SECTION 1

INTRODUCTION

This report presents data collected from field investigations performed by Parsons Environment & Infrastructure Group Inc. (Parsons) and completed in the vicinity of the Former Cleaner Products Supply (FCPS) building (the “Site”) (NYSDEC Site Number 241123). Sampling was conducted around the Site located at 50-45 Barnett Avenue, Queens, New York from August 2017 through March 2018. The supplemental investigations were performed to continue monitoring of chlorinated volatile organic compounds (CVOCs), particularly tetrachloroethene (PCE), and other related chlorinated by-products previously detected in groundwater in the surrounding 5-acres of the Site. Supplemental investigation activities described in this report were performed in accordance with the New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation (DER)-10 technical guidance.

Investigation efforts included three quarterly groundwater monitoring events (August 2017, January 2018 and July 2018) and one air sampling event (March 2018). Results of the sampling events are detailed within this submittal. The results provide supplemental information following the Remedial Investigation Report (RIR) submitted in March 2017.

SECTION 2

BACKGROUND

2.1 SITE AND SURROUNDING DEVELOPMENT

The Site is a 0.23-acre parcel located at 50-45 Barnett Avenue, Long Island City, Queens County, New York (**Figure 1**) and is currently occupied by Capitol Glass and Sash Company, Inc. A one-story building occupies a majority of the Site with a small fenced area to the north. To the west of the Site is the Queensboro parking lot, to the north Long Island Railroad (LIRR) tracks and Right of Way (ROW), and to the south are residential properties. To the east of FCPS are adjacent commercial buildings housed by JCP Cabinetry, Perma Iron, Paratransit Auto Parts, and AHRC Inc.

The Site was initially developed in 1952 when the building was constructed to house a dry-cleaning product supply business. Product storing operations reportedly occurred between 1952 and 2007. During operations, above ground storage tanks (ASTs) containing PCE, were believed to be stored near the center of the building.

Historical operations at the Site are believed to be responsible for detections of chlorinated CVOCs in soil above the New York Code Rules and Regulations (NYCRR) Protection to Groundwater and Commercial Clean-up Objectives (particularly PCE) in soil and soil vapor beneath the building footprint. Pathways for human exposure to impacted soils are limited given the impacted area is occupied in entirety by the building; however, due to the high levels of sub-slab soil vapors in the immediate vicinity of the Site, a soil vapor extraction system was installed.

2.2 SITE GEOLOGY AND HYDROLOGY

Site topography is generally flat with groundwater flowing northeast, in the direction of the East River and Flushing Bay but may vary seasonally. According to regional groundwater flow maps, this location appears to be at a groundwater divide suggesting that groundwater may flow radially away from the Site. Groundwater has been observed at approximately 15-20 feet below ground surface (bgs).

No water supply wells have been identified downgradient of the Site. According to New York City Department of Environmental Protection (NYCDEP) website, the Department acquired the privately-owned Jamaica Water Supply Company which serviced Queens from 1887 to 1996. The groundwater supply system consisted of 68 wells, 44 well stations and several water storage tanks. The system ceased operations more than a decade ago in the area of the Site. Water is supplied from the Catskill/Delaware watersheds.

No wetlands exist on or adjacent to the Site based on checking NY State and Federal wetland mapping. The 100-year floodplain, as delineated by the Federal Emergency Management Agency (FEMA), is not present in the vicinity of the Site (FEMA website).

SECTION 3

SUPPLEMENTAL INVESTIGATION ACTIVITIES

The objective of the supplemental investigation activities was to continue monitoring the nature and extent of contamination, particularly PCE, TCE, and other related by-products previously detected in soil, soil vapor, and groundwater on and near the Site. The applicable remediation standards for the Site include the 6-NYCRR Part 375 Commercial Clean-up Objectives for soil, the NYSDEC groundwater quality standard (GWQS). Guideline values are provided by NYSDOH for select indoor air parameters to assist in decision making.

3.1 GROUNDWATER INVESTIGATION

Groundwater investigation activities included sampling of existing monitoring wells associated with the Site. Prior to collection of groundwater samples, a synoptic round of depth-to-water readings and depth-to-bottom readings were collected from each well. The depth to water in each monitoring well was measured using an electronic water-level indicator attached to a graduated tape. The groundwater depth-to-water readings are presented in **Table 1** and groundwater elevation contours on **Figures 2, 3 and 4** for each quarterly sampling event, respectively.

August 2017 Investigation

Groundwater samples were collected from 13 monitoring wells (MW-1, MW-5, MW-6, MW-8, MW-9, MW-103S, MW-104S, MW-104D, MW-105S, MW-105D, MW-107D, MW-108D and MW-109S) between August 1 and August 2, 2017. The suite was sampled for TCL VOCs via USEPA SW846 8260C. Additionally, monitoring wells MW-5, MW-6, MW-103S, MW-107D, and MW-109S were sampled for 1,4-dioxane via USEPA SW846 8270D SIM and Perfluorinated Hydrocarbons (PFOAs) via USEPA SW846 537 (modified), with the exception of MW-109S. Groundwater samples from monitoring wells MW-5, MW-6, MW-8, MW-9, MW-103S, MW-104S, MW-104D, MW-107D and MW-109S contained detections of PCE above the NYSDEC GWQS of 5 micrograms per liter ($\mu\text{g/L}$). The highest concentration measured during the event was 1,800 $\mu\text{g/L}$ at MW-6, located off-site at the northwest corner of Barnett Avenue and Woodside Avenue. Concentrations of trichloroethylene (TCE) and cis-1,2-Dichloroethylene (cis-1,2-DCE) were noted above NYSDEC GWQS in monitoring wells MW-5, MW-6, MW-104S and MW-105D during this event.

Concentrations of 1,4-dioxane was non-detect in the wells sampled, except monitoring well MW-103S which contained a concentration of 0.24 $\mu\text{g/L}$. However, the result was flagged "J" with the result being less than the reporting limit (RL) but greater than or equal to the method detection limit (MDL), with an approximate concentration value.

Laboratory analytical results from the August 2017 groundwater investigation are summarized in **Table 2** and presented on **Figure 5**.

January 2018 Investigation

Groundwater samples were collected from 11 monitoring wells (MW-3, MW-5, MW-6, MW-9, MW-103S, MW-104S, MW-104D, MW-107D, MW-108D, and MW-109S) between January 23

and January 26, 2018. The suite was sampled for TCL VOCs. Additionally, monitoring wells MW-5, MW-6, MW-103S, MW-104S and MW-104D were sampled for dissolved gases via Method RSK-175 (Ethane, Ethene and Methane), metals (Iron and Manganese) via USEPA SW846 Method 6020A, Total Organic Carbon (TOC) via USEPA SW846 Method 5310B, Nitrogen as Nitrate via SM Method 4500 NO3F, and Sulfate via ASTM Method D516-90,02. Groundwater samples from monitoring wells MW-3, MW-5, MW-6, MW-8, MW-9, MW-103S, MW-104S, MW-104D, MW-107D, and MW-109S contained detections of PCE above the NYSDEC GWQS of 5 µg/L. The highest concentration measured during the event was 660 µg/L at MW-104D, located off-site approximately 110 ft northeast of MW-6 (NWC of Barnett Avenue and Woodside Avenue). Concentrations of PCE decreased from the August 2017 event in monitoring wells MW-5, MW-6, and MW-8 and increased in monitoring wells MW-103S, MW-104S, MW-104D, MW-107D and MW-109S. Concentrations of cis-1,2-DCE were noted above NYSDEC GWQS (5 µg/L) in monitoring wells MW-5, MW-104S and MW-104D during this event. Concentrations of TCE were noted above NYSDEC GWQS (5 µg/L) in monitoring wells MW-5, MW-6, MW-104S, MW-104D, and MW-107D; with the highest concentration of 75 µg/L in MW-104D during this event.

Concentrations of iron were noted above NYSDEC GWQS (300 µg/L) in MW-5, MW-6, MW-103S, MW-104S and MW-104D, along with concentrations of manganese above NYSDEC GWQS (300 µg/L) in MW-104D. The highest concentration of Iron measured was 11,400 µg/L at MW-104D. Concentrations of nitrogen as nitrate was noted above NYDEC GWQS (10mg/l) at MW-103S (13.6 mg/l). Concentrations of dissolved gases (RSK-175) were non-detect in the monitoring wells sampled.

Laboratory analytical results from the January 2018 groundwater investigation are summarized in **Table 3** and presented on **Figure 5**.

July 2018 Investigation

Groundwater samples were collected from 15 monitoring wells (MW-1, MW-3, MW-5, MW-6, MW-7, MW-8, MW-9, MW-103S, MW-104S, MW-104D, MW-105S, MW-105D, MW-107D, MW-108D and MW-109S) between July 17 and July 20, 2018. The suite was sampled for TCL VOCs. Additionally, monitoring wells MW-5, MW-6, MW-103S, MW-104S, and MW-104D were sampled for dissolved gases RSK-175, metals (iron and manganese), TOC, nitrogen as nitrate, and sulfate. Groundwater samples from monitoring wells MW-5, MW-6, MW-103S, MW-104S, MW-104D, and MW-109S contained detections of PCE above the NYSDEC GWQS of 5 µg/L. The highest concentration measured during the event was 240 µg/L at MW-5, located off-site near the southeast intersection of Woodside Avenue and 37th Road. Concentrations of PCE were stable or decreasing from the August 2017 and January 2018 events in monitoring wells all the monitoring wells sampled. Concentrations of cis-1,2-DCE were noted above NYSDEC GWQS (5 µg/L) in monitoring wells MW-5, MW-6, MW-104S, and MW-104D during this event. Compared to the January 2018 event, concentrations of cis-1,2-DCE increased from 26 µg/L to 840 µg/L in MW-104S and from 17 µg/L to 39 µg/L in MW-104D. Concentrations of TCE were noted above NYSDEC GWQS (5 µg/L) in monitoring wells MW-1, MW-3, MW-5, MW-6, MW-104S, MW-104D, and MW-107D; with the highest concentration of 180 µg/L in MW-104S during this event. Concentrations of chloroform were noted above NYSDEC GWQS (7 µg/L) in MW-7 at 34 µg/L.

Concentrations of iron were noted above NYSDEC GWQS (300 µg/L) in monitoring wells MW-5, MW-6, MW-103S, MW-104S, and MW-104D, with the highest concentration of 13,200 µg/L in MW-104D, which increased from the January 2018 event. Monitoring well MW-104D also exhibited concentrations of manganese above NYSDEC GWQS (300 µg/L) at 2,600 µg/L.

Concentrations of dissolved gases (RSK-175), TOC, sulfate and nitrogen as nitrate were non-detect in the monitoring wells sampled.

Laboratory analytical results from the July 2018 groundwater investigation are summarized in **Table 4** and presented on **Figure 5**.

Groundwater PCE/TCE isopleths for the August 2017 results are depicted in **Figure 6**, **Figure 7** for January 2018 results, and **Figure 8** for July 2018 results. Laboratory analytical reports for each sampling event is presented in **Appendix A**. A complete listing of detected and non-detected compounds and results is included in the DUSRs for the above referenced groundwater investigation in **Appendix B**.

3.2 SOIL VAPOR INTRUSION INVESTIGATION

Soil vapor intrusion investigation analytical results were collected for indoor air and ambient air samples. The NYSDOH soil vapor intrusion guidance (revised 2015) matrix provides a guideline value of 100 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) for indoor air samples.

March 2018

A total of five indoor and ambient air samples were collected on-site (50-45-Ambient, 50-45-ID Office, and 50-45-ID-Work Shop) and on the surrounding off-site properties located 52-07 Barnett Avenue (52-07-ID-Metal Shop and 52-07-ID-Office). There were no indoor air sample detections of PCE above the NYSDOH guidance level. Indoor air concentrations for ethanol ranged from 110 $\mu\text{g}/\text{m}^3$ in sample 52-07-ID-Metal Shop to 2,000 $\mu\text{g}/\text{m}^3$ in sample 50-45-ID-Office. Indoor air concentrations for butane ranged from 150 $\mu\text{g}/\text{m}^3$ in sample 50-45-ID-Office to 2,000 $\mu\text{g}/\text{m}^3$ in sample 50-45-ID Office. Indoor air concentrations for toluene ranged from 360 $\mu\text{g}/\text{m}^3$ in sample 52-07-ID-Office to 4,200 $\mu\text{g}/\text{m}^3$ in sample 52-07-ID-Metal Shop. Indoor air concentrations for acetone ranged from 260 $\mu\text{g}/\text{m}^3$ in sample 52-07-ID-Office to 14,000 $\mu\text{g}/\text{m}^3$ in sample 52-07-ID-Metal Shop; however, the result for 52-07-ID-Office was flagged "J" with the result being less RL but greater than or equal to the MDL. Sample 52-07-ID-Office exceeded guidance levels for cyclohexane at 110 $\mu\text{g}/\text{m}^3$, xylenes at 190 $\mu\text{g}/\text{m}^3$, m,p-xylenes at 150 $\mu\text{g}/\text{m}^3$ and styrene at 110 $\mu\text{g}/\text{m}^3$. Sample 52-07-ID-Metal Shop exceeded guidance levels for ethyl acetate at 310 $\mu\text{g}/\text{m}^3$, methyl isobutyl ketone (4-methyl-2-pentanone) at 360 $\mu\text{g}/\text{m}^3$ and n-heptane at 170 $\mu\text{g}/\text{m}^3$.

Laboratory analytical results from the March 2018 soil vapor intrusion investigation activities are summarized in **Table 5** and presented on **Figure 9**. A complete listing of detected and non-detected compounds and analytical results is included in the DUSRs for the above referenced vapor intrusion investigation in **Appendix B**.

SECTION 4

CONCLUSIONS

4.1 EXPOSURE ASSESSMENT

The exposure assessment, findings and recommendations were provided in the March 2017 RIR. The supplemental field investigations confirm the original findings which are detailed as followed:

Soil Vapor

Results of soil vapor intrusion investigations conducted in association with the Site indicate no PCE concentrations above NYSDOH guidance values for indoor air samples within the FCPS and JCP Cabinetry buildings. The soil vapor extraction system acts as both a remedial system to address vapors in the vadose zone as well as a building mitigation system. Continued vapor intrusion monitoring is warranted in this area to confirm there is no exposure route to building inhabitants. As detailed in the March 2017 RIR, the adjacent buildings north of Barnett Avenue and residential/business properties south of Barnett Avenue indicated indoor air and corresponding sub-slab concentrations of PCE were below the NYSDOH guidance values and as such monitoring was not conducted during these events.

Groundwater

Detections of several CVOCS in groundwater associated with the Site are above the NYSDEC GWQS. Concentrations of PCE and TCE increased in MW-5 (PCE 92 µg/L to 260 µg/L and TCE 25 µg/L to 44 µg/L) and MW-104D (PCE 80 µg/L to 180 µg/L and TCE 27 µg/L to 56 µg/L) from 2015 to 2018, respectively. However; concentrations of PCE and TCE decreased in MW-6 (PCE 2,200 µg/L to 120 µg/L and TCE 150 µg/L to 10 µg/L), MW-104S (PCE 280 µg/L to 130 µg/L and TCE 490 µg/L to 180 µg/L), and MW-103S (PCE 1,500 µg/L to 12 µg/L) from 2015 to 2018, respectively.

Groundwater is not a potential exposure pathway for local residents as the public water supply comes from a public supply source. Given the depth to groundwater is at least 15 feet below ground surface, potential exposure to groundwater is not likely to occur during future construction or during future maintenance of deep underground utilities at the Site such as underground sewer or water lines. In addition, the nearest natural surface drainage way (Newtown Creek) is located approximately 1.83 mile south-southwest of the site and drains to the East River, which is located approximately 2.26 miles from the Site (see **Figure 1**). Neither Newtown Creek nor the East River are likely to be affected by site contamination based on the proximity of the creek and river from the Site.

4.2 FINDINGS AND RECOMMENDATIONS

- Continued vapor intrusion monitoring is warranted on-site and off-site to the east at the buildings occupied by Capitol Glass and Sash and JCP Cabinetry, respectively.

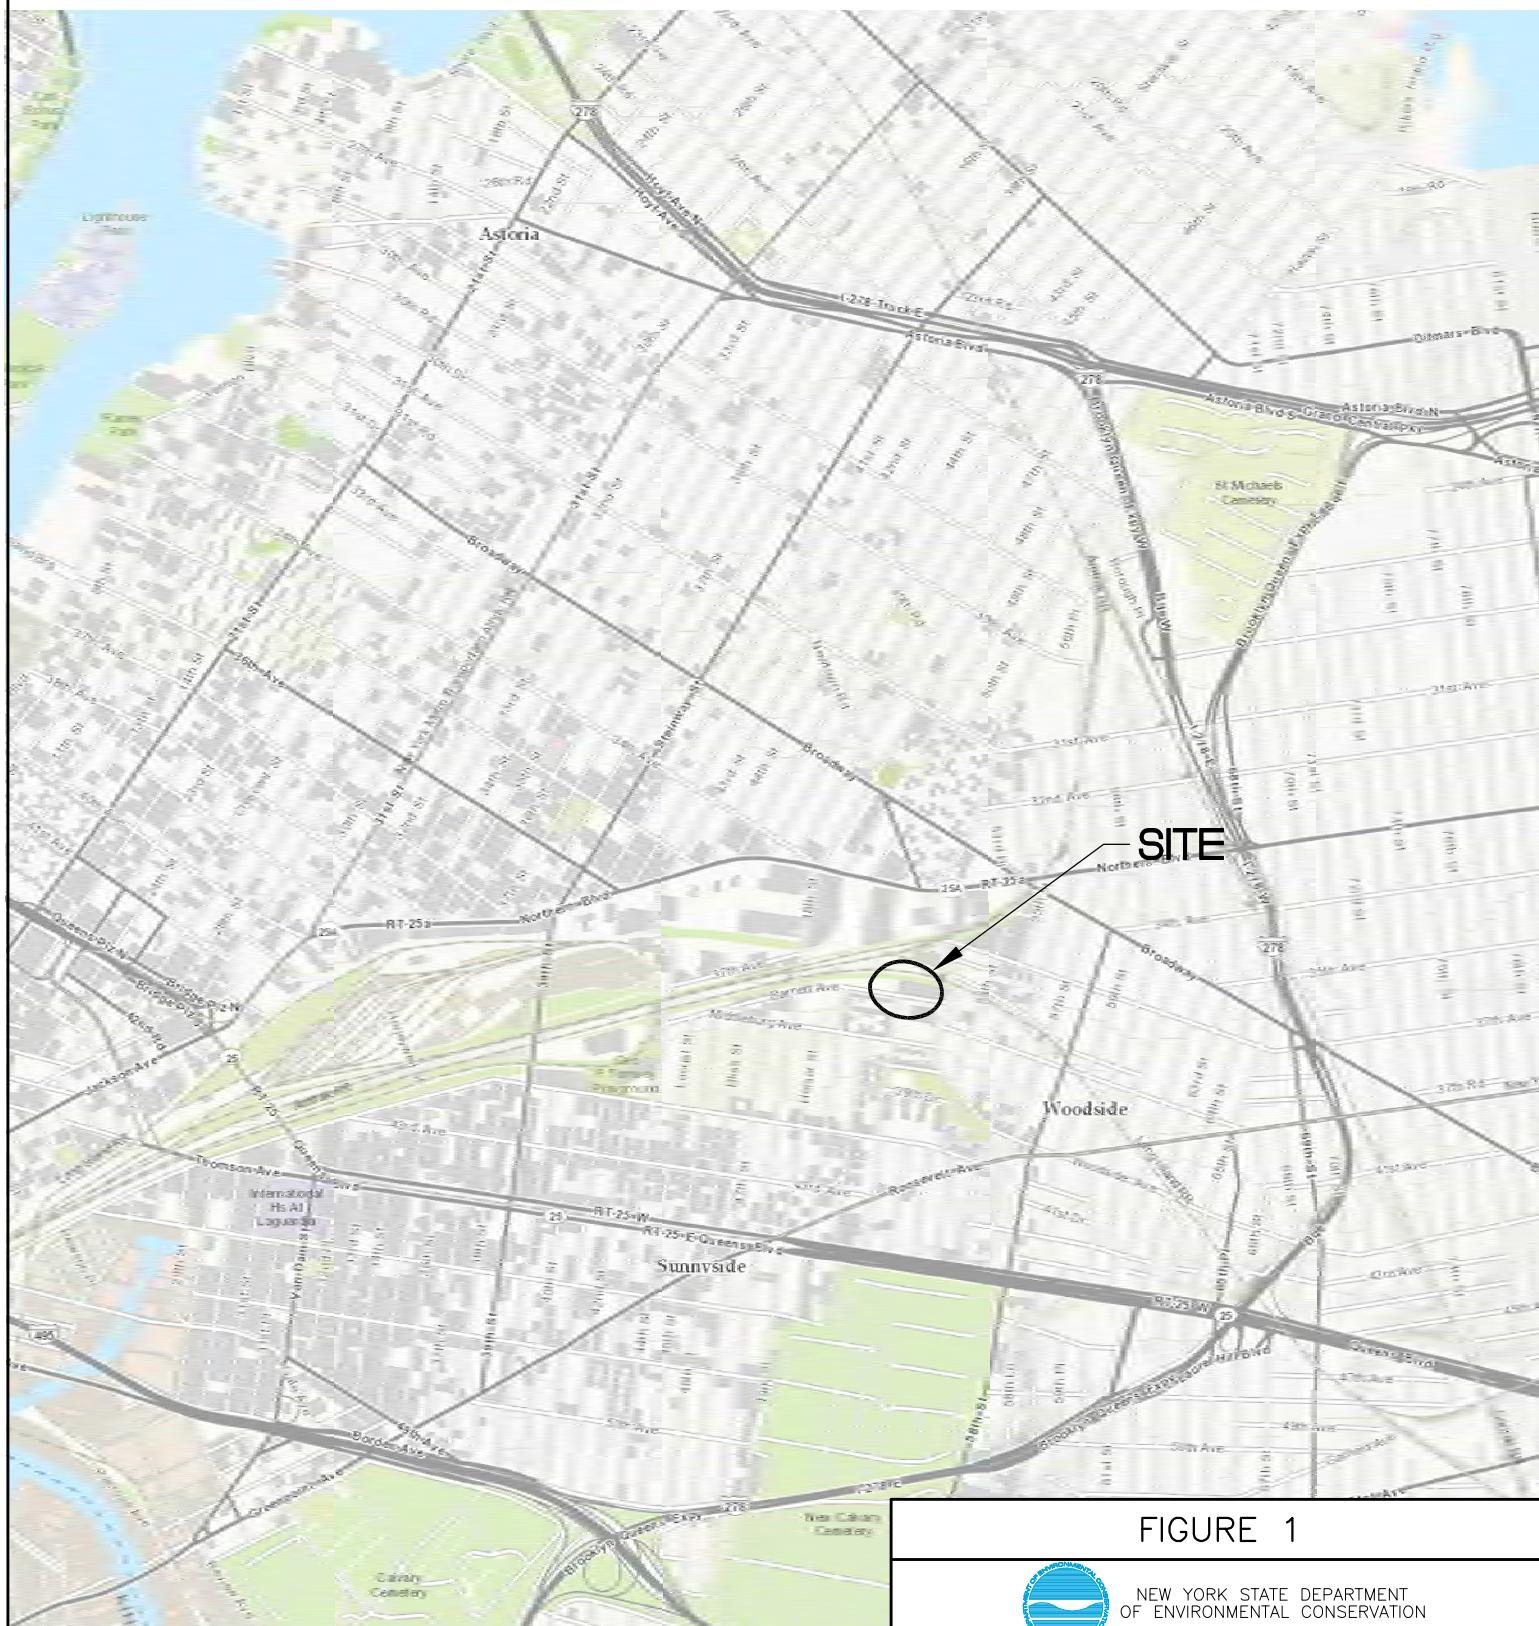

- Groundwater in the vicinity of the FCPS building is approximately 15' bgs and is impacted with PCE; which is the primary solvent used in dry cleaning operations. Following review of historical and current analytical data and investigation of potential preferential pathways the following information was determined:
 - Monitoring well MW-6, located at the corner of Barnett Avenue and Woodside Avenue, has consistently exhibited high detections of PCE, with a reduction in concentrations from 2Q15 to 3Q18. Based on the analytical data gathered to date, a subsurface preferential pathway between monitoring well MW-6 and the FCPS building has neither been confirmed nor eliminated. There may be a correlation to PCE concentrations and groundwater elevation changes at this location. Continued groundwater sampling at this location for TCL VOCs is recommended to further identify a trend in PCE concentrations as well as a comparative analysis to groundwater elevations;
 - Monitoring well MW-103S, located in the northeast corner of the FCPS building footprint, has continued to exhibit decreasing PCE detections from 260 µg/l in 2Q15 to 12 in 3Q18. Continued groundwater sampling at this location for TCL VOCs is recommended to further identify a trend in PCE concentrations as well as a comparative analysis to groundwater elevations based on potential trends identified in monitoring well MW-6;
 - Monitoring wells MW-5, MW-6, MW-103S, MW-104S, and MW-104D have consistently detected PCE daughter products such as cis-1,2-DCE and trans-1,2-DCE during site investigation activities. Continued groundwater sampling at these locations is recommended to further monitor degradation of PCE in the vicinity of the FCPS site; and,
 - Off-site monitoring wells MW-5, MW-6, MW-104S, MW-104D, and MW-107D, located southwest of the FCPS building, have consistently detected TCE above the NYSDEC GWQS. Continued groundwater sampling at these locations is recommended to further identify a trend in TCE locations.

Certificate of Analysis

Project Name: **TO-15 Air Testing**

Workorder: **2302234**

Purchase Order:

Workorder ID: **NYSDEC-FCPS Site**

Dear Ms. Weber:

Enclosed are the analytical results for samples received by the laboratory on Wednesday, March 14, 2018.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Mrs. Vanessa N Badman (Project Coordinator) at (717) 944-5541.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads.

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

ALS Spring City: 10 Riverside Drive, Spring City, PA 19475 610-948-4903

CC: Ms. Allyson Kriney

This page is included as part of the Analytical Report and must be retained as a permanent record thereof.

Mrs. Vanessa N Badman
Project Coordinator

SAMPLE SUMMARY

Workorder: 2302234 NYSDEC-FCPS Site

Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix "S" followed by a method number (such as S2310B-97) refer to methods from "Standard Methods for the Examination of Water and Wastewater".
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.

Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)
(S)	Surrogate Compound
NC	Not Calculated
*	Result outside of QC limits

Number of Shipping containers received: 2

Project Name/#: NYSDEC - FCPS Site

Date/Time received: 03-14-2018

Received By: Jasmine Stevenson

Project Manager Review (date)

(signature)

Courier: UPS J458 198 9244, J458 198 9253

Circle the response below as appropriate.

1. Did kit(s) come with a shipping slip (airbill, etc.)? YES NO NA

If YES, enter airbill numbers:

J458 198 9244, J458 198 9253

Shipping Container Information:

2. Were shipping containers received without signs of tampering? YES NO NA

Comments _____

3. Were custody seals present and intact? YES NO NA

4. Were custody seals numbers present? YES NO NA

List Custody Seal Numbers:

2898, 2899

Sample Condition:

5. Were sample containers received intact without signs of tampering? YES NO NA

Comments _____

Chain of Custody:

6. Did COC arrive with the samples? YES NO NA

7. Do sample ID/Sample Description(s) match samples submitted? YES NO NA

8. Is date and time of collection listed on the COC for all samples? YES NO NA

9. Is identification of sampler on COC? YES NO NA

10. Are requested test method(s) on COC? YES NO NA

11. Are necessary signatures on COC? YES NO NA

12. Was Internal COC initiated? (should always be YES) YES NO NA

Sample Integrity Usability:

13. Do sample containers match the COC? YES NO NA

14. Were sample canisters received within 15 days of shipment to client? YES NO NA

Anomalies or Non-Conformances:

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
*	LCS or LCSD is outside acceptance limits.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

LCMS

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
*	Isotope Dilution analyte is outside acceptance limits.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Glossary

Abbreviation

These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Edison

Narrative

CASE NARRATIVE

Client: Parsons Corporation

Project: FCPS

Report Number: 460-138477-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 8/2/2017 5:55 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 0.6° C and 1.2° C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples FC-EB-080117 (460-138477-1), FC-MW-103S (460-138477-2), FC-MW-5 (460-138477-3), FC-MW-9 (460-138477-4), FC-MW-8 (460-138477-5), FC-MW-108D (460-138477-6), FC-MW-104S (460-138477-7), FC-MW-104D (460-138477-8), FC-MW-105S (460-138477-9), FC-MW-105D (460-138477-10), FC-MW-1 (460-138477-11), FC-MW-6 (460-138477-12), FC-MW-107D (460-138477-13), FC-MW-109S (460-138477-14) and FC-MW-6-D (460-138477-15) were analyzed for Volatile organic compounds (GC-MS) in accordance with EPA SW-846 Methods 8260C. The samples were analyzed on 08/13/2017 and 08/14/2017.

The continuing calibration verification (CCV) analyzed in batch 460-456073 and batch 460-455924 was outside the method criteria for the following analytes: Chloroethane (biased high) and Bromoform (biased low). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

The laboratory control sample (LCS) for batch 456073 recovered outside control limits for the following analyte: Chloroethane. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Acetone was detected in method blank MB 460-455924/7 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Acetone was detected in method blank MB 460-456073/7 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Tetrachloroethene failed the recovery criteria low for the MS/MSD of sample FC-MW-6MS/MSD (460-138477-12) in batch 460-455924.

Case Narrative

Client: Parsons Corporation
Project/Site: FCPS

TestAmerica Job ID: 460-138477-1

Job ID: 460-138477-1 (Continued)

Laboratory: TestAmerica Edison (Continued)

Chloroethane failed the recovery criteria high.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount.

Refer to the QC report for details.

Samples FC-MW-104D (460-138477-8)[5X], FC-MW-6 (460-138477-12)[5X] and FC-MW-6-D (460-138477-15)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the volatiles analysis.

All other quality control parameters were within the acceptance limits.

1,4 DIOXANE BY METHOD 8270 SIM

Samples FC-EB-080117 (460-138477-1), FC-MW-103S (460-138477-2), FC-MW-5 (460-138477-3), FC-MW-6 (460-138477-12), FC-MW-107D (460-138477-13), FC-MW-109S (460-138477-14) and FC-MW-6-D (460-138477-15) were analyzed for 1,4 Dioxane by Method 8270 SIM in accordance with EPA SW-846 Method 8270D SIM DKQP. The samples were prepared on 08/08/2017 and analyzed on 08/09/2017 and 08/14/2017.

No difficulties were encountered during the SVOC SIM DKQP analysis.

All quality control parameters were within the acceptance limits.

PERFLUORINATED HYDROCARBONS (PFC)

Samples FC-EB-080117 (460-138477-1), FC-MW-103S (460-138477-2), FC-MW-6 (460-138477-12), FC-MW-107D (460-138477-13) and FC-MW-6-D (460-138477-15) were analyzed for Perfluorinated Hydrocarbons (PFC) in accordance with PFC. The samples were prepared on 08/07/2017 and 08/10/2017 and analyzed on 08/10/2017 and 08/15/2017.

The following samples: 460-138477-2, 460-138477-12, 460-138477-12[MS], 460-138477-12[MSD], 460-138477-13 and 460-138477-15 were decanted prior to preparation due to excessive sediment.

The Isotope Dilution Analyte (IDA) recovery associated with the following sample is below the method recommended limit for 13C5 PFNA: 460-138477-12[MS]. Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the sample.

Perfluorooctanoic acid (PFOA) was detected in method blank MB 320-178144/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No other difficulties were encountered during the Perfluorinated Hydrocarbons (PFC) analysis.

All other quality control parameters were within the acceptance limits.

Detection Summary

Accreditation/Certification Summary

Client: Parsons Corporation
Project/Site: FCPS

TestAmerica Job ID: 460-138477-1

Laboratory: TestAmerica Edison

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
New York	NELAP	2	11452	04-01-18
The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:				
Analysis Method	Prep Method	Matrix	Analyte	
8270D SIM	3510C	Water	1,4-Dioxane	

Laboratory: TestAmerica Sacramento

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

The appropriate Project Manager and Department Manager should be notified about the samples which were pH adjusted. Samples for Metal analysis which are out of compliance must be acidified at least 24 hours prior to analysis.

EDS-WI-038, Rev 4, 06/09/2014

Initials: RG

Date: 8/2/17

Note: Since laboratory accreditations are subject to change, TestAmerica Laboratories, Inc. places the ownership of method, analysis & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/ matrix being analyzed, the samples must be shipped back to the TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to TestAmerica Laboratories, Inc. attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to TestAmerica Laboratories, Inc.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC VOA

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation

These commonly used abbreviations may or may not be present in this report.

¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Parsons Corporation

Project: FCPS

Report Number: 460-148997-1

Revision 1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

Revision 1 - Per client request, the data has been revised to report non-detected results to the RL vs. MDL.

RECEIPT

The samples were received on 1/24/2018 2:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.7° C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples FC-MW-103S (460-148997-1), FC-MW-5 (460-148997-2) and FC-TB012318 (460-148997-3) were analyzed for Volatile organic compounds (GC-MS) in accordance with EPA SW-846 Methods 8260C. The samples were analyzed on 01/27/2018.

No difficulties were encountered during the volatiles analysis.

All quality control parameters were within the acceptance limits.

DISSOLVED GASES

Samples FC-MW-103S (460-148997-1) and FC-MW-5 (460-148997-2) were analyzed for dissolved gases in accordance with RSK_175. The samples were analyzed on 01/26/2018.

The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 480-397402 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the

Case Narrative

Client: Parsons Corporation
Project/Site: FCPS

TestAmerica Job ID: 460-148997-1

Job ID: 460-148997-1 (Continued)

Laboratory: TestAmerica Edison (Continued)

spiking amount.

Refer to the QC report for details.

The following non-client QC samples were diluted to bring the concentration of target analytes within the calibration range: (460-148914-A-6), (460-148914-C-6 MS) and (460-148914-C-6 MSD). Elevated reporting limits (RLs) are provided.

No other difficulties were encountered during the dissolved gases analysis.

All other quality control parameters were within the acceptance limits.

TOTAL METALS (ICP/MS)

Samples FC-MW-103S (460-148997-1) and FC-MW-5 (460-148997-2) were analyzed for Total Metals (ICP/MS) in accordance with EPA SW-846 Method 6020A. The samples were prepared on 01/31/2018 and analyzed on 02/02/2018.

No difficulties were encountered during the Metals analysis.

All quality control parameters were within the acceptance limits.

SULFATE

Samples FC-MW-103S (460-148997-1) and FC-MW-5 (460-148997-2) were analyzed for sulfate in accordance with ASTM Method D516-90. The samples were analyzed on 02/02/2018.

Samples FC-MW-103S (460-148997-1)[2X] and FC-MW-5 (460-148997-2)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the sulfate analysis.

All quality control parameters were within the acceptance limits.

NITROGEN-NITRATE

Samples FC-MW-103S (460-148997-1) and FC-MW-5 (460-148997-2) were analyzed for Nitrogen-Nitrate in accordance with SM 4500 NO3 F. The samples were analyzed on 01/25/2018.

Nitrate as N failed the recovery criteria low for the MS/MSD of sample 460-149002-1 in batch 460-492548.

Refer to the QC report for details.

Samples FC-MW-103S (460-148997-1)[10X] and FC-MW-5 (460-148997-2)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the nitrate analysis.

All other quality control parameters were within the acceptance limits.

TOTAL ORGANIC CARBON

Samples FC-MW-103S (460-148997-1) and FC-MW-5 (460-148997-2) were analyzed for total organic carbon in accordance with SM 5310B. The samples were analyzed on 02/02/2018.

No difficulties were encountered during the TOC analysis.

All quality control parameters were within the acceptance limits.

Accreditation/Certification Summary

Client: Parsons Corporation
Project/Site: FCPS

TestAmerica Job ID: 460-148997-1

Laboratory: TestAmerica Edison

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
New York	NELAP	2	11452	04-01-19

The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
6020A	3010A	Water	Iron
6020A	3010A	Water	Manganese

Laboratory: TestAmerica Buffalo

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD is outside acceptance limits.
F1	MS and/or MSD Recovery is outside acceptance limits.

GC VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation

These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Parsons Corporation

Project: FCPS

Report Number: 460-149190-1

Revision 1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

Revision 1 - Per client request, the data has been revised to report non-detected results to the RL vs. MDL.

RECEIPT

The samples were received on 1/26/2018 5:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 5.3° C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples FC-MW-104D (460-149190-1), FC-TB012518 (460-149190-2), FC-MW-104S (460-149190-3), FC-MW-109S (460-149190-4), FC-MW-109S-D (460-149190-5), FC-MW-3 (460-149190-6), FC-MW-107D (460-149190-7), FC-MW-9 (460-149190-8), FC-MW-108D (460-149190-9), FC-MW-8 (460-149190-10), FC-EB-012618 (460-149190-11) and FC-MW-6 (460-149190-12) were analyzed for Volatile organic compounds (GC-MS) in accordance with EPA SW-846 Methods 8260C. The samples were analyzed on 01/29/2018 and 01/30/2018.

The laboratory control sample (LCS) for analytical batch 460-493297 recovered outside control limits for the following analyte: Carbon disulfide. This analyte was not detected in the associated samples; therefore, the data have been reported.

Carbon disulfide failed the recovery criteria low for the Matrix Spike/Matrix Spike Duplicate (MS/MSD) of sample FC-MW-109SMS (460-149190-4) in batch 460-493297.

Refer to the QC report for details.

Samples FC-MW-104D (460-149190-1)[2X], FC-MW-104S (460-149190-3)[2X] and FC-MW-6 (460-149190-12)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Case Narrative

Client: Parsons Corporation
Project/Site: FCPS

TestAmerica Job ID: 460-149190-1

Job ID: 460-149190-1 (Continued)

Laboratory: TestAmerica Edison (Continued)

No other difficulties were encountered during the volatiles analysis.

All other quality control parameters were within the acceptance limits.

DISSOLVED GASES

Samples FC-MW-104D (460-149190-1), FC-MW-104S (460-149190-3) and FC-MW-6 (460-149190-12) were analyzed for dissolved gases in accordance with RSK_175. The samples were analyzed on 01/31/2018.

No difficulties were encountered during the dissolved gases analysis.

All quality control parameters were within the acceptance limits.

TOTAL METALS (ICP/MS)

Samples FC-MW-104D (460-149190-1), FC-MW-104S (460-149190-3) and FC-MW-6 (460-149190-12) were analyzed for Total Metals (ICP/MS) in accordance with EPA SW-846 Method 6020A. The samples were prepared on 02/01/2018 and analyzed on 02/02/2018.

No difficulties were encountered during the Metals analysis.

All quality control parameters were within the acceptance limits.

SULFATE

Samples FC-MW-104D (460-149190-1), FC-MW-104S (460-149190-3) and FC-MW-6 (460-149190-12) were analyzed for sulfate in accordance with ASTM Method D516-90. The samples were analyzed on 02/06/2018.

Sulfate failed the recovery criteria high for the MS/MSD of sample FC-MW-6MS (460-149190-12) in batch 460-495320.

Refer to the QC report for details.

Sample FC-MW-104D (460-149190-1)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the sulfate analysis.

All other quality control parameters were within the acceptance limits.

NITROGEN-NITRATE

Samples FC-MW-104D (460-149190-1), FC-MW-104S (460-149190-3) and FC-MW-6 (460-149190-12) were analyzed for Nitrogen-Nitrate in accordance with SM 4500 NO₃ F. The samples were analyzed on 01/27/2018.

Samples FC-MW-104D (460-149190-1)[10X], FC-MW-104S (460-149190-3)[10X] and FC-MW-6 (460-149190-12)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the nitrate analysis.

All quality control parameters were within the acceptance limits.

TOTAL ORGANIC CARBON

Samples FC-MW-104D (460-149190-1), FC-MW-104S (460-149190-3) and FC-MW-6 (460-149190-12) were analyzed for total organic carbon in accordance with SM 5310B. The samples were analyzed on 02/07/2018.

No difficulties were encountered during the TOC analysis.

All quality control parameters were within the acceptance limits.

Accreditation/Certification Summary

Client: Parsons Corporation
Project/Site: FCPS

TestAmerica Job ID: 460-149190-1

Laboratory: TestAmerica Edison

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
New York	NELAP	2	11452	04-01-19

The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
6020A	3010A	Water	Iron
6020A	3010A	Water	Manganese

Laboratory: TestAmerica Buffalo

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

THE LAGGER IN ENVIRONMENTAL TESTING

Note: Since laboratory accreditation are subject to change, TestAmerica Laboratories, Inc. places the ownership of method, analysis & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, samples must be shipped back to the TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to TestAmerica Laboratories, Inc. attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to TestAmerica Laboratories, Inc.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
H	Sample was prepped or analyzed beyond the specified holding time

Glossary

Abbreviation

These commonly used abbreviations may or may not be present in this report.

☒	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Parsons Corporation

Project: Former Cleaner Project - Woodside, NY

Report Number: 460-160904-1

Revision 1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

Revision 1 - Per client request, the data has been revised to report non-detected results to the RL vs. MDL.

RECEIPT

The samples were received on 7/20/2018 9:25 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.3° C.

Receipt Exceptions

The following sample(s) was received with less than 2 days remaining on the holding time or less than one shift (8 hours) remaining on a test with a holding time of 48 hours or less. As such, the laboratory had insufficient time remaining to perform the analysis within holding time: sample #6 for Nitrate.

One or more containers for the following sample(s) was received broken: one vial from sample #2 and one vial from sample #4.

The following samples were approved for the continuation of the nitrate analysis out of hold time by the client on July 23, 2018: FC-MW-103S (460-160904-5), FC-MW-5 (460-160904-6), FC-MW-104S (460-160904-7), FC-MW-104D (460-160904-8), FC-MW-6 (460-160904-10) and FC-EB-071718 (460-160904-12).

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples FC-MW-7 (460-160904-1), FC-MW-7-D (460-160904-2), FC-MW-8 (460-160904-3), FC-MW-108D (460-160904-4), FC-MW-103S (460-160904-5), FC-MW-5 (460-160904-6), FC-MW-104S (460-160904-7), FC-MW-104D (460-160904-8), FC-MW-107D (460-160904-9), FC-MW-6 (460-160904-10), FC-TB071718 (460-160904-11) and FC-EB-071718 (460-160904-12) were analyzed for Volatile organic compounds (GC-MS) in accordance with EPA SW-846 Methods 8260C. The samples were analyzed on 07/27/2018 and 07/28/2018.

Case Narrative

Client: Parsons Corporation

Project/Site: Former Cleaner Project - Woodside, NY

TestAmerica Job ID: 460-160904-1

Job ID: 460-160904-1 (Continued)

Laboratory: TestAmerica Edison (Continued)

Sample FC-MW-104S (460-160904-7)[2X] required dilution prior to analysis to bring the concentration of target analytes within the calibration range. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the volatiles analysis.

All quality control parameters were within the acceptance limits.

DISSOLVED GASES

Samples FC-MW-103S (460-160904-5), FC-MW-5 (460-160904-6), FC-MW-104S (460-160904-7), FC-MW-104D (460-160904-8), FC-MW-6 (460-160904-10) and FC-EB-071718 (460-160904-12) were analyzed for dissolved gases in accordance with RSK_175. The samples were analyzed on 07/24/2018.

No difficulties were encountered during the dissolved gases analysis.

All quality control parameters were within the acceptance limits.

METALS

Samples FC-MW-103S (460-160904-5), FC-MW-5 (460-160904-6), FC-MW-104S (460-160904-7), FC-MW-104D (460-160904-8), FC-MW-6 (460-160904-10) and FC-EB-071718 (460-160904-12) were analyzed for Metals in accordance with 6020B. The samples were prepared and analyzed on 07/24/2018.

No difficulties were encountered during the Metals analysis.

All quality control parameters were within the acceptance limits.

SULFATE

Samples FC-MW-103S (460-160904-5), FC-MW-5 (460-160904-6), FC-MW-104S (460-160904-7), FC-MW-104D (460-160904-8), FC-MW-6 (460-160904-10) and FC-EB-071718 (460-160904-12) were analyzed for sulfate in accordance with ASTM Method D516-90. The samples were analyzed on 07/24/2018.

Samples FC-MW-103S (460-160904-5)[5X] and FC-MW-104D (460-160904-8)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the sulfate analysis.

All quality control parameters were within the acceptance limits.

NITROGEN-NITRATE

Samples FC-MW-103S (460-160904-5), FC-MW-5 (460-160904-6), FC-MW-104S (460-160904-7), FC-MW-104D (460-160904-8), FC-MW-6 (460-160904-10) and FC-EB-071718 (460-160904-12) were analyzed for Nitrogen-Nitrate in accordance with SM 4500 NO₃ F. The samples were analyzed on 07/20/2018.

The following sample(s) was received with less than 2 days remaining on the holding time or less than one shift (8 hours) remaining on a test with a holding time of 48 hours or less. As such, the laboratory had insufficient time remaining to perform the analysis within holding time: sample #6 for Nitrate.

Samples FC-MW-103S (460-160904-5)[10X], FC-MW-5 (460-160904-6)[5X], FC-MW-104S (460-160904-7)[5X] and FC-MW-104D (460-160904-8)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the nitrate analysis.

All quality control parameters were within the acceptance limits.

TOTAL ORGANIC CARBON

Case Narrative

Client: Parsons Corporation

Project/Site: Former Cleaner Project - Woodside, NY

TestAmerica Job ID: 460-160904-1

Job ID: 460-160904-1 (Continued)

Laboratory: TestAmerica Edison (Continued)

Samples FC-MW-103S (460-160904-5), FC-MW-5 (460-160904-6), FC-MW-104S (460-160904-7), FC-MW-104D (460-160904-8), FC-MW-6 (460-160904-10) and FC-EB-071718 (460-160904-12) were analyzed for total organic carbon in accordance with SM 5310B. The samples were analyzed on 07/27/2018.

No difficulties were encountered during the TOC analysis.

All quality control parameters were within the acceptance limits.

If pH adjustments are required record the information below:

Sample No(s). adjusted: NA
Preservative Name/Conc.: NA

Lot # of Preservative(s): NA
The appropriate Project Manager and Department Manager should be notified about the samples which were pH adjusted.

Samples for Metatanalysis which are out of compliance must be acidified at least 24 hours prior to analysis.
Initials: J
Volume of Preservative used (ml): NA
Expiration Date: NA
Date: 7/20/18

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	False	Refer to Job Narrative for details.
Sample containers have legible labels.	True	
Containers are not broken or leaking.	False	Refer to Job Narrative for details.
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation

These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Parsons Corporation

Project: FCPS

Report Number: 460-160989-1

Revision 1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

Revision 1 - Per client request, the data has been revised to report non-detected results to the RL vs. MDL.

RECEIPT

The samples were received on 7/20/2018 6:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.9° C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples FC-MW-105D (460-160989-1), FC-MW-105S (460-160989-2), FC-MW-1 (460-160989-3), FC-MW-109S (460-160989-4), FC-MW-9 (460-160989-5), FC-MW-3 (460-160989-6) and FC-TB072018 (460-160989-7) were analyzed for Volatile organic compounds (GC-MS) in accordance with EPA SW-846 Methods 8260C. The samples were analyzed on 07/28/2018.

No difficulties were encountered during the volatiles analysis.

All quality control parameters were within the acceptance limits.

PARSONS

SECTION 1

DATA USABILITY SUMMARY

Air samples were collected from the Former Cleaners Products Supply site in Sunnyside, New York on March 12, 2018. Analytical results from these samples were validated and reviewed by Parsons for usability with respect to the following requirements:

- Work Plan,
- Analytical methodologies, and
- USEPA Region II Standard Operating Procedures (SOPs) for organic and inorganic data review.

The analytical laboratory for this project was ALS Environmental (ALS) in Middletown, Pennsylvania. This laboratory is certified to perform project analyses through the New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP).

1.1 LABORATORY DATA PACKAGES

The laboratory data package turnaround time, defined as the time from sample receipt by the laboratory to receipt of the analytical data packages by Parsons, was 231 days for the project samples. The data packages received from ALS were paginated, complete, and overall were of good quality. Comments on specific quality control (QC) and other requirements are discussed in detail in the attached data validation report which is summarized in Section 2.

1.2 SAMPLING AND CHAIN-OF-CUSTODY

The samples were collected, properly preserved, shipped under a chain-of-custody (COC) record, and received at ALS within two days of sampling. All samples were received intact and in good condition at the laboratory.

1.3 LABORATORY ANALYTICAL METHODS

The project samples that were collected from the site were analyzed for volatile organic compounds (VOCs) including naphthalene. Summaries of issues concerning these laboratory analyses are presented in Subsection 1.3.1. The data qualifications resulting from the data validation review and statements on the laboratory analytical precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS) are discussed for each analytical method by media in Section 2. The laboratory data were reviewed and may be qualified with the following validation flags:

- "U" - not detected at the value given,
- "UJ" - estimated and not detected at the value given,
- "J" - estimated at the value given,

PARSONS

- "J+" - estimated biased high at the value given,
- "J-" - estimated biased low at the value given,
- "N" - presumptive evidence at the value given, and
- "R" - unusable value.

The validated laboratory data were tabulated and are presented in Attachment A.

1.3.1 Volatile Organic Analysis

The project samples were analyzed for VOCs including naphthalene using the USEPA TO-15 analytical method. Certain reported results for these samples were qualified as estimated based upon instrument calibrations. The reported VOC analytical results were 100% complete (i.e., usable) for the project data. PARCCS requirements were met.

SECTION 2

DATA VALIDATION REPORT

2.1 AIR

Data review has been completed for data packages generated by ALS containing air samples collected from the site. Analytical results from these samples were contained within sample delivery group (SDG) 2302234. All of these samples were properly preserved, shipped under a COC record, and received intact by the analytical laboratory. The validated laboratory data are presented in Attachment A.

Data validation was performed for all samples in accordance with the most current editions of the USEPA Region II SOPs for organic data review. This data validation and usability report is presented by analysis type.

2.1.1 Volatiles (Including Naphthalene)

The following items were reviewed for compliancy in the volatile analysis:

- Custody documentation
- Holding times
- Surrogate recoveries
- Matrix spike/matrix spike duplicate (MS/MSD) precision and accuracy
- Laboratory control sample (LCS) recoveries
- Laboratory duplicate precision
- Laboratory method blank contamination
- GC/MS instrument performance
- Initial and continuing calibrations
- Internal standard area counts and retention times
- Summa canister certifications
- Sample result verification and identification
- Quantitation limits
- Data completeness

These items were considered compliant and acceptable in accordance with the validation protocols with the exception of initial calibrations as discussed below.

PARSONS

Initial Calibrations

All initial calibration compounds were compliant with a minimum average RRF of 0.05 and a maximum percent relative standard deviation (%RSD) within 30%. It was noted that initial calibration verification standard recoveries exceeded the 70-130%R QC limit for naphthalene (146%R) and 1,2,4-trichlorobenzene (141%R, 143%R) associated with the project samples. Therefore, the sample results for these compounds were considered estimated with positive results qualified "J" for the affected samples.

It was noted that acetone exceeded the instrument calibration range in sample 52-07-ID-Metal Shop. Therefore, this result was considered estimated and qualified "J" for this sample.

Usability

All volatile air sample results were considered usable following data validation.

Summary

The quality assurance objectives for measurement data included considerations for precision, accuracy, representativeness, completeness, comparability, and sensitivity. The volatile air data presented by ALS were 100% complete (i.e., usable). The validated volatile laboratory data are tabulated and presented in Attachment A.

PARSONS

SECTION 1

DATA USABILITY SUMMARY

Groundwater samples were collected from the Former Cleaners Products Supply site in Sunnyside, New York on January 23, 2018 through January 26, 2018 and July 17, 2018 through July 20, 2018. Analytical results from these samples were validated and reviewed by Parsons for usability with respect to the following requirements:

- Work Plan,
- Analytical methodologies, and
- USEPA Region II Standard Operating Procedures (SOPs) for organic and inorganic data review.

The analytical laboratory for this project was Test America Laboratories (TAL) in Edison, New Jersey and Buffalo, New York. This laboratory is certified to perform project analyses through the New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP).

1.1 LABORATORY DATA PACKAGES

The laboratory data package turnaround time, defined as the time from sample receipt by the laboratory to receipt of the analytical data packages by Parsons, was 10-12 days for the project samples. The data packages received from TAL were paginated, complete, and overall were of good quality. Comments on specific quality control (QC) and other requirements are discussed in detail in the attached data validation report which is summarized in Section 2.

1.2 SAMPLING AND CHAIN-OF-CUSTODY

The samples were collected, properly preserved, shipped under a chain-of-custody (COC) record, and received at TAL within one day of sampling. All samples were received intact and in good condition at the laboratory.

1.3 LABORATORY ANALYTICAL METHODS

Groundwater samples that were collected from the site were analyzed for volatile organic compounds (VOCs) including methane, ethane, and ethene; iron; manganese; nitrate; sulfate; and total organic carbon (TOC). Summaries of issues concerning these laboratory analyses are presented in Subsections 1.3.1 through 1.3.3. The data qualifications resulting from the data validation review and statements on the laboratory analytical precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS) are discussed in Section 2. The laboratory data were reviewed and may be qualified with the following validation flags:

"U" - not detected at the value given,

PARSONS

"UJ" - estimated and not detected at the value given,
"J" - estimated at the value given,
"J+" - estimated biased high at the value given,
"J-" - estimated biased low at the value given,
"N" - presumptive evidence at the value given, and
"R" - unusable value.

The validated laboratory data were tabulated and are presented in Attachment A.

1.3.1 Volatile Organic Analysis

The project samples were analyzed for VOCs including methane, ethane, and ethene using the USEPA SW-846 8260C and USEPA approved RSK-175 analytical methods. Certain reported results for these samples were qualified as estimated based upon laboratory control sample recoveries, matrix spike/matrix spike duplicate (MS/MSD) recoveries, and instrument calibrations; and qualified as nondetected based upon trip blank and equipment blank contamination. The reported VOC analytical results were 100% complete (i.e., usable) for the project data presented by TAL. PARCCS requirements were met.

1.3.2 Metals Analysis

The project samples were analyzed for iron and manganese using the USEPA SW-846 6020B analytical method. The reported results for the metals samples did not require qualification resulting from data validation. The reported metals analytical results were considered 100% complete (i.e., usable) for the project data presented by TAL. PARCCS requirements were met.

1.3.3 Wet Chemistry Analysis

The project samples were analyzed for nitrate, sulfate, and TOC using the SM4500, ASTM D516-90, and SM5310B analytical methods, respectively. Certain reported results for these samples were qualified as estimated based upon MS/MSD recoveries. The reported wet chemistry analytical results were considered 100% complete (i.e., usable) for the project data presented by TAL. PARCCS requirements were met.

SECTION 2

DATA VALIDATION REPORT

2.1 GROUNDWATER

Data review has been completed for data packages generated by TAL containing groundwater samples collected from the site. Analytical results from these samples were contained within sample delivery groups (SDGs) 460-148997-1, 460-149190-1, 460-160904-1, and 460-160989-1. All of these samples were properly preserved, shipped under a COC record, and received intact by the analytical laboratory. The validated laboratory data are presented in Attachment A.

Data validation was performed for all samples in accordance with the most current editions of the USEPA Region II SOPs for organic data review. This data validation and usability report is presented by analysis type.

2.1.1 Volatiles (Including Methane, Ethane, and Ethene)

The following items were reviewed for compliancy in the volatile analysis:

- Custody documentation
- Holding times
- Surrogate recoveries
- Matrix spike/matrix spike duplicate (MS/MSD) precision and accuracy
- Laboratory control sample (LCS) recoveries
- Laboratory method blank and trip/equipment blank contamination
- GC/MS instrument performance
- Initial and continuing calibrations
- Internal standard area counts and retention times
- Field duplicate precision
- Sample result verification and identification
- Quantitation limits
- Data completeness

These items were considered compliant and acceptable in accordance with the validation protocols with the exception of MS/MSD precision and accuracy, LCS recoveries, blank contamination, and continuing calibrations as discussed below.

PARSONS

MS/MSD Precision and Accuracy

All MS/MSD precision (relative percent difference; RPD) and accuracy (percent recovery; %R) measurements were considered acceptable and within QC limits for designated spiked project samples with the exception of the low MS/MSD accuracy results for carbon disulfide (48%R/47%R; QC limit 69-133%R) during the spiked analyses of sample FC-MW-109S (1/25/2018). Therefore, the nondetected carbon disulfide result was considered estimated and qualified “UJ” for the affected parent sample.

LCS Recoveries

All LCS recoveries were considered acceptable and within QC limits with the exception of the low LCS recovery for carbon disulfide (59%R; QC limit 69-133%R) associated with the samples collected on 1/25/2018 and 1/26/2018. Therefore, the carbon disulfide results which were nondetects were considered estimated and qualified “UJ” for the affected samples.

Blank Contamination

The trip blank associated with samples collected on 1/23/2018 contained acetone below the reporting limit at a concentration of 4 µg/L; the trip blank associated with samples collected on 1/25/2018 and 1/26/2018 contained methylene chloride below the reporting limit at a concentration of 0.23 µg/L; the trip blank associated with samples collected on 7/17/2018 and 7/18/2018 contained methylene chloride at a concentration of 4.3 µg/L; the equipment blank associated with samples collected on 7/17/2018 and 7/18/2018 contained acetone and methylene chloride at concentrations of 5.6 and 4.3 µg/L, respectively; and the trip blank associated with samples collected on 7/19/2018 and 7/20/2018 contained acetone and methylene chloride at concentrations of 5.4 and 5.7 µg/L, respectively. Therefore, results for these compounds less than the validation action concentrations were considered not detected and qualified “U” for the affected samples.

Continuing Calibrations

All continuing calibration compounds were compliant with a minimum relative response factor (RRF) of 0.05 (0.01 for poor performers) and a maximum percent difference (%D) within ±20% (±40% for poor performers) with the exception of carbon disulfide (-42.1%D, -51.5%D) and bromomethane (-23.2%D, -28.8%D) in the continuing calibrations associated with samples collected on 1/25/2018 and 1/26/2018; and 1,1-dichloroethene (-25.6%D) in the continuing calibration associated with samples with lab IDs 460-149190-1, -3, -9, and -12. Therefore, the sample results for these noncompliant compounds which were nondetects were considered estimated and qualified “UJ” for the affected samples.

Usability

All volatile sample results were considered usable following data validation.

Summary

The quality assurance objectives for measurement data included considerations for precision, accuracy, representativeness, completeness, comparability, and sensitivity. The volatile data

PARSONS

presented by TAL were 100% complete (i.e., usable). The validated volatile laboratory data are tabulated and presented in Attachment A.

2.1.2 Metals

The following items were reviewed for compliancy in the metals analysis:

- Custody documentation
- Holding times
- Initial and continuing calibration verifications
- Initial and continuing calibration, laboratory preparation blank, and equipment blank contamination
- Interference check sample (ICS) recoveries
- Matrix spike (MS) recoveries
- Laboratory duplicate precision
- LCS recoveries
- ICP serial dilution
- Field duplicate precision
- Sample result verification and identification
- Quantitation limits
- Data completeness

These items were considered compliant and acceptable in accordance with the validation protocols.

Usability

All metals sample results were considered usable following data validation.

Summary

The quality assurance objectives for measurement data included considerations for precision, accuracy, representativeness, completeness, comparability, and sensitivity. The metals data presented by TAL were 100% complete (i.e., usable). The validated metals laboratory data are tabulated and presented in Attachment A.

2.1.3 Wet Chemistry

The following items were reviewed for compliancy in the wet chemistry analysis:

- Custody documentation
- Holding times
- Initial and continuing calibration verifications

PARSONS

- Initial and continuing calibration, laboratory preparation blank, and equipment blank contamination
- Matrix spike (MS) recoveries
- Laboratory duplicate precision
- LCS recoveries
- Field duplicate precision
- Sample result verification and identification
- Quantitation limits
- Data completeness

These items were considered compliant and acceptable in accordance with the validation protocols with the exception of blank contamination and matrix spike recoveries as discussed below.

Blank Contamination

The field QC equipment blank associated with samples collected on 7/17/2018 and 7/18/2018 contained TOC below the reporting limit at a concentration of 0.43 mg/L. Validation qualification of these samples was not required.

Matrix Spike Recoveries

All matrix spike recoveries were considered acceptable and within QC limits with the exception of the high matrix spike recoveries for sulfate (124%R, 117%R; QC limit 85-115%R) associated with sample FC-MW-6 (1/26/2018). Therefore, the positive sulfate result was considered estimated and qualified "J" for the affected parent sample.

Usability

All wet chemistry sample results were considered usable following data validation.

Summary

The quality assurance objectives for measurement data included considerations for precision, accuracy, representativeness, completeness, comparability, and sensitivity. The wet chemistry groundwater data presented by TAL were 100% complete (i.e., usable). The validated wet chemistry laboratory data are tabulated and presented in Attachment A.

NOVEMBER 2018

SECTION 1

DATA USABILITY SUMMARY

Groundwater samples were collected from the Former Cleaners Products Supply site in Sunnyside, New York on August 1, 2018 through August 2, 2018. Analytical results from these samples were validated and reviewed by Parsons for usability with respect to the following requirements:

- Work Plan,
- Analytical methodologies, and
- USEPA Region II Standard Operating Procedures (SOPs) for organic and inorganic data review.

The analytical laboratory for this project was Test America Laboratories (TAL) in Edison, New Jersey and West Sacramento, California. This laboratory is certified to perform project analyses through the New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP).

1.1 LABORATORY DATA PACKAGES

The laboratory data package turnaround time, defined as the time from sample receipt by the laboratory to receipt of the analytical data packages by Parsons, was 21 days for the project samples. The data packages received from TAL were paginated, complete, and overall were of good quality. Comments on specific quality control (QC) and other requirements are discussed in detail in the attached data validation report which is summarized in Section 2.

1.2 SAMPLING AND CHAIN-OF-CUSTODY

The samples were collected, properly preserved, shipped under a chain-of-custody (COC) record, and received at TAL within one day of sampling. All samples were received intact and in good condition at the laboratory.

1.3 LABORATORY ANALYTICAL METHODS

Groundwater samples that were collected from the site were analyzed for volatile organic compounds (VOCs), 1,4-dioxane, and per- and poly-fluorinated alkyl substances (PFAS). Summaries of issues concerning these laboratory analyses are presented in Subsections 1.3.1 through 1.3.3. The data qualifications resulting from the data validation review and statements on the laboratory analytical precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS) are discussed in Section 2. The laboratory data were reviewed and may be qualified with the following validation flags:

"U" - not detected at the value given,

"UJ" - estimated and not detected at the value given,

PARSONS

- "J" - estimated at the value given,
- "J+" - estimated biased high at the value given,
- "J-" - estimated biased low at the value given,
- "N" - presumptive evidence at the value given, and
- "R" - unusable value.

The validated laboratory data were tabulated and are presented in Attachment A.

1.3.1 Volatile Organic Analysis

The project samples were analyzed for VOCs using the USEPA SW-846 8260C analytical method. Certain reported results for these samples were qualified as estimated based upon instrument calibrations; and qualified as nondetected based upon laboratory method blank and equipment blank contamination. The reported VOC analytical results were 100% complete (i.e., usable) for the project data presented by TAL. PARCCS requirements were met.

1.3.2 1,4-Dioxane Organic Analysis

The project samples were analyzed for 1,4-dioxane using the USEPA SW-846 8270D analytical method. The reported results for these samples did not require qualification resulting from data validation. The reported 1,4-dioxane analytical results were considered 100% complete (i.e., usable) for the project data presented by TAL. PARCCS requirements were met.

1.3.3 PFAS Organic Analysis

The project samples were analyzed for PFAS using the modified USEPA 537.1 analytical method. The reported results for these samples did not require qualification resulting from data validation. The reported PFAS analytical results were considered 100% complete (i.e., usable) for the project data presented by TAL. PARCCS requirements were met.

SECTION 2

DATA VALIDATION REPORT

2.1 GROUNDWATER

Data review has been completed for data packages generated by TAL containing groundwater samples collected from the site. Analytical results from these samples were contained within sample delivery group (SDG) 460-138477-1. All of these samples were properly preserved, shipped under a COC record, and received intact by the analytical laboratory. The validated laboratory data are presented in Attachment A.

Data validation was performed for all samples in accordance with the most current editions of the USEPA Region II SOPs for organic data review. This data validation and usability report is presented by analysis type.

2.1.1 Volatiles

The following items were reviewed for compliancy in the volatile analysis:

- Custody documentation
- Holding times
- Surrogate recoveries
- Matrix spike/matrix spike duplicate (MS/MSD) precision and accuracy
- Laboratory control sample (LCS) recoveries
- Laboratory method blank and equipment blank contamination
- GC/MS instrument performance
- Initial and continuing calibrations
- Internal standard area counts and retention times
- Field duplicate precision
- Sample result verification and identification
- Quantitation limits
- Data completeness

These items were considered compliant and acceptable in accordance with the validation protocols with the exception of MS/MSD precision and accuracy, LCS recoveries, blank contamination, and continuing calibrations as discussed below.

PARSONS

MS/MSD Precision and Accuracy

All MS/MSD precision (relative percent difference; RPD) and accuracy (percent recovery; %R) measurements were considered acceptable and within QC limits for designated spiked project samples with the exception of the high MS/MSD accuracy results for chloroethane (205%R/215%R; QC limit 52-150%R) during the spiked analyses of sample FC-MW-6. Validation qualification was not required for the affected parent sample.

LCS Recoveries

All LCS recoveries were considered acceptable and within QC limits with the exception of the high LCS recovery for chloroethane (169%R; QC limit 52-150%R) associated with all samples. Since chloroethane was not detected, validation qualification was not required for the affected samples.

Blank Contamination

The laboratory method blanks associated with the project samples contained acetone below the reporting limit at concentrations of 2.05 and 2.62 µg/L; and the equipment blank associated with the project samples contained acetone, ethylbenzene, and total xylenes at concentrations of 5.6, 0.4, and 1.0 µg/L, respectively. Therefore, results for these compounds less than the validation action concentrations were considered not detected and qualified "U" for the affected samples.

Continuing Calibrations

All continuing calibration compounds were compliant with a minimum relative response factor (RRF) of 0.05 (0.01 for poor performers) and a maximum percent difference (%D) within ±20% (±40% for poor performers) with the exception of chloroethane (82.5%D, 70.0%D) and bromoform (-24.8%D, -20.9%D) in the continuing calibrations associated with all samples. Therefore, the sample results for these noncompliant compounds were considered estimated with positive results qualified "J" and nondetected results qualified "UJ" for the affected samples.

Usability

All volatile sample results were considered usable following data validation.

Summary

The quality assurance objectives for measurement data included considerations for precision, accuracy, representativeness, completeness, comparability, and sensitivity. The volatile data presented by TAL were 100% complete (i.e., usable). The validated volatile laboratory data are tabulated and presented in Attachment A.

2.1.2 1,4-Dioxane

The following items were reviewed for compliancy in the 1,4-dioxane analysis:

- Custody documentation

PARSONS

- Holding times
- Surrogate recoveries
- Matrix spike/matrix spike duplicate (MS/MSD) precision and accuracy
- Laboratory control sample (LCS) recoveries
- Laboratory method blank and equipment blank contamination
- GC/MS instrument performance
- Initial and continuing calibrations
- Internal standard area counts and retention times
- Field duplicate precision
- Sample result verification and identification
- Quantitation limits
- Data completeness

These items were considered compliant and acceptable in accordance with the validation protocols.

Usability

All 1,4-dioxane sample results were considered usable following data validation.

Summary

The quality assurance objectives for measurement data included considerations for precision, accuracy, representativeness, completeness, comparability, and sensitivity. The 1,4-dioxane data presented by TAL were 100% complete (i.e., usable). The validated 1,4-dioxane laboratory data are tabulated and presented in Attachment A.

2.1.3 PFAS

The following items were reviewed for compliancy in the PFAS analysis:

- Custody documentation
- Holding times
- Surrogate recoveries
- Matrix spike/matrix spike duplicate (MS/MSD) precision and accuracy
- Laboratory control sample (LCS) recoveries
- Laboratory method blank and equipment blank contamination
- Instrument performance
- Initial and continuing calibrations

- Field duplicate precision
- Sample result verification and identification
- Quantitation limits
- Data completeness

These items were considered compliant and acceptable in accordance with the validation protocols with the exception of blank contamination as discussed below.

Blank Contamination

The laboratory method blank associated with the project samples contained PFOA below the reporting limit at a concentration of 1.55 ng/L; and the field QC equipment blank associated with the project samples contained PFHpA, PFOA, PFHxS, and PFOS at concentrations of 1.5, 3.8, 0.94, and 1.3 ng/L, respectively. Validation qualification of these samples was not required.

Usability

All PFAS sample results were considered usable following data validation.

Summary

The quality assurance objectives for measurement data included considerations for precision, accuracy, representativeness, completeness, comparability, and sensitivity. The PFAS groundwater data presented by TAL were 100% complete (i.e., usable). The validated PFAS laboratory data are tabulated and presented in Attachment A.
