CERTIFICATION

The following certification is required as prescribed in Order on Consent, Index Number D1-0001-99-05.

I Joseph Lifrieri responsible for the day to day performance of the field investigation program for the Far Rockaway Former MGP site (NYSDECs item number 2-41-032) certify that the work was performed in accordance with the approved Preliminary Site Assessment Work Plan, dated April 2002, and that any deviations from this work plan an were pre-approved by NYSDEC.

Re: Final Preliminary Site Assessment Report
Order of Consent D1-0001-99-05
Site #2-41-032
Far Rockaway Former MGP Site
Far Rockaway, New York

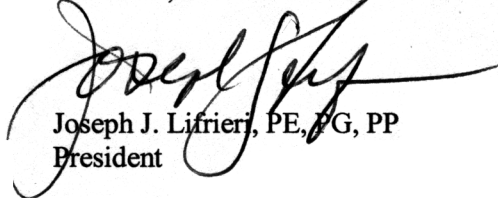

Dear Mr. White:

Paulus, Sokolowski and Sartor Engineering, PC (PS&SPC) is pleased to present this Final Preliminary Site Assessment (PSA) report regarding the investigation conducted at the Far Rockaway Former Manufactured Gas Plant (MGP) site. One hard copy and four electronic copies of the report package is enclosed for your review.

If you have any questions or would like to discuss these issues further do not hesitate to contact me, or John Pastorick at 732-560-9700 extension 228.

Very truly yours,

PAULUS, SOKOLOWSKI & SARTOR ENGINEERING, PC

Joseph J. Lufrieri, PE, PG, PP
President

EXECUTIVE SUMMARY

Paulus, Sokolowski and Sartor Engineering, PC (PS&S ENG PC) is pleased to submit this Preliminary Site Assessment (PSA) report pursuant to Order On Consent # D1-001-99-05 entered into by KeySpan Corporate Service, LLC (KeySpan) and the New York State Department of Environmental Conservation (NYSDEC), dated September 30, 1999, for the Far Rockaway Former Manufactured Gas Plant (MGP) site located on the north side of Brunswick Avenue between B12th Street and Minton Avenue. The Project Site is also known as 1200 - 1224 Brunswick Avenue (Section 59/Block 15529/Lots 102, 105, 110 and 115). The subject site is not currently owned or operated by KeySpan.

This investigation was predicated upon a New York State Department of Environmental Conservation (NYSDEC) approved PSA Workplan prepared by Vanasee Hantgen & Brustlin, Inc. The PSA Workplan also contained a Quality Assurance Project Plan (QAPP) which was utilized during implementation of the investigation. The PSA was completed during one phase which consisted of a records review, site reconnaissance and a soil, soil vapor and groundwater sampling program.

Based on the information compiled for the subject site, it appears that the general area of the site contains historic fill placed at some point within the last 75+ years to raise the elevation of the land to a usable level. The site has been actively used as office and warehousing space since the cessation of MGP-related operations in 1909. The results of the field investigation confirmed the presence of fill materials (i.e., miscellaneous fill consisting of sand, gravel, metal, glass, cinders, concrete and other debris) throughout the site area containing certain Resource Conservation and Recovery Act (RCRA) Metals and Target Analyte Metals and Volatile Organic compounds, Semi-Volatile Organic compounds, Polychlorinated Biphenyls and Cyanide. During the excavation of a test trench, the former gas holder foundation pad was encountered at a depth of four feet below the surface grade. This was the only potential MGP-related structure that was encountered and/or discovered during the implementation of the field sampling program.

Analysis of groundwater samples obtained through low-flow sampling of the temporary monitoring wells, installed at the site, indicated the presence of certain RCRA Metals and Target Analyte Metals, Volatile Organic compounds, Semi-Volatile Organic compounds, Polychlorinated Biphenyls and Cyanide in the groundwater.

Six sampling locations situated on and adjacent to the Long Island Railroad (LIRR) property were not conducted as outlined in the PSA Workplan. These sample locations (as shown on Figures 4 and 5) were soil borings FRSB-05, FRSB-06 and FRSB-07; surface sample FRSS-10; soil vapor sample FRSV-05 and groundwater sample FRGW-04. During and after the implementation of the field sampling program, KeySpan was informed by LIRR that it would not be able to grant access to perform the sampling on its property. As a result, no field duplicate samples were collected for the soil borings as the duplicates were scheduled to be obtained from those soil borings located on the LIRR property. Additionally, soil boring FRSB-11, groundwater sample point FRGW-07 and soil vapor sample FRSV-02 were relocated from the sidewalk in front of 1224 Brunswick Avenue onto Brunswick Avenue.

1.0 INTRODUCTION

Paulus, Sokolowski and Sartor Engineering, PC (PS&S ENG, PC), at the request of KeySpan Corporate Services, LLC (KeySpan) and in compliance with the New York State Department of Environmental Conservation (NYSDEC) Order on Consent #D1-0001-99-05, conducted a Preliminary Site Assessment (PSA) of three (3) parcels of land containing three (3) two-story buildings located at 1200-1224 Brunswick Avenue, Far Rockaway, Queens County, New York (Figure 1). The work for this site was performed by professionals of Paulus, Sokolowski and Sartor, LLC (PS&S)/KeySpan Business Solutions under the responsible charge of appropriately licensed professionals of PS&S ENG PC. The subject site is also identified as Section 59/Block 15529/Lots 102, 105, 110 and 115 according to the Far Rockaway Tax Department. The subject site comprises approximately one-acre of land in a mixed industrial and residential area. At the time the site operated as a Manufactured Gas Plant (MGP) site, only the center building (1216 Brunswick Avenue) existed. According to reviewed documentation, the original building was constructed in approximately 1900 and housed a MGP until approximately 1909. The site is currently utilized by three separate tenants for warehousing, shipping and distribution operations.

The information contained within this PSA includes historical site data supplied to PS&S by KeySpan and information gathered during the records review process and field investigation. Specifically, the information supplied to PS&S by KeySpan consisted of the Order On Consent, Initial Data Submittal and the NYSDEC approved PSA Workplan, including a Quality Assurance Project Plan (QAPP). The field investigation consisted of soil, groundwater and soil vapor sampling and analysis and was predicated on an NYSDEC approved PSA workplan prepared by Vanasse Hantgen Brustlin, Inc. (VHB) and dated April 2002.

This PSA Report is subdivided into three sections; Records Review; Soil, Groundwater and Soil Vapor Sampling; and Soil, Groundwater and Soil Vapor Laboratory Analysis.

1.1 Site Overview

The subject parcel (1200-1224 Brunswick Avenue, Section 59/Block 15529/Lots 102, 105, 110 and 115) is approximately one acre in size and contains three two-story buildings, which house warehousing and office space, as well as paved parking and landscaped areas. The site is situated at latitude 40° 36' 35.78"N and longitude 74° 44' 57.92"W. Figure 2 depicts the general site layout. The building is serviced by public utilities, including electric, water, sewer and natural gas.

Generally to the north of the facility is the Long Island RailRoad (LIRR) railway, beyond which are commercial buildings. To the east and south is residential housing. To the west are commercial buildings.

2.0 RECORDS REVIEW

2.1 Historical Information

According to reviewed information a “gas works” operated at the site between 1900 and 1909. The property was owned by the Hempstead Gas and Electric Light Company from 1900 to 1902. In 1902 the operations of the facility was transferred to Queensborough Gas and Electric Company, at which time the two entities consolidated. Subsequently in 1923 the Long Island Lighting Company (LILCO) acquired control of Queensborough Gas and Electric Company via stock purchase.

Following cessation of operations of the MGP, the site was utilized as office space by LILCO and the Queensborough Gas and Electric Company. At the time the site operated as an MGP facility, there were several structures associated with the MGP operations; a 75,000 cubic foot gas holder, coal bins, a gas generator and a purifier.

Review of available on-line documents at the New York City Department of Buildings website indicated several alterations of the property located at 1200 Brunswick Avenue in 1911, 1973 and 1981. A demolition activity is listed for the year 1963 which indicated the demolition of three sheds on the property. Lastly there is an indication of the construction of new buildings in 1912 and 1971. The records indicate an alteration to the building located at 1216 Brunswick Avenue in 1970 no other information was available regarding building construction for this address. The only information available for 1224 Brunswick Avenue was a violation for not obtaining a building permit for the installation of roof-top air conditioning units.

Based on review of these documents and comparison with Sanborn Maps (Section 2.3) it would appear that the building at 1200 Brunswick Avenue was constructed in approximately 1971.

2.2 Aerial Photograph Interpretation

Aerial photographs depicting the subject site during the years 1954, 1966, 1974, 1984 and 1994 were reviewed by PS&S. All of the aerial photographs depict the site as it generally appears today. Copies of the Aerial Photographs are enclosed in Appendix A.

2.3 Sanborn Map Interpretation

Sanborn Fire Insurance Maps depicting the subject site were reviewed for the years 1901, 1912, 1933, 1951, 1981, 1982, 1983, 1985, 1986, 1987, 1988, 1990, 1991, 1992, 1993, 1995 and 1996. Copies of the Sanborn Maps are enclosed in Appendix B. The 1901 map depicts the property as being operated by the Hempstead Gas and Electric Company. The features depicted on the map are a gas holder and the original building. The labeling of site features is blurred and therefore difficult to distinguish. The 1912 map depicts the property as being operated by the Queensborough Gas and Electric Company. The map depicts the same features as the 1901 map with the exception that a new building is shown on the eastern side of the property along B12th Street.

The 1933 and 1951 maps depict the property as being operated by the Queensborough Gas and Electric Company. The maps depict the same features as the 1912 map with the exception of the expansion of the original building, plus the construction of the western-most building currently located on the property along Brunswick Avenue. The map also depicts a gasoline tank on the eastern side of this building, although it does not indicate whether it is an aboveground or underground storage tank. The 1981 map no longer shows any of the MGP-related features nor the gasoline tank. Additionally, it would appear that the gas holder was demolished between 1950 and 1980 as it is not present on the 1981 Sanborn Map and is present on the 1951 map. The map generally depicts the site as it appears today. The remainder of the Sanborn Maps are similar to the 1981 map.

2.4 Known Discharges

PS&S made inquiries, via certified mail and/or by telephone, of the NYSDEC, the United States Environmental Protection Agency (USEPA), the Far Rockaway District Manager, the Far Rockaway Fire Department, and the Far Rockaway Health Department, requesting information concerning records of any storage, disposal, spills or releases of hazardous substances requiring environmental response action on, or adjacent to, the subject site.

Copies of PS&S letters of inquiry to the local, state and federal agencies are presented in Appendix C. Copies of response letters received to date from the agencies are also contained in Appendix C. PS&S also utilized a commercial environmental information service to obtain data regarding state and federal environmental program records including the Federal NPL list, Federal CERCLIS list, Federal RCRA Treatment, Storage, and Disposal (TSD) facilities, Federal RCRA generator list, Federal Emergency Response Notification System (ERNS) list, State list of hazardous waste sites, State landfill/solid waste disposal site lists, State Leaking Tanks list and State Registered Tanks list. The data obtained from Environmental Data Resources (EDR), is contained in Appendix D. Information provided in letters received to date or obtained through telephone conversations is summarized below. Response letters received subsequent to this report will be forwarded upon receipt.

Far Rockaway District Manager

In response to its December 19, 2002 inquiry, PS&S contacted, by telephone, the Far Rockaway District Manager's office who indicated that they have no records of any spills or releases of hazardous substances and no record of underground storage tanks. The District Manager's office then directed PS&S ENG PC to the Long Island Power Authority (LIPA). LIPA also indicated that it had no records regarding the subject site.

Far Rockaway Health Department

To date, PS&S has not received any correspondence from the Health Department in response

to the December 19, 2002 inquiry.

Far Rockaway Fire Department

A telephone discussion with the Far Rockaway Fire Department revealed that it has no records regarding the subject site.

New York State Department of Environmental Conservation (NYSDEC)

On December 19, 2002, PS&S submitted an electronic request to the Freedom of Information (FOI) office of the NYSDEC requesting any information they may have relating to spills, disposal, storage or releases of hazardous substances on or adjacent to the subject property. On December 31, 2002, PS&S received correspondence from NYSDEC indicating that it had received our request and that it was being forwarded to the FOI Law Coordinator in the Environmental Remediation Department. PS&S subsequently received a telephone call from the NYSDEC in which it was indicated that the only files maintained by NYSDEC for the subject site were those that had been submitted to NYSDEC by KeySpan. Those were the same documents used in the preparation of this PSA.

United States Environmental Protection Agency (USEPA)

On January 7, 2003, PS&S received a response to its inquiry from the USEPA indicating that it has no RCRA information for the subject or adjacent sites.

2.5 EDR Regulatory Agency Database Search

PS&S also utilized the services of Environmental Data Resources (EDR), of Southport, Connecticut. EDR maintains computer files of federal and state regulatory agency databases

pertaining to actual and potential hazardous waste sites.

Information pertaining to potential and actual hazardous waste sites obtained from EDR is included in Appendix D. This material is accumulated by EDR from publicly available and other secondary sources of information. Sites included on any of the database lists and sufficiently described to be accurately located by EDR within the search area for the individual data file (primary sites), are also plotted by EDR on an area map, enclosed in Appendix D.

The subject site was not identified on the EDR search of primary sites although it was listed on the secondary search of unplottable sites. The site was only identified as the Hempstead Gas & Electric Light Company on the Coal Gas sites list. No further information was available regarding this site in the EDR search. The EDR database search identified forty-five (45) other primary sites within the designated search radii. These sites ranged in distance from 0.005 mile to 1.0 mile from the subject site. These sites consisted of seven sites containing registered underground storage tanks (UST), two sites listed as Resource Conservation and Recovery Information System-Small Quantity Generators (RCRIS-SG), twenty-seven sites listed as having leaking storage tank incident reports (LTANKS), two sites listed on the Major Oil Storage Facilities Database (MOSF UST), one (1) site on the Registered Waste Tire and Storage Facility List (SWTIRE), two sites listed on the Major Oil Storage Facilities Database (MOSF AST) and three sites listed on the New York Spills list (SPILLS).

There were a total of thirty-one secondary sites identified. These sites consisted of one (1) UST site; two LTANKS sites; twenty SPILLS sites; four FINDS sites; two sites listed on the Emergency Response Notification System list (ERNS); four RCRIS-SG sites; one site listed as having a Voluntary Cleanup Agreement (VCP); one site listed as a Registered Recycling Facility (SWRCY); and one Coal Gas site, the Hempstead Gas & Electric Light Company as referenced above.

2.6 Remediation Activities

During the course of this investigation, PS&S found no information regarding prior investigation or remediation activities performed at the subject site. PS&S made inquiries to the USEPA and the NYSDEC regarding any environmental remediation activities at the site.

To date, PS&S has received correspondence from the NYSDEC and USEPA indicating that it has no records regarding remedial activities conducted at the subject site. PS&S also received correspondence from the USEPA indicating that it had no RCRA information regarding the subject site or adjacent properties.

2.7 Environmental Sampling Data

PS&S identified no additional areas of environmental concern as part of this Records Review, beyond what was outlined in the Preliminary Site Assessment Workplan and other data information previously provided by KeySpan.

2.8 Federal, State, and Local Environmental Permits

During the course of the Records Review, PS&S found no information regarding any permits relating to the subject site. PS&S made inquiries to the USEPA and the NYSDEC regarding any permits at the site. To date, PS&S received correspondence from the NYSDEC indicating that it has no permits related to the subject site. PS&S also received correspondence from the USEPA indicating that it has no RCRA information for the subject site or adjacent properties.

2.9 Administrative, Civil, Criminal Enforcement Actions

During the course of this Records Review, PS&S found no information regarding any enforcement actions relating to the subject site. PS&S made inquiries to the USEPA, the NYSDEC, and local agencies regarding any spills, discharges or releases of hazardous substances at the site. To date, PS&S received correspondence from the NYSDEC indicating that it has no records of any actions regarding the subject site. PS&S also received correspondence from the USEPA indicating that it has no RCRA information for the subject site or adjacent properties.

2.10 Site Reconnaissance

A PS&S representative conducted a visual environmental reconnaissance of the subject site on October 23, 2002. The PS&S representative met with representatives of KeySpan Energy. The property currently contains three two-story masonry buildings. This center building, formerly utilized as an MGP site, has since been renovated into office and warehousing space.

The buildings consist of a two-level office and warehousing. Along the Brunswick Avenue frontage there are several bay doors and loading docks on the western and eastern ends of the building. Based on a reconnaissance of the exterior of the buildings, no additional areas of concern were identified. The western-most portion of the property is landscaped in the area where the former gas holder was situated. The remainder of the property is covered by either asphalt parking lots and concrete sidewalks.

3.0 SITE INVESTIGATION

A Site Investigation (SI) consisting of a soil, groundwater and soil vapor sampling and analysis program was conducted in accordance with the NYSDEC approved PSA Workplan, dated April 2002 prepared by Vanasse Hangen Brustlin, Inc. Soil samples were obtained for laboratory analysis from eight soil boring locations, fourteen surface soil sample locations and one test trench. At seven of the eight soil boring locations a temporary one-inch diameter monitoring well was installed to obtain groundwater samples for laboratory analysis. Four soil vapor samples were also collected for laboratory analysis.

The site plans presented in this report were prepared based on a field survey performed by PS&S. The site plan includes building locations, sampling locations, and sampling point elevations. Figure 3 presents the topographical survey plan, prepared by Robinson Aerial Surveys. Figure 4 presents the locations and elevations of the soil borings, surface soil samples, soil vapor and temporary monitoring wells. Figure 5 presents a plan which indicates a general groundwater flow direction to the northwest. Table 1 provides an analytical sample summary of the sample numbers, associated depths, matrix and laboratory analysis.

There were several variations from the approved PSA Workplan which are discussed within the context of this report. The PSA Workplan denoted soil and groundwater sample analysis for the presence of benzene, toluene, ethylbenzene and xylenes (BTEX), as previously approved by the NYSDEC. This was subsequently changed to volatile organic compounds plus a fifteen-peak library search (VOC+15). Analysis of polycyclic aromatic hydrocarbons (PAHs) was subsequently changed to base neutral organic compounds plus a fifteen-peak library search (BN+15), as previously approved by the NYSDEC. In addition, the use of polyethylene tubing during the soil vapor sampling program noted in the PSA Workplan was changed to teflon-lined polyethylene tubing.

3.1 Soil Boring and Sampling Program

The soil boring sampling program was conducted between December 2 and 5, 2002. The soil borings were advanced utilizing a GeoProbe with four-foot MacroCores. A total of eight soil borings were advanced and two soil samples were obtained from each soil boring. Soil Borings FRSB-01, FRSB-02 and FRSB-03 and FRSB-04 were advanced at the western portion of the site in the area of the former gas holder. FRSB-08 was advanced at the eastern end of the property. FRSB-09 and FRSB-10 were advanced in front of the center building which formerly housed the coal bin storage, gas generator and purifier. FRSB-11 was installed in the street between the former gas holder and the storage building.

Soil samples obtained from the upper interval of a boring are designated by the boring number and the letter "A". Soil samples obtained from the deeper depth interval are designated by the boring number and the letter "B". Soil borings FRSB-05, FRSB-06 and FRSB-07 were not performed as they were located along the LIRR property where site access was never granted by the LIRR. Matrix Spike and Matrix Spike Duplicate samples were collected from sample FRSB-09B.

The soils typically encountered on the subject site consisted of fine to medium sand with some silt and gravel. In some of the borings, a fill material consisting of brick, glass, concrete and metal was encountered. In one of the soil borings (FRSB-04) an ash and cinder layer was encountered at approximately two to six feet below grade. Groundwater was encountered at depths ranging from four to eight feet below surface grade. Copies of the soil boring logs are contained in Appendix E.

Soils collected in the MacroCore samplers were field-screened with a photoionization detector (PID) for the presence of organic vapors upon removal from the sampler. Field-screening readings are recorded on the boring logs. Elevated field PID readings, soil staining and strong odors were encountered in soil borings FRSB-01, FRSB-03 and FRSB-

04. Refer to the soil boring logs contained in Appendix E for the associated PID readings and depths. A discussion of the analytical laboratory results for the samples collected from these borings is included in Section 4.1.

3.2 Surface Soil Sampling Program

The surface soil sampling program was conducted between December 2 and 5, 2002. The surface samples were collected from the 0 to 2 inch depth interval below any impervious layer (i.e., concrete, asphalt, grass, etc.) utilizing a disposable polyethylene trowel. A total of 14 surface soil samples were collected and were identified as FRSS-01 through FRSS-09 and FRSS-11 through FRSS-14. Sample FRSS-15 is a field duplicate of FRSS-13. Matrix Spike and Matrix Spike Duplicate samples were collected from sample FRSS-01. FRSS-10 was not performed as it was located on the LIRR property, where site access was never granted by the LIRR.

Surface samples FRSS-01 through FRSS-09 were collected from the western portion of the property, where the gas holder was formerly located. FRSS-11 through FRSS-14 were collected on the east side of B12th Street and the south side of Brunswick Avenue to determine if former MGP operations had impacted surface soils in the immediate vicinity of the subject site. Soils were field-screened with a photoionization detector (PID) for the presence of organic vapors upon removal from the sampler. No elevated field PID readings, soil staining or odors were encountered in any of the surface samples. A discussion of the analytical laboratory results for the samples collected from these surface samples is included in Section 4.2.

3.3 Test Trench

A test trench was excavated on December 4, 2002 in the reported area of the former gas holder utilizing a Bobcat backhoe equipped with a trenching bucket. The soils encountered in this test trench consisted of topsoil and stone underlain by a brown fine to coarse sand with silt and fill material consisting of brick, concrete, glass and wire to a depth of two feet below grade. At the two foot to three foot interval below surface grade a layer of ashes and cinders was encountered which was underlain by an orange fine to coarse sand with silt and cobbles. At four feet below grade the foundation slab of the former gas holder was encountered. It was approximately four inches thick and was underlain by eight-inches of three to six-inch stone, underlain by orange brown fine to coarse sand with trace amounts of silt.

Four subsurface soil samples were collected from within the test trench and are identified as FRTT-01 through FRTT-04. Sample FRTT-04 is a field duplicate of FRTT-01. Sample FRTT-01 and FRTT-04 were collected at the north end of the trench below the foundation pad and subbase, FRTT-03 was collected from the western end of the trench and FRTT-02 was collected from the ash and cinder layer. The collected samples and soils contained within the trench excavation were field-screened with a photoionization detector (PID) for the presence of organic vapors. No elevated field PID readings, soil staining and/or strong odors were encountered in any of the test trench samples or within the test trench. A copy of the test trench log with the associated PID reading and depths is enclosed in Appendix E. A discussion of the analytical laboratory results for the samples collected from the test trench is presented in Section 4.3.

3.4 Soil Vapor Sampling Program

The soil vapor sampling program was conducted between December 2 and 5, 2002. The soil vapor probes were advanced by driving a stainless steel hollow point equipped with teflon-lined polyethylene tubing into the vadose zone, a depth of approximately three feet below surface grade. A total of four soil vapor points, identified as FRSV-01 through FRSV-04, were advanced and one sample was obtained from each vapor point.

Soil vapor samples were obtained by initially purging the sample tube with a vacuum pump to achieve a constant flow of vapor through the tubing. Following purging of the sample tubing, an initial PID reading was obtained. Following purging and the PID reading, a SUMMA canister equipped with a regulator calibrated for a one-hour sample duration was connected to the tubing. PID readings and actual sample times were recorded on the samples records enclosed in Appendix F. FRSV-05 was not performed as it was located on the LIRR property where site access was never granted by the LIRR. No Matrix Spike and Matrix Spike Duplicate samples were collected. Sample FRSV-06 was a field duplicate of sample FRSV-04.

3.5 Groundwater Sampling Program

Six temporary groundwater monitoring wells (FRGW-01 through FRGW-03 and FRGW-05 though FRGW-07) were installed and developed between December 2 and 5, 2002. The wells were subsequently sampled on December 12, 2002. Table 1 identifies the soil boring at which each groundwater monitoring well was installed. FRGW-04 was not performed as it was located on the LIRR property where site access was never granted by the LIRR. Matrix Spike and Matrix Spike Duplicate samples were collected from sample FRGW-03. Sample FRGW-08 is a field duplicate sample of FRGW-06.

The monitoring wells were constructed of a five foot long section of a prepack well screen and a casing riser of one-inch schedule 40 polyvinyl chloride (PVC). All of the monitoring wells were finished as flush-mount installations with an interior locking cap. Following

installation of the monitoring wells, they were developed until a turbid-free discharge was obtained. The wells were subsequently sampled a week following the installation of the last well. All of the wells were sampled utilizing the “Low-Flow” sampling procedure. Each well was purged utilizing a peristaltic pump, at a flow rate equal to or less than 0.25 gallons per minute (gpm). When all of the water quality indicator parameters stabilized, the analytical sample was collected from the discharge. The sample for volatile organic analysis was collected utilizing a disposable bailer. Refer to Section 3.5 for presentation of the analytical laboratory results. Copies of the well purge and sampling forms have been included in Appendix G.

3.6 Quality Assurance/Quality Control (QA/QC) Program

The following QA/QC program was implemented at the subject site. The sampling was performed in accordance with NYSDEC protocols and the approved Quality Assurance Project Plan (QAPP).

Prior to commencement of sampling operations and between each analytical sampling interval, the GeoProbe drill rods were decontaminated using accepted decontamination protocols as outlined in the NYSDEC approved QAPP. The MacroCore samplers were equipped with new disposable acetate liners which were changed following the acquisition of each sample. The sampling trowels utilized were disposable polyethylene and were changed following the acquisition of each sample. The soil vapor probes and tubing utilized were new and dedicated to each soil vapor sampling location. The groundwater monitoring wells were sampled utilizing dedicated polyethylene tubing and disposable bailers. During the sampling operations, the PS&S representative wore disposable gloves which were changed following acquisition of each analytical sample to prevent cross-contamination between sampling locations. Any field sampling equipment that was not disposable and/or dedicated was decontaminated in the following manner.

1. Thorough scrub and washing with non-phosphate detergent and tap water wash;

2. Tap water rinse;
3. Distilled/deionized water rinse;
4. 10% nitric acid rinse;
5. Distilled/deionized water rinse;
6. Methanol rinse;
7. Air dry; and
8. Distilled/deionized water rinse.

A field blank was obtained for each day of sampling from a decontaminated sampler. The field blank was prepared by pouring distilled/deionized water, provided by the analytical laboratory, over the inner surface of the sampler and directly into laboratory-supplied sample containers. Field blanks are prepared as a check of the procedures used to decontaminate the sampling apparatus. The field blank was handled and transported in the same manner as the samples obtained from the borings. A trip blank was included in each cooler containing collected samples for laboratory analysis and was analyzed for VO+15.

All samples for laboratory analysis were collected in laboratory-provided glass containers fitted with Teflon seals, placed in an iced cooler, and relinquished to Hampton-Clarke Veritech Laboratories, Inc. under standard chain-of-custody documentation. Hampton-Clarke Veritech Laboratories, Inc. is a New York ELAP certified laboratory. The soil vapor samples were relinquished to and analyzed by CON-TEST Analytical Laboratory, which is a New York ELAP certified laboratory.

Review of the laboratory QA/QC data indicated the laboratory daily blank analyzed with the surface soil and the soil boring samples was contaminated with methylene chloride and bi(2-ethylhexyl)phthalate. These two compounds were also reported in a majority of the soil samples. No PCB, pesticide, or metals contamination of the daily blank was reported.

The laboratory daily blank analyzed with the groundwater samples was reported to be contaminated with bis(2-ethylhexyl)phthalate and di-n-butylphthalate, which were also reported in a majority of the groundwater samples. No volatile organic, PCB, pesticide, or metals contamination of the daily blank associated with the groundwater sample analyses

was reported.

The laboratory analysis of the field blanks associated with the soil samples indicated the presence of methylene chloride, bis(2-ethylhexyl)phthalate and di-n-butylphthalate. Several tentatively identified compounds (TICs) with retention times similar to those TICs detected in the soil sample analysis for the semi-volatile organic fraction were also found present in the field blanks.

The laboratory analysis of the field blanks associated with the groundwater samples indicated the presence of bis(2-ethylhexyl)phthalate and several TICs with retention times similar to those TICs reported in the groundwater analytical samples. In the volatile organic fraction of the analyses, methylene chloride, toluene and TICs with retention times similar to those TICs detected in the analytical samples were reported in the field blanks.

According to the analytical laboratory narrative, elevated method detection limits (MDLs) were reported in the analysis of groundwater samples FRGW-02 and FRGW-03. These elevated MDLs were a result of the dilution factor utilized in order to properly analyze the collected samples in accordance with the laboratory QA/QC procedures. Soil samples FRSB-04A, FRSB-01A, FRSB-01B, FRSB-03A, FRSB-09A, and FRSB-09B and groundwater samples FRGW-02 and FRGW-03 and the associated matrix spike (MS) and matrix spike duplicate (MSD) exhibited deviations from the QC criteria. These deviations consisted of significantly elevated dilution factors, and MS and MSD recoveries outside of QC criteria. The analytical results for the collected soil and groundwater field duplicates confirmed sample homogeneity, sampling procedures and analytical methods.

4.0 LABORATORY ANALYSIS

The collected soil samples were analyzed for the presence of volatile organics compounds plus a fifteen peak library search (VO+15), base neutral compounds plus a fifteen peak library search (BN+15), metals (RCRA Metals) and total cyanide, in accordance with the PSA Workplan. Ten percent of the collected samples from each sample group were analyzed for the Target Compound

List plus a thirty peak library search (TCL+30) and Target Analyte List metals (TAL Metals). The field duplicate samples were analyzed for the same parameters as its associated sample. The soil vapor samples were analyzed for volatile organics utilizing USEPA Method TO-15 and naphthalene by the Massachusetts Department of Environmental Protection (DEP) Air Phase Petroleum Hydrocarbons Method. The collected groundwater samples were analyzed for the presence of VO+15, BN+15, RCRA Metals and total cyanide, with one sample being analyzed for TCL+30 and TAL Metals. The results of the laboratory analyses are discussed in following sections by analytical parameter.

A summary of analytical test results reported by the laboratory for the collected analytical samples and associated QA/QC samples obtained during this environmental sampling program are summarized in table format as listed below. The analytical results for each sampling location are summarized in data tables as described below:

Table 2	Soil Boring Sample Analytical Results Summary
Table 3	Surface Soil Sample Analytical Results Summary
Table 4	Test Trench Soil Sample Analytical Results Summary
Table 5	Soil Vapor Sample Analytical Results Summary
Table 6	QA/QC Control Blanks Analytical Results Summary

A copy of the laboratory summary sheets for the soil and groundwater sample analyses are included in Appendices H and I, respectively. Appendix J contains the soil vapor laboratory analytical data package. Appendix K contains a photographic log of some of the collected soil samples.

4.1 Soil Boring Soil Samples

A total of sixteen soil samples were collected from the eight soil borings. Samples FRSB-01B, FRSB-09A and FRSB-09B were analyzed for TCL+30 and TAL Metals. The remainder of the soil boring samples were analyzed for VO+15, BN+15, RCRA Metals and total cyanide.

4.1.1 Volatile Organic Compounds

Methylene chloride, a common laboratory chemical/contaminant, was reported by the laboratory to be present in 12 of the 16 soil samples at concentrations ranging from 0.0048 parts per million (ppm) to 0.012 ppm. Methylene Chloride was also detected in the associated laboratory blank. Acetone was reported in sample FRSB-04B at 0.03 ppm and ethylbenzene was reported in samples FRSB-01A (0.25 ppm); FRSB-03A (33 ppm); FRSB-04A (32 ppm) and FRSB-04B (0.0026 ppm). Toluene was reported in 12 of the 16 soil samples at concentrations ranging from 0.0015 ppm to 2.9 ppm. The analytical laboratory reported the presence of xylenes in four samples; FRSB-01A (0.37 ppm); FRSB-03A (60 ppm); FRSB-04A (23 ppm) and FRSB-04B (0.0039 ppm).

4.1.2 Base Neutral Compounds

Several base neutral compounds were reported by the laboratory to be present in some or all of the 16 soil boring samples. Generally, the majority of the detected compounds were the polycyclic aromatic hydrocarbons (PAHs).

4.1.3 Pesticides/Polychlorinated Biphenyls

Three samples (FRSB-01B, FRSB-09A and FRSB-09B) were analyzed for pesticides and polychlorinated biphenyls (PCBs) as part of the TCL+30 analysis. Only sample FRSB-01B was reported to contain concentrations of pesticides above the detection limit. These contaminants were endrin aldehyde at 0.016 ppm; endrin ketone at 0.015 ppm and P,P=DDT at 0.024 ppm. PCBs were reported as Not detected at the method detection limit in all three samples.

4.1.4 Inorganic Constituents

Certain metals (arsenic, barium, chromium and lead) were reported to be present in all or some of the samples analyzed for RCRA Metals. Arsenic was reported in five of the 16 samples at concentrations ranging from 2.6 ppm to 6.3 ppm. Barium was reported in six samples, at concentrations ranging from 12 ppm to 59 ppm. Chromium was reported in seven samples, at concentrations ranging from 6 ppm to 18 ppm and lead was reported in five samples at concentrations ranging from 10 ppm to 214 ppm.

In those samples analyzed for TAL Metals (FRSB-01B, FRSB-09A and FRSB-09B) the analytical laboratory reported the presence of aluminum, arsenic, barium, iron, lead, manganese, vanadium and zinc in all or some of the samples.

Cyanide was reported as not detectable above the detection limits in all 16 samples.

4.2 Surface Soil Samples

A total of 14 soil samples were collected from the surface sample locations. Sample FRSS-04 was analyzed for TCL+30 and TAL Metals. The remainder of the samples were analyzed for VO+15, BN+15, RCRA Metals and total cyanide.

4.2.1 Volatile Organic Compounds

Acetone, methylene chloride, (a common laboratory chemical/contaminant), and toluene were the only volatile organic compounds (VOCs) reported in some or all of the surface soil samples. The reported concentrations of methylene chloride ranged from 0.003 to 0.0088 ppm. Methylene Chloride was also detected in the associated laboratory blank. The reported concentrations of toluene ranged from 0.0015 ppm to 0.013 ppm. Acetone was detected only in sample FRSS-01, at a concentration of 0.037 ppm.

4.2.2 Base Neutral Compounds

Several base neutral compounds were reported by the laboratory to be present in some or all of the 14 surface soil samples. Generally, the majority of the detected compounds were the PAHs.

4.2.3 Pesticides/Polychlorinated Biphenyls

Only one sample, FRSS-04, was analyzed for pesticides/polychlorinated biphenyls (PCBs). The concentrations of PCBs in this sample was 0.08 ppm; pesticides were reported as Not detected at the laboratory method detection limit.

4.2.4 Inorganic Constituents

All of the samples were analyzed for RCRA Metals with the exception of sample FRSS-04, which was analyzed for TAL metals. In those samples analyzed for RCRA Metals, the analytical laboratory reported all or some of the metals in each sample with the exception of selenium and silver which were reported as not-detected at the laboratory detection limit. The analytical laboratory also reported the presence of the following TAL Metals: aluminum, arsenic, barium, cadmium, calcium, chromium, cobalt, copper, iron, lead, magnesium, manganese, mercury, nickel, vanadium and zinc in sample FRSS-04. Cyanide was reported in six of the samples at concentrations ranging from 0.27 ppm to 0.93 ppm.

4.3 Test Trench Soil Samples

Four soil samples were collected from within the test trench and were identified as FRTT-01 through FRTT-04. Samples FRTT-01, FRTT-02 and FRTT-03 were analyzed for VO+15, BN+15, RCRA Metals and cyanide; FRTT-03 was analyzed for TCL+30 and TAL Metals. Sample FRTT-04 was a field duplicate of sample FRTT-01.

4.3.1 Volatile Organic Compounds

Methylene chloride, a common laboratory chemical/contaminant, was the only VOC reported in all four soil samples. Methylene Chloride was also detected in the associated laboratory blank. The reported concentrations ranged from 0.006 ppm to 0.00074 ppm. Benzene was detected in sample FRTT-04 at a concentration of 0.0019 ppm and toluene was reported in sample FRTT-03 at 0.003 ppm and FRTT-04 at 0.0051 ppm.

4.3.2 Base Neutral Compounds

Several base neutral compounds were reported in some or all of the 14 surface soil samples. Generally, the majority of the detected compounds were the PAHs compounds.

4.3.3 Pesticides/Polychlorinated Biphenyls

Only one sample, FRTT-03, was analyzed for pesticides/polychlorinated biphenyls (PCBs). The laboratory reported PCBs as not-detected at the method detection limit.

Two pesticides were reported to be present, endrin ketone at a concentration of 0.029 ppm and methoxychlor at 0.12 ppm.

4.3.4 Inorganic Constituents

All of the samples were analyzed for RCRA Metals, with the exception of sample FRTT-03 which was analyzed for TAL metals. In those samples which were analyzed for RCRA Metals the analytical laboratory reported all or some of the metals in each sample. The analytical laboratory reported the presence of 18 of the 22 TAL Metals in sample FRTT-03. Cyanide was reported to be present only in sample FRTT-03 at a concentration of 0.61 ppm.

4.4 Soil Vapor Samples

Table 5 presents the analytical results for the five soil vapor canister samples that were collected during the field sampling program. The collected samples were identified as FRSV-01 through FRSV-04, plus FRSV-06, a duplicate of sample FRSV-04. The samples were analyzed for VOC content and naphthalene using USEPA Method TO-15 using Massachusetts DEP Air Phase Petroleum Hydrocarbons Method. The detection limit for each individual compound was 0.5 parts per billion (ppb). The results of the analysis indicated the presence of various VO compounds and naphthalene at low level ppb concentrations. A total of 17 VO compounds and naphthalene were detected in one or more

of the five collected samples. The highest concentration of any VO compound detected was 59 ppb isopropyl alcohol at sample location FRSV-01. The highest total VOC concentration was 98.1 ppb, also at sample location FRSV-01. Naphthalene was detected at two sample locations, FRSV-03 at 1.4 ppb and FRSV-06 at 3.6 ppb. FRSV-06 is the field duplicate sample of FRSV-04.

4.5 Groundwater Samples

Seven groundwater samples were collected from the subject site. Sample FRGW-03 was the only sample analyzed for TCL+30 and TAL Metals. The remainder of the samples were analyzed for VO+15, BN+15, RCRA Metals and total cyanide. Sample FRGW-08 is a field duplicate of sample FRGW-06. Table 7 presents the analytical results for each groundwater sampling location and the associated QA/QC blanks.

4.5.1 Volatile Organic Compounds

Benzene was reported in sample FRGW-03 at a concentration of 540 ppb, while ethylbenzene was reported in samples FRGW-02 at 41 ppb and FRGW-03 at 1900 ppb. Toluene was reported in samples FRGW-03 at 24,000 ppb and FRGW-05 at 27 ppb. Xylenes were reported in samples FRGW-02 at 29 ppb; FRGW-03 at 4,200 ppb; FRGW-05 at 2.5 ppb and FRGW-06 at 1.4 ppb but below its laboratory method detection limit. Chloroform was reported in FRGW-07 at a concentration of 5 ppb, which was also below the laboratory method detection limit.

4.5.2 Base Neutral Organic Compounds

Five base neutral organic compounds were reported in all or some of the groundwater samples, while 2-methylnaphthalene was reported in samples FRGW-02 at 87 ppb and FRGW-03 at 70 ppb. Acenaphthylene was reported in sample FRGW-03 at 30 ppb. Bis(2-ethylhexyl)phthalate was reported in samples FRGW-01 at 1.9 ppb; FRGW-05 at 1.4 ppb; FRGW-06 at 1.2 ppb; FRGW-07 at 2.3 ppb and FRGW-08 at 1.5 ppb. All of these results were below the respective laboratory method detection limits. Bis(2-ethylhexyl)phthalate was also present in the associated laboratory blank. Di-n-butylphthalate was reported at 1.4 ppb in both FRGW-01 and FRGW-07, below their associated laboratory method detection limit and also present in the associated laboratory blank. Naphthalene was reported to be present in FRGW-02 at 1600 ppb; FRGW-03 at 3200 ppb; FRGW-05 at 7.5 ppb; FRGW-06 at 4 ppb and FRGW-08 at 6.1 ppb. The concentrations of naphthalene in samples FRGW-05, FRGW-06 and FRGW-08 were reported at concentrations below their associated laboratory method detection limits.

4.5.3 Pesticides/Polychlorinated Biphenyls

Pesticides and polychlorinated biphenyls (PCBs) analyses were conducted on sample FRGW-03. Both PCBs and pesticides were reported as not-detected at the laboratory method detection limit.

4.5.4 Inorganic Constituents

Sample FRGW-03 was analyzed for TAL Metals and the analytical laboratory reported the presence of aluminum, calcium, iron, lead, magnesium, manganese, potassium and sodium in this sample. The only RCRA Metals reported were barium at concentrations of 300 ppb in sample FRGW-01 and 160 ppb in sample FRGW-02

and lead at 6.3 ppb in sample FRGW-02. Cyanide was reported as not detectable at the laboratory detection limits in all seven samples.

5.0 SUMMARY

PS&S ENG, PC at the request of KeySpan and in accordance with the NYSDEC Order on Consent #D1-0001-99-05, conducted a Preliminary Site Assessment (PSA) of a parcel of land located at 1200-1224 Brunswick Avenue, Far Rockaway, Queens County, New York. The subject site is also identified as Section 59/Block 15529/Lots 102, 105, 110 and 115 according to the Far Rockaway Tax Department. The site is not currently owned or operated by Keyspan.

Review of available historical information regarding the subject site indicated that a Manufactured Gas Plant (MGP) site operated on-site between the years of 1900 and 1909. The facilities associated with this MGP site were one building (1216 Brunswick Avenue) which housed the coal bins, purifier and gas generator and a 75,000 cubic foot (cf) gas holder which was located on the landscaped area of 1224 Brunswick Avenue. During the site reconnaissance none of these structures were found to be present, with the exception of the former gas holder foundation which was encountered in the test trench which was completed as part of the soil investigation activities.

A soil and groundwater sampling and analysis program was conducted at the site to investigate the potential for the presence of contaminants in the surface and subsurface soils and groundwater. This sampling program was initiated during the week of December 2, 2002 and consisted of the collection of fourteen surface soil samples; sixteen soil samples were collected from eight soil borings; three samples were collected from a test trench which was excavated to determine the presence of the former gas holder foundation; and four soil vapor samples were collected. Additionally, six of the soil borings were converted into groundwater monitoring wells to aid in the collection of groundwater samples for laboratory analysis.

Groundwater was encountered in the soil borings at depths ranging from four to eight feet below surface grade and groundwater flow was determined to be in a general northwesterly direction.

Evaluation of the analytical data obtained from samples collected from the subsurface in the soil borings, test trench excavations and surface sample locations indicated the presence of SVO compounds, (particularly polycyclic aromatic hydrocarbons (PAHs)), RCRA and TAL metals at concentrations exceeding NYSDEC recommended soil cleanup objective guidelines (Table 8). The largest distribution of compounds were present, in samples obtained from the area of the former gas holder. VO compounds were also reported to be present at concentrations exceeding the NYSDEC recommended soil cleanup objective guidelines. These samples were obtained from the area of the former gas holder.

Evaluation of the analytical data from the groundwater samples indicated the presence of SVO compounds, particularly polycyclic aromatic hydrocarbons (PAHs), RCRA and TAL metals and BTEX compounds to be present at concentrations exceeding NYSDEC groundwater standards. These samples were collected in the area of the former gas holder.

The results of the analysis of the soil vapor samples indicated the presence of various VO compounds and naphthalene at low level concentrations. The highest concentration of any VO compound detected was 59 parts per billion (ppb) isopropyl alcohol at sample location FRSV-01. The highest total VOC concentration was 98.1 ppb, also at sample location FRSV-01. Naphthalene was detected at two sample locations, FRSV-03 at 1.4 ppb and FRSV-06 at 3.6 ppb. FRSV-06 is the field duplicate sample of FRSV-04. These samples were collected in the area of the former gas holder.

Environmental Data Resources, Inc.

Aerial Photography Print Service

Environmental Data Resources, Inc.'s (EDR) Aerial Photography Print Service is a screening tool designed to assist professionals in evaluating potential liability on a target property resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of *reasonably ascertainable standard historical sources*. *Reasonably ascertainable means information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.*

To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following *standard historical sources* may be used: aerial photographs, fire insurance maps, property tax files, land title records (although these cannot be the sole historical source consulted), topographic maps, city directories, building department records, or zoning/land use records. ASTM E 1527-00 requires *"All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful."* (ASTM E 1527-00, Section 7.3.4, page 12).

Aerial Photographs

Aerial photographs are a valuable historical resource for documenting past land use and can be particularly helpful when other historical sources (such as city directories or fire insurance maps) are not reasonably ascertainable. The EDR Aerial Photograph Print Service includes a search of aerial photograph collections flown by public and private agencies for the state of New York. EDR's professional field-based researchers provide digitally reproduced historical aerial photographs at approximately ten year intervals.

Glossary of Terms

A.A.A.

Aerial photograph flyer: Agriculture Adjustment Administration (Federal).

A.S.C.S

Aerial photograph flyer: Agricultural Stabilization and Conservation Service (Federal)

Address in Research Source

Indicates that a property is listed at a different address than the one provided by the user. Generally occurs when a property is located on a corner or, when the physical address of a property is different than its mailing address.

Address Not Listed in Research Source

Occurs when a specific site address is not listed in city directories and/or fire insurance maps.

Adjoining

Any property that is contiguous, or a property that would be contiguous if not for a public thoroughfare, to the target property. *To differentiate from each adjoining property, stand at the target property's "front door" facing the street.*

Adjoining Back

Property directly to the rear of the target property. (Applies only to fire insurance map data.)

Adjoining Front

Property directly in front of the target property. (Applies only to fire insurance map data.)

Adjoining Left

Property directly to the left of the target property. (Applies only to fire insurance map data.)

Adjoining Right

Property directly to the right of the target property. (Applies only to fire insurance map data.)

Adjoining Surrounding Area

Property that may adjoin the target property but due to lack of specific map information cannot be located precisely. This situation typically occurs when city directory information, but not fire insurance map information, is available.

C.A.S

Aerial photograph flyer: Chicago Aerial Survey (private).

C.S.S.

Aerial photograph flyer: Commodity Stabilization Service (Federal).

Cartwright

Aerial photograph flyer: Cartwright (private)

CD

City Directory

Commercial

Any property including, but not limited to, property used for industrial, retail, office, agricultural, other commercial, medical, or educational purposes; property used for residential purposes that has more than four residential dwelling units.

Commercial or Industrial

Property that has either a commercial *or* an industrial use. Examples include retail stores, manufacturing facilities, factories, and apartment buildings.

D.N.R.

Aerial photograph flyer: Department of National Resources (state).

D.O.T.

Aerial photograph flyer: Department of Transportation (state).

Fairchild

Aerial photograph flyer: Fairchild (private).

FIM

Fire Insurance Map

Flood Insurance Rate Maps

Flood Insurance Rate Maps are produced by the Federal Emergency Management Agency (FEMA). These maps indicate special flood hazard areas, base flood elevations and flood insurance risk zones.

Flood Prone Area Maps

Flood Prone Area maps are produced by the United States Geological Survey (USGS). Areas identified as flood prone have been determined by available information gathered from past floods.

F.S.

Aerial photograph flyer: Forest Service (Federal).

Geonex

Aerial photograph flyer: Geonex (private).

M.C.

Aerial photograph flyer: Metropolitan Council of the Twin Cities Area (state).

Mark Hurd

Aerial photograph flyer: Mark Hurd (private)

N.A.P.P.

Aerial photograph flyer: National Aerial Photography Program (Federal).

National Wetland Inventory Maps

National Wetland Inventory Maps are produced by the U.S. Fish and Wildlife Service, a division of the U.S. Department of the Interior. Wetland and deepwater habitat information is identified on a 7.5 minute U.S.G.S. topographic map. The classification system used categorizes these habitats into five systems: marine, estuarine, riverine, lacustrine and palustrine.

No Return

Indicates that site owner was unavailable at time of surveyor's contact. (*Applies only to city directories.*)

No Structure Identified on Parcel

Used when site boundaries and/or site address is indicated on a fire insurance map; no structure details exist.

Other

Occurs when the site's classification is different than EDR's standard categories. Examples may include undeveloped land and buildings with no specified function.

P.M.A.

Aerial photograph flyer: Production and Marketing Administration (Federal).

Pacific Aerial

Aerial photograph flyer: Pacific Aerial (private)

Portion

Refers to the fire insurance map information identified on the four quadrants of a target or adjoining property. The portions are referred to as *Frontright*, *Frontleft*, *Backright*, and *Backleft* and are determined as if one were standing at the front door, facing the street.

Property Not Defined

Used when property is not clearly demarcated on a fire insurance map.

Residential

Any property having fewer than five dwelling units used exclusively for residential purposes.

Residential with Commercial Uses (a.k.a. Multiple Purpose Address)

A business (firm) and residence at the same address. Examples include a doctor, attorney, etc. working out of his/her home.

Sidwell

Aerial photograph flyer: Sidwell (private).

Site Not Mapped

Occurs when an adjoining property has not been mapped by fire insurance map surveyors. (*Applies only to fire insurance map data*)

Teledyne

Aerial photograph flyer: Teledyne (private)

Topographic Maps

Topographic maps are produced by the United States Geological Survey (USGS). These maps are color coded line and symbol representations of natural and selected artificial features plotted to scale.

Turnbow

Aerial photograph flyer: Michael Turnbow (private)

U.S.D.A.

Aerial photograph flyer: United States Department of Agriculture (Federal).

U.S.D.I.

Aerial photograph flyer: United States Department of the Interior (Federal).

U.S.G.S.

Aerial photograph flyer: United States Geological Survey (Federal).

Vacant

May refer to an unoccupied structure or land. *Used only when fire insurance map or city directory specifies 'vacant.'*

W.P.A.

Aerial photograph flyer: Works Progress Administration (Federal).

WALLACE

Aerial photograph flyer: Wallace (private).

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

**REGION 2
290 BROADWAY
NEW YORK, NY 10007-1866**

January 17, 2003

Re: Freedom of Information Act Request No.(s): (2)RIN-0546-03

Subject: 1200, 1216 AND 1224 BRUNSWICK AVE. FAR ROCKAWAY, NY

Dear FOIA Requester:

The above-mentioned site is not listed on the CERCLIS or NFRAP lists at the present time.

As of February 15, 1995, CERCLIS no longer includes sites which EPA has assessed and designated "No Further Remedial Action Planned" (NFRAP). A NFRAP designation means, to the best of EPA's knowledge, Superfund has completed its assessment at a site and determined no further steps would be taken to list this site on the National Priorities List (NPL) unless information is received at a later time indicating this decision was not appropriate. A NFRAP decision does not necessarily mean that there is no hazard associated with a given site; it means only that based upon available information, the location is not judged to be a potential NPL site.

Also, the absence of a facility from the CERCLIS list should not be construed as a determination by the EPA that the facility has not been affected by the presence of any hazardous waste. The absence of a facility from this list means that EPA has not received information indicating that there has been a release or threat of hazardous substances at or from the facility. Therefore, EPA has not performed an assessment at this location to date. As with any parcel of real property, EPA may be called upon to assess the property for a release of hazardous substances should conditions warrant.

In the future, you may conduct site searches by accessing the internet at the following World Wide Web Sites:

CERCLIS: http://www.epa.gov/enviro/html/cerclis/cerclis_query.html
ERNS: <http://www.nrc.uscg.mil>
NTIS: <http://www.ntis.gov>
EPA HQ <http://www.epa.gov>

You may also obtain hard copy or diskettes of CERCLIS and other Region 2 lists from the Superfund Automated Phone System or from the National Technical Information Service (NTIS). Enclosed are instructions for accessing each of these systems.

If your request includes non-Superfund inquiries, copies of your letter will be sent to other EPA divisions for separate response.

Sincerely,

A handwritten signature in black ink, reading "Leslie H. Peterson". The signature is written in a cursive style with a large, stylized "L" and "P".

Leslie H. Peterson, Chief
Resource Management/Cost Recovery Section
Emergency and Remedial Response Division

Re: Freedom of Information Request No. 02-RIN-00546-03
Dated: December 19, 2002

Dear Mr. Lifrieri:

Your request for information has been referred to this branch for response. We have searched the Resource Conservation and Recovery Act (RCRA) files and/or computer database as appropriate to respond to your request. In addition, you may also receive more information from other program areas within this Regional Office.

We were unable to find RCRA information concerning the sites at 1200, 1216 and 1224 Brunswick Avenue in Far Rockaway, New York.

If you consider this response to be a denial, you may address your written appeal to HQ FOIA OPERATIONS STAFF, U.S. Environmental Protection Agency, 1200 Pennsylvania Avenue, N.W., MC 2822T, Washington, D.C. 20460.

Also, RCRA information is now available on the World Wide Web as described on the enclosed sheet.

Please include the above referenced request number in any subsequent communication relating to this response.

Sincerely yours,

Adolph Everett, Acting Chief
RCRA Programs Branch

Environmental Protection Agency Internet

Internet - Region 2

EPA Region 2 provides an increasing amount of Environmental media information, and other Regional Activities via Internet at <http://www.epa.gov>. Recently, Region 2 has provided a Freedom of Information Act (FOIA) specific page <http://www.epa.gov/region2/foia.htm> which covers many media programs, currently focusing on RCRA data. Through this FOIA page, you can learn about each media Program, associated databases, and special points of interest. Of particular interest is the ability to "directly download" all of the most commonly requested Region 2 ASCII and Flat File RCRA FOIA reports - all compressed for quicker downloading.

Also found on the FOIA site are direct links to the **Envirofacts** and **RTK Net** public access databases. Both house Environmental media data from EPA National Databases, and are specifically designed for public use. Both have on-line query capabilities for facility specific information.

More specific FOIA requests will be honored by directly writing to Region 2, and more specific questions regarding the RCRA Program should be directed to the RCRA Hotline at 1-800-424-9346.

Internet - HQ

EPA HQ provides BRS data cycle instructions, and the data for all completed BRS data cycles at <http://www.epa.gov/epaoswer/hazwaste/data>.

Mr. Joseph Lifrieri
Paulus, Sokolowski & Sartor Engineering, PC
67A Mountain Blvd. Ext.
PO Box 4039
Warren, NJ 07059

RE:

Thank you for your FOIA request, dated December 19, 2002, and received in this office on January 2, 2003, for records related to 1200, 1216 AND 1224 BRUNSWICK AVE. FAR ROCKAWAY, NEW YORK. The Agency has twenty (20) working days to respond to your request, except when you have agreed to an alternate due date or unusual circumstances exist that would require an extension of time under 5 U.S.C. 552(a)(6)(B). Please be advised that in accordance with the EPA's revised FOIA regulations (40 CFR 2.100, et. seq.), effective November 5, 2002, the Agency's fees for processing requests have changed. The new fee schedule is as follows:

- Clerical staff time billed at \$4.00 per 15 minutes of search and/or review
- Professional staff time billed at \$7.00 per 15 minutes of search and/or review
- Managers' time billed at \$10.25 per 15 minutes of search and/or review
- No fee will be charged for services at or below \$14.00
- Assurance of payment of fees above \$25.00 will be obtained from the requester before commencing any work
- Advance payment of fees above \$250 may be required by the Agency before commencing any work

We hope to respond to you soon. In the interim, please contact us if you have any questions about your request. Please cite to your FOIA request number in all communications.

Sincerely,

Freedom of Information Officer - Public Affairs

Building Information Search	Property Profile Overview	Complaints By Address
Overview for Complaint	ECB Query By Location	ECB Query By Number

For additional information please review the [Frequently Asked Questions](#), call our Call Center at Department's Call Center at 212-227-7000, Monday through Friday between the hours of 8 a.m. and 5 p.m., or visit one of our Borough Offices.

For a quick review of codes review the [Index Interpretation](#) document (10 kb in **Adobe® Acrobat® 5.0 -PDF** format).

Building Information Search

Block - Tax block assigned by Department of Finance

Borough - 1= Manhattan, 2 = Bronx, 3 = Brooklyn, 4 = Queens, 5 = Staten Island

Building Identification Number - Unique 7-digit Building Identification Number, assigned by City Planning, to a specific building

Complaint Number - 7-digit number assigned to complaint by DOB

House Number - House Number of Residence or Commercial Property

Lot - Tax lot assigned by Department of Finance

Street - Street Name where Property is located

[Back to top](#)

Actions - List of all Pre-BIS construction related activity, violations.

BIN# - Unique 7-digit Building Identification Number, assigned by City Planning, to a specific building

Census Tract -

Community Board - 3-digit identifier: Borough code = first position, last 2 = community board

Complaints - Total number of complaints on a property

DOB Special Place Name - Name commonly used to refer to property. I.e.. Empire State Building

Finance Occupancy Code - Occupancy Classification Use from Department of Finance

Jobs/Filings - Number of BIS Applications filed on property. I.e., NBs, Alterations, Demolition's, Subdivisions

Landmark Status - L code indicates that the building has been assigned landmark status

Property Record(s) - Displays how many records are attached to the specific property.

Tax Block - Tax block assigned by Department of Finance

Tax Lot - Tax lot assigned by Department of Finance

Violations-DOB - Total number of DOB violations on a property

Violations-ECB - Total number of ECB violations on a property

For a quick review of codes review the [Index Interpretation](#) document (10 kb in **Adobe® Acrobat® 5.0 -PDF** format).

[Back to top](#)

Complaints By Address

Address - Borough, House Number, Street Name of property

Category - 2-digit code for type of Complaint

Complaint Number - 7-digit number assigned to complaint by DOB

Date Entered - Date Complaint was entered into BIS

Disposition - Result of Inspection concluding in a disposition of the complaint

Inspection Date - Date complaint inspection was performed

Status - Status of complaint - Pending/Resolved

Total Complaints at BIN No - Total number of complaints on a property

[Back to top](#)

Overview for Complaint

Assigned To - 2-digit code for type of Complaint

Block - Maximum 5 position field indicating tax block of property; acquired from DOF

Borough - Borough where complaint was filed

Category Code - 2-digit code for type of Complaint

Community Board - 3-digit identifier: Borough code = first position, last 2 = community board

Complaint at - Location of complaint - Borough, House Number and Street Name

Disposition - Complaint results

Last Inspection - Date of Last Inspection

Lot - Tax block assigned by Department of Finance

Owner - Name of property owner, complaint was filed against.

Priority - Code assigned depending on severity of complaint

Received - Date complaint was received

ZIP - Zip Code of location of property

[Back to top](#)

DOB Violations

Use these codes within the violation number to help determine the type of DOB violation it is.

B - Boiler

BDM -Boiler

BMD - Boiler

C - Construction

E - Elevator

EIT - Elevator Safety Test

ES - Electric Sign

LL5 - Local Law 5 of 1973 (Fire Safety in Office Buildings)

LL10/80 - Local Law 10 of 1980 (Facades)

LL 10/81 - Local Law 10 of 1981 (Elevator Safety Test)

LL 16/84 - Local Law 16 of 1984 (Fire Safety)

LL58 - Local Law 58-Filing to legalize work

LL62/91 - Boiler

NRF - No Report Filed

P - Plumbing

S - Sign

V - DOB Violation

VECB - ECB Violation

VP - Violation Pending

VPW or **VW** - Violation Work Without a Permit

ZW - Zoning Violation

For a quick review of codes review the [**Index Interpretation**](#) document (10 kb in **Adobe® Acrobat® 5.0 -PDF** format).

ECB Query By Location

A - Active (A) - in violation or (D) - not currently in violation.[violation was dismissed or condition was corrected.]

BIN# - Unique 7-digit Building Identification Number, assigned by City Planning, to a specific building

Block - Tax block assigned by Department of Finance

CB - 3-digit identifier: Borough code = first position, last 2 = community board

DOB VIOL NUMB - Cross reference DOB violation number. Note first six digits are date violation was written

ECB NUM - Unique number of ECB violation

INF CD - Infraction Code identifying violation type

Lot - Tax lot assigned by Department of Finance

PROV LAW - Provisional Law/ Administrative code number cited in the violation

RESPONDENT NAME - Person/Company that was issued violation

STATUS - Various status codes: I.e. Pending/ Overdue/ Violation Dismissed

VIOL TYPE - Type of violation issued. I.e.. Elevator

[Back to top](#)

ECB Query By Number

AJR - Date of ECB action to adjourn hearing to new date

Amount Imposed - ECB fine imposed at the hearing against the violation

Amount Paid - Amount paid by respondent against the imposed amount

ASG - Date assigned to Administrative Law Judge (ECB)

BIN # - Unique 7-digit Building Identification Number, assigned by City Planning, to a specific building

Block - Tax block assigned by Department of Finance

CB - 3-digit identifier: Borough code = first position, last 2 = community board

COM - Date of compliance

Compl By Date - Date compliance is required

Compl Met Date - Compliance Met Date

Compl Met Flag - Compliance Met - Yes/No

Compl Status - Status of compliance. [Compliance required correction of the violating condition and usually certification of correction]

CUR - Date violation was cured

DEF - Date defaulted at ECB hearing

Delivered Date - Date violation was served

Device Number - Boiler or Elevator device number that the violation pertains to

Device Type - Type of device violation issued to. I.e.. Elevator

DOB Viol Number - Cross reference DOB violation number. Note first six digits are date violation

was written

ECB Violation Number - Unique number of ECB violation

First Infraction - First section violated

GEO Flag - The geographical location of the building. The number one (1) indicates that the property is recognized by the Department of Buildings.

Hearing Status - Status of ECB hearing

Hearing Time - Scheduled time for hearing ECB violation

HRG - Date of hearing

Infraction Codes - Infraction codes identifying violation types. Also includes description of violation condition.

Issuing Insp ID - Badge number of inspector who issued the violation

Location - Location where the hearing will take place. (Borough specific)

Location Info - Location where violation was issued

Lot - Tax lot assigned by Department of Finance

Reinspection Compliance - Date re-inspected by DOB, property found in compliance, but certificate of correction may still be required

Respondent Info - Respondent name and address responsible for resolving the violation

Sched Hrg Date - Scheduled hearing date for ECB violation

STIP ACC - Date stipulation accepted

Tax Lien Serv - Yes/ No - Identifies whether a lien was, or is being, placed on this premises as a result of the violation

Viol Issue Date - Date violation was written

Viol Type - Type of ECB violation written. I.e. -Construction, Elevator, Boiler

Violation Severity - How severe the violation issued is. A= High, B = Moderate, C = Low

WRI - City violations only

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

CBS AST	Chemical Bulk Storage Database

EDR PROPRIETARY HISTORICAL DATABASES

Coal Gas	Former Manufactured Gas (Coal Gas) Sites
-----------------------	--

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS 1 degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. EDR's definition of a site with an elevation equal to the target property includes a tolerance of +/- 10 feet. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property (by more than 10 feet). Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL ASTM STANDARD

RCRIS: The Resource Conservation and Recovery Act database includes selected information on sites that generate, store, treat, or dispose of hazardous waste as defined by the Act. The source of this database is the U.S. EPA.

A review of the RCRIS-SQG list, as provided by EDR, and dated 09/09/2002 has revealed that there are 2 RCRIS-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

STATE ASTM STANDARD

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, has revealed that there is 1 SHWS site within approximately 1 mile of the target property.

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 27 LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 7 UST sites within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>

MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 MOSF UST sites within approximately 0.5 miles of the target property.

Remark: DEC FOUND OILY WATER BEING DISCHARGED FROM THE OUTFALL OF THE O/W SEPARATOR DURING SITE INSPECTION, NOTIFIED USCG OF OBSERVATION ON 1/23/95

DEC Remarks: 03-01-95 LEUNG WROTE MEMO TO ANDY YERMAN OF THE SPDES GROUP AND INFORMED HIM OF FINDINGS. 02-21-95 RECEIVED LAB RESULTS FROM PEDNEAU LT ASSOCIATES, INC.: GASOLINE AND DIESEL FUEL PRODUCTS ARE IDENTIFIED IN THE SAMPLES. 01-24-95 LEUNG FAXED FIELD NOTES TO PETTY OFFICER STEVE DOOLEY OF THE USCG PER HIS REQUEST. 01-23-95 LEUNG NOTIFIED USCG OF FINDINGS, PETTY OFFICER JERRY MOTYKIN TOOK THE REPORT. 01-20-95 LEUNG AND W. PARISH ARRIVED ON SITE TO PERFORM SPOT INSPECTION. SOME AREAS OF THE TERMINAL ARE FLOODED BECAUSE OF HEAVY RAIN. OBSERVED SHEEN ON THE BAY AND SHEEN ON THE LAST CHAMBER OF THE OIL/WATER SEPARATOR. EFFLUENT WASTEWATER CONTAINED SHEEN AS IT IS BEING DISCHARGED. DEC TOOK SAMPLES OF THE DISCHARGE. PICTURES TAKEN OF THE SURFACE WATER NEAR THE OUTFALL. OIL PUDDLES ALSO OBSERVED AS THE OIL/WATER SEPARATOR IS BACKED UP TO THE ON-SITE DRAINS. DEC NOTIFIED TERMINAL PERSONNEL TO STOP DISCHARGE. SERGIO (TERMINAL WORKER) SHUT SYSTEM OFF. MIKE CRAWFORD (TERMINAL SUPERVISOR) CALLED FOR CONTRACTOR TO PUMP O/W SEPARATOR AT 12:25. AT 13:30 PREMIUM TRANSPORTATION ARRIVED TO PUMP OUT THE SEPARATOR AND TRANSFER THE CONTENT TO ON-SITE TANK TRUCKS. AT 13:54 DEC OBSERVED STORM WATER DISCHARGE COMING FROM THE TANK FARM AREA AND WATER CONTAINED PETROLEUM SHEEN. DEC TOLD EAGLE OIL PERSONNEL TO STOP DISCHARGE. SERGIO (ANOTHER WORKER AT THE TERMINAL) STOPPED THE DISCHARGE BY BOLTING DOWN THE DRAIN PIPE. PERSONNEL CONTINUED TO CLEAN O/W SEPARATOR AND BAY TANKS WITH ABSORBENT PADS. DEC ISSUED CLEANUP LETTER TO EAGLE OIL. DEC DEPARTED SITE AT 14:10 TO DROP SAMPLES OFF AT THE LAB.

Remark: CONTAMINATED SOIL IS BEING DUG UP AND DUMPED ELSEWHERE. ADDITIONAL CONTAMINATION BEING COVERED UP. NOV 2: PER SANDY GASOLINE INSTALLATION)- INSTALLING STAGE 2 VAPOR RECOVERY SYSTEM.

DEC Remarks: 11/02/92: Received anonymous complaint alleging contaminated soil being dug up and dumped elsewhere. DEC spoke to Gasoline Installations- they are installing Stage II Vapor Recovery; no contamination encountered.
11/03/92 A): DEC Gibbons) onn site- GI had just removed 1 2K steel tank that had water in it. 11/03/92 B): Soil beneath tank heavily contaminated. Gasoline Installations refused to stockpile soil; they understood investigation would be required. 11/03/92 C): Three samples taken. Two to be held by GI pending further notice by DEC; one to be held by DEC NOT ANALYZED). Has sketch. 11/04/92 A): DEC Rice) on scene- GI removing soil from TOP of tanks in order to install secondary containment. Soil heavily contaminated. GI to stockpile same. Has sketch. 11/04/92 B): New foundation had been poured; supposedly no contamination in that area. 11/04/92 C): OWNER S PROPERTY?) REP ON SCENE- LVF REALTY 516-371-2424. 11/05/92: DEC Ricce) on scene- GI continuing work. Approx 8cy soil stockpiled total. Took sample of stockpiled soil NOT ANALYZED). 11/06/92: DEC Rice), GI, and LVF s rep on scene- advised LVF s rep of disposal requirements and need for further investigation. 11/09/92 A): DEC Rice), GI, and LVF on scene - GI removed 1 2K, 1 3K, and 1 4K steel gas tanks. All had light to moderate corrosion. Tanks ripped apart, unable to check for holes. Has sketch and pictures. 11/09/92 B): Removed approx 20cy soil from INSIDE and around tanks. Tanks had been improperly abandoned. LVF decided to not dig any further, but rather to have wells installed. 11/09/92 C): Contamination extended to groundwater. No floating product. 11/09/92 D): DEC took bottom sample NOT ANALYZED). 11/19/92: DEC Sottile) letter to Sunoco- Request wells, monitoring, and dissolved product testing. Gave deadline and scenario for failure to comply. 01/27/93: Sottile met GI on site to discuss well locations. 07/21/93: Environmental Assessment Remediation letter on behalf of Sunoco)- FEEL INVESTIGATION AND REMEDIATION NOT WARRANTED. Gives reasons. 08/25/93: Sottile letter to EAR, cc Sunoco- Must perform some type of investigation. Sample the existing new tank-bed) wells for dissolved product

duct, and DEC will evaluate. 08/30/93: EAR letter- Will sample well
s. 09/01/93: EAR sampled wells. 03/09/94 A): EAR letter- enco
se site and groundwater maps and data.. NEW TANKS AND TANK BED WELLS)
ARE ON N EDGE OF SITE, UPGRADIENT OF OLD TANK BED. 03/09/94 B): ONE
TANK BED WELL HAD UNSPECIFIED AMOUNT) FLOATING PRODUCT. Two of five we
lls had very high MTBE; all had some MTBE and BTEX. 03/09/94 C):CLA
IMED THAT THESE RESULTS COULD NOT HAVE BEEN FROM CURRENT TANK BED. 03
/22/94: Sottile letter TO LVF REALTY- Request investigation and remedi
ation. Gives deadline and scenario for failure to comply. 09/01/95:
NASSAU COUNTY DPW MAY ACQUIRESOME OR ALL OF PROPERTY FOR ROADWORK. 01
/26/96: NCDPW to DEC Campbell)- Their investigation has shown high
levels of dissolved product. Road project has been delayed; would like
to resolve issues. 03/29/96: Campbell spoke to LVF- THEY FFORWARDED
22MAR94 LETTER TO SUNOCO. SUPPOSEDLY, SUNOCO HAD SAMPLED WELLS SEVERAL
TIMES AND ASSUMED RESPONSIBILITY. 05/28/96: Campbell spoke to LVF-
SUNOCO HAD NOT SAMPLED WELLS. Campbell to send investigation letters to
him and Sunoco. 05/229/96: Letters to Sunoco and LVF- Request inves
tigation and remediation. Gives scenario for failure to comply. 01/0
8/97: Campbell spoke to LVF- LVF insisted Sunoco was sampling. DEC in
formed him that we had checked with Sunoco and they are nnot sampling.
DEC feels LVF is liable. LVF to talk to Sun. 05/09/97: DEC Campbell
I, Sottile, Haas) on site- DEC TO HAVE SITES THAT HAVE NOT PERFORMED GR
OUNDWATER INVESTIGATIONS SAMPLED TO PRIORITIZE WHICH NEED WORK. 05/29
/97: Sottile on siite- JNM installing Geoprobes. 12/04/97: Campbel
I letter to LVF- STATE IS ARRANGING FOR INVESTIGATION AND REMEDIATION.
If you wish, may enter into Stipulation Agreement. State to seek reimbu
rsement plus penalties. 01/18/99: 6K GAS UST FAILED TANK TEST. RE:
SPILL 98-12875) GASOLINE INSTALLATIONS WILL EXCAVATE, ISOLATE REPAIR.
01/28/98: Campbell on site with JNM- Installing and sampling wells. H
as sketch. SITE CURRENTLY HAS 1 4K AND 3 6K TANKS. 01/29/98: Campbe
ll and JNMon site- continuing investigation. CHECKED DEPTH TO WATER HO
URLY DUE TO POSSIBLE TIDAL INFLUENCE. 01/12/99: GOMEZ MAILED STIPULA
TION AGREEMENT TO LENNY MANZO/LVF REQUIRING SIGNED STIPULATION AGREEMENT

Environmental Problems:

Health Problems:

N-09468, (located on the NW corner of Wheelock & Burnside Avenues) contained trichloroethene (TCE) at 3,309 ppb, total 1,2-dichloroethene (1,2-DCE) at 2,771ppb, and vinyl chloride at 444 ppb. Subsequent to this notification, the NYSDEC initiated a Preliminary Site Assessment (PSA). This PSA was conducted between June and August 1999. The PSA concluded that the source of TCE and 1,2-DCE is located along the north side of Burnside Avenue between Wheelock Avenue and Hoover Street. Past site operations have contaminated the groundwater with TCE and 1,2-DCE at concentrations well above their respective Part 703.5 Class GA Standards. The groundwater is part of an EPA-designated sole source aquifer, and the contamination of this aquifer constitutes a significant threat to the environment.

Past site operations have contaminated the groundwater with TCE and 1,2-DCE at concentrations well above their respective Part 703.5 Class GA Standards. The groundwater is part of an EPA-designated sole source aquifer.

The area is mixed residential and commercial, with residences north and south of the site. Groundwater flows east, northeast and is four feet deep. Public water serves the area and is regularly monitored. Therefore, exposure to contaminated groundwater is not expected. All other potential exposure routes will be assessed during the forthcoming investigation.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List

Source: EPA

Telephone: N/A

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

Source: EPA

Telephone: 703-413-0223

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Source: EPA

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

EDR PROPRIETARY HISTORICAL DATABASES

Former Manufactured Gas (Coal Gas) Sites: The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. ©Copyright 1993 Real Property Scan, Inc. For a technical description of the types of hazards which may be found at such sites, contact your EDR customer service representative.

Disclaimer Provided by Real Property Scan, Inc.

The information contained in this report has predominantly been obtained from publicly available sources produced by entities other than Real Property Scan. While reasonable steps have been taken to insure the accuracy of this report, Real Property Scan does not guarantee the accuracy of this report. Any liability on the part of Real Property Scan is strictly limited to a refund of the amount paid. No claim is made for the actual existence of toxins at any site. This report does not constitute a legal opinion.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines/Electrical Transmission Lines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines and electrical transmission lines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

FAR ROCKAWAY FORMER MGP
BRUNSWICK AVENUE/B12TH STREET
FAR ROCKAWAY, NY 11691

TARGET PROPERTY COORDINATES

Latitude (North):	40.610298 - 40° 36' 37.1"
Longitude (West):	73.748703 - 73° 44' 55.3"
Universal Transverse Mercator:	Zone 18
UTM X (Meters):	605857.8
UTM Y (Meters):	4496039.5

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

USGS TOPOGRAPHIC MAP ASSOCIATED WITH THIS SITE

Target Property: 2440073-E6 LAWRENCE, NY
Source: USGS 7.5 min quad index

GENERAL TOPOGRAPHIC GRADIENT AT TARGET PROPERTY

Target Property: Undeterminable

Source: General Topographic Gradient has been determined from the USGS 1 Degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> QUEENS, NY	<u>FEMA Flood Electronic Data</u> Not Available

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> LAWRENCE	<u>NWI Electronic Data Coverage</u> YES - refer to the Overview Map and Detail Map
--	---

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Site-Specific Hydrogeological Data*:

Search Radius: 2.0 miles
Location Relative to TP: 1 - 2 Miles WSW
Site Name: EDGEMERE LF
Site EPA ID Number: NYD980754725
Groundwater Flow Direction: TOWARD AND INTO SURROUNDING SURFACE WATER BODIES.
Measured Depth to Water: less than 10 feet.
Hydraulic Connection: Detailed hydraulic connection information is not available. The site is underlain by outwash sands, a clay unit, sand and gravel, and the Gardiners clay.
Sole Source Aquifer: No information about a sole source aquifer is available
Data Quality: Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 2.000 Miles.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Pleistocene
Code: Qp (decoded above as Era, System & Series)

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: sandy loam
sand
mucky - loamy sand

Surficial Soil Types: sandy loam
sand
mucky - loamy sand

Shallow Soil Types: sand
loamy sand

Deeper Soil Types: stratified
gravelly - coarse sand
sand

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

STATSGO: State Soil Geographic Database

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the national Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-260-2805

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-260-2805

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: In November 1971 the United States Geological Survey (USGS) implemented a national water resource information tracking system. This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on more than 900,000 wells, springs, and other sources of groundwater.

WTB120202	AB74159	Aqueous	VO15-8260

Problems associated with these analyses are as follows:

Volatiles:

Methylene chloride was recovered in method blanks FA8078, FA8122 and FA8164a and in samples AB74133-142, 144-157 as a result of possible laboratory contamination.

Sample AB74143 was run at a 250x dilution.

Chlorobenzene was recovered below QC criteria in the MS (58%). All criteria was met in the MBS and MSD. The RPD for Chlorobenzene was also outside QC criteria.

There were no other problems associated with this analysis.

Semi-Volatiles:

Samples AB74135, AB74141, AB74142 and AB74153 were run at a 3 times dilution.

Sample AB74143 was run at a 120 times dilution.

Sample AB74147 was run at a 2 times dilution.

Phthalates were recovered in method blank SMB1858, SMB1859 and WMB1750 and in samples AB74138, AB74135-AB74137, AB74144, AB74147, AB74148 and AB74154-AB74157 as a result of possible laboratory contamination.

The MBS from batch 1859 was recovered above QC criteria for 2,4-Dinitrotoluene (100%).

The MSD from batch 1859 was recovered below QC criteria for N-Nitroso-di-n-propylamine (35%). The RPD between the MS and MSD from batch 1859 was also above QC criteria for N-Nitroso-di-n-propylamine (43%). The MS and MBS from batch 1859 met all QC criteria for N-Nitroso-di-n-propylamine.

There were no other problems associated with this analysis.

PCBs:

There were no problems associated with this analysis.

Pesticides:

The MS was recovered above QC criteria for Dieldrin (389%). The RPD between the MS and MSD was also above QC criteria for Dieldrin (61%). The MSD and MBS met all QC criteria for Dieldrin.

The MS and MSD were recovered above QC criteria for p,p'-DDT (741% and 174%). The RPD between the MS and MSD was also above QC criteria for p,p'-DDT (62%). The MBS met all QC criteria for p,p'-DDT.

The RPD between the MS and MSD was above QC criteria for Aldrin (45%). The MBS, MS and MSD met all QC criteria.

There were no other problems associated with this analysis.

Metals:

Initial QC from batch 4269 was recovered outside of QC criteria for all compounds due to matrix interference. QC from this batch was therefore re-prepared to confirm interferences.

The MS and MSD from batch 4371 were recovered outside of QC criteria for Ba (127% and 183%), Mn (247% and 167%), Ca (-200% and -170%), Mg (-42% and -33%). The LCS met all QC criteria.

The MS from batch 4371 was recovered outside of QC criteria for Sb (74%). The LCS and MSD met all QC criteria.

The MS and MSD from batch 4369 were recovered outside of QC criteria for Ba (1.3% and 62%). The LCS met all QC criteria.

The MS from batch 4369 was recovered outside of QC criteria for Ca (177%), Mg (141%), Cu (54%), Pb (-14%) and Zn (-20%). The LCS and MSD met all QC criteria.

The MSD from batch 4369 was recovered outside of QC criteria for Mn (213%). The LCS and MS met all QC criteria.

The serial dilution from batch 4371 was recovered outside of QC criteria for Cd (41%), Ni (30%), K (36%) and Na (42%).

The serial dilution from batch 4369 was recovered outside of QC criteria for Ni (18%) and Zn (11%).

The RPD between the sample and sample duplicate from batch 4371 was above QC criteria for Cu (21%) and Mn (25%).

The RPD between the sample and sample duplicate from batch 4369 was above QC criteria for Ca (70%) and Mg (77%).

There were no other problems associated with this analysis.

Wet Chemistry:

There were no problems associated with this analysis.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on floppy diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Stan Gilewicz, Laboratory Director

U - Indicates the compound was analyzed but not detected.

J - Indicates an estimated value when a compound is detected at less than the specified detection limit.

B - Indicates the analyte was found in the blank as well as in the sample.

E - Indicates the analyte concentration exceeds the calibration range of the instrument.

U - Indicates the compound was analyzed but not detected.
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.

U - Indicates the compound was analyzed but not detected.
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.

Total Target Concentration 63

U - Indicates the compound was analyzed but not detected.

J - Indicates an estimated value when a compound is detected at less than the specified detection limit.

B - Indicates the analyte was found in the blank as well as in the sample.

E - Indicates the analyte concentration exceeds the calibration range of the instrument.

Total Target Concentration 1

U - Indicates the compound was analyzed but not detected.
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.

Total Target Concentration 640

U - Indicates the compound was analyzed but not detected.

J - Indicates an estimated value when a compound is detected at less than the specified detection limit.

B - Indicates the analyte was found in the blank as well as in the sample.

E - Indicates the analyte concentration exceeds the calibration range of the instrument.

Total Target Concentration 3.2

U - Indicates the compound was analyzed but not detected.

J - Indicates an estimated value when a compound is detected at less than the specified detection limit.

B - Indicates the analyte was found in the blank as well as in the sample.

E - Indicates the analyte concentration exceeds the calibration range of the instrument.

Total Target Concentration 1.5

U - Indicates the compound was analyzed but not detected.

J - Indicates an estimated value when a compound is detected at less than the specified detection limit.

B - Indicates the analyte was found in the blank as well as in the sample.

E - Indicates the analyte concentration exceeds the calibration range of the instrument.

Total Target Concentration 0

U - Indicates the compound was analyzed but not detected.
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.

* activated 12-13-02

Problems associated with these analyses are as follows:

Volatiles:

The following samples were run at a dilution: AB74441 (125x), AB74446 (125x), and AB74447 (125x). There was methylene chloride contamination in blanks FA8164a and FA8193 and in samples AB74442-AB74445, and AB74448-AB74451 as a result of laboratory contamination. Sample AB74447 had surrogates outside QC recovery in both runs. The following compounds fell outside QC criteria in the matrix spike duplicate and the RPD: 1,1-Dichloroethene (MSD 36%, RPD 76%), Benzene (MSD 45%, RPD 60%), Chlorobenzene (MSD 34%, RPD 67%), Toluene (MSD 37%, RPD 64%), and Trichloroethene (MSD 37%, RPD 66%).

There were no other problems associated with this analysis.

Semi-Volatiles:

The following samples were run at a dilution: AB74445 (10x), and AB74447 (10x). 2-4 Dinitrotoluene fell outside QC criteria in the MBS (90%) and matrix spike (90%) in batch SMB1862 and in the matrix spike (91%) in batch SMB1861. Phthalates were recovered in method blank SMB 1862 and in samples AB74447 through AB74451 as a result of possible laboratory contamination. The surrogates in MBS SMB1862 were inadvertently double spiked.

There were no other problems with this analysis.

PCBs:

There were no problems associated with this analysis.

Pesticides:

There were no problems associated with this analysis.

Metals:

The following analytes fell outside QC criteria in the matrix spike and/or the matrix spike duplicate: Aluminum (MS 355%, MSD 861%), Antimony (MSD 67%), Manganese (MS 219%, MSD 341%), Vanadium (MSD 134%), Iron (MS 801%, MSD 1720%), and Zinc (MSD 127%). The concentration of Iron was above four times the spiking level. All analytes passed QC criteria in the MBS. Aluminum (93%) and Iron (25%) fell outside QC criteria in the RPD. Cobalt and Lead did not meet serial dilution criteria.

There were no other problems associated with this analysis.

Wet Chemistry:

There were no problems associated with this analysis.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on floppy diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Total Target Concentration 58

U - Indicates the compound was analyzed but not detected.
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.

U - Indicates the compound was analyzed but not detected.
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.

Total Target Concentration 19

U - Indicates the compound was analyzed but not detected.

J - Indicates an estimated value when a compound is detected at less than the specified detection limit.

B - Indicates the analyte was found in the blank as well as in the sample.

E - Indicates the analyte concentration exceeds the calibration range of the instrument.

Total Target Concentration 210

U - Indicates the compound was analyzed but not detected.

J - Indicates an estimated value when a compound is detected at less than the specified detection limit.

B - Indicates the analyte was found in the blank as well as in the sample.

E - Indicates the analyte concentration exceeds the calibration range of the instrument.

Total Target Concentration 0.21

U - Indicates the compound was analyzed but not detected.

J - Indicates an estimated value when a compound is detected at less than the specified detection limit.

B - Indicates the analyte was found in the blank as well as in the sample.

E - Indicates the analyte concentration exceeds the calibration range of the instrument.

SDG Narrative

SDG Narrative

HC 0003

Project: PSS
Job: Far Rockaway Former MGP

Hampton-Clarke, Inc. (HCI) received the following PSS samples on December 6, 2002:

<u>PSS #</u>	<u>HCI #</u>	<u>Type</u>	<u>Analysis</u>
FB120402	AB74453	Aqueous	Vo8260+10, BN8270+25, PCB-8082, Pesticides-8081, Metals-6010 (TAL), Mercury-7471A, Cyanide-9010
FB120502	AB74454	Aqueous	Vo8260+15, BN8270+15, Metals-6010 (RCRA), Mercury-7471A, Cyanide-9010
WTB120402	AB74455	Aqueous	Vo8260+15

Problems associated with these analyses are as follows:

Volatiles:

Methylene chloride was recovered in samples AB74453 and AB74454 as a result of possible laboratory contamination.

There were no other problems associated with this analysis.

Semi-Volatiles:

Phthalates were recovered in method blank WMB1754 and in samples AB74453 and AB74454 as a result of possible laboratory contamination.

The MSD was recovered below QC criteria for 1,4-Dichlorobenzene (27%). The RPD between the MS and MSD was above QC criteria for 1,4-Dichlorobenzene (87%). The MS and MBS met all QC criteria for 1,4-Dichlorobenzene.

There were no other problems associated with this analysis.

PCBs:

There were no problems associated with this analysis.

Pesticides:

There were no problems associated with this analysis.

Metals:

The serial dilution was recovered above QC criteria for Mg (25%) and Mn (16%).

There were no other problems associated with this analysis.

Wet Chemistry:

There were no problems associated with this analysis.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on floppy diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Stanley Gilewicz, Laboratory Director

Total Target Concentration 1.2

U - Indicates the compound was analyzed but not detected.
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.

Project: PSS

Job: Far Rockaway Former MGP

Hampton-Clarke, Inc. (HCI) received the following PSS samples on December 6, 2002:

<u>PSS #</u>	<u>HCI #</u>	<u>Type</u>	<u>Analysis</u>
FRSB-11A	AB74404	Soil	Vo8260+15, BN8270+15, Metals-RCRA, Cyanide
FRSB-11B	AB74405	Soil	Vo8260+15, BN8270+15, Metals-RCRA, Cyanide
FRTT-04	AB74406	Soil	Vo8260+15, BN8270+15, Metals-RCRA, Cyanide
STB120502	AB74407	Aqueous	Vo8260+15

Problems associated with these analyses are as follows:

Volatiles:

Methylene chloride was recovered in method blank FA8164a and in samples AB74404-AB74407 as a result of possible laboratory contamination.

The MSD was recovered below QC criteria for 1,1-Dichloroethene (36%), Benzene (45%), Chlorobenzene (34%), Toluene (37%) and Trichloroethene (37%). The RPD between the MS and MSD was above QC criteria for 1,1-Dichloroethene (76%), Benzene (60%), Chlorobenzene (67%), Toluene (64%) and Trichloroethene (66%). The MBS and MS met all QC criteria.

There were no other problems associated with this analysis.

Semi-Volatiles:

Sample AB74406 was run at a 2 times dilution.

Phthalates were recovered in method blank SMB1862 and in samples AB74404-AB74406 as a result of possible laboratory contamination.

The surrogates in SMB1862 (MS) were inadvertently double spiked.

The MS was recovered above QC criteria for 2,4-Dinitrotoluene (91%). The MBS and MSD met all QC criteria for 2,4-Dinitrotoluene.

There were no other problems associated with this analysis.

There were no other problems associated with this analysis.

Metals:

The MSD was recovered above QC criteria for Ba (126%). The MS and LCS met all QC criteria for Ba.

The serial dilution was recovered above QC criteria for Pb (11%).

There were no other problems associated with this analysis.

Wet Chemistry:

There were no problems associated with this analysis.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on floppy diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Total Target Concentration 0.013

U - Indicates the compound was analyzed but not detected.
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.

TB121202	AB74913	Aqueous	Vo8260+15

Problems associated with these analyses are as follows:

Volatiles:

Sample AB74905 was run at a 10 times dilution.

Samples AB74907-AB74909 were run at a 500 times dilution. Samples AB74908 and AB74909 are QC samples; two different Form 1's have been provided for these samples because spiking compounds were added after the samples were diluted. Therefore, one Form 1 shows the targeted compounds which required the dilution, while the other Form 1 shows the spiking compounds, the concentrations of which have not been diluted.

Methylene chloride was recovered in samples AB74906 and AB74913 as a result of possible laboratory contamination.

The MS and MSD were recovered above QC criteria for Toluene (184% and 166%). The MBS met all QC criteria for Toluene.

There were no other problems associated with this analysis.

Semi-Volatiles:

Samples AB74905, AB74907-AB74909 were run at a 20 times dilution.

Phthalates were recovered in method blank WMB1759 and in samples AB74903, AB74904, AB74906, AB74908, AB74909, AB74910-AB74912 as a result of possible laboratory contamination.

The MS and MSD were recovered above QC criteria for Pentachlorophenol (113% and 115%). The MBS met all QC criteria for Pentachlorophenol.

0004

There were no other problems with this analysis.

PCBs:

There were no problems associated with this analysis.

Pesticides:

There were no problems associated with this analysis.

Metals:

The serial dilution was recovered above QC criteria for Mg (25%) and Mn (16%).

There were no other problems associated with this analysis.

Wet Chemistry:

There were no problems associated with this analysis.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on floppy diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Total Target Concentration 12

U - Indicates the compound was analyzed but not detected.
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.

Total Target Concentration 7000

U - Indicates the compound was analyzed but not detected.

J - Indicates an estimated value when a compound is detected at less than the specified detection limit.

B - Indicates the analyte was found in the blank as well as in the sample.

E - Indicates the analyte concentration exceeds the calibration range of the instrument.

Client Id: FRGW-03 (MS) **Initial Volume:** 450ml
Data File: GC44817 **Final Volume:** 10ml
Date Analyzed: 17 Dec 2002 8:19 **Dilution Factor:** 1
Date Received/Extracted: 12/14/02-12/16/02 **Percent Solids:** 0
Column: J&W-Scientific db-608/1701 30m .32mmID

CAS #	Compound	PQL/MDL	Concentration (Units: ug/L)
12674112	Aroclor-1016	1.1	15
11104282	Aroclor-1221	1.1	UU
11141165	Aroclor-1232	1.1	UU
53469219	Aroclor-1242	1.1	UU
12672296	Aroclor-1248	1.1	UU
11097691	Aroclor-1254	1.1	UU
11096825	Aroclor-1260	1.1	16

Total Target Concentration 31

U - Indicates the compound was analyzed but not detected.
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.

ANALYTICAL SUMMARY

LIMS BAT #: LIMS-68167
JOB NUMBER: 2522-006-084

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: FAR ROCKAWAY FORMER MGP, FAR ROCKAWAY, NY

FIELD SAMPLE #	LAB ID	MATRIX	SAMPLE DESCRIPTION	TEST
FRSV-01	02B32153	AIR	CT 4397	air special test
FRSV-02	02B32154	AIR	CT 3384	air special test
FRSV-03	02B32152	AIR	CT 4415	air special test
FRSV-04	02B32151	AIR	CT 3373	air special test
FRSV-06	02B32150	AIR	CT 4414	air special test

The CON-TEST Environmental Laboratory operates under the following certifications and accreditations :

AIHA 100033	AIHA ELLAP (LEAD) 100033
MASSACHUSETTS MA0100	NEW HAMPSHIRE 2516
CONNECTICUT PH-0567	VERMONT DOH (LEAD) No. LL015036
NEW YORK ELAP 10899	RHODE ISLAND (LIC. No. 112)

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.
