor Air - The contaminants present in soil vapor at elevated levels were detected at much lower concentrations in indoor air. The highest concentration of the BTEX compounds was toluene at 6.3 ug/m3. PCE was detected at a concentration of 0.66 ug/m3; TCE at 0.21 ug/m3; and ethanol at 450 ug/m3. The ethanol concentrations in indoor air were approximately an order of magnitude larger than the soil vapor concentrations, indicating the source to be within the building. No indoor air guidance values were exceeded for any compound. The owners

K - SKILLMAN ST. STATION (Continued) **S109321184**

	of the affected property have been notified where mitigation or monitoring of impacts to indoor air is required. In 2018, several monitoring wells were sampled for PFAS and 1,4-dioxane as part of the Department's Emerging Contaminants initiative. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfanoic acid (PFOS) were reported at concentrations of up to 180 and 45 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. Individual PFAS exceeding the 100 ppt screening level included perfluorohexanoic acid (PFHxA) at a concentration of 208 ppt. Total PFAS, including PFOA and PFOS, were reported at concentrations of up to 817 ppt, which is above the 500 ppt screening level for total PFAS in groundwater. An Interim Site Management Plan (ISMP) is in place that governs soil disturbance and the required groundwater monitoring. "
Health Problem:	"Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move in to the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Mitigation has been recommended to address the potential for people to inhale contaminants in indoor air of the onsite building due to soil vapor intrusion. Environmental sampling indicates that soil vapor intrusion is a concern for off-site buildings which are occupied. "

DEC Memo:	"09/23/2011-Zhune spoke to Kevin Brusse from Environmental Business Consultant 631-504-6000 He said. They are doing Phase II for potential purchaser. They found one UST not properly abandoned. Yesterday they did boribgs arround the tank and found soil contaminated. They went 20' down and found a gray sheen in the groundwater interface. They collected soil and groundwater samples. 05/14/12-Zhune called to Kevin Brusse. He said the site has been accepted into the Brownfield program. He also said Mandy Yau is the project manager for this site. 05/14/12- Zhune spoke to Jane O'Connell she request to assign this spill to Mandy Yau. "
Remarks:	"Caller advised during inspection of property found a leaking fuel tank unknown amount of oil spilled into soil. Clean up is pending."

Site Description: "Location: The site is located in the Bedford-Stuyvesant section of Brooklyn. The site is generally rectangular in shape with 193 feet of frontage along Bedford Avenue. The site is comprised of a single tax parcel (Block 1886, Lot 44). The site is approximately 0.46 acres in size. Site Features: Now that contamination has been removed, construction of a 7-story mixed-use commercial-residential building,

744 BEDFORD AVENUE (Continued) **S116712571**

which will cover the entire site, is underway. Current Zoning and Land Use: The current use of the site is vacant, zoned mixed commercial (M1-2 / R6A zoning) use. Past Use of the Site: According to Sanborn maps the southern portion of the site was occupied by a carriage repository in 1904 while the northern portion was occupied by single family homes. By 1918 the southern portion became occupied by a 50-car garage with underground gasoline tanks. By 1947 auto sales and service was added to the front portion of the garage. In 1950 the rear portion of the site remained residential. Sometime between 1965 and 1977 the homes on the northern portion were removed and replaced with a 1-story building identified as used auto sales. The use of the site remained as auto sales and auto repair through 1993 when the buildings were shown as vacant. The gas tanks remained on all the maps from 1918 through 1996. Site Geology and Hydrogeology: The elevation of the site ranges from 19 to 21 feet above the National Geodetic Vertical Datum (NGVD). The area topography gradually slopes to the north. Soil at the site is described as historic fill materials to a depth ranging from 4 to 6 feet below the surface followed by native silty-sand and gravel. The depth to groundwater beneath the Site is approximately 12 feet below grade and flows to the southwest toward dewatering wells at a subway station. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum-related VOCs, including ethylbenzene, n-propylbenzene, xylene, and 1,3,5-Trimethylbenzene (1,3,5-TMB) which exceeded the unrestricted use soil cleanup objectives (UUSCOs). Metals (copper, lead, mercury, and zinc) were also detected in the soil exceeding UUSCOs. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Low level VOCs found in soil vapor were addressed by the extensive site excavation (source removal) and following a soil vapor intrusion evaluation, no further actions were necessary to address exposures related to soil vapor intrusion."

Health Problem: "Remedial actions are complete and have eliminated the potential for contact with site-related contaminants."

85 SKILLMAN STREET - FORMER JUNK YARD (Continued) **S113916513**

Update By: RECURLEY

Site Description: "Location: The 85 Skillman Street site (Site) is located in the Bedford-Stuyvesant section of Brooklyn. The site is bounded by commercial/residential properties and Park Avenue to the north, residential properties, a fire station and Bedford Avenue to the east, commercial, vacant property and Myrtle Avenue to the south and Skillman Street to the west. Site Features: The site is identified as 85 Skillman Street, Section 3, Block 1900, Lot 16 on the NYC tax map. Lot 16 encompasses approximately 0.19 acres of property and includes former lots 14, 15, 16 and 17, that were consolidated into one through a lot merger. The site was formerly vacant property covered with crushed stone and gravel and used as a parking lot. Current Zoning and Land Use: The site is zoned M1-2/R6A in a mixed use zoning district. This mixed use district permits a mixture of residential and non-residential (commercial, community, light manufacturing) uses in the same building. After remediation, the site has been developed for restricted residential use as a multi-story apartment building with a basement. Past Use of the site: All of the lots which now make up the site parcel were developed as residential properties at one time. Former lot 17 on the north side was redeveloped for industrial use as a sheet metal facility for a short period around 1950, an auto repair facility and then as a junk storage or storage facility. The structure on this lot was demolished around 1978, however the lot continued to be used as a small junkyard up until recently. The residence on former lot 16 was demolished around 1965. Residential structures on former lots 14 and 15 were demolished around 1981. Since the demolitions, former lots 14, 15 and 16 have been used for parking. Site Geology and Hydrogeology: The topography of the site and the surrounding area slopes gently to the northwest towards the New York Shipyard and the East River. The ground level elevation on the property is approximately 33 feet above mean sea level. The site is underlain by a layer of historic fill that is approximately 2 to 7 feet thick starting just below the ground surface. The historic fill generally consists of silty-sand, brick, wood, concrete and other debris. The native soils below the historic fill consist of brown silty-sand. The approximate depth to groundwater is 31 feet below ground surface (bgs) in the area. Regional groundwater contour maps indicated that the groundwater flow should be to the northwest towards the East River. However, contrary to this, monitoring well water level measurements appear to indicate that the site area flow is in a southeasterly direction. Additional research indicates that groundwater flow, particularly on the eastern half of the site, may be influenced by the MTA's six subway dewatering wells located in the Nostrand and Marcy Avenue area 1,600 feet to the east of the site."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants were PCBs in soil, as well as lead and polycyclic aromatic hydrocarbons in soil. Minimal amounts PCBs were also detected in groundwater. Remedial actions have been achieved unrestricted soil cleanup objectives, PCBs are no longer present in groundwater and no environmental easement or site management plan are necessary. The text below remains for information. Nature and Extent of Contamination: Soil - A total of 17 soil samples were initially collected at the site. Twelve of these samples were collected from six borings at two different depth intervals (0 to 2 and 6 to 8 feet) in each boring. Two soil samples were collected at the groundwater interface in two of the borings. Additionally three shallow hand-augured soil samples were collected at a suspected hotspot area

85 SKILLMAN STREET - FORMER JUNK YARD (Continued) **S113916513**

in the NE corner of the site. At the request of the USEPA, eight additional soils samples (B7 to B14) were collected from 0 to 2 feet below grade to further delineate the horizontal extent of soil with PCB concentrations greater than 50 ppb. The shallow soils on northern lot 17 and on the western half of lot 16 were impacted by polychlorinated biphenyls (PCBs). PCB (Aroclor 1254) were found in the range of 0.51 to 150 parts per million (ppm) in the 0 to 2 foot depth interval. The shallow soils throughout the site have also been impacted by metals and polycyclic aromatic hydrocarbons (PAHs). Lead was found in the range of 450 to 5,300 ppm and individual PAHs from non-detectable to 18 ppm. No volatile organic compounds (VOCs) were encountered during the RI Except at one location where metals and PAHs were found in fill materials, there was no contamination, including PCBs found above unrestricted use SCOs in the deeper (6 to 8 foot) native soils. The RI report cited the presence of subsurface electrical equipment located in the northeast corner of the property as the possible source of the PCB contamination. The metals and PAH contamination found throughout the site, appears to be indicative of typical historic fill in NYC. Remediation consisted of excavation and disposal of contaminated soil, followed by confirmation sampling. Initially, areas of soil containing PCBs above 40 ppm (PCB Hot Spot) and PCBs between 1 ppm and 40 ppm (PCB Cold Spot) were divided into grids and sampled individually to ensure PCB removal. Upon completion of PCB soil removal, and after removal of the remaining historic fill and clean soil necessary for building construction, nine endpoint samples were taken. These indicated that no exceedances of unrestricted soil cleanup objectives for PCBs, metals, VOCs, SVOCS or pesticides remain at the site. Groundwater - PCE and TCE were initially found in groundwater at two monitoring well locations on the eastern side of the property. Both compounds were above the groundwater standards of 5.0 ppb for each and were believed to originate from an off-site source. The maximum PCE concentration was 26 ppb and the maximum TCE concentration was 38 ppb. Filtered samples of groundwater exceeded SCGs for sodium and manganese as well as for iron, which are commonly found in shallow groundwater in this region and are not considered site specific contaminants of concern. PCBs were also found in groundwater in three of the monitoring wells. Concentrations ranged from 1.5 to 2.3 ppb. Based on the fact that PCBs were not detected in the deeper soils, the depth to groundwater and the installation of the wells in contaminated boreholes, the RI report attributed the PCBs in groundwater to cross-contamination during monitoring well construction. All four wells were removed during construction. After remediation, four groundwater wells were re-installed at the site. The groundwater was sampled twice and did not contain PCBs. Although the PCE and TCE were attributed to an off-site source, groundwater was also sampled for VOCs. While the PCE in the first well was 26 ppb, the TCE decreased by 60 percent to a final concentration of 12 ppb. In the second well, the groundwater concentrations of both PCE and TCE decreased by over 90 percent (to 1.9 and 1.3 ppb respectively). Soil Vapor - During the remedial investigation, soil vapor on the property was found to contain low levels of several volatile organic compounds. The PCE concentrations found in soil vapor were less than 1.0 micrograms per cubic meter and TCE was not detected in the soil vapor. No remedial measures were necessary to address soil vapor onsite. "

Health Problem: "Remedial actions completed at the site have eliminated all potential exposures to site-related contamination."

DEC Memo:	"11/2/05, Dyber: No response from owner. Referred to Region. Next Step: Perform state-funded investigation. 8/30/05, Dyber: Sent letter to owner. 8/9/05, Dyber: Did not receive reports. Left message for Gulum. Contact owner if no return call. 7/21/05: Al Gulum found a file with several reports. He will make copies and send them to me. 7/14/05: Spoke with Al Gulum. He will check his records. 9/7/06 - Austin - Assigned from Albany to Region 2 staff for review and closure - end 10/20/06 - Raphael Ketani. The spill case was opened due to the discovery of a buried 275 gal. tank and associated contaminated. The soil was excavated and the lead hot spot was also removed. Reports and correspondences regarding the excavation work are in the file. The present owners of the property are: 1 Carlton Associates Inc. The site location is block 02031 and lot 0016. I found a letter in the file dated 11/5/97 and written by Anthony Sigona, the previous Spills case worker for the project. The letter states at the end that the spill case will be closed. Based upon the reports and other documentation in the file, and the 11/5/97 letter, I am closing he spill case and setting the closure date as 11/5/97. "

FRUSTACIA-14757-A MECH-NETWORKS-FOUND APPRX 1 GAL OF HEATING OIL COMING FROM BUILDING STANDPIPE. ****3RD PARTY INVOLVEMENT****-OIL OVERFLOWED AFTER DELIVERY OF HEATING OIL TO BUILDING ONTO SIDEWALK AND THEN INTO VAULT 2572- MR FRUSTACIA FOUND OIL COMPANY HAD PLACED DIAPERS TO CONTAIN

SPILL NUMBER 9812897 (Continued) **S104619936**

OIL. SUMP PUMP IN HOLE BUT OIL MINDER CAUSED PUMP TO SHUT DOWN AUTOMATICALLY. MR. FRUSTACIA MANUALLY DISCONNECTED PUMP. NO JOINT REGULATOR IN VAULT. PLUMBING COMING FROM TRAP SEEMS TO BE GOING INTO CUSTOMER'S BUILDING. MR. FRUSTACIA TOOK SAMPLE AND PLACED ENV TAG 08317. WILL NEED TO TAKE 3 SAMPLES-1 FOR FLASHPOINT, 1 FOR OIL ID, AND 1 FOR PCB. WHEN MR FRUSTACIA CALLS BACK HE WILL BE NOTIFIED OF 2 ADDITIONAL SAMPLES AND WILL NEED TO GET ACCESS TO BUILDING AND TRY TO DETERMINE TYPE OF PLUMBING GOING INTO BUILDING. DOES NOT SEEM TO BE COMING FROM ANY COMPANY EQUIPMENT. FDR IN VAULT SHOWS JAN 1, 1951 AND 147PPM. UPDATEJAN-20-1999 1600HRS CAMPANILE O/S NETWORKS REPORTS HIM AND ZALLOUGHI ARRIVED AT 1500HRS THEY BROKE OPEN PIPES ON SUMP PUMP IN VAULT AND FOUND NO TRACE OF OIL, WENT INTO 705 BEDFORD AVE AND TRACED OUT PIPES. AND FOUND AN OIL TANK THAT BELONGS TO BLDIN THE SAME ROOM WHERE THE SUMP PUMP ORIGINATES . FOUND TRACES OF OIL IN ROOM. IT APPEARES TO BE COMING FROM OLD OIL TANK. NOTIFIED JOE BELIEVED TO BE SUPT (WOULD NOT GIVE LAST NAME) FROM S&W KNITTING MILL. WE RECOMEND DEP BE NOTIFIED OF SITUATION IN OIL TANK ROOM. MR CAMPANILE RECOMENDS THAT SUPT SHOULD CLEAN UP HIS ROOM. UPDATE ***** 1-20-99 LAB SEQ# 99-00596 <1.0 ALSO, SQ# 99-00598 OIL ID INDICATES THE PRESENCE OF A SUBSTANCE SIMILAR TO A LIGHT FUEL OIL. 16-FEB-1999 17:44 -- A.WALKER #55495, BKLYN ENV OPS, REPORTS CLEANUP COMPLETED WITH SLIX AT 16:00 HRS & E/S TAG #08317 REMOVED. Also, e2mis no. 122-564: 1/20/99 10:00HRS-***3RD PARTY INCIDENT***N. FRUSTACIA-14757 A MECHANIC-NETWORKS FOUND APPRX 1 PINT OF HEATING OIL ON 750 GALLONS OF WATER IN VAULT 2601 F/O 2 LYNCH STREET-COMING FROM OIL STANDPIPE FROM BUILDING AFTER OIL COMPANY MADE DELIVERY-NO PLUMBING IN THIS VAULT-THIS VAULT IS CONNECTED TO V 2572-INCIDENT #122562. THIS IS CONTAINED-NO SUMP IN THIS VAULT.FDR 6B50 INSTALLED 1/1/84 AND SHOWS 10 PPM-DOES NOT LOOK AS THOUGH THIS IS COMING FROM COMPANY EQUIPMENT. TOOK SAMPLE FOR FLASHPOINT-OIL ID-AND PCB. update****** LAB SEQ # 99-00597 <1.0 ALSO 99-00599-001 I.D IS NOT POSSIBLE DUE TO THE DEGRADED QUALITY OF THE MATERIAL RECOVERED. 16-FEB-1999 17:44 -- A.WALKER #55495, BKLYN ENV OPS, REPORTS CLEANUP COMPLETED WITH SLIX AT 14:30 HRS & E/S TAG #08303 REMOVED."

Remarks: "THERE WAS A HEATING OIL DELIVERY AT THAT LOCATION. THE SPILL ENDED UP IN VAULT 2572 AND IS 1 GAL ON 1000 GAL OF WATER AND VAULT 2601 IS 1 PT ON 750 GAL OF WATER.THE SUMP PUMP IN BOTH VAULTS ARE NOT RUNNING."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 10/30/03. TTF letter has been send to: ANDY HELEN KELLER SCHOOL 57 WILLOWBY AVE BROOKLYN, NY 11201 Y 12/08/2005 The NYC School spill coordinator, Jim Merlo, indicates that this spill report is for a tank registered to the landlord of the facility and not part of the School district. Joe White called the contact for the spill, Phil Fazen. Mr. Fazen indicates that he tested the tank and was not ablke to make the repair and has no record of a subsequent tank test passing. He recommended calling Petroleum Tank Testers who may have

HELEN KELLER SCHOOL (Continued) **S106000067**

been involved in fixing / replacing / abandoning the tank.
12/08/2005: Joe White called Dianna at Petroleum Tank Testers and she ondicated that her records show failure with no passes. Tank was cleaned and some lines plugged but tank still did not pass. She indicated that the work was being performed for Exterme Heating Company and that I should follow up with them. 12/08/2005: Joe White called Jason at Extreme Heating Company. Hedid not recall the work but suggested that I call him back next week and he would be in the office where his records are kept. I will follow up next week with him. 12/12/2005: Joe White called Jason at Extreme Heating and left a message. Awaiting a return phonecall. 1/6/2006: Called Jason at Extreme Heating. No return message was received. 1/13/2006: I was unable to get any furtherinformation regarding this spill. Given the age of the spill and the reported volume of the spill being 0 gallons and the fact that there are no PBS registered tanks at this location I have to assume that he tanks have either been removed or taken out of service. I am closing out this spill. ------ joe white"

DEC Memo:	"6/8/05 - Project transferred to TLGibbons in Central Office, Albany 9/16/05 - Spoke with Conrad Milster, Pratt Institute (718-636-3579 or 3694). Worked for Pratt since 1958 and was familiar w/ tank on Myrtle Avenue. He believed they were removed when they converted to gas. He will find files. 10/7/05 - Spoke with Mr. Milster. Said Tony Gelver (718-636-3579) was boss when this work done. He will call. 10/11/05 - Ron LeClair (978-589-3380 or 978-852-8142), ENSR, called. Consultant to Pratt. Will try and fing info on spill. 1/18/06 - Received tank report from Ron LeClair, which he received from Mid-County Mechanical Inc., who did testing of tank and collected soil samples around tank. Tanks was closed in place, however, information he submitted was sketchy. 1/19/06 - Spoke with Mr. LeClair. He will send other information he has on spill to fill in data gaps. Documents show that the tank was pumped out, cleaned and closed in place with cement. Samples from two borings drilled adjacent to tank show negligible levels of petroleum contamination. Close spill. "

Site Description:	"Plume track down 224251 identified 735 Bedford Avenue/12 Spencer Street at the source of CVOC contamination. The plume trackdown project was originally called the Spencer Street Groundwater plume trackdown. The name was changed to 735 Bedford Avenue in 2018. The plume trackdown project was generated based on information collected on the public sidewalk of Spencer Street between Flushing Avenue and Park Avenue. The project area is located on the western extent of Long Island, in the New York City Borough of Brooklyn, in the northern section of the Bedford/Stuyvesant neighborhood. The area of investigation includes Spencer Street and Bedford Avenue, south of Flushing Avenue. The surrounding area is predominantly

12 SPENCER STREET (Continued) **S123159094**

industrial/commercial with mixed commercial and residential properties. The area of investigation is approximately 1.3 miles east southeast of the East River. Location The Site is located in the Bedford Stuyvesant section of Kings County. The Site is located in the City of New York and Borough of Brooklyn. The Site is rectangular shaped spanning between Bedford Avenue and Spencer Street with 25 feet of frontage along both Bedford Avenue and Spencer Street. The north and south sides of the property are bordered by residential buildings. The west side is bordered by the Bedford Avenue and the east side by Spencer Street. Site Features The Site is improved with a multi-story commercial building with one half accessible by Bedford Avenue and the other half accessible on Spencer Street. There is currently a cellar level below the 735 Bedford Avenue portion of the site. Current Zoning and Land Use The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. Nearly all industrial uses are allowed in M1 districts if they meet the stringent M1 performance standards. Offices, hotels and most retail uses are also permitted. The current use of the building as office space is in compliance with the zoning. Surrounding land use includes multi-family residential properties to the north, commercial / retail / office use to the west, residential and commercial (warehouses) to the south and commercial (warehouses) to the east. The area surrounding the property is highly urbanized and predominantly consists of older industrial / commercial buildings with mixed use (retail / residential) buildings along main corridors such as Bedford Avenue Flushing Avenue and Park Avenue. There are ten schools located within 1,200 feet of the Site including Bnei Shimon Yisroel of Sopron approximately 450 feet to the east. There were no nursing homes or hospitals identified within 1,000 feet of the Site. Past Use of the Site The environmental history of the subject property was previously investigated through the review of Federal and State Environmental databases, Environmental Sanborn Fire Insurance maps, NYC Department of Building records and the NYC Department of Finance databases. According to the review of these sources the Site has been developed since at least 1887 with a residential home through at least 1904. In 1918 the property is shown to be redeveloped with a 1story building identified as a carriage and auto repair shop. The present 3-story building is shown by 1935. The use from 1935 to 1965 is shown as storage. From 1977 to 1989 the building is labeled with an M which refers in general to manufacturing. From 1991 to 1996 the use is not specified. The Requestor purchased the property in March 2015. The investigation of this brownfield site is the result of the 735 Bedford Ave. (Site #224251) (aka Spencer Street Groundwater Plume) groundwater plume trackdown. Site Geography and Geology Subsurface soils at the Site consist of historic fill materials to a depth of approximately 1 to 5 feet below grade followed by native silty-sand and clay. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the property is approximately 20 feet above mean sea level. The topography within the immediate area slopes gradually from south to north. Groundwater occurs beneath the Site at a depth of approximately 15 feet below grade under water table conditions. Based on groundwater flow maps on properties in the vicinity, groundwater flow is generally east. However, the groundwater flow direction was determined from groundwater elevation

12 SPENCER STREET (Continued) **S123159094**

measurements taken on the Site show the flow direction to be from the south east to the northwest in the eastern half of the Site. The Site is not located within a designated flood zone area. "

Env Problem: "Background: 224281 was identified as a potential source for contamination outlined in a plume track down identified as Spencer Street GW (Site 224251). As part of an off-site investigation performed upgradient to BCP site C224204 (11 Spencer) groundwater samples were collected showing high concentrations of chlorinated volatile organic compounds (CVOCs). Tetrachloroethene (PCE) was detected at 120,000 parts per billion or ppb (compared to a groundwater standard of 5 ppb), trichloroethene was detected at 38,000 ppb (compared to a groundwater standard of 5 ppb) and 1,1,1-trichloroethane was detected at 86,000 ppb (compared to a groundwater standard of 5 ppb). These elevated values located as part of an up-gradient plume led to the creation of P-Site Spencer Street GW. In the summer of 2017 Environmental Assessment Remediation (EAR) on behalf of the Department performed the plume track down. Four (4) monitoring wells (MW-1 to MW-4) were installed to delineate the plume. Concentrations of PCE ranged from 150,000 ppb in MW-3 to 0.33 ppb in MW-1 (compared to a groundwater standard of 5 ppb). Along with the groundwater analysis, five (5) soil samples were collected from four locations (MW-1 through MW-4) at the water table interface and/or the depth interval exhibiting indication of impact. PCE in soil samples ranged from 4,200,000 ppb in MW-3 to 0.7 ppb in MW-4 (compared to commercial soil cleanup objective (CSCO) of 150,000 ppb). C224282: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), some metals, and polychlorinated biphenyls (PCBs) as part of a limited subsurface investigation performed by Environmental Business Consultants (EBC) on behalf of the property owner. Sub slab soil Vapor samples were collected and analyzed for VOCs. Based upon the limited investigation conducted to date, the primary contaminants of concern are tetrachloroethene (PCE), trichloroethene (TCE), and 1,2-dichlorethene (1,2-DCE). Soil Based on the investigations completed to date, chlorinated VOCs are detectable in soil. Maximum concentration of PCE in soils collected on site are 4.2 ppm (unrestricted use soil cleanup objective (UUSCO) is 1.3 ppm). Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, and Dibenzo(a,h)anthracene were detected above CSCO objectives throughout the site. Groundwater PCE [maximum concentration 45,000 parts per billion (ppb), standard 5 ppb], TCE (9,100 ppb max, 5 ppb standard), 1,2-dichlorethene (4,200 ppb max, 5 ppb standard), and well as 1,1,1-TCA, 1,1-DCA, and 1,1-DCE were detected above the NYSDEC GA Groundwater Quality Standards. Sub-slab soil vapor and indoor air CVOCs were detected in the sub slab vapor and indoor air samples. Further evaluation of the results is required to determine if monitoring or mitigation is necessary on-site. "

Health Problem: "People are not expected to come into contact with contaminated soil or groundwater because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The on site commercial building is occupied and

12 SPENCER STREET (Continued) **S123159094**

actions are recommended to address potential exposures associated with soil vapor intrusion. Additional investigation is needed to determine whether additional actions may be needed to address the potential for exposure associated with soil vapor intrusion off-site."

DEC Memo:	"11/1/2004 - JZ (desk duty): Underground pipe line broke. It has been replace by Petroleum Tank Cleaners (PTC). Endpoint soil samples were taken for analyze, results will send to DEC for review. PBS No. is 2-607483. There are three USTs storing #2 Fuel oil. Unclear which line was leaked. Contaminated soil letter sent to: St. Joseph's College, 245 Clinton Avenue, Brooklyn NY 11205-3688 1/20/2005 Sangesland reviewed submittal from PTC. Report says the top of the tank was uncovered, some contamination was found around the top of the tank near a return line connection. Suction & return lines were replaced. System was retested and passed a pressure test. Contaminated soil was dug out and removed (Manifest included). End point samples were taken on 11/22/04 and tested by South Mall Lab. VOC's were OK. Minor hits for some SVOC's. ***Spill closed - No further action required.***"
Remarks:	"they replaced the pipe and cleaned the mess"

Town:	New York City
Record Added Date:	12/17/2014
Record Updated Date:	08/11/2020
Update By:	HMDUDEK
Site Description:	"Location The Site is located in the Bedford Stuyvesant section of Kings County and is comprised of three tax parcels identified as Block 1716, Lots 20, 21 and 24 on the New York City Tax Map. The combined lots total 18,774 square feet (0.43 acres). The Site has 167.25 ft of street frontage on Spencer Street and 75 feet of street frontage on Flushing Avenue. The area surrounding the Site includes commercial to the south and west, mixed-use (1st floor retail) properties to the east, residential properties to the northwest, and commercial / industrial properties to the north. Site Features The Site is currently vacant with no structures present and is not being used. An 8-foot high construction fence borders the property on the north and west sites to prevent unauthorized access. Current Zoning and Land Use The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. Nearly all industrial uses are allowed in M1 districts if they meet the stringent M1 performance standards. Offices, hotels and most retail uses are also permitted. Certain community facilities, such as hospitals, are allowed in M1 districts only by special permit, but houses of worship are allowed as-of-right. Surrounding land use ncludes commercial to the south and west, mixed-use (1st floor retail) properties to the east, residential properties to the northwest, and commercial / industrial properties to the north. The area surrounding the property is highly urbanized and predominantly consists of older industrial/ commercial buildings with mixed use (retail / residential) buildings along main corridors such as Bedford Avenue, Flushing Avenue and Park Avenue.

11 SPENCER STREET (Continued) **S117362879**

There are eight schools located within 1,200 feet of the Site including Bnei Shimon Yisroel of Sopron approximately 200 feet to the east (see Figure 5). There were no nursing homes or hospitals identified within 1,000 feet of the Site. Past Use of the Site Lot 21 was originally developed prior to 1887 with a 2-story residential home along Spencer Street and a stone yard which fronted on Flushing Avenue. The most recent building was constructed in 1935 and was used as a garage. By 1947, the main portion of the building was used as a sheet metal works with the Spencer Street portion used as a private garage. By 1950 the private garage became part of the sheet metal works and was used for painting and spraying and making wire and wire products. The building remained in this use through at least the 1990's. Lot 20 was originally a storefront but has been a vacant lot used for parking since 1935. Lot 24 was used as a lumber shed in 1918, then as a tire shop from 1935 to 1950, storage from 1965 to 1996. The current owner purchased the property in March 2015. The buildings on lot 21 and 20 were demolished in 2018?. Site Geology and Hydrogeology Subsurface soils at the site include a silty non-native fill with ash and other rubble which varies in depth from 1 to 5 feet. A fine silt, and in some locations clay, is present beneath the fill at a depth of approximately 3 to 5 feet. Crushed rock and course sand grading to fine sand and silt is present below the fill and silt and extends to the water table (10 to 15 feet bgs). This is followed by a medium to coarse sand to a depth of 20 feet with cobbles and coarse sand observed in the vicinity of the source area from 20 to 50 feet below grade. The groundwater flow direction as determined from on-site groundwater elevation measurements is north and east. A site location map is attached as Figure 1. "

Env Problem:

"Nature and Extent of Contamination : Soil: A Focused Subsurface Site Investigation was conducted in July 2014 and a Supplemental Focused Subsurface Investigation was conducted in September 2014. The primary contaminant of concern in soil is PCE. PCE was detected at all 46 reported on-site soil sampling locations, at a maximum of 32 parts per million (ppm) in one of the soil samples collected from a boring that was installed near the concrete degreasing pit within the building. This concentration exceeds both the Unrestricted Use soil cleanup objective (UUSCO) of 1.3 ppm and the Protection of Groundwater SCO (1.3 ppm). No petroleum-related volatile organic compounds (VOCs) were detected in soil at concentrations exceeding the UUSCOs. Additional soil samples were collected in 2015, 2016 and 2017. During that investigation, the highest concentration of PCE was detected in MWC2 (2/22/17) at 900 ppm at 11/12 feet below grade surface . Contaminants of concern have also been detected in off-site soil samples collected to the north and west of the BCP site. Adjacent BCP sites abut the Site to the east. Additional delineation of off-site impacted will be required as part of the RAWP. Groundwater: Multiple investigations were performed on-site from 2014 to 2019. Groundwater samples have been collected from nineteen monitoring wells. Several compounds were detected well above standards in groundwater during the Focused Subsurface Site Investigation. PCE was detected at a maximum of 47,000 parts per billion (ppb) (standard of 5 ppm), TCE at a maximum of 250 ppb (standard of 5 ppm), DCE at a maximum of 260 ppb (standard of 5 ppm), and 1,1,1-TCA at a maximum of 3,100 ppb (standard of 5 ppm). During a supplemental investigation, toluene was detected at a maximum of 66,000 ppb (standard of 5 ppm). Supplemental groundwater samples were collected in 2017. CVOCs were the primary contaminants

11 SPENCER STREET (Continued) **S117362879**

of concern. PCE was detected at a maximum concentration of 120,000 ppb (standard of 5 ppm), TCE at a maximum concentration of 38,000 ppb (standard of 5 ppm), DCE at a maximum concentration of 4,200 ppb (standard of 5 ppm), and 1,1,1-TCA at a maximum concentration of 86,000 ppb (standard of 5 ppm). Contaminants of concern have also been detected in off-site groundwater samples collected to the north and west of the BCP site. Adjacent BCP sites abut the Site to the east. Additional delineation of off-site impacted will be required as part of the RAWP. Soil Vapor and Indoor Air: Sub-slab vapors containing PCE and TCE have been found beneath the building slab at levels as high as 1.6 million micrograms per meter cubed (ug/m3) and 82,000 ug/m3, respectively. These same compounds have been detected within the indoor air in the building on Lot 21 (prior to demolition), with PCE observed as high as 80 ug/m3 and TCE observed as high as 30.8 ug/m3. These concentrations represent a concern for soil vapor intrusion with respect to any on-site buildings that will be built and nearby offsite buildings. Neighboring lots were analyzed for soil vapor intrusion as part of the remedial investigations. Lot 26 had maximum sub-slab concentrations of PCE and TCE a5.47 ug/m3 and 3,000 ug/m3 respectively. Indoor air concentrations of PCE and TCE within Lot 26 resulted maximum concentrations of 14.4 ug/m3 and 0.84 ug/m3 respectively. "

Health Problem: "Access is restricted by a fence. People may contact contaminants in soil by walking on the site, digging, or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant and redevelopment is planned. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for future on-site buildings. Action is recommended to address potential exposures at an adjacent building. Additional investigation is needed to determine whether actions are needed to address soil vapor intrusion in other off-site structures."

DEC Memo:	"09/15/14-Hiralkumar Patel. alternate addresses: 476-478 Flushing Avenue no other spills or PBS record found. 12:57 PM:- spoke with Frank. as part of property transaction, a phase I and phase II investigations were conducted at former sheet metal factory. the site is currently vacant. during phase II investigation, PCE (50 ppm) and toluene (60 ppm) are found in groundwater. asked Frank to submit copy of investigation reports. 09/24/14-Hiralkumar Patel. 2:53 PM:- spoke

11 SPENCER STREET (Continued) **S117362879**

with Mark Mandell, property owner's representative. asked him to submit copy of Phase I and Phase II reports for review. Mr. Mandell asked to send request in email. Mark Mandell **property owners representative** Mandell Mandell LLP. 80-02 Kew Gardens Road, Suite 606 Kew Gardens, NY 11415 PH. (718) 427-2191 Fax (718) 427-2193 email: mark@mandellmandell.com 3:09 PM:- sent email to Mr. Mandell and asked to submit copy of available environmental investigation reports for review. 3:23 PM:- left message for Alan Brooks, whose name is listed in last property tax bill from NYC Finance. as per NYC Finance record, property is owned by I. T. F. Corp. I. T. F. Corp. **property owner as per NYC Finance** c/o Alan Brooks Brooks & Cantor LLP. 3000 Marcus Avenue, Sutie 2E4 New Hyde Park, NY 11042-1005 Ph. (516) 326-6767 Fax (866) 344-7288 email: brooksea@optonline.net 3:30 PM:- sent email to Mr. Brooks with copy of email previously sent to Mr. Mandell. asked Mr. Brooks to submit copy of available environmental investigation reports for review. 09/25/14-Hiralkumar Patel. 7:04 AM:- received email from Frank including draft copy of Focused Subsurface Site Investigation report and Supplemental Focused Subsurface Site Investigation report. Frank mentioned that these reports were made for Merritt Environmental, who subcontracted them. abstract of focused subsurface site investigation report: - site consists multiple lots on two block: 1. Block# 1716 / Lot# 24 (and 25, as per tax lot) (1-9 Spencer St, 466-468 Flushing Ave) - approx. 2,500 sq. ft. vacant located at the southeast corner of the intersection between Flushing Ave and Spencer St 2. Block# 1716 / Lot# 20 (15 Spencer St) and 21 (11 Spencer St, 476-478 Flushing Ave) - one large 20,000 sq. ft. vacant one-story former manufacturing building with no basement used in large part for sheet metal manufacturing ---------- 3. Block# 1716 / Lot# 15 (25 Spencer St) and 16 (23 Spencer St, 28-32 Walworth St) - one approx. 4,000 sq. ft. single-story manufacturing/warehouse building that is currently contains a seafood distributor 4. Block# 1716 / Lot# 14 (27 Spencer St) - approx. 7,000 sq. ft exterior stockyard used by the seafood distributor 5. Block# 1715 / Lot# 29 (12 Spencer St, 735 Bedford Ave) - vacant three-story commercial building with a full basement - site elevation is estimated at roughly 20 ft above mean sea level - Phase I conducted by Merritt Engineering - Phase I indicated historical underground benzene storage tank, evidence of a former aboveground storage tank containing TCE and at least two historical gasoline USTs at 476 Flushing Ave (former sheet metal manufacturing facility) ---------- - GPR survey found one subsurface anomaly resembling a UST at the Flushing Ave side of the former sheet metal manufacturing building, and possible UST fill pipe in vacant lot (lot #: 24/25) - one 07/21/14, total of 16 borings (B1 through B16) were installed on lots associated with this project - borings B15 and B16 were installe in the basement of building at 12 Spencer St (lot #: 29), to a maximum depth of 3 ft below basement floor where refusal encountered - during field activities, it was observed that all equipment and other items associated with former operations within the sheet metal manufacturing building had been removed - a large concrete-lined pit is located within this building and its former use was unknown. however, a former employee of the manufacturing operations said that the pit was a former dipping tank for cleaning metal with solvents - former worker also recalled possible dumping of water solvent at the southeast corner of the open stockyard at south end of the site ---------- - groundwater was encountered at approx. 13 ft bg - a distinct solvent odor was detected in soil and

11 SPENCER STREET (Continued) **S117362879**

groundwater samples collected from boring B10, which was located nearest to the concrete pit in the sheet manufacturing building - due to field evidence of possible contamination, two soil samples were collected from boring B10 - groundwater samples were collected from borings B1, B6, B7, B8, B9, B10 and B14 - found chlorinated solvent contamination in soil and groundwater samples soil analyticals: ----------B10 9-10 ft PCE----------32,000 groundwater analyticals: ----------B1GW-----B6GW-----B7GW-----B8GW-----B9GW-----B10GW-----B14GW 1,1, 1-Trichloroethane----------44-------97-------22----------18-----3,100 1, 1-Dichloroethene----------5--------6--------3----------260 cis-1,2-Dichloroethene---------17-------95-------21 PCE----------120------180------170--------9------250-----47,000--------98 TCE----------44-------41-------71-------11-------23-------250---------6 abstract of supplemental focused subsurface site investigation report: - additional six (6) soil borings were installed (B17 to B22) to investigate groundwater quality - shallow and/or deeper groundwater samples were collected from borings, based on its location in reference to borings installed during previous investigation - shallow groundwater samples were collected from the water table zone (13-17 ft bg) and deeper samples were collected from 31-35 ft bg groundwater analyticals: ----------B18----------B18----------B19----------B22 13-17 ft 30-34 ft 31-35 ft 31-35 ft Toluene----------66,000----------860 Naphthalene---------390 PCE----------210----------46----------210----------14 TCE----------19----------35----------16 - boring B19 was installed near previous boring B10 and only deeper groundwater sample was collected from B19 as shallow sample was collected from B10 earlier - toluene release may hve originated from a small flammable materials storage room at the west side of the 11 Spencer St building. this area was formerly used for spray painting metal products other spill #: 9311586 was reported on 12/28/1993 at 25 Spencer Street (lot #: 25) due to dumping issue. case closed. ---------- PBS #: 2-356913 is recorded for 21-23 Spencer Street (lot #: 16). as per PBS record, building 23 had one (1) 1,000 gal #2 oil UST and two (2) 275 gal #2 oil ASTs. the UST was removed in Oct. 1993 and the ASTs were coverted to non-regulated use. --------- 2:01 PM:- spoke with Victoria at Merritt Engineering and asked for copy of Phase I report. she mentioned that someone from her office will call back. 09/26/14-Hiralkumar Patel. 10:04 AM:- received email from Maryann Wegh (mwegh@merrittec.com) of Merritt Engineering including link to Phase I report. abstract of Phase I: - on-site investigation was conducted on 07/07/14 - property currenly consists of a four (4) 1-story vacant and one (1) occupied commercial manufacturing warehouse buildings, located on a combined plot size of approx. 33,724 sq. ft. - the buildings were constructed circa 1931 - database review indicated 550 gal UST for Benzene and a 275 gal AST for TCE (CBS #: 2-000024) were registered to 476 Flushing Ave (aka 11 Spencer St) ---------- - as per CBS record, the Benzene UST was removed in May 1992 and the TCE AST was removed in Jan. 1995 ---------- - there appears to be two (2) underground gasoline

11 SPENCER STREET (Continued) **S117362879**

tanks which are no longer in use buried in the 1-9 Spencer St AKA 476-478 Flushing Ave front driveway on Spencer St and under the ground floor slab of 476-478 Flushing Ave - sanborn map for 1935 shows a gasoline tank present at the 476-479 Flushing Ave - a gasoline fill box which is no longer in use was noted in the parking lot next to the 11 Spencer st building - surface oil staining was noted throughout 13-15 Spencer St and 476-478 Flushing Ave - there is a 2,000 gal #2 oil AST located in the basement of the Flushing Ave building but the size of the tank could not be confirmed due to flooding - RCRA Non Generator, EPA ID #: NYD001287671 - Delta Metal Products Co. - 476 Flushing Ave - historical use of 1-15 Spencer St and 466-468 and 476-478 Flushing Ave consisted of a junkyard, shed, manufacturing, sheet metal works and paint spraying ---------- - two (2) 275 gal #2 oil ASTs are located in the basement of 12 Spencer St discussed with DEC Jane O'Connell. after reviewing the data, she asked to transfer case to her name. 7/3/15 Greco assigned as PM of spill #1406369. Spill will be addressed under 11 Spencer Street BCP Site."

DEC Memo:	"Obligado - I called Patrick Glier. He said the tested the tank and identified a small dry leak . He said the tank is a 3000 gallon AST. His technician believes its probably a vent line issue. The contact is Alvin Dorta 917 685 0308. I called and left a message to call back

ST. JOSEPH COLLEGE - TTF (Continued) **S109583686**

the DEC. From PBS the facility is #2-319384 Facility has 1 3000 gallon #2 fuel oil AST in subtarean vault St. Joseph College Attention Mr. Dorta adorta@sjcny.edu I spoke with Mr. Dorta and advised of DEC requirement to determine cause of leak and retest. TTF letter sent to MR. Dorta via email. Spill assigned to Demeo. 4/29/14 - Obligado - Pat from Protest called, on 4/24/14 to 4/25/14 the isolated and retested tank and replaced vent pipe. 631 321 4670. They will email report to Demeo. 11/12/15 TJD File review. Protest has provided letter report detailing repairs and passing retest. As per report, 3,000 gallon AST failed tightness test with a dry leak. An isolation test was then performed which identified the vent line as the leaking tank system component. The vent line was subsequently replaced - a complete system test was then performed with passing results. As per contractor statement, there was no evidence of visible contamination within the tank vault - no further action is required. All documentation has been uploaded to DECDOCS. Spill closed."

DEC Region:	2
DER Facility ID:	227703
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 4/2/2002 Mark Califano from Galli Engineering called to find out status of spill closure. 631-271-9292 Reassigned from Sullivan to Sangesland. Site is a former gas station which failed a tank test in 1990. 4/11/2002 Sangesland ran a PBS for this site. File says 9 tanks had been removed in May 1994 and one waste oil tank remains. Sangesland called the facility operator (Pedro Mendez 718-628-7285) who said the tanks were not pulled, but filled with cement before he arrived at the property. Property owner is Mr. Barry (718-326-7265) Mr. Barry said the tanks were not pulled, but rather filled in place. Apparently the property is being sold and Mr. Barry would like this old spill closed out. PBS Application will need to be updated to identify that the status of the tanks is not Removed , but rather Abandoned in place 4/11/2002 Sangesland left a message with Joseph Martinez of Galli Engineering (734 Walt Whitman Rd. Suite 402A Melville, NY 11747) According to Mr. Barry, soil borings were drilled and tested. Review needs to confirm that soil samples were taken in appropriate locations and that samples were tested to EPA Method 8270 and 8021. Since this was a Tank Farm of several 550 gal UST's at least 1 ground water sample will also need to be run for VOC and SVOC's. 4/12/2002 Sangesland spoke with Mr.Martinez of Galli Engineering. Apparently a Phase I and Phase II report has been completed including soil borings. After a discussion of what was in the report, it was concluded that a well would be required and groundwater tested. Mr. Martinez will complete this work and incorportate the results into his report and resubmit. Sangesland also forwarded to Mr. Martinez a copy of Spill Closure Report Outline . 4/13/2002 Sangesland forwarded (fax) a request to identify the location/status of the waste oil 550 UST. Requested a soil boring tested to 8021, 8270 and RCRA Metals. 4/26/2002 Sangesland received a Sampling Investigation Work Plan from Galli Engineering which outlines 2 soil borings and 1 water sample - All as discussed above. Sangesland forwarded an OK back to Galli Engineering to go ahead with this work. 7/8/2002 Sangesland was on site for an additional round of soil borings and groundwater sampling. Specific boring and water sampling locations were selected on site with Galli. All samples appear clear. Galli will submit samples to the lab and will prepare a closure report. 8/15/2002 Sangesland reviewed a Spill Closure Report dated August 9, 2002. This report presents additional soil boring data from July 8 field work, results from 2 well samples (65'depth) and a section on the MTBE issue at the site. All of the soil results for the site are ND for VOC and SVOC. The groundwater samples were

58-02 FLUSHING AVE/QUEENS (Continued) **S105230168**

trace or ND for VOC and SVOC. MTBE was detected in both groundwater samples: (GW-7 = 1,106 ug/L) and (GW-8 = 2,543 ug/L). In the MTBE section of the report, Galli presented data to support their belief that the MTBE found was due to several documented MTBE releases within 1/2 mile upgradient of this site. Based on this analysis and the lack of any detection of MTBE, VOC or SVOC's in any of the soil samples above 65ft depth, the DEC is satisfied that this site is not causing any negative impact to the environment. Spill Closed "

VCP:

Name:	BROOKLYN NAVY YARD INDUSTRIAL PARK
Address:	FLUSHING AVENUE & CUMBERLAND STREET
City,State,Zip:	BROOKLYN, NY 1205
Program Type:	VCP
Site Code:	58910
HW Code:	V00120
Site Class:	A
SWIS:	2401
Region:	2
Town:	New York City
Acres:	146.790
Date Record Added:	11/30/2000
Date Record Updated:	11/01/2020
Updated By:	SMQUANDT
Site Description:	"Location: The Brooklyn Navy Yard Voluntary Cleanup Program site consists of 146.79 acres of the 353-acre Brooklyn Navy Yard Industrial Park. Site Features: The site is generally flat and bounded by the East River on the north, Flushing Avenue to the south, Kent Avenue to the east and Navy Street to the west. The main site features include piers surrounding large dry docks used for ship repair, many industrial and commercial use buildings, roadways and a movie studio and associated sound stages. Current Zoning and Land Use: The site is currently used as an industrial park and is zoned as M3-1. This zoning allows for heavy manufacturing, warehousing, office work and the making of films. The Navy Yard itself is an industrial/commercial area, while the property surrounding the Navy yard is mixed commercial and residential use. Past Use of the Site: The site was used as a ship building and repair facility from the 1800's to the mid-1900's. These activities included metal

BROOKLYN NAVY YARD - NYC DEP (Continued) **1000446347**

fabrication, painting and sand blasting, as well as various support activities including the maintenance of the electrical system. These functions resulted in the release of metals, petroleum products and PCBs. Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) was created for the site-wide investigation in an effort to find discreet source areas throughout the BNY facility. OU2 was created in order to expedite the investigation at a portion of the site prior to building a new movie studio. OU 3 was created in order to expedite the investigation at a portion of the site that was to have a second studio built upon it. For administrative reasons, OU 3 was subsequently terminated, and the remedy was incorporated under the OU 1 remedy. All studies are now complete and the final remedy is in-place. Site Geology and Hydrogeology: Site soil is comprised of many feet of historic fill (e.g., soil mixed with coal ash and building rubble) that was placed in low-lying, marshy areas over a hundred years ago. Groundwater occurs at a depth of approximately four feet below ground surface, and it flows west/northwest towards the East River."

Env Problem: "Post-Remediation: All remedies have been implemented. The site remedy requires that the site be covered with materials suitable for commercial use. The site is controlled via an Environmental Easement and is now managed under a Site Management Plan. Prior to Remediation: The primary contaminants of concern at the facility were metal, semi-volatile organic compounds and PCBs, as detailed below. Nature and Extent of Contamination: The majority of the Brooklyn Navy Yard is underlain by historic fill, and soil and groundwater quality at the site is reflective of this. Much of the low to moderate-level metal and Semi-Volatile Organic Compound (SVOC) contamination identified in soil during site investigations is attributable to coal ash, cinders, asphalt and other fill materials in the upper soil layer (0 ft-20ft below ground surface), with concentrations of contaminants typically elevated above state Unrestricted, Residential, and Restricted Residential Use Cleanup Objectives, but generally near the state s Restricted Commercial Use Cleanup Objectives (see 6 NYCRR Part 375-6). The metals and SVOC compounds detected in site soil/fill appear to be bound through physical and chemical processes, limiting the potential for ground water impacts, as well as curtailing pathways to environmental receptors (i.e., groundwater and down gradient surface waters). Groundwater contamination with metals and SVOCs is present at levels that are generally reflective of the historic fill present at the facility, with only one well showing SVOC levels appreciably above standards, and that well (MW-04) is thought to be impacted by contamination emanating from the nearby former manufactured gas plant at the adjacent K-Nassau Works MGP site (Site ID No. 224019B). That site is being addressed under a separate investigation, and the impacts to groundwater will be assessed under the remedy for that site. Metals in excess of groundwater standards appears to be largely an artifact of the sampling technique (i.e., soil particles became entrained in the water sample), as opposed to a wide-spread plume of dissolved contamination. Soil vapors were assessed at the facility and while certain contaminants were detected, the levels were not considered to be indicative of a potential threat to indoor air. Twenty-three

BROOKLYN NAVY YARD - NYC DEP (Continued) **1000446347**

	electrical sub-stations located within the Brooklyn Navy Yard study area were found to be contaminated with polychlorinated biphenyls (PCBs). Twenty of those areas have been either remedied or are being actively managed under the Site Management Plan and are slated for remedy when taken out of service. Three areas (Building 297, Building 274 and Building 77) originally within the VCP study were excluded from the final VCP remedy and are being considered for further action under consent order with the NYSDEC. Special Resources Impacted/Threatened: Sediments contained several metals and SVOCs above screening criteria, however, the aquatic ecological evaluation shows the benthic and finfish communities to be of moderate diversity and population size, consistent with other similar settings in the New York City area. The investigation concluded that the ecological resources at the Brooklyn Navy Yard (Wallabout Basin) have not been significantly impacted by site contamination. "
Health Problem:	"People in the area around Brooklyn Navy Yard are not exposed to site contaminants in their drinking water since the area is served with public water. Any contamination that may remain in soil at the site following excavation and off-site disposal will be inaccessible since it will be under pavement, structures or one foot of clean soil over a demarcation layer. Data collected during investigations indicate that it is unlikely that people in the area of the site would be breathing any site-related contaminants."

Town:	New York City
Record Added Date:	06/21/2017
Record Updated Date:	11/12/2020
Update By:	HMDUDEK
Site Description:	"Location The Site (a.k.a. Former Techtronics Ecological Site, P Site No. 224239) is located in the Bedford Stuyvesant section of Kings County and is comprised of a single tax parcel totaling 3,910 square feet (0.089 acres). The Site is located in the City of New York and Borough of Brooklyn. The Site is rectangular shaped with 78 feet of frontage along Walworth Street. The north, south and west sides of the property are bordered by warehouses and commercial / industrial buildings. Site Features The Site is improved with a 3,910 sf, 1-story masonry building constructed in 1982 (estimate). The building is divided into two sections each with its own access to the outside; the north section which was recently used as warehouse space and the south section which was used by an orthodox congregation for a prayer room. Current Zoning and Land Use Compliance with Current Zoning The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial

TOLDOS YEHUDAH LLC (Continued) **1000244308**

districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. Nearly all industrial uses are allowed in M1 districts if they meet the stringent M1 performance standards. Offices, hotels and most retail uses are also permitted. Certain community facilities, such as hospitals, are allowed in M1 districts only by special permit, but houses of worship are allowed as-of-right. The proposed project, which includes an office building, is compatible with the surrounding land use and will be in compliance with the current zoning. Compliance with Land Use Plans On May 9, 2001, the City Council approved the Flushing - Bedford rezoning action (CEQR No. 00DCP015K) covering 15 blocks in the Flushing Avenue and Bedford Avenue area of Community Districts 1 and 3 in the Bedford Stuyvesant neighborhood of Brooklyn. According to the Notice of Completion of The Final Environmental Impact Statement issued on March 16, 2001 by the NYC Planning Commission: The Flushing Bedford area, although zoned for manufacturing uses, contains a mix of residential uses, vacant land, open uses, auto-related uses, and commercial and industrial buildings. The rezoning area has experienced a significant decline in industrial activity over the last four decades resulting in an increase in auto related uses, junk yards and vacant land. Study findings indicate that over the last two decades, there has been a substantial growth in the residential population in the surrounding areas, resulting in a housing shortfall and increasing demand for new dwelling 'units. Since the mid 1980's there has been a marked increase in residential development, especially in the area north of Flushing Avenue. Although the existing manufacturing zoning does not permit as-of-right residential development, in recent years there has been new residential development in the area north of Flushing Avenue pursuant to zoning variances granted by the Board of Standards, and Appeals (BSA). In 1996 and 1998, two rezoning applications were approved changing the designation of a three block area immediately north of the rezoning area from manufacturing to residential. The presence of vacant and underutilized land, coupled with the increasing demand for housing in the adjacent communities, presents an opportunity for new residential development in this part of Brooklyn. The objectives of the rezoning were to: -provide opportunities for new residential development on vacant and under-utilized parcels; -bring existing non-conforming residential uses into conformance, and would allow for their enlargement; -allow for the continued presence and expansion of commercial and manufacturing uses; -permit the introduction of new commercial and manufacturing uses; and, -allow the residential re-use of underutilized and vacant land. In general, the action would provide the land use controls necessary for appropriate residentialdevelopment and the continued presence of viable manufacturing uses. The proposed project will be in full compliance with the current land use plans as identified in the Flushing Bedford Rezoning Action (CEQR No. 00DCP015K) adopted by the City on May 9, 2001. Past Use of the Site The historic use of the Site includes a storefront building, garage and residence from sometime prior to 1887 to sometime before to sometime before 1965 when a two-story residence remained on the south side of the Site and a single-story warehouse used for chemical drum storage was present on the north side of the Site. By 1977, the two-story residence was no longer present and the singlestory chemical drum storage warehouse remained on the north side of the Site. By 1982 the Site was redeveloped with a single-story paint mixing warehouse. The Site and

TOLDOS YEHUDAH LLC (Continued) **1000244308**

adjacent properties have remained generally unchanged through the current day. This site was originally a P site (Former Techtronics Ecological Site, Site No. 224239). The site then entered the BCP program to complete the investigation and remedy. Site Geography and Geology The geologic setting of Long Island is well documented and consists of crystalline bedrock overlain by layers of unconsolidated deposits. According to geologic maps of the area created by the United States Geologic Survey (USGS), the bedrock in this area of Brooklyn is an igneous intrusive classified as the Ravenswood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and / or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Subsurface soils at the Site consist of historic fill materials to a depth of approximately 4 to 6 feet below grade. Silty sand and gravel is present immediately below this layer. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the property is approximately 20 feet above mean sea level. The topography within the immediate area slopes gradually from south to north. No portion of the Site is located within a designated flood zone area. The nearest moderate risk flood zone is located 800 feet to the northwest and the nearest high risk flood zone is located 950 feet to the northwest. "

Env Problem:
"Nature and Extent of Contamination: The chlorinated solvent compounds tetrachloroethylene (PCE) and its breakdown products trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE), as well as other volatile organic compounds (VOCs) were detected in soil, groundwater, and soil vapor samples during the remedial investigation in 2018/19. Soil samples collected on site also contained elevated concentrations of Metals, Semi-Volatile Organic Compounds (SVOCs), and PCBs. Soil During the remedial investigation, eight (8) soil borings were collected throughout the site. Chlorinated Volatile Organic Compounds (CVOCs) were detected above Protection of Groundwater Soil Cleanup Objectives in all soil borings. Maximum PCE concentration of 3,200,000 ug/kg was found at SB-1708 (7-9 bgs). Maximum TCE concentration of 200,000 ug/kg was found at SB-1708 (7-9 bgs). Groundwater During the remedial investigation, five (5) monitoring wells were installed. CVOCs were detected in all five groundwater samples collected at the site: PCE ranges from 7,800 to 20,000 parts per billion, or ppb; TCE ranges from 1,800 to 11,000 ppb; and cis-1,2-DCE ranges from 270 to 11,000 ppb. The NYSDEC s list of 21 PFAS compounds was also analyzed as part of the remedial investigation. Combined PFOA PFOS concentrations ranged from 50 parts per trillion (ppt) in MW-1701 to 928 ppt in MW 1705. Soil Vapor As part of the remedial investigation, six (6) soil vapor samples were collected throughout the site. CVOCs were detected in all on-site samples. PCE ranged from 705 ug/m3 in SS-5 to 590,000 ug/m3 in SS-1. TCE concentrations ranged from 106 ug/m3 in SS-5 to 488,000 ug/m3 in SS-1. All sub-slab vapor samples also contained BTEX compounds. Significant Threat: A significant threat determination will be made following completion of a site characterization. "

Health Problem:
"People may contact contaminated soils or groundwater if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and this site is served by a public water supply that obtains water from a different source not affected

TOLDOS YEHUDAH LLC (Continued) **1000244308**

by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant and redevelopment is planned. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for future onsite buildings. Additional investigation is needed to determine whether actions are needed to address soil vapor intrusion in offsite structures."

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

FORMER TECHTRONICS ECOLOGICAL CORP. (Continued) **S120706231**

Env Problem:	"Nature and Extent of Contamination: The chlorinated solvent compounds tetracholoethylene (PCE) and its breakdown products trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE), as well as other volatile organic compounds (VOCs) were detected in soil and groundwater samples during investigation in December 2007. Soil Chlorinated solvents were detected in one soil sample collected from above the water table at concentrations exceeding unrestricted use soil cleanup objectives: PCE (4.3 parts per million, or ppm) and TCE (0.87 ppm). Groundwater Chlorinated solvents were detected in all four groundwater samples collected at the site: PCE ranges from 17 to 30,845 parts per billion, or ppb; TCE ranges from 31 to 48,675 ppb; and cis-1,2-DCE ranges from 7 to 164,000 ppb. Non-chlorinated VOCs were detected in one groundwater sample (MW-2): toluene (75,488 ppb), ethylbenzene (4,393 ppb) and xylene (17,405 ppb). Significant Threat: A significant threat determination will be made following completion of a site characterization."
Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

SWIS:	2401
Town:	New York City
Record Added Date:	10/16/2018
Record Updated Date:	08/11/2020
Update By:	HMDUDEK
Site Description:	"Location The site (a.k.a. Former Techtronics B, Site No. 224259). is in the Bedford Stuyvesant section of Brooklyn in the City of New York and is comprised of a single tax parcel totaling 4,450 square feet (0.102 acre). The site is rectangular in shape with 50 feet of frontage on Flushing Avenue and 89.25 feet of frontage on Walworth Street. The north side of the property is bordered by Flushing Avenue, and the east side is bordered by Walworth Street. The west and south property lines are bordered by two NYSBCP sites; the 11 Spencer site to the west and the 8 Walworth site to the south. Site Features The site is currently vacant with no structures and is not being used. An 8-foot-high construction fence borders the property on the north and west sites to prevent unauthorized access. Current Zoning and Land Use The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. M2 districts buffer light industrial zones (M1) and zones which are occupied by heavy industrial use (M3) (i.e. power plants, solid waste transfer facilities and recycling plants). Nearly all industrial uses are allowed in M1 districts if they meet the stringent M1 performance standards. Offices, hotels and most retail uses are also permitted. Certain community facilities, such as hospitals, are allowed in M1 districts only by special permit, but houses of worship are allowed as-of-right. The site is currently vacant with no structures present and is not being used. Surrounding land use includes commercial and mixed-use (retail / residential) properties along the north side of Flushing Avenue, commercial / office use to the west, commercial (warehouses) properties to the south and to the east. The area surrounding the property is highly urbanized and predominantly consists of older industrial / commercial buildings with mixed use (retail / residential) buildings along main corridors such as Bedford Avenue, Flushing Avenue and Park Avenue. There are ten schools located within 1,200 feet of the site including Bnei Shimon Yisroel of Sopron approximately 150 feet to the east. There were no nursing homes or hospitals identified within 1,000 feet of the site. Past Use of the Site The environmental history of the subject property was previously investigated through the review of Federal and State Environmental databases, Environmental Sanborn Fire Insurance maps, NYC Department of Building records and the NYC Department of Finance databases. According to the review of these sources the property was developed sometime prior to 1887 with two 2-story residences in the southern portion of the Lot with the northern portion vacant. A 1-story building was constructed on the northern portion which is shown as broom manufacturers supply till 1950. Based on sources provided, a 1 story building was constructed in 1965 and identified

FORMER TECHTRONICS SITE B (Continued) **S121933852**

as paint mixing . The northern building is shown as storage or warehouse. Both buildings remain unchanged till 2016 when the north building was demolished. The south building was demolished in 2018. The property was known to be most recently used by an auto repair shop and a fish market. A site characterization of the site was completed under the project name Former Techtronics B (Site No. 224259). After the site characterization the site entered the brownfield program as 480 Flushing. Site Geology and Hydrogeology Subsurface soils at the site consist of historic fill materials to a depth of approximately 1 foot below grade followed by native silty-sand and clay. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the property is approximately 16 feet above mean sea level. The topography within the immediate area slopes gradually from south to north. Groundwater was reported to be present under semi-confined conditions at approximately 12-14 ft below grade. Based upon the site characterization, groundwater flow was reported to be northwest. Neighboring sites indicate a east by north east groundwater flow. The site is not located within a designated flood zone area."

Env Problem: "Nature and Extent of Contamination: Surface Soil: A Site Characterization was performed in 2017 under an Order from the NYS Department of Environmental Conservation. A set of two (2) surface soil samples were collected from four (4) locations across the site. The samples were collected from 0-2 inches bgs and 2-12 inches bgs. Tetrachloroethene (PCE) was detected at a maximum concentration of 16 parts per million (ppm). This concentration exceeds both the Unrestricted Use soil cleanup objective (UUSCO) of 1.3 ppm and the Protection of Groundwater SCO (PoGWSCO) (1.3 ppm). Subsurface Soil: During the 2017 Site Characterization, eight (8) soil borings were installed across the site. Samples were collected and analyzed at areas of observable impact and at the groundwater interface. PCE was detected at a maximum concentration 99 parts per million (ppm)(UUSCO: 1.3 ppm and PoGWSCO: 1.3 ppm). The following VOCs and Semi-Volatile Organic compounds were also detected in subsurface soils: Benzo(a)anthracene (260 ppm max, standard 1 UUSCO), Benzo(a)pyrene (230 ppm, standard 1 UUSCO), Benzo(b)fluoranthene (280 ppm, standard 1 UUSCO), Benzo(k)Fluoranthene (100 ppm, standard 0.8 UUSCO), Phenanthrene (800 ppm, standard 1 UUSCO), Dibenzo(a,h)anthracene (37 ppm, standard 0.33 UUSCO), Indo(1,2,3-cd)pyrene (140 ppm, standard 0.5 UUSCO). Brick and coal fragments were observed in shallow soil at some of the soil borings collected, suggesting the presence of urban fill. Groundwater: As part of the Site Characterization three (3) monitoring wells were installed and sampled. PCE was detected at a maximum concentration of 2,400 parts per billion (ppb), (standard 5 ppb), TCE was detected at a maximum concentration of 350 ppb (5 ppb standard), and 1,2-dichlorethene was detected at a maximum concentration of 340 ppb (5 ppb standard). Soil Vapor: The site is currently undeveloped. Three soil vapor samples were collected on-site with elevated concentrations of chlorinated VOCs. Max concentrations of PCE are 40.6 micrograms per cubic meter (ug/m3), TCE 1470 ug/m3 and vinyl chloride 7.77 ug/m3. "

Health Problem: "Access is restricted by a fence. People may contact contaminants in soil by walking on the site, digging, or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into

FORMER TECHTRONICS SITE B (Continued) **S121933852**

overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant and redevelopment is planned. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for future on-site buildings. Additional investigation is needed to determine whether actions are needed to address soil vapor intrusion in off-site structures."

DER Facility ID:	124588
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 9/24/03 There was a Ferric Chloride spill called in to the DEC Hotline by DEP James Daley at 8:37 AM on September 24,2003. Reportedly, the spill was caused by a tank failure. DEC Spill responder Michelle Tipple and Joseph Kudirka from the Water unit responded to this spill. Upon investigation, an 8000 gallon tank of Ferric Chloride had an internal failure and released some of it's contents to a secondary containment tank, this secondary tank released some of the Ferric Chloride into the containment area surrounding the secondary tank. The containment area surrounding the secondary tank had been modified with the installation of a wooden structure secured with steel bolts around the top of the containment.

RED HOOK WWTP (Continued) **U003075007**

When the chemical hit the bolts they were dissolved, allowing a small amount,10-15 gal of Ferric Chloride beyond the containment areas. Soda Ash was applied to the Ferric Chloride as required by DEP protocol. Mats were placed on the drain inlets in the vicinity to reduce the possibility of the chemical reaching the water. Eagle Brook Pump and repair were in route to remove all product from the tanks and containment area, assess and repair the system. DEP Plant Superintendent Joseph Massaro will keep DEC updated. 9/25/03 Tipple followed up with James Daly- DEP safety. Eagle Brook worked until 4:30 this AM removing product and thoroughly cleaning the tanks and impacted area, all product removed from the site was carried by the eagle brook company's properly tagged tank trucks. Upon inspection of the cleaned system it was determined that the discharge line on the bottom of the tank was compromised causing the release. The system repairs are scheduled to begin later today. "

Remarks: "ruptured tank caused materal to leak - attm to stop leak now - haz mat enroute - 10 to 15 gal on the ground -- over 1000 gal in the tank -- potential for a large spill"

DEC Memo:	"03/09/17-Hrialkumar Patel. 2:24 PM:- spoke with Shila (716-204-8054) at Core Env. Ron was not in office. Shila mentioned that DEC Jonathan Greco was copied on email correspondence on this matter. 2:34 PM:- left message for DEC Greco. reviewed remediation database and found open case #: 224018. 3:09 PM:- received call from DEC Greco and asked to transfer case to his name as he is handling a VCP case (# 224018) at the site. case assigned to DEC Greco. 3/30/18 - Spill has reportedly been addressed, however, no documentation has been submitted as yet. Greco to check with Langan for current status. 4/27/18 - Spill closure request and documentation was received from Langan Environmental (the Developer's Environmental Consultant)via Core Environmental (BNY's Environmental Consultant). The report documents the limited nature of the spill, as well as the adequacy of Langan's response. The spill was excavated, and end points were sampled and only low PPM levels of SVOC were detected. DEC PM J. Greco closed the spill based upon the report received. (Greco, 4/27/18)"

Updated By: DJEATON
Site Description: "The Kent Avenue Generating Station Site is located in Brooklyn, NY. It is along the waterfront (Wallabout Channel, trib to East River) on the west side of Kent Avenue, south of the intersection with Division Avenue. The site is the location of the former Kent Avenue Generating Station, which has since been demolished. Excepting activities related to building demolition and property rehabilitation, with respect to current use the site is considered inactive. The uses of the surrounding parcels are varied: across Kent Avenue is a NYC Park (Roberto Clemente Ballfield); immediately to the south is the Brooklyn Navy Yard 13 Acre Parcel Site (NYSDEC Site No. 224019A); immediately to the north across Division Avenue are commercial uses; properties to the northeast and to the southeast appear to have residential uses. Prior uses that appear to have led to site contamination include discharges during the period of operation of the power plant and on-site re-use of prior demolished structures as fill material. A number of environmental investigations of the property have occurred including a Phase II (2000) and other investigations focused on particular issues or areas of the site from 2006 to present. Reclassified to N. See V00732 - Kent Avenue Station Site. Work to be done under VCA Amendment."
Env Problem: "This site has been successfully remediated. The information on the remedy is included under site V00732. The following description was true during the early stages of work at this site. The primary contaminants of concern at the site known at the time include PCBs, asbestos, various metals, petroleum constituents and PAHs. Investigations indicate SCG exceedances of PCB and petroeum compounds in sediments/ sludge contained in a large concrete structure (known as the ash pit); asbestos, metals and PAHs in subsurface soils/fill; and an area of groundwater petroleum contamination in the southwest corner of the property. The significance of the contamination needs to be determined."

Updated By:	DJEATON
Site Description:	"Location: The site is located in a mixed-use area along the Brooklyn waterfront. It is bounded by Kent Avenue to the east, Wallabout Channel to the west, Division Avenue to the north, and the Brooklyn Navy Yard to the south. Site Features: The site has been sold to a developer but is still currently vacant and open. In the subsurface, a large concrete-lined pit is present in the northwest corner of the site and along the edge of the Wallabout Channel. A large concrete slab which is part of a former power plant foundation occupies the center of the site. The slab has been covered with clean fill. Current zoning/use. The site is zoned for industrial use, but is currently vacant. It is surrounded by commercial buildings and multiple occupancy residences. Past Use of the Site: The site was previously an electrical generating station and substation from 1906 until the late 1990s. The site was razed from 2007 to 2009. The main sources of contamination were the concrete-lined ash pit storage area and by-products of the electrical generating process which are scattered across the site. Site Geology and Hydrogeology: The site is underlain by a 5 to 10 foot layer of fill material. Under the fill are intermingled layers of silt and sand down to roughly 100 feet below grade. Beneath the silt and sand is a clay confining unit. The water table lies roughly 8 feet below the ground surface. Based on the site s proximity to the Wallabout channel, groundwater levels are probably tidally influenced. The far western edge of the site is built out on piles over the bank of the Wallabout Channel. "
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) in soil, volatile organic compounds (VOCs) in groundwater and polychlorinated biphenyls (PCBs) in the ash pit sediments. Remedial

KENT AVENUE GENERATING STATION (Continued) **S102663001**

	actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan."
Health Problem:	"The site is completely fenced, which restricts public access. Persons who dig below the ground surface may come into contact with contaminants in the subsurface soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy."

DEC Memo:	"11/22/10 - Austin - This spill has been reassigned to Douglas MacNeal in DER-Albany, as part of a remediaton project he is handling - end 11/24/10 - MacNeal - The Asbestos brought to the surface has been handled by a National Grid Contractor. I am awaiting a report from National Grid documenting the clean-up. Any additional asbestos material will be handled under the existing VCA (V00732) 3/31/2011 - MacNeal - The spill is closed. The date of closure is the date that correspondence was received from National Grid which contained air monitoring reports and a waste manifest which confirmed proper disposal of the asbestos which was released. Those items have been placed in edocs. "
Remarks:	"While taking bore samples has a release into the apmosphere. Location is a former ConEd site."

DEC Memo:	"201150. see eDocs 12/13/06: Transferred from Breen to O'Connell. Spill submitted for closure by Con Ed. This site was a former Con Ed generating station, and previous investigations (circa 1999 through 2002) have found evidence of metals, SVOCs and VOCs in soil and groundwater, however the site is NOT in any remedial program. See also spill nos. 9910753, 9910993, 9911014 and 9911046. (JHO) 12/14/06: spoke with David Rubin, Con Ed Remediation project manager. Apparently the site is undergoing second Phase II for property transfer. Con Ed also plans on demolishing the former gen station building. They expect a summary report of investigation with recommendations for remediation from consultant during 1Q07. I told Dave to make sure DEC receives a copy, since we have a number of outstanding spills related to the site. (JHO) 1/9/08: This spill is closed, track under spill no. 9911014. (MA) "

Hazardous Waste Summary:
Waste Code: D000
Waste Description: Not Defined

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002

PFIZER INC (Continued) **1000443177**

Waste Description: CORROSIVE WASTE

Waste Code: D003
Waste Description: REACTIVE WASTE

Waste Code: D004
Waste Description: ARSENIC

Waste Code: D009
Waste Description: MERCURY

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U031

PFIZER INC (Continued) **1000443177**

Waste Description: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U080
Waste Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Waste Code: U112
Waste Description: ACETIC ACID, ETHYL ESTER (I) (OR) ETHYL ACETATE (I)

Waste Code: U115
Waste Description: ETHYLENE OXIDE (I,T) (OR) OXIRANE (I,T)

Waste Code: U122
Waste Description: FORMALDEHYDE

Waste Code: U134
Waste Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Waste Code: U154
Waste Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U188
Waste Description: PHENOL

Waste Code: U219
Waste Description: THIOUREA

Waste Code: U220
Waste Description: BENZENE, METHYL- (OR) TOLUENE

Waste Code: U226
Waste Description: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Site Description: "Location: The Brooklyn Gas Light Works Manufactured Gas Plant (MGP) is located at 1 Hudson Avenue in Brooklyn, New York in Kings County. Site Features: An active generating station (Hudson Ave.), owned by Consolidated Edison, currently operates at the site. The site is covered by buildings, some asphalt parking areas and walkways. Current Zoning and Land Use: The site is currently an active generating station and is zoned for light manufacturing and commercial uses. The nearest residential area is 0.3 miles to the south. Past Use of the Site: The MGP plant operated from 1849 until approximately 1900. The property was sold to Brooklyn Edison Company between 1922 and 1928. The MGP buildings and associated above-ground structures were subsequently removed and the generating station was built. Consolidated Edison purchased the property and generating station in approximately 1950. Site Geology and Hydrogeology: The general geology in the area is artificial fill and alluvial deposits ranging between 15-20 feet thick. The next layer consists of glacial deposits (clay, sand, gravel and boulders); then a layer of Gardiner's Clay; coarse sand and gravel; a clay and silty clay layer; a sand layer interbedded with gravel clay and silt; and finally a bedrock consisting of gneiss, schist and pegmatite. Overall groundwater ranges between 5 and 22 feet below ground surface (bgs), and generally flows to the north towards the East River. The site

K - BROOKLYN GAS LIGHT A (Continued) **S111009485**

groundwater is tidally influenced. "
Env Problem: "Environmental conditions at the site will be determined during the Site Characterization."
Health Problem: "The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review. "

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/30/2020

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

8-10 GRAND AVENUE
8-10 GRAND AVENUE
BROOKLYN, NY 11205

TARGET PROPERTY COORDINATES

Latitude (North):	40.69747 - 40° 41' 50.89''
Longitude (West):	73.965091 - 73° 57' 54.33''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	587437.2
UTM Y (Meters):	4505478.0
Elevation:	24 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940597 BROOKLYN, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

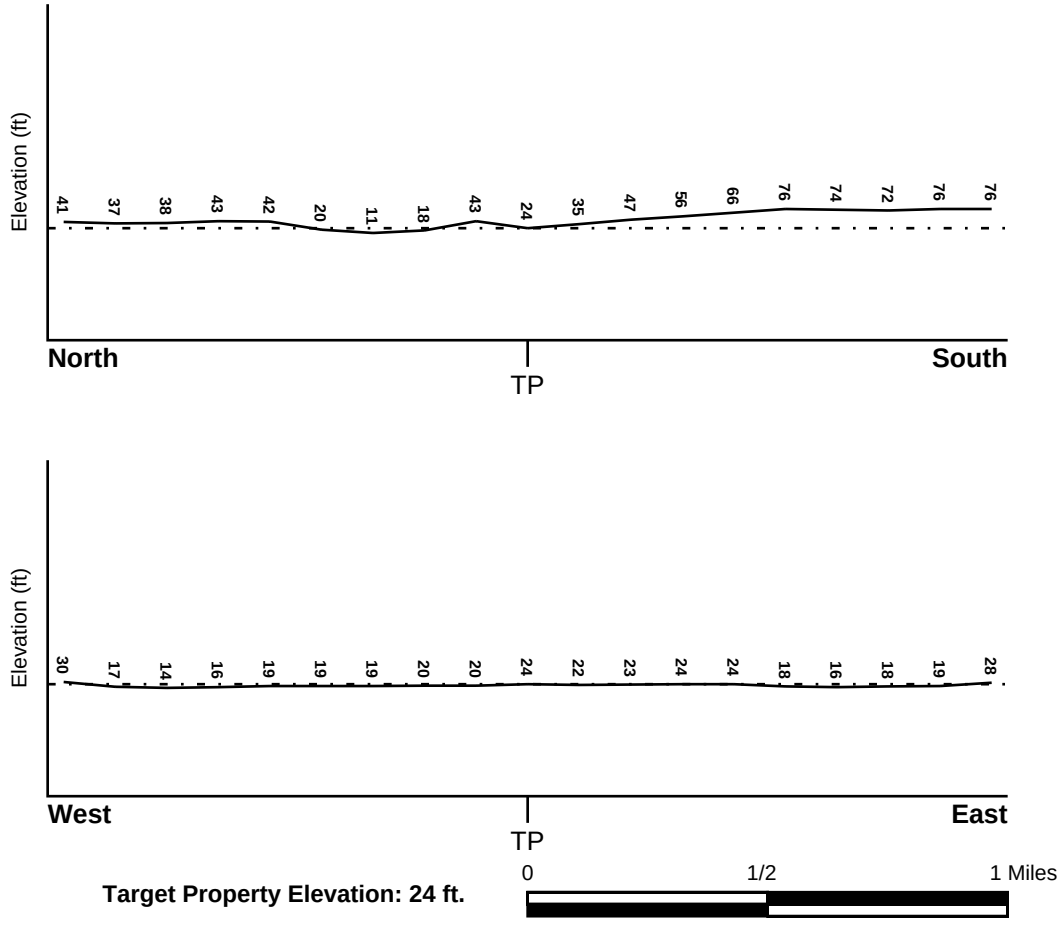
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 24 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970204F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970203F	FEMA FIRM Flood data
3604970211F	FEMA FIRM Flood data

3604970064B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/8 - 1/4 Mile West
Site Name:	Naval Station Ny
Site EPA ID Number:	NY5170022250
Groundwater Flow Direction:	NOT AVAILABLE.
Measured Depth to Water:	14 feet in a well located 1 mile southeast of the site.
Hydraulic Connection:	Information is not available about the hydraulic connection between the surficial aquifer (upper glacial till) and underlying aquifer(s). Bedrock is present at an estimated depth of 100 feet.
Sole Source Aquifer:	A sole source aquifer is persent at or near the site
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

This material is proprietary and the subject of copyright protection and other intellectual property rights owned by or licensed to Tele Atlas North America, Inc. The use of this material is subject to the terms of a license agreement. You will be held liable for any unauthorized copying or disclosure of this material.

This Report contains certain products owned by or licensed by Tele Atlas North America, Inc. ("TANA") and licensed to EDR pursuant to an agreement between EDR and TANA (the "TANA Agreement"). Such products include the Dynamap® /2000 (commencing with the most current version, nationwide coverage, ArcInfo™ format, tiled by county, with semi−annual Updates) and are referred to in this Report as the "Licensed Products".

The use of the Licensed Products with a non−TANA map may result in increased variance between the location displayed on the map and ground truth location.

The recipient of the Report (hereinafter referred to as an "End User") shall use such Report solely for its internal purposes and not for resale.

U.S. GOVERNMENT RIGHTS. If End User is an agency, department, or other entity of the United States Government, or funded in whole or in part by the United States Government, then use, duplication, reproduction, release, modification, disclosure or transfer of this commercial product and accompanying documentation, is restricted in accordance with the LIMITED or RESTRICTED rights as described in DFARS 252.227−7014(a)(1) (JUN 1995) (DOD commercial computer software definition), DFARS 227.7202−1 (DOD policy on commercial computer software), FAR 52.227−19 (JUN 1987) (commercial computer software clause for civilian agencies), DFARS 252.227−7015 (NOV 1995) (DOD technical data − commercial items clause); FAR 52.227−14 Alternates I, II, and III (JUN 1987) (civilian agency technical data and noncommercial computer software clause); and/or FAR 12.211 and FAR 12.212 (commercial item acquisitions), as applicable. In case of conflict between any of the FAR and DFARS provisions listed herein, the construction that provides greater limitations on the Government's rights shall control. Contractor/manufacturer is Tele Atlas North America, Inc., 11 Lafayette Street, Lebanon, NH 03766−1445. Phone: 603.643. 0330. The Licensed Products are ©1984−2008 by Tele Atlas North America, Inc. ALL RIGHTS RESERVED. For purpose of any public disclosure provision under any federal, state or local law, it is agreed that the Licensed Products are a trade secret and a proprietary commercial product and not subject to disclosure.

If End User is an agency, department, or other entity of any State government, the United States Government or any other public entity or funded in whole or in part by the United States Government, such End User agrees to protect the Licensed Products from public disclosure and to consider the Licensed Products exempt from any statute, law, regulation, or code, including any Sunshine Act, Public Records Act, Freedom of Information Act, or equivalent, which permits public access and/or reproduction or use of the Licensed Products. In the event that such exemption is challenged under any such laws, any and all right to retain any copies or to use of the Licensed Products shall be terminated and considered immediately null and void. Any copies of the Licensed Products held by End User shall immediately be destroyed. If any court of competent jurisdiction considers this clause void and unenforceable, in whole or in part, for any reason, then all Licensed Products previously delivered to End User will be destroyed.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

1.0 EXECUTIVE SUMMARY

Property Address: 8-10 Grand Avenue, Brooklyn, NY 11205.

Property Usage: A commercial building and a mixed-use building.

Property Description: The subject property consists of a two-story commercial building and a seven-story mixed-use apartment building. The two-story building is occupied by a paper goods and household supplies store, and a metal shop. The seven-story building contains apartments above an art studio on the ground floor. The buildings contain 50 residential apartments and three commercial units. The buildings have a combined footprint of approximately 15,805 square feet, and the property is approximately 16,775 square feet in area.

Subject	Acceptable	Routine Solution	Additional Study	Estimated Cost

Advanced Cleanup Technologies, Inc. (ACT) has performed the Phase I Environmental Site Assessment in conformance with the scope of limitations of ASTM Practice E 1527-05 of 8-10 Grand Avenue, Brooklyn, NY 11205, the "subject property." Any exceptions or deletions from this practice are described in Section 2.2 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property, except for the following:

- Historical industrial usage of the subject property (Sections 5.1, 5.2, 5.4, 6.4);
- Inactive hazardous waste disposal site at adjacent property to the north (Section 5.1).

No historical recognized environmental conditions were observed at the subject property. A historical recognized environmental condition is an environmental condition that in the past would have been considered a recognized environmental condition.

No *de minimis* conditions were observed at the subject property. A *de minimis* condition is one that generally does not present a material risk of harm to public health or the environment and that generally would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies (excluding local asbestos and lead situations).

2.0 INTRODUCTION

Pursuant to the request of Bruman Realty LLC, as our client, ACT has conducted a Phase I Environmental Site Assessment (ESA) of 8-10 Grand Avenue, Brooklyn, NY 11205. The Assessment was performed to meet or surpass the industry standard established by ASTM's Standard Practice for Environmental Site Assessments (E 1527-05). This ESA was conducted in accordance with and subject to the proposal dated August 14, 2013.

2.1 Purpose

The purpose of this report is to assess the subject property for evidence of Recognized Environmental Conditions (RECs) in accordance with the provisions of ASTM Standard E 1527-05. As defined by the ASTM, the term recognized environmental condition means “the presence or likely presence of any hazardous substance or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or onto the ground, ground water, or surface water of the property.” A material threat is “a physically observable or obvious threat which is reasonably likely to lead to a release that is threatening and might result in impact to public health or the environment.” A REC may include hazardous substances or petroleum products even under conditions in compliance with laws.

2.2 Detailed Scope of Services

The Phase I ESA includes a visual inspection of the subject property, improvements, and surrounding properties to identify potential recognized environmental conditions. The adjacent properties were viewed from the subject property and roadways to determine potential sources of contamination or environmental impacts that could migrate to the subject property.

Research into historical uses of the property and surrounding land and a review of regulatory agency files and databases pertaining to the property and surrounding properties were performed.

Interviews with property representatives regarding past and present conditions and interviews with local government officials were performed to determine if environmental issues exist at the subject property.

The Phase I ESA also contains non-ASTM items including a limited visual screening for suspect asbestos-containing materials and lead based paint and a review of regulatory agency documents regarding lead in drinking water and radon in the vicinity of the subject property.

2.3 Significant Assumptions

Information and records provided by the user, outside vendors, and regulatory agencies consulted by ACT are assumed to be correct and complete.

2.4 Limitations and Exceptions

This practice constitutes "All Appropriate Inquiry" (AAI) into the previous ownership and uses of the property consistent with good commercial or customary practice in accordance with the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. 9601). Data gaps may occur in the event that a portion of the AAI practice cannot be fully performed as per ASTM E 1527-05, despite the good faith effort of the environmental professional. This practice does not address local or state environmental assessment obligations that may be applicable to the property.

The purpose of this ESA is to assess the subject property with respect to the presence of hazardous substances and/or petroleum products in accordance with provisions of ASTM Standard E 1527-05. This practice is intended to permit the user, which may be a perspective purchaser or tenant, an owner, a lender or a property manager, to satisfy requirements to qualify as an innocent land owner, contiguous property owner, or bona fide prospective purchaser, hereinafter known as the Landowner Liability Protections (LLPs).

The innocent landowner defense applies to individuals who were not aware of contamination at a property despite completion of AAI at the time of purchase; government entities that acquired a property via escheat, eminent domain, or involuntary transfer or acquisition; and individuals who inherited a property.

The contiguous property owner liability protection applies to owners who have completed AAI

prior to purchase and were not aware of a contiguous property not owned by them that has or may have impacted their property. Knowledge of impact from a contiguous property exempts the owner from the contiguous property owner liability.

The bona fide prospective purchaser liability protection signifies that the purchaser made all appropriate inquiries into the subject property prior to its purchase.

This Phase I ESA has been prepared to assess the potential environmental liabilities at the subject site with respect to data that Advanced Cleanup Technologies, Inc. has accumulated during the Phase I ESA. The conclusions presented in this report are based solely on the observations of the site at the time of the assessment. Data provided, including information provided by others, were utilized in assessing the site conditions. The accuracy of this Phase I ESA is subject to the accuracy of the information provided. Advanced Cleanup Technologies, Inc. is not responsible for areas not seen or information not collected.

This Phase I ESA was performed at the request of Bruman Realty LLC in accordance with ASTM E 1527-05. The report has been prepared for the sole use of Bruman Realty LLC. No other party may use the report without written consent from ACT and Bruman Realty LLC.

2.5 Special Terms and Conditions

No special terms or condition are in addition to the scope outlined in Section 2.2 of this Phase I ESA.

2.6 User Responsibilities

This practice does not address the continuing obligations of the user, including protection of activity and use limitations, which are legal or physical use limitations on use of or access to a site that may include institutional or engineering controls (physical modifications to a subject property to reduce or prevent contact with known subsurface contamination at a subject property) or the duty to take reasonable steps to prevent future releases, or the duty to comply with legally required release reporting obligations.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The address of the subject property is 8-10 Grand Avenue, Brooklyn, NY 11205. The New York City tax map identification number is Block 1877, Lots 27 and 30.

3.2 Site and Vicinity Characteristics

The subject property is located in an industrial, commercial, and residential area in the northern portion of the borough of Brooklyn in New York City. The immediate vicinity of the subject property contains industrial, commercial, and residential buildings. The subject property is located approximately 2,790 feet southeast of Wallabout Bay and 1.8 miles east of the Upper Bay.

3.3 Current Use of the Property

The subject property currently contains a two-story commercial building and a seven-story mixed-use apartment building. The two-story building is occupied by Ring & Bring, a paper goods and household supplies store, and a metal shop. The seven-story building contains apartments above an art studio on the ground floor. The current uses do not appear to be impacting the environmental quality of the subject property.

3.4 Description of Structures, Roads and Other Improvements

The subject property is located along the western side of Grand Avenue at the intersection of Flushing Avenue. Electric, water, and natural gas services enter the property underground from the east. Utility meters are located on each floor. The buildings are heated by natural gas blowers located on each floor. Hot water is supplied to the building by electric and natural gas heating tanks also located on each floor. The building is connected to the municipal sewer system.

3.5 Current Use of Adjoining Properties

The exterior conditions of adjacent properties were viewed from the subject property and adjacent roadways.

North:	The Brooklyn Navy Yard.
South:	A six- and seven-story residential apartment building.
East:	One-story commercial buildings.
West:	A one-story warehouse.

The adjacent properties to the south, east and west do not appear to be impacting the environmental quality of the subject property. The adjacent property to the north is discussed further in Section 5.1, below.

4.0 USER PROVIDED INFORMATION

A User Questionnaire was provided to the real estate representatives of the subject property. The completed User Questionnaire has not been provided to ACT at the time of this report.

4.1 Environmental Liens

An environmental lien search is an inquiry into the existence of environmental cleanup liens against the subject property that are filed or recorded under federal, tribal, state, or local laws.

An environmental lien search was not included in the scope of work of this assessment and therefore was not performed. However, if the findings of a lien search performed by any other party reveal the presence of an environmental related lien on the subject property, this information should be forwarded to ACT for review, and any significant findings will be added to this assessment as an addendum.

5.0 RECORDS REVIEW

5.1 Standard Environmental Records Sources

In an effort to determine the potential impact from hazardous waste activities or petroleum products at the subject property, adjacent properties and surrounding area, a review of database information on waste sites within one mile of the subject property was conducted. The database report information was provided to ACT by Environmental Data Resources Incorporated, dated August 22, 2013.

The review included a search of the following Federal, United States Environmental Protection Agency (USEPA) and New York State Department of Environmental Conservation (NYSDEC) databases:

- USEPA National Priorities List (NPL) and Delisted NPL Sites;
- USEPA Comprehensive Environmental Response, Compensation, and Liability Act Information System (CERCLIS Non-NFRAP) and CERLIS No Further Remedial Action Planned (CERCLIS NFRAP) Sites;
- NYSDEC listing of Inactive Hazardous Waste Disposal and Registry Qualifying Sites or State equivalent NPL and CERCLIS Sites;
- USEPA and NYSDEC Resource Conservation and Recovery Act Information System (RCRIS) Hazardous Waste Treatment Storage and Disposal (TSD) facilities, RCRIS corrective action activity (CORRACTS) sites, and Hazardous Waste Generator/transporter facilities;

- USEPA and NYSDEC Brownfield and Voluntary Cleanup Sites;
- NYSDEC Solid Waste Management Facilities Database;
- NYSDEC listing of Leaking Underground Storage Tanks and Spills List;
- NYSDEC listing of Petroleum Bulk Storage Facilities, Major Oil Storage and Chemical Bulk Storage Facilities;
- USEPA Emergency Response and Notification System (ERNS);
- USEPA and NYSDEC Institutional Controls/Engineering Controls (IC/EC).

The NPL and CERCLIS databases are maintained by the USEPA and contain records for each of the hazardous waste facilities nominated or chosen for cleanup under Superfund. The NPL database was searched for sites within a radius of 1 mile from the subject property. The subject property is not identified on the NPL database. No NPL sites are identified within 1 mile of the subject property.

The Delisted NPL database was searched for sites within a radius of ½ mile from the subject property. The subject property is not identified on the Delisted NPL database. No Delisted NPL sites are identified within ½ mile of the subject property.

The NYSDEC publication of Inactive Hazardous Waste Disposal and Registry Qualifying Sites in New York State contains a listing of all properties and facilities in New York State that have been identified as containing toxic or hazardous wastes and/or contamination in various forms. The subject property is not identified in the database. Three Inactive Hazardous Waste Disposal Sites or Registry Qualifying sites are identified in the database within 1 mile of the subject property. The closest site, Naval Station-Brooklyn, Transformer Area at Flushing Avenue, is located adjacent to the north of the subject property. The site is listed as containing contaminated soils beneath concrete and clean backfill. Due to the confirmed presence of soil contamination in close proximity to the subject property, the Brooklyn Naval Station located adjacent to the north may be impacting the environmental quality of the subject property.

The CERCLIS database was searched for sites within a radius of ½ mile from the subject property. The subject property is not identified on the CERCLIS Non-NFRAP database. No CERCLIS Non-NFRAP sites are identified in the database within ½ mile of the subject property.

The CERCLIS-NFRAP database was searched for sites within a radius of ½ mile from the subject property. The subject property is not identified on the CERCLIS-NFRAP database. Two CERCLIS-NFRAP sites are identified in the database within ½ mile of the subject property. The closest site, NMCRC-Floyd Bennett at Flushing and Washington, is located 0.145 miles west of the subject property. The site is listed in the database with facility ID NY6170022168. Due to the non-proximate location and lower elevation of the site, it is unlikely to impact the environmental quality of the subject property.

The RCRIS database includes listings of properties, which are undergoing Corrective Action. The subject property is not listed in the Corrective Action database. Two RCRIS Corrective Action sites are identified within 1 mile of the subject property. The closest site, Techtronics Ecological Corp.

at 8 Walworth Street, is located 0.534 miles east-northeast of the subject property. The site is listed in the EPA database with facility ID NYD000824334. Due to the non-proximate location and lower elevation of the site, it is unlikely to impact the environmental quality of the subject property.

RCRIS database includes listings of properties, which are considered Hazardous Waste Treatment, Storage or Disposal (TSD) facilities. The subject property is not listed in the RCRIS TSD database. No RCRIS TSD sites are identified within 1/2 mile of the subject property.

The RCRIS database includes listings of properties, which are considered Hazardous Waste Generators or Transporters. The subject property is not listed in the RCRIS Hazardous Waste Generator/Transporter database. However, Favorite Knitting Mills at 10 Grand Avenue (EPA facility ID NY0000385443) is listed as transporting three drums of material in 1994 containing hazardous concentrations of lead. A review of the USEPA Envirofacts database indicates that Favorite Knitting Mills, with corporate offices and operations at 10 Grand Avenue, Brooklyn, NY last updated RCRIS database information on April 22, 2010. The historical industrial usage of the subject property is discussed further in Sections 5.2 and 5.4, below.

Seven RCRIS Hazardous Waste Generator/Transporter sites are identified within 1/4 mile of the subject property. The closest site, Con Edison at Ryerson Street and Flushing Avenue, is located 0.045 miles west-northwest of the subject property. It is listed as a "Conditionally Exempt Small Quantity Generator," generating "100kg or less of hazardous waste per calendar month." Due to the non-proximate location and lower elevation of the site, it is unlikely to impact the environmental quality of the subject property.

The NYSDEC publication of Brownfield/Voluntary Cleanup Sites in New York State contains a listing of all properties and facilities where expansion or redevelopment is complicated by real or perceived environmental contamination. The subject property is not identified in the database. Two Brownfield/VCP sites are identified in the database within ½ mile of the subject property. The closest site, the Former Arkansas Company, Inc. Site at 74 Wallabout Street, is located 0.270 miles east-northeast. The site is listed with ID 478229. Due to the non-proximate locations and lower elevation of the site, it is unlikely to impact the environmental quality of the subject property.

The NYSDEC Solid Waste Landfill Facility database (SWLF) includes properties, which are active solid waste disposal sites. The SWLF database was searched for sites within a radius of ½ mile of the subject property. The subject property is not identified on the SWLF database. No SWLF sites are identified in the database within 1/2 mile of the subject property.

The NYSDEC Spills and Leaking Underground Storage Tank (LUST) lists were searched for all reported spills within ½ mile of the subject property. The subject property is not identified in the Spill/LUST database. A total of 64 Spills or LUSTs have occurred within ½ mile of the subject property. The closest active LUST, Phillips 66 at 140 Vanderbilt Avenue, is located 0.375 miles southwest of the subject property. The spill is classified as a "known release that creates a fire or hazard – Corrective

action taken." Due to the non-proximate location of the site, it is unlikely to impact the environmental quality of the subject property.

The NYSDEC listing of Petroleum Bulk Storage (PBS), Major Oil Storage (MOSF) and Chemical Bulk Storage (CBS) facilities was searched for any listings within ¼ mile of the subject property. The subject property is not identified in the PBS/MOSF/CBS databases. A total of 26 PBS or CBS facilities are identified in the database within ¼ mile of the property. The closest site is 376 East 94 Realty Associated LLC & 20 Grand LLC at 20 Grand Avenue, is located 0.017 miles southeast of the subject property. That property is registered in the PBS database with facility ID 2-335002.

The ERNS database is a Federal listing of properties which emergency responses were made to in reference to hazardous waste. The ERNS database was searched for the subject property. The subject property is not listed in the ERNS database.

The USEPA and NYSDEC Institutional Controls/Engineering Controls (IC/EC) database was searched for the subject property. The subject property is not listed in the IC database.

5.2 Local Regulatory Agencies

The New York City Department of Buildings (DOB) file contains a Property Profile Overview for Block 1877, Lots 27 and 30. The property addresses are 2-10 Grand Avenue or 268-276 Flushing Avenue, Brooklyn, NY. The property owners are listed as Perl Fein and Rachel Taub. The building on Lot 27 is classified as an E9 warehouse building, and the building on Lot 30 is classified as an F1 factory/industrial building. The buildings have a combined footprint of approximately 15,805 square feet, and the property is approximately 16,775 square feet in area. The property is zoned in a M1-2 district. The construction date for the building on Lot 27 is listed as 1994, and the date for the building's construction on Lot 30 is listed as 1935.

The building on Lot 27 is listed as having four open DOB violations. These violations are related to local law infractions. No open Environmental Control Board (ECB) violations are listed for the building. The building on Lot 30 is listed as having 30 open DOB violations. These violations are related to local law, elevator, and failure to benchmark infractions. There are 35 open ECB violations listed for the building. These violations are related to boiler, zoning, construction, elevator, plumbing, and local law infractions.

Two Certificates of Occupancy (C of O) are for the subject property on the DOB website. A C of O dated April 20, 1965 indicates that a three-story building used as a warehouse is located on Lot 27. A C of O dated April 24, 1928, indicates that a one-story garage and repair shop is located on Lot 30.

The New York City Bureau of Fire Prevention, Department of Health, and Department of Environmental Protection have not responded to our information requests at the time of this report. Pertinent information received from these city agencies will be provided in an addendum to this report.

5.3 Physical Setting Source

The topography of the area has a mild northern slope. The vicinity of the site is approximately 26 feet above mean sea level. The ground surface in the vicinity of the property is covered with asphalt and concrete pavement and industrial, commercial, and residential buildings.

The subsurface beneath the site consists of unconsolidated sand and gravel layers from the ground surface to approximately 50 feet below ground surface where the Raritan confining unit is encountered. The major aquifer system beneath the subject property is the Upper glacial aquifer. Bedrock beneath the subject property is located approximately 200 feet below ground surface. Regional ground water in the vicinity of the subject property is expected to flow to the west.

5.4 Historical Use Information of the Subject Property and Adjacent Properties

Historical fire insurance maps for the years 1887 through 2007 were obtained and reviewed by ACT from Environmental Data Resources Incorporated.

Subject Property	As of 1887, the property contained a two-story dwelling, a three-story dwelling, 2 one-story dwellings, a two-story shed, a one-story shed, and a lumberyard. As of 1904, the property contained a one-story coffee roasting shop, a one-story Wergenfider Linotype Co. storage building, a two-story horse shoeing store, 3 one-story office buildings, 3 one-story sheds, and 2 one-story lumber sheds. As of 1915, the property contained a three-story coffee roasting shop, a one-story building, a one-story paper manufacturing building, a two-story horse shoer shop, and a one-story office building. As of 1938, the property contained the one-story Santini Inc. storage and warehouse, a three-story rag warehouse, a one-story storage building, and a two-story horse shoer. By 1950, the horse shoer was converted to storage. By 1969, all of these buildings were replaced with an eight-story flat and parking. As of 1995, the parking lot was converted into a two-story warehouse. The flat and warehouse remained through 2007.
North	As of 1887, this property contained a one-story gatehouse to the Brooklyn Navy Yard, which remained through 2007.
South	As of 1887, this property contained the one-story Beers & Resseguie planning mill. As of 1904, this property contained a one-story Sturterant Fan, 4 one-story buildings, and a one-story lumber shed, which were left

	vacant by 1915. As of 1938, these buildings were replaced with a seven-story vacant building, which was a flat and no longer vacant by 1950. It remained through 2007.
East	As of 1887, this property contained a four-story store, 3 two-story dwellings, 4 one-story dwellings, a 1.5-story dwelling, and 3 one-story sheds. As of 1904, this property contained a four-story store, 2 two-story dwellings, 2 1.5-story dwellings, a one-story dwelling, a one-story wagon house, a one-story shed, and 2 two-story sheds. As of 1915, this property contained a four-story hay & feed building, a two-story dwelling, 3 two-story sheds, 2 one-story wagon sheds, a one-story automobile house, a 1.5-story garage, and a 1.5-story building. As of 1938, this property contained a one-story tire service building, a one-story automobile wrecking place, a one-story and a two-story empty cartes building, a one-story garage, a one-story building, and a two-story building. As of 1950, this property was occupied by only a one-story tire service building and a parking lot. By 1969, the tire service building was converted into a commercial building and a one-story metal storage building added. By 1982, another one-story building was added. By 1986, the parking lot was replaced with a two-story warehouse and the metal storage building converted into a two-story warehouse. The property then remained substantially unchanged through 2007.
West	As of 1887, this property contained a one-story office building, one-story shed, one-story building, and a three-story store. As of 1904, this property contained a three-story store, 2 one-story sheds, a one-story office building, Resseguie Planning Mill, lumber in piles, and a one-story lumber shed. As of 1915, this property contained a three-story store and a four-story E.R. Lowe Co. Farmer's Boarding & Livery Stable. As of 1938, this property contained a four-story storage building for Linotype Company and the eight-story Matrix Building. By 1950, the storage building contained offices and a one-story lumber shed was added. By 1969, this property was occupied by the two-story NYC Department of Social Services warehouse and eight-story public Matrix Building, which as of 1977 was converted into the NY Department of Social Services. This property then remained substantially unchanged through 2007.
General Vicinity	As of 1887, the vicinity was a half-developed residential area with a few commercial and manufacturing buildings, and a hospital. By 1904, it had transitioned into a half-residential half-commercial area with manufacturing buildings and a hospital, and by 1938 into a largely commercial and manufacturing area with only a couple residences. By 1977, the hospital was replaced with US Naval Station until 1996. The vicinity then remained substantially unchanged through 2007.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

Steven Walls of ACT performed a site inspection on August 19, 2013. David Cohen and Duvi Bruman, representatives of the prospective buyer, and Mark, a representative of the owner, provided access. The property was traversed by foot.

6.2 General Site Setting

The subject property is located in an industrial, commercial, and residential area in the northern portion of Brooklyn. The topography of the area has a mild northern slope. The immediate vicinity of the subject property contains industrial, commercial, and residential development.

6.3 Exterior Observations

The subject property contains a two-story commercial building and a seven-story mixed-use apartment building. The exteriors of the buildings are constructed of brick masonry. The buildings have flat rubber and tar roofs, which contain the elevator rooms and HVAC equipment.

One exterior storm drain was observed at the property. This drain discharges to the municipal sewer. No stains, odors, or evidence of spills were observed in the vicinity of the drain. Minor oil staining was observed in the elevator rooms.

6.4 Interior Observations

The main entrances of the buildings are located on the eastern property boundary along Grand Avenue, with additional entrances located on the northern property boundary along Flushing Avenue. Two overhead doors are located on Grand Avenue, and one overhead door is located on Flushing Avenue. The interiors of the buildings consist of concrete and tile floors; concrete and sheetrock walls; and concrete, sheetrock, and drop ceilings.

The two-story building is occupied by Ring & Bring, a paper goods and household supplies store, and a metal shop. The ground floor contains a loading dock and machinery for metalworking; the second floor is used as offices. The building does not have a basement. The seven-story building contains an art studio on the ground floor and 30 residential apartments on the upper 6 floors. The buildings are connected by a walkway on the second floor.

The seven-story building has two cable elevators that service the first through seventh floors. The building does not have a basement. Mark, the representative of the owner, indicated that the building was previously utilized as a knitting factory.

Solid waste is stored in garbage pails in various locations throughout the buildings. There is no evidence of hazardous waste within the solid waste. No floor drains were observed throughout the building. No stains, odors, or evidence of spills were observed throughout the interior of the building.

6.5 Asbestos

A visual inspection of the property for suspect asbestos-containing materials (ACM) such as pipe and boiler insulation, ceiling tiles and floor tiles was conducted. No suspect asbestos-containing materials were observed at the property.

These findings comprise only a preliminary inspection of the subject property for ACM and should not be interpreted as a formal asbestos survey. All federal, state, and local regulations should be followed with respect to asbestos-containing materials if renovations or demolition are to be performed at the property.

6.6 Hazardous Materials

A visual inspection of the property was conducted for evidence of potential hazardous material contamination. Paints and cleaners were stored in various locations throughout the buildings. No other potential hazardous materials were observed at the subject property.

No areas of stressed vegetation or excavated areas were observed anywhere on the property. No indication of previous environmental investigations, such as groundwater monitoring wells, was observed at the property or any adjoining properties. No pits, ponds, or lagoons indicative of hazardous waste disposal were observed at the property.

6.7 Storage Tanks

No aboveground storage tanks were observed at the property. No evidence of underground storage tanks, such as fill pipes or vent pipes, was observed at the property. No evidence of former underground storage tanks, such as asphalt or concrete patches, was observed at the property.

6.8 Radon

The New York State Department of Health maintains records of average radon levels by

county. The average level for Kings County is 1.9 picoCuries per Liter (pCi/L). This level is considered to be within the normal background range. The United States Environmental Protection Agency standard for radon is 4.0 pCi/L.

6.9 Potable Water

The subject property is supplied water by the local municipality. The municipality monitors the quality of this water for organic and inorganic constituents, including lead, in accordance with federal law. The municipality must maintain lead concentrations at less than 15 micrograms per liter.

6.10 Lead Based Paint

A visual inspection of the property for chipped, peeling, or cracking paint was performed. No areas of chipped, peeling, or deteriorating paint were observed at the property. Painted surfaces were in fair to good condition.

These findings comprise only a preliminary inspection for lead-based paint at the subject property and should not be interpreted as a formal lead-based paint inspection. All federal, state, and local regulations should be followed with respect to lead-based paint if renovations or demolition activities affecting painted surfaces are to be performed.

6.11 PCBs

No electrical transformers were observed at the property. The building on seven story building contains two cable elevators that service the first through seventh floors, with elevator rooms located on the roof. Minor staining was observed on the elevator room floors. The two-story building does not contain an elevator. The buildings do not contain any other equipment that could contain substantial amounts of PCB-contaminated oil.

7.0 INTERVIEWS

7.1 Interview with Owner

A Property Owner/Representative Questionnaire has not been returned at the time of this report.

7.2 Interview with Site Manager

A property manager was not available during the site inspection for interview.

7.3 Interview with Occupants

No site occupants were available during the site inspection for interview.

7.4 Interviews with Local Government Officials

ACT attempted to contact officials at the New York City Department of Buildings and the Department of Environmental Protection to obtain information indicating recognized environmental conditions in connection with the subject property. No officials were available for interview regarding the subject property.

7.5 Interviews with Others

No additional interviews were conducted as part of this assessment.

8.0 FINDINGS

During the course of this Phase I ESA, ACT has observed the following known or suspected recognized environmental conditions:

- Historical industrial usage of the subject property (Sections 5.1, 5.2, 5.4, 6.4);
- Inactive hazardous waste disposal site at adjacent property to the north (Section 5.1).

No historical recognized environmental conditions and no *de minimis* conditions were observed at the subject property. No significant data gaps were observed during this assessment.

9.0 OPINION

Based on the scope of work performed, it is ACT's professional opinion that historical industial usage of the subject property and an inactive hazardous waste site at the adjacent property to the north are recognized environmental conditions at the subject property and its immediate vicinity that could adversely impact upon its environmental quality and warrant further environmental study.

10.0 CONCLUSIONS

Advanced Cleanup Technologies, Inc. (ACT) has performed the Phase I Environmental Site Assessment in conformance with the scope of limitations of ASTM Practice E 1527-05 of 8-10 Grand Avenue, Brooklyn, NY 11205, the "subject property." Any exceptions or deletions from this practice are described in Section 2.2 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property, except for the following:

- Historical industrial usage of the subject property (Sections 5.1, 5.2, 5.4, 6.4);
- Inactive hazardous waste disposal site at adjacent property to the north (Section 5.1).

11.0 RECOMMENDATIONS

A Phase II Subsurface Investigation should be performed to determine whether historical industrial usage of the subject property and an inactive hazardous waste site at the adjoining property to the north have impacted the environmental quality of the subject property. The investigation should include soil, soil vapor and ground water sampling, laboratory analysis and report preparation. The cost for this task should not exceed $10,000.

12.0 DEVIATIONS

No deviations from the detailed scope of services outlined in Section 2.2 were performed as part of this Phase I ESA.

13.0 ADDITIONAL SERVICES

No additional services beyond the detailed scope of services outlined in Section 2.2 were performed as part of this Phase I ESA.

15.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

This practice must be conducted by an Environmental Professional (EP) or under the supervision of an EP, which signifies an individual who "possesses sufficient specific education, training and expertise necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases" as defined by ASTM. Individuals who do not qualify as EP's may assist in the performance of AAI if appropriately trained and supervised by an EP. At a minimum, the EP must be involved in the planning of the site reconnaissance and interviews. The EP is also responsible for the review of the Phase I Environmental Site Assessment and interpretation of the information obtained via the Phase I Investigation.

ACT declares that to the best of our professional knowledge and belief we meet the definition of EP defined in 312.10 of 40 CFR Part 312. ACT has the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. ACT has developed and performed the All Appropriate Inquiry in conformance with the standards and practices set fourth in 40 CFR Part 312.

Dated: August 29, 2013

DEC Memo: 01/17/07 - See e-docs for Con Ed report detailing cleanup and closure.12/22/06 - Raphael Ketani. I spoke to Tom Columbia at the ERT Desk at 9:30AM. He said that the Con Ed cleanup truck and crew came to the site at 8:45AM. They put down absorbent, scooped up the spent absorbent and put it into a drum, and had it carted away as non-hazardous material. He said no drains were impacted.203830. see eDocs
Remarks: Vehicle #23775Spilled onto asphalt -spilled due to aged equipmentCleanup - pending resource availableRef. 203830

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D006
Waste name: CADMIUM

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: D009
Waste name: MERCURY

Waste code: D039

Mr. Balinco, property manager. he doesn't know anything about contamination soil at site. this proeprty occupies block between Ryerson st and Grand Ave (main office). building area along Ryerson st is vacant since 1999, which was found with contaminated soil. asked Mr. Balinco to find out tank closure report.Yaniv BalincoMoishe's Self Storage32 Grand AvenueBrooklyn, NY 11205Ph. (718) 237-9735Fax (718) 237-9771email: ybalinco@moishesselfstorage.com03/08/07-Hiralkumar Patel. tried to reach Mr. Balinco but he is on vacation and will be back on 03/27/07.06/14/07-Hiralkumar Patel. PBS #: 2-602131. as per PBS record, site had two 5000 gal #2 oil USTs and were removed in 2000.from city records, property owner:Ryerson Street Realty Corp.450 W 15th StreetNew York, NY 10011-7097and alternate addresses: 35-57 Ryerson street, 315-333 Park Avenue, 32 Grand Avenue.sent letter to Mr. Balinco at 32 Grnad Avenue and also to Ryerson St Realty corp requiring soil/groundwater investigation in area of previously removed tanks. letter emailed to Mr. Balinco.06/26/07-Hiralkumar Patel. letter, that was sent to Ryerson St REalty corp address, came back undelivered.07/25/07-Hiralkumar Patel. spoke with Mr. Balinco. he didn't received any letter. sent copy of previously sent letter to Mr. Balinco at different email address (brooklynstorage@moishes.com).08/20/07-Hiralkumar Patel. received call from Mr. Bartley from Accutech. he mentioned about tank closure report dated Oct. 18, 2000. asked Mr. Bartley to submit that report.James BartleyAccutech Environmental ServicesPh. (732) 739-6444 Ext. 1408/27/07-Hiralkumar Patel. received report from James. abstract:- report prepared on Oct. 18, 2000- Accutech removed one 12,000 gal #2 UST and one hydraulic lift and abandoned one 12,000 #2 oil UST- western UST (UST #1) was located immediately adjacent to the footings of a loading dock existing on the adjacent property- was determined that the removal of UST #1 would seriously undermine the footings of loading dock, so UST #1 was abandoned-in-place with cement slurry- eastern UST (UST #2) was removed- stained soil was observed around the fill pipes of both USTs and on the bottom of the UST's excavation- groundwater was not encountered in the bottom of the UST's common excavation at approx. 16 ft bg- 8 inch thick concrete anchor slab, on which the USTs were installed, was found on the bottom of the UST's excavation- sandy clay found from 2 ft to 10 ft and silty clay was found from 10 ft to 16 ft depth- tops of the UST's were located approx. 3.5 ft bg- no holes were found in UST #2- stained soil was removed from the northern, eastern and southern sidewalls and the bottom of the excavation- excavated was extended vertically to approx. 16 ft bg in the eastern portion of the excavation, between the edge of the anchor slab and the buildng foundations- UST #1 was inspected in place. no holes were observed on

DEC Memo: 200289. Breen responded to site on 5-30-06 and spoke to Leon Paretsky. Release was discovered during a routine manhole inspection. Dielectric fluid was totally contained in the vault - there was no release to the environment. Repair crew responding to initial report observed a slow leak in a 3/4 inch bypass pipe that is connected hydraulically to the feeder, but not electrically. The emergency repair crew was successful in applying a clamp to the leaking bypass pipe. The feeder was never taken out of service. Con Edison had Allstate on site to pump out the vault. Con Ed will then wash the vault and apply a permanent (welded) repair patch. 11/16/06 - closed

Site Code: 55915
Site Description: Location: Naval Station - Brooklyn is located in a flat industrial area within the New York Naval Shipyard in the Williamsburg section of Brooklyn, north of Flushing Avenue, between Clinton Avenue and Williamsburg Place.
Site Features: The East River is 1500 feet west of the site. There a re two working electrical substations at the site which have three transformers employing dielectric fluid which formerly contained PCBs. Each of the substations is contained within an area surrounded by concrete walls. They are located in the northern portion of the property, adjacent to the property line.
Current Zoning/Use(s): Industrial Historic Use(s): A 1987 Phase I i nvestigation showed that the PCB content of the dielectric fluid in the transformers ranged from 250 to 590 parts per million (ppm). Transformer spills stained slabs and soil located beneath the transformers, with soil contamination ranging from 0.5 to 870 ppm. The PCB containing transformers were subsequently retro-filled. Remedial work began in the summer of 1994 and concluded in 1995 and included power-washing the transformers and stained slabs and removing hazardous levels of PCB contaminated soils. The areas were then backfilled with crushed stone and secured. Three monitoring wells were installed to determine whether PCBs had contaminated the groundwater beneath the site at Building 7. Three rounds of groundwater samples collected in September 1996, December 1996, and March 1997, showed no detectable concentrations of PCBs. It was determined that further monitoring at this site was not warranted. In July 2012 NYSDEC placed an Environmental Notice on the Transformer Area which requires written approval from NYSDEC prior to any disturbance or excavation of the soil, proper management and/or disposal of any contaminated materials exposed or removed, and prior approval by NYSDEC for any change in use. The Transformer Area has been delisted from the Registry of Inactive Hazardous Waste Disposal Sites in New York State.
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete, to extent that the Navy was able to work around the active

transformers. The primary contaminants of concern at the site, PCB's, were addressed by the removal action completed in 1995. Due to the location in a walled transformer yard beneath the crushed stone site cover, and the limited amounts remaining in the soil, residual PCB contamination in the soils will not impact the East River. Three rounds of groundwater samples were non-detect for PCBs.
Special Resources Impacted/ Threatened: None
Health Problem: Since some contaminated soils remain at the site below concrete or clean backfill, people will not come in contact with contaminated soils unless they dig below the surface materials. In addition, the site is fenced, which restricts public access.

Site Code: 55915
Site Description: Location: Naval Station - Brooklyn is located in a flat industrial area within the New York Naval Shipyard in the Williamsburg section of Brooklyn, north of Flushing Avenue, between Clinton Avenue and Williamsburg Place.
Site Features: The East River is 1500 feet west of the site. There a re two working electrical substations at the site which have three transformers employing dielectric fluid which formerly contained PCBs. Each of the substations is contained within an area surrounded by concrete walls. They are located in the northern portion of the property, adjacent to the property line.
Current Zoning/Use(s): Industrial Historic Use(s): A 1987 Phase I i nvestigation showed that the PCB content of the dielectric fluid in the transformers ranged from 250 to 590 parts per million (ppm). Transformer spills stained slabs and soil located beneath the transformers, with soil contamination ranging from 0.5 to 870 ppm. The PCB containing transformers were subsequently retro-filled. Remedial work began in the summer of 1994 and concluded in 1995 and included power-washing the transformers and stained slabs and removing hazardous levels of PCB contaminated soils. The areas were then backfilled with crushed stone and secured. Three monitoring wells were installed to determine whether PCBs had contaminated the groundwater beneath the site at Building 7. Three rounds of groundwater samples collected in September 1996, December 1996, and March 1997, showed no detectable concentrations of PCBs. It was

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D006
Waste name: CADMIUM

Waste code: D008
Waste name: LEAD

Waste code: D009
Waste name: MERCURY

Waste code: B007
