## **1.0 Introduction**

This Operation, Monitoring, and Maintenance (OM&M) Plan is meant to govern the initial shakedown operations and longer term operation and maintenance of the Soil Vapor Extraction (SVE) system installed in accordance with the August 2016 Soil Vapor Extraction System Design Work Plan, at the Former Cleaners Products Supply State Superfund Site, Site No. 241123, located at 50-45 Barnett Avenue, Sunnyside, Queens, NY.

This OM&M Plan expands upon the conceptual OM&M Plan presented in the August 2016 SVE work plan and shall be used to guide the operation and maintenance of this system for the initial year of operations. Following the first year of operating the SVE system, this plan may require modification before it is incorporated into the Site Management Plan of the Former Cleaners Products Supply State Superfund Site.

## **2.0 SVE System Components**

The SVE System includes five (5) vapor extraction wells, overhead piping routed to an external treatment shed, a moisture separator, particulate filter, 20 horsepower regenerative blower, and two (2) vapor-phase granular activated carbon vessels.

### **2.1 SVE Wells**

The five (5) SVE wells are constructed with a 10 foot screen located at 6 to 16 feet below grade at the locations indicated in Figure 1. Well construction details are shown on Figure 2. The screen interval was chosen based on the depth of PCE contamination found during the Site Characterization and Remedial Investigation and the groundwater depth beneath the site, which ranges from 21 to 25 feet below grade.

### **2.2 SVE Piping**

The SVE wells are trenched to nearby walls, where they run up and along the ceiling as shown in Figure 1. The piping exits the building along the western edge and enters the treatment shed within the alleyway between the building and the adjacent parking lot.

### **2.3 Treatment Shed**

#### **2.3.1 Fresh Air Intake Filter**

A fresh air intake filter was placed before the moisture separator as indicated on Figure 3, the process and instrumentation diagram (P&ID). The fresh air intake is meant for testing the system before vapors from the SVE wells are extracted, or if necessary, to bleed in fresh air along with extracted vapors collected from the SVE wells to dilute vapor concentrations for treatment purposes. Following initial start-up, the fresh air intake is anticipated to be closed during normal operating conditions.

### **2.3.2 Moisture Separator**

A 47-gallon moisture separator (see Appendix A) was installed in the treatment shed with a high level alarm/shutoff and manual liquid pump for separating moisture from the collected vapors. The manual pump will be used to empty the moisture separator into a 55 gallon drum for sampling and storage within the eastern alleyway which borders the site building. If it's determined to be non-hazardous, it will require a "contained-in/out" determination before it is disposed. The monitoring frequency of the fluid level of this component is included in Appendix B.

### **2.3.3 Inline Air Filter**

An inline filter was installed for removing particulates before air enters the regenerative blower. Sample ports were installed on either side of the filter to measure pressure drops which will inform when the filter requires replacement.

### **2.3.4 Regenerative Blower**

A 19.44 horsepower Air Tech 3BA1900-7AT16 (see Section 1 of Appendix A) regenerative blower was installed with a variable frequency drive (VFD) to refine air flow-rates and for efficiency.

### **2.3.5 Air Silencer**

A discharge silencer was installed after the regenerative blower to help reduce the noise that will be produced from the regenerative blower.

## **2.4 Carbon Treatment**

Two vapor phase granular-activated-carbon (GAC) vessels are located outside of the treatment shed, inside the fenced in alleyway between the site building and adjacent parking lot. The GAC vessels are the final treatment component before extracted vapors are discharged through the effluent stack outside and above the building. As outlined further below, post-GAC effluent and pre-GAC influent will be monitored with air sampling and a photo-ionization detector (PID) to determine when GAC vessels need replacement to keep the discharge of volatile organic compounds (VOCs) below an emission rate that meets the ambient guideline concentration (AGC) of 4  $\mu\text{g}/\text{m}^3$  at the nearest receptor such that the emissions associated with this project comply with the substantive requirements of 6 NYCRR Part 212 and DAR-1.

Pre-carbon, mid-carbon, and post-carbon will initially be monitored on a daily basis during the first week of operation, followed by weekly visits for the next three weeks, and monthly visits thereafter. PID readings and Air samples (TO-15) will be collected in accordance with the frequencies noted in Section 4.0 below.

The PID and TO-15 monitoring data will determine when carbon breakthrough starts to occur such that the carbon vessels can be changed such that the emission rate stays below the concentration when the modeled Ambient Guideline Concentration (AGC) of 4 µg/m<sup>3</sup> (see DAR-1) would be exceeded at the nearest residential property across the street from the site.

NYSDEC is provided with effluent monitoring data as soon as it is generated from the Test America laboratory to allow timely replacement of carbon vessels as needed.

Best efforts will be made to direct spent carbon to a regeneration facility for re-use in accordance with DER-31, Green Remediation.

## **2.5 Discharge Stack**

Following treatment of extracted vapors via the GAC units, the effluent runs along the exterior wall of the building above the treatment shed, and discharges in the direction of the railroad tracks, about 3 feet above the building roofline.

## **2.6 Sampling Ports**

Sample ports and instrumentation have been installed to collect various types of system data, including total VOCs extracted/discharged, vacuum, air flow rate, and air temperature. Sampling ports and/or instruments were installed at the following locations:

1. Sample ports were installed on each extraction well; and before, in between, and after the two carbon drums for collection of samples for laboratory analysis and PID measurements for total VOCs
2. Flow meters – one on each manifold leg and one total system meter before the air filter
3. Vacuum gauges – before and after the air filter and on each leg of the manifold
4. Temperature gauges before and after the regenerative blower
5. Pressure gauges – blower effluent and before and after each carbon drum

## **2.7 Alarm/Alert Systems**

An alert system governed by a programmable logic controller/telemetry system (SCADA – supervisory control and data acquisition system) was installed and is capable of sending the following text/email alerts so the system may be monitored from a remote location with internet access:

1. Moisture separator tank high level alert
2. Low vacuum alarm
3. Blower VFD failure alarm
4. High temperature alarm on carbon drum inlet air as follows:

- a. If temperatures approach 130 degrees F, the extraction rate should be dialed back.
  - b. If temperatures approach 140 degrees F, the system will be shut down, per carbon unit manufacturer's recommendations.
5. A heater, exhaust fan, and two thermostats will be included and the enclosure's air temperature will be monitored with a room temperature transmitter.

### **3.0 Electric Service**

NYSDEC is responsible for paying the electric bills, and are being sent directly to the Division of Environmental Remediation, 625 Broadway, Albany, NY as follows:

Attention: Dwight Zobre  
 Division of Environmental Remediation – 12<sup>th</sup> Floor  
 625 Broadway, Mail Stop 7012-7012  
 Albany, NY 12233-7016  
 dwight.zobre@dec.ny.gov

### **4.0 Initial Start-Up Procedures – Month 1**

After completing construction of the SVE system, an initial inspection of the system's components was conducted as noted in the SVE Inspection Form attached in Appendix B. All overhead piping and connections will be inspected to ensure everything is securely fastened to walls and the ceiling. All piping and system components located outside of the site building and the treatment shed were inspected to ensure everything was securely fastened.

All electrical connections will be inspected to ensure there are no loose wires and that every electric component has been connected.

The initial Start-up phase includes a 1 month shake-down period in which the system will be shut off at the end of each day for the first week, and then operated continuously during the rest of the month with weekly monitoring to ensure adequate carbon replacement. During this period, the entire system and all piping connections will be thoroughly inspected to ensure the system meets the intended design parameters.

The system will initially be energized under the lowest allowable setting with the fresh air intake filter open. Each extraction well will be slowly opened until every well is drawing an adequate vacuum to achieve influence across the site and the fresh air intake filter reduced accordingly. Each of the following parameters will be recorded during the first month-long startup phase in accordance with the frequency listed in Table 2 below. An "SVE Monitoring Form" has been included in Appendix B.

**Table 2: Initial Start-up Monitoring – Month 1**

| Parameter | Location(s) | Frequency |
|-----------|-------------|-----------|
|-----------|-------------|-----------|

|                  |  |  |
|------------------|--|--|
| PID monitoring*  | <ol style="list-style-type: none"> <li>Each of the five (5) extraction wells</li> <li>Pre-carbon</li> <li>Mid-carbon</li> <li>Post-carbon</li> </ol>                               | <u>1<sup>st</sup> Week:</u> 3 or more times per day<br><u>2<sup>nd</sup> – 4<sup>th</sup> Week:</u> up to 3 times per week/as necessary  |
| Air Sampling     | <ol style="list-style-type: none"> <li>Pre-carbon</li> <li>Post-carbon</li> </ol>  | <u>1<sup>st</sup> Week:</u> During initial startup once extraction rates and vacuum influence have been normalized<br><u>2<sup>nd</sup> – 4<sup>th</sup> Week:</u> Once per week |
| Extraction Rate* | <ol style="list-style-type: none"> <li>Each extraction well</li> <li>Fresh air extraction (if open)</li> <li>Combined effluent pre-carbon</li> <li>Effluent post-carbon</li> </ol> | <u>1<sup>st</sup> Week:</u> 3 or more times per day<br><u>2<sup>nd</sup> – 4<sup>th</sup> Week:</u> up to 3 times per week/as necessary  |
| Air Temperature* | <ol style="list-style-type: none"> <li>Before Regenerative Blower</li> <li>After Regenerative Blower</li> </ol>  | <u>1<sup>st</sup> Week:</u> 3 or more times per day<br><u>2<sup>nd</sup> – 4<sup>th</sup> Week:</u> up to 3 times per week/as necessary  |
| Vacuum Influence | 11 vapor monitoring points inside site building and adjacent JCP cabinetry   | <u>1<sup>st</sup> Week:</u> 3 or more times per day<br><u>2<sup>nd</sup> – 4<sup>th</sup> Week:</u> up to 3 times per week/as necessary  |

\*these parameters should be measured in conjunction with one another

## 5.0 Intermediate Operational Period – Month 2 through 6

Following the first month of operating the SVE system, with NYSDEC approval, the monitoring and inspection frequency can be relaxed provided the system is functioning within design parameters and does not require continued monitoring at the frequency described in Table 2 above. During months 2 through 6, monitoring is expected to be reduced to a monthly frequency, as indicated in Table 3, or depending on GAC vessel replacement frequency, may need to remain weekly until a more-predictable frequency is established.

**Table 3: Intermediate Monitoring – Months 2 through 6**

| Parameter      | Location(s)   | Frequency  |
|----------------|---|--|
| PID monitoring | <ol style="list-style-type: none"> <li>Each of the five (5) extraction wells</li> <li>Pre-carbon</li> <li>Mid-carbon</li> </ol> | Monthly or Weekly depending on carbon treatment requirements (in conjunction with Extraction |

|                  |  |   |
|------------------|--|---|
|                  | 4. Post-carbon   | Rate and Air Temp measurements)   |
| Air Sampling     | 1. Pre-carbon<br>2. Post-carbon  | Monthly   |
| Extraction Rate  | 1. Each extraction well<br>2. Fresh air extraction (if open)<br>3. Combined effluent pre-carbon<br>4. Effluent post-carbon | Monthly or Weekly depending on carbon treatment requirements (in conjunction with PID and Air Temp measurements)        |
| Air Temperature  | 1. Before Regenerative Blower<br>2. After Regenerative Blower  | Monthly or Weekly depending on carbon treatment requirements (in conjunction with PID and Extraction Rate measurements) |
| Vacuum Influence | 11 vapor monitoring points inside site building and adjacent JCP cabinetry   | Monthly/as necessary  |

## 6.0 Longer Term Operation, Monitoring & Maintenance – Post Month 6

Following the first six (6) months of operation, the carbon treatment requirements (i.e., required change out frequency based on breakthrough) should be more predictable to allow for monthly operation and maintenance. The telemetry system discussed in Section 2.7 above will provide real-time data which will allow most of the monitoring to be done from a computer. There will still be a need for monthly visits to ensure the system is functioning properly and to gather data on the parameters in Table 4 below:

**Table 4: Long Term Monitoring – Post Month 6**

| Parameter       | Location(s)  | Frequency  |
|-----------------|--|--|
| PID monitoring  | 1. Each of the five (5) extraction wells<br>2. Pre-carbon<br>3. Mid-carbon<br>4. Post-carbon                               | Monthly, or more depending on carbon treatment (in conjunction with Extraction Rate and Air Temp measurements) |
| Air Sampling    | 1. Pre-carbon<br>2. Post-carbon  | Month 9, Month 12, then quarterly or semi-annually   |
| Extraction Rate | 1. Each extraction well<br>2. Fresh air extraction (if open)<br>3. Combined effluent pre-carbon<br>4. Effluent post-carbon | Monthly, or more depending on carbon treatment (in conjunction with PID and Air Temp measurements)             |

|                  |   |   |
|------------------|---|---|
| Air Temperature  | <ol style="list-style-type: none"> <li>1. Before Regenerative Blower</li> <li>2. After Regenerative Blower</li> </ol> | Monthly, or more depending on carbon treatment (in conjunction with PID and Extraction Rate measurements) |
| Vacuum Influence | 11 vapor monitoring points inside site building and adjacent JCP cabinetry  | Monthly/as necessary  |

## 7.0 Monthly Reporting

EnviroTrac will provide monthly reports which contain:

1. Inspection/Maintenance forms,
2. SVE Monitoring forms,
3. regular/irregular maintenance items,
4. duration of operation, and
5. all sampling data which was obtained during reporting period.

Monthly reports should be submitted on the 10<sup>th</sup> day of the month following the monthly reporting period (e.g., a July monthly report should be submitted by the 10<sup>th</sup> of August and contain all maintenance, monitoring, repairs, etc. which occurred in July).

## 8.0 System Optimization/Site Management

Following one year of operating the SVE system, a substantial amount of data will be available to determine the approximate mass of PCE that has been removed from the site which may help estimate how much longer the system may need to run, or if there is any potential for system optimization.

After a few years of operation, it is anticipated that enough mass will have been removed such that carbon treatment will no longer be necessary and the SVE system will essentially be functioning as a sub-slab-depressurization system (SSDS). Once this stage in remediation is reached, the existing system will likely be too robust and inefficient, and elimination or modification of system components may be necessary.

This OM&M will be referenced and/or modified accordingly and be contained within the Site Management Plan (SMP) for the Former Cleaners Products Supply site. The SMP will lay out the site-wide specifics for long term operation, monitoring and maintenance of site-wide engineering and institutional controls (ECs/ICs), which will include operation of the SVE system, groundwater monitoring, or other ICs that will be part of the final remedy described in the Record of Decision.

## 1. Pump Ranges

These operating instructions cover the Airtech 3BA side channel vacuum pumps and compressors supplied with standard TEFC motors. Other configurations are available including V-belt driven units, units with explosion proof motors, mechanical seals, magnetic drives, coatings and modifications for high pressure service. Airtech can provide any combination of modifications to meet your application requirements. Such blowers, however, are outside the scope of this manual.

### Description

All regenerative blowers are dynamic compression devices and utilize a non-contacting impeller to accelerate the gas and a specially designed housing to compress the gas. Cooling is accomplished by using the motor fan to blow air over the housing. In larger models, the housing is specially designed with cooling fins to allow a wider range of operation. Both the inlet and outlet ports have built-in silencers and mesh screens. Both the inlet and outlet have an inside connection thread corresponding to DIN ISO 228. On larger units, multiple suction and discharge connection configurations may be available.

The wetted parts are constructed of Aluminum on all models. The blower shares a bearing with the motor. The seal between the bearing and the motor is not gas tight in most models, therefore these blowers are not recommended for handling of toxic or explosive gases. (Contact Airtech Vacuum, Inc. for additional options if explosive or toxic gases will be handled.)

A full range of accessory items are available, including vacuum or pressure relief valves, check valves, suction filters, motor starters, vacuum/pressure cross-over valves, and in-line filters.

### Application/Installation Environment

**CAUTION! These blowers are designed for use in general industry. Suitable personnel protection according to OSHA requirements is provided, but the equipment should not be operated in residential settings.**

Airtech blowers can be operated as either vacuum pumps or compressors. They are suitable for use with air having a relative humidity up to 90 percent, but not generally suitable for handling corrosive or erosive gases. Special versions for toxic or aggressive gases may be available. Use of the standard blower in aggressive environments may cause damage to the blower or exposure to gases being handled in the local environment.

**CAUTION! Dangerous (flammable or explosive) or aggressive (corrosive) gases should not be handled by the standard blower.**

Handling of flammable or aggressive gases and vapors may be possible by using a specially configured or modified blower. Contact factory for additional information. The standard blower is not suitable for operation in explosive environments as defined by NFPA 70. Contact factory for assistance.

**CAUTION! The ambient and suction temperatures should be between 40 and 105 F. For temperatures outside this region, please contact the factory.**

The maximum permissible pressure difference for vacuum or pressure is dependant on the motor rating (See Tables 1 to 4 for detailed information by model number.) and power supply frequency. The figures in Tables 1 to 4 are computed assuming an ambient temperature of 77 F (25 C) and a local barometric pressure of 1013 mbar (sea level). Operation at an ambient temperature of 104 F (40C) is the maximum permissible, and will result in a reduction of 10 percent on maximum vacuum or pressure attainable by the unit. For temperatures between 77 F and 104 F, reduce the maximum pressure reduction is a linear function of temperature.

When operating at altitudes above 3280 feet (1000 m) above mean sea level, contact Airtech Inc.

**CAUTION! Operation of the unit outside the recommended range of pressures and ambient conditions will result in shorted operating life.**

Operation of any blower is possible at 87 Hertz without modification. When using a VFD to operate the blower at this frequency, refer to the nameplate for limits on vacuum and pressure, current draw and motor performance.

If your specific model number is not listed above, please consult the nameplate on the unit for electrical data. If the model you are installing is listed above, please confirm the data on the nameplate. Data in Tables 1 through 4 is subject to change and is approximate. Be sure to confirm necessary operating data what that on the nameplate before commissioning the unit.

**CAUTION! Do not operate any 3BA blower above 87 Hz without consultation with the factory. Failure of the blower motor is possible when operating out of range. Consult with the factory for assistance.**

Expected temperature rise of the handled gas at maximum allowable pressure differential and when operating at sea level is indicated below:

Single Stage – Approximate Temperature Rise

| Blower Model   | Maximum Rise at 50 Hz speed |           | Maximum Rise at 60 Hz speed |           |
|----------------|-----------------------------|-----------|-----------------------------|-----------|
|                | Degrees F                   | Degrees K | Degrees F                   | Degrees K |
| 3BA1100-7..0.  | 115                         | 46        | 136                         | 58        |
| 3BA1200-7..0.  | 65                          | 18        | 101                         | 38        |
| 3BA1300-7..0.  | 90                          | 32        | 77                          | 25        |
| 3BA1300-7..1.  | 90                          | 32        | 140                         | 60        |
| 3BA1300-7..2.  | 90                          | 32        | 158                         | 70        |
| 3BA1400-7..0.  | 99                          | 37        | 86                          | 30        |

## Tightening Torque Specifications

For non-electrical connections

| Thread | Ft-lbs maximum torque | Nm maximum torque |
|--------|-----------------------|-------------------|
| M4     | 2.43                  | 3.3               |
| M5     | 3.25                  | 4.4               |
| M6     | 6.49                  | 8.8               |
| M8     | 19.47                 | 26.4              |
| M10    | 34.10                 | 46.2              |
| M12    | 56.76                 | 77                |

For electrical connections

| Thread | Ft-lbs torque | Nm torque  |
|--------|---------------|------------|
| M4     | 0.6 to 0.9    | 0.8 to 1.2 |
| M5     | 1.3 to 1.8    | 1.3 to 1.8 |

For metal threaded glands/unions

| Thread  | Ft-lbs maximum torque | Nm maximum torque |
|---------|-----------------------|-------------------|
| M12x1.5 | 3 to 4.5              | 4 to 6            |
| M16x1.5 | 3.7 to 5.5            | 5 to 7.5          |
| M20x1.5 | 4.4 to 6.6            | 6 to 9            |
| M32x1.5 | 5.9 to 8.9            | 8 to 12           |
| M40x1.5 | 5.9 to 8.9            | 8 to 12           |

For plastic threaded glands/unions

| Thread  | Ft-lbs maximum torque | Nm maximum torque |
|---------|-----------------------|-------------------|
| M12x1.5 | 1.5 to 2.6            | 2 to 3.5          |
| M16x1.5 | 2.2 to 3              | 3 to 4            |
| M20x1.5 | 3 to 3.7              | 4 to 5            |
| M32x1.5 | 3.7 to 5.2            | 5 to 7            |
| M40x1.5 | 3.7 to 5.2            | 5 to 7            |

Operating above the indicated maximum pressure or vacuum would overload the motor and/or overheat the unit. In addition to the maximum allowable pressure difference, careful consideration should be given to matching the motor protection devices (provided by others) to the expected current draw. In no case should the blower be operated with inadequate motor overload protection.

Since regenerative blowers are dynamic compression devices, the performance limits shown in Tables 1 to 4 are applicable only for a gas with the same specific gravity, dynamic viscosity and chemical characteristics as air. For gases with different physical properties than air, the limits will be different from those shown in the tables. Please contact Airtech for assistance in determining the proper blower size and configuration if handling gases other than air.

A vacuum relief valve or pressure relief valve should always be installed at the suction or discharge of the regenerative blower. This will prevent operation outside the applicable ranges shown in Tables 1 to 4. If the relief valves were not specified in the ordering process, please contact Airtech for details, price and availability of the needed valves before commissioning the unit. Failure to use the proper relief valve may result in failure of the blower due to operation outside the applicable limits; any such failure is outside the scope of Airtech's standard warranty.

**WARNING! Be sure to install the necessary personnel protection devices if unexpected shut-down of the unit presents danger of death or injury.**

## 2. Installation

As illustrated in Figure 1, the Airtech 3BA blower can be installed in any physical configuration.

**CAUTION! Regenerative blowers can have surface temperatures in excess of 120 F. To avoid burns or other physical injury, take care to avoid contact with the surfaces of the blower during and immediately after operation.**

To ensure adequate cooling of the blower during operation, install the blower with the minimum clearance as indicated in the table below.

Minimum installation clearances, 3BA blowers

| Range               | Distance from fan guard to closest obstruction.<br>(inches/mm) | Distance from cover (opposite of fan) to closest obstruction.<br>(inches/mm) |
|---------------------|--|--|
| 3BA11 through 3BA14 | 1.4/34   | 0.79/20  |
| 3BA15 through 3BA19 | 2.1/53   | 1.57/40  |
| 3BA72 and 3BA73     | 1.3/34   | 1.18/30  |
| 3BA74 through 3BA76 | 2.1/54   | 1.18/30  |

Please note that it may be desirable, where possible, to allow for larger clearances to allow access for maintenance or repair personnel. The noted clearances are to ensure adequate air flow for cooling only and are a minimum requirement.

Failure to allow for the noted clearances may result in premature failure of the blower due to lack of cooling, even if all other precautions are taken as recommended. For specific advice about installations requiring closer clearances, please contact Airtech, Inc. for recommendations.

Airtech regenerative blowers can be mounted in any configuration, either horizontally or vertically mounted. It is not usually necessary to bolt the smaller blowers to a rigid surface during operation, though this may be desirable to reduce pipe vibration, movement and noise. Larger models should be bolted in place, especially when installed vertically, to prevent possible rotation, damage or injury due to start-up torque.

**CAUTION! For installations at altitudes greater than 3250 Feet above sea level there will be a loss in capacity. Please contact your factory representative for assistance in determining the extent of the loss of capacity likely at your specific location.**

**WARNING! Be sure to follow all local codes and regulations with respect to installation and operation of the blower. The blower motor should be wired to a branch circuit disconnect and all other safety devices recommended by the relevant sections of NFPA 70, National Electrical Code, and in accordance with all applicable state and local regulations and requirements.**

## Installation Procedure

Perform the installation exactly in accordance with the following steps:

1. For vacuum operation, connect the suction pipe to connection A, and for pressure operation connect the pressure pipe to connection B (See Figure 1). Install startup screens before startup to protect pump from debris.

Figure 1

**CAUTION! Design your piping system to avoid unnecessary pressure loss, which may significantly affect the operation of any regenerative blower. Contact your Airtech representative for assistance in designing and configuring an appropriate piping system for your application.**

For alternation between vacuum and pressure in any application, changeover valves are available. Use of the changeover valve allows the same connection to be used for both vacuum and pressure.

2. The electrical data shown in Tables 1 to 4 should be confirmed by examination of the motor data plate on your 3BA blower. The motors feature Class F insulation as a standard and are UL recognized for applications in both Canada and the United States (CUL). Motors are IEC design IP55, equal to a NEMA TEFC motor design. The connection diagram for the motors can be found in the inside of the terminal box cover. Be sure to confirm that your electrical supply has sufficient capacity to operate the blower according to the nameplate requirements.

3. A magnetic motor starter should always be used to connect the motor to the power supply. It is advisable to use thermal overload motor starters to provide

maximum protection for the motor and wiring. All cabling used on starters should be secured with good quality cable clamps.

We recommend that the motor starters used feature a time delay trip on high amperage to avoid nuisance trips on start-up. When the unit is started cold, over amperage may be experienced for a short time due to the higher resistance of the windings at lower temperatures.

If using a change over or solenoid valve, ensure that the voltage connected to the valve matches that shown on the valve instructions or nameplate. Most valves are rated for 110 Volts 60Hz or 220 Volts 50 Hz. Connection of these valves to higher voltages may result in immediate valve failure.

**WARNING! The electrical installation should be made by a qualified electrician and in complete compliance with all NFPA 70 (National Electrical Code) requirements along with all state and local code requirements. The main disconnect and motors starters are assumed to be provided by others.**

4. Install the necessary relief valves and confirm their proper operation.

### 3. Start-up

**CAUTION! Do not start the blower motor more than 10 times in one hour. If multiple and frequent start-ups are required by your application, install a minimum run timer in the motor control circuit to avoid decreased motor life and possible fire due to over-starting of the motor.**

1. Before operation, confirm the correct direction of rotation by jogging (switching rapidly on and off) the motor and observing the motor fan rotation in the same direction as the arrow. If the direction of rotation is incorrect, lock out the power and switch two leads (three phase) or rewire (single phase) to effect the opposite rotation direction. Recheck the direction of rotation before proceeding.

2. Do not operate the blower at pressure or vacuum ranges that exceed those shown in Tables one through four for the model being installed. This can be achieved by use of the recommended relief valve shown in Table 5.

Note: Relief valves that have been factory pre-set have a label indicating the set pressure and an arrow indicating the direction of flow. The arrow will point into the pipe when installed in vacuum applications and out of the pipe when installed in pressure applications. Do not re-set the relief valve if it has been pre-set from the factory.

In the event the relief valve setting needs to be reset, adjust the set screw to increase or decrease the tension on the spring. Place the blower in operation and note the current draw of the motor. When the current draw of the motor is near the maximum noted on the motor nameplate, tighten the locking nut on the valve and proceed.

3. When checking the current draw of the motor with an ammeter, be sure to confirm the voltage at the motor junction box. Low voltage conditions may result in difficulty starting or in unexpected motor failure or motor starter trips.

### Potential Risks for Operators

Noise emission: Free field noise limits are indicated in Tables one through four. Hearing protection is not normally required at the expected noise generation levels in the table; however, local conditions may result in higher ambient noise. If this is the case and local noise exceeds OSHA recommended levels for expected exposure time (typically 85 dBA for eight hours), hearing protection should be used.

## 4. Maintenance and Servicing

**WARNING!** Be sure the power supply is disconnected and locked out before attempting to do any maintenance on the unit. It is critical that the unit be locked out from starting during maintenance as severe injury or death could result from exposure to high voltage or rotating parts.

**CAUTION!** Allow the blower to cool to a surface temperature of less than 100 F before attempting maintenance. Prolonged exposure to temperatures above 120F can cause severe burns.

Clean the blower surfaces periodically to avoid build up of dust or other debris. Build up of debris can cause overheating and premature failure of the blower.

If an inlet filter is being used, ensure that it remains clean during operation by examining the filter cartridge for debris build up. Replace dirty or clogged filter cartridges.

On pressure units, periodically clean the inlet mesh screen to avoid loss of capacity. If an external inlet filter is used, the filter element should be cleaned monthly or as frequently as required by local conditions. Excessive pressure drop will develop from use of clogged or dirty filters. This pressure drop will degrade blower performance and increase operating temperatures, leading possibly to premature pump failure.

To replace the filter, remove the wing nut and cover. Remove the element and either clean with compressed air or replace. Reassemble in reverse order.

For vacuum applications, the optional in-line vacuum filter must be cleaned regularly, depending on local conditions. Cleaning can be achieved by blowing out with compressed air. If cleaning is not possible, replace the cartridge. Access the cartridge by unhooking the relevant clips and removing the cover.

**CAUTION!** Do not attempt to check the filter cartridge during operation of the blower. Only check the cartridge after disconnecting the power from the blower and locking out the power to prevent an unexpected start.

Bearings require regreasing with Exxon/Esso UNIREX N3 or equal grease after approximately 20,000 operating hours (normal conditions) or between 2 and 3 years after installation and commissioning. Do not mix grease types.

### Troubleshooting Chart

| Fault                                | Cause  | Remedy  | Responsible Party       |
|--------------------------------------|--|---|-------------------------|
| Motor does not start, no noise.      | Two or more power legs interrupted   | Check fuses, terminals, etc.. for source of interruption and correct.   | Electrician             |
| Motor does not start, humming noise. | One power supply lead interrupted  | Check fuses, terminals, etc.. for source of interruption and correct.   | Electrician             |
|                                      | Impeller is jammed.  | Open blower cover, remove debris, clean.  | Service Technician      |
|                                      |  | Check impeller clearance and reset if necessary.  |                         |
|                                      | Defective Impeller   | Replace impeller.   | Service Technician      |
|                                      | Defective Bearing  | Replace defective bearing.  | Service Technician      |
| Trip of motor starter at start-up    | Incorrect starter setting  | Ensure starter setting is correct (check current on nameplate)  | Electrician             |
|                                      | Winding short-circuit  | Megger motor  | Electrician             |
|                                      | Motor overloaded due to operation of pump at excessive differential pressures. | Inspect filters, mufflers and connection pipes and clean as required.<br><br>Check relief valve operation. Reset or replace as necessary. | Operator                |
|                                      | Impeller Jammed  | See above fault Motor does not start, humming noise, cause jammed impeller.   | Operator                |
| Excessive Power Consumption          | Lime or other deposits   | Decalcify or clean unit as required (see Maintenance Chart)   | Operator                |
| No Vacuum or Pressure.               | Severe leak in system  | Close off pump and run deadheaded to confirm pump is operating properly. If so, find and fix leak in the system.                          | Operator                |
|                                      | Wrong direction of rotation  | Check air flow direction and change direction of rotation if necessary.   | Operator<br>Electrician |

|                        |  |  |                     |
|------------------------|--|--|---------------------|
| Insufficient Vacuum    | System too small   | Use larger system  | Operator            |
|                        | Inlet piping too long or too small.                            | Increase pipe diameter to reduce pressure loss in inlet piping. Contact Airtech for assistance in determining correct pipe size. | Operator            |
|                        | Leak at connection to vacuum system.                           | Check for leaks and repair if necessary.   | Operator            |
|                        | Density of gas handles different from air.                     | Consider increased limits on operation due to density differences. Consult Airtech, Inc. for assistance.                         | Airtech Engineering |
|                        | Change in impeller geometry due to erosion                     | Clean impeller and examine for wear. Replace if necessary.   | Service Technician  |
|                        | Inlet filter clogged.  | Change filter element; remove clog.  | Operator            |
|                        | Vacuum relief valve incorrectly set.                           | Reset or replace vacuum relief valve. Contact Airtech for assistance.  | Operator            |
|                        | Seal defective.  | Replace seal.  | Service Technician  |
| Abnormal flow noises.  | Flow speed too high.   | Clean pipes or use larger pipes to connect unit to process.  | Operator            |
|                        | Muffler soiled.  | Clean muffler inserts, replace if necessary.   | Operator            |
| Abnormal running noise | Ball bearing defective or insufficient lubrication on bearing. | Re-grease or replace bearing as required.  | Service Technician  |
| Compressor leaky       | Seals on muffler defective.                                    | Tighten muffler connection. Replace gasket if necessary.   | Operator            |
|                        | Seals in motor area defective                                  | Replace as necessary.  | Service Technician  |

## Repair on-site

**WARNING! Before attempting an on-site repair, ensure that a qualified electrician has disconnected the motor from the power supply so that accidental starting of the motor is impossible.**

After a repair and before re-installation be sure to follow the instructions noted in this manual under "Installation and Operation."

## Lifting

For smaller units (less than 65 lbs/ 30 kgs), it may be possible to lift the units manually. When doing so, be sure to understand the weight of the unit being lifted and to follow good lifting safety procedures.

| Model          | Weight Lbs/kgs | Model          | Weight Lbs/kgs |
|----------------|----------------|----------------|----------------|
| 3BA1300-7AT06  | 20/9           | 3BA1310-7AT26  | 33/15          |
| 2BA1300-7AT16  | 22/10          | 3BA1410-7AT36  | 55/25          |
| 3BA1400-7AT06  | 29/13          | 3BA1410-7AT46  | 59.5/29        |
| 3BA1400-7AT26  | 37.5/17        | 3BA1510-7AT46  | 86/39          |
| 3BA1500-7AT06  | 40/18          | 3BA1510-7AT56  | 97/44          |
| 3BA1500-7AT16  | 46.5/21        | 3BA1610-7AT26  | 104/47         |
| 3BA1500-7AT26  | 51/23          | 3BA1610-7AT36  | 119/54         |
| 3BA1500-7AT36  | 55/25          | 3BA1610-7AT46  | 163/74         |
| 3BA1600-7AT06  | 57.5/26        | 3BA1610-7AT56  | 172/78         |
| 3BA1600-7AT16  | 64/29          | 3BA1640-7AT36  | 128/58         |
| 3BA1600-7AT26  | 75/34          | 3BA1640-7AT46  | 172/78         |
| 3BA1600-7AT36  | 90.5/41        | 3BA1640-7AT56  | 181/82         |
| 3BA1800-7AT06  | 128/58         | 3BA1810-7AT16  | 250/113        |
| 3BA1800-7AT16  | 143/65         | 3BA1810-7AT26  | 260/118        |
| 3BA1800-7AT26  | 150/68         | 3BA1810-7AT36  | 316/143        |
| 3BA1900-7AT06  | 265/120        | 3BA1810-7AT46  | 341/155        |
| 3BA1900-7AT16  | 314/142        | 3BA1840-7AT26  | 260/118        |
|                |                | 3BA1840-7AT36  | 316/143        |
|                |                | 3BA1910-7AT16  | 409/186        |
|                |                | 3BA1910-7AT36  | 455/206        |
| 3BA7210-0AT167 | 35.3/16        | 3BA7220-0AT567 | 61.7/28        |
| 3BA7310-0AT167 | 35.3/16        | 3BA7320-0AT567 | 66.1/30        |
| 3BA7410-0AT167 | 50.7/23        | 3BA7420-0AT267 | 72.7/33        |
| 3BA7510-0AT168 | 57.3/26        | 3BA7420-0AT567 | 86/39          |
| 3BA7510-0AT268 | 63.9/29        | 3BA7520-0AT268 | 88.2/40        |
| 3BA7610-0AT168 | 70.5/32        | 3BA7620-0AT368 | 106/48         |
| 3BA7610-0AT368 | 77.2/35        | 3BA7620-0AT568 | 143/65         |
|                |                | 3BA7630-0AT668 | 207/94         |

When lifting 3BA15 through 3BA19 (but not 3BA1943 units) or the 3BA75 through the 3BA76, use the eye bolt provided (eye bolts are not included on smaller units). One attachment point should be sufficient. Ensure that the crane is rated for the weight being lifted.

For the 3BA1943, use the eye bolt and the holes in the feet of the blower to lift and maintain a balanced load.

### **Storage**

The 3BA units should be stored in a clean, dry environment. If stored in an area with a humidity of greater than 80 percent, store in a closed container with desiccant drying agents to avoid damage.

### **Disposal**

Dispose in accordance with all local health and safety regulations.

Spare parts list are available from your local Airtech service center. Please contact your local Airtech representative for assistance.

## **Airtech, Inc. ("Company") Warranty Statement**

Company warrants that on the date of shipment to Purchaser the goods will be of the kind and quality described herein, merchantable, and free of all defects in workmanship and materials.

If within one year from the date of initial operation, but not more than eighteen months from date of shipment by the Company, of any item of the goods, Purchaser discovers that such item was not as warranted above and promptly notifies Company in writing thereof, Company shall remedy such defect by, at the Company's option, adjustment, repair or replacement of the item and any affected part of the good. Purchaser shall assume all responsibility and expense for removal, reinstallation and freight in connection with the foregoing remedy. The same obligations and conditions shall extend to replacement items furnished by the Company hereunder. Company shall have the right of disposal of items replaced by it. Purchaser shall grant Company access to the goods at all reasonable times in order for Company to determine any defect in the goods. In the event that adjustment, repair or replacement does not remedy the defect, the Company and Purchaser shall negotiate in good faith an equitable adjustment in the contract price.

The Company's responsibility does not extend to any item of the goods which has not been manufactured and sold by the Company. Such item shall be covered only by the express warranty, if any, by the manufacturer thereof. The Company and its suppliers shall also have no responsibility if the goods have been improperly stored, handled or installed, or if the goods have not been operated or maintained according to their ratings or according to the instructions in Company or supplier furnished manuals, or if unauthorized repairs or modifications have been made to the goods.

**THIS WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES (EXCEPT TITLE) INCLUDING BUT NOT LIMITED TO IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS, AND CONSTITUTES THE ONLY WARRANTY OF COMPANY WITH RESPECT TO THE GOODS.**

The forgoing states Purchaser's exclusive remedy against Company and its suppliers for any defect in the good or for failure of the goods to be as warranted, whether Purchaser's remedy is based on contract, warranty, failure of such remedy to achieve its essential purpose, tort (including negligence), strict liability, indemnity, or any other legal theory, and whether arising out of warranties, representations, instructions, installations, or defects from any cause.

Neither Company nor its suppliers shall be liable, whether in contract, warranty, failure of a remedy to meet its essential purpose, tort (including negligence), strict liability, indemnity or any other legal theory, for loss of use, revenue or profit or for cost of capital or of substitute use or performance or for indirect, liquidated, incidental or consequential damages or for any other loss or cost of a similar type, or for claims by Purchaser for damages of Purchaser's customers.

## Air / Water Separators

**ESD Waste2Water, Inc.** ESD custom fabricates Air / Water Separators for Soil Vapor Extraction and Dual Phase Extraction applications. Made of structurally sound, light-weight marine grade 5052 aluminum, our separators can withstand full vacuum applications and are completely corrosion resistant. Unlike carbon steel based separators, ESD Separators resist both internal chemical corrosion and the harshest external environmental conditions. The aesthetic qualities of ESD Separators are never compromised by oxidation. ESD Separators never experience corrosive pitting leaks, because our designs render expensive internal/external epoxy mastic coatings entirely unnecessary.

ESD Separators are available in many standard sizes and can be custom designed with a wide variety of options, including pump out systems, level gauging, additional particulate filtration, and baffling for high entrained

Certified to UL-508A Standards

Thank you for allowing ESD to provide a solution to your equipment needs.

### Filter Housings – Inline Particulate Filters

| ESD Model # | Inlet Size / Type | Equivalent Solberg | ESD Net Price |
|-------------|-------------------|--------------------|---------------|
| IPF-300     | 3.0" MNPT         | CSL-235P-300       | \$ 565.00     |
| IPF-400     | 4.0" MNPT         | CSL-235P-400       | \$ 590.00     |
| IPF-600     | 6.0" MNPT         | CSL-275P-600       | \$ 900.00     |
| IPF-600F    | 6.0" Flanged      | CSL-375P-600F      | \$ 1,100.00   |

Marine Grade aluminum construction

## "L" STYLE INLET VACUUM AIR FILTERS "CSL" Series 3" - 6" MPT

### APPLICATIONS

|                              |   |                        |
|------------------------------|---|------------------------|
| Ash Handling                 | Bag House Systems                                     | Blowers Fan            |
| Blowers-PD Type              | Cement  | Chemical Processing    |
| Envelope Manufacturing       | Factory Automation                                    | Food Processing-Vacuum |
| Glass, Ceramic-Vacuum        | Intake Suction-Vacuum Pump                            | Medical                |
| Pneumatic Conveying Systems  | Remote Installations for Piston and Screw Compressors | Vacuum Furnaces        |
| Vacuum Packaging             | Vacuum Pump-Rotary Vane                               | Vacuum Pumps & Systems |
| Vacuum Pump-Screw Technology | Vacuum Pump-Side Channel                              | Vacuum Systems-Central |
| Waste Water Aeration         | Woodworking   |                        |

### FEATURES & SPECIFICATIONS

|   |  |
|---|--|
| 99%+ removal efficiency std: Paper=2 micron, Polyester=5 micron             | Filter change out differential: 10"-15" in. H <sub>2</sub> O above initial delta P |
| Heavy duty T bolts for easy maintenance                                     | Hydrostatically tested 0.5 bar pressure for vacuum tightness                       |
| Inlet air enters canister above element                                     | Inlet/Outlet 1/4" gauge taps standard  |
| Large dirt holding capacity and easy field cleaning                         | Low pressure drop  |
| Positive sealing O-ring seal system   | Powder coat paint finish   |
| Rugged all steel construction with baked enamel finish                      | Temp (continuous): min -15° F ( -26° C) max 220° F (104° C)                        |
| Vacuum level: Typically 1x10 <sup>-3</sup> mmHg (1.3x10 <sup>-3</sup> mbar) |  |

### OPTIONS

|   |                                     |                       |
|---|-------------------------------------|-----------------------|
| Activated carbon prefilter to reduce odor | Available in <i>Stainless Steel</i> | Epoxy coated housings |
| Larger sizes available                    | Special connections, BSPT/Metric    | Support brackets      |
| Various elements available                |                                     |                       |

### Line Drawing

\*All measurements are shown in standards.

# Absorptive Silencers

## Air Intake and Discharge

### "SLCR" Series 1/2" - 4" MPT, FPT

## APPLICATIONS & EQUIPMENT

- ♦ Small Air Compressors
- ♦ Centrifugal Blowers
- ♦ Regenerative Blowers
- ♦ Vacuum Pumps & Systems
- ♦ Vacuum Packaging Equipment
- ♦ Vacuum Lifters
- ♦ Small Low Pressure Vents
- ♦ Blowers - Side Channel

## FEATURES & SPECIFICATIONS

- ♦ Layered sound absorbent media
- ♦ **Minimal** pressure drop because it does not rely on internal baffles, tubes or other restrictive devices
- ♦ Reduces high frequency noise up to 30 decibels (Due to the wide range of applications and machines these units are used on, please inquire for your specific application.)
- ♦ **Inlet or Discharge** silencing applications with maximum temperature of 212°F (100°C)
- ♦ Durable inline carbon steel construction with baked enamel finish
- ♦ For inline air service

## OPTIONS (Inquiries Encouraged)

- ♦ Flange Adapters
- ♦ Larger sizes available

## CONFIGURATION

## DRAWING

Dimension tolerance  $\pm 1/4"$

Note: Noise attenuation may vary due to the wide range of applications and equipment.

## Compact Filter Silencers FS Series 1/2" - 6" MPT, Flange

Filter Silencers

### Features

- Fully drawn weatherhood - no welds to rust or vibrate apart
- Tubular silencing design - tubes are positioned to maximize attenuation and air flow while minimizing pressure drop
- Durable carbon steel construction with baked enamel finish & powder coated weatherhood

### Technical Specifications

- Temp (continuous): min -15°F (-26°C) max 220°F (104°C)
- Filter change out differential: 15-20" H<sub>2</sub>O over initial  $\Delta P$
- Pressure drop graphs available upon request
- Polyester: 99%+ removal efficiency standard to 5 micron
- Paper: 99%+ removal efficiency standard to 2 micron

### Options

- 1/8" tap holes available for 3" and larger connections
- Pressure drop indicator (See page 3-11)
- Various media for different environments
- Stainless steel construction
- Epoxy coated finish
- Special connections
- Side Access Silencer Filters (LQB Series) for space restricted enclosures (select models)

**Tidbit:** Charlie Solberg Sr. "Senior" designed our first filter silencer in 1966. The FS-15 size filter was created for small air compressors.

## Goulds Pumps

### G&L MCS SERIES

End Suction Centrifugal Pumps

*Bombas Centrífugas de Succión Final Serie MCS*

## GOULDS PUMPS

Goulds Pumps is a brand of ITT Corporation.

*Goulds Pumps es una marca de fábrica de ITT Corporation.*

[www.goulds.com](http://www.goulds.com)

*Engineered for life*

## A Full Range of Product Features Un producto con una amplia gama de características

### Superior Materials of Construction:

AISI 304 and 316L stainless steel liquid handling components for corrosion resistance, quality appearance, and improved strength and ductility.

### High Efficiency Impeller:

Enclosed impeller with unique floating seal ring design maintains maximum efficiencies over the life of the pump without adjustment.

**Casing:** Stainless steel construction with NPT threaded, centerline connections, easily accessible vent, prime and drain connections with stainless steel plugs.

**Mechanical Seal:** Standard John Crane seal with carbon ceramic faces, BUNA elastomers, and stainless metal parts. Optional high temperature and chemical duty seals available.

**Motors:** NEMA standard open drip-proof, totally enclosed fan cooled enclosures. Rugged ball bearing design for continuous duty under all operating conditions.

### Materiales superiores de construcción:

Los componentes para el manejo de líquidos son de acero inoxidable AISI 304 y 316L, lo que brinda resistencia a la corrosión, calidad y mayor fuerza y ductilidad.

### Impulsor de eficiencia superior:

El impulsor encerrado con un diseño único de anillo de sello flotante, mantiene a máxima eficiencia durante toda la vida útil de la bomba sin necesidad de ajustes.

**Carcasa:** Construcción de acero inoxidable con rosca NPT, conexiones centrales y conexiones de ventilación, cebado y drenaje de fácil acceso y tapones de acero inoxidable.

**Sello mecánico:** John Crane estándar con superficies de sellado de carbono/cerámica, elastómeros BUNA y componentes de metal inoxidable. También se encuentran disponibles sellos opcionales para altas temperaturas y manejo de productos químicos.

**Motores:** Estándar NEMA abiertos resguardados o totalmente encerrados con recinto enfriado por ventilador. Cojinete de bolas de sólido diseño para trabajo continuo bajo cualquier condición de operación.

The various versions of the MCS are identified by a product code number on the pump label. This number is also the catalog number for the pump. The meaning of each digit in the product code number is shown at right.

Las diferentes versiones de la MCS se identifican con un número de código de producto en la etiqueta de la bomba. Este número es también el número de catálogo de la bomba. El significado de cada dígito en el código del producto se muestra a la derecha.

## MCS Product Line Numbering System Sistema de numeración de la línea de productos MCS

### Example Product Code,

#### Ejemplo código del producto

1 MS 1 C 5 E 4

#### Mechanical Seal and O-ring

0 = Pre-engineered standard  
For optional mechanical seal modify catalog order no. with seal code listed below.

#### Sello mecánico y anillo 'O'

0 = Estándar aprobado  
Para sello mecánico opcional modificar el número de orden del catálogo con el código del sello según la siguiente tabla.

| John Crane Mechanical Seal (½" seal),<br>Sello Mecánico John Crane (sello de ½") |   |   |                            |                                  |                           |                                      |

#### Impeller Option Code . . . No Adder Required

For optional impeller diameters modify catalog order no. with impeller code listed below. Select optional impeller diameter from pump performance curve.

#### Código del Impulsor Opcional . . . No se requiere adición

Para impulsores con diámetros opcionales modificar el número de orden del catálogo con el código del impulsor indicado a continuación. Escoger el impulsor con diámetro opcional de la curva de funcionamiento de la bomba.

| Impeller Code,<br>Código del Impulsor | Pump Size, Tamaño de la Bomba |                         |                        |
|---------------------------------------|-------------------------------|-------------------------|------------------------|
|                                       | 1 x 1¼ – 6<br>Diameter        | 1¼ x 1½ – 6<br>Diameter | 1½ x 2 – 6<br>Diameter |
| K                                     | —                             | 6⅞                      | —                      |
| G                                     | —                             | 5⅞                      | 5⅞                     |

| D                                     | 4¾                            | 4⅞                      | 4⅞                     |
| E                                     | 4⅞                            | 4¼                      | 3⅞                     |
| F                                     | 4⅞                            | 3⅞                      | —                      |

#### Driver, Motor

1 = 1 PH, ODP    4 = 1 PH, TEFC  
2 = 3 PH, ODP    5 = 3 PH, TEFC

#### HP Rating, Capacidad en HP

C = ½ HP    E = 1 HP    G = 2 HP    J = 5 HP  
D = ¾ HP    F = 1½ HP    H = 3 HP

#### Driver: Hertz/Pole/RPM,

#### Motor: Hercios/Polo/RPM

1 = 60 Hz, 2 pole, 3500 RPM  
4 = 50 Hz, 2 pole, 2900 RPM

#### Material

MS = Stainless steel, Acero inoxidable

#### Pump Size, Tamaño de la bomba

1 = 1 x 1¼ – 6    2 = 1¼ x 1½ – 6    3 = 1½ x 2 – 6

## Performance Coverage (60 Hz) Rango de operación (60 Hz)

### NOTES:

Not recommended for operation beyond printed H-Q curve.

For critical application conditions consult factory.

Not all combinations of motor, impeller and seal options are available for every pump model. Please check with G&L Pumps on non-cataloged numbers.

All standard 3500 RPM ODP and TEFC motors supplied by Goulds Pumps, have minimum of 1.15 service factor. Standard catalog units may utilize available service factor. Any motors supplied other than Goulds Pumps check available service factor.

### NOTAS:

No se recomienda para funcionamiento superior al indicado en la curva H-Q.

Para condiciones de aplicaciones críticas consultar con la fábrica.

No todas las combinaciones de motor, impulsor y sellos se encuentran disponibles para todos los modelos de bomba. Por favor consultar con G&L Pumps sobre los números no catalogados.

Todos los motores estándar de 3500 RPM, ODP (abiertos resguardados) y TEFC (totalmente encerrados con enfriamiento forzado) provistos por Goulds Pumps tienen un factor mínimo de servicio de 1,15. Las unidades estándar de catálogo pueden utilizar el factor de servicio disponible. Verificar el factor de servicio disponible de todo motor no provisto por Goulds Pumps.

## MCS Close Coupled Pump Major Components: Materials of Construction

### Materiales de construcción de los principales componentes de la bomba MCS de acoplamiento cerrado

| Item No.,<br>Parte No. | Description,<br>Descripción   | Materials,<br>Materiales   |

## MCS Close Coupled – Dimensions, Weights and Specifications

### MCS Acople Cerrado – Dimensiones, pesos y especificaciones

Clockwise rotation viewed from drive end. Rotación en dirección de las agujas del reloj visto desde el extremo del motor.

#### NOTES:

- Pumps will be shipped with top vertical discharge as standard. For other orientations, remove casing screws, rotate to desired position, and tighten 6mm screws to 5 – 6 lbs./ft. (6.8-8 N•m).
- Dimensions in inches and millimeters (mm). Weight in pounds and kilograms (kg).
- Motor dimensions may vary with motor manufacturer.
- Not to be used for construction purposes unless certified.

#### NOTAS:

- Las bombas se entregan con la descarga vertical superior estándar; para una orientación diferente, retirar los tornillos de la carcasa, hacer girar hasta la posición deseada y ajustar los bulones de 6 mm a 5-6 libras/pie (6,8-8 N•m).
- Dimensiones en pulgadas y milímetros (mm), peso en libras y kilogramos (kg).
- Las dimensiones del motor pueden variar de acuerdo al fabricante.
- No utilizar para fines de construcción a menos que estén certificadas.

#### Dimensions and Weights – Determined by Pump, Dimensiones y peso – Determinados por la bomba

| Pump, Bomba | Suct., Aspiración | Disch., Descarga | HP  | W         | X          | Y         | L          | Wt. Less Motor, Peso sin motor |

| H                                       | 5"      |
| A                                       | 4 3/4"  |
| B                                       | 4 5/8"  |
| C                                       | 4 3/8"  |
| D                                       | 4 1/16" |
| E                                       | 3 7/8"  |

**NOTE:** Although not recommended, the pump may pass a 11/32" sphere.

**NOTA:** Si bien no se recomienda, la bomba puede pasar una esfera de 11/32".

# ITT

## Commercial Water

### Specifications, Especificaciones

#### Capacities to:

170 GPM (550L/min) at 3500 RPM

#### Heads to:

150 feet (46 m) at 3500 RPM

#### Working pressures to:

75 PSIG (5 bars)

125 PSIG (9 bars) optional seals

#### Maximum temperatures

**to:** 212°F (100°C) with standard seal or 250°F (121°C) with optional high temperature seal.

#### Direction of rotation:

Clockwise when viewed from motor end.

#### Motor specifications:

NEMA 56 square flange frame. 3500 RPM ½ through 5 HP. Open drip-proof, ½ -3 HP totally enclosed fan-cooled enclosures. Stainless steel shaft with ball bearings.

Single phase: Voltage 115/230 ODP and TEFC. (3 HP model – 230 V only) Built-in overload with auto-reset provided.

Three phase: Voltage 208-230/460 ODP and TEFC.

**NOTE:** For three phase motors, overload protection must be provided in starter unit. Starter and heaters must be ordered separately.

#### Capacidades:

170 GPM (550L/min) a 3500 RPM

#### Cargas:

150 pies (46 m) a 3500 RPM

#### Presión de trabajo:

75 PSIG (5 baras)

125 PSIG (9 baras) con sellos opcionales

#### Temperatura máxima:

212°F (100°C) con sello estándar o 250°F (121°C) con sello opcional para alta temperatura.

#### Dirección de rotación:

En dirección de las agujas del reloj visto desde el extremo del motor.

#### Motores:

Bastidor NEMA 56 con brida cuadrada, 3500 RPM de ½ a 5 HP. Abierto resguardado, ½ a 3 HP totalmente encerrado con alojamiento enfriado por ventilador. Eje de acero inoxidable con cojinetes de bola.

Monofásicos: Voltaje 115/230 ODP y TEFC. (modelo 3 HP – 230 voltios solamente). Se proporciona protección contra sobrecarga incorporada con restablecimiento automático. Trifásicos: Voltaje 208-230/460 ODP & TEFC.

**NOTA:** Para los motores trifásicos se debe proporcionar la protección contra sobrecarga en la unidad de arranque. El arrancador y los calentadores se deben pedir por separado.

### Typical Applications, Aplicaciones típicas

Specifically designed for a broad range of general applications traditionally requiring various materials such as all iron, bronze fitted or all bronze construction.

- Water circulation
- Booster service
- Liquid transfer
- Spray system
- Chillers

- Washing/cleaning systems
- Injection molding cooling
- Reverse osmosis
- Air scrubbers
- Heat exchangers
- Filtration systems
- Jockey pumps
- OEM applications
- General water services

Diseñadas específicamente para una amplia variedad de aplicaciones generales, requiriendo tradicionalmente varios materiales, tales como hierro, bronce empotrado o todas las construcciones de bronce.

- Circulación de agua
- Aumento de presión
- Transferencia de líquidos
- Sistemas de aspersión
- Enfriadores

- Sistemas de lavado/limpieza
- Enfriamiento de moldeo por inyección
- Osmosis reversa
- Depuradores de aire
- Intercambiadores de calor
- Sistemas de filtración
- Bombas auxiliares
- Aplicaciones de fabricantes originales de equipos
- Servicios generales de agua

## SAFETY INSTRUCTIONS

**TO AVOID SERIOUS OR FATAL PERSONAL INJURY OR MAJOR PROPERTY DAMAGE, READ AND FOLLOW ALL SAFETY INSTRUCTIONS IN MANUAL AND ON PUMP.**

**THIS MANUAL IS INTENDED TO ASSIST IN THE INSTALLATION AND OPERATION OF THIS UNIT AND MUST BE KEPT WITH THE PUMP.**

This is a **SAFETY ALERT SYMBOL**. When you see this symbol on the pump or in the manual, look for one of the following signal words and be alert to the potential for personal injury or property damage.

**DANGER**

Warns of hazards that **WILL** cause serious personal injury, death or major property damage.

**WARNING**

Warns of hazards that **CAN** cause serious personal injury, death or major property damage.

**CAUTION**

Warns of hazards that **CAN** cause personal injury or property damage.

**NOTICE: INDICATES SPECIAL INSTRUCTIONS WHICH ARE VERY IMPORTANT AND MUST BE FOLLOWED.**

**THOROUGHLY REVIEW ALL INSTRUCTIONS AND WARNINGS PRIOR TO PERFORMING ANY WORK ON THIS PUMP.**

**MAINTAIN ALL SAFETY DECALS.**

**WARNING**

Hazardous fluids  
can cause fire,  
burns or death.

**UNIT NOT DESIGNED FOR USE WITH HAZARDOUS LIQUIDS OR FLAMMABLE GASES. THESE FLUIDS MAY BE PRESENT IN CONTAINMENT AREAS.**

## DESCRIPTION and SPECIFICATIONS:

The Model MCS is a close coupled, end suction, centrifugal pump for general liquid transfer service, booster applications, etc. Liquid-end construction is all AISI Type 304 stainless steel, stamped and welded. Impellers are fully enclosed, non-trimmable to intermediate diameters. Casings are fitted with diffusers for efficiency and for negligible radial shaft loading.

All units have NEMA 48Y or 56Y motors with square flange mounting and threaded shaft extension.

### 1. IMPORTANT

- 1.1. Inspect unit for damage. Report any damage to carrier/dealer immediately.
- 1.2. Electrical supply must be a separate branch circuit with fuses or circuit breakers, wire sizes, etc., in compliance with National and Local electrical codes. Install an all-leg disconnect switch near pump.

**CAUTION**

Always disconnect electrical power when handling pump or controls.

- 1.3. Motors must be wired for proper voltage. Motor wiring diagram is on motor nameplate. Wire size must limit maximum voltage drop to 10% of nameplate voltage at motor terminals, or motor life and pump performance will be lowered.

- 1.4. Always use horsepower-rated switches, contactor and starters.

#### 1.5. Motor Protection

- 1.5.1. Single-phase: Thermal protection for single-phase units is sometimes built in (check nameplate). If no built-in protection is provided, use a contactor with a proper overload. Fusing is permissible.

- 1.5.2. Three-phase: Provide three-leg protection with properly sized magnetic starter and thermal overloads.

#### 1.6. Maximum Operating Limits:

Liquid                      212°F (100°C) with standard seal  
Temperature:            250°F (120°C) with high temperature seal.

Working Pressure: 75 PSI with standard seal  
125 PSI with optional seals.

Starts per Hour: 20, evenly distributed.

- 1.7. Regular inspection and maintenance will increase service life. Base schedule on operating time. Refer to Section 8.

## 2. INSTALLATION

- 2.1. Locate pump as near liquid source as possible (below level of liquid for automatic operation).

- 2.2. Protect from freezing or flooding.

- 2.3. Allow adequate space for servicing and ventilation.

- 2.4. All piping must be supported independently of the pump, and must "line-up" naturally.

**CAUTION**

Never draw piping into place by forcing the pump suction and discharge connections.

- 2.5. Avoid unnecessary fittings. Select sizes to keep friction losses to a minimum.

- 2.6. Units may be installed horizontally, inclined or vertically.

**CAUTION**

Do not install with motor below pump. Any leakage or condensation will affect the motor.

- 2.7. Foundation must be flat and substantial to eliminate strain when tightening bolts. Use rubber mounts to minimize noise and vibration.

- 2.8. Tighten motor hold-down bolts before connecting piping to pump.

## 3. SUCTION PIPING

- 3.1. Low static suction lift and short, direct, suction piping is desired. Consult pump performance curve for *Net Positive Suction Head Required*.

- 3.2. Suction pipe must be at least as large as the suction connection of the pump. Smaller size will degrade performance.

3.3. If larger pipe is required, an eccentric pipe reducer (with straight side up) must be installed at the pump.

3.4. Installation with pump below source of supply:

3.4.1. Install full flow isolation valve in piping for inspection and maintenance.

**CAUTION** Do not use suction isolation valve to throttle pump.

3.5. Installation with pump above source of supply:

3.5.1. Avoid air pockets. No part of piping should be higher than pump suction connection. Slope piping upward from liquid source.

3.5.2. All joints must be airtight.

3.5.3. Foot valve to be used only if necessary for priming, or to hold prime on intermittent service.

3.5.4. Suction strainer open area must be at least triple the pipe area.

3.6. Size of inlet from liquid source, and minimum submergence over inlet, must be sufficient to prevent air entering pump through vortexing. See Figures 1 through 4.

3.7. Use 3 to 4 wraps of Teflon tape to seal threaded connections.

Figure 1

Figure 2

Figure 3

Figure 4

## 4. DISCHARGE PIPING

4.1. Arrangement must include a check valve located between a gate valve and the pump. The gate valve is for regulation of capacity, or for inspection of the pump or check valve.

4.2. If an increaser is required, place between check valve and pump.

4.3. Use 3 to 4 wraps of Teflon tape to seal threaded connections.

## 5. ROTATION

5.1. Correct rotation is right-hand (clockwise when viewed from the motor end). Switch power on and off quickly. Observe shaft rotation. To change rotation:

5.1.1. Single-phase motor: Non-reversible

5.1.2. Three-phase motor: Interchange any two power supply leads.

## 6. OPERATION

6.1. Before starting, pump must be primed (free of air and suction pipe full of liquid) and discharge valve partially open.

6.2. Make complete check after unit is run under operating conditions and temperature has stabilized. Check for expansion of piping.

## 7. MAINTENANCE

7.1. Ball bearings are located in and are part of the motor. They are permanently lubricated. No greasing required.

**CAUTION** Pumped liquid provides lubrication. If pump is run dry, rotating parts will seize and mechanical seal will be damaged. Do not operate at or near zero flow. Energy imparted to the liquid is converted into heat. Liquid may flash to vapor. Rotating parts require liquid to prevent scoring or seizing.

## 8. DISASSEMBLY

Complete disassembly of the unit will be described. Proceed only as far as required to perform the maintenance work required.

8.1. Turn off power.

8.2. Drain system and flush if necessary.

8.3. Remove motor hold-down bolts.

8.4. Disassembly of Liquid End

8.4.1. Remove casing bolts (370).

8.4.2. Remove back pull-out assembly from casing (100).

8.4.3. Remove impeller locknut (304).

**CAUTION** Do not insert screwdriver between impeller vanes to prevent rotation of close-coupled units. Remove cap at opposite end of motor. A screwdriver slot or a pair of flats will be exposed. Using them will prevent impeller damage.

8.4.4. Remove impeller (101) by turning counter-clockwise when looking at the front of the pump. Protect hand with rag or glove.

**CAUTION** Failure to remove the impeller in a counter-clockwise direction may damage threading on the impeller, shaft or both.

8.4.5. With two pry bars 180 degrees apart and inserted between the seal housing (184) and the motor adapter (108), carefully separate the two parts. The mechanical seal rotary unit (383) should come off the shaft with the seal housing.

8.4.6. Push out the mechanical seal stationary seat from the motor side of the seal housing.

## 9. REASSEMBLY

9.1. All parts should be cleaned before assembly.

9.2. Refer to parts list to identify required replacement items. Specify pump index or catalog number when ordering parts.

- 9.3. Reassembly is the reverse of disassembly.
- 9.4. Observe the following when reassembling the liquid-end:
- 9.4.1. All mechanical seal components must be in good condition or leakage may result. Replacement of complete seal assembly, whenever seal has been removed, is good standard practice.  
It is permissible to use a light lubricant, such as glycerin, to facilitate assembly. Do not contaminate the mechanical seal faces with lubricant.
  - 9.4.2. Inspect casing O-ring (513) and replace if damaged. This O-ring may be lubricated with petroleum jelly to ease assembly.
  - 9.4.3. Inspect guidevane seal ring (349) and replace if worn.

**⚠ CAUTION** Do not lubricate guidevane seal ring (349). Insure it is not pinched by the impeller on reassembly.

- 9.5. Check reassembled unit for binding. Correct as required.
- 9.6. Tighten casing bolts in a star pattern to prevent O-ring binding.

## 10. TROUBLE SHOOTING CHART

### MOTOR NOT RUNNING

(See causes 1 through 6)

### LITTLE OR NO LIQUID DELIVERED

(See causes 7 through 17)

### POWER CONSUMPTION TOO HIGH

(See causes 4, 17, 18, 19, 22)

### EXCESSIVE NOISE AND VIBRATION

(See causes 4, 6, 9, 13, 15, 16, 18, 20, 21, 22)

#### PROBABLE CAUSE:

1. Tripped thermal protector
2. Open circuit breaker
3. Blown fuse
4. Rotating parts binding
5. Motor wired improperly
6. Defective motor
7. Not primed
8. Discharge plugged or valve closed
9. Incorrect rotation
10. Foot valve too small, suction not submerged, inlet screen plugged.
11. Low voltage
12. Phase loss (3-phase only)
13. Air or gasses in liquid
14. System head too high
15. NPSHA too low:  
Suction lift too high or suction losses excessive.  
Check with vacuum gauge.
16. Impeller worn or plugged
17. Incorrect impeller diameter
18. Head too low, causing excessive flow rate
19. Viscosity or specific gravity too high
20. Worn bearings
21. Pump or piping loose
22. Pump and motor misaligned

## PARTS LIST

| Item No. | Description                 | Materials                                 |
|----------|-----------------------------|---|
| 100      | Casing                      | AISI 316L SS                              |
| 101      | Impeller                    |   |
| 108      | Motor adapter               | Steel                                     |
| 123      | Deflector                   | BUNA-N                                    |

## Commercial Water

### GOULDS PUMPS LIMITED WARRANTY

This warranty applies to all water systems pumps manufactured by Goulds Pumps.

Any part or parts found to be defective within the warranty period shall be replaced at no charge to the dealer during the warranty period. The warranty period shall exist for a period of twelve (12) months from date of installation or eighteen (18) months from date of manufacture, whichever period is shorter.

A dealer who believes that a warranty claim exists must contact the authorized Goulds Pumps distributor from whom the pump was purchased and furnish complete details regarding the claim. The distributor is authorized to adjust any warranty claims utilizing the Goulds Pumps Customer Service Department.

**The warranty excludes:**

- (a) Labor, transportation and related costs incurred by the dealer;
- (b) Reinstallation costs of repaired equipment;
- (c) Reinstallation costs of replacement equipment;
- (d) Consequential damages of any kind; and,
- (e) Reimbursement for loss caused by interruption of service.

**For purposes of this warranty, the following terms have these definitions:**

- (1) "Distributor" means any individual, partnership, corporation, association, or other legal relationship that stands between Goulds Pumps and the dealer in purchases, consignments or contracts for sale of the subject pumps.
- (2) "Dealer" means any individual, partnership, corporation, association, or other legal relationship which engages in the business of selling or leasing pumps to customers.
- (3) "Customer" means any entity who buys or leases the subject pumps from a dealer. The "customer" may mean an individual, partnership, corporation, limited liability company, association or other legal entity which may engage in any type of business.

**THIS WARRANTY EXTENDS TO THE DEALER ONLY.**

Goulds Pumps, G&L and the ITT Engineered Blocks Symbol are registered trademarks and tradenames of ITT Industries Inc.

SPECIFICATIONS ARE SUBJECT TO CHANGE WITHOUT NOTICE.

## AIR PURIFICATION CANISTERS 140-200 LB. ACTIVATED CARBON

G-1  
G-2  
**G-3**

The CARBOTROL "G" Canisters handles flows up to 500 CFM.

### FEATURES

- High activity carbon.
- Epoxy lined steel or polyethylene construction.
- Acceptable for transport of hazardous spent carbon.
- Side drain for removal of accumulated condensate.
- Low pressure drop.
- PVC internal piping.
- High temperature (180°F) steel units available.

### APPLICATIONS

- Soil vapor remediation
- Air stripper exhausts
- Tank vents
- Exhaust hoods
- Work area purification
- Sewage plant odor control

#### SAFETY

Certain chemical compounds in the presence of activated carbon may oxidize, decompose or polymerize. This could result in temperature increases sufficient to cause ignition of the activated carbon or adsorbed material. If a compounds reaction with activated carbon is unknown, appropriate tests should be considered.

## 2. Soil Vapor Extraction Instrumentation/Switches

**Vacuum Gauges (0-100" H<sub>2</sub>O)**  
**Model#25-200-100-In.H<sub>2</sub>O Vac**

**Pressure Gauges (0-100" H<sub>2</sub>O)**  
**Model#40-200-30-In.H<sub>2</sub>O**

**GENERAL INFORMATION**

**NOSHOK 200 Series Diaphragm Gauges** are designed for extremely low pressure or vacuum measurement. The ultra sensitive diaphragm capsules are rated for pressure (or vacuum) as low as 0-10 **inches of water** and as high as 0-10 **psi**.

The cases are constructed of black painted steel on the 2 1/2" size and 304 Stainless Steel on the 4" size. The lenses are molded plexiglass on the 2 1/2" size and instrument glass on the 4" size for strength and clarity. The diaphragm capsules are phosphor bronze and when coupled to the precision all-brass movements, provide extremely accurate indication over the service life of the gauge.

Available options include a recalibrator on the 2 1/2" size (accessible through the front of the dial) and overpressure protection of up to 200% of the dial range. Mounting options include 304 stainless steel or black steel triangular bezels and U-Clamps in addition to chrome or black steel front flanges.

Applications for **NOSHOK 200 Series Gauges** include medical, biomedical, heating-ventilating and air conditioning, gas distribution, filtration, burner and gas combustion service, waste water treatment and everywhere low pressure and vacuum measurement is required.

---

## Pressure Gauge Series 100, 200, 300, 400, 500, 600, 700, 800 and 900

---

### Installation

Prior to pressure gauge installation, the following conditions should be considered: temperature, humidity, vibration, pulsation, shock, and other climatic and environmental conditions of the application, as well as the potential need for protective accessories and/or special installation requirements.

Always use a wrench on the gauge socket when installing a NOSHOK pressure gauge into position; never use force on the gauge case to tighten into position. This may result in a loss of accuracy, excessive friction and/or mechanical damage to the measuring element and case of the NOSHOK pressure gauge. When surface or panel mounting a gauge, be sure the surface is flat and the panel cutout and/or the mounting hole configuration is correct (please refer to the NOSHOK Pressure Gauge catalog NK95G for these specifications). If the surface is uneven or the panel cutout is larger than the gauges diameter, use an adapter ring to remove mounting strain and/or adapt the gauge to the larger diameter panel cutout. When connecting a gauge to a rigid pipe service, use flexible tubing where possible as a connector to eliminate plumbing strain. Rapid pressure pulsation and extreme mechanical vibration may be damaging to some NOSHOK pressure gauge movement gearing, bushings, and linkage. In extreme cases, steps should be taken to dampen these forces. In pressure ranges over 600 psi, a NOSHOK orifice is recommended for pulsation dampening, but in extreme pulsation applications a NOSHOK Piston Type Pressure Snubber may be required.

When installing a gauge into a corrosive situation be sure to select a pressure gauge or pressure gauge and diaphragm seal combination suitable for your application. Gauges to be used on high temperature service should have a five foot or longer leg of pipe or tubing connecting the gauge to dissipate heat and protect the gauge measuring element from damage.

A gauge to be used on steam pressure service should be installed with a water filled NOSHOK pigtail steam siphon between the gauge and the steam line.

### Maintenance

Apart from occasional calibration, NOSHOK pressure gauges require little or no maintenance. Some applications may be more aggressive than others, resulting in an increased frequency in the need for calibration. The environmental limitations for the specific NOSHOK pressure gauge series should be observed in all cases, and gauges applied in situations outside these requirements may result in premature wear and/or failure of the gauge.

### Warranty

All NOSHOK pressure gauges carry a one or three year warranty. NOSHOK warrants for three years our 300, 500, 600, 700 and 900 series liquid filled pressure gauges to be free from defects in materials and workmanship, to remain within the cataloged accuracy and performance specifications, and to maintain the integrity of the hermetically sealed case preventing leakage. NOSHOK warrants for one year our 100, 200, 400, 600, 700, and 800 series non-liquid filled pressure gauge. Certain limitations do apply; for more information please consult page three of the NOSHOK Pressure Gauges catalog (NK95G).

Please do not hesitate to contact us with any additional questions.

## Series 616W Differential Pressure Transmitter

### Specifications - Installation and Operating Instructions

The **SERIES 616W** Differential Pressure Transmitter senses the pressure of air and non-combustible, compatible gases and sends a standard 4 to 20 mA or selectable 0 to 5/0 to 10 VDC output signal. All models, including those featuring an LCD, are factory calibrated to specific ranges. Positive, negative, and differential pressures can be measured within a full scale accuracy of  $\pm 0.25\%$ . This weatherproof unit is enclosed in a polycarbonate case, rated IP66/NEMA 4X. The span and zero controls are for use when checking calibration, and are not intended for re-ranging.

Series 616W Transmitter Models & Ranges

| MODEL CHART  |                  |               |                 |
|--------------|------------------|---------------|-----------------|
| Model        | Range            | Max. Pressure | Digital Display |
| 616W-2       | 0 to 6 in w.c.   | 10 psig       | —               |
| 616W-3       | 0 to 10 in w.c.  | 10 psig       | —               |
| 616W-4       | 0 to 20 in w.c.  | 20 psig       | —               |
| 616W-5       | 0 to 40 in w.c.  | 20 psig       | —               |
| 616W-6       | 0 to 100 in w.c. | 15 psig       | —               |
| 616W-7       | 0 to 200 in w.c. | 45 psig       | —               |
| 616W-2-LCD   | 0 to 6 in w.c.   | 10 psig       | 0 to 6.00       |
| 616W-3-LCD   | 0 to 10 in w.c.  | 10 psig       | 0 to 10.00      |
| 616W-4-LCD   | 0 to 20 in w.c.  | 20 psig       | 0 to 20.0       |
| 616W-5-LCD   | 0 to 40 in w.c.  | 20 psig       | 0 to 40.0       |
| 616W-6-LCD   | 0 to 100 in w.c. | 15 psig       | 0 to 100.0      |
| 616W-7-LCD   | 0 to 200 in w.c. | 45 psig       | 0 to 200.0      |
| 616W-6B-LCD  | 3-0-3 in w.c.    | 10 psig       | -3.00-0-3.00    |
| 616W-10B-LCD | 5-0-5 in w.c.    | 10 psig       | -5.00-0-5.00    |
| 616W-20B-LCD | 10-0-10 in w.c.  | 10 psig       | -10.00-0-10.00  |
| 616W-2M-LCD  | 0 to 1.5 kPa     | 68.9 kPa      | 0 to 1.50       |
| 616W-3M-LCD  | 0 to 2.5 kPa     | 68.9 kPa      | 0 to 2.50       |
| 616W-4M-LCD  | 0 to 5 kPa       | 137.8 kPa     | 0 to 5.00       |
| 616W-5M-LCD  | 0 to 10 kPa      | 103.4 kPa     | 0 to 10.0       |

Table 1

#### SPECIFICATIONS

**Service:** Air and non-combustible, compatible gases.

**Wetted Materials:** Consult factory.

**Accuracy:** 0.25% FS @ 77°F (25°C), display accuracy  $\pm 0.5\%$ .

**Thermal Effect:**  $\pm 0.02\%$  FS/°F ( $\pm 0.036\%$  FS/°C).

**Stability:**  $\pm 1\%$  FS/yr.

**Temperature Limits:** 14 to 185°F (-10 to 85°C).

**Pressure Limits:** See chart.

**Power Requirements:** 10 to 35 VDC (2-wire), 17 to 36 VDC, or isolated 21.6 to 33 VAC (3-wire).

**Output Signal:** 4 to 20 mA (2-wire), 0 to 5 VDC, or 0 to 10 VDC (3-wire)

**Zero and Span Adjustments:** Push buttons.

**Loop Resistance:** Current Output: 0 to 1250  $\Omega$  (max); Voltage Output: Load resistance 1 k $\Omega$  (min).

**Current Consumption:** 40 mA max.

**Electrical Connections:** 3-wire removable European style terminal block for 16 to 26 AWG.

**Process Connections:** Barbed, dual size to fit 1/8" and 3/16" (3.12 and 4.76 mm) I.D. rubber or vinyl tubing.

**Enclosure Rating:** NEMA 4X (IP66).

**Mounting Orientation:** Any orientation.

**Weight:** Without LCD: 8.8 oz (249 g); With LCD: 9.6 oz (272 g).

**Agency Approvals:** CE.

INSTALLATION

**1. Location:** Select a clean, dry mounting location free from excess vibration where the temperature will remain between 14 to 185°F (-10 to 85°C). Distance from the receiver is limited only by total loop resistance. See Electrical Connections below. The tubing supplying pressure to the instrument can be practically any length required, but long lengths will increase response time slightly.

**2. Position:** A vertical position, with the pressure connection pointing down, is recommended. That is the position in which all standard models are spanned and zeroed at the factory. They can be used at other angles, but final spanning and zeroing must be done while the transmitter is in that alternate position.

**3. Pressure Connections:** Two integral barbed tubing connections are provided. They are dual-sized to fit both 1/8" and 3/16" (3.12 and 4.76 mm) I.D. tubing. Be sure the pressure rating of the tubing exceeds that of the operating range. On ranges over 20 psi, we recommend use of a suitable hose clamp to assure the integrity of the connection.

ELECTRICAL CONNECTIONS

**CAUTION** Do not exceed specified supply voltage ratings. Permanent damage not covered by warranty will result. This unit is not designed for 120 or 240 VAC line operation.

Electrical connections are made to the terminal block located on the inside of the transmitter. Determine which of the following circuit drawings best applies to your application and wire accordingly.

Electrical Connection

The Series 616W simultaneously transmits a 2-wire 4 to 20 mA current output and a 3-wire 0 to 5 V / 0 to 10 V voltage output via a removable European-style three conductor terminal block. The transmitter can be wired in one of the following three ways to utilize the current and/or voltage output.

Power Supply

Refer to Table 2 for the required supply rating.

| MODEL CHART                      |  |
|----------------------------------|--|
| Output Type                      | Power Supply Rating                        |
| 2-wire current                   | 10 to 35 VDC (40 mA min)                   |
| 3-wire current                   | 17 to 36 VDC or 21.6 to 33 VAC (40 mA min) |
| Simultaneous current and voltage | 17 to 35 VDC (40 mA min)                   |

Table 2

Choose a power supply with a voltage and current rating sufficient to meet the power specifications under all operating conditions. If the supply is unregulated, make sure that the output voltage remains within the required voltage range under all power line conditions. Ripple on the supply should not exceed 100 mV.

AC/DC Jumper Selection

**NOTICE** The jumper is factory set to AC. If DC power is applied while the jumper is set to AC, no damage will occur. However, the accuracy of the unit may be temporarily affected.

**CAUTION** Powering the unit with AC power while the jumper is set to DC may permanently damage the transmitter.

Refer to Figure 1 for the location of the AC/DC jumper. Place the shorting jumper across either the two pins marked AC or the two pins marked DC.

Figure 1: AC/DC Jumper

2-Wire 4 to 20 mA Current Operation

**CAUTION** Do not exceed specified supply voltage ratings. Permanent damage not covered by warranty will result. Simultaneous outputs are not designed for AC voltage operation.

The connections to the transmitter are made through terminals 2 and 3 on the terminal block as shown in Figure 2. The terminal block is removable and each of the terminals are labeled underneath the terminal block on the circuit board. Polarity is indicated by terminals 2 (+IOUT) and 3 (-IOUT). The AC/DC selection jumper should be set for DC operation.

Figure 2: Current Output Wiring

The range of appropriate receiver load resistances (RL) for power supply voltage available is given by the formula listed below. Shielded 2-wire cable is recommended for control loop wiring. Ground the shield at the power supply end.

**NOTICE** The receiver may be connected to either the negative or positive side of the loop, whichever is most convenient. Should the polarity of the transmitter or receiver be inadvertently reversed, the loop will not function properly, but no damage will be done to the transmitter.

$$R_L = \frac{V_{PS} - 10.0}{20 \text{ mA DC}}$$

The maximum length of connecting wire between the transmitter and the receiver is a function of wire size and receiver resistance. That portion of the total current loop resistance represented by the resistance of the connecting wires themselves should not exceed 10% of the receiver resistance. For extremely long runs (over 1,000 ft/305 m), it is desirable to select receivers with lower resistances in order to keep the size and cost of the connecting leads as low as possible. In installations where the connecting run is no more than 100 ft (30.5 m), connecting lead wire as small as No. 22 ga. can be used.

### 3-Wire 0 to 10 V and 0 to 5 V Voltage Operation

#### CAUTION

Do not exceed specified supply voltage ratings. Permanent damage not covered by warranty will result.

The connections to the transmitter are made to Terminals 1, 2, and 3 on the terminal block as shown in Figure 3. The terminal block is removable and each of the terminals are labeled underneath the terminal block on the circuit board. Polarity is indicated by 1, 2, and 3. When connecting using a DC power source, make sure the AC/DC selection jumper is set for DC. If the polarity of the transmitter is inadvertently reversed, the unit will not function properly, but no damage will be done to the transmitter. When connecting to an AC power source, make sure the AC/DC selection jumper is set for AC. Either lead of the supply power may be connected to terminals 1 and 2 without affecting the operation of the transmitter or causing damage to the transmitter.

Figure 3: Voltage Output Wiring

The minimum receiver load is 1 kΩ. The resistance due to the wire should be low compared to the receiver load resistance. While the voltage at the terminal block remains unchanged with a 10 mA current flow, resistive losses in the wiring do cause errors in the voltage delivered to the receiver. For a 1% accuracy gauge, the resistance of the wires should be less than 0.1% of the value of the receiver load resistance. This will keep the error caused by the current flow below 0.1%.

### Simultaneous Current and Voltage Operation

#### CAUTION

Do not exceed specified supply voltage ratings. Permanent damage not covered by warranty will result. Simultaneous outputs are not designed for AC voltage operation.

The connections to the transmitter are made to Terminals 1, 2, and 3 on the terminal block as shown in Figure 4. The terminal block is removable and each of the terminals are labeled underneath the terminal block on the circuit board. Polarity is indicated by terminals 1, 2, and 3. The AC/DC selection jumper should be set for DC operation. The voltage output and the power supply must have separate wire leads that are only joined at terminal 2 of the transmitter. Additional error may occur for the voltage output if a single wire is used or if the wires are joined at the power supply or receiver.

NOTE- POWER AND VOLTAGE RECEIVER "-" MUST BE SEPERATE WIRES AND BOTH WIRED TO

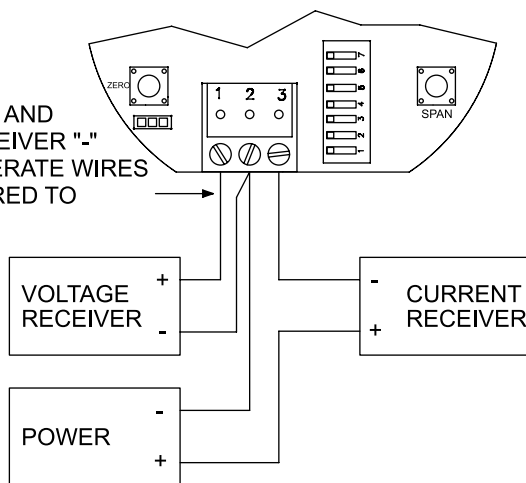

Figure 4: Simultaneous Current and Voltage Output Wiring

For the current output, the maximum allowable loop resistance (wiring + receiver resistance) is dependent on the power supply. The maximum loop voltage drop must not reduce the transmitter voltage below 17 V. The maximum loop resistance can be calculated using the following equation:

$$R_{MAX} = \frac{V_{PS} - 17.0}{20 \text{ mA DC}}$$

(where  $V_{PS}$  is the power supply voltage)

The equation uses 17.0 instead of 10.0 used in the current only equation. This represents the minimum voltage supply which is higher on the simultaneous output configuration due to the requirements of the voltage outputs.

Shielded 4-wire cable is recommended for control loop wiring. Ground the shield at the power supply end only. Should the polarity of the transmitter or receiver be inadvertently reversed, the unit will not function properly, but no damage will be done to the transmitter.

For voltage outputs, the minimum receiver load is 1 kΩ. The resistance due to the wire should be low compared to the receiver load resistance. While the voltage at the terminal block remains unchanged with a 10 mA current flow, resistive losses in the wiring do cause errors in the voltage delivered to the receiver. For a 1% accuracy gauge, the resistance of the wires should be less than 0.1% of the value of the receiver load resistance. This will keep the error caused by the current flow below 0.1%.

### CALIBRATION

#### NOTICE

There is a 5 second delay from the time the zero or span calibration button is released until the time that the change in the calibration takes place. This delay is used to prevent stress related offsets on the lower range.

### Zero Calibration

The zero calibration can be set by applying zero pressure to both the pressure ports and pressing the zero button for 3 seconds. If either the remote or local LCD is present, the display will read ZERo and then sequence back to the home display.

### Span Calibration

The span calibration can be adjusted only after setting the zero adjustment. It must be completed within 5 minutes of the last zero calibration. The span calibration button will be ignored until the zero calibration is completed. Apply pressure to the ports of the transmitter that are associated with the maximum output of the transmitter (20 mA, 5 V, or 10 V, depending on the output being used). Press and hold the span button for 3 seconds. If either the remote or local LCD are present, the display will read SPAn and then sequence back to the home display. If the span calibration is attempted before adjusting the zero calibration, the FAiL error message will flash on the display. On bi-directional models, separate spans can be performed on the positive and negative sides of the range.

### ZERO DEADBAND

Figure 5

### MAINTENANCE/REPAIR

Upon final installation of the Series 616W Differential Pressure Transmitter, no routine maintenance is required. The Series 616W is not field serviceable and is not possible to repair the unit. Field repair should not be attempted and may void warranty.

### WARRANTY/RETURN

Refer to "Terms and Conditions of Sale" in our catalog and on our website. Contact customer service to receive a Return Goods Authorization number before shipping the product back for repair. Be sure to include a brief description of the problem plus any additional application notes.

Temperature transmitters for system enclosure, control panel, and GAC influent.

#TTW-104

**Dwyer**

**SERIES TTW**

# WEATHERPROOF IMMERSION TEMPERATURE TRANSMITTER

Pt100 RTD, PC Programmable Transmitter

The **SERIES TTW** Immersion Temperature Transmitter offers a field adjustable temperature transmitter pre-assembled with an RTD sensor and weatherproof enclosure.

## FEATURES/BENEFITS

- Preset to 32 to 212°F (0 to 100°C) output range
- USB port for easy output scale adjustment in the field

## APPLICATIONS

- Immersion temperature sensing in HVAC systems

| MODEL CHART    |              |
|----------------|--------------|
| Model          | Probe Length |
| <b>TTW-104</b> | 4"           |
| TTW-106        | 6"           |
| TTW-108        | 8"           |

| TTW-118        | 18"          |

## SPECIFICATIONS

### TEMPERATURE SENSOR

**Accuracy:**  $\pm 3^{\circ}\text{F}$  ( $\pm 1.7^{\circ}\text{C}$ ).

**Temperature Limits:** Operating: -40 to 302°F (-40 to 150°C).

**Sensor Curves:** Pt100 RTD (TE Series Curve D).

### TEMPERATURE TRANSMITTER

**Input Range:** -328 to 986°F (-200 to 530°C).

**Output:** Two-wire 4 to 20 mA.

**Output Impedance:** 600  $\Omega$  @ 24 VDC.

**Power Requirements:** 12 to 35 VDC.

**Accuracy:**  $\pm 0.2\%$  FS.

**Temperature Limits:** -40 to 185°F (-40 to 85°C).

**Response Time:** <100 ms.

### ENCLOSURE

**Temperature Limits:** -40 to 212°F (-40 to 100°C).

**Rating:** NEMA 4X (IP65).

**Material:** Painted aluminum housing.

## No. A-709 RTD Transmitter Enclosure

### Specifications - Installation and Operating Instructions

Shown with optional Series  
RTD Temperature Transmitter

#### PARTS LIST

- (1) Enclosure
- (1) Enclosure Cover
- (1) 1/8" male NPT x 7/16-24 male Adapter
- (1) 1/8" male NPT x 7/16 female Adapter
- (1) 1/2" male NPT x 1/8" female Bushing
- (2) M4x8 Socket Cap Screws
- (1) 1/4" I.D. x 3/8" O.D. O-ring

#### ENCLOSURE ASSEMBLY

1. Insert 1/2" male NPT x 1/8" female adapter into enclosure from bottom.
2. Place o-ring inside 7/16-24 female fitting and loosely assemble it to the 7/16-24 male x 1/8" NPT adapter, then assemble to adapter noted in step #1 as shown in Figure 1.

Figure 1

#### INSTALLING SERIES 651 RTD TRANSMITTER

1. Use M4x8 screws to attach RTD to enclosure.
2. Feed wiring through 1/2" NPT opening.
3. Connect wiring to appropriate terminals on transmitter.

#### INSTALLING SERIES RTD SENSOR

1. From inside of enclosure, feed tip of RTD sensor through transmitter (if included) and fitting assembly.
2. Make sure wiring will clear all metal surfaces when cover is replaced.
3. Lock RTD sensor in place by tightening the two hex fittings outside the enclosure.
4. Use 1/8" NPT threads to mount assembled unit in place. Optional A-345 1/8" NPT flange includes a gasket and two self tapping screws for convenient installation on sheet metal ducts, etc.
5. Attach RTD sensor wires to transmitter terminals if it is installed within enclosure, if using a remotely located transmitter, route wiring between sensor and transmitter to inside through the 1/2" NPT opening.
6. Replace cover and tighten screws when wiring is complete.

# TxBlock-USB Transmitter

## TEMPERATURE TRANSMITTER - OPERATING MANUAL – V1.0x H

### INTRODUCTION

The **TxBLOCK-USB** is a 4-20 mA 2-wire temperature transmitter for head mount, powered by the current loop. The output current is linearized and adjusted in function of the input sensor type and range configured.

Its configuration is accomplished by connecting the transmitter to a PC USB port without the need of any dedicated interface. The configuration does not require that the transmitter be powered.

### SPECIFICATIONS

**Sensor input:** User defined. The supported sensors are listed in **Table 1**, along with their maximum ranges.

**Thermocouples:** Types J, K, R, S, T, N, E and B according to IEC 60584 (ITS-90). Impedance >> 1 MΩ

**Pt100:** Type 3-wire, Excitation 0.8 mA,  $\alpha = 0.00385$ , according IEC 60751 (ITS-90).  
For 2-wire sensors, tie terminals 3 and 4 together.

**Pt1000:** Type 3-wire, Excitation 0.65 mA,  $\alpha = 0.00385$ , according IEC 60751 (ITS-90).  
For 2-wire sensors, tie terminals 3 and 4 together.

**NTC R<sub>25°C</sub>:** 10 kΩ ± 1 %, B<sub>25/85</sub> = 3435

**Voltage:** 0 to 50 mVdc. Impedance >> 1 MΩ

| Sensor Type    | Maximum Measurement Range | Minimum Measurement Range |
|----------------|---------------------------|---------------------------|
| Voltage        | 0 to 50 mV                | 5 mV                      |
| Thermocouple K | -150 to 1370 °C           | 100 °C                    |
| Thermocouple J | -100 to 760 °C            | 100 °C                    |
| Thermocouple R | -50 to 1760 °C            | 400 °C                    |
| Thermocouple S | -50 to 1760 °C            | 400 °C                    |
| Thermocouple T | -160 to 400 °C            | 100 °C                    |
| Thermocouple N | -270 to 1300 °C           | 100 °C                    |
| Thermocouple E | -90 to 720 °C             | 100 °C                    |
| Thermocouple B | 500 to 1820 °C            | 400 °C                    |
| Pt100          | -200 to 650 °C            | 40 °C                     |
| Pt1000         | -200 to 650 °C            | 40 °C                     |
| NTC            | -30 to 120 °C             | 40 °C                     |

**Table 1** – Sensors accepted by the transmitter

**Switch-on delay:** < 2.5 s. The accuracy is only guaranteed after 15 min.

**Terms of reference:** ambient: 25 ° C; voltage: 24 Vdc, load: 250 Ω; settling time: 10 minutes.

**Temperature Effect:** < ±0.16 % / 25 °C

**Response time:** typical 1.6 s.

**Maximum voltage allowed at input terminals no sensor:** 3 V.

**RTD current:** 800 μA.

**RTD cable resistance effect:** 0.005 °C / Ω

**Maximum allowable cable resistance for RTD:** 25 Ω.

| Sensor Type                        | Typical Accuracy | Minimum Accuracy |

**Table 2** – Calibration error, percentage of the full measurement range

(\*) **Add cold junction compensation:** < ± 1 °C.

**Power supply influence:** 0.006 % / V typical (percentage of the full measure range).

**Output:** 4-20 mA or 20-4 mA current, 2-wired; linear in relation to the temperature measurement by the selected sensor.

**Output Resolution:** 2 μA.

**Power supply:** 10 to 35 Vdc, across the transmitter;

**Maximum load (RL):** RL (max.) = (Vdc – 10) / 0.02 [Ω]

Where: Vdc= Power supply voltage (10-35 Vdc)

**Operating Temperature:** -40 to 85 °C

**Humidity:** 0 to 90 % RH

**Electromagnetic Compatibility:** EN 61326-1:2006

**No electrical isolation between input and output.**

**Internal protection against polarity inversion.**

**Cold junction compensation for thermocouples.**

**Dimensions:** 43.5 mm (diameter) x 20.5 mm (height)

**Connection Wire Cross Section:** 0.14 a 1.5 mm<sup>2</sup>

**Screw Tightening:** 0.8 Nm.

**Housing:** ABS UL94-HB.

### CONFIGURATION

When the transmitter is used with the factory setting, no further action is required and the transmitter is ready to be installed. Changes to the configuration are possible through the **TxConfig II** software, provided free of charge.

The **TxBLOCK-USB** Setup Kit consisting of the Txconfig II software and USB cable can be purchased from the manufacturer or any authorized distributor. The Txconfig II software is continuously updated and new versions can be downloaded at no charge from the manufacturer's website. To install, execute the **TxConfigIISetup.exe** file and follow the instructions.

**Fig. 1** – USB cable connection

During the setup, the transmitter is powered by the USB, not requiring an external power supply.

The transmitter setup can also be made by connecting it to the loop, using the *loop* power supply. There is no electrical insulation between the transmitter and the communication port (interface), therefore it is not recommended to configure it with the sensor inlet connected to the process. See Fig. 2.

Fig. 2 – USB cable connections – Loop powered

After these connections, the user must run the **TxConfig II** software and, if necessary, consult the *Help* topic to help using the software.

### SOFTWARE CONFIGURATION:

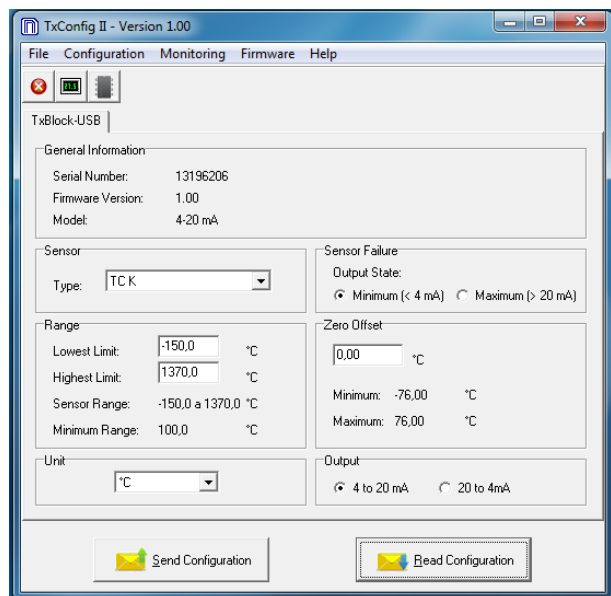

Fig. 3 – TxConfig II software main screen

The fields in the screen mean:

- General Information:** This field shows information that identifying the transmitter. This information should be sent to the manufacturer in an eventual request for technical assistance.
- Sensor:** Select the type of sensor to be used. See Table 1.
- Measuring Range:** Sets de measurement range of the transmitter.

**Lower Range Limit:** equivalent temperature for a current of 4 mA.

**Upper Range Limit:** equivalent temperature for a current of 20 mA.

#### Sensor Range

The values chosen cannot exceed the **range of sensor** shown in this field. See Table 1 of this manual.

#### Minimum Range

Do not set a lower band (span) that the **Minimum Range** indicated below in this same field. See Table 1 of this manual.

- Sensor Failure:** It establishes the output behavior, when the transmitter indicates a failure:

**Minimum:** output current goes to < 3.6 mA (down-scale), typically used for refrigeration.

**Maximum:** output current goes to > 22.0 mA (up-scale), typically used for heating.

- Zero Correction:** It corrects small deviations presented in the transmitter output, for example, when the sensor is replaced.
- Send Configuration:** It applies the new setup. Once sent, the setup will be immediately adopted by the transmitter.
- Read Configuration:** Reads the current setup in the transmitter connected. The screen now presents the current setup that may be changed by the user.

### FACTORY SETTING:

- Sensor: Pt100 3-wire, range 0 to 100 °C
- Sensor failure: upscale (maximum).
- 0 °C zero correction.
- Unit: °C;
- Output: 4-20 mA.

Upon purchase order, the user can define a specific setup.

### MECHANICAL INSTALLATION

The **TxBlock-USB** transmitter is suitable to be installed in heads. Vibrations, moisture and extreme temperatures, electro-magnetic interference, high voltage and other interferences can permanently damage the unit, and could cause error in the measured value.

### DIMENSIONS:

Fig. 4 – Transmitter dimensions

### ELECTRICAL INSTALLATION

- Section of the cable used: 0.14 to 1.5 mm<sup>2</sup>
- Recommended torque in the terminal: 0.8 Nm.

### RECOMMENDATIONS FOR INSTALLATION

- Sensor signals conductors must go through the plant system separate from power leads (loop), if possible in grounded conduits.
- The instruments must be powered from the instrumentation power supply circuit.
- In control and monitoring applications is essential to consider what can happen when any part of the system fails.
- It is recommended the use of suppressors in contact coils, solenoids and any inductive load.

## ELECTRICAL CONNECTIONS

The figures below show the electrical connections required. The terminals 3, 4, 5 and 6 are dedicated to the sensor connection. **LOAD** represents the 4-20 mA current measuring device (indicator, controller, recorder, etc.).

### PT100 2-WIRE

**Note:** When the Pt100 2-wire the terminals 3 and 4 must be interconnected, according to the figure below.

The Pt100 wire length **should be less than 30 cm** to maintain the measurement error within specifications (electrical resistance).

Fig. 5 – Transmitter electrical connections (Pt100 2-wire)

### PT100 3-WIRE

Fig. 6 – Transmitter electrical connections (Pt100 3-wire)

### PT100 4-WIRE

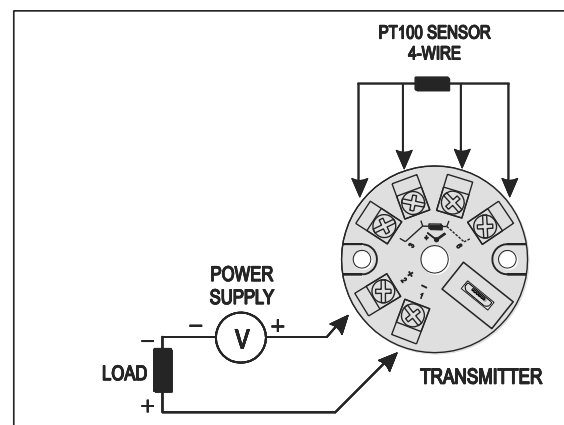

Fig. 7 – Transmitter electrical connections (Pt100 4-wire)

**Pt1000 3-wire / Pt100 3-wire and 4-wire:** For appropriate cable resistance compensation they should be equal for all legs. Maximum wire resistance is 25  $\Omega$  per wire leg. Usage of a 3 or 4 wire with conductors of equal length and gauge is recommended.

### NTC 2-WIRE

Fig. 8 – Transmitter electrical connections (NTC 2-wire)

### THERMOCOUPLES

Fig. 9 – Transmitter electrical connections (Thermocouple)

### VOLTAGE (0-50 mV)

Fig. 10 – Transmitter electrical connections (0-50 mV)

## OPERATION

The sensor offset can be changed through the ***TxConfig II*** software. The USB cable may be connected to the transmitter without causing any measurement errors. See item *Zero Correction* in the chapter **CONFIGURATION** of this manual.

The user must choose the most suitable sensor and range to the process. The chosen range must not exceed the maximum range of measurement defined for the sensor and should not be smaller than the minimum range for the same sensor.

It is important to note that the transmitter accuracy is based on the maximum range of the sensor used, even when a narrower range is programmed.

### Example:

- The Pt100 sensor in the range 0 to 100 °C and accuracy of 0.12 %, the maximum error will be 1.02 °C (0.12 % of 850 °C).
- The Pt100 sensor in the range 500 to 600 °C and accuracy of 0.19 %, the maximum error will be 1.61 °C (0.19 % of the 850 °C).

**Note:** When measurements are made at the transmitter, see if the Pt100 excitation current required by the calibrator is compatible with the Pt100 excitation current used in the transmitter: 0.8 mA.

## SAFETY INFORMATION

Any control system design should take into account that any part of the system has the potential to fail. This product is not a protection or safety device and its alarms are not intended to protect against product failures. Independent safety devices should be always provided if personnel or property are at risk.

Product performance and specifications may be affected by its environment and installation. It's user's responsibility to assure proper grounding, shielding, cable routing and electrical noise filtering, in accordance with local regulations, EMC standards and good installation practices.

## SUPPORT AND MAINTENANCE

This product contains no serviceable parts inside. Contact our local distributor in case you need authorized service. For troubleshooting, visit our FAQ at [www.novusautomation.com](http://www.novusautomation.com).

## LIMITED WARRANTY AND LIMITATION OF LIABILITY

NOVUS warrants to the original purchaser that this product is free from defects in material and workmanship under normal use and service within one (1) year from the date of shipment from factory or from its official sales channel to the original purchaser.

NOVUS liability under this warranty shall not in any case exceed the cost of correcting defects in the product or of supplying replacement product as herein provided and upon the expiration of the warranty period all such liability shall terminate.

For complete information on warranty and liability limitations, check appropriate section in our web site: [www.novusautomation.com/warranty](http://www.novusautomation.com/warranty).

# Bimetal Thermometer

## Model TI.20, All Stainless Steel Construction

Datasheet TI.20

### Application

- Suitable fluid medium which does not corrode 304 stainless steel

### Special features

- Back connection without external reset
- Industrial design
- All Stainless steel construction

### Standard version

#### Size

2" (50.8 mm) - Type TI.20

#### Accuracy

± 1.0% full scale value (ASME B40.3)

#### Min. / Max. Ranges

-100 °F to 1000 °F (and equivalent Celsius)

#### Working Range

Steady: full scale value  
Short time: 110% of full scale value

#### Under / Over Range Protection

Temporary over or under range tolerance of 50% of scale up to 500 °F (260°C). For ranges above 500°F, maximum over range is 800°F; continuous. 1000°F intermittent.

#### Connection

Material: 304 stainless steel  
Center back mount (CBM)  
1" NPT

#### Stem

Material: 304 stainless steel  
Diameter: 1" (6.35 mm)  
Length: 2 ½" to 24" (63.5 mm to 609.6 mm)

#### Measuring Element

Bi-metal helix

Thermometer TI.20

#### Case

Material: 304 stainless steel; hermetically sealed per ASME B40.3 standard

#### Dial

White aluminum, dished, with black markings

#### Pointer

Black aluminum

#### Standard Scales

Single: Fahrenheit or Celsius  
Dual: Fahrenheit (outer) and Celsius (inner)

#### Window

Flat instrument glass

#### Weight

2" - 5 oz.; Add 1 oz. for every 2" of stem length

#### Dampening

Inert gel to minimize pointer oscillation

#### Order Options (min. order may apply)

Special scales and dial markings; Acrylic windows  
Calibration certification traceable to NIST

#### Warranty

Limited one year warranty as stated in Wika's Terms & Conditions of Sale.

| STANDARD RANGES         |                                     |                        |

<sup>1</sup>Not recommended for continuous service over 800°F (425°C)

## Dimensions

### Standard versions

**Note:** Thermowells for temperature instruments are recommended for all process systems where pressure, velocity, or viscous, abrasive and corrosive materials are present individually or in combination. A properly selected thermowell protects the temperature instrument from possible damage resulting from these process variables. Furthermore, a thermowell permits removal of the temperature instrument for replacement, repair or testing without effecting the process media or the system.

## Total System Flow Meter #FM40C450Q

**ROTRON® Regenerative Blowers**

# Measurement Accessories

**Blower Connection Key**

NPT – American National Standard Taper Pipe Thread (Male)

NPSC – American National Standard Straight Pipe Thread for Coupling (Female)

SO – Slip On (Smooth – No Threads)

## Air Flow Meter

**FEATURES**

- Direct reading in SCFM
- Low pressure drop (2-4" typical) across the flow meter
- Non-clogging, low impedance air stream
- Light weight aluminum
- No moving parts
- Large easy-to-read dial
- Accurate within 2% at standard conditions
- Good repeatability
- Available in 2", 3" and 4" sizes
- Factory configured for quick installation
- .048" Allen key supplied for gauge adjustment

**OPTIONS**

- Corrosion-resistant version with Chem-Tough™ or in stainless steel
- FDA-approved Food Tough™ surface conversion

**BENEFITS**

- **OPTIMIZE SYSTEM EFFICIENCY**  
Measuring the correct air flow can assist you in fine-tuning to your system's optimal efficiency.
- **BALANCE MULTI-PIPING SYSTEMS**  
When evacuating CFM from more than one pipe, different run lengths or end system impedance can cause one pipe to handle more CFM than the other. With an accurate CFM reading, piping can be balanced by bleeding air in/out or by creating an extra impedance.
- **DETECT CHANNELING OR PLUGGING**  
For systems in which channeling or plugging can occur, a change in the CFM measured can help indicate the unseen changes in your system.

## Air Flow Meter

Thank you for purchasing an AMETEK Rotron Flow Meter. When matched with the correct Rotron blower, and properly installed and maintained, this meter will quickly and accurately measure the pipe flow. To ensure good results, please take the time to read these instructions before starting the installation of your air flow meter.

### Sizing for Optimal Efficiency

### Installation

- Piping** – The flow meter should be installed horizontally on the inlet side of the blower. Since this device is directional, please observe the flow direction arrow. Rotron suggests using a length of straight pipe equivalent to three to five pipe diameters prior to the meter for any elbows, valves, etc., unless there is a tee. If there is a tee, the suggested equivalent length is eight to ten pipe diameters. The flow meter should have two pipe diameters of straight pipe after the flow exits the meter before any elbows, tees, valves, etc.
- Continuous Service** – Moisture and debris should not be allowed to enter the tubes leading into the gauge, as it may affect the gauge. Orient the gauge between 10 o'clock and 2 o'clock when viewed from end. (See Figure 1).

If the gauge does not read zero, gently press down on gauge cover while turning counterclockwise to remove cover. Zero the gauge with the Allen wrench and reattach cover.

INSTALL GAUGE  
10 O'CLOCK TO 2 O'CLOCK

Figure 1

3. Interchangeability – Gauges within a body style are interchangeable to better match your systems actual flow rate to the Gauge Scale. For example:

| <i>Body Style</i> | <i>Gauges Available</i> | <i>Flow Range Available</i> |
|-------------------|-------------------------|-----------------------------|
| A                 | 550599                  | 6-30 SCFM                   |
| A                 | 550600                  | 9-45 SCFM                   |
| A                 | 550601                  | 13-65 SCFM                  |

Similar options for each body style are available. **Gauges** may be purchased separately and field installed without removing the flow meter from the piping.

### Typical Arrangement

### Operation

Rotron's Flow Meter is a venturi style design. After air enters the inlet, the pressure is measured in the high-pressure tap. The second tap measures the pressure at the throat. The differential between the taps registers across a specially calibrated gauge to provide accurate readings. The throat is then expanded back to the original size to keep pressure loss to under 2-4 IWG.

### Maintenance

This air flow meter has been designed to require minimal maintenance. During normal operation, little maintenance is required. Care should be taken to ensure no debris enters the meter.

If the tubes become plugged, remove and clean. Do not switch the low and high hoses. Note proper orientation of hoses.

# Bourdon Tube Pressure Gauges

## Dry or Liquid Filled Gauge with SAE Connection

### Type 212.53S - Dry Case

### Type **213.53S** - Liquid-filled Case

WIKAI Datasheet 21X.53S

#### Applications

- Intended for adverse service conditions where pulsating or vibration exists (with liquid filling)
- Hydraulics & compressors
- Suitable for gaseous or liquid media that will not obstruct the pressure system

#### Special features

- Vibration and shock resistant (with liquid filling)
- 7/16" -20 SAE connection
- Pressure ranges up to 15,000 psi

Bourdon Tube Pressure Gauge Model 213.53S

#### Description

##### Design

ASME B40.100 &amp; EN 837-1

##### Sizes

2½" (63 mm)

##### Accuracy class

± 2/1/2% of span (ASME B40.100 Grade A)

##### Ranges

Vacuum / Compound to 200 psi  
 Pressure from 15 psi to 15,000 psi  
 or other equivalent units of pressure or vacuum

##### Working pressure

Steady: 3/4 scale value  
 Fluctuating: 2/3 full scale value  
 Short time: full scale value

##### Operating temperature

Ambient: -40°F to +140°F (-40°C to +60°C) - dry  
 -4°F to +140°F (-20°C to +60°C) - glycerine filled  
 -40°F to +140°F (-40°C to +60°C) - silicone filled  
 Medium: +140°F (+60°C) maximum

##### Temperature error

Additional error when temperature changes from reference temperature of 68°F (20°C) ±0.4% for every 18°F (10°C) rising or falling. Percentage of span.

##### Weather protection

Weather tight (NEMA 4X / IP 65)

##### Pressure connection

Material: copper alloy  
 Lower mount (LM)  
 7/16" - 20 SAE with o-ring, washer and lock nut

##### Bourdon tube

Material: copper alloy  
 ≤ 1,000 PSI: C-type  
 ≥ 1,500 PSI: helical type

##### Movement

Copper alloy

##### Dial

White ABS with stop pin and with black lettering

##### Pointer

Black aluminum

### Case

304 stainless steel with vent plug and stainless steel crimp ring. Suitable for liquid filling. Case connection sealed with EPDM o-ring (glycerine filled) or Viton o-ring (dry or silicone filled).

### Window

Polycarbonate with Buna-N gasket

### Case fill

Glycerine 99.7% - Type 213.53S

### Optional extras

- Brass restrictor
- External zero adjustment (2½" only)
- Red drag pointer or mark pointer
- Silicone or Fluorolube case filling
- Custom dial layout
- Other pressure scales available  
bar, kPa, MPa, kg/cm² and dual scales

### Dimensions

| Size |    | A    | B    | C    | E    | S    | T       | W    | Weight          |
|------|----|------|------|------|------|------|---------|------|-----------------|
| 2.5" | mm | 69   | 61.2 | 31   | 13   | 6    |         | 14   | 0.38 lb. dry    |
|      | in | 2.69 | 2.41 | 1.23 | 0.51 | 0.24 | 7/16-20 | 0.55 | 0.46 lb. filled |

### Ordering information

Pressure gauge model / Nominal size / Scale range / Size of connection / Optional extras required  
Specifications and dimensions given in this leaflet represent the state of engineering at the time of printing.  
Modifications may take place and materials specified may be replaced by others without prior notice.

# Dayton®

## Utility Shutter-Mounted Exhaust Fans

Models: 1HKL9C, 1HLA1C, 1HLA2C, **1HLA3C**, 1HLA4C, 1HLA5C, 1HLA7C, 1HLA8C, 1HLA9C, 1HLB1C, 1HLB2C, 1HLB3C, 1HLB4C, 1HLB5C and 1HLB6C

**PLEASE READ AND SAVE  
THESE INSTRUCTIONS.  
READ CAREFULLY  
BEFORE ATTEMPTING  
TO ASSEMBLE, INSTALL,  
OPERATE OR MAINTAIN THE  
PRODUCT DESCRIBED.**

**PROTECT YOURSELF AND  
OTHERS BY OBSERVING ALL  
SAFETY INFORMATION. FAILURE  
TO COMPLY WITH INSTRUCTIONS  
COULD RESULT IN PERSONAL  
INJURY AND/OR PROPERTY  
DAMAGE! RETAIN INSTRUCTIONS  
FOR FUTURE REFERENCE.**

**PLEASE REFER TO BACK COVER  
FOR INFORMATION REGARDING  
DAYTON'S WARRANTY  
AND OTHER IMPORTANT  
INFORMATION.**

**Model #:** \_\_\_\_\_

**Serial #:** \_\_\_\_\_

**Purch. Date:** \_\_\_\_\_

*Form 5S7662 / Printed in China*

*PUC200 Version 1 06/2015*

*© 2015 Dayton Electric Manufacturing Co.*

*All Rights Reserved*

**BEFORE YOU BEGIN****⚠ WARNING**

*Installation, troubleshooting and parts replacement are to be performed only by qualified personnel.*

**Electrical Requirements:**

- The motor amperage and voltage ratings must be checked for compatibility to supply voltage prior to final electrical connection. Please refer to the motor's nameplate label.
- Wiring must conform to local and national codes.

**Tools / Materials Needed:**

- Mounting Fasteners (8)
- Sealant or Caulk
- Regular Screw Driver Set

**Recommended Accessories:**

- Speed control (48C172) for 1HKL9C, 1HLA1C, 1HLA2C, 1HLA3C, 1HLA4C, 1HLA9C & 1HLB3C. 2 - Speed Fan Switch(1DGZ9) for 1HLB1C.

**UNPACKING****Contents:**

- Dayton® Utility Shutter-Mounted Exhaust Fans(1)
- Operating Instructions and Parts Manual (1)

**Inspect:**

- After unpacking unit, inspect carefully for any damage that may have occurred during transit. Check for loose, missing, or damaged parts. Shipping damage claim must be filed with carrier.
- Check all bolts, screws, set-screws, etc. for looseness that may have occurred during transit. Retighten as required. Rotate propeller by hand to be sure it turns freely.

- See General Safety Instructions on page 4, and Cautions and Warnings as shown.

## GENERAL SAFETY INSTRUCTIONS

Fans are UL/cUL Listed, Standard 705.

**⚠ DANGER**

***Do not depend on any switch as the sole means of disconnecting power when installing or servicing the fan.***

***Always disconnect, lock-out and tag-out power source before installing or servicing.***

***Failure to disconnect power source can result in fire, shock or serious injury.***

***Motor will restart without warning after thermal protector trips. Do not touch operating motor, it may be hot enough to cause injury.***

**⚠ DANGER**

***Do not place body parts or objects in fan or motor openings while motor is connected to the power source.***

**⚠ CAUTION**

***All electrical connections should be made by a qualified electrician.***

**⚠ WARNING**

***These utility exhaust fans are for general purpose exhaust applications only. Do not use these exhaust fans in explosive or corrosive***

***atmospheres.***

1. Follow all local electrical and safety codes in the United States and Canada, as well as the National Electrical Code (NEC) and the Occupational Safety and Health Act (OSHA) in the United States, and the Canadian Electric Code (CEC) in Canada.
2. Always disconnect power source before working on or near a motor or its connected load.
3. Protect the power cable from coming in contact with sharp objects.
4. Do not kink or create tight bends in the power cable and never allow the cable to come in contact with oil, grease, hot surfaces, or chemicals.
5. Make certain that the power source conforms to the requirements of your specific exhaust fan model.
6. The fan frame and motor must be electrically grounded to a suitable electrical ground, such as a grounded water pipe or ground wire system.

**⚠ CAUTION**

***To reduce the risk of injury to persons, observe the following:***

***In United States to reduce the risk of injury to persons, OSHA complying guards are required when fan is installed within 7 feet of floor or working level.***

***In Canada to reduce the risk of injury to persons, CSA complying guards are required when fan is installed below 2.5 meters (8.2 feet) above floor or grade level.***

## GENERAL SPECIFICATIONS

|                        |                                     |

## INSTALLATION INSTRUCTION

1. The unit should be securely mounted in a rigid framework.

**NOTE:** Allowing the fan frame to flex or move will result in undue vibrations and possible premature motor, propeller, or shutter failure.

2. Install any auxiliary components such as thermostats, switches, or speed controls.
3. Connect power to the motor, using an approved wiring method.

Refer to the following wiring diagrams: Figures 2 through 4.

### WARNING

*Fan frame and motor must be securely and adequately grounded to a suitable electrical ground, such as a ground water pipe or ground wiring system.*

**Figure 2 -** Wiring Diagram Single speed. 115 volts connection.

**Figure 3 -** Wiring Diagram Two speed. 115 volts connection.

**Figure 4 -** Wiring Diagram - Speed Controllable . 115 volts connection.

## OPERATION

1. Keep the area free of objects that could impede air flow on both the intake and exhaust side of fan.
2. For proper exhaust operation, a window, door, or louver should be opened for fresh air intake on the opposite side of the area to be ventilated.
3. Turn the fan ON, the shutter will open automatically. When the unit is turned OFF, the shutter will close.
4. Speed controllable units are designed to operate at a minimum of fifty percent line voltage.

## MAINTAINANCE

1. Disconnect power source before servicing.
2. Periodically clean the propeller, guard, motor, and shutter of any accumulated dirt.

### **⚠ DANGER**

***Do not depend on any switch as sole means of disconnecting power when installing or servicing. If power disconnect is not visible utilize OSHA Lock out/Tag out procedure.***

***Failure to do so may result in fatal electrical shock.***

***Employ proper lock-out/tag-out procedures when performing maintenance.***

## REPAIR PARTS AND DISASSEMBLY

1. Disconnect power before servicing.
2. Refer to illustration of parts placement (Figure 5).
3. Remove the four screws holding the guard to the venturi panel. Remove the guard/motor/propeller assembly.
4. Loosen the set screw on propeller hub and remove the propeller.

## TROUBLESHOOTING GUIDE

| Symptom               | Possible Cause(s)  | Corrective Action  |
|-----------------------|--|--|
| Excessive noise       | <ol style="list-style-type: none"> <li>1. Dry motor bearings</li> <li>2. Loose propeller</li> <li>3. Bent or damaged propeller</li> <li>4. Loose guard assembly or motor fasteners.</li> </ol> | <ol style="list-style-type: none"> <li>1. Relubricate motor bearings as per instructions or replace motor.</li> <li>2. Tighten set screws on propeller hub.</li> <li>3. Replace propeller</li> <li>4. Tighten as required to 15-20 inch lbs.</li> </ol>                                      |
| Fan inoperative       | <ol style="list-style-type: none"> <li>1. Blown fuse or open circuit breaker</li> <li>2. Defective motor</li> <li>3. Speed control off or too low or inoperative</li> </ol>                    | <ol style="list-style-type: none"> <li>1. Replace fuse or reset circuit breaker</li> <li>2. Replace motor (see Figure 5)</li> <li>3. Turn controller on. if not working replace Speed controller</li> </ol>  |
| Insufficient air flow | <ol style="list-style-type: none"> <li>1. Blocked intake or exhaust opening</li> <li>2. Low voltage</li> <li>3. Speed control set too low</li> </ol>   | <ol style="list-style-type: none"> <li>1. Clear intake and exhaust openings of any obstructions. Clean, motor, guard, propeller, and shutter assembly. Increase fresh air intake opening size.</li> <li>2. Determine cause and correct</li> <li>3. Increase speed with controller</li> </ol> |

## **DAYTON ONE-YEAR LIMITED WARRANTY**

**DAYTON ONE-YEAR LIMITED WARRANTY.** All Dayton® product models covered in this manual are warranted by Dayton Electric Mfg. Co. ("Dayton") to the original user against defects in workmanship or materials under normal use for one year after date of purchase. If the Dayton product is part of a set, only the portion that is defective is subject to this warranty. Any product or part which is determined to be defective in material or workmanship and returned to an authorized service location, as Dayton or Dayton's designee designates, shipping costs prepaid, will be, as the exclusive remedy, repaired or replaced with a new or reconditioned product or part of equal utility or a full refund given, at Dayton's or Dayton's designee's option, at no charge. For limited warranty claim procedures, see "Warranty Service" below. This warranty is void if there is evidence of misuse, mis-repair, mis-installation, abuse or alteration. This warranty does not cover normal wear and tear of Dayton products or portions of them, or products or portions of them which are consumable in normal use. This limited warranty gives purchasers specific legal rights, and you may also have other rights which vary from jurisdiction to jurisdiction.

### **WARRANTY DISCLAIMERS AND LIMITATIONS OF LIABILITY RELATING TO ALL CUSTOMERS FOR ALL PRODUCTS**

**LIMITATION OF LIABILITY.** TO THE EXTENT ALLOWABLE UNDER APPLICABLE LAW, DAYTON'S LIABILITY FOR CONSEQUENTIAL AND INCIDENTAL DAMAGES IS EXPRESSLY DISCLAIMED. DAYTON'S LIABILITY IN ALL EVENTS IS LIMITED TO AND SHALL NOT EXCEED THE PURCHASE PRICE PAID.

**WARRANTY DISCLAIMER.** A DILIGENT EFFORT HAS BEEN MADE TO PROVIDE PRODUCT INFORMATION AND ILLUSTRATE THE PRODUCTS IN THIS LITERATURE ACCURATELY; HOWEVER, SUCH INFORMATION AND ILLUSTRATIONS ARE FOR THE SOLE PURPOSE OF IDENTIFICATION, AND DO NOT EXPRESS OR IMPLY A WARRANTY THAT THE PRODUCTS ARE MERCHANTABLE, OR FIT FOR A PARTICULAR PURPOSE, OR THAT THE PRODUCTS WILL NECESSARILY CONFORM TO THE ILLUSTRATIONS OR DESCRIPTIONS. EXCEPT AS PROVIDED BELOW, NO WARRANTY OR AFFIRMATION OF FACT, EXPRESSED OR IMPLIED, OTHER THAN AS STATED IN THE "LIMITED WARRANTY" ABOVE IS MADE OR AUTHORIZED BY DAYTON.

**PRODUCT SUITABILITY.** MANY JURISDICTIONS HAVE CODES AND REGULATIONS GOVERNING SALES, CONSTRUCTION, INSTALLATION, AND/OR USE OF PRODUCTS FOR CERTAIN PURPOSES, WHICH MAY VARY FROM THOSE IN NEIGHBORING AREAS. WHILE ATTEMPTS ARE MADE TO ASSURE THAT DAYTON PRODUCTS COMPLY WITH SUCH CODES, DAYTON CANNOT GUARANTEE COMPLIANCE, AND CANNOT BE RESPONSIBLE FOR HOW THE PRODUCT IS INSTALLED OR USED. BEFORE PURCHASE AND USE OF A PRODUCT, REVIEW THE SAFETY/SPECIFICATIONS, AND ALL APPLICABLE NATIONAL AND LOCAL CODES AND REGULATIONS, AND BE SURE THAT THE PRODUCT, INSTALLATION, AND USE WILL COMPLY WITH THEM.

**CONSUMERS ONLY.** CERTAIN ASPECTS OF DISCLAIMERS ARE NOT APPLICABLE TO CONSUMER PRODUCTS SOLD TO CONSUMERS; (A) SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION OR EXCLUSION MAY NOT APPLY TO YOU; (B) ALSO, SOME JURISDICTIONS DO NOT ALLOW A LIMITATION ON HOW LONG AN IMPLIED WARRANTY LASTS, SO THE ABOVE LIMITATION MAY NOT APPLY TO YOU; AND (C) BY LAW, DURING THE PERIOD OF THIS LIMITED WARRANTY, ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE APPLICABLE TO CONSUMER PRODUCTS PURCHASED BY CONSUMERS, MAY NOT BE EXCLUDED OR OTHERWISE DISCLAIMED.

THIS LIMITED WARRANTY ONLY APPLIES TO UNITED STATES PURCHASERS FOR DELIVERY IN THE UNITED STATES.

### **WARRANTY SERVICE**

To obtain warranty service if you purchased the covered product directly from W.W. Grainger, Inc. ("Grainger"), (i) write or call or visit the local Grainger branch from which the product was purchased or another Grainger branch near you (see [www.grainger.com](http://www.grainger.com) for a listing of Grainger branches); or (ii) contact Grainger by going to [www.grainger.com](http://www.grainger.com) and clicking on the "Contact Us" link at the top of the page, then clicking on the "Email us" link; or (iii) call Customer Care (toll free) at 1-888-361-8649. To obtain warranty service if you purchased the covered product from another distributor or retailer, (i) go to [www.grainger.com](http://www.grainger.com) for Warranty Service; (ii) write or call or visit a Grainger branch near you; or (iii) call Customer Care (toll free) at 1-888-361-8649. In any case, you will need to provide, to the extent available, the purchase date, the original invoice number, the stock number, a description of the defect, and anything else specified in this Dayton One-Year Limited Warranty. You may be required to send the product in for inspection at your cost. You can follow up on the progress of inspections and corrections in the same ways. Title and risk of loss pass to buyer on delivery to common carrier, so if product was damaged in transit to you, file claim with carrier, not retailer, Grainger or Dayton. For warranty information for purchasers and/or delivery outside the United States, please use the following applicable contact information:

**Dayton Electric Mfg. Co.,  
100 Grainger Parkway, Lake Forest, IL 60045 U.S.A.  
or call +1-888-361-8649**

Please read and save these instructions. Read carefully before attempting to assemble, install, operate or maintain the product described. Protect yourself and others by observing all safety information. Failure to comply with instructions could result in personal injury and/or property damage! Retain instructions for future reference.

# Dayton® Fan Forced Wall Heaters

## Description

Great heat response, contemporary design and very quiet operation make this fan-forced wall register heater ideal for bedrooms, dens, basements, breezeways, bathrooms, small offices, and workshops. This heater is for wall mounting only. Do not install heater behind towel rack, behind doors, in the floor or closet where airflow may be obstructed. These heaters come with a multi-wattage selection board that allows installer to permanently change wattage during installation.

## Specifications

| Model Number | Volts | Watts/Amps  | Watts/Amps | Watts/Amps | Watts/Amps |
|--------------|-------|-------------|------------|------------|------------|
| 3UG15E       | 120   | 1500W/12.5A | 1125W/9.4A | 750W/6.3A  | 375W/3.1A  |
| 3UG16E       | 120   | 1500W/12.5A | 1125W/9.4A | 750W/6.3A  | 375W/3.1A  |
| 3UG17E       | 240*  | 2000W/8.3A  | 1500W/6.3A | 1000W/4.2A | 500W/2.1A  |
| 3UG18E       | 240*  | 2000W/8.3A  | 1500W/6.3A | 1000W/4.2A | 500W/2.1A  |
| 3UG19E       | 240*  | 2400W/10.0A | 1800W/7.5A | 1200W/5.0A | 600W/2.5A  |
| 3UG20E       | 240*  | 2400W/10.0A | 1800W/7.5A | 1200W/5.0A | 600W/2.5A  |

(\*) Will operate on 208V at 75% wattage.

Figure 1

## General Safety Information

**⚠ WARNING** When using electrical appliances, basic precautions should always be followed to reduce the risk of fire, electric shock, and injury to persons, including the following:

1. Read all instructions before installing or using this heater.
2. This heater is hot when in use. To avoid burns, do not let bare skin touch hot surfaces. Keep combustible materials, such as furniture, pillows, bedding, papers, clothes, etc. and curtains at least 3 feet (0.9 m) from the front of the heater.
3. Extreme caution is necessary when any heater is used by or near children or invalids and whenever the heater is left operating and unattended.
4. Do not operate any heater after it malfunctions. Disconnect power at service panel and have heater inspected by a reputable electrician before using.
5. Do not use outdoors.
6. To disconnect heater, turn controls to off, and turn off power to heater circuit at main disconnect panel.
7. Do not insert or allow foreign objects to enter any ventilation or exhaust opening as this may cause an electric shock, fire, or damage to the heater.

# Dayton® Fan Forced Wall Heaters

## General Safety Information (Continued)

8. To prevent a possible fire, do not block air intake or exhaust in any manner.
9. A heater has hot and arcing or sparking parts inside. Do not use it in areas where gasoline, paint, or flammable liquids are used or stored.
10. Use this heater only as described in this manual. Any other use not recommended by the manufacturer may cause fire, electric shock, or injury to persons.
11. This heater is provided with a red alarm light that will illuminate only if the heater has turned off as a result of overheating. If you see the light on, immediately turn the heater off and inspect for any objects on or adjacent to the heater that may have blocked the airflow or otherwise caused high temperatures to have occurred.  
**DO NOT OPERATE THE HEATER WITH THE ALARM LIGHT ILLUMINATING.**
12. This heater is intended for comfort heating applications and not intended for use in special environments. Do not use in damp or wet locations such as marine or greenhouse or in areas where corrosive or chemical agents are present.
13. When installing, see INSTALLATION INSTRUCTIONS for additional warnings and precautions.
14. For safe and efficient operation, and to extend the life of your heater, keep your heater clean. See MAINTENANCE INSTRUCTIONS.

## SAVE THESE INSTRUCTIONS

### Installation Instructions

**▲ WARNING** *To prevent a possible fire, injury to persons or damage to the heater, adhere to the following:*

1. Disconnect all power coming to heater at main service panel before wiring or servicing.
2. All wiring procedures and connections must be in accordance with the National and Local Codes having jurisdiction and the heater must be grounded.
3. Power supply must enter back box through the knockouts in the LEFT side of box. Do not use the knockouts in the right side of the box (see Figure 2). See also TOP marking on the back box for proper orientation.
4. Verify the power supply voltage coming to heater matches the ratings as shown on the heater nameplate.

**▲ CAUTION** *Energizing heater at a voltage greater than the voltage printed on the nameplate will damage the heater and void the warranty and could cause a fire.*

**▲ CAUTION** *High temperature, risk of fire, keep electrical cords, drapery, furnishings, and other combustibles at least 3 feet (0.9 m) from front of heater. Do not install heater behind doors, below towel racks, or in an area where it is subject to being blocked by furniture, curtains or storage materials. Hot air from the heater may damage certain fabrics and plastics.*

5. To reduce the risk of fire, do not store or use gasoline or other flammable vapors and liquids in the vicinity of the heater.
6. This heater is to be wall mounted only using back box provided. Do not install sideways, upside down, in the ceiling or floor.
7. The following minimum clearances must be maintained: Heater to floor - 4" (102 mm); Heater to any adjacent wall - 6" (152 mm); heater to ceiling - 36" (915 mm).
8. Do not operate the heater without the grille installed.
9. Do not use this heater for dry out, as the paint, plaster, sawdust and drywall sanding dust will permanently damage the heater and must be kept out of the heater.

Heaters are designed for recessed installation in standard 2 x 4 (50 mm x 100 mm) or larger stud walls with the back box mounted as shown in either Figure 2, or Figure 3.

**NOTE:** Heater should be controlled by either built-in thermostat or remote wall thermostat. Models 3UG16E, 3UG18E and 3UG20E are equipped with built-in thermostat.

This heater may be wired with standard building wiring (rated minimum 60°C). Refer to Table 1 for appropriate wire size for the heater to be used.

### TO INSTALL BACK BOX IN NEW CONSTRUCTION – WALL STUDS 16" O.C.

(Refer to Figure 2)

1. Locate back box and back box support brackets (2). Back box must be installed with mounting rails to the top (see Figure 2B).

# Models 3UG15E thru 3UG20E

## Installation Instructions (Continued)

2. Install back box support brackets with foot tabs directed towards the center of the back box as shown in Figure 2A and 2B. It may be necessary to bend up slightly the tab on the back box support bracket to allow insertion under the mounting lances on the bottom of the back box.

| Total Amps   | Wire Size* (Copper) | Circuit Breaker or Fuse Size |
|--------------|---------------------|------------------------------|
| 0 thru 12    | #14                 | 15 Amps                      |
| 12.1 thru 16 | #12                 | 20 Amps                      |
| 16.1 thru 24 | #10                 | 30 Amps                      |

(\*) Refer to NEC (National Electrical Code) for maximum run length to minimize voltage drop to 3% max. Circuit runs exceeding 100ft may require larger conductor size.

Table 1

- 3. Determine which knockout in back box will be used for field wiring and remove (see "Dimensions", page 1). Install strain relief (field supplied).
- 4. Fish field wiring through strain relief leaving 6" of wire inside box.
- 5. Insert back box assembly into wall, aligning rear of back box with back side of studs (see Figure 2C). The back box support brackets should be resting on the sole plate of the stud wall to insure proper spacing and leveling (see Figure 2B).
- 6. Using four (4) wood screws or drywall screws or four (4) nails (field supplied), secure back box to studs (see Figure 2B). Back box support

brackets can now be removed. If not removed, secure to sole plate.

**TO INSTALL BACK BOX IN NEW CONSTRUCTION – WALL STUDS SPACING GREATER THAN 16" O.C.** (Refer to Figure 3)

**NOTE:** Figure 3 depicts the back box installed with the left side adjoining stud. For a box with the right side adjoining a stud, reverse the directions shown below.

- 1. Locate back box and back box support brackets (2). Back box must be installed with mounting rails to the top (see Figure 3B).

Figure 2

- 2. Determine which side of the back box will adjoin stud and insert back box support bracket on that side with foot tab directed towards center of back box. On the side of the back box that will not adjoin stud, install back box support bracket on that side with foot tab directed towards end of box and secure to box with 3/8" long sheet metal screw (provided).
- 3. Determine which knockout in back box will be used for field wiring and remove (see "Dimensions", page 1). Install strain relief (field supplied).
- 4. Fish field wiring through strain relief leaving 6" of wire inside box.

Figure 3

ENGLISH

# Dayton® Fan Forced Wall Heaters

E  
N  
G  
L  
I  
S  
H

## Installation Instructions (Continued)

5. Insert back box assembly into wall, aligning rear of back box with back side of stud (see Figure 3C). The back box support brackets should be resting on the sole plate of the stud wall to insure proper spacing and leveling (see Figure 3B).
6. Use two (2) wood screws or drywall screws or two (2) nails (field supplied) to secure the side of the back box that adjoins a stud. Use one (1) wood screw or drywall screw or one (1) nail (field supplied) to secure the foot tab of the back box support bracket (that is on the end opposite the stud) to the sole plate (see Figure 3B).

### TO INSTALL BACK BOX IN EXISTING CONSTRUCTION

1. Locate wall studs to be sure that entire cut-out can be made between studs. At least one side of the cut-out must be flush with side of the stud. Bottom of cut-out must be 4" above finished floor minimum. Make a cut-out in wall 14½" wide x 6¾" high (368 mm x 171 mm) (see Figure 4).

Figure 4

2. Determine which knockout in back box will be used for field wiring and remove (see "Dimensions", page 1). Install strain relief (field supplied).
3. Fish field wiring through strain relief leaving 6" of wire inside box.
4. Insert back box into cut-out. Rear of back box should be flush with back of stud wall.
5. Using four (4) wood screws or drywall screws (field supplied) or four (4) nails (field supplied), secure back box to studs (see Figure 2B). If wall studs are greater than 16" o.c., use only 2 fasteners and on the opposite end of the back box drive a 1" sheet metal screw (provided) through hole in end cap. This will draw the back box tight with drywall when grille is installed (see Figure 5).

Figure 5

### TO INSTALL THERMOSTAT ASSEMBLY (3UG16E, 3UG18E, 3UG20E ONLY)

**NOTE:** Thermostat assembly should not be installed until after the drywall phase of construction is complete. Dust from drywall installation and joint compound can be harmful if it gets inside thermostat assembly components.

1. The thermostat must be installed in right end of the heater.

2. Position thermostat above slot in right end of back box. Push tab on thermostat bracket through slot in top, right end of back box until the bracket locks in place (see Figure 6).

Figure 6

3. If the thermostat is controlling more than one heater, the total of all heater amperage ratings (see "Specifications") cannot exceed 25 amps at 120 volts AC thru 240 volts AC. Refer to Table 1 for correct wire, circuit breaker, or fuse sizing.
4. Connect one red and one black thermostat lead to power wiring per wiring diagram (Figure 7) using properly sized listed wirenuts (provided).
5. Fold wires back into wiring compartment behind thermostat to clear fan deck.

### TO INSTALL FAN DECK ASSEMBLY

**NOTE:** Fan deck assembly should not be installed until after the drywall phase of construction is complete. Dust from drywall installation and joint compound can be harmful if it gets inside fan deck components.

1. Locate fan deck and mounting rails in top of back box.

# Models 3UG15E thru 3UG20E

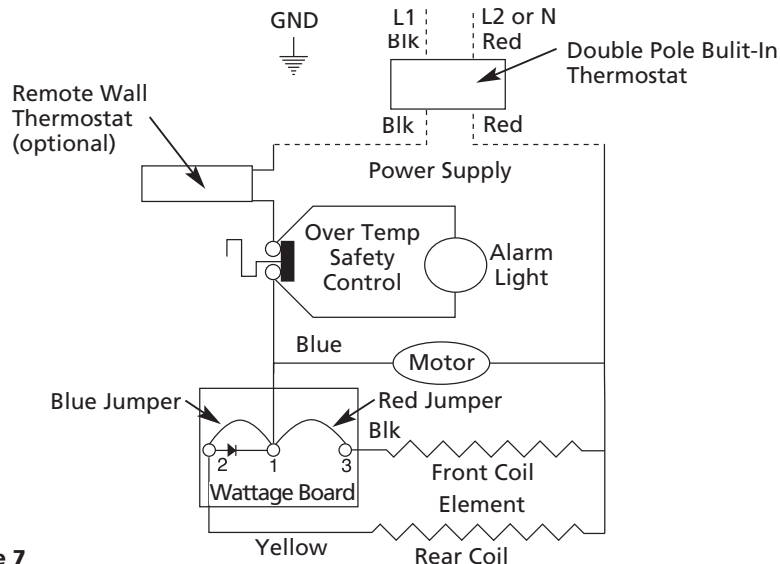

## Installation Instructions (Continued)

2. Insert flanges on fan deck into mounting rails and slide back until fan deck stops (see Figure 8).
3. Make wiring connections, attaching one red and one black thermostat lead to two (2) black heater leads for 240V or to black and white heater leads for 120V with wirenuts (provided). Connect field ground lead to bare ground wire with wirenut (provided) (see Figure 7).

**Figure 8**

4. Remove 1/2" knockout from grille and install grille using two oval head screws. Push thermostat knob on thermostat shaft.
5. Reconnect power at main fuse or circuit breaker distribution panel.

**Figure 7**

| Wattage         |       |                 |       |                 | Jumper 1    | Jumper 2   |
|-----------------|-------|-----------------|-------|-----------------|-------------|------------|
| 3UG19E & 3UG20E |       | 3UG17E & 3UG18E |       | 3UG15E & 3UG16E |             |            |

| 1200            | 900   | 1000            | 750   | 750             | Leave in    | Clip out   |
| 600             | 450   | 500             | 375   | 375             | Clip out    | Clip out   |

### TO CHANGE WATTAGE OUTPUT

The chart below shows the wattages available by model. Each heater is factory wired for its maximum wattage. The last two columns in the chart refer to the jumpers on the wattage board. To change wattage, clip out Jumper 1 and/or Jumper 2 as shown in the chart below. Completely remove jumpers by clipping at both ends as close to the board as possible.

### NOTE TO INSTALLER

When making wattage changes, the installer must circle the wattage on the white label located on the heat deck before installing the heat deck.

## Operation Instructions

### FOR MODELS 3UG16E, 3UG18E AND 3UG20 WITH BUILT IN THERMOSTAT

**NOTE:** For models using remote mounted thermostat, refer to the instructions included with the thermostat.

1. Heater must be properly installed before operation.
2. After heater is completely assembled, rotate thermostat knob counter-clockwise until control stops. This is the minimum heat setting.

# Dayton® Fan Forced Wall Heaters

## Operation Instructions (Continued)

3. Turn power supply to heater "ON" at main switch panel.
4. Heater should not operate. If it operates disconnect power and recheck wiring.
5. Rotate thermostat clockwise until it stops (maximum heat setting).
6. Heater and fan should come on. If heater and fan do not come on, disconnect power and check wiring.
7. Allow heater to continue to operate until room temperature reaches desired comfort level. Then rotate thermostat knob counterclockwise slowly until thermostat clicks off.
8. It may be necessary to readjust thermostat a time or so until exact comfort level is attained. Rotation in the clockwise direction will increase the amount of time the heater will produce heat. Rotation in the counterclockwise direction will reduce the amount of time the heater is on.

**NOTE:** For best results, the heater should be left "ON" constantly during the heating season as the thermostat, when properly set, will maintain the desired temperature. In the full counterclockwise position the heater will remain off until the room temperature drops well below freezing.

### HOW TO RESET OVER-TEMPERATURE SAFETY CONTROL

This heater is provided with an over-temperature safety control that will turn the heater off if the heater overheats. If this control operates, a

red alarm light, visible through the front of the grille, will illuminate to alert the owner that the heater is off and requires attention.

**⚠ WARNING** *Do not tamper with or bypass any safety limits inside heater.*

1. Turn the heater off at the thermostat AND disconnect power at the circuit breaker for at least 10 minutes to allow the heater to cool and the safety control to reset.
2. When the heater has cooled, check to see if the heater is blocked or excessively dirty as these conditions may cause overheating. Remove any blockages and /or refer to the **User Cleaning Instructions** in the **Maintenance Instructions** section for cleaning instructions if dirty.
3. Turn circuit breaker on, reset thermostat to desired setpoint, and verify the heater is operating normally.
4. If the heater malfunctions again and the red light illuminates, disconnect power at the circuit breaker and have the heater inspected by a qualified electrician.

**⚠ CAUTION** *Do not continue to attempt to use the heater if the safety control repeatedly operates after being reset. To do so could permanently damage the heater or create a fire or safety hazard.*

## Maintenance Instructions

It is important to keep this heater clean. Your heater will give you years of service and comfort with only minimum care. To assure efficient operation follow the simple instructions below.

**⚠ WARNING** *All servicing beyond simple cleaning that requires disassembly should be performed by qualified service personnel.*

**⚠ WARNING** *To reduce the risk of fire and electric shock or injury, disconnect all power coming to heater at main service panel and check that the element is cool before servicing or performing maintenance.*

### USER CLEANING INSTRUCTIONS

1. After the heater has cooled, a vacuum cleaner with brush attachment may be used to remove dust and lint from exterior surfaces of the heater including the grille openings.
2. With a damp cloth, wipe dust and lint from grille and exterior surfaces.
3. Return power to heater and check to make sure it is operating properly.

### MAINTENANCE CLEANING INSTRUCTIONS

*(To be performed only by Qualified Service Personnel)*

At least annually, the heater should be cleaned and serviced by a qualified service person to assure safe and efficient operation. This should include the removal of the grille and, as necessary, the heater from the back box to clean residue from the unit. After completing the cleaning and servicing, the heater should be fully reassembled and checked for proper operation.

# Dayton® Fan Forced Wall Heaters

## LIMITED WARRANTY

**DAYTON ONE-YEAR LIMITED WARRANTY.** DAYTON® FAN FORCED WALL HEATERS, MODELS COVERED IN THIS MANUAL, ARE WARRANTED BY DAYTON ELECTRIC MFG. CO. (DAYTON) TO THE ORIGINAL USER AGAINST DEFECTS IN WORKMANSHIP OR MATERIALS UNDER NORMAL USE FOR ONE YEAR AFTER DATE OF PURCHASE. ANY PART WHICH IS DETERMINED TO BE DEFECTIVE IN MATERIAL OR WORKMANSHIP AND RETURNED TO AN AUTHORIZED SERVICE LOCATION, AS DAYTON DESIGNATES, SHIPPING COSTS PREPAID, WILL BE, AS THE EXCLUSIVE REMEDY, REPAIRED OR REPLACED AT DAYTON'S OPTION. FOR LIMITED WARRANTY CLAIM PROCEDURES, SEE "PROMPT DISPOSITION" BELOW. THIS LIMITED WARRANTY GIVES PURCHASERS SPECIFIC LEGAL RIGHTS WHICH VARY FROM JURISDICTION TO JURISDICTION.

**LIMITATION OF LIABILITY.** TO THE EXTENT ALLOWABLE UNDER APPLICABLE LAW, DAYTON'S LIABILITY FOR CONSEQUENTIAL AND INCIDENTAL DAMAGES IS EXPRESSLY DISCLAIMED. DAYTON'S LIABILITY IN ALL EVENTS IS LIMITED TO AND SHALL NOT EXCEED THE PURCHASE PRICE PAID.

**WARRANTY DISCLAIMER.** A DILIGENT EFFORT HAS BEEN MADE TO PROVIDE PRODUCT INFORMATION AND ILLUSTRATE THE PRODUCTS IN THIS LITERATURE ACCURATELY; HOWEVER, SUCH INFORMATION AND ILLUSTRATIONS ARE FOR THE SOLE PURPOSE OF IDENTIFICATION, AND DO NOT EXPRESS OR IMPLY A WARRANTY THAT THE PRODUCTS ARE MERCHANTABLE, OR FIT FOR A PARTICULAR PURPOSE, OR THAT THE PRODUCTS WILL NECESSARILY CONFORM TO THE ILLUSTRATIONS OR DESCRIPTIONS. EXCEPT AS PROVIDED BELOW, NO WARRANTY OR AFFIRMATION OF FACT, EXPRESSED OR IMPLIED, OTHER THAN AS STATED IN THE "LIMITED WARRANTY" ABOVE IS MADE OR AUTHORIZED BY DAYTON.

**Technical Advice and Recommendations, Disclaimer.** Notwithstanding any past practice or dealings or trade custom, sales shall not include the furnishing of technical advice or assistance or system design. Dayton assumes no obligations or liability on account of any unauthorized recommendations, opinions or advice as to the choice, installation or use of products.

**Product Suitability.** Many jurisdictions have codes and regulations governing sales, construction, installation, and/or use of products for certain purposes, which may vary from those in neighboring areas. While attempts are made to assure that Dayton products comply with such codes, Dayton cannot guarantee compliance, and cannot be responsible for how the product is installed or used. Before purchase and use of a product, review the product applications, and all applicable national and local codes and regulations, and be sure that the product, installation, and use will comply with them.

Certain aspects of disclaimers are not applicable to consumer products; e.g., (a) some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you; (b) also, some jurisdictions do not allow a limitation on how long an implied warranty lasts, consequently the above limitation may not apply to you; and (c) by law, during the period of this Limited Warranty, any implied warranties of implied merchantability or fitness for a particular purpose applicable to consumer products purchased by consumers, may not be excluded or otherwise disclaimed.

**Prompt Disposition.** A good faith effort will be made for prompt correction or other adjustment with respect to any product which proves to be defective within limited warranty. For any product believed to be defective within limited warranty, first write or call dealer from whom the product was purchased. Dealer will give additional directions. If unable to resolve satisfactorily, write to Dayton at address below, giving dealer's name, address, date, and number of dealer's invoice, and describing the nature of the defect. Title and risk of loss pass to buyer on delivery to common carrier. If product was damaged in transit to you, file claim with carrier.

**Manufactured for Dayton Electric Mfg. Co., 100 Grainger Parkway, Lake Forest, Illinois 60045-5201 U.S.A.**

2-Pole Thermostat for Heater #D2022H10BA

## LINE VOLTAGE WALL MOUNTED THERMOSTATS

### SERIES 2000 THERMOSTATS

- 120V to 277V Operating Voltage
- Heat Only
- Single & Double Pole designs
- Wire leads
- Double pole models incorporate positive off
- 50°F to 90°F Temperature Range

MASTER PACK: 25 Pieces / 12 lbs.

Please read and save these instructions. Read through this owner's manual carefully before using product. Protect yourself and others by observing all safety information, warnings, and cautions. Failure to comply with instructions could result in personal injury and/or damage to product or property. Please retain instructions for future reference.

## VAPOR TIGHT FIXTURE

### Description

The LumaPro Vapor Tight fixture is designed for heavy-duty non-explosive environments. Vapor resistant for use in weather, exposed high traffic areas whenever dust or moisture are present. Applications include processing plants, cold storage, foundries, factories, loading docks, railways, tunnels, bridges, and walkways. UL listed for wet locations if installation has a weatherproof outlet box.

### Unpacking

After unpacking unit, inspect carefully for any damage that may have occurred during transit. Check for loose, missing, or damaged parts. Shipping damage claim must be filed with carrier.

3RB17

3RB18

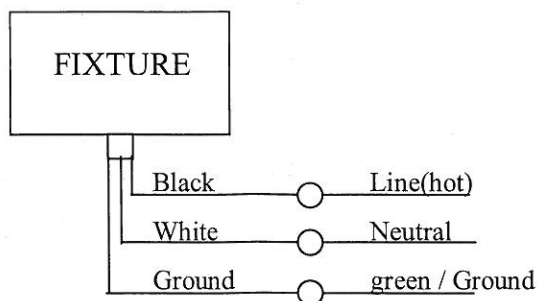

3RB24

### Specifications and Dimensions

| Model | Volts | Watts | Housing Dimensions (in) |       |
|-------|-------|-------|-------------------------|-------|
|       |       |       | H                       | W     |
| 3RB17 | 120   | 200   | 9 3/4                   | 5 5/8 |
| 3RB18 | 120   | 200   | 12 1/2                  | 7     |
| 3RB24 | 120   | 200   | 10 1/4                  | 4 1/4 |

### Wiring Diagrams

### General Safety Information

1. Failure to comply with the instructions and safety information could result in malfunction of unit, fire hazard of unit, fire hazard or electrical shock.

#### CAUTION

Make sure power supply line is 120 volts.

## Vapor Tight Fixture

### General Safety Information (continued)

**▲ WARNING** *Potential fatal shock hazard! Do not handle an energized fixture or energize any fixture with wet hands or when standing on a wet or damp surface, or in water.*

**▲ WARNING** *Use only with grounded cover plates or boxes.*

**▲ CAUTION** *This fixture is not suitable for Hazardous or Classified locations.*

2. This fixture must be installed in accordance with all electrical and safety codes and ordinances and the most recent National electrical Code (NEC) and the Occupational Safety and Health Act (OSHA) . (Refer to Volume 1 on General Industry Standards and Interpretations (OSHA).)
3. All commercial installations should be performed by a qualified electrician.
4. Make certain the power conforms to the requirements of this fixture.
5. Disconnect power before installing or servicing. If the power disconnect switch is out of sight, lock it in the open position and tag it to prevent unexpected application of power.

### Installation

**▲ WARNING** *Model 3RB24 must be installed with a weatherproof outlet box if used in wet location.*

*Models 3RB17 and 3RB18 are furnished with UL approved weatherproof outlet boxes.*

1. Remove guard and globe for ease of installation.
2. When using model 3RB17 or 3RB18 for wet locations use an approved caulking compound between mounting surface and back of fixture.
3. Secure fixture to mounting surface, fixture 3RB24 requires ¾" conduit or adapt to ½" conduit using reducer (supplied).
4. Use UL approved connectors (not furnished) to connect wires to power supply. Connect black fixture wire to black supply wire. Connect white fixture wire to white supply wire. Connect ground wire.
5. Screw 200 watt max incandescent lamp into lamp socket. Rough service or industrial lamps are recommended.

**▲ CAUTION** *DO NOT OVERTIGHTEN.*

6. Replace globe and guard, securing guard with set screw provided.

### Maintenance

**▲ WARNING** *Be sure all power to the fixture is disconnected before attempting any service or repair!*

### Troubleshooting Chart

| Symptom               | Possible Causes                  | Corrective Action                   |
|-----------------------|----------------------------------|-------------------------------------|
| Lamp will not operate | 1. Loose bulb                    | 1. Check bulb installation          |
|                       | 2. ON/OFF switch in OFF position | 2. Put ON/OFF switch in ON position |
|                       | 3. Loose wire                    | 3. Check connections.               |

## Warranty

**LIMITED ONE-YEAR WARRANTY**

Should this product fail to perform satisfactorily due to a defect or poor workmanship within ONE YEAR from the date of purchase, return it to the place of purchase and it will be replaced, free of charge. Incidental or consequential damages are excluded from this warranty.

## 4. Control Panel Materials

## CP350COM Standby UPS

Offers energy savings, battery backup and surge protection.

The CyberPower Standby CP350COM uninterruptible power supply (UPS) safeguards PCs and other electronics (monitors, cable DSL/ modems, VoIP routers, fax machines, and home theater equipment) from blackouts, brownouts, surges, spikes, sags, and other power abnormalities.

This UPS system is ENERGY STAR® qualified with patented GreenPower UPS™ Bypass circuitry to save on energy costs by reducing energy consumption and heat buildup.

A Three-Year Warranty ensures that this UPS has passed our highest quality standards in design, assembly, material and workmanship, further protection is offered by a \$75,000 Connected Equipment Guarantee.

### Typical Applications

- Desktop Computers
- Personal Electronics

### Features

- 350VA / 225W
- Standby Topology
- GreenPower UPS™
- ENERGY STAR® Qualified
- Full-time Surge Protection and Battery Backup
- Compact Form Factor
- 6 Outlets with RJ11 Protection
- EMI/RFI Filters
- 3-Year Warranty

ETR202

ETR202F

ZR011

- Two thermostats in one unit
  - one Normally Closed (NC) and one Normally Open (NO)
  - or two Normally Open (NO)
- Each with wide adjustable temperature range
- Available with °F or °C scale
- DIN rail mountable

**Industry Standards**

UL Recognized Component  
cUL Recognized Component  
CE Recognized  
CSA Rated

**FEATURES-SPECIFICATIONS****Applications****ETR202C and ETR202F**

- Designed to provide air temperature control and monitoring in switch gear enclosures that are set up to operate with heaters, fans, filter ventilators, heat exchangers, and/or signal transmitters.
- When the enclosure reaches the pre-determined set point, temperature contacts in the thermostat are activated and the fan or heater automatically begins to operate.
- Thermostats prolong the life expectancy of heaters and fans by curtailing their operating hours and also increase the working efficiency of electrical components by exposing them to fewer contaminants from the surrounding environment.

**ZR011**

- The ZR011 houses two separate thermostats, allowing the independent control of heating and cooling or other equipment. Both thermostats offer wide adjustment ranges and are color coded for easy function recognition.
- Switching capacity:  
NC: 10A resistive/2A inductive @ 250 VAC  
NO: 5A resistive/2A inductive @ 250 VAC DC 30W

**Features**

- Normally Closed Thermostat—For the control of fan heaters and heaters
- Normally Open Thermostat—For the control of cooling units, fans, filter ventilators or switching, or signal transmitters in the event of overheating
- Available in Fahrenheit or Celsius scale
- Thermostatic bi-metallic sensor element
- Easily installed by clip mounting on 35mm or 38mm DIN rails

- Housing made from gray flame retardant UL94-VO plastic
- Connection: 2 pole terminal for max. 14 AWG
- Switching Difference (hysteresis): 12°F (7°C)
- Switching Capacity: 15 A (2) AC 120V, 10 A (2) AC 250V, 10A 12V DC, 5A 24V DC

The versatile and extensive range of products - from 0.05 mm<sup>2</sup> to 300 mm<sup>2</sup> - means that you have diverse options for your applications at your disposal.  
Hardened steel for mechanical strength and high-quality tinned copper for optimum conductivity. All materials comply with RoHS requirements and have been tested to current environment guidelines.

## S8VK-G Nomenclature

**15-W Models**  
S8VK-G015 □□

**30-W / 60-W / 120-W / 240-W Models**  
S8VK-G030 □□/S8VK-G060 □□/S8VK-G12024/S8VK-G240 □□

**480-W Models**  
S8VK-G480 □□

**Note:** The S8VK-G06024 is shown above.

| No. | Name                            | Function   |
|-----|---------------------------------|--|
| 1   | Input terminals (L), (N)        | Connect the input lines to these terminals. *1   |
| 2   | Protective Earth terminal (PE)  | Connect the ground line to this terminal. *2     |
| 3   | DC Output terminals (-V), (+V)  | Connect the load lines to these terminals.       |
| 4   | Output indicator (DC ON: Green) | Lights while a direct current (DC) output is ON. |
| 5   | Output voltage adjuster (V.ADJ) | Use to adjust the voltage.                       |

\*1. The fuse is located on the (L) side. It is not user-replaceable. For a DC input, connect the positive voltage to the L terminal.

\*2. This is the protective earth terminal specified in the safety standards. Always ground this terminal.

#### General characteristics

These devices are used to protect against short circuits and overloads of wiring installations and loads in panel boards, office buildings, stores and similar applications. Their purpose is circuit protection, circuit isolation and load operation controls. They have instantaneous trip characteristics defined as follows:

- B-curve: instantaneous trip 3...5 times In for non-inductive or low inductive loads (heating resistors, generators, very long wire lines)
- C-curve: instantaneous trip 5...10 times In for inductive loads (mixed and inductive resistive loads with low inrush current)
- D-curve: instantaneous trip 10...14 times In for highly inductive loads (loads with high inrush and current such as motors).

Main features include:

- IEC rated current In: 1...63A
- Pole width: 17.5mm / 0.69"
- Contact status with flag indicator
- Trip characteristic: Curve type B, C and D
- Auxiliary contacts and trip releases mounted on MCB left side
- Fixing on 35mm DIN rail (IEC/EN 60715).

#### Operational characteristics

- Dissipation per pole: 3...13W
- IEC rated insulation voltage Ui: 440V
- IEC rated impulse voltage Uimp: 4kV
- IEC rated operational voltage Ue: 230/400VAC.

#### Certifications and compliance

Certifications obtained: TÜV – Rheinland; UL Recognized for USA and Canada (cURus – File E359585) as "Supplementary Protectors", designated as Overcurrent type, for general industrial use, suitable for factory wiring only with 125-135% tripping current of amp rating. Products having this type of marking are intended for use as components of complete workshop- assembled equipment.

Compliant with standards: IEC/EN 60898-1, IEC/EN 60947-2, UL 1077, CSA C22.2 n°235.

#### General characteristics

These devices are used to protect against short circuits and overloads of wiring installations and loads in panel boards, office buildings, stores and similar applications. Their purpose is circuit protection, circuit isolation and load operation controls. They have characteristics of instantaneous trip defined as follows:

- B-curve: instantaneous trip 3...5 times  $I_n$  for non-inductive or low inductive loads (heating resistors, generators, very long wire lines)
- C-curve: instantaneous trip 5...10 times  $I_n$  for inductive loads (mixed loads, resistive and inductive with low inrush current)
- D-curve: instantaneous trip 10...14 times  $I_n$  for highly inductive loads (loads with high inrush and current such as motors).

Main features include:

- IEC rated current  $I_n$ : 1...63A
- Pole width: 17.5mm / 0.69"
- Contact status with flag indicator
- Trip characteristic: Curve type B, C and D
- Auxiliary contacts and trip releases mounted on left side
- Fixing on 35mm DIN rail (IEC/EN 60715).

#### Operational characteristics

- Dissipation per pole: 3...13W
- IEC rated insulation voltage  $U_i$ : 440V
- IEC rated impulse voltage  $U_{imp}$ : 4kV
- IEC rated operational voltage  $U_e$ : 230/400VAC.

#### Certifications and compliance

Certifications obtained: TÜV – Rheinland; UL Recognized for USA and Canada (cURus – File E359585) as "Supplementary Protectors", designated as Overcurrent type, for general industrial use, suitable for factory wiring only with 125-135% tripping current of amp rating. Products having this type of marking are intended for use as components of complete workshop- assembled equipment.

Compliant with standards: IEC/EN 60898-1, IEC/EN 60947-2, UL 1077, CSA C22.2 n°235.

# ATV312HD15M3

variable speed drive ATV312 - 15kW - 28.5kVA - 628W - 200..240 V- 3-phase supply

Product availability : Stock - Normally stocked in distribution facility

Price\* : 1721.00 USD

# Important Information

---

## NOTICE

Read these instructions carefully, and look at the equipment to become familiar with the device before trying to install, operate, or maintain it. The following special messages may appear throughout this documentation or on the equipment to warn of potential hazards or to call attention to information that clarifies or simplifies a procedure.

The addition of this symbol to a Danger or Warning safety label indicates that an electrical hazard exists, which will result in personal injury if the instructions are not followed.

This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

## DANGER

**DANGER** indicates an imminently hazardous situation, which, if not avoided, **will result** in death or serious injury.

## WARNING

**WARNING** indicates a potentially hazardous situation, which, if not avoided, **can result** in death, serious injury or equipment damage.

## CAUTION

**CAUTION** indicates a potentially hazardous situation, which, if not avoided, **can result** in injury or equipment damage.

## CAUTION

**CAUTION**, used without the safety alert symbol, indicates a potentially hazardous situation which, if not avoided, **can result** in equipment damage.

## PLEASE NOTE

The word "drive" as used in this manual refers to the controller portion of the adjustable speed drive as defined by NEC.

Electrical equipment should be installed, operated, serviced, and maintained only by qualified personnel. No responsibility is assumed by Schneider Electric for any consequences arising out of the use of this product.

© 2009 Schneider Electric. All Rights Reserved

# Before you begin

Read and understand these instructions before performing any procedure with this drive.

## DANGER

### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

- Read and understand this manual before installing or operating the Altivar 312 drive. Installation, adjustment, repair, and maintenance must be performed by qualified personnel.
- The user is responsible for compliance with all international and national electrical code requirements with respect to grounding of all equipment.
- Many parts of this drive, including the printed circuit boards, operate at the line voltage. DO NOT TOUCH. Use only electrically insulated tools.
- DO NOT touch unshielded components or terminal strip screw connections with voltage present.
- DO NOT short across terminals PA/+ and PC/- or across the DC bus capacitors.
- Before servicing the drive:
  - Disconnect all power, including external control power that may be present.
  - Place a "DO NOT TURN ON" label on all power disconnects.
  - Lock all power disconnects in the open position.
  - WAIT 15 MINUTES to allow the DC bus capacitors to discharge. Then follow the "Bus Voltage Measurement Procedure" page [16](#) to verify that the DC voltage is less than 42 V. The drive LEDs are not indicators of the absence of DC bus voltage.
- Install and close all covers before applying power or starting and stopping the drive.

**Failure to follow these instructions will result in death or serious injury.**

## DANGER

### UNINTENDED EQUIPMENT OPERATION

- Read and understand this manual before installing or operating the Altivar 312 drive.
- Any changes made to the parameter settings must be performed by qualified personnel.

**Failure to follow these instructions will result in death or serious injury.**

## WARNING

### DAMAGED DRIVE EQUIPMENT

Do not operate or install any drive or drive accessory that appears damaged.

**Failure to follow these instructions can result in death, serious injury, or equipment damage.**

## WARNING

### LOSS OF CONTROL

- The designer of any control scheme must consider the potential failure modes of control paths and, for certain critical control functions, provide a means to achieve a safe state during and after a path failure. Examples of critical control functions are emergency stop and overtravel stop.
- Separate or redundant control paths must be provided for critical control functions.
- System control paths may include communication links. Consideration must be given to the implications of unanticipated transmission delays or failures of the link.<sup>a</sup>

**Failure to follow these instructions can result in death, serious injury, or equipment damage.**

a. For additional information, refer to NEMA ICS 1.1 (latest edition), "Safety Guidelines for the Application, Installation, and Maintenance of Solid State Control" and to NEMA ICS 7.1 (latest edition), "Safety Standards for Construction and Guide for Selection, Installation and Operation of Adjustable-Speed Drive Systems."

## Before you begin

---

### CAUTION

#### **INCOMPATIBLE LINE VOLTAGE**

Before turning on and configuring the drive, ensure that the line voltage is compatible with the supply voltage range shown on the drive nameplate. The drive may be damaged if the line voltage is not compatible.

**Failure to follow these instructions can result in injury or equipment damage.**

### CAUTION

#### **RISK OF DAMAGE TO THE MOTOR**

The use of external overload protection is required under the following conditions:

- Repowering up the product since there is no motor thermal state memory.
- Running multiple motors.
- Running motors rated at less than 0.2 times the nominal drive current.
- Using motor switching.

**Failure to follow these instructions can result in equipment damage**

# Documentation structure

---

The following Altivar 312 technical documents are available on the Schneider Electric website ([www.schneider-electric.com](http://www.schneider-electric.com)) as well as on DVD-ROM (reference VW3A8200).

## Installation manual

This manual describes how to install and wire the drive.

## Programming manual

This manual describes the functions, parameters and use of the drive terminal (integrated display terminal, optional graphic display terminal and optional remote terminal).

## Simplified manual

This manual is an extract from programming and installation manual. This manual is delivered with the drive.

## Quick Start

The Quick Start describes how to wire and configure the drive to start motor quickly and simply for simple applications. This document is delivered with the drive.

## Communication manuals: Modbus, CANopen, ...

These manual describes the assembly, connection to the bus or network, signaling, diagnostics, and configuration of the communication-specific parameters.

They also describe the protocol communication services.

## Communication variables guide

The Communication variables manual defines the drive control processes and the drive variables which can be accessed by the communication buses: Modbus, CANopen, ...

# INSTALLATION

### 1. Receive and inspect the drive

- ☐ Check that the catalog number printed on the label is the same as that on the purchase order.
- ☐ Remove the Altivar from its packaging and check that it has not been damaged in transit.

### 2. Check the line voltage

- ☐ Check that the voltage range of the drive is compatible with the line voltage (see pages [10](#) and [11](#)).

### 3. Mount the drive

- ☐ Mount the drive in accordance with the instructions in this document (see page [14](#)).
- ☐ Install any options required (see option documentation).

### 4. Wire the drive (see page [17](#))

- ☐ Connect the motor, ensuring that its connections correspond to the voltage.
- ☐ Connect the line supply, after making sure that the power is off.
- ☐ Connect the control part.

Steps 2 to 4 must be performed with the **power off**.

# PROGRAMMING

5. Please refer to the programming manual.

## Setup - Preliminary recommendations

---

### Prior to switching on the drive

#### **DANGER**

##### **UNINTENDED EQUIPMENT OPERATION**

Ensure that all logic inputs are inactive to help prevent an accidental startup.

**Failure to follow these instructions will result in death or serious injury.**

### Prior to configuring the drive

#### **DANGER**

##### **UNINTENDED EQUIPMENT OPERATION**

- Read and understand this manual before installing or operating the Altivar 312 drive.
- Any changes made to the parameter settings must be performed by qualified personnel.
- Ensure that all logic inputs are inactive to help prevent an accidental startup when modifying parameters.

**Failure to follow these instructions will result in death or serious injury.**

### Line contactor

#### **CAUTION**

##### **RISK OF DAMAGE TO THE DRIVE**

- Avoid operating the contactor frequently to avoid premature aging of the filter capacitors.
- Power cycling must be more than 60 seconds.

**Failure to follow these instructions can result in equipment damage.**

## Drive ratings

### Single phase supply voltage: 200...240 V 50/60 Hz

For three phase output 200/240 V motors

| Motor                        |      | Line supply (input)   |          |                |                         |                                     | Drive (output)      |                                | Reference       | Size |

(1) These power ratings and currents are for a maximum ambient temperature of 50°C and a switching frequency of 4 kHz in continuous operation. The switching frequency is adjustable from 2 to 16 kHz.

Above 4 kHz, the drive will reduce the switching frequency in the event of excessive temperature rise. The temperature rise is controlled by a sensor in the power module. Nonetheless, the nominal drive current should be derated if operation above 4 kHz needs to be continuous.

Derating curves are shown on page 15 as a function of switching frequency, ambient temperature and mounting conditions.

(2) Current on a line supply with the "Max. prospective line Isc" indicated.

(3) Peak current on power-up, for the max. voltage (240 V + 10%).

(4) For 60 seconds.

(5) These references can be ordered without terminal board in order to integrate an optionnal communication board. Add a B at the end of the reference. For example, ATV312HU11M2 becomes ATV312HU11M2B.

## Drive ratings (continued)

### Three phase supply voltage: 380...500 V 50/60 Hz

For three phase output 380/500 V motors

(1) These power ratings and currents are for a maximum ambient temperature of 50°C and a switching frequency of 4 kHz in continuous operation. The switching frequency is adjustable from 2 to 16 kHz.

Above 4 kHz, the drive will reduce the switching frequency in the event of excessive temperature rise. The temperature rise is controlled by a sensor in the power module. Nonetheless, the nominal drive current should be derated if operation above 4 kHz needs to be continuous.

Derating curves are shown on page 15 as a function of switching frequency, ambient temperature and mounting conditions.

(2) Current on a line supply with the "Max. prospective line Isc" indicated.

(3) Peak current on power-up, for the max. voltage (500 V + 10%, 600 V + 10%).

(4) For 60 seconds.

(5) These references can be ordered without terminal board in order to integrate an optional communication board. Add a B at the end of the reference. For example, ATV312H037N4 becomes ATV312H037N4B.

(6) The use of an AC choke, which must be ordered separately (please refer to the catalog), is mandatory on these drives

# Mounting

## Mounting and temperature conditions

Install the unit vertically, at  $\pm 10^\circ$ .

Do not place it close to heating elements.

Leave sufficient free space so that the air required for cooling purposes can circulate from the bottom to the top of the unit.

Free space in front of unit: 10 mm (0.39 in.) minimum.

When IP20 protection is adequate, we recommend that the vent cover on the top of the drive be removed, as shown below.

## Removing the vent cover

Example ATV312HU11M3

## Mounting types

3 types of mounting are possible:

### Type A mounting:

Free space  $\geq 50$  mm (2 in.) on each side, with vent cover fitted. Mounting type A is suitable for drive operation at surrounding air temperature less or equal to  $50^\circ\text{C}$  ( $122^\circ\text{F}$ ).

### Type B mounting:

Drives mounted side-by-side, vent cover should be removed (the degree of protection becomes IP20).

### Type C mounting:

Free space  $\geq 50$  mm (2 in.) on each side. Vent cover should be removed for operation at surrounding air temperature above  $50^\circ\text{C}$  ( $122^\circ\text{F}$ ). The degree of protection becomes IP20

**Note:** For switching frequencies above 4 kHz and derating conditions, please refer to the derating curves for guidelines.

## Mounting (continued)

### Derating curves

Derating curves for the drive current  $I_n$  as a function of the temperature, switching frequency and type of mounting.

For intermediate temperatures (e.g. 55°C; 131 °F), interpolate between 2 curves.

### Flow of air

If you are installing the drives in enclosures, make provision for a flow of air at least equal to the value given in the table below for each drive.

| ATV312H  | Flow rate            |                      |
|--|----------------------|----------------------|
|  | m <sup>3</sup> /hour | ft <sup>3</sup> /min |
| 018M2, 037M2, 055M2,<br>018M3, 037M3, 055M3,<br>037N4, 055N4, 075N4, U11N4<br>075S6, U15S6 | 18                   | 11                   |
| 075M2, U11M2, U15M2<br>075M3, U11M3, U15M3<br>U15N4, U22N4<br>U22S6, U40S6                 | 33                   | 19                   |
| U22M2,<br>U22M3, U30M3, U40M3<br>U30N4, U40N4<br>U55S6, U75S6                              | 93                   | 55                   |
| U55M3<br>U55N4, U75N4<br>D11S6   | 102                  | 60                   |
| U75M3, D11M3,<br>D11N4, D15N4<br>D15S6   | 168                  | 99                   |
| D15M3  | 216                  | 127                  |

## Mounting (continued)

### Installing the EMC plates

#### EMC mounting plate: Supplied with the drive

Fix the EMC equipotentiality mounting plate to the holes in the ATV312 heatsink using the 2 screws supplied, as shown in the drawings below.

| ATV312H  | Size |
|--|------|
| 018M3, 037M3   | 1    |
| 055M3, 075M3   | 2    |
| 018M2, 037M2   | 3    |
| 055M2, 075M2   | 4    |
| U11M3, U15M3   | 5    |
| U11M2, U15M2, U22M3,<br>037N4, 055N4, 075N4, U11N4, U15N4,<br>075S6, U15S6 | 6    |

| ATV312H  | Size |
|--|------|
| U22M2, U30M3, U40M3,<br>U22N4, U30N4, U40N4,<br>U22S6, U40S6 | 7    |
| U55M3, U75M3,<br>U55N4, U75N4,<br>U55S6, U75S6               | 8    |
| D11M3, D15M3,<br>D11N4, D15N4,<br>D11S6, D15S6               | 9    |

### Bus voltage measurement procedure

#### **DANGER**

##### **HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH**

Read and understand the precautions in "Before you begin" page 5 before performing this procedure.

**Failure to follow these instructions will result in death or serious injury.**

The DC bus voltage can exceed 933 Vdc. Use a properly rated voltage-sensing device when performing this procedure. To measure the DC bus voltage:

1. Disconnect all power.
2. Wait 15 minutes to allow the DC bus to discharge.
3. Measure the voltage of the DC bus between the PA/+ and PC/- terminals to ensure that the voltage is less than 42 Vdc.
4. If the DC bus capacitors do not discharge completely, contact your local Schneider Electric representative. Do not repair or operate the drive.

## Recommendations

### Power and circuit protection

The drive must be grounded to conform with the regulations concerning high leakage currents (over 3.5 mA).

Where local and national codes require upstream protection by means of a residual current device, use a type A device for single-phase drives and a type B device for three-phase drives as defined in the IEC Standard 60755.

Choose a suitable model integrating:

- High frequency current filtering,
- A time delay that helps to prevent tripping caused by the load from stray capacitance on power-up.  
The time delay is not possible for 30 mA devices; in this case, choose devices with immunity against nuisance tripping.

If the installation includes several drives, provide one "residual current device" per drive.

Keep the power cables separate from circuits in the installation with low-level signals (detectors, PLCs, measuring apparatus, video, telephone).

If you are using cables longer than 50 m (164 ft) between the drive and the motor, add output filters (please refer to the catalogue).

### Control

Keep the control circuits away from the power cables. For control and speed reference circuits, we recommend using shielded twisted cables with a pitch of between 25 and 50 mm (1 and 2 in.), connecting the shielding to ground at each end.

### Equipment Grounding

Ground the drive according to local and national code requirements. A minimum wire size of 10 mm<sup>2</sup> (6 AWG) may be required to meet standards limiting leakage current.

## ⚡ ⚠ DANGER

### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

- The drive panel must be properly grounded before power is applied.
- Use the provided ground connecting point as shown in the figure below.

**Failure to follow these instructions will result in death or serious injury.**

- Ensure that the resistance of the ground is one ohm or less.
- When grounding several drives, you must connect each one directly, as shown in the figure to the left.
- Do not loop the ground cables or connect them in series.

## ⚠ WARNING

### IMPROPER WIRING PRACTICES

- The ATV312 drive will be damaged if input line voltage is applied to the output terminals (U/T1,V/T2,W/T3).
- Check the power connections before energizing the ATV312 drive.
- If replacing another drive, verify that all wiring connections to the ATV312 drive comply with wiring instructions in this manual page [29](#).

**Failure to follow these instructions can result in death, serious injury, or equipment damage.**

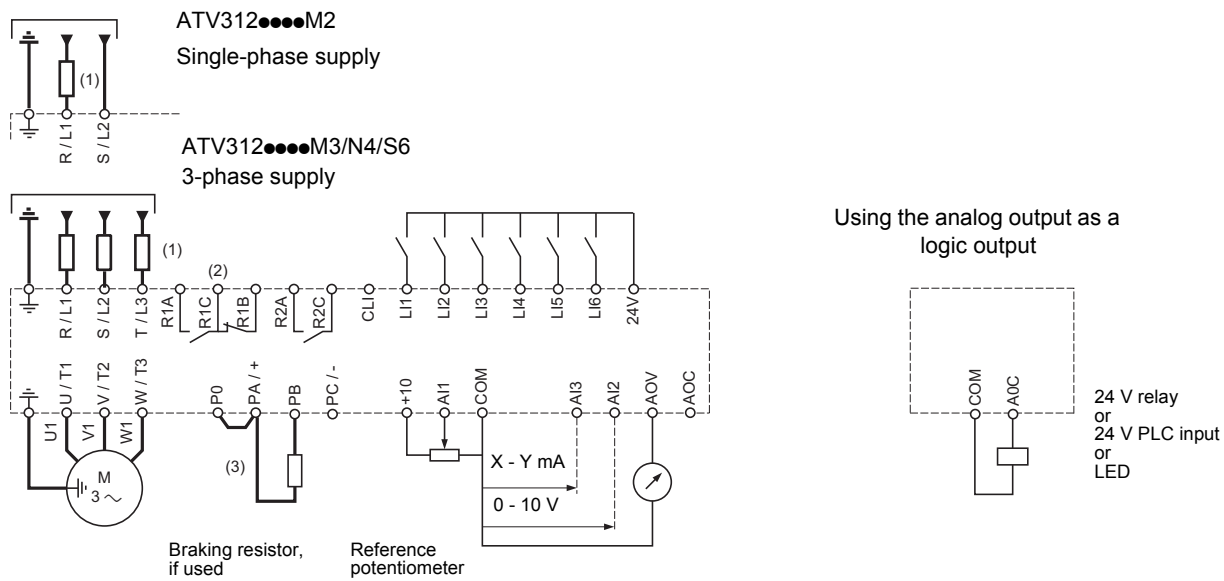

## ⚠ WARNING

### INADEQUATE OVERCURRENT PROTECTION

- Overcurrent protective devices must be properly coordinated.
- The Canadian Electrical Code and the National Electrical Code require branch circuit protection. Use the fuses recommended in the installation manual.
- Do not connect the drive to a power feeder whose short-circuit capacity exceeds the drive short-circuit current rating listed in this manual page [29](#).

**Failure to follow these instructions can result in death, serious injury, or equipment damage.**

## General wiring diagram

- (1) Line choke, if used (single phase or 3-phase)
- (2) Fault relay contacts, for remote indication of the drive status
- (3) If a braking resistor is connected, set [\[Dec ramp adapt.\] \(brA\)](#) parameter to yes (refer to the programming manual).

**Note 1:** Use interference suppressors on all inductive circuits near the drive or coupled to the same circuit (relays, contactors, solenoid valves, etc).

**Note 2:** This diagram is for the standard ATV312 products. Optional communication cards may change the control wiring of the product. Please see the associated documentation for the option cards for details.

**Choice of associated components:**  
Please refer to the catalogue.

## Logic input switch

This switch (1) assigns the link to 0V, 24 V or "floating":

### Using volt-free contacts

### Using PLC transistor output

(1) See page 24 to locate the switch on the terminal board.

## ⚠ DANGER

### UNINTENDED EQUIPMENT OPERATION

- Prevent accidental grounding of logic inputs configured for sink logic. Accidental grounding can result in unintended activation of drive functions.
- Protect the signal conductors against damage that could result in unintentional conductor grounding.
- Follow NFPA 79 and EN 60204 guidelines for proper control circuit grounding practices.

**Failure to follow these instructions will result in death or serious injury.**

### Power terminals

#### Access to the power terminals

To access the terminals, open the cover as shown in the example below.

### **DANGER**

#### **HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH.**

Replace the cover plate on the terminals and close the door before applying power.

**Failure to follow these instructions will result in death or serious injury.**

## Functions of the power terminals

| Terminal           | Function                                | For Altivar 312                              |
|--------------------|---|--|
| $\perp$            | Ground terminal                         | All ratings                                  |

| PC/-               | DC bus - polarity                       | All ratings                                  |
| U/T1 - V/T2 - W/T3 | Outputs to the motor                    | All ratings                                  |

## Arrangement and characteristics of the power terminals

### CAUTION

#### RISK OF DAMAGE TO THE DRIVE

- Never remove the link between PO and PA/+.
- The PO and PA/+ terminal screws must always be fully tightened as a high current flows through the link.

Failure to follow these instructions can result in equipment damage

Control terminals

Access to the control terminals

**DANGER**

**UNINTENDED EQUIPMENT OPERATION**

- Do not plug or unplug the terminal board while drive is powered.
- Check the tightening of the fixing screw after any manipulation on the terminal board.

**Failure to follow these instructions will result in death or serious injury.**

**DANGER**

**HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH**

Do not touch the terminal board before :

- removing power on the drive,
- removing any voltage on input and output terminals.

**Failure to follow these instructions will result in death or serious injury.**

Arrangement of the control terminals

| ATV312 Control terminals | Applicable wire size (1)<br>mm² (AWG) | Tightening torque (2)<br>N·m (lb.in) |
|--------------------------|---------------------------------------|--------------------------------------|
| R1A, R1B, R1C, R2A, R2C  | <b>0.75</b> to 2.5 ( <b>18</b> to 14) | 0.5 to 0.6 (4.4 to 5.3)              |

### Electromagnetic compatibility (EMC)

**IMPORTANT:** The high frequency equipotential ground connection between the drive, motor, and cable shielding does not eliminate the need to connect the ground (PE) conductors (green-yellow) to the appropriate terminals on each unit.

#### Principle and precautions

- Grounds between the drive, motor, and cable shielding must have high frequency equipotentiality.
- When using shielded cable for the motor, use a 4-conductor cable so that one wire will be the ground connection between the motor and the drive. Size of the ground conductor must be selected in compliance with local and national codes. The shield can then be grounded at both ends. Metal ducting or conduit can be used for part or all of the shielding length, provided there is no break in continuity.
- When using shielded cable for Dynamic Brake (DB) resistors, use a 3-conductor cable so that one wire will be the ground connection between the DB resistor assembly and the drive. The size of the ground conductor must be selected in compliance with local and national codes. The shield can then be grounded at both ends. Metal ducting or conduit can be used for part or all of the shielding length, provided there is no break in continuity.
- When using shielded cable for control signals, if the cable is connecting equipment that is close together and the grounds are bonded together, then both ends of the shield can be grounded. If the cable is connected to equipment that may have a different ground potential, then ground the shield at one end only to prevent large currents from flowing in the shield. The shield on the ungrounded end may be tied to ground with a capacitor (for example: 10 nF, 100 V or higher) in order to provide a path for the higher frequency noise. Keep the control circuits away from the power circuits. For control and speed reference circuits, we recommend using shielded twisted cables with a pitch of between 25 and 50 mm (1 and 2 in.) Keep the control circuits away from the power circuits. For control and speed reference circuits, we recommend using shielded twisted cables with a pitch of between 25 and 50 mm (1 and 2 in.)
- Ensure maximum separation between the power supply cable (line supply) and the motor cable.
- The motor cables must be at least 0.5 m (20 in.) long.
- Do not use surge arresters or power factor correction capacitors on the variable speed drive output.
- If using an additional input filter, it should be mounted as closed as possible to the drive and connected directly to the line supply via an unshielded cable. Link 1 on the drive is via the filter output cable.
- For installation of the optional EMC plate and instructions for meeting IEC 61800-3 standard, refer to the section entitled "Installing the EMC plates" and the instructions provided with the EMC plates.

### **DANGER**

#### **HAZARD OF ELECTRIC SHOCK, EXPLOSION OR ARC FLASH**

- Do not expose cable shielding except where connected to ground at the metal cable glands and underneath the grounding clamps.
- Ensure that there is no risk of the shielding coming into contact with live components.

**Failure to follow these instructions will result in death or serious injury.**

## Optional EMC plate installation diagram and instructions (examples)

Installation depends on the drive size. The table below gives the size according to the reference.

| Size 1            | Size 2            | Size 3            | Size 4            | Size 5            | Size 6  | Size 7  | Size 8  | Size 9  |
|-------------------|-------------------|-------------------|-------------------|-------------------|---|---|---|---|
| H018M3,<br>H037M3 | H055M3,<br>H075M3 | H018M2,<br>H037M2 | H055M2,<br>H075M2 | HU11M3,<br>HU15M3 | HU11M2,<br>HU15M2,<br>HU22M3,<br>H037N4,<br>H055N4,<br>H075N4,<br>HU11N4,<br>HU15N4,<br>H075S6,<br>HU15S6 | HU22M2,<br>HU30M3,<br>HU40M3,<br>HU22N4,<br>HU30N4,<br>HU40N4,<br>HU22S6,<br>HU40S6 | HU55M3,<br>HU75M3,<br>HU55N4,<br>HU75N4,<br>HU55S6,<br>HU75S6 | HD11M3,<br>HD15M3,<br>HD11N4,<br>HD15N4,<br>HD11S6,<br>HD15S6 |

Sizes 1 to 4

Size 5 to 7

Size 8

Size 9

1. EMC plate supplied with the drive, to be installed as indicated on the diagram.
2. Altivar 312
3. Non-shielded power supply wires or cable
4. Non-shielded wires for relay contacts
5. Attach and ground the shielding of cables 6, 7 and 8 as close as possible to the drive:
  - Strip the shielding.
  - Use stainless steel cable clamps of an appropriate size on the parts from which the shielding has been stripped, to attach them to the plate 1.

The shielding must be clamped tightly to the metal plate to improve electrical contact.
6. Shielded cable for motor connection with shielding connected to ground at both ends.
 

The shielding must be continuous and intermediate terminals must be in EMC shielded metal boxes.

For 0.18 to 1.5 kW drives, if the switching frequency is higher than 12 kHz, use cables with low linear capacitance: max. 130 pF (picoFarads) per meter.
7. Shielded cable for connecting the control/signalling wiring.
 

For applications requiring several conductors, use cables with a small cross-section (0.5 mm<sup>2</sup>, 20 AWG).

The shielding must be connected to ground at both ends. The shielding must be continuous and intermediate terminals must be in EMC shielded metal boxes.
8. Shielded cable for connecting braking resistor (if used).
 

The shielding must be continuous and intermediate terminals must be in EMC shielded metal boxes.

### Note:

- If using an additional input filter, it should be mounted under the drive and connected directly to the line supply via an unshielded cable. Link 3 on the drive is then via the filter output cable.
- The HF equipotential ground connection between the drive, motor and cable shielding does not remove the need to connect the PE ground conductors (green-yellow) to the appropriate terminals on each unit.

### Operation on an IT system

IT system: Isolated or impedance earthed neutral.

ATV312●●●●M2 and ATV312●●●●N4 drives have a built-in EMC filter. As a result they exhibit leakage current to ground. If the leakage current creates compatibility problems with your installation (residual current device or other), then you can reduce the leakage current by opening the IT jumper. In this configuration EMC compliance is not guaranteed.

Use a permanent insulation monitor compatible with non-linear loads (for example Merlin Gerin type XM200).

#### ATV312H 018M2 to U22M2 and ATV312H 037N4 to U40N4:

Pull out the jumper on the left of the ground terminal as illustrated below.

#### ATV312H U55N4 to D15N4:

Move the cable tag on the top left of the power terminals as illustrated below (example: ATV312HU55N4):

# Check list

---

Read carefully the safety information in programming, installation, simplified manuals and the catalogue. Before starting up the drive, please check the following points regarding mechanical and electrical installations, then use and run the drive.  
For complete documentation, refer to [www.schneider-electric.com](http://www.schneider-electric.com).

## 1. Mechanical installation

- For drive mounting types and recommendations on the ambient temperature (see the Mounting instructions on page [14](#)).
- Mount the drive vertically as specified (see the Mounting instructions on page [14](#)).
- The use of the drive must be in agreement with the environments defined by the standard 60721-3-3 and according to the levels defined in the catalogue.
- Mount the options required for your application (see catalogue).

## 2. Electrical installation

- Connect the drive to the ground (see Equipment Grounding on page [17](#)).
- Ensure that the input power voltage corresponds to the drive nominal voltage and connect the line supply as shown on the drawing on page [18](#).
- Ensure to use appropriate input power fuses and circuit breaker.
- Wire the control terminals as required (see Control terminals on page [24](#)). Separate the power cable and the control cable according to EMC compatibility rules.
- The range ATV312●●●●M2 and ATV312●●●●N4 integrates EMC filter. The leakage current can be reduced using the IT jumper as explained in the paragraph Operating on an IT system on page [28](#).
- Ensure that motor connections correspond to the voltage (star, delta).

## 3. Use and run the drive (see programming manual)

- Start the drive and you will see [\[Standard mot. freq\] \(bFr\)](#) at the first power on. Check that the frequency defined by the frequency [b F r](#) (the factory setting is 50 Hz) is in accordance with the frequency of the motor.
- On first power-up parameters [\[Ref.1 channel\] \(Fr1\)](#) and [\[2/3 wire control\] \(tCC\)](#) appear after [b F r](#). These parameters should be set if you want to control the drive locally, see page «How to control the drive locally» in the programming manual.
- On subsequent power-up, [r d y](#) will be displayed on the HMI.
- The [\[Restore config.\] \(FCS\)](#) function, permits you to reset the drive with factory settings.

# Maintenance

## Servicing

The Altivar 312 does not require any preventive maintenance. However, it is advisable to perform the following checks regularly:

- The condition and tightness of connections.
- Ensure that the temperature around the unit remains at an acceptable level and that ventilation is effective. Average service life of fans: 10 years.
- Remove any dust from the drive.
- Ensure proper fan operation.
- Physical damage to covers.

## Assistance with maintenance, detected fault display

If a problem arises during setup or operation, ensure that the recommendations relating to the environment, mounting and connections have been observed.

The first fault detected is stored and displayed, flashing, on the screen: the drive locks and the status relay (R1) contact opens.

## Clearing the detected fault

Disconnect the drive power supply in the event of a non-resettable fault.

Wait for the display to go off completely.

Find the cause of the detected fault and correct it.

Restore power to the drive.

The detected fault will no longer be present if it's cause has been corrected.

In the event of a non resettable detected fault:

- Remove/cut the power to the drive.
- WAIT 15 MINUTES to allow the DC bus capacitors to discharge. Then follow the "Bus Voltage Measurement Procedure" page [16](#) to verify that the DC voltage is less than 42 V. The drive LEDs are not indicators of the absence of DC bus voltage.
- Find and correct the detected fault.
- Restore power to the drive to confirm the detected fault has been rectified.

**Certain detected faults can be programmed for automatic restart after the cause has disappeared.**

These detected faults can also be reset by cycling power to the drive or by means of a logic input or control bit.

## Display menu

Use the display menu to show the status of the drive and it's current values as an aid for finding the causes of detected faults.

## Spares and repairs

Serviceable product: replacement of spares following the catalog.

## Procedure after a long time storage

**WARNING**

**RISK OF EXPLOSION AT THE POWER UP**

The capacitors after a long time storage can have issues. Following a storage time between 2 and 3 years:

- Use one AC supply variable connected between L1, L2 and L3
- Increase AC supply voltage to have:
  - 25% of rated voltage during 30mn
  - 50% of rated voltage during 30mn
  - 75% of rated voltage during 30mn
  - 100% of rated voltage during 30mn

**Failure to follow these instructions can result in death, serious injury, or equipment damage.**

# Short-circuit rating and branch circuit protection

## Recommended fuse ratings for UL and CSA requirements

| Reference     | Voltage (Y) | Input withstand rating (1) | Output interrupt rating (X)(2) | Enclosure Containment rating (3) (Type 1) | Branch Circuit protection (Z1) | Rating (Z2) |
|---------------|-------------|----------------------------|--------------------------------|---|--------------------------------|-------------|
| ATV312H018M2  | 200-240     | 1                          | 22                             |   | Class J Fuse                   | 6           |
| ATV312H037M2  | 200-240     | 1                          | 22                             |   | Class J Fuse                   | 10          |
| ATV312H055M2  | 200-240     | 1                          | 22                             |   | Class J Fuse                   | 10          |
| ATV312H075M2  | 200-240     | 1                          | 22                             |   | Class J Fuse                   | 15          |
| ATV312HU11M2  | 200-240     | 1                          | 22                             |   | Class J Fuse                   | 20          |
| ATV312HU15M2  | 200-240     | 1                          | 22                             |   | Class J Fuse                   | 20          |
| ATV312HU22M2  | 200-240     | 1                          | 22                             |   | Class J Fuse                   | 30          |
| ATV312H018M3X | 200-240     | 5                          | 22                             | 22  | Class J Fuse                   | 3           |
| ATV312H037M3X | 200-240     | 5                          | 22                             | 22  | Class J Fuse                   | 6           |

| ATV312H075S6X | 575-600     | 5                          | 22                             | 22  | Class J Fuse                   | 6           |
| ATV312HU15S6X | 575-600     | 5                          | 22                             | 22  | Class J Fuse                   | 6           |
| ATV312HU22S6X | 575-600     | 5                          | 22                             | 22  | Class J Fuse                   | 10          |
| ATV312HU40S6X | 575-600     | 5                          | 22                             | 22  | Class J Fuse                   | 15          |
| ATV312HU55S6X | 575-600     | 22                         | 22                             | 22  | Class J Fuse                   | 20          |
| ATV312HU75S6X | 575-600     | 22                         | 22                             | 22  | Class J Fuse                   | 25          |
| ATV312HD11S6X | 575-600     | 22                         | 22                             | 22  | Class J Fuse                   | 35          |
| ATV312HD15S6X | 575-600     | 22                         | 22                             | 22  | Class J Fuse                   | 45          |

Suitable For Use On A Circuit Capable Of Delivering Not More Than \_\_\_X\_\_\_ rms Symmetrical Amperes, \_\_\_Y\_\_\_ Volts Maximum, When Protected by \_\_\_Z 1\_\_\_ with a Maximum rating of \_\_\_Z 2\_\_\_.

(1) Input withstand rating is that for which the product has been designed thermally. Installation on a supply greater than this level will require additional inductance to satisfy this level.

(2) Output interrupt rating relies on Integral solid state short circuit protection. This does not provide branch circuit protection. Branch circuit protection must be provided in accordance with the National Electrical Code and any additional local codes. This is dependant on the type of installation.

(3) Enclosure Containment Rating is the maximum input short-circuit current at the drive input terminals with the specific branch Circuit Protection present for which any internal component breakdown, will not create a shock, flame, fire or expulsion hazard outside a specific enclosure structure. The various combinations are indicated in supplementary documents.

The information provided in this documentation contains general descriptions and/or technical characteristics of the performance of the products contained herein. This documentation is not intended as a substitute for and is not to be used for determining suitability or reliability of these products for specific user applications. It is the duty of any such user or integrator to perform the appropriate and complete risk analysis, evaluation, and testing of the products with respect to the relevant specific application or use thereof. Neither Schneider Electric nor any of its affiliates or subsidiaries shall be responsible or liable for misuse of the information contained herein. If you have any suggestions for improvements or amendments or have found errors in this publication, please notify us.

No part of this document may be reproduced in any form or by any means, electronic, or mechanical, including photocopying, without express written permission of Schneider Electric.

All pertinent state, regional, and local safety regulations must be observed when installing and using this product. For reasons of safety and to help ensure compliance with documented system data, only the manufacturer should perform repairs to components.

When devices are used for applications with technical safety requirements, the relevant instructions must be followed.

Failure to use Schneider Electric software or approved software with our hardware products may result in injury, harm, or improper operating results.

Failure to observe this information can result in injury or equipment damage.

# Important information

---

## NOTICE

Read these instructions carefully, and look at the equipment to become familiar with the device before trying to install, operate, or maintain it. The following special messages may appear throughout this documentation or on the equipment to warn of potential hazards or to call attention to information that clarifies or simplifies a procedure.

The addition of this symbol to a Danger or Warning safety label indicates that an electrical hazard exists, which will result in personal injury if the instructions are not followed.

This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

## **DANGER**

**DANGER** indicates an imminently hazardous situation which, if not avoided, will result in death, serious injury or equipment damage.

## **WARNING**

**WARNING** indicates a potentially hazardous situation which, if not avoided, can result in death, serious injury or equipment damage.

## **CAUTION**

**CAUTION** indicates a potentially hazardous situation which, if not avoided, can result in injury or equipment damage.

## **CAUTION**

**CAUTION**, used without the safety alert symbol, indicates a potentially hazardous situation which, if not avoided, can result in equipment damage.

## PLEASE NOTE

The word "drive" as used in this manual refers to the "controller portion" of the adjustable speed drive as defined by NEC.

Electrical equipment should be installed, operated, serviced, and maintained only by qualified personnel. No responsibility is assumed by Schneider Electric for any consequences arising out of the use of this documentation.

# Before you begin

Read and understand these instructions before performing any procedure with this drive.

## DANGER

### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

- Only appropriately trained persons who are familiar with and understand the contents of this manual and all other pertinent product documentation and who have received safety training to recognize and avoid hazards involved are authorized to work on and with this drive system. Installation, adjustment, repair and maintenance must be performed by qualified personnel.
- The system integrator is responsible for compliance with all local and national electrical code requirements as well as all other applicable regulations with respect to grounding of all equipment.
- Many components of the product, including the printed circuit boards, operate with mains voltage. Do not touch. Use only electrically insulated tools.
- Do not touch unshielded components or terminals with voltage present.
- Motors can generate voltage when the shaft is rotated. Prior to performing any type of work on the drive system, block the motor shaft to prevent rotation.
- AC voltage can couple voltage to unused conductors in the motor cable. Insulate both ends of unused conductors of the motor cable.
- Do not short across the DC bus terminals or the DC bus capacitors or the braking resistor terminals.
- Before performing work on the drive system:
  - Disconnect all power, including external control power that may be present.
  - Place a "Do Not Turn On" label on all power switches.
  - Lock all power switches in the open position.
  - Wait 15 minutes to allow the DC bus capacitors to discharge. The DC bus LED is not an indicator of the absence of DC bus voltage that can exceed 800 Vdc.
  - Measure the voltage on the DC bus between the DC bus terminals using a properly rated voltmeter to verify that the voltage is < 42 Vdc.
  - If the DC bus capacitors do not discharge properly, contact your local Schneider Electric representative.
- Install and close all covers before applying voltage.

**Failure to follow these instructions will result in death or serious injury.**

## DANGER

### UNINTENDED EQUIPMENT OPERATION

- Read and understand this manual before installing or operating the Altivar 312 drive.
- Any changes made to the parameter settings must be performed by qualified personnel.

**Failure to follow these instructions will result in death or serious injury.**

## WARNING

### DAMAGED EQUIPMENT

Do not install or operate any drive that appears damaged.

**Failure to follow these instructions can result in death, serious injury, or equipment damage.**

### **WARNING**

#### **LOSS OF CONTROL**

- The designer of any control scheme must consider the potential failure modes of control paths and, for critical control functions, provide a means to achieve a safe state during and after a path failure. Examples of critical control functions are emergency stop, overtravel stop, power outage, and restart.
- Separate or redundant control paths must be provided for critical control functions.
- System control paths may include communication links. Consideration must be given to the implications of unanticipated transmission delays or failures of the link.
- Observe all accident prevention regulations and local safety guidelines.<sup>a</sup>
- Each implementation of the product must be individually and thoroughly tested for proper operation before being placed into service.

**Failure to follow these instructions can result in death, serious injury, or equipment damage.**

a. For USA: Additional information, refer to NEMA ICS 1.1 (latest edition), "Safety Guidelines for the Application, Installation, and Maintenance of Solid State Control" and to NEMA ICS 7.1 (latest edition), "Safety Standards for Construction and Guide for Selection, Installation and Operation of Adjustable Speed Drive Systems."

# Documentation structure

---

The following Altivar 312 technical documents are available on the Schneider Electric website ([www.schneider-electric.com](http://www.schneider-electric.com)).

## **Installation Manual**

This manual describes how to install and connect the drive.

## **Programming manual**

This manual describes the functions and parameters of the drive's terminals and how to use them.

## **Quick Start**

This document describes how to connect and configure the drive so that the motor can be started both quickly and easily for basic applications. This document is supplied with the drive.

## **Manuals for Modbus<sup>®</sup>, CANopen<sup>®</sup>, etc.**

These manuals describe the installation process, the bus or network connections, signaling, diagnostics and the configuration of parameters specific to communication.

They also describe the communication services of the protocols.

# Software enhancements

---

Since it was first marketed, the Altivar ATV 312 has been equipped with additional functions. Software version V5.1 IE 50 has now been updated to V5.1 IE 54. This documentation relates to version V5.1 IE 54.  
The software version appears on the rating plate attached to the side of the drive.

## Enhancements made to version V5.1 IE 54 in comparison to V5.1 IE 50

### New possible configuration

- Local configuration : By pressing the MODE button during 3 seconds, the drive switches automatically to Local configuration. The embedded Jog Dial works as a potentiometer (Fr1 = AIV1) and embedded RUN button is activated.
- Remote configuration : This is the factory configuration.

# INSTALLATION

1. Please refer to the Installation Manual.

## PROGRAMMING

### Tips:

- Before beginning programming, complete the customer setting tables, page [112](#).
- Use the [\[Restore config.\] \(FCS\)](#) parameter, page [46](#), to return to the factory settings at any time.
- To locate the description of a function quickly, use the index of functions on page [111](#).
- Before configuring a function, read carefully the "Function compatibility" section on pages [21](#) and [22](#).
- **Note:**  
The following operations must be performed for optimum drive performance in terms of accuracy and response time:
  - Enter the values indicated on the (motor) rating plate in the [\[MOTOR CONTROL\] \(drC-\)](#) menu, page [41](#).
  - Perform auto-tuning with the motor cold and connected using the [\[Auto-tuning\] \(tun\)](#) parameter, page [43](#).
  - Adjust the [\[FreqLoopGain\] \(FLG\)](#) parameter, page [33](#) and the [\[Fr.Loop.Stab\] \(StA\)](#) parameter, page [34](#).

2. Apply input power to the drive, but do not give a run command.

3. Configure:

- The nominal frequency of the motor [\[Standard mot. freq\] \(bFr\)](#) page [41](#) if this is not 50 Hz,
- The motor parameters in the [\[MOTOR CONTROL\] \(drC-\)](#) menu, page [41](#), only if the factory configuration of the drive is not suitable,
- The application functions in the [\[INPUTS / OUTPUTS CFG\] \(I-O-\)](#) menu, page [47](#), the [\[COMMAND\] \(CtL-\)](#) menu, page [50](#), and the [\[APPLICATION FUNCT.\] \(FUn-\)](#) menu, page [62](#), only if the factory configuration of the drive is not suitable.

4. In the [\[SETTINGS\] \(SEt-\)](#) menu, adjust the following parameters:

- [\[Acceleration\] \(ACC\)](#), page [32](#) and [\[Deceleration\], \(dEC\)](#) page [32](#),
- [\[Low speed\] \(LSP\)](#), page [33](#) and [\[High speed\] \(HSP\)](#), page [33](#),
- [\[Mot. therm. current\] \(ItH\)](#), page [33](#).

5. Start the drive.

## Setup - Preliminary Recommendations

### Before powering up the drive

#### DANGER

##### UNINTENDED EQUIPMENT OPERATION

Make sure that all logic inputs are inactive to avoid any unintended operation.

**Failure to follow these instructions will result in death or serious injury.**

### Before configuring the drive

#### DANGER

##### UNINTENDED EQUIPMENT OPERATION

- Read and understand this manual before installing or operating the ATV312 drive.
- Any changes made to the parameter settings must be performed by qualified personnel.
- Make sure that all logic inputs are inactive to avoid any unintended operation when parameters are being changed.

**Failure to follow these instructions will result in death or serious injury.**

### Start-up

**Note:** When factory settings apply and during power-up/manual reset or after a stop command, the motor can only be powered once the "forward", "reverse" and "DC injection stop" commands have been reset. If they have not been reset, the drive will display [\[Freewheel stop\] \(nSt\)](#) but will not start. If the automatic restart function has been configured ([\[Automatic restart\] \(Atr\)](#) parameter in the [\[FAULT MANAGEMENT\] \(FLt-\)](#) menu, page [91](#)), these commands are taken into account without a reset (to zero) being necessary.

### Line contactor

#### CAUTION

##### RISK OF DAMAGE TO DRIVE

- Frequent use of the contactor will cause premature ageing of the filter capacitors.
- Do not have cycle times less than 60 seconds.

**Failure to follow these instructions can result in equipment damage.**

### Using a motor with a lower rating or dispensing with a motor altogether

- With the factory settings, motor output phase loss detection is active ([\[Output Phase Loss\] \(OPL\)](#) = [\[YES\] \(YES\)](#), page [94](#)). To avoid having to use a motor with the same rating as the drive when testing the drive or during a maintenance phase, deactivate motor output phase loss detection ([\[Output Phase Loss\] \(OPL\)](#) = [\[No\] \(nO\)](#)). This can prove particularly useful if very powerful drives are being used.
- Set the [\[U/F mot 1 selected\] \(Uft\)](#) parameter, page [44](#), on [\[Cst. torque\] \(L\)](#) in the [\[MOTOR CONTROL\] \(drC-\)](#) menu.

#### CAUTION

##### RISK OF DAMAGE TO MOTOR

Motor thermal protection will not be provided by the drive if the motor's nominal current is 20% lower than that of the drive. Find an alternative source of thermal protection.

**Failure to follow these instructions can result in equipment damage.**

# Factory configuration

## Factory settings

The Altivar 312 is factory-set for the most common operating conditions:

- Display: drive ready **[Ready]** (rdY) with motor stopped, and motor frequency with motor running.
- The LI5 and LI6 and logic inputs, AI3 analog input, AOC analog output, and R2 relay are unaffected.
- Stop mode when fault detected: freewheel

| Code                         | Description                      | Value  | Page               |
|------------------------------|----------------------------------|--|--------------------|
| <b>b F r</b>                 | [Standard mot. freq]             | [50Hz IEC]   | <a href="#">41</a> |

| <b>i t H</b>                 | [Mot. therm. current]            | Nominal motor current (value depending on drive rating)  | <a href="#">33</a> |
| <b>S d C I</b>               | [Auto DC inj. level 1]           | 0.7 x nominal drive current, for 0.5 seconds   | <a href="#">35</a> |
| <b>S F r</b>                 | [Switching freq.]                | 4 kHz  | <a href="#">40</a> |
| <b>r r 5</b>                 | [Reverse assign.]                | [LI2] (LI2): Logic input LI2   | <a href="#">48</a> |
| <b>P S 2</b>                 | [2 preset speeds]                | [LI3] (LI3): Logic input LI3   | <a href="#">72</a> |
| <b>P S 4</b>                 | [4 preset speeds]                | [LI4] (LI4): Logic input LI4   | <a href="#">72</a> |
| <b>F r I</b>                 | [Ref.1 channel]                  | [AI1] (AI1) - Analog input AI1   | <a href="#">29</a> |
| <b>S R 2</b>                 | [Summing ref. 2]                 | [AI2] (AI2) - Analog input AI2   | <a href="#">70</a> |
| <b>r I</b>                   | [R1 Assignment]                  | [No drive flt] (FLt): The contact opens when a fault is detected or when the drive has been switched off | <a href="#">49</a> |
| <b>b r A</b>                 | [Dec ramp adapt.]                | [Yes] (YES): Function active (automatic adaptation of deceleration ramp)                                 | <a href="#">64</a> |
| <b>A t r</b>                 | [Automatic restart]              | [No] (nO): Function inactive   | <a href="#">91</a> |
| <b>S t t</b>                 | [Type of stop]                   | [Ramp stop] (rMP): On ramp   | <a href="#">65</a> |
| <b>C F G</b>                 | [Macro configuration]            | [Factory set.] (Std) (1)   | <a href="#">45</a> |

Check whether the values above are compatible with the application. If necessary, the drive can be used without changing the settings.

(1) If you want to keep the drive's presettings to a minimum, select the macro configuration **[Macro configuration]** (CFG) = **[Start/stop]** (StS) followed by **[Restore config.]** (FCS) = **[Factory Set.]** (InI) (page [46](#)).

The **[Start/stop]** (StS) macro configuration is the same as the factory configuration, apart from the I/O assignment:

- Logic inputs:
  - LI1, LI2 (reversing): 2-wire transition detection control, LI1 = run forward, LI2 = run reverse.
  - LI3 to LI6: Inactive (not assigned).
- Analog inputs:
  - AI1: Speed reference 0-10 V.
  - AI2, AI3: Inactive (not assigned).
- Relay R1: The contact opens in the event of a detected fault (or drive off).
- Relay R2: Inactive (not assigned).
- Analog output AOC: 0-20 mA, inactive (not assigned).

# Basic functions

---

## Drive thermal protection

### Functions:

Thermal protection by PTC probe fitted on the heatsink or integrated in the power module.

Indirect protection of the drive against overloads by tripping in the event of an overcurrent. Typical tripping values:

- Motor current = 185% of nominal drive current: 2 seconds
- Motor current = 150% of nominal drive current: 60 seconds

## Drive ventilation

The fan starts up when the drive is powered up then shuts down after 10 seconds if a run command has not been received.

The fan is powered automatically when the drive is unlocked (direction of operation + reference). It is powered down a few seconds after the drive is locked (motor speed < 0.2 Hz and injection braking completed).

# Basic functions

## Motor thermal protection

### Function:

Thermal protection by calculating the  $I^2t$ .  
The protection takes account of self-cooled motors.

### CAUTION

#### RISK OF DAMAGE TO MOTOR

External protection against overloads is required under the following circumstances:

- When the product is being switched on again, as there is no memory to record the motor thermal state
- When supplying more than one motor
- When supplying motors with ratings less than 0.2 times the nominal drive current
- When using motor switching

**Failure to follow these instructions can result in equipment damage.**

# Remote display terminal option, ATV31

This terminal is a local control unit which can be mounted on the door of the wall-mounted or floor-standing enclosure. It has a cable with connectors, which is connected to the drive serial link (see the manual supplied with the terminal). Its display capabilities are practically identical to those of the Altivar 312. With this terminal, however, up and down arrows are used for navigation rather than a jog dial. There is also an access locking switch for the menus. There are three buttons for controlling the drive (1):

- FWD/REV: Reversal of the direction of rotation
- RUN: Motor run command
- STOP/RESET: Motor stop command or reset

Pressing the button a first time stops the motor, and if DC injection standstill braking is configured, pressing it a second time stops this braking.

**Note:** Protection via customer confidential code has priority over the switch.

**Note:**

- The remote terminal access locking switch also locks access by the drive keys.
- When the remote display terminal is disconnected, any locking remains active for the drive keys.
- The remote display terminal will only be active if the [Modbus baud rate] (tbr) parameter in the [COMMUNICATION] (COM-) menu, page [98](#), still has its factory setting: [19.2 Kbps] (19.2).

(1) To activate the buttons on the remote display terminal, you first have to configure [HMI command] (LCC) = [Yes] (YES), page [61](#).

## Saving and loading configurations

Up to four complete configurations for ATV312 drives without an option card can be stored on the remote display terminal. These configurations can be saved, transported and transferred from one drive to another of the same rating. 4 different operations for the same device can also be stored on the terminal.

See the [Saving config.] (SCS) and [Restore config.] (FCS) parameters in the [MOTOR CONTROL] (drC-) menu, pages [45](#) and [46](#), the [INPUTS / OUTPUTS CFG] (I-O-) menu, pages [49](#) and [49](#), the [COMMAND] (CtL-) menu, pages [61](#) and [61](#), and the [APPLICATION FUNCT.] (FUn-) menu, pages [90](#) and [90](#).

To transfer a configuration between an ATV31 and an ATV32, follow the procedure on page [90](#).

# Remote graphic display terminal option, ATV61/ATV71

## Description of the terminal

Thanks to the screen size of this graphic display terminal, which works with FLASH V1.1IE19 or higher and is part of the ATV71, it is possible to display more detailed information than can be shown on an on-board display. It is connected in the same way as the ATV31 remote display terminal.

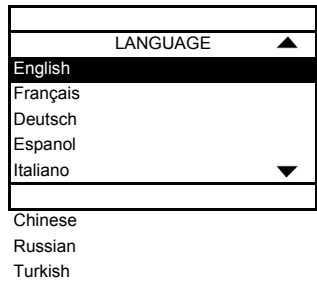

**Note:** Keys **3**, **4**, **5** and **6** can be used to control the drive directly, if control via the terminal is activated.

To activate the buttons on the remote display terminal, you first have to configure [\[HMI command\]](#) (LCC) = [\[Yes\]](#) (YES), page [61](#).

# Remote graphic display terminal option, ATV61/ATV71 (continued)

## Powering up the graphic display terminal for the first time

When powering up the graphic display terminal for the first time, the user has to select the required language.

Display after the graphic display terminal has been powered up for the first time. Select the language and press ENT.

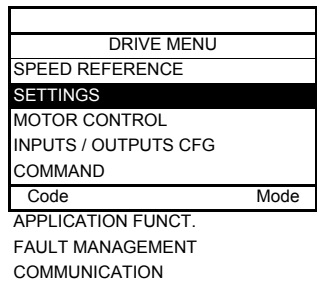

The drive's rating details will now appear.

The [MAIN MENU] follows automatically.

3 seconds  
or ENT

Automatically switches to the [DRIVE MENU] menu after 3 seconds. Select the menu and press ENT.

# Remote graphic display terminal option, ATV61/ATV71 (continued)

## Powering up the drive for the first time

When powering up the drive for the first time, the user immediately accesses the 3 parameters below: [Standard mot. freq] (bFr), [Ref.1 channel] (Fr1), and [2/3 wire control] (tCC), page 30. .

Display after the drive has been powered up for the first time.

The [MAIN MENU] follows automatically.

3 seconds

Automatically switches to the [DRIVE MENU] menu after 3 seconds. Select the menu and press ENT.

MOTOR CONTROL  
INPUTS / OUTPUTS CFG  
COMMAND  
APPLICATION FUNCT.  
FAULT MANAGEMENT  
COMMUNICATION

ESC

The word "Ready" appears on the graphic display terminal if you press the ESC key when in the [DRIVE MENU].

# Remote graphic display terminal option, ATV61/ATV71 (continued)

## Subsequent power-ups

Display after powering up.

The [\[MAIN MENU\]](#) follows automatically.

3 seconds

Automatically switches to the [\[DRIVE MENU\]](#) menu after 3 seconds. Select the menu and press ENT.

Code Mode  
APPLICATION FUNCT.  
FAULT MANAGEMENT  
COMMUNICATION

ESC

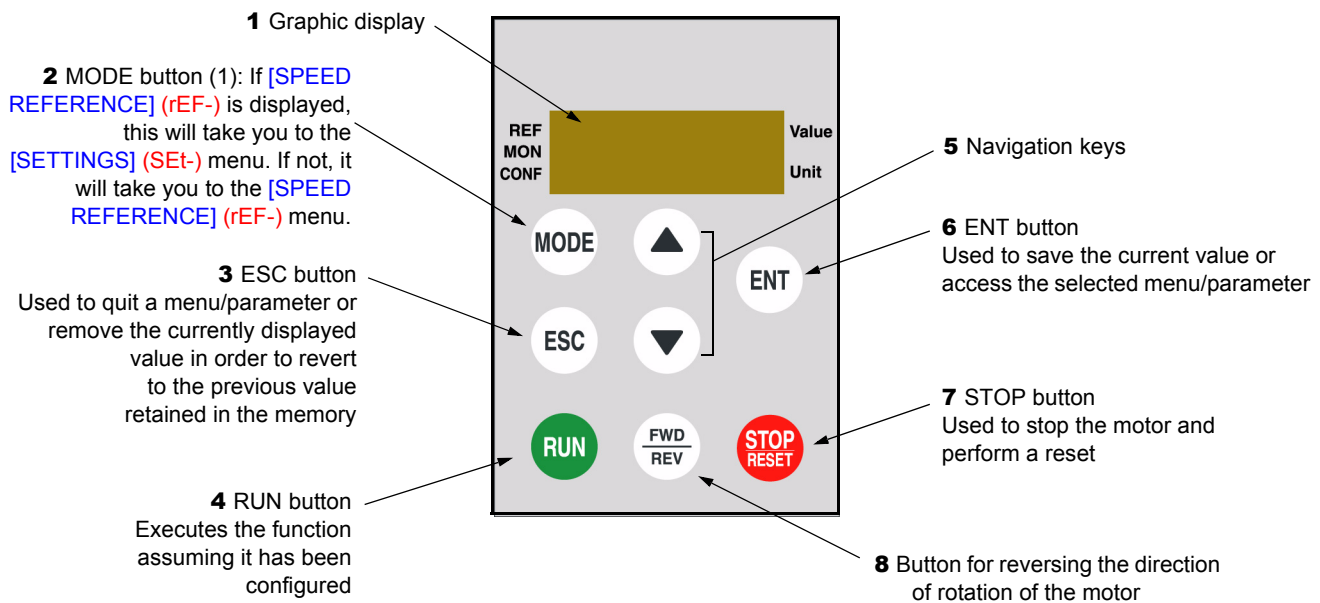

The word "Ready" appears on the graphic display terminal if you press the ESC key when in the [\[DRIVE MENU\]](#).

# Remote display terminal option, ATV12

## Description of the terminal

This terminal is a local control unit which can be mounted on the door of the wall-mounted or floor-standing enclosure. It has a cable with connectors, which is connected to the drive serial link (see the manual supplied with the terminal). Its display capabilities are practically identical to those of the Altivar 312. With this terminal, up and down arrows are used for navigation rather than a jog dial.

(1) If the drive is locked by a code ([PIN code 1] (COd), page 103), pressing the Mode key enables you to switch from the [MONITORING] (SUP-) menu to the [SPEED REFERENCE] (rEF-) menu and vice versa.

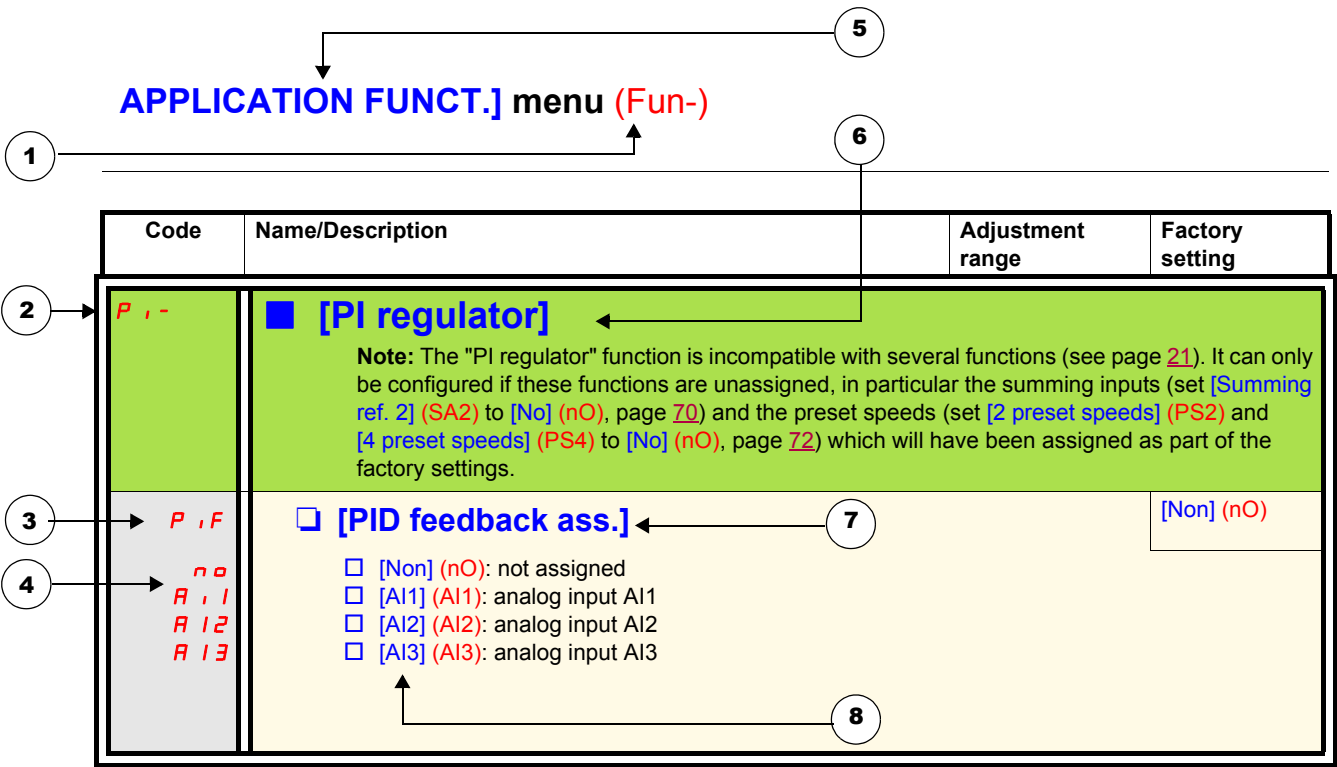

To activate the buttons on the remote display terminal, you first have to configure [HMI command] (LCC) = [Yes] (YES), page 61.

# Structure of the parameter tables

The parameter tables contained in the descriptions of the various menus are organized as follows.

Example :

1. Name of menu on 4-digit 7-segment display

2. Submenu code on 4-digit 7-segment display

3. Parameter code on 4-digit 7-segment display

4. Parameter value on 4-digit 7-segment display
5. Name of menu on ATV61/ATV71 graphic display terminal

6. Name of submenu on ATV61/ATV71 graphic display terminal

7. Name of parameter on ATV61/ATV71 graphic display terminal

8. Value of parameter on ATV61/ATV71 graphic display terminal

# Compatibility of functions

## Incompatible functions

The following functions will be inaccessible or deactivated in the cases described below:

### Automatic restart

This is only possible for the 2-wire level control type ([2/3 wire control] (tCC) = [2 wire] (2C) and [2 wire type] (tCt) = [Level] (LEL) or [Fwd priority] (PFO)).

### Catch on the fly

This is only possible for the 2-wire level control type ([2/3 wire control] (tCC) = [2 wire] (2C) and [2 wire type] (tCt) = [Level] (LEL) or [Fwd priority] (PFO)).

This function is locked if automatic standstill injection has been configured as DC ([Auto DC injection] (AdC) = [Continuous] (Ct)).

## Function compatibility table

The choice of application functions may be limited by the number of I/O and by the fact that some functions are incompatible with one another. Functions which are not listed in this table are compatible.

**If there is an incompatibility between functions, the first function configured will prevent the others being configured.**

**To configure a function, first check that functions which are incompatible with it are unassigned, especially those which are assigned in the factory settings.**

|                                  | Summing inputs (factory setting) | +/- speed (1) | Management of limit switches | Preset speeds (factory setting) | PI regulator | Jog operation | Brake control | DC injection stop | Fast stop | Freewheel stop |
|----------------------------------|----------------------------------|---------------|------------------------------|---------------------------------|--------------|---------------|---------------|-------------------|-----------|----------------|
| Summing inputs (factory setting) |                                  | ●             |                              | ↑                               | ●            | ↑             |               |                   |           |                |
| +/- speed (1)                    | ●                                |               |                              | ●                               | ●            | ●             |               |                   |           |                |
| Management of limit switches     |                                  |               |                              |                                 | ●            |               |               |                   |           |                |
| Preset speeds (factory setting)  | ←                                | ●             |                              |                                 | ●            | ↑             |               |                   |           |                |
| PI regulator                     | ●                                | ●             | ●                            | ●                               |              | ●             | ●             |                   |           |                |
| Jog operation                    | ←                                | ●             |                              | ←                               | ●            |               | ●             |                   |           |                |
| Brake control                    |                                  |               |                              |                                 | ●            | ●             |               | ●                 |           |                |
| DC injection stop                |                                  |               |                              |                                 |              |               | ●             |                   |           | ↑              |
| Fast stop                        |                                  |               |                              |                                 |              |               |               |                   |           | ↑              |
| Freewheel stop                   |                                  |               |                              |                                 |              |               |               | ←                 | ←         |                |

(1)Excluding special application with reference channel [Ref.2 channel] (Fr2) (see diagrams 53 and 55)

● Incompatible functions    □ Compatible functions    ■ Not applicable

Priority functions (functions which cannot be active at the same time):

← ↑ The function marked with the arrow takes priority over the other.

Stop functions take priority over run commands.

Speed references via logic command take priority over analog references.

# Compatibility of functions

## Logic and analog input application functions

Each of the functions on the following pages can be assigned to one of the inputs.

A single input can activate several functions at the same time (reverse and 2nd ramp for example). **The user must therefore ensure that these functions can be used at the same time.**

The [\[MONITORING\] \(SUP-\)](#) menu ([\[\[LOGIC INPUT CONF.\]\] \(LIA-\)](#) parameter, page [104](#), and [\[\[ANALOG INPUTS IMAGE\]\] \(AIA-\)](#) parameter, page [104](#)) can be used to display the functions assigned to each input in order to check their compatibility.

Before assigning a reference, command or function to a logic or analog input, the user must check that this input has not already been assigned in the factory settings and that no other input has been assigned to an incompatible or unwanted function.

- Example of incompatible function to be unassigned:  
In order to use the "+speed/-speed" function, the preset speeds and summing input 2 must first be unassigned.

The table below lists the factory-set input assignments and the procedure for unassigning them.

| Assigned input | Function        | Code         | To unassign, set to: | Page               |
|----------------|-----------------|--------------|----------------------|--------------------|
| LI2            | Run reverse     | <b>r r 5</b> | nO                   | <a href="#">48</a> |
| LI3            | 2 preset speeds | <b>P 5 2</b> | nO                   | <a href="#">72</a> |
| LI4            | 4 preset speeds | <b>P 5 4</b> | nO                   | <a href="#">72</a> |
| AI1            | Reference 1     | <b>F r 1</b> | Anything but AI1     | <a href="#">58</a> |
| LI1            | Run forward     | <b>t t t</b> | 2C or 3C             | <a href="#">47</a> |
| AI2            | Summing input 2 | <b>S A 2</b> | nO                   | <a href="#">70</a> |

# List of functions that can be assigned to inputs/outputs

# Checklist

---

Carefully read the information contained in the programming, installation and simplified manuals, as well as the information in the catalog. Before starting to use the drive, please check the following points relating to mechanical and electrical installations. For the full range of documentation, please visit [www.schneider-electric.com](http://www.schneider-electric.com).

## 1. Mechanical installation (see the simplified and installation manuals)

- For details of the different installation types and recommendations concerning ambient temperature, please refer to the installation instructions in the simplified or installation manuals.
- Install the drive vertically in accordance with the specifications. Please refer to the installation instructions in the simplified or installation manuals.
- When using the drive, both the environmental conditions defined under standard 60721-3-3 and the levels defined in the catalog must be respected.
- Install the required options for your application. Refer to the catalog for details.

## 2. Electrical installation (see the simplified and installation manuals)

- Ground the drive. See the sections on how to ground equipment in the simplified and installation manuals.
- Make sure the input supply voltage matches the nominal drive voltage and connect the line supply in accordance with the simplified and installation manuals.
- Make sure you use appropriate input line fuses and circuit breakers. See the simplified and installation manuals.
- Arrange the cables for the control terminals as required (see the simplified and installation manuals). Separate the supply and control cables in accordance with EMC compatibility rules.
- The ATV312●●●●M2 and ATV312●●●●N4 ranges include an EMC filter. Using an IT jumper helps reduce leakage current. This is explained in the paragraph about the internal EMC filter on the ATV312●●●●M2 and the ATV312●●●●N4 in the installation manual.
- Make sure the motor connections are right for the voltage (star, delta).

## 3. Using and starting up the drive

- Start the drive. [\[Standard mot. freq\] \(bFr\)](#), page [29](#), is displayed the first time the drive is powered up. Make sure the frequency defined by frequency [bFr](#) (the factory setting is 50 Hz) matches the motor's frequency.
- When the drive is powered up for the first time, the [\[Ref.1 channel\] \(Fr1\)](#) parameter, page [29](#), and the [\[2/3 wire control\] \(tCC\)](#) parameter, page [30](#), are displayed after [\[Standard mot. freq\] \(bFr\)](#). These parameters will need to be adjusted if you wish to control the drive locally.
- When the drive is powered up subsequently, [\[Ready\] \(rdY\)](#) is displayed on the HMI.
- The [\[Restore config.\] \(FCS\)](#) function, page [46](#), is used to reinitialize the drive with the factory settings.

## Description of the HMI

### Functions of the display and the keys

**Note1:** In LOCAL configuration, the three Leds REF, MON, and CONF are blinking simultaneously in programming mode and are working as a Led chaser in control mode.

#### Normal display, with no fault code displayed and no startup:

- **4 3.0**: Displays the parameter selected in the **[MONITORING] (SUP-)** menu (default: motor frequency). If the current is limited, the display flashes. In such cases, CLI will appear at the top left if an ATV61/ATV71 graphic display terminal is connected to the drive.
- **in t**: Initialization sequence
- **rd y**: Drive ready
- **dc b**: DC injection braking in progress
- **ns t**: Freewheel stop
- **fs t**: Fast stop
- **tu n**: Auto-tuning in progress

In the event of a detected fault, the display will flash to notify the user accordingly. If an ATV61/ATV71 graphic display terminal is connected, the name of the detected fault will be displayed.

- (1) If the drive is locked by a code (**[PIN code 1] (COd)**, page 103), pressing the Mode key enables you to switch from the **[MONITORING] (SUP-)** menu to the **[SPEED REFERENCE] (rEF-)** menu and vice versa. It is no longer possible to switch between LOCAL and REMOTE configurations.

## Easy REMOTE and LOCAL configuration

The LOCAL configuration allows to activate automatically the embedded RUN button and the jog dial as a potentiometer. In that configuration, the speed adjustment will also be effective on remote keypads. MODE button on ATV12 remote display terminal and on ATV61/71 graphic display terminal (function key F4) is also active to switch from one configuration to another.

[Ref.1 channel] (Fr1) is set to [AI Virtual 1] (AIV1) and [2/3 wire control] (tCC) are set to [Local] (LOC) when switching to LOCAL configuration.

**Choose the configuration (REMOTE or LOCAL) before starting the parameters adjustment of the drive.**

For parameters interdependencies reasons, switching from one configuration to another will change other parameters (for example : Input/Output assignment will return to their factory value).

**⚠ DANGER**

**UNINTENDED EQUIPMENT OPERATION**

When switching from REMOTE to LOCAL configuration, all the assignments involving the logic inputs will revert to their default values.

- Check that this change is compatible with the wiring diagram used.

**Failure to follow these instructions will result in death or serious injury.**

## Structure of the menus

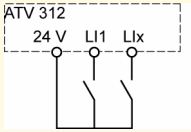

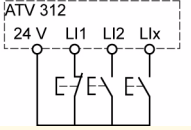

# Programming

## Configuring the [Standard mot. freq] (bFr), [2/3 wire control] (tCC), and [Ref.1 channel] (FrI) parameters

These parameters can only be modified when the drive is stopped and no run command is present.

| Code   | Description   | Adjustment range | Factory setting |
|--|---|------------------|-----------------|
| <b>bFr</b><br><br>50<br>60   | <input type="checkbox"/> <b>[Standard mot. freq]</b><br><br>This parameter is only visible the first time the drive is powered up.  2 s

The jog dial (ENT) needs to be pressed and held down (for 2 s) to change the assignment for this parameter.

# [SPEED REFERENCE] (rEF-) menu

The [SPEED REFERENCE] (rEF-) menu displays [HMI Frequency ref.] (LFr), [Image input AIV1] (AIV1) or [Frequency ref.] (FrH) depending on which control channel is active.

During local control, the HMI's jog dial functions as a potentiometer, making it possible to increase or reduce the reference value within limits defined by the [Low speed] (LSP) and [High speed] (HSP) parameters.

When local control is deactivated, by the [Ref.1 channel] (Fr1) parameter, only the reference values are displayed. The value will be read-only and can only be changed via the jog dial (the speed reference is supplied by an AI or another source).

The reference displayed will depend on how the drive has been configured.

| Code | Description  | Factory setting |
|------|--|-----------------|
| LFr  | <div><input type="checkbox"/> [HMI Frequency ref.]</div> <div>This parameter only appears if the function has been enabled.<br/>It is used to change the speed reference from the remote control.<br/>ENT does not have to be pressed to enable a change of reference.</div> | 0 to 500 Hz     |
| AIV1 | <div><input type="checkbox"/> [Image input AIV1]</div> <div>Used to amend the speed reference via the jog dial</div>   | 0 to 100%       |
| FrH  | <div><input type="checkbox"/> [Frequency ref.]</div> <div>This parameter is read-only. It enables you to display the speed reference applied to the motor, regardless of which reference channel has been selected.</div>  | LSP to HSP Hz   |

## [SETTINGS] (SEt-) menu

(1)Parameter can also be accessed in the [MOTOR CONTROL] (drC-) menu.

## [MOTOR CONTROL] (drC-) menu

With the exception of [Auto tuning] (tUn), which can power up the motor, parameters can only be changed in stop mode, with no run command present.

On the optional ATV31 remote display terminal, this menu can be accessed with the switch in the  position.

Drive performance can be optimized by:

- Entering the values given on the motor rating plate in the Drive menu
- Performing an auto-tune operation (on a standard asynchronous motor)

| rSC  | <input type="checkbox"/> [Cold stator resist.] <p><input type="checkbox"/> [No] (nO): function inactive. For applications which do not require high performance or do not tolerate automatic auto-tuning (passing a current through the motor) each time the drive is powered up.<br/> <input type="checkbox"/> [Init] (InIt): activates the function. To improve low-speed performance whatever the thermal state of the motor.<br/> <input type="checkbox"/> Value of cold state stator resistance used, in mΩ.</p> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>It is strongly recommended that this function is activated for mechanical handling applications.</li> <li>The function should only be activated [Init] (InIt) when the motor is cold.</li> <li>When [Cold stator resist.] (rSC) = [Init] (InIt), the [Auto-tuning] (tUn) parameter is forced to [Power on] (POn). At the next run command the stator resistance is measured with an auto-tune. The [Cold stator resist.] (rSC) then changes to a value of (BBBB) and maintains it, [Auto-tuning] (tUn) is still forced to [Power on] (POn). The [Cold stator resist.] (rSC) parameter remains at [Init] (InIt) as long as the measurement has not been performed.</li> <li>Value BBBB can be forced or changed using the jog dial (1).</li> </ul> |                  | [No] (nO)                           |

### (1) Procedure:

- Check that the motor is cold.
- Disconnect the cables from the motor terminals.
- Measure the resistance between 2 of the motor terminals (U. V. W.) without modifying its connection.
- Use the jog dial to enter half the measured value.
- Increase the factory setting of [IR compensation] (UFR), page 33, to 100% rather than 20%.

**Note:** Do not use [Cold stator resist.] (rSC) if it is not set to [No] (nO) or = [Power on] (POn) with catch on the fly ([CATCH ON THE FLY] (FLr-), page 93).

| <b>FCS</b>  | <input type="checkbox"/> [Restore config.]  | (1)              | [No] (nO)       |
|  2 s | <div style="background-color: black; color: white; text-align: center; padding: 5px;"><b>⚠ DANGER</b></div> <div style="background-color: yellow; padding: 10px;"> <b>UNINTENDED EQUIPMENT OPERATION</b><br/> Check that the changes made to the current configuration are compatible with the wiring diagram used.<br/><br/> <b>Failure to follow these instructions will result in death or serious injury.</b> </div> <div style="padding: 10px;"> <input type="checkbox"/> [No] (nO): Function inactive.<br/> <input type="checkbox"/> [Internal 1] (rEC1): The current configuration becomes identical to the backup configuration previously saved by [Saving config.] (SCS) = [Config 1] (Str1).<br/> [Internal 1] (rEC1) is only visible if the backup has been carried out. [Restore config.] (FCS) automatically switches to [No] (nO) as soon as this action has been performed.<br/> <input type="checkbox"/> [Factory Set.] (InI): The current configuration is replaced by the configuration selected by the [Macro configuration] (CFG) parameter (2). [Restore config.] (FCS) automatically switches to [No] (nO) as soon as this action has been performed.<br/> If the ATV31 remote display terminal option is connected to the drive (3), the following additional selection options appear, as long as the corresponding files in the remote display terminal's EEPROM memory have been loaded (0 to 4 files): [File 1] (FIL1), [File 2] (FIL2), [File 3] (FIL3), [File 4] (FIL4). They enable the current configuration to be replaced with one of the 4 configurations that may be loaded on the remote display terminal.<br/> [Restore config.] (FCS) automatically switches to [No] (nO) as soon as this action has been performed.<br/> <b>Note:</b> If <b>nAd</b> appears on the display briefly before the parameter switches to [No] (nO), this means that the configuration transfer is not possible and has not been performed (different drive ratings, for example). If <b>nEr</b> appears on the display briefly before the parameter switches to [No] (nO), this means that an invalid configuration transfer has occurred and that the factory settings will need to be restored using [Factory Set.] (InI).<br/> In both cases, check the configuration to be transferred before trying again. </div> |                  |                 |

- (1) [Saving config.] (SCS), [Macro configuration] (CFG), and [Restore config.] (FCS) can be accessed from several configuration menus, but they apply to all menus and parameters.
- (2) The following parameters are not modified by this function; they retain their configuration:
- [Standard mot. freq] (bFr), page 41
  - [HMI command] (LCC), page 61
  - [PIN code 1] (COd), (terminal access code), page 103
  - The parameters in the [COMMUNICATION] (COM-) menu
  - The parameters in the [MONITORING] (SUP-) menu
- (3) Options [File 1] (FIL1) to [File 4] (FIL4) continue to be displayed on the drive, even after the ATV31 remote terminal has been disconnected.

The jog dial (ENT) needs to be pressed and held down (for 2 s) to change the assignment for this parameter.

[INPUTS / OUTPUTS CFG] (I-O-) menu

The parameters can only be modified when the drive is stopped and no run command is present. On the optional ATV31 remote display terminal, this menu can be accessed with the switch in the position.

| Code | Description   | Adjustment range | Factory setting   |
|------|---|------------------|-------------------|

Fun -  
FLt -  
Cn -  
SuP -

The parameters can only be modified when the drive is stopped and no run command is present. On the optional remote display terminal, this menu can be accessed with the switch in the  position.

Control and reference channels

Run commands (forward, reverse, etc.) and references can be sent using the following channels:

| Command CMD                                | Reference rFr                                 |
|--|---|
| tEr: Terminals (LI.)                       | Alx: Terminals                                |
| LCC: Remote display terminal (RJ45 socket) | LCC: ATV312 keypad or remote display terminal |
| LOC: Control via the keypad                | AlV1: Jog dial                                |
| Mdb: Modbus (RJ45 socket)                  | Mdb: Modbus (RJ45 socket)                     |
| nEt: Network                               | nEt: Network                                  |

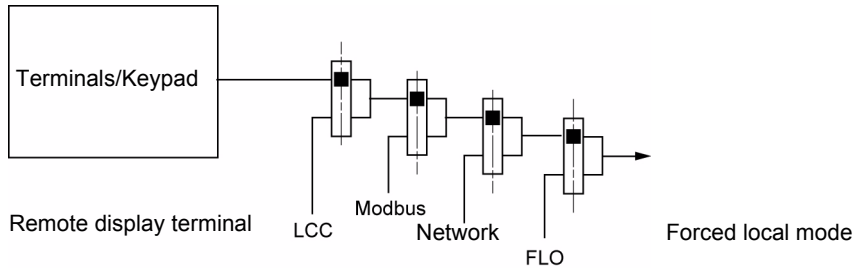

The [ACCESS LEVEL] (LAC) parameter in the [COMMAND] (CtL-) menu, page 58, can be used to select priority modes for the control and reference channels. It has 3 function levels:

- [ACCESS LEVEL] (LAC) = Basic functions. The channels are managed in order of priority.  
[Level 1] (L1):
- [ACCESS LEVEL] (LAC) = Provides the option of additional functions compared with [Level 1] (L1):  
[Level 2] (L2):
  - +/- speed (motorized jog dial)
  - Brake control
  - 2nd current limit switching
  - Motor switching
  - Management of limit switches
- [ACCESS LEVEL] (LAC) = Same functions as with [Level 2] (L2). Management of the control and reference channels is configurable.  
[Level 3] (L3):

## [COMMAND] (CtL-) menu

These channels can be combined in order of priority if [ACCESS LEVEL] (LAC) = [Level 1] (L1) or [Level 2] (L2).

Highest priority to lowest priority: Forced local mode, Network, Modbus, Remote display terminal, Terminals/Keypad (from right to left in the diagram below)

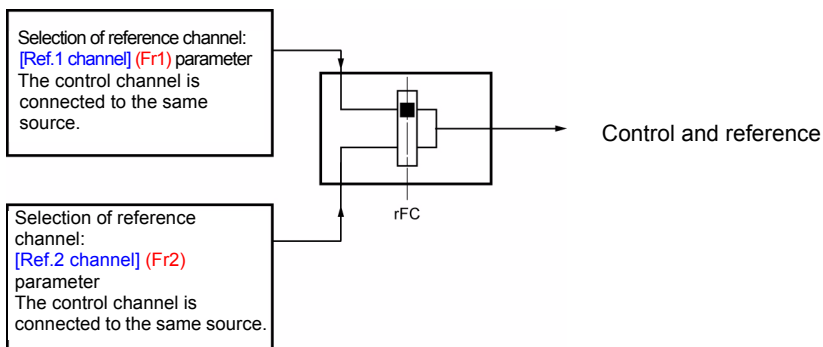

See the detailed block diagrams on pages 53 and 54.

- On ATV312 drives, in factory settings mode, control and reference are managed by the terminals.
- With a remote terminal display, if [HMI command] (LCC) = [Yes] (YES) ([COMMAND] (CtL-) menu), control and reference are managed by the remote terminal display (reference via [HMI Frequency ref.] (LFr) in the [SETTINGS] (SEt-) menu).

The channels can be combined by configuration if [ACCESS LEVEL] (LAC) = [Level 3] (L3).

Combined control and reference ([Profile] (CHCF) parameter = [Not separ.] (SIM)):

The [Ref. 2 switching] (rFC) parameter can be used to select the [Ref.1 channel] (Fr1) or [Ref.2 channel] (Fr2) channel, or to configure a logic input or a control word bit for remote switching of either one.

See the detailed block diagrams on pages 55 and 57.

# [COMMAND] (CtL-) menu

REF -  
SET -  
drC -  
i-D -  
CtL -  
Fun -  
FLt -  
Cn -  
SUP -

Separate control and reference ([Profile] (CHCF) parameter = [Separate] (SEP)):

## Reference

The [Ref. 2 switching] (rFC) parameter can be used to select the [Ref.1 channel] (Fr1) or [Ref.2 channel] (Fr2) channel, or to configure a logic input or a control word bit for remote switching of either one.

## Control

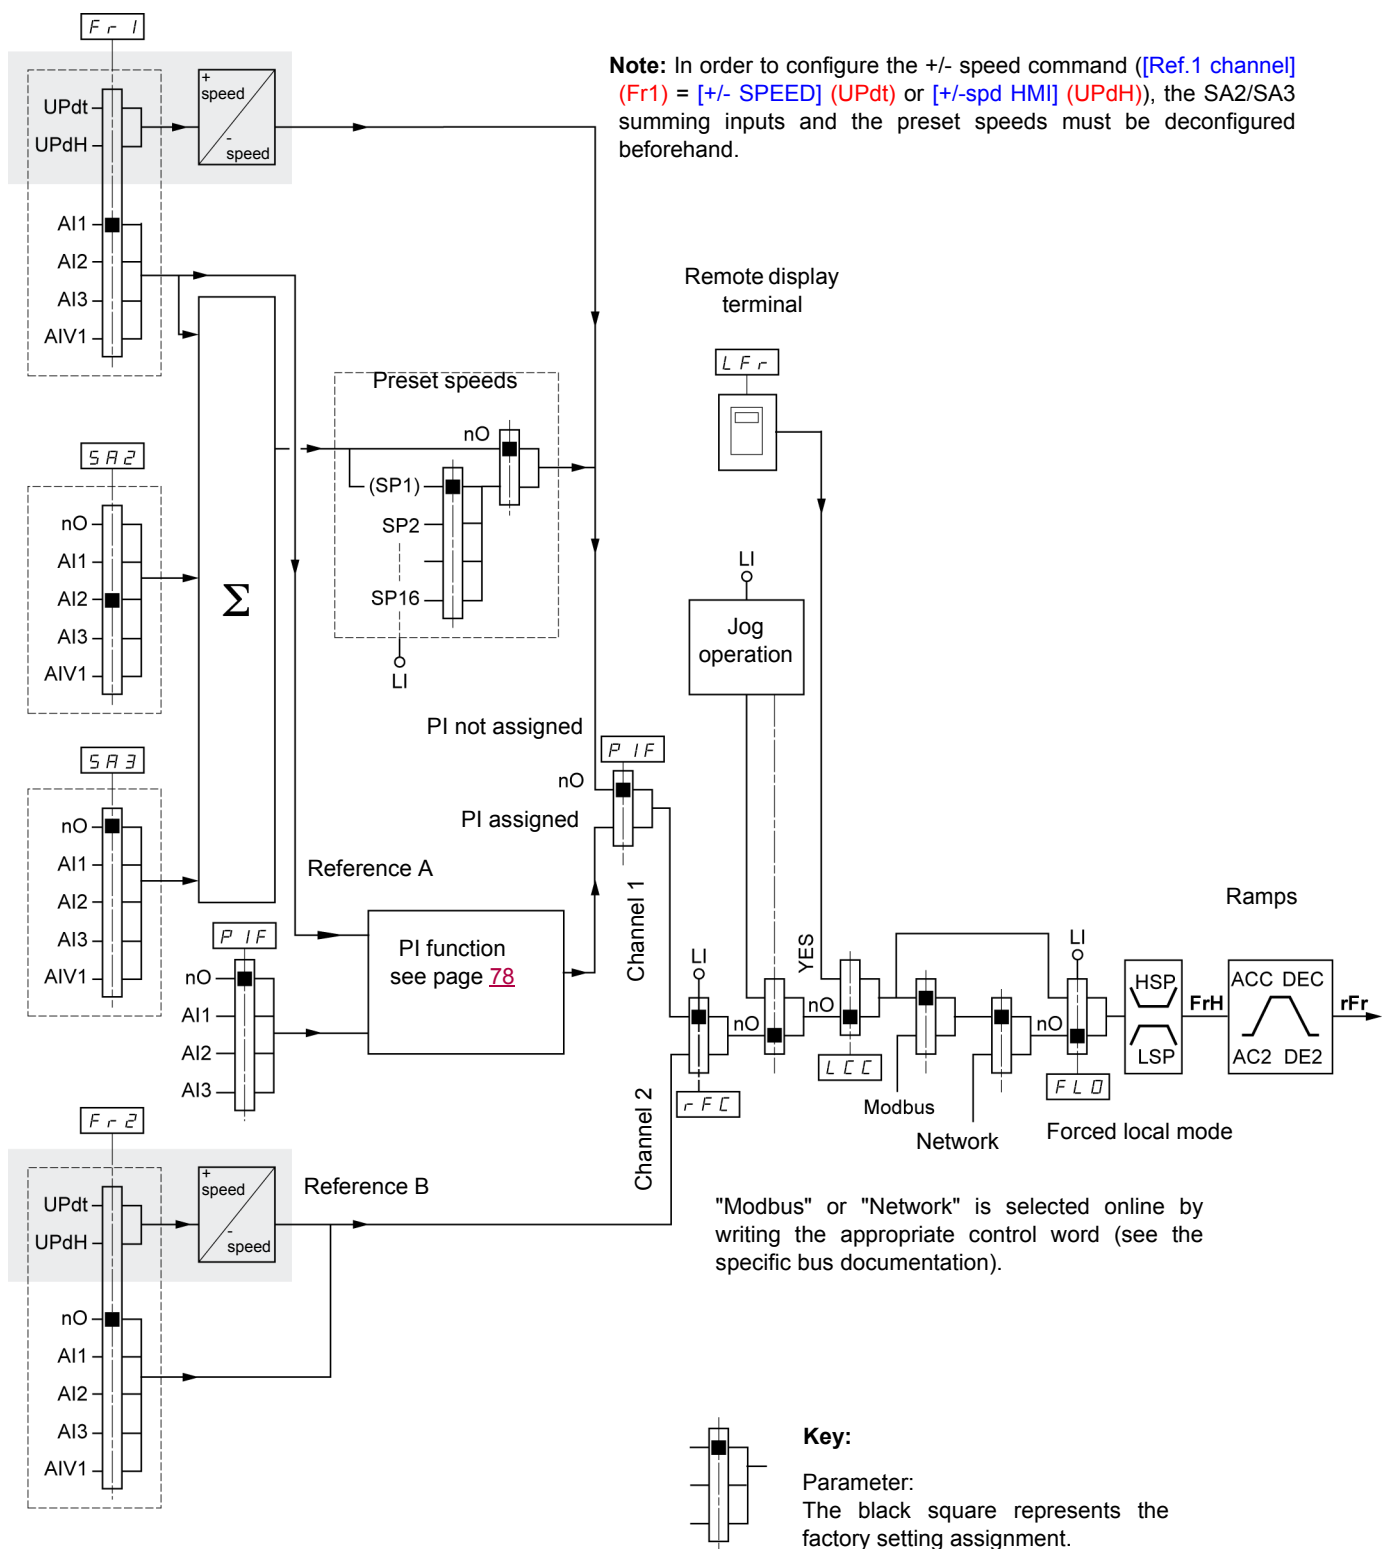

The [Cmd switching] (CCS) parameter, page 60, can be used to select the [Cmd channel 1] (Cd1) or [Cmd channel 2] (Cd2) channel, or to configure a logic input or a control bit for remote switching of either one.

See the detailed block diagrams on pages 55 and 56.

## [COMMAND] (CtL-) menu

Reference channel for [ACCESS LEVEL] (LAC) = [Level 1] (L1) or [Level 2] (L2)

Function can be accessed for  
 [ACCESS LEVEL] (LAC) = [Level 2] (L2)

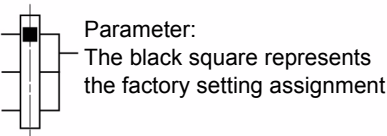

[COMMAND] (CtL-) menu

Control channel for [ACCESS LEVEL] (LAC) = [Level 1] (L1) or [Level 2] (L2)

The [Forced local assign.] (FLO) parameter, page 99, the [HMI command] (LCC) parameter, page 61, and the selection of the Modbus bus or network are common to the reference and control channels.  
Example: If [HMI command] (LCC) = [Yes] (YES), the command and reference are given by the remote display terminal.

Key:

Reference channel for [ACCESS LEVEL] (LAC) = [Level 3] (L3)

**Note:** In order to configure the +/- speed command ([Ref.1 channel] (Fr1) = [+/- SPEED] (UPdt) or [+/-spd HMI] (UPdH)), the SA2/SA3 summing inputs and the preset speeds must be deconfigured beforehand.

**Control channel for [ACCESS LEVEL] (LAC) = [Level 3] (L3)**

The [Ref.1 channel] (Fr1) parameter, page 58, the [Ref.2 channel] (Fr2) parameter, page 58, the [Ref. 2 switching] (rFC) parameter, page 59, the [Forced local assign.] (FLO) parameter, page 99, and the [Forced local Ref.] (FLOC) parameter, page 99, are common to reference and control. The control channel is therefore determined by the reference channel.

**Stop key priority**

**Forward Reverse Stop**

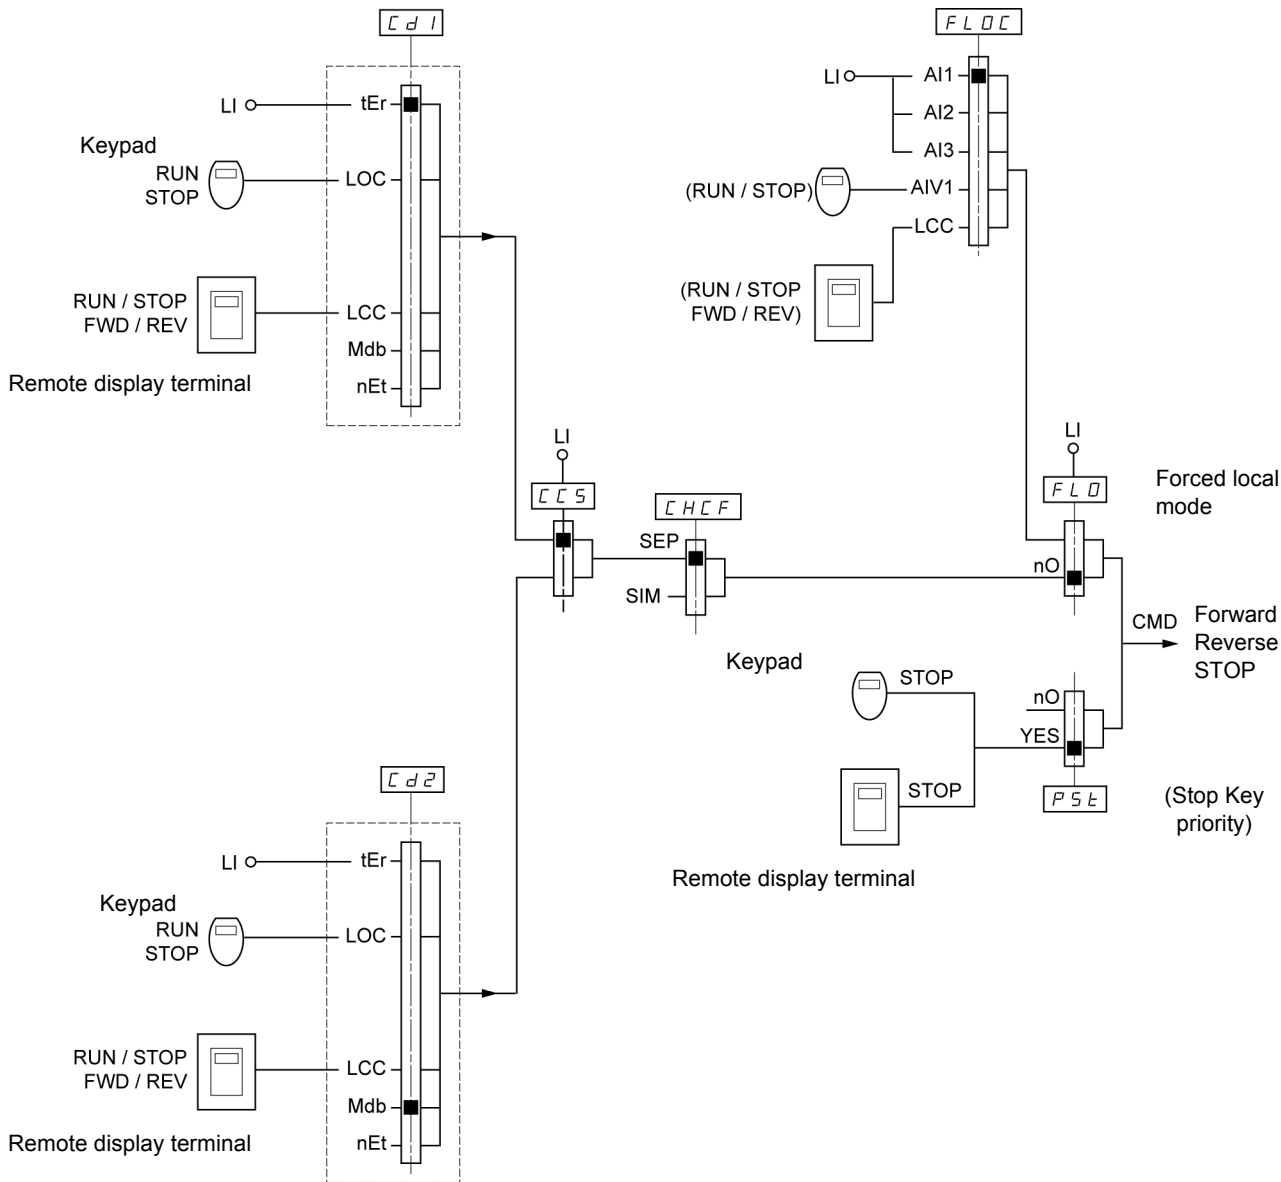

**Key:**  
Parameter:  
The black square represents the factory setting assignment.

[COMMAND] (CtL-) menu

Control channel for [ACCESS LEVEL] (LAC) = [Level 3] (L3)

Mixed mode (separate reference and control)

The [Forced local assign.] (FLO) parameter, page 99, and the [Forced local Ref.] (FLOC) parameter, page 99, are common to reference and control.  
Example: If the reference is in forced local mode via [AI1] (AI1) (analog input at the terminals), control in forced local mode is via LI (logic input at the terminals).

## [COMMAND] (CtL-) menu

**Note:** There may be an incompatibility between functions (see the incompatibility table, page 21). In this case, the first function configured will prevent the remainder being configured.

| Code  | Description  | Adjustment range | Factory setting |

### (1) NOTE:

- It is not possible to simultaneously assign **[+/- SPEED] (UPdt)** to **[Ref.1 channel] (Fr1)** or **[Ref.2 channel] (Fr2)**, and **[+/-spd HMI] (UPdH)** to **[Ref.1 channel] (Fr1)** or **[Ref.2 channel] (Fr2)**. Only one of the **[+/- SPEED] (UPdt)/[+/-spd HMI] (UPdH)** assignments is permitted on each reference channel.
- The +/- speed function in **[Ref.1 channel] (Fr1)** is incompatible with several functions (see page 21). It can only be configured if these functions are unassigned, in particular the summing inputs (set **[Summing ref. 2] (SA2)** to **[No] (nO)**, page 70) and the preset speeds (set **[2 preset speeds] (PS2)** and **[4 preset speeds] (PS4)** to **[No] (nO)**, page 72) which will have been assigned as part of the factory settings.
- In **[Ref.2 channel] (Fr2)**, the +/- speed function is compatible with the preset speeds, summing inputs, and the PI regulator.

The jog dial (ENT) needs to be pressed and held down (for 2 s) to change the assignment for this parameter.

The jog dial (ENT) needs to be pressed and held down (for 2 s) to change the assignment for this parameter.

(1) [Saving config.] (SCS), [Macro configuration] (CFG), and [Restore config.] (FCS) can be accessed from several configuration menus, but they apply to all menus and parameters.

[APPLICATION FUNCT.] (FUn-) menu

The parameters can only be modified when the drive is stopped and no run command is present.  
On the optional remote display terminal, this menu can be accessed with the switch in the position.

Some functions have numerous parameters. In order to clarify programming and avoid having to scroll through endless parameters, these functions have been grouped in submenus.  
Like menus, submenus are identified by a dash after their code: **PSS -** for example.

**Note:** There may be an incompatibility between functions (see the incompatibility table, page 21). In this case, the first function configured will prevent the remainder being configured.

| Code  | Name/Description  | Adjustment range | Factory setting |

| <b>tR4</b><br>★                | <input type="checkbox"/> <b>[End Dec round]</b><br>Parameter can be accessed if the [Ramp type] (rPt) = [Customized] (CUS), page 62.   | 0 to (100-tA3)                          | 10              |
| <b>lnr</b><br>0.01<br>0.1<br>1 | <input type="checkbox"/> <b>[Ramp increment]</b><br><input type="checkbox"/> [0.01] (0.01): Ramp can be set between 0.05 s and 327.6 s.<br><input type="checkbox"/> [0.1] (0.1): Ramp can be set between 0.1 s and 3,276 s.<br><input type="checkbox"/> [1] (1): Ramp can be set between 1 s and 32,760 s (1).<br>This parameter applies to the [Acceleration] (ACC), [Deceleration] (dEC), [Acceleration 2] (AC2), and [Deceleration 2] (dE2) parameters.<br><b>Note:</b> Changing the [Ramp increment] (lnr) parameter causes the settings for the [Acceleration] (ACC), [Deceleration] (dEC), [Acceleration 2] (AC2), and [Deceleration 2] (dE2) parameters to be modified as well. | 0.01 - 0.1 - 1                          | 0.1             |
| <b>ACC</b><br><b>dEC</b>       | <input type="checkbox"/> <b>[Acceleration]</b> (2)<br><input type="checkbox"/> <b>[Deceleration]</b><br>Defined to accelerate/decelerate between 0 and the nominal frequency [Rated motor freq.] (FrS) (parameter in the [MOTOR CONTROL] (drC-) menu).<br>Check that the value for [Deceleration] (dEC) is not too low in relation to the load to be stopped.  | In accordance with <b>lnr</b> , page 63 | 3 s<br>3 s      |

(1) When values higher than 9,999 are displayed on the drive or on the remote display terminal, a point is inserted after the thousands digit.

### Note:

This type of display can lead to confusion between values which have two digits after a decimal point and values higher than 9,999. Check the value of the [Ramp increment] (lnr) parameter.

Example:

- If [Ramp increment] (lnr) = 0.01, the value 15.65 corresponds to a setting of 15.65 s.
- If [Ramp increment] (lnr) = 1, the value 15.65 corresponds to a setting of 15,650 s.

(2) Parameter can also be accessed in the [SETTINGS] (SEt-) menu.

These parameters only appear if the corresponding function has been selected in another menu. When the parameters can also be accessed and set from within the configuration menu for the corresponding function, their description is detailed in these menus, on the pages indicated, to aid programming.

(1)Parameter can also be accessed in the [SETTINGS] (SEt-) menu.  
(2)In corresponds to the nominal drive current indicated in the Installation Manual and on the drive nameplate.

★ These parameters only appear if the corresponding function has been selected in another menu. When the parameters can also be accessed and set from within the configuration menu for the corresponding function, their description is detailed in these menus, on the pages indicated, to aid programming.

Summing inputs

**Note:**  
AI2 is a ± 10 V input which can be used for subtraction by summing a negative signal.

See the complete block diagrams on pages 53 and 55.

Preset speeds

2, 4, 8 or 16 speeds can be preset, requiring 1, 2, 3 or 4 logic inputs respectively.

The following assignment order must be observed: [2 preset speeds] (PS2), then [4 preset speeds] (PS4), then [8 preset speeds] (PS8), then [16 preset speeds] (PS16).

Combination table for preset speed inputs

| 16 speeds<br>LI (PS16) | 8 speeds<br>LI (PS8) | 4 speeds<br>LI (PS4) | 2 speeds<br>LI (PS2) | Speed reference |
|------------------------|----------------------|----------------------|----------------------|-----------------|
| 0                      | 0                    | 0                    | 0                    | Reference (1)   |

- (1)Parameter can also be accessed in the [SETTINGS] (SEt-) menu. This parameter will depend on how many speeds have been configured.
- (2)Reminder: The speed remains limited by the [High speed] (HSP) parameter, page 33.

These parameters only appear if the corresponding function has been selected in another menu. When the parameters can also be accessed and set from within the configuration menu for the corresponding function, their description is detailed in these menus, on the pages indicated, to aid programming.

+/- speed

Function can only be accessed if [ACCESS LEVEL] (LAC) = [Level 2] (L2) or [Level 3] (L3), page 58.  
Two types of operation are available.

- 1. Use of single action buttons:** Two logic inputs are required in addition to the direction(s) of operation.  
The input assigned to the "+ speed" command increases the speed, the input assigned to the "- speed" command decreases the speed.  
**Note:**  
If the "+ speed" and "- speed" commands are activated at the same time, "- speed" will be given priority.

- 2. Use of double action buttons:** Only one logic input assigned to "+ speed" is required.

+/- speed with double action buttons:

Description: 1 button pressed twice for each direction of rotation. Each action closes a contact.

|                | Released<br>(- speed) | 1st press<br>(speed maintained) | 2nd press<br>(+ speed) |
|----------------|-----------------------|---------------------------------|------------------------|
| Forward button | —                     | a                               | a and b                |
| Reverse button | —                     | c                               | c and d                |

Wiring example:

LI1: Forward  
LIx: Reverse  
LIy: + speed

This type of +/- speed is incompatible with 3-wire control.

Whichever type of operation is selected, the max. speed is set by the [High speed] (HSP) parameter, page 33.

**Note:**  
If the reference is switched via [Ref. 2 switching] (rFC), page 59, from one reference channel to any other reference channel with "+/- speed", the value of the [Output frequency] (rFr) reference (after ramp) is copied at the same time. This prevents the speed being incorrectly reset to zero when switching takes place.

## [APPLICATION FUNCT.] (FUn-) menu

### PI regulator

#### Block diagram

The function is activated by assigning an analog input to the PI feedback (measurement).

Reference B

Pages 53 and 55

#### PI feedback:

PI feedback must be assigned to one of these analog inputs, AI1, AI2, or AI3.

#### PI reference:

The PI reference can be assigned to the following parameters in order of priority:

- Preset references via logic inputs, [Preset ref. PID 2] ( $rP2$ ), [Preset ref. PID 3] ( $rP3$ ), and [Preset ref. PID 4] ( $rP4$ ), page 81
- Internal reference [Internal PID ref.] ( $rPI$ ), page 82
- Reference [Ref.1 channel] ( $Fr1$ ), page 58

Combination table for preset PI references

| LI (Pr4) | LI (Pr2) | Pr2 = nO | Reference      |
|----------|----------|----------|----------------|
| 0        | 0        |          | $rPI$ or $Fr1$ |
| 0        | 1        |          | $rP2$          |
| 1        | 0        |          | $rP3$          |
| 1        | 1        |          | $rP4$          |

Parameters can also be accessed in the [SETTINGS] (SE-) menu:

- [Internal PID ref.] ( $rPI$ ), page 32
- [Preset ref. PID 2] ( $rP2$ ), [Preset ref. PID 3] ( $rP3$ ), and [Preset ref. PID 4] ( $rP4$ ), page 36
- [PID prop. gain] ( $rPG$ ), page 36
- [PID integral gain] ( $rIG$ ), page 36
- [PID fbk scale factor] ( $FbS$ ), page 36:

The [PID fbk scale factor] ( $FbS$ ) parameter can be used to scale the reference according to the variation range for PI feedback (sensor rating).

Example: Regulating pressure

PI reference (process) 0-5 bar (0-100%)

Rating of pressure sensor 0-10 bar

[PID fbk scale factor] ( $FbS$ ) = max. sensor scaling/max. process

[PID fbk scale factor] ( $FbS$ ) =  $10/5 = 2$

- [PID wake up thresh.] ( $rSL$ ), page 38:

Can be used to set the PI error threshold above which the PI regulator will be reactivated (wake-up) after a stop due to the max. time threshold being exceeded at low speed [Low speed time out] ( $tLS$ )

- [PID correct. reverse] ( $PIC$ ), page 36: If [PID correct. reverse] ( $PIC$ ) = [No] ( $nO$ ), the speed of the motor will increase when the error is positive (example: pressure control with a compressor). If [PID correct. reverse] ( $PIC$ ) = [Yes] ( $YES$ ), the speed of the motor will decrease when the error is positive (example: temperature control using a cooling fan).

"Manual - Automatic" operation with PI

This function combines the PI regulator and [Ref. 2 switching] (rFC) reference switching, page 59. The speed reference is given by [Ref.2 channel] (Fr2) or by the PI function, depending on the state of the logic input.

Setting up the PI regulator

1. Configuration in PI mode  
See the block diagram on page 78.
2. Perform a test in factory settings mode (in most cases, this will be sufficient).  
To optimize the drive, adjust [PID prop. gain.] (rPG) or [PID integral gain] (rIG) gradually and independently, and observe the effect on the PI feedback in relation to the reference.
3. If the factory settings are unstable or the reference is incorrect:  
Perform a test with a speed reference in manual mode (without PI regulator) and with the drive on load for the speed range of the system:
  - In steady state, the speed must be stable and comply with the reference, and the PI feedback signal must be stable.
  - In transient state, the speed must follow the ramp and stabilize quickly, and the PI feedback must follow the speed.If this is not the case, see the settings for the drive and/or sensor signal and cabling.

Switch to PI mode.  
Set [Dec ramp adapt.] (brA) to no (no auto-adaptation of the ramp).  
Set the [Acceleration] (ACC) and [Deceleration] (dEC) speed ramps to the minimum level permitted by the mechanics without triggering an [OVERBRAKING] (ObF) fault.  
Set the integral gain [PID integral gain] (rIG) to the minimum level.  
Observe the PI feedback and the reference.  
Switch the drive ON/OFF repeatedly or quickly vary the load or reference a number of times.  
Set the proportional gain [PID prop. gain] (rPG) in order to ascertain a good compromise between response time and stability in transient phases (slight overshoot and 1 to 2 oscillations before stabilizing).  
If the reference varies from the preset value in steady state, gradually increase the integral gain [PID integral gain] (rIG), reduce the proportional gain [PID prop. gain] (rPG) in the event of instability (pump applications), and find a compromise between response time and static precision (see diagram).  
Perform in-production tests over the whole reference range.

The oscillation frequency depends on the system dynamics.

| Parameter                 | Rise time | Overshoot | Stabilization time | Static error |
|---------------------------|-----------|-----------|--------------------|--------------|
| [PID prop. gain] (rPG)    | ↘         | ↗         | =                  | ↘            |
| [PID integral gain] (rIG) | ↘         | ↗         | ↗                  | ↘            |

## Brake control

Function can only be accessed if [ACCESS LEVEL] (LAC) = [Level 2] (L2) or [Level 3] (L3) (page 53).  
This function, which can be assigned to relay R2 or logic output AOC, enables the drive to manage an electromagnetic brake.

### Principle

Synchronize brake release with the build-up of torque during startup and brake engage at zero speed on stopping, to help prevent jolting.

### Brake sequence

Settings which can be accessed in the application functions [APPLICATION FUNCT.] (FUn-) menu:

- Brake release frequency [Brake release freq] (brL)
- Brake release current [Brake release I FW] (lbr)
- Brake release time delay [Brake Release time] (brt)
- Brake engage frequency [Brake engage freq] (bEn)
- Brake engage time delay [Brake engage time] (bEt)
- Brake release pulse [Brake impulse] (bIP)

#### Recommended brake control settings:

1. [Brake release freq] (brL), page 84:
  - Horizontal movement: Set to 0.
  - Vertical movement: Set to a frequency equal to the nominal motor slip in Hz.
2. [Brake release I FW] (lbr), page 84:
  - Horizontal movement: Set to 0.
  - Vertical movement: Preset the nominal current of the motor then adjust it in order to help prevent jolting on start-up, making sure that the maximum load is held when the brake is released.
3. [Brake Release time] (brt), page 84:
 

Adjust according to the type of brake. It is the time required for the mechanical brake to release.
4. [Brake engage freq] (bEn), page 84:
  - Horizontal movement: Set to 0.
  - Vertical movement: Set to a frequency equal to the nominal motor slip in Hz. **Note:** Max. [Brake engage freq] (bEn) = [Low speed] (LSP); this means an appropriate value must be set in advance for [Low speed] (LSP).
5. [Brake engage time] (bEt), page 85:
 

Adjust according to the type of brake. It is the time required for the mechanical brake to engage.
6. [Brake impulse] (bIP), page 85:
  - Horizontal movement: Set to [No] (nO).
  - Vertical movement: Set to [Yes] (YES) and check that the motor torque direction for "run forward" control corresponds to the upward direction of the load. If necessary, reverse two motor phases. This parameter generates motor torque in an upward direction regardless of the direction of operation commanded in order to maintain the load whilst the brake is releasing.

(1) Parameter can also be accessed in the [SETTINGS] (SEt-) menu.

(2) In corresponds to the nominal drive current indicated in the Installation Manual and on the drive nameplate.

★ These parameters only appear if the corresponding function has been selected in another menu. When the parameters can also be accessed and set from within the configuration menu for the corresponding function, their description is detailed in these menus, on the pages indicated, to aid programming.

## Management of limit switches

Function can only be accessed if [ACCESS LEVEL] (LAC) = [Level 2] (L2) or [Level 3] (L3), page 58.

This function can be used to manage the operation of one or two series limit switches (non-reversing or reversing).

- Assignment of one or two logic inputs (forward limit switch, reverse limit switch)
- Selection of the stop type (on ramp, fast or freewheel)
- Following a stop, the motor is permitted to restart in the opposite direction only.
- The stop is performed when the input is in state 0. The direction of operation is authorized in state 1.

### Restarting after stop caused by a limit switch

- Send a run command in the other direction (when control is via the terminals, if [2/3 wire control] (tCC) = [2 wire] (2C) and [2 wire type] (tCt) = [Transition] (trn), first remove all the run commands).

or

- Invert the reference sign, remove all the run commands then send a run command in the same direction as before the stop caused by a limit switch.

These parameters only appear if the corresponding function has been selected in another menu. When the parameters can also be accessed and set from within the configuration menu for the corresponding function, their description is detailed in these menus, on the pages indicated, to aid programming.

## [MONITORING] (SUP-) menu

The parameters can be accessed with the drive running or stopped.  
 On the optional remote display terminal, this menu can be accessed with the switch in any position.

Some functions have numerous parameters. In order to clarify programming and avoid having to scroll through endless parameters, these functions have been grouped in submenus.

Like menus, submenus are identified by a dash after their code: **LIR -** for example.

When the drive is running, the value displayed is that of one of the monitoring parameters. By default, the value displayed is the output frequency applied to the motor ([Output frequency] (rFr) parameter).

While the value of the new monitoring parameter required is being displayed, press and hold down the jog dial (ENT) again (for 2 seconds) to confirm the change of monitoring parameter and store it. From then on, it is the value of this parameter that will be displayed during operation (even after powering down).

"Unless the new choice is confirmed by pressing and holding down ENT again, the display will revert to the previous parameter after powering down.

**Note:** After the drive has been turned off or following a loss of line supply, the parameter displayed is the drive status ([Ready] (rdY), for example).

The selected parameter is displayed following a run command.

## [MONITORING] (SUP-) menu

| Code  | Description  | Variation range      |
|---|--|----------------------|
| <b>LFr</b><br>★                                       | <input type="checkbox"/> <b>[HMI Frequency ref.]</b><br>Frequency reference for control via built-in display terminal or remote display terminal.  | 0 to 500 Hz          |
| <b>rP r</b><br>★                                      | <input type="checkbox"/> <b>[Internal PID ref.]</b><br>Internal PID reference<br>Parameter is only visible if [PID feedback ass.] (PIF) is not set to [No] (nO), page 80.  | 0 to 100%            |

# Migration ATV31 - ATV312

The ATV312 is compatible with the ATV31.

To retrieve the configuration of the ATV31, simply transfer the configuration from the ATV31 to the ATV312. See below **Configuration transfer between an ATV31 and an ATV312**

## Dimensions

For all sizes, the ATV312 is 6 mm less deep than the ATV31●●●●●●A.

## Replacing an ATV31●●●●●●A with an ATV312

### Note: Position of the logic input switch

On the ATV31●●●●●●A, the logic input switch was set to "Sink" in the factory setting.

On the ATV312, it is set to "Source" in the factory setting.

Set the switch to match the setting on the product being replaced. For more information, see the "Control terminals" chapter in the Installation Manual.

### Note: Position of the IT jumper

There was no integrated EMC filter on the ATV31●●●●●●A. For details on how to deactivate the integrated EMC filter on the ATV312, see the "Operation with IT connection" chapter in the Installation Manual.

ATV312 used in LOCAL configuration (see page 27) uses the Jog Dial as a potentiometer and RUN button is activated. This is a similar way of working than ATV31●●●●●●A. When the drive is powered up for the first time, the two parameters shown below appear after [Standard mot. freq] (bFr). They need to be set as follows:

[Ref.1 channel] (Fr1), page 29, to [AI Virtual 1] (AIV1)

[2/3 wire control] (tCC), page 30, to [Local] (LOC)

The following parameters can be used subsequently to return to the other HMI version:

[Ref.1 channel] (Fr1) in the [COMMAND] (CtL-) menu

[2/3 wire control] (tCC) in the [INPUTS / OUTPUTS CFG] (I-O-) menu

### Factory settings

As well as the differences in terms of control by potentiometer, the following differences apply between the factory settings for the ATV31●●●●●●A and those of the ATV312:

| Parameter                  | ATV31●●●●●●A  | ATV312        |
|----------------------------|---|---------------|
| [2/3 wire control] (tCC)   | Local control LOC                                       | [2 wire] (2C) |
| [Ref.1 channel] (Fr1)      | Analog input AIP  | AI1           |
| [Cmd channel 1] (Cd1)      | Local control LOC                                       | tEr           |
| [Reverse assign.] (rrS)    | [No] (nO) (if [2/3 wire control] (tCC) = [Local] (LOC)) | LI2           |
| [Forced local Ref.] (FLOC) | AIP jog dial  | AIU1          |
| [Select ATV31 conf.] (ArE) | Parameter does not exist on the ATV31                   | [No] (nO)     |

## Configuration transfer between an ATV31 and an ATV312 (using the ATV31 remote terminal or a loader tool)

Compatible loader tools are :

- Multi-Loader V1.10 and higher,
- Simple-Loader V1.3 and higher,
- SoMove V1.1.11.1 and higher,
- SoMove Mobile V2.0 and higher,
- PC software.

**Note:** The transfer can't be done from an ATV31 to an ATV312 with a communication option board.

A new [Select ATV31 conf.] (ArE) parameter has been added to the [APPLICATION FUNCT.] (FUN-) menu.

It can be used to specify the ATV31 type (ATV31 or ATV31●●●●●●A) during transfers between an ATV31 and ATV312.

Values of the [Select ATV31 conf.] (ArE) parameter:

- [No] (nO), factory setting, transfer between two ATV312
- [ATV31...A] (31A), transfer from ATV31●●●●●●A to ATV312
- [ATV31 std] (31E), transfer from ATV31 to ATV312

To perform a configuration transfer, see the procedure on page 90.

# Diagnostics and troubleshooting

## Drive does not start, no code displayed

- If the display does not light up, check the power supply to the drive and check the wiring of inputs AI1 and AI2 and the connection to the RJ45 connector.
- The assignment of the "Fast stop" or "Freewheel stop" functions will prevent the drive from starting if the corresponding logic inputs are not powered up. The ATV312 then displays [\[Freewheel stop\] \(nSt\)](#) or [\[Fast stop\] \(FSt\)](#). This is normal since these functions are active at zero so that the drive will be stopped if there is a wire break.
- Check that the run command input(s) have been actuated in accordance with the chosen control mode (the [\[2/3 wire control\] \(tCC\)](#) parameter in the [\[INPUTS / OUTPUTS CFG\] \(I-O-\)](#) menu, page [47](#)).
- If an input is assigned to the limit switch function and this input is at zero, the drive can only be started up by sending a command for the opposite direction (see page [89](#)).
- If the reference channel (page [53](#)) or the control channel (page [54](#)) is assigned to a communication network, when the power supply is connected, the drive will display [\[Freewheel stop\] \(nSt\)](#) and remain in stop mode until the communication bus sends a command.
- If the LED on the DC bus is lit and nothing appears on the display, check that there is no short-circuit on the 10 V power supply.
- If the drive displays [\[Ready\] \(rdy\)](#) and refuses to start, check that there is no short-circuit on the 10 V power supply and check the wiring of inputs AI1 and AI2 and the connection to the RJ45 connector.
- In the factory setting, the "RUN" button is inactive. Set the [\[Ref.1 channel\] \(Fr1\)](#) parameter, page [29](#), and the [\[Cmd channel 1\] \(Cd1\)](#) parameter, page [59](#), to control the drive locally.

## Fault detection codes which require a power reset after the fault is cleared

The cause of the fault must be removed before resetting by cycling power to the drive.

[\[PRECHARGE FAULT\] \(CrF\)](#), [\[OVERSPEED\] \(SOF\)](#), [\[AUTO-TUNING FAULT\] \(tnF\)](#), and [\[BRAKE CONTROL FAULT\] \(bLF\)](#) can also be reset remotely using a logic input (the [\[Fault reset\] \(rSF\)](#) parameter in the [\[FAULT MANAGEMENT\] \(FLt-\)](#) menu, page [92](#)).

| Code                  | Name                                  | Probable cause  | Remedy  |

### Fault detection codes that can be reset with the automatic restart function after the cause has disappeared

See the [Automatic restart] (Atr) function, page 91.

These detected faults can also be reset by turning the drive off then on again or by means of a logic input (the [Fault reset] (rSF) parameter, page 92, in the [FAULT MANAGEMENT] (FLt-) menu, page 91).

| Code         | Name                  | Probable cause   | Remedy   |

# MultiModem® iCell

## Intelligent Cellular Modems

The MultiModem® iCell family of intelligent cellular modems offers a broad range of options including 2G and 3G models as well as a full line of GSM and CDMA models. All MultiModem iCell modems are fully certified and carrier approved so you can get to market extremely fast allowing customers to start obtaining the benefits of M2M. MultiTech products are designed specifically for M2M applications thus they are durable, stable, reliable, and easy to deploy. In addition, the MultiModem iCell includes Universal IP® stack which allows users to implement enhanced M2M functions such as persistent connectivity, event monitoring, and others.

### Features

- 3G and 2G models available
- GSM and CDMA models available
- Models with GPS tracking capability
- USB and Serial connectors
- GPIO connectivity
- Universal IP stack for enhanced M2M functionality
- FCC, PTCRB, Industry Canada, and R&TTE certified
- Carrier approved
- Two year warranty, upgradable to five years

### Benefits

- Quick deployments to shorten time to market
- Long and stable lifecycles
- Certified and carrier approved

| Network Certifications          | PTCRB   | Verizon, Sprint, Aeris                             |

\* Actual performance speeds may be affected by a variety of attributes such as cell tower distance, data loads, packet sizes, etc.

\*\*UL Listed @ 40° C, limited by power supply. UL Certification does not apply or extend to an ambient above 40° C and has not been evaluated by UL for ambient greater than 40° C. "UL has evaluated this device for use in ordinary locations only. Installation in a vehicle or other outdoor locations has not been evaluated by UL. UL Certification does not apply or extend to use in vehicles or outdoor applications or in ambient above 40° C."

## Specifications

### GPS Specifications

|                      |  |
|----------------------|--|
| Accuracy             | Position 2.5m CEP, Velocity 0.1 m/sec                            |
| Open Sky TTFF        | Hot start 1 second<br>Cold start 29 seconds<br>Reacquisition <1s |
| Sensitivity Tracking | -161 dBm   |
| Protocol             | NMEA-0183, V3.01, GGA, GLL, GSA, GSV, RMC, VTG                   |

### GPIO Functions

|       |  |
|-------|--|
| Pin 1 | Digital input, 24V tolerance   |
| Pin 2 | Digital input, 24V tolerance   |
| Pin 3 | Configurable as either Digital input (5V tolerant TTL/CMOS levels) or Digital output (3.3V High) or as an ADC input (0 to 3.3V rail) |
| Pin 4 | Configurable as either Digital input (5V tolerant TTL/CMOS levels) or Digital output (3.3V High) or as an ADC input (0 to 3.3V rail) |
| Pin 5 | ADC input (0 to 3.3V rail)   |
| Pin 6 | Ground and must be connected to the ground of the attached device  |

## Ordering Information

### GSM Products

| Product     | Description                      | Bundle Available | Region   |
|-------------|----------------------------------|------------------|----------|
| MTCMR-H5    | Intelligent HSPA+ Modem          | Yes*             | Regional |
| MTCMR-H5-GP | Intelligent HSPA+ Modem with GPS | No               | Regional |
| MTCMR-E1    | Intelligent EDGE Modem           | Yes*             | Global   |
| MTCMR-E1-GP | Intelligent EDGE Modem with GPS  | No               | Global   |
| MTCMR-G2    | Intelligent GPRS Modem           | Yes*             | Global   |
| MTCMR-G2-GP | Intelligent GPRS Modem with GPS  | No               | Global   |

\* Bundles include power supply, antenna, and cables and are noted as follows.

-NAM Includes US style power plug

-EU Includes Euro style power plug

-GB/IE Includes UK style power plug

### CDMA Products

| Product           | Description                            | Bundle Available | Region   |
|-------------------|--|------------------|----------|
| MTCMR-EV2-Nx**    | Intelligent EV-DO Rev A Modem          | Yes*             | USA      |
| MTCMR-EV2-GP-Nx** | Intelligent EV-DO Rev A Modem with GPS | No               | USA      |
| MTCMR-C2-Nx**     | Intelligent 1xRTT Modem                | Yes*             | Regional |
| MTCMR-C2-GP-Nx**  | Intelligent 1xRTT Modem with GPS       | No               | Regional |

\* Bundles include power supply, antenna, and cables and are noted as follows.

-NAM Includes US style power plug

\*\* Nx signifies the specific Carrier that the product is approved for

-N2 For Sprint Networks (USA)

-N3 For Verizon Wireless Networks (USA)

-N16 For Aeris Communications Networks (USA)

Use ordering codes for specific build options. Go to [www.multitech.com](http://www.multitech.com) for detailed product model numbers.

## Services & Warranty

MultiTech's comprehensive Support Services programs offer a full array of options to suit your specific needs. These services are aimed at protecting your investment, extending the life of your solution or product, and reducing total cost of ownership. Our seasoned technical experts, with an average tenure of more than 10 years, can walk you through smooth installations, troubleshoot issues and help you with configurations. Products include a 2-year warranty that can be extended up to 5 years via MultiTech's Extended Warranty program.

### Extended Warranty

To give you peace-of-mind and protect your investment, our Extended Warranty Service Plans ensure your MultiTech products are covered for 1, 2, or 3 years beyond the manufacturer's warranty.

### Installation Support

MultiTech's Installation Support Service delivers priority service with the ability to work one-on-one with an experienced MultiTech technical support engineer, to guide you through the installation process for our products.

### Technical Support Services

At MultiTech, we're committed to providing you personalized attention and quality service while providing you a quick response to your product support needs. We have several options of support for you to choose from.

For additional information on Support Services as well as other service offerings, please contact your MultiTech representative or visit [www.multitech.com/support.go](http://www.multitech.com/support.go).

# Two-4-One™ Power Transformers

## Chassis Mount

Split Bobbin Construction Providing Superior Isolation.

Signal's 241 transformers use a split bobbin construction that provides superior isolation and low capacitive coupling.

### General Specifications

- Power - 2.4 VA to 100 VA
- Dielectric Strength - 2500 Vrms Hipot
- Primaries - Single or dual primaries (115V or 115/230 V - 50/60 Hz)
- Secondary - Single center tapped secondary
- Terminals - Solder lug / quick connect type terminals
- Insulation - Class B (130° C) UL 1446 E66312

### Agency Certifications

- UL recognized to UL 506 / UL 5085-1, File # E63829
- CSA certified to C22.2 #66.1, File # 221070

| Part Number |               | Secondary RMS Rating | Part Number |               | Secondary RMS Rating |
|-------------|---------------|----------------------|-------------|---------------|----------------------|
| Single 115V | Dual 115/230V |                      | Single 115V | Dual 115/230V |                      |

# Two-4-One™ Power Transformers

## Chassis Mount

### Split Bobbin with High Isolation

**Note:** Agency certified 241 Series transformers with standard length and color lead wires are readily available. See website for 241-L product series.

# PROCONTROL *series 2<sup>plus</sup>*

## TYPE B Product Specification

The next generation **Type B** ProControl features a capacity of up to 51 industrially-hardened inputs and outputs in a small and easy-to-use package. The **Series 2<sup>plus</sup>** contains everything you need for the core of your control/monitoring system, including the ability to connect directly to 120V inputs, and to drive motor starters, solenoids and other devices directly from built-in relay outputs. The **Type B** includes expanded datalogging and reporting capability, a built-in power supply for your instruments and transducers, as well as pluggable connectors for all I/O. It's a truly capable SCADA system for your operation. Available with Ethernet, cellular data modem and analog phone modem communication options.

|                | Model B1   | Model B2  |
|----------------|--|---|
| <b>INPUTS</b>  |  |   |
| Discrete       | Twelve (12) protected discrete inputs. Support for 4 flowmeters or pulse accumulators with rates to 200Hz.                               | Fourteen (14) protected discrete inputs. Eight (8) optically isolated inputs. Support for 6 flowmeters or pulse accumulators with rates to 200Hz. |
| Analog         | Eight (8) 4-20ma inputs with built-in 24Vdc supply. Inputs are surge and short-circuit protected and may also be used as discrete inputs | Ten (10) 4-20ma inputs with built-in 24Vdc supply. Inputs are surge and short-circuit protected and may also be used as discrete inputs           |
| <b>OUTPUTS</b> |  |   |
| Discrete       | Fourteen (14) relay outputs rated @ 1A, 120V   | Fourteen (14) relay outputs rated @ 1A, 120V  |
| Analog         |  | Five (5) 4-20ma outputs. PID loop control.  |

|                        | Model B1  | Model B2   |
|------------------------|---|--|
| <b>DATALOGGING</b>     |   |  |
| Discrete               | 2,000 points standard. 30,000 points optional. All logging occurs on change of state.   | 30,000 points standard. All logging occurs on change of state.     |
| Analog                 | 16,000 points standard (2000 per channel). 40,000 points optional.  | 20,000 points standard (2000 per channel). 50,000 points optional. |
| Event                  | 2,000 points standard. 10,000 points optional.  | 2,000 points standard. 10,000 points optional.                     |
| Totalizer              | 50 points per channel   | 50 points per channel  |
| <b>COMMUNICATIONS</b>  |   |  |
| Ethernet, cellular IP: | ProView™ Software, real-time monitoring from any broadband connection. Alarm and Status Emails, text messaging on alarm   |  |
| Analog phone modem:    | ProView™ Software, real-time monitoring from any phone line. Alarm and Status fax reports, text/pager messages (email optional)   |  |
| ProControl Network:    | Optional, can be linked via RS-485 for distributed control or higher I/O counts   |  |
| <b>USER INTERFACE</b>  |   |  |
| Display                | Rugged LCD (Liquid Crystal Display) 2 x 20 character display  |  |
| Keypad                 | 2 x 6 membrane keypad.  |  |
| LEDs                   | LEDs: System Status, Communications Link, Networking  |  |
| <b>PROCESS CONTROL</b> |   |  |
| System                 | Up to 64 regular system processes total with 16 startup and 16 shutdown processes, specified by easy-to-understand Boolean (IF...THEN) logic                                      |  |
| Alarms                 | Generate shutdowns, emails, FAX reports and/or text messages.   |  |
| Loops                  | PID loop control (Type B2 only) with user control of setpoint, proportional, integral and derivative gains and max change per calculation. Also open loop proportional algorithm. |  |
| <b>POWER</b>           |   |  |
| System                 | 10VAC, 30VA, external transformer provided  |  |
| I/O Supply             | 24 VDC, 15V and 9V available for powering sensors/instruments.  |  |
| <b>ENVIRONMENTAL</b>   |   |  |
| Dimensions             | 13.5" long x 6" wide x 3.5" high.   |  |
| Weight                 | 6 lbs.  |  |
| Power Dissipation      | 25W max.  |  |
| Operating Temperature  | -20C to +50C  |  |
| Humidity               | 95% R.H. non-condensing   |  |

## SERIES 2<sup>plus</sup> USER MANUAL

Version 2.X

## **LIMITED WARRANTY**

EOS Research Ltd. (EOS) warrants its products to be free from defects in materials and workmanship for a period of one year from the date of purchase. Its obligation under this warranty is limited to repairing or replacing, at its sole option, any such defective products. This warranty includes parts and labor. This warranty does not apply to equipment which has been damaged by accident, negligence or misapplication or has been altered or modified in any way.

EXCEPT AS PROVIDED HEREIN, EOS RESEARCH LTD. MAKES NO WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. Some states do not permit limitation or exclusion of implied warranties, therefore the aforesaid limitation(s) or exclusion(s) may not apply to the purchaser.

This warranty gives you specific legal rights and you may also have other rights which vary from state to state.

### **IMPORTANT SAFETY PRECAUTIONS**

Any complex hardware or software may be difficult to document, explain or understand. It is important to consider the consequences or unexpected or abnormal behavior which may be caused by a defect or human failure to comprehend. In order to protect people and property from damage, a thorough safety analysis should always be performed. When the consequences of a failure are serious, it is essential to protect life and property against such a failure with redundant backup systems or safety devices. It is agreed between the purchaser and EOS Research Ltd. that protection against and the consequences of any such failure are entirely the purchaser's responsibility.

This device is not approved for use in life support or medical systems.

As installed, this product may be part of a system which is required to meet various electrical, fire, safety or other codes and regulations. Compliance with these codes is the purchaser's responsibility.

Specifications subject to change without notice.

## **APPENDIX A - Typical ProControl Wiring**

Please see the ProView manual for operation of the remote access software which is supplied with the ProControl Series **2<sup>plus</sup>**.

# 1.0 SYSTEM OVERVIEW

## 1.1 General

The *ProControl Series 2<sup>plus</sup>* is a small but powerful microprocessor based control/telemonitoring system. By combining a control panel and remote monitor in one unit, the Series 2<sup>plus</sup> can act as a central supervisory and data management tool for any stand-alone operation. The *ProControl Series 2<sup>plus</sup>* can perform multiple tasks:

- **Stand-Alone Control:** The *ProControl Series 2<sup>plus</sup>* is a sophisticated programmable logic controller that will efficiently supervise and control your operation. It can interface with up to 70 electrical devices (float switches, pressure transducers, pH transmitters, flow meters, pumps, blowers, etc.), and execute numerous control functions simultaneously. Automatic shutdown routines can be programmed in to protect your operation during alarm conditions. It is extremely versatile in terms of the control algorithms it can execute.
- **Remote Control and Monitoring:** The *ProControl Series 2<sup>plus</sup>* gives you a window into your operation from any remote location, using the easy-to-use Windows-based software supplied with the system. You communicate with the ProControl over a modem link, which allows you to view all of your system's operating conditions, while also providing the same access to control functions that you would have if you were at the site (e.g., turning pumps on and off, adjusting alarm setpoints, etc.). No other telemonitoring device gives you the ProControl's level of remote control capability.
- **Reporting:** The *ProControl Series 2<sup>plus</sup>* will keep you informed. It will send you periodic fax status reports of your project operations on a schedule specified by you, and will alert you immediately either by fax or by numeric or alpha-numeric pager if an alarm condition warrants attention. No longer do you have to assume what's happening at your remote operation.....the ProControl will tell you exactly.
- **Datalogging:** The *ProControl Series 2<sup>plus</sup>* is your information manager. It is a powerful datalogger that automatically records all operating conditions in its battery-backed memory. You can access your logged data remotely at any time, and download it to your office computer for further processing. The datalogging capability is an invaluable tool for reporting purposes, troubleshooting, and trend graphing.

One or more of these features can be used in your installation; they are standard in every ProControl unit.

## 1.2 Key Concepts

The following are the building blocks of any Series **2<sup>plus</sup>** monitoring and control system.

### ***Inputs and Outputs (I/O's)***

No system can be effective in the real world without communication and one of the principal ways the ProControl communicates is by responding to information collected by sensors and by issuing “commands” to other electronic or electrical devices. Sensor information constitutes an *Input* while a “command” to another device constitutes an *Output*. The Series **2<sup>plus</sup>** works with all of the more important types of I/O devices in general use. Appendix A demonstrates how a variety of I/O devices are connected to the ProControl.

### ***Digital Inputs***

These inputs are designed to detect the closure of switch contacts such as those found on float switches or overpressure sensors. They can respond to any normally open or normally closed dry contact. The Series **2<sup>plus</sup>** provides its own wetting (supply) voltage of 5 volts DC for each digital input circuit. The Series **2<sup>plus</sup>** can respond to changes in state as fast as 4 Hz or 3 Hz (cycles per second) depending on the model purchased. Digital inputs are “debounced” for 125 or 150 milliseconds, respectively. This means that a switch or other input that changes state (becomes open or closed) must stay in that state for 125 or 150 milliseconds before the Series **2<sup>plus</sup>** will respond to the change.

Eight high-speed digital inputs can also be used for traditional digital (pulse-output) flow meters. These inputs can detect signal changes at up to a 200/500 Hz rate. All high-speed digital inputs are “debounced” for 1250/500 microseconds. The faster rate applies only to those systems containing the 18.432 MHz processor.

### ***Analog Inputs***

These inputs are compatible with sensors which send out a 4 - 20 milliamp (mA) signal. Most analog sensors are available with this type of signal, examples being pressure transducers, pH transmitters, and many flow meters. These inputs allow the operator to read the actual “value” of a parameter, such as pressure, instead of an on/off signal.

### ***Digital Outputs***

Digital outputs turn things like pumps, solenoid valves, and alarm lights on and off. The Series **2<sup>plus</sup>** digital outputs are relay outputs designed to switch small loads directly, such as motor starters, lamps, and solenoid valves.

|                           |   |
|---------------------------|---|
| <b>Analog Outputs</b>     | <p>Analog outputs are typically used in process control schemes where a controlled piece of equipment can accept a signal which is variable over a range. This output is expressed as a percentage (0 - 100%) and is used to control pump speeds, chemical dosing rates, etc., instead of conventional on/off operation. The equipment that the ProControl sends the analog output to must accept a 4 - 20 mA signal. Often, an analog output is used in conjunction with an analog input such as a pH transmitter to form a control scheme known as <i>feedback control</i>. In essence, the input and output will work together to maintain a user set input level. This concept is described further in the next section under <i>Analog Output Processes</i>.</p> |
| <b>Tagnames</b>           | <p>Each input and output is given a descriptive <i>Tagname</i> by the user that uniquely identifies it to the system operator. For instance, a digital input could be called "TANKHI", an analog input could be called "AIRFLO" and a digital output could be called "PUMP_1". This tagname is used by the local LCD display, the FAX report and by the ProView software. The analog inputs are also given a <i>Units Tagname</i> which identifies the unit of measure associated with the input sensor. Each tagname can be up to six characters long and each units tagname can be up to three characters long ("PSI", for instance). The tagnames can include the uppercase letters A-Z, the numbers 0-9, a blank space, and the underscore (_) character.</p>     |
| <b>1.3 Control Basics</b> | <p>The status of all inputs or outputs can easily be monitored both locally and remotely. What gives the Series <b>2<sup>plus</sup></b> its real power, however, is the ability to automatically initiate actions based on the status of the inputs and your pre-programmed instructions (this is often called <i>Process Control</i>). These actions can include switching certain outputs, faxing back a report, sending an alphanumeric or numeric page, shutting down the entire system or sounding the local alarm. Process control functions are programmed into your ProControl by EOS Research or one of our technology partners according to your specifications.</p>  |

**Active State**

Central to the use of control on the Series 2<sup>plus</sup> is the concept of *Active State*. Each input on the ProControl receives certain signals from a sensor which constitute “normal” operation and other signals which constitute an exception to normal operation.

A digital input can monitor only two states, ON or OFF (alternatively, CLOSED or OPEN). The *Active State* would be the state in which the controller would respond to the digital input, and perform certain actions or generate an alarm. For example, if a high level float switch in a tank is tripped (turned ON) by rising fluid level, we can say that its *Active State* correlates to a situation in which the fluid level is high. The active state of the float switch could cause the Series 2<sup>plus</sup> to trigger an alarm, turn off a pump, or initiate some other action. The Series 2<sup>plus</sup> can be set up so that either ON or OFF is the active state.

An analog input sensor can take on many states (or values) between the minimum and maximum of its measurement range. The ProControl operator, however, can set two threshold values which divide the total input span into two functional regions. These threshold values are more commonly called the *Low Alarm Limit* and the *High Alarm Limit*, although on the Series 2<sup>plus</sup> these thresholds are somewhat more flexible in use than those names imply. An analog input which has transcended either its Low Alarm Limit or High Alarm Limit is said to be in its active state.

For instance, consider an analog input sensor which measures pressure from 0 to 10 PSI. The system operator could set the low limit to 4 PSI and the high limit to 6 PSI. In this case the *Active State* would usually be considered as the input state greater than 6 PSI or less than 4 PSI. This interpretation is called *Endpoint Active State* (EAS) on the Series 2<sup>plus</sup> because the endpoints of the range are the areas which need to trigger action or generate alarms. The opposite interpretation is also possible and is called *Window Active State* (WAS). Any input values between 4 PSI and 6 PSI would trigger action or generate alarms.

**Figure 1. Active State**

If the ProControl has *Alarms Set*, when any input enters its active state, a local beeper will sound on the ProControl. The word *Alarm* here applies only to the sounding of a local beeper and is not associated with any process control. The active state condition is indicated on the LCD display and can be acknowledged by the operator. The beeper is silenced when it has been acknowledged or after 30 seconds have elapsed. The beeper only operates when the system is operating in Manual mode.

|                                   |  |
|-----------------------------------|--|
| <b><i>Startup Sequence</i></b>    | <p>The <i>Startup Sequence</i> is a series of control algorithms or steps which run in succession and which are designed to place the system in its normal operating mode. It can be as simple as turning all the outputs on simultaneously, or as complex as a multi-stage delay with many conditions. Up to 8 or 16 individual startup steps can be declared depending on the model of the controller. The ProControl can be configured to automatically run this sequence when the unit is powered up.</p>  |
| <b><i>Process Tasks</i></b>       | <p>A <i>Process Task</i> is an ongoing control algorithm which runs continuously. Think of each process task as an IF-THEN statement, in which an action is initiated if a certain condition or combination of conditions exists. Some examples are:</p> <ul style="list-style-type: none"> <li>• IF Tank Level Sensor 2 is on, THEN turn Pump 2 off</li> <li>• IF Air Flow Rate &lt; 10 cfm AND Reactor Temperature &gt; 250<sup>0</sup>, THEN open Bleed Valve 2</li> </ul> <p>Up to 16 or 64 separate process tasks can be run simultaneously depending on the model of the controller. Process tasks can trigger FAX reports, pager alerts, and system shutdowns.</p>  |
| <b><i>Shutdown Sequence</i></b>   | <p>The <i>Shutdown Sequence</i> is a series of control steps which run in succession and which are designed to shut your system down in a manner which is best for the equipment or treatment processes involved. The shutdown sequence can be activated manually or automatically due to an alarm condition. Here is a typical shutdown sequence:</p> <ul style="list-style-type: none"> <li>• Turn off Well Pumps 1 and 2</li> <li>• Wait 5 minutes, then turn off Stripper Blower</li> <li>• Open Bleed Valve 2</li> <li>• When Oxidizer Temperature &lt; 150<sup>0</sup>, turn off SVE Blower</li> </ul>   |
| <b><i>Automatic Operation</i></b> | <p>The use of the startup sequence, process tasks, and the shutdown sequence constitutes <i>Automatic Operation</i> of your system with the ProControl Series <b>2<sup>plus</sup></b> (otherwise known as <i>Auto Mode</i>). The Series <b>2<sup>plus</sup></b> will be placed into auto mode (automatically) when your system has been started up using the programmed startup sequence. If one condition of the programmed startup sequence is not met during the startup process, your system will be completely shut down by the ProControl as a safety measure. Once the startup sequence has been successfully completed, the ProControl begins running the process tasks continuously. <b>PROCESS TASKS WILL RUN ONLY WHEN IN AUTO MODE.</b> Please note that the audible beeper will <u>not</u> sound even if the ProControl has <i>Alarms Set</i> when it is in Auto Mode, since the process tasks will control these situations as the user has specified.</p> |

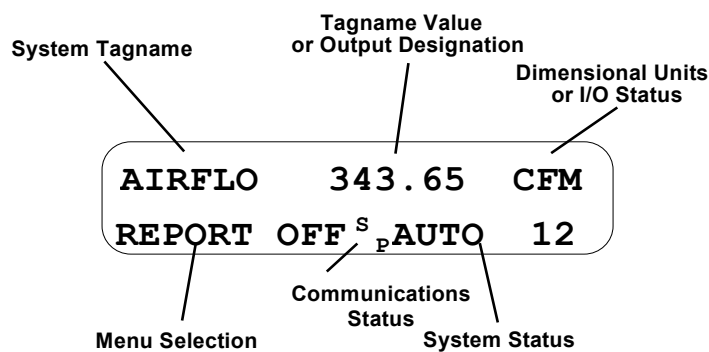

|                                |   |
|--------------------------------|---|
| <b>Manual Operation</b>        | You can override the Series 2 <sup>plus</sup> programmed control functions by operating in <i>Manual Mode</i> . In manual mode, your process will respond only to operator input from the keypad of the ProControl, or to commands issued from the ProView software. <b>PLEASE NOTE THAT PROCESS TASKS AND THEIR ERROR-CHECKING MECHANISMS DO NOT RUN DURING MANUAL MODE!</b> Manual mode is useful when you wish to troubleshoot your system, but none of the system safeguards built into auto mode are available. You can place your operation into auto mode any time by issuing the command from the keypad.   |
| <b>Analog Output Processes</b> | In some cases, you may want to use an analog output to control equipment that maintains an analog input at a certain constant level. For example, you may wish to automatically maintain a pH of 8.5 in a reaction tank by varying the dosing rate of a chemical feed pump. The pH you wish to maintain (8.5) is called the <i>SetPoint</i> of the analog output process. An analog input to the ProControl (in this case, a pH transmitter) is said to provide <i>feedback</i> to the unit, and combined with an analog output, constitute <i>feedback control</i> .   |
| <b>PID Loops</b>               | A reliable type of feedback control can be obtained through a <i>PID Loop</i> . PID stands for <i>Proportional-Integral-Derivative</i> , and is a commonly-used process control technique. We'll skip the details of the mathematics involved, but suffice it to say that a PID loop is the favored control technique for most analog output processes. With only a <i>Proportional</i> term applied in the equation, the analog output is controlled based on an error signal generated from the difference between the SetPoint and the actual analog input. The PID loop can also improve its performance as it continues to run if an <i>Integral</i> term is used and can respond to quick changes in the controlling analog input if a <i>Derivative</i> term is used. EOS Research will configure your PID loops for you and can provide further information if necessary. |
| <b>Proportional Outputs</b>    | In some cases, it may be desirable to base an analog output signal on an analog input value. In this situation, no specific SetPoint is used because there is a direct relationship between the output and input values. For example, if you wanted to base the output of a metering pump on some flow rate, you might use a proportional output to relate the amount of chemical metered to the flow rate.   |

## 2.0 ON-SITE OPERATION

### 2.1 LCD Display

If your unit did not come with an LCD display, the following sections *do not* apply.

The 2 line x 20 character LCD display is used to display and control system operations. The display is divided into separate areas or fields, as outlined below.

*Figure 2. Display Fields*

|   |   |
|---|---|
| <b><i>System Tagname</i></b>                  | This six-character field is used to identify the I/O point displayed. Descriptive names such as WELL1 or BLOWER are used.   |
| <b><i>Tagname Value</i></b>                   | For analog inputs, this field displays the value of the input, the high alarm limit, or the low alarm limit. For digital outputs, OUTPUT is displayed. For digital inputs, this field is unused. For analog outputs, this field displays the output percentage, the output level, or the associated input setpoint.   |
| <b><i>Dimensional Units or I/O Status</i></b> | For analog inputs, this three-character field displays the dimensional units associated with the input sensor, such as GPM or PSI. For digital inputs and outputs, this field displays either ON or OFF. For analog outputs, this field abbreviates percent with PCT. In the case of digital outputs, if the particular output displayed has been designated a lamp output ( <i>see ProView manual</i> ), and a lamp test is currently running, an asterisk (*) will appear before ON or OFF to indicate the lamp is illuminated despite the indicated output status (the output will return to this indicated status once the lamp test has been completed). |
| <b><i>Menu Selection</i></b>                  | This field displays the current menu selection.   |

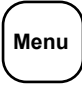

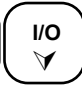

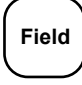

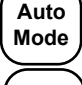

|                                     |   |
|-------------------------------------|---|
| <b><i>Communications Status</i></b> | This field displays one of five different descriptors which indicate any of several special functions of the ProControl. If no communications action is being taken, ">" will appear. Communications messages include: <b>SP</b> (Sending Page) - indicates that the unit is attempting to send either an alphanumeric or numeric page; <b>EF</b> (Encoding Fax) - indicates that the unit is presently encoding a facsimile report as a result of a request by either the operator or the unit itself; <b>SF</b> (Sending Fax) - indicates that the unit is attempting to send a fax report; and <b>DC</b> (Data Communications) - indicates that the unit is presently interfaced with ProView. |
| <b><i>System Status</i></b>         | This area displays the current system status: AUTO, MANUAL, START, or SHUTD and an associated process task number indicating the last successfully completed Auto process, current Startup process, or current Shutdown process.  |

## 2.2 Keypad

The Series 2<sup>plus</sup> keypad contains 12 buttons which are used along with the LCD Display to control the operations of the system.

*Figure 3. Series 2<sup>plus</sup> Keypad*

|   |  |
|---|--|
|    | This key is used to scroll through a series of options which are displayed on the LCD screen, and which allow the user to configure various aspects of system behavior.                      |
|       | These keys are used to display information about particular I/O points on the LCD Screen. The keys allow the user to scroll through all of the system I/O points either forward or backward. |
|   | The Acknowledge key is used to silence the audible beeper or to acknowledge a memo sent from a remote ProView user.  |
|    | The Set Hi Lo key allows the user to change the high and low alarm limits for analog inputs or to toggle the display in the I/O Summary.   |
|    | The Emergency Shutdown key is used to turn off all outputs and return the system to manual mode. The programmed shutdown sequence is <u>not</u> executed using this key.                     |
|    | The Field key is used to select a character position to be edited. It is used in conjunction with any direct alphanumeric entry.   |
|   | These keys are used to toggle system variables from one state to the next or to scroll through possible character entries when used in conjunction with the Field key.                       |
|    | This key is used to place the system in manual mode.   |
|    | This key is used to place the system in auto mode.   |
|    | The Enter key is used to initiate certain actions selected by other keys or to confirm alphanumeric editing done using other keys.   |

## 2.3 Password

When the system is first turned on the password screen is displayed and the user is prompted to enter the password to gain access to the system. "EOS" is the default password. The password on the Series 2<sup>plus</sup> was designed as a *low-level* security feature. It is not sufficient in and of itself to withstand a determined effort at system entry. The ProControl unit can be configured to bypass the password screen when the unit is powered up.

CUSTOMER ID TAGNAME  
ENTER PASSWORD: BAA

Use the Up and Down keys to change the character displayed above the cursor.

CUSTOMER ID TAGNAME  
ENTER PASSWORD: BAA

The Field key is used to move the cursor to the next character to be edited.

CUSTOMER ID TAGNAME  
ENTER PASSWORD: EOS

The enter key submits the password for approval.

If the password was entered correctly, the following screen will be displayed for about a second before the operations screen is displayed:

Password Accepted  
VER 2.XXX : 1

ROM Version #

User Setup Version #

Otherwise, the following message will be displayed for a second and the user will be returned to the password menu:

Incorrect Password

## 2.4 Operations Screen

After the password has been entered correctly, the operations screen is displayed. The operations screen allows the user to set system parameters and to review the status of all system inputs and outputs.

WELL1 OFF  
ALARMS SET >MANUAL

**2.5 I/O Keys**

Pressing the I/O Up or I/O Down keys will scroll through the operational I/O points in the system. Data relevant to a particular I/O point will be displayed to right of the point's Tagname.

**WELL2** **ON**  
ALARMS SET >MANUAL

Forward scroll through I/O points

**WELL3** **OFF**  
ALARMS SET >MANUAL

Forward scroll through I/O points

**WELL2** **ON**  
ALARMS SET >MANUAL

Backward scroll through I/O points

**2.6 Digital Input Menu**

A digital input displayed in the operations screen will be displayed as shown. When the input is in its Active State "ON" will be displayed in the Input Status area. Otherwise, "OFF" will be displayed.

**2.7 Digital Output Menu**

A digital output displayed in the operations screen will appear as shown. When the output has been turned on, "ON" will be displayed in the Output Status area. Otherwise, "OFF" will be displayed. The cursor is displayed under the first character in the status field to indicate that it can be changed. The Lamp Status character (\*) will be shown for a lamp output if a *lamp test* is running regardless of the output's true state.

**PUMP1** **OUTPUT** **ON**  
ALARMS SET >MANUAL

Pressing the Up or Down key will toggle the digital output state and turn the corresponding relay OFF or ON.

**PUMP1** **OUTPUT** **ON**  
**ALARMS** SET >MANUAL

Pressing the Field key will move the cursor to the Menu selection field.

## 2.8 Analog Input Menu

|           | Analog Tagname     | Analog Value | Units |
|-----------|--------------------|--------------|-------|
|           | H2OFLO             | 54.6         | GPM   |
|           | ALARMS SET >MANUAL |              |       |
| Set Hi Lo | H2OFLO             | 20.0         | GPM   |
|           | LOW ALARM >MANUAL  |              |       |
| Set Hi Lo | H2OFLO             | 80.0         | GPM   |
|           | HIGH ALARM >MANUAL |              |       |
| Set Hi Lo | H2OFLO             | 120817       | GAL   |
|           | TOTAL FLOW >MANUAL |              |       |
| Up Down   | H2OFLO             | 30.0         | GPM   |
|           | LOW ALARM >MANUAL  |              |       |
| Field     | H2OFLO             | 30.0         | GPM   |
|           | LOW ALARM >MANUAL  |              |       |
| Enter     | H2OFLO             | 30.0         | GPM   |
|           | LOW ALARM >MANUAL  |              |       |

An analog input displayed in the operations screen will be displayed as shown to the left. The value of the analog input will be shown along with the dimensional units. In the case of a pulse accumulator (totalizer only), you will see only TOT where units is normally displayed.

Use the Set Hi Lo key to set the low alarm limit.

Press the Set Hi Lo key again to set the high alarm limit.

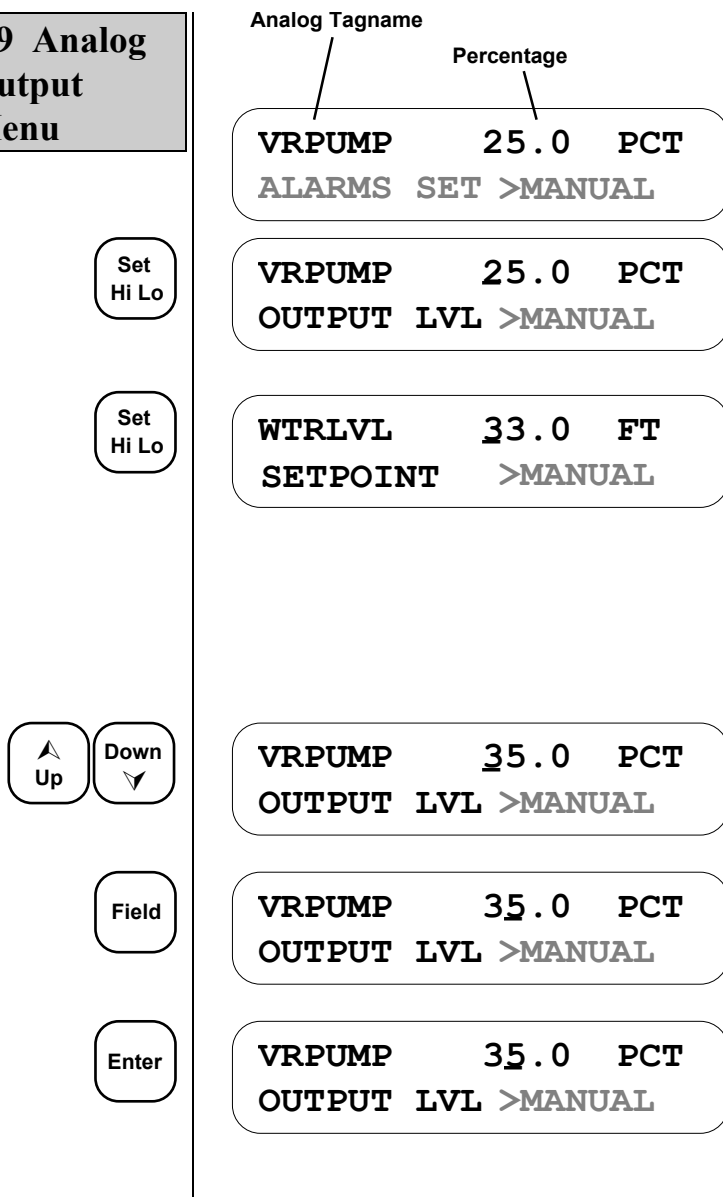

Press the Set Hi Lo key again to see the total flow on a flow type input, and once more to return.

The Up and Down keys are used to change the value of the current character, as denoted by the cursor.

The Field key is used to move to the next character to be edited.

To save the low alarm limit changes, press the enter key.

## 2.9 Analog Output Menu

An analog output displayed in the operations screen will be displayed as shown to the left. The percentage of full scale output will be displayed as well.

The Set Hi Lo key can be used to set the output percentage.

Press the Set Hi Lo key again to declare the SetPoint of an associated analog input. The SetPoint is used only if a PID control loop is in use as an analog output process.

Pressing Set Hi Lo again returns to the original menu.

The Up and Down keys are used to change the value of the current character, as denoted by the cursor.

The Field key is used to move to the next character to be edited.

To save the output level changes, press the enter key.

## 2.10 Menu Key

When pressed, the Menu key will scroll through a series of items which allow the user to configure various aspects of system behavior. A description of these items appear in a 10 character field at the bottom left of the display. Either the Up and Down keys or the Enter key is used to change the item.

**ALARMS** Use the Up and Down keys to enable or disable Alarms.

**REPORT** Use the Up and Down keys to enable or disable the unit's reporting capabilities (fax or page).

**FAX NOW** Use the Enter key to send a FAX report immediately.

**STARTUP** Use the Enter key to run the Startup Sequence.

**SHUTDOWN** Use the Enter key to run the Shutdown Sequence.

Menu

TAGNAM DIM  
SHUTDOWN >MANUAL

Enter

**LAST SHUTDOWN** This display item shows what input or output caused the last shutdown.

Menu

TAGNAM DIM  
SDN TAGNAM >MANUAL

**LOG OFF** Use the Enter key to Log Off the system and return to the password menu.

Menu

TAGNAM DIM  
LOGOFF >MANUAL

Enter

**LAST MEMO** Use the Enter key to see the last memo sent from the remote ProView user. Up and Down are used to scroll through the message, and Ack is used to return to the ProControl menus. If you hit any other key you will see an informative message telling you which keys are valid. The message will be displayed for 3 seconds if no keys are pressed, but can be acknowledged before the 3-second period by pressing either the Ack or Enter keys.

Menu

TAGNAM DIM  
LAST MEMO >MANUAL

Enter

HEY BULLWINKLE,  
REMEMBER TO SHUT THE

Down  
▼

PUSH <ACK> TO RETURN

Field

UP & DOWN TO SCROLL  
OR <ACK>NOWLEDGE

Ack

LIGHTS OFF!  
PUSH <ACK> TO RETURN

Ack

TAGNAM DIM  
LAST MEMO >MANUAL

Use the Enter key to enter the I/O summary. The analog input values 0-10 represent a percentage of full scale (i.e. 0  $\cong$  4 mA, 5  $\cong$  12 mA). Set HiLo is used to toggle between input/output summaries. An underscore represents an open input or an unswitched output. A block indicates a closed input or a switched output. An x or X is displayed when an output is not enabled and is unswitched or switched, respectively. An asterisk (\*) will be displayed if an output is declared as a lamp and a lamp test is currently being performed. The Field key can be used to move the blinking cursor through the outputs. The Up/Down keys can be used to toggle the state of the output whose position is covered by the blinking cursor. The Enter key will return the ProControl back to its standard menus. If you press any other keys you will see an informative message telling you which keys are valid. The message will be displayed for 3 seconds if no keys are pressed, but can be interrupted before the 3-second period by pressing the Enter key.

**MODES** Use the Up and Down keys to toggle an Analog Output from Manual control to PID control or Proportional control, depending on which analog output process is being used. This selection will only appear if an analog output tagname is displayed and the analog output is part of an analog output process.

|      |   |                               |
|------|---|-------------------------------|
| Menu | <b>TAGNAM</b> 100.0    PCT<br><b>MODE MAN</b> >MANUAL | <div>Up</div> <div>Down</div> |
|      | <b>TAGNAM</b> 96.3    PCT<br><b>MODE PID</b> >MANUAL  |                               |
|      | <b>TAGNAM</b> 25.0    PCT<br><b>MODE PRO</b> >MANUAL  |                               |

**GROUP** The ProControl allows outputs to be assigned to different *Groups* to allow greater process control flexibility. In some cases, you may wish to be able to specify alternate process tasks for a given output. For instance, you can have the operation of a pump be controlled by a series of level switches in a tank, or alternately, the pump can be run on a timed cycle. By selecting the appropriate process Group, you can change the control strategy for that piece of equipment. EOS Research will configure the groups for you according to your specifications

Use the Up and Down keys to select a Group for the displayed output. This menu item is displayed only for outputs that have been configured by EOS to have alternate process Groups.

|      |  |                               |
|------|--|-------------------------------|
| Menu | <b>TAGNAM</b> <b>OUTPUT</b> <b>DIM</b><br><b>GROUP 1</b> >MANUAL | <div>Up</div> <div>Down</div> |
|      | <b>TAGNAM</b> <b>OUTPUT</b> <b>DIM</b><br><b>GROUP 2</b> >MANUAL |                               |

## 2.11 LED Indicators

Your ProControl unit has three status LEDs to the left of the keypad, which are used to indicate the following:

|                       |   |
|-----------------------|---|
| <b>System Status:</b> | Normally ON when unit is powered.<br>One blink - The system has internally reset.<br>Two blinks - An internal error has occurred.   |
| <b>Connect:</b>       | ON if user is remotely or locally connected.<br>ON if system is faxing or paging.<br>Slow blink - last fax or page failed, press ACK to clear.<br>Fast blink - local connect cable inadvertently left plugged in, press ACK to clear. |
| <b>Network:</b>       | Rapid blinking indicates an active network connection.  |

## 3.0 REPORTING FEATURES

### 3.1 Fax Report

The ProControl unit will keep you informed of your system's operations with facsimile status reports. With the supplied ProView software you can configure the unit to send fax reports to up to two different numbers. You can also have these reports sent on a daily basis, at regular intervals during the day, or when triggered by specific process tasks. You can send one at any time by using the *Fax Now* option either from the menu on the ProControl's display, or through the ProView software.

The fax report you receive will contain several fields, each denoted by a shadow box. The number of fields will depend on the configuration of your system. For instance, you would not see a field indicating *Analog Outputs* if your system does not contain any of these.

The fields as you will see them are shown below. All information enclosed in brackets is variable and depends on your particular system configuration.

**To:**

<FAX RECIPIENT>

will indicate the intended fax recipient's name.

**From:**

THE <SYSTEM NAME>                      SYSTEM IN <SITE LOCATION>    AT <TIME> ON <DATE>  
 SETUP VERSION X                      :   ROM VERSION 2.x                      :   MODEL B1

will indicate the name and location of your system, the date and time at which the fax report was initiated, your current ProView setup version, and the current on-board software version 2.X.

**System Status:**

```
<MODE><PXX> : LAST SHUTDOWN AT <TIME> ON <DATE> BY <SHUTDOWN CAUSE>  
                FAX REPORT INITIATED BY <FAX CAUSE>
```

will indicate the current <MODE> of the controller and associated process. For example, if the controller is running the startup or shutdown sequence, you would see either START or SHUTD followed by the current algorithm. Similarly, in auto mode, you would see AUTO followed by the last successfully completed process task.

The LAST SHUTDOWN indicates when the system last initiated the shutdown sequence and what caused it to happen. For example, if the shutdown sequence were initiated by a key press, the cause you would see would be KEYPAD. Similarly, if the shutdown sequence were caused by a process task such as a high pressure sensor whose tagname was HIPRES, you would see HIPRES as the <SHUTDOWN CAUSE>. If multiple inputs or outputs caused the shutdown (i.e. a process task was dependent on more than one input being in the active state and/or multiple outputs being ON), the most recent one which changed will appear as the cause.

Similarly, the FAX REPORT INITIATED BY line will indicate the tagname of the I/O point which caused the fax to be sent, provided there was only one I/O point responsible. If multiple I/O points were responsible, the process itself will be indicated. Consider, for example, a process task where a shutdown was caused by HIPRES and BLOWER, and a fax was also generated. The <FAX CAUSE> would be PROCESS XX, where XX is the number from 1 - 64 of this process task. In the case where *Fax Now* was selected from the menu option on the LCD, the <FAX CAUSE> would be KEYPAD. The <FAX CAUSE> from a ProView generated *Fax Now* command would be REMOTE. This line will not appear on daily or interval scheduled fax reports.

**Discrete Inputs:**

<TAGNAME> is <STATE>    <TAGNAME> is <STATE> ...

will indicate the status of all of the digital inputs in four columns. Inputs which are in the active state will appear as ON and those which are in their normal state will appear as OFF.

**Discrete Outputs:**

<TAGNAME> is <STATE>    <TAGNAME> is <STATE> ...

will indicate the status of all of the digital outputs in four columns.

**Analog Inputs:**

<TAGNAME> is <VALUE> <DIM> LIMITS are L: <LO-LIM> <DIM> H: <HI-LIM> <DIM>  
 <TAGNAME> is <VALUE> <DIM> TOTAL FLOW is <FLOW>    <DIM>  
 <TAGNAME>                      TOTAL FLOW is <FLOW>    <DIM>  
 ...

will indicate the current value, dimensional units, low alarm limit, and high alarm limit for all analog inputs which are not flow-type inputs. The precision of the values displayed can be selected through ProView. Any flow-type analog input which is responsible for maintaining a total flow will display that flow in place of the alarm limits. Any pulse-type digital input used for a digital flow meter will appear here since the information being obtained by that type of flow meter is analog in nature. In addition, pulse accumulators (volume totalizers) will appear here.

**Analog Outputs:**

<TAGNAME>    <PCT>    PCT    <MODE>                      <TAGNAME>    <PCT>    PCT    <MODE>  
 ...

will indicate the output percentage and mode of operation of all analog outputs. The precision is fixed to one decimal place and will range from 0.0 to 100.0, expressed as a percentage. The <MODE> of operation will be PID if the analog output is currently being used in a PID loop, or PRO if the analog output is currently being used in a Proportional scheme, otherwise it will be MAN indicating that the analog output is under manual control.

The next two pages contain examples of scheduled and alarm fax reports.

### **3.2 Page Alerts**

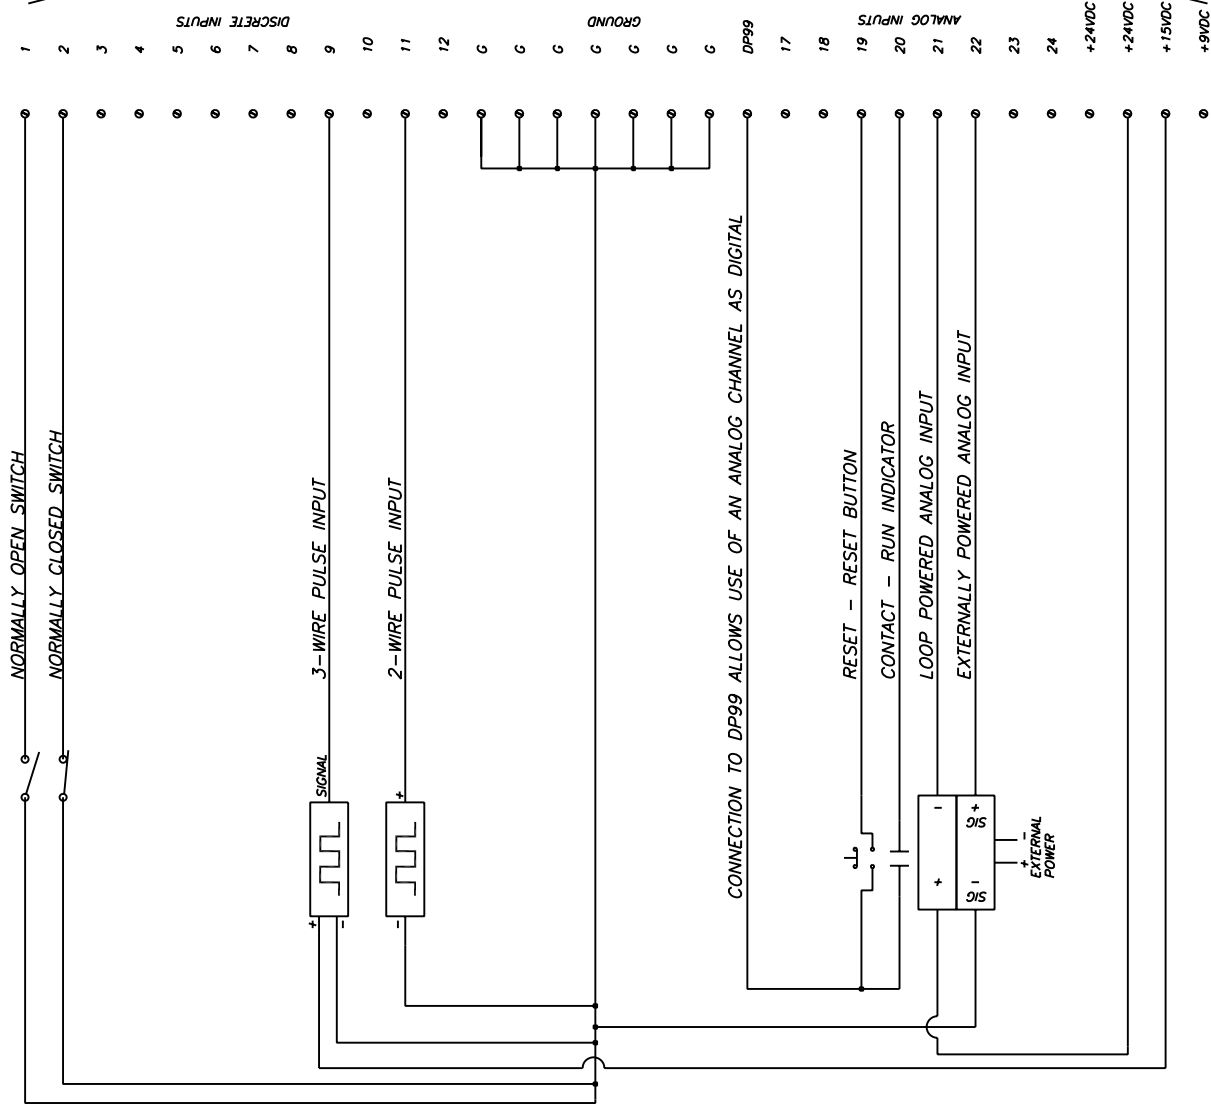

The ProControl unit can alert you to important conditions at your site via a page alert. Any system that is not in manual mode, that is, executing process tasks or the startup or shutdown sequences, can send a message up to eighty characters in length to an alphanumeric pager or up to nineteen digits in length to a numeric pager. If you are out of the office and away from a fax machine, you will still be alerted to any trouble at your site. With ProView you can select up to two pager numbers to be called. Each process task or startup/shutdown algorithm is capable of sending a message to either or both of these pagers. The pager messages are configured by EOS Research according to your specifications.

An example message for an alphanumeric pager would be:

ANYTOWN SITE  
High water level EQ Tank  
System shut down!  
Call Fred to fix: 555-6789

Example: T1-0510 G = 1/2"x 1"light GREY duct with cover

(1) Each standard length is actually 6'6 3/4"  
but is counted as 6 feet for packaging and pricing

\* Color - add suffix "G" for light GREY "W" for WHITE

ADHESIVE BACKING - add suffix "A" to catalog number - contact  
sales office for pricing (see page 23)

Available in 1 meter length  
contact sales office

Non-slip cover  
design of minimum  
encumbrance and  
maximum grip.

Restricted slot  
opening for wire  
retaining.

Two predetermined  
breaklines:  
- for breaking off and  
removal of sidewall  
finger segments only.  
- for removal of sidewall  
finger and base segments.

Burr-free edges.

Recess boss for rapid  
mounting  
of components.

For wire fill capacity and base perforation of the wiring duct, see page 18.

## Features

Ultra-slim 1 Pole - 6 A relay

Printed circuit mount

- direct or via PCB socket

35 mm rail mount

- via screw or screwless sockets

- 1 Pole changeover contacts or 1 Pole normally open contact
- Ultra slim, 5 mm, package
- Sensitive DC coil - 170 mW (Dual AC/DC coil drive possible using 93 series sockets)
- UL Listing (certain relay/socket combinations)
- Cadmium Free contact materials
- 8/8 mm clearance/creepage distance
- 6 kV (1.2/50  $\mu$ s) insulation, coil-contacts

FOR UL RATINGS SEE:  
"General technical information" page V

### Contact specification

|  |                       |
|--|-----------------------|
| Contact configuration                        | 1 CO (SPDT)           |
| Rated current/Maximum peak current           | A 6/10                |

Manual Motor Protectors & Controllers

Manual Motor  
Protectors & Controllers

# Compact All-in-One Solutions

*Powering Business Worldwide*

- Eliminate the overload relay with a manual motor protector or combination motor controller
- Get a disconnect, starter, and overload and motor protection in one compact device
- A complete motor protector and remote control solution easily assembled
- UL 508F ratings means no need for protection upstream when using a combination motor controller

① UL 508 Type E starters are assembled from a standard XTPR and a special incoming terminal line side adapter (XTPAXLSA or XTPAXLSAD).

② Select manual motor protectors by full load amperes. Maximum motor ratings (kW, hp) are for reference only.

③ In this range, calculate motor rating according to rated current. Specified values to NEC 430.6(A)(1).

**Note:** A UL 508 Type E self-protected manual combination starter (XTPR) consists of a manual motor protector (XTPR) and a UL listed line side adapter (e.g., XTPAXLSA). The Type E self-protected manual combination starter alone is a legitimate short-circuit protective device and disconnect means for the downstream motor, while the contactor has been added to provide remote operation of the motor circuit.

*XT Family of Contactors***Contactors and Starters****Product Description**

Eaton's new line of **XT** Contactors and Starters includes non-reversing and reversing contactors, overload relays and a variety of related accessories. Because **XT** meets IEC, UL, CSA, CCC and CE standards, it is the perfect product solution for IEC applications all over the world. The compact, space saving, and easy to install **XT** line of IEC contactors and starters is the efficient and effective solution for customer applications from 7A to 2000A.

**Features and Benefits**

- AC control from 12V to 600V 50/60 Hz
- DC control from 12V to 220V
- Available with screw or spring cage terminals
- Reversing or non-reversing contactors and starters
- AC-3 contactor ratings to 1000A and AC-1 contactor ratings to 2000A
- Non-reversing starters to 650A
- Panel or DIN rail mounting to 65A
- IP20 finger and back-of-hand proof
- Large ambient temperature range, -25 to 50°C [-13 to 122°F]
- AC and DC controlled contactors in the same compact frame
- Low power consumption DC coils
- Built-in NO or NC auxiliary contacts to 32A
- Plug-in accessories for reduced installation time
- Coil replacement on Frames C – N (18 – 820A)
- Contact replacement on Frames D – N (40 – 820A)
- Integrated suppressor 7 – 150A DC operated contactors and 185 – 2000A AC and DC operated contactors

**Standards and Certifications**

- IEC EN 60947
- CE Approved
- UL
- CSA
- CCC
- ATEX
- RoHS

**Note:** For Type 2 Coordination, see Page 199.

① Underscore ( ) indicates magnet coil suffix required. See Table 57, Page 37.

② For Spring Cage Terminals, insert C after the fourth digit of the Catalog Number. Example: XTCEC007B10A. For 7 – 12A XTCEC Contactors, the power, auxiliary and coil terminals are spring cage. For 18 – 32A XTCEC Contactors, the auxiliary and coil terminals are spring cage. For 40 – 150A XTCEC Contactors, the coil terminals only are spring cage.

③ For electrical life contactor application data, see Table 51, Page 34.

#### Notes:

The 7 – 32A XTCE Contactors have positively driven contacts between the integrated auxiliary contact and the auxiliary contact module as well as within the auxiliary contact modules.

The 40 – 65A XTCE Contactors have positively driven contacts within the auxiliary contact module. 6 auxiliary contacts are possible with a combination of side mounted and front mount auxiliary contacts.

DC operated contactors (Frames B – G, 7 – 150A) have a built-in suppressor circuit.

Frame B – C contactors with 1NC built-in auxiliary are mirror contacts (XTCE...B01\_ – XTCE...C01\_).

#### XTPB Pushbutton Manual Motor Protectors — North American Usage ①②

|   |                             |  |  |                      |
|---|-----------------------------|--|--|----------------------|
|   | IP65<br>NEMA 3R, 4X, 12, 13 | XTPB MMP Only or with: XTPAXFA..., XTPBXFAEM20, XTPAXSA..., XTPAXUVR..., XTPAXSR..., XTPAXCL | With actuating diaphragm                                     | <b>XTPBXENAS65</b>   |
|  | IP65<br>NEMA 3R, 4X, 12, 13 | XTPB MMP Only or with: XTPAXFA..., XTPBXFAEM20, XTPAXUVR..., XTPAXSR..., XTPAXCL             | With Emergency-Stop (E-Stop) pushbutton actuator, Red-Yellow | <b>XTPBXENASES65</b> |

#### B-Frame (0.1 – 32A) XTPR Rotary Manual Motor Protectors — North American Usage ③

|   |                        |  |  |                      |
|---|------------------------|--|--|----------------------|
|  | IP55<br>NEMA 1, 12, 3R | B-Frame XTPR Only or with: XTPAXSA... and XTPAXFA..., XTPAXUVR...and XTPAXFA..., XTPAXSR...and XTPAXFA..., XTPAXCL | With red/yellow rotary handle for use as Emergency-Stop switch to VDE 0113 | <b>XTPAXENAS55RY</b> |
|---|------------------------|--|--|----------------------|

#### D-Frame (10 – 65A) XTPR Rotary Manual Motor Protectors ④⑤

|   |                            |  |  |                       |
|---|----------------------------|--|--|-----------------------|
|  | IP65<br>NEMA 1, 12, 3R, 4X | D-Frame XTPR Only or with: XTPAXFA..., XTPAXFAEM20, XTPAXSA..., XTPAXSATR..., XTPAXUVR..., XTPAXSR..., XTPAXCL | With red/yellow rotary handle for use as Emergency-Stop switches to IEC / EN 60204 | <b>XTPAXENCSD65RY</b> |
|---|----------------------------|--|--|-----------------------|

① Built-in terminal for PE(N).

② North American enclosures come with conduit adapters for use with 1/2" NPT.

③ Built-in N and PE terminal, lower part without knockouts.

④ Integrated terminal for PE(N) connection.

⑤ % Metric knockouts:  
Top ÷ bottom: M25/M32  
In backplate: M25/M32  
Control cable entry: M20

## General Information

| EAN:                   | 4013614216725  |
| Catalog Description:   | TA75DU-52 Thermal Overload Relay   |
| Long Description:      | The TA75DU-52 thermal overload relay is an economic electromechanical protection device for the main circuit. It offers reliable and fast protection for motors in the event of overload or phase failure. The device has trip class 10A. Further features are the temperature compensation, trip contact (NC), signal contact (NO), automatic- or manual reset selectable, trip-free mechanism, STOP- and Test function and a trip indication. The overload relays are connected directly to the block contactors. Single mounting kits are available as accessory. |

UL File E64791

CSA File LL66078

**FEATURES-SPECIFICATIONS****Applications**

This lightweight enclosure provides long-lasting protection for housing electrical components in highly corrosive environments. It is used in both indoor and outdoor settings that are frequently wet or have constant exposure to water, other liquids, or contaminants. Suitable for use in petro-chemical plants, sewage plants, marine environments, and similar installations.

**Construction**

- Bodies and doors fabricated from .080-inch thick (2 millimeters) 5052-H32 aluminum
- Continuously welded seams ground smooth, no holes or knockouts
- Door and body stiffeners are provided in larger enclosures for extra rigidity
- Rolled lip on three sides of door and all sides of enclosure opening is provided to exclude liquids and contaminants
- Quick and easy to operate stainless steel door clamps are provided
- Doors are removable by pulling stainless steel continuous hinge pin
- Hasp and staple for padlocking
- Print pocket is provided
- Closed cell oil resistant neoprene gasket
- Collar studs provided for mounting optional sub panels
- External mounting feet for mounting enclosure
- Grounding provisions provided
- Optional back panels must be ordered separately

**Finish**

- All exterior surfaces of enclosures have a smooth grained finish
- Optional aluminum back panels are unpainted (See page 14)
- Optional steel back panels are white polyester powder (See page 14)

**Accessories**

- Back panels (reference tables)
- See pages J1-J22

\*Back panels must be ordered separately.

**NOTES:**

1. Large print pocket (8X10) is furnished if H = 20.00" or more and W = 20.00" or more. Otherwise small (6X6) print pocket is provided.
2. Panels made from 12 Ga. steel or 10 Ga. Aluminum.
3. Panels have flanges along all sides when either dimension exceeds 17".
4. The number of door clamps is dependent on size of enclosure. Clamps are furnished along three sides of door.
5. F = 3" when W is 16" or greater and 1-1/4" when W is 12" or less.

Please read and save these instructions. Read carefully before attempting to assemble, install, operate or maintain the product described. Protect yourself and others by observing all safety information. Failure to comply with instructions could result in personal injury and/or property damage! Retain instructions for future reference.

# Dayton® AC Axial Fans

## Description

Dayton AC Axial Fans are single speed units used for spot cooling where space is limited. They are widely used in computers, copy machines, electronic instrumentation, cabinet cooling, machine tool products, and solar systems. They are field interchangeable with most other axial fans. Ball bearing units are all position mount. Sleeve bearing units are horizontal shaft mount only. Optional finger guard and cord set are available as accessories (except 2RTD2, 3LE75, 4WT40 and 4WT41 have 12" leads) and can be ordered separately.

**NOTE:** Not for use with adjustable speed controls.

**NOTE:** All data based on 60 Hz operation. When operated on 50 Hz, a decrease of approximately 20% will occur in flow rate performance.

(†) At free air.

(\*) SIL db – Speech interference Level in decibels. This figure represents an average of the sound pressure levels in the 500, 1000, and 2000 Hz octave bands.

# Dayton® AC Axial Fans

## General Safety Information

**⚠ WARNING** *Disconnect power before installing or servicing.*

1. Follow all local electrical and safety codes, the National Electrical Code (NEC) and the Occupational Safety and Health Act (OSHA) in the United States.
2. Fan must be securely and adequately grounded. This can be accomplished by connecting a separate ground wire to the fan frame with a self-threading screw (not furnished) in the hole provided.
3. Lock and tag power disconnect to prevent unexpected application of power.
4. Guard all moving parts.
5. Protect the power cable from coming in contact with sharp objects.
6. Do not kink power cable and never allow the cable to come in contact with oil, grease, hot surfaces or chemicals.

7. Make certain that the power source conforms to the requirements of your equipment.

**⚠ WARNING** *Do not use in explosive atmospheres.*

## Installation

1. Mount fan in the position most desirable to your needs. Note mounting limitations under "Description."
2. Secure fan in place with screws and tinnerman clips or nuts and bolts. (Mounting hardware not included.)

## WIRING

Refer to Grainger Catalog for a complete list of cord sets. Plug cord set into fan and connect to 115 volt or 230 volt power source, as noted on nameplate.

**NOTE:** 2RTD2, 3LE75, 4WT40 and 4WT41 do not accept a cord set.

**⚠ CAUTION** *Exposed wires should not come in contact with the fan housing.*

1. Fan must be adequately grounded. This can be accomplished by connecting a separate ground wire to the fan housing with a #10 self-threading screw (not furnished) in the hole provided.

## Operation

Dayton sleeve bearing axial fans are designed to operate optimally in horizontal airflow position. Arrows stamped on housing indicate direction of blade rotation and airflow. Ball Bearing Axial Fans are designed to mount in any position.

## Maintenance

**⚠ WARNING** *Always disconnect power supply before inspecting the axial fan or working with the unit for any reason.*

Axial fan cannot be field serviced. Replace entire unit if defective.

**NOTE:** No replacement parts available.

## ACCESSORIES

Refer to Grainger Catalog for a complete list of axial fan accessories.

Por favor lea y guarde estas instrucciones. Léalas cuidadosamente antes de tratar de montar, instalar, operar o dar mantenimiento al producto aquí descrito. Protéjase usted mismo y a los demás observando toda la información de seguridad. ¡El no cumplir con las instrucciones puede ocasionar daños, tanto personales como a la propiedad! Guarde estas instrucciones para referencia en el futuro.

# Ventiladores Axiales de CA Dayton®

## Descripción

Los ventiladores axiales de CA Dayton son unidades de velocidad única para aplicaciones de enfriamiento parcial donde el espacio es limitado. Se utilizan generalmente en computadoras, máquinas copiadoras, instrumentación electrónica, enfriamiento dentro de gabinetes, máquinas-herramientas y sistemas solares. Se pueden intercambiar en campo con la mayoría de ventiladores axiales. Todas las unidades de rodamientos de bolas se montan en posición. Las unidades de rodamientos de manguito se instalan con el eje en posición horizontal únicamente. Se dispone de conjuntos de cordones y protecciones para los dedos opcionales como accesorios (salvo los modelos 2RTD2, 3LE75, 4WT40 y 4WT41 que incluyen conductores de 30.5 cm). Estos accesorios pueden pedirse por separado.

**AVISO:** han sido diseñados para uso con controles de velocidad ajustable.

**AVISO:** Toda la información está basada en un funcionamiento a 60 Hz. En un funcionamiento a 50 Hz, el flujo disminuirá aproximadamente un 20%.

(†) Al aire libre.

(\*) SIL db – Nivel de interferencia en conversación en decibeles. Esta cifra representa un promedio de los niveles de presión sonora en octavos de frecuencia de banda de 500, 1000 y 2000 Hz.

# Ventiladores Axiales de CA Dayton®

## Información de Seguridad General

**⚠ ADVERTENCIA** *Desconecte la alimentación eléctrica antes de instalar o dar mantenimiento.*

1. Observe todos los códigos eléctricos y de seguridad locales, el Código Eléctrico Nacional (NEC) y la Ley de Seguridad y Salud Ocupacional (OSHA) de EE.UU.
2. El ventilador debe conectarse a tierra de forma segura y adecuada. Esto se logra conectando un cable de puesta a tierra independiente al bastidor del ventilador con un tornillo autorroscante (no suministrado) en el orificio provisto.
3. Bloquee y coloque un aviso de advertencia en el punto de desconexión para evitar que el dispositivo sea encendido inesperadamente.
4. Proteja todas las partes móviles.
5. Evite que el cable de alimentación entre en contacto con objetos filudos.
6. No pliegue el cable de alimentación y nunca permita que éste entre en contacto con aceite, grasa, superficies calientes o productos químicos.
7. Asegúrese que la fuente de alimentación satisfaga los requisitos de su equipo.

### ⚠ ADVERTENCIA

*No utilice este producto en ambientes explosivos.*

## Instalación

1. Instale el ventilador en la posición más indicada para sus necesidades. Observe las limitaciones de montaje bajo "Descripción".
2. Asegure el ventilador en posición con tornillos, y tuercas y pernos o sujetadores timmerman. (Herraje de montaje no suministrado).

## CABLEADO

Consulte el catálogo de Grainger para obtener una lista completa de conjuntos de cordones. Enchufe el conjunto de cordones en el ventilador y conecte a una fuente de alimentación de 115 voltios o 230 voltios, según se indica en la placa del fabricante.

**AVISO:** Los modelos 2RTD2, 3LE75, 4WT40 y 4WT41 no funcionan con un conjunto de cordones.

### ⚠ PRECAUCION

*Los cables expuestos no deberán entrar en contacto con el alojamiento del ventilador.*

1. El ventilador debe estar debidamente conectado a tierra. Esto se logra conectando un cable de puesta a tierra independiente al alojamiento del ventilador con un tornillo autorroscante No. 10 (no suministrado) en el orificio provisto.

## Operación

Los ventiladores axiales de rodamientos de manguito han sido diseñados para funcionar de manera óptima en posición de circulación de aire horizontal. Las flechas impresas en el alojamiento indican la dirección de la rotación del aspa y la dirección de aire. Los ventiladores axiales de rodamientos de bolas han sido diseñados para instalarse en cualquier posición.

## Mantenimiento

**⚠ ADVERTENCIA** *Desconecte siempre la fuente de alimentación antes de inspeccionar el ventilador axial o trabajar en la unidad por cualquier razón.*

El ventilador axial no puede recibir servicio en campo. Reemplace la unidad completa si se encuentra defectuosa.

**AVISO:** No hay partes de reemplazo disponibles.

## ACCESORIOS

Consulte el catálogo de Grainger para obtener una lista completa de los accesorios para ventiladores axiales.

**Veillez lire et conserver ces instructions. Lire attentivement avant de commencer à assembler, installer, faire fonctionner ou entretenir l'appareil décrit. Protégez-vous et les autres en observant toutes les informations sur la sécurité. Négliger d'appliquer ces instructions peut résulter en des blessures corporelles et/ou en des dommages matériels ! Conserver ces instructions pour références ultérieures.**

# Ventilateurs hélicoïdes

## c.a. Dayton®

### Description

Les ventilateurs hélicoïdes c.a. Dayton sont des appareils à vitesse unique utilisés pour un rafraîchissement circonscrit dans un espace limité. Ils sont très utilisés dans des ordinateurs, des photocopieuses, de l'équipement électronique, pour le refroidissement des armoires, dans des produits d'outillage et dans des systèmes solaires. Ils sont interchangeables avec la plupart des autres ventilateurs hélicoïdes. Les appareils avec roulements à billes s'installent dans n'importe quelle position. Les appareils avec coussinet-douille s'installent uniquement sur un arbre horizontal. Le jeu de protection pour les doigts et de cordon est disponible en tant qu'accessoire (saufs le 2RTD2, 3LE75, 4WT40 et le 4WT41 qui ont des fils de 30,5 cm) et peut être commandé séparément.

**REMARQUE :** Ne peuvent être utilisés avec des commandes de vitesse réglable.

**REMARQUE :** Toutes les données sont calculées à partir d'un fonctionnement sur du 60 Hz. Un fonctionnement à 50 Hz. réduit d'environ 20 % la performance du débit.

(t) À l'air libre.

(\*) SIL db – Niveau d'interférence de la voix en décibels. Ce chiffre représente une moyenne des niveaux de pression du son dans les bandes d'octaves de 500, 1000 et 2000 Hertz.

# Ventilateurs hélicoïdes c.a. Dayton®

## Informations générales sur la sécurité

**⚠ AVERTISSEMENT** *Couper l'alimentation électrique avant d'installer ou de réparer l'appareil.*

1. Respecter tous les codes électriques et de sécurité locaux, le United States National Electric Code (NEC) et l'Occupational Safety and Health Act (OSHA) des États-Unis.
2. Le ventilateur doit être mis à la terre de façon sécuritaire et adéquate. On obtiendra ce résultat en connectant un fil de terre séparé au cadre du ventilateur et en le vissant avec une vis à filetage automatique (non fournie) dans le trou prévu à cet effet.
3. Verrouiller et étiqueter l'interrupteur pour éviter une mise en marche intempestive.
4. Protéger toutes les pièces mobiles.
5. Protéger le câble d'alimentation contre un contact avec des objets acérés.
6. Ne pas plier le câble d'alimentation et ne jamais le laisser entrer en contact avec de l'huile, de la graisse, des surfaces chaudes ou des produits chimiques.
7. S'assurer que la source d'alimentation électrique est conforme aux exigences de votre équipement.

**⚠ AVERTISSEMENT**

*Ne pas utiliser dans une atmosphère explosive.*

## Installation

1. Installer le ventilateur dans la position qui convient le mieux à vos besoins. Prendre note des limitations d'installation indiquées sous la rubrique « Description ».
2. Fixer solidement le ventilateur à l'aide de vis et d'attaches à tôle ou avec des écrous et des boulons. (La visserie de montage n'est pas incluse.)

## CÂBLAGE

Se reporter au catalogue de Grainger pour une liste complète des jeux de cordons. Brancher le jeu de cordon dans le ventilateur et connecter à une source d'alimentation de 115 à 230 V, comme indiqué sur la plaque signalétique.

**REMARQUE :** Le 2RTD2, 3LE75, 4WT40 et le 4WT41 n'acceptent pas de jeux de cordon.

**⚠ ATTENTION**

*Les fils exposés ne doivent pas entrer en contact avec le logement du ventilateur.*

1. Le ventilateur doit être correctement mis à la terre. On obtiendra ce résultat en connectant un fil de terre distinct au logement du ventilateur avec une vis à filetage automatique n° 10 (non fournie) dans le trou prévu à cet effet.

## Fonctionnement

Les ventilateurs hélicoïdes à coussinets-douilles de Dayton sont conçus pour donner une performance maximale lorsque le débit d'air est à l'horizontale. Les flèches gravées sur le logement indiquent le sens de rotation de la pale et le débit d'air. Les ventilateurs hélicoïdes à roulements à billes sont conçus pour être installés dans n'importe quelle position.

## Entretien

**⚠ AVERTISSEMENT** *Toujours débrancher l'alimentation électrique avant d'inspecter le ventilateur hélicoïde ou de travailler sur l'appareil pour une raison quelconque.*

Un ventilateur hélicoïde ne peut être réparé sur le terrain.

Un appareil défectueux doit être entièrement remplacé.

**REMARQUE :** Aucune pièce de rechange disponible.

## ACCESSOIRES

Se reporter au catalogue de Grainger pour une liste complète des accessoires pour ventilateurs hélicoïdes.

## TW Series – 22mm NEMA Style Pushbuttons

### Key features:

- TW NEMA Style Switches with snap-on contacts
- Corrosion resistant octagonal chrome plated locking bezel
- Snap-on 10A contact blocks
- Incandescent or LED illumination
- Slow make, double break, self cleaning contacts
- Modular construction for maximum flexibility
- NEMA 4X and IP65 watertight/oiltight panel
- Available assembled or as sub-components
- Large M3.5 screw terminals with captive sems plate

IDEC has your 22mm switching needs covered.

Button styles include flush, extended, mushroom, or square and all bodies are crafted from fracture-resistant nylon.

All illuminated units feature two lens styles, one that maximizes light dispersion, the other accommodates direct lens engraving.

Self cleaning contact mechanisms allow for a wide current rating, 5mA to 10A, which reduces the need for various contact materials.

When looking for a 22mm switch that is durable, easy to use, and versatile, then IDEC's TW series is your solution.

Pilot Lights (Assembled)

Alarm pilot lights: AP\_W2\_99DR24V

Assembled Pilot Lights

A P (Q) W 1 (B) (99) (D) - R - (24V)

Function

P: Pilot Light

Bezel Shape

Blank: Octagonal (round lenses)  
Q: Square

Series Designation

W: TW Series

Lens Shape

1: Flat  
2: Dome

Lens Type

Blank: Standard (ribbed)  
B: Engravable (smooth with insert included)

Illumination Circuit

- 99: Full Voltage (lamp determines voltage)
- 126: 120V AC Step Down Transformer
- 246: 240V AC Step Down Transformer
- 486: 480V AC Step Down Transformer

Lamp Voltage

(Full Voltage Units Only)

- 6V: 6V AC/DC
- 12V: 12V AC/DC
- 24V: 24V AC/DC
- 120V: 120V AC (LED only)
- 240V: 240V AC (LED only)

Lens Color Code

- A: Amber
- G: Green
- R: Red
- S: Blue
- W: White
- Y: Yellow

Lamp Type

Blank: Incandescent  
D: LED

- 1. Use only when interpreting part numbers. Do not use for developing part numbers.
- 2. All transformers step down to 6V.

## Non-Illuminated Selector Switches (Assembled)

Transfer Pump HOA & Test Lights/Reset switches: ASW33L11N

## Assembled Selector Switches

**A S W 3 (1) (L) 20 (N) - 304**

**Function**

S: Selector Switch

**Series Designation**

W: TW Series

**Number of Positions**

2: 2-Position

3: 3-Position

4: 4-Position

5: 5-Position

**Spring Return Action**

Blank: Maintained

1: Spring return from Right (2 or 3 position)

2: Spring return from Left (2 or 3 position)

3: 2-Way spring return from Left and Right  
(3 position only)

**Circuit Number**

(Standard circuits shown on following pages and 669.)

**Contacts Terminal Style**

Blank: standard

N: Fingersafe (IP20)

**Contact Arrangement Code**

10: 1NO 01: 1NC

20: 2NO 02: 2NC

40: 4NO 04: 4NC

11: 1NO-1NC 22: 2NO-2NC

**Operator Style Code**

Blank: Knob Operator

L: Lever Operator

K: Key Operator

1. Use only when interpreting part numbers. Do not use for developing part numbers.
2. Custom contact configurations available.
3. Custom key removable codes available.
4. Portions of part number inside ( ) are optional.

Illuminated Selector Switches (Assembled)

SVE Blower HOA Switch: ASLW329911DN-423-G-24V

**Assembled Illuminated Selector Switches**

A SL W 2 (2) 99 11 (D) (N) - (103) - R - (24V)

**Function**

SL:Illuminated Selector Switch

**Series Designation**

W: TW series

**Number of Positions**

2: 2-Position  
3: 3-Position

**Spring Return Action**

Blank: Maintained  
1: Spring return from Right  
2: Spring return from Left  
3: Two-Way spring return from Left and Right

**Illumination Circuit**

99: Full Voltage (lamp determines voltage)  
126: 120V AC Step Down Transformer  
246: 240V AC Step Down Transformer  
486: 480V AC Step Down Transformer

**Lamp Voltage**  
(Full Voltage Units Only)

6V: 6V AC/DC  
12V: 12V AC/DC  
24V: 24V AC/DC  
120V: 120V AC (LED only)  
240V: 240V AC (LED only)

**Lens Color Code**

A: Amber  
G: Green  
R: Red  
S: Blue  
W: White  
Y: Yellow

**Contact Circuit Number**

Standard circuits are listed on the following pages and 669.

**Contact Terminal Style**

Blank: Standard  
N: Fingersafe

**Lamp Type**

Blank: Incandescent Lamp  
D: LED Lamp

**Contact Arrangement**

|             |             |
|-------------|-------------|
| 10: 1NO     | 01: 1NC     |
| 20: 2NO     | 02: 2NC     |
| 40: 4NO     | 04: 4NC     |
| 11: 1NO-1NC | 22: 2NO-2NC |

1. Use only when interpreting part numbers. Do not use for developing part numbers.  
2. All transformers step down to 6V (use 6V lamp).

**SOLID STATE HOUR METERS & COUNTERS****700 SERIES****CURTIS****DESCRIPTION**

The Curtis 700 Series are highly reliable solid state hour meters and counters that offer an unprecedented combination of patented technology, performance, reliability and value.

**MODEL 700:** 2-Wire Hour Meter, displays only when powered. Available in AC/DC.

**MODEL 701:** 3-Wire Hour Meter, has a provision or continuous display. Available in AC/DC and DC-only.

**MODEL 703:** Pulse Counter. Available in AC/DC and DC-only.

**APPLICATIONS**

A wide variety of industrial and commercial applications, including scheduled maintenance, warranty and leasing – for medical equipment, transport and industrial vehicles and other industrial equipment.

**FEATURES**

- All-8's LCD function test: each digit displays an eight for one second after power-up.
- Attractive 6-digit LCD 5mm or 7mm high digits (7mm with optional backlighting) are much easier to read than electro-mechanical meters, which have only 3mm high digits.
- Silent operation – no moving parts. Eliminates annoying gear and motor noise.
- Exceptional reliability due to nonvolatile memory (EEPROM) which retains data for 25+ years.
- Wide voltage ranges, for example, one unit can be powered from 75 to 270 VAC anywhere between 48 and 440 Hz – ideal for distribution and worldwide markets without having to stock multiple model types.
- Electrical reset (optional).
- Available in ten case styles – all fit in standard hour meter/counter cutouts.
- Multiple mountings available – Metal U-bracket, "U" clamp/stud (D, Q, R and S cases), flange mount with hardware (F, G, J cases), or mounting clip (G, L, Y, Z, cases).
- Backlit units allow external illumination control, i.e., on/off or dimmer (12VDC only).
- Flashing hourglass icon indicates when the hour meter is accumulating time.
- Memory will arm only when power has been applied for five seconds (with no loss of time or counts).
- Low power consumption.
- UL and CE recognized.

| Reset                                  | 5ms min. at operating voltage. Main power must be applied for a minimum of 250ms prior to reset signal.   |

### NOTES:

1. Mating connector must be installed.
2. Equivalent to Delphi-Packard connector P/N 12162000 2-pin.
3. Equivalent to Delphi-Packard connector P/N 15336035 4-pin.
4. Equivalent to Molex connector P/N 43045-0412.
5. UL files AU1841 and E45175.
6. R(5mm) and Q housings also available in a 65/65 version (see model encodement).
