DEC Memo: Start CallerRemark - 0330013 Location is a junk yard. Unpermitted discharge of automotive waste fluids onto ground surface. END CallerRemark - 0330013

Remarks: Start DECRemark - 0330013 Prior to Sept, 2004 data translation this spill Lead DEC Field was "DEMEO" 4/15/05 - Austin - Recd copy of signed Stip with compliance schedule - reassigned from deMeo to Rahman, for tracking compliance and reviewing submissions - end 07/07/05-SR//Investigation Plan was submitted in May'05.Plan was approved and RP's contractor Brian E. Flynn was advised to send the report after investigation. As per the consent order, the department has not received any BMP/PPP which was due in April'05. 09.26.05 SR// Sharif made a call to Brian E. Flynn. in absence of him, left a message for him to submit the report. 10.07.05 SR// Normann Teitler of Metropolitan NY Towing Auto Body & Salvage Association called DEC sayinghe will work with the contractor to furnish BMP/PPP to DEC and the Investigation report as well. He is expected to give me a call by next week. 07/31/06 Rahman- I spoke with Brian Flynnm, who indicated that they have performed soil investigation and found contamination in some places. A report will be forwarded to DEC within few weeks. 08/22/06 Rahman- DEC has not rec'd the investigation summary report which was due on August,05. A non compliance letter was sent to Metropolitan NY Towing & Auto Body Association 2 52nd Street, Box A8 Brooklyn, NY 11232 Attn: Norman Teitler 09/27/06 Rahman- Rec'd investigation summary report.VOC/SVOC levels are below TAGM level.Therefore, does n't warrant any remediation effort.Spill is closed. Other Pertinent Environmental Activity Identified at Site

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Remarks:	Start DECRemark - 0305131 Prior to Sept, 2004 data translation this spill Lead DEC Field was "TIPPLE" No contact provided to confirm problem 12/19/05 Feroze. Spill is transferred from Ketani to Feroze. 03/15/06. Spill is transferred from Feroze to Kumer Patel. 03/16/06-Hiralkumar Patel. from Reverse PHone Directory, following information got based on address: Aberdeen Recycling 91-01 130th St Richmond Hill, NY 11418 (718) 849-2981 Tried this number, but no body replied. no voice mail system set up. 05/25/06-Hiralkumar Patel. Visited site on 05/23/06. site is receiving different ferrous material for recycling but not cars. found concrete in good condition around site except one corner, which has piles of junk. pile contains cut fuel oil tanks also. spoke with Harry Singh, operator of facility. they receive tanks after it is empty and open. they don't receive any material which might have any product in it. in the pile area, there was a crane and around this crane found soil soaked with oil and some oil mixed with water. and this is the only area where i found oil and odor. Mr. Singh is not sure about whether there is a concrete floor under the crane or not. haven't seen any

S&S SPECALITY CORP (Continued) **S106017114**

drain in remaining part of site.not sure about soil condition and drain under the pile area. there is residential building next to property. Mr. Singh gave me copy of letter from Henry Traktman from Metropolitan Heat & Power Co., Inc., who had abondoned fuel oil tank at site.abstract of letter: - 550 gal UST system at site has been legally abandoned and the piping removed. - all contents of the storage system were removed and the system rendered free of flammable or combustible vapors - all waste removed from the storage system has been disposed of in accordance with applicable city, state and federal requirements. - buried tank has been removed and all connecting lines have been removed. this letter was sent to NYC Fire Dept. on Feb. 13, 2004. and Henry Traktman has sent it. Henry Traktman Ph. (718) 941-7600 FAX (718) 941-7606 Mr. Singh gave me owner's information. Ween Tung Aberdeen Recycling 9101 130th Street Richmond Hill, NY 11418 Ph. (718) 849-3393 (O) (718) 366-4017 (H) FAX (718) 849-2981 Spoke with Mr. Tung. he asked me to send letter at site address. Spoke with operator at Metropoliton. she will call back with information. CSL sent out to owner. faxed to owner. 05/26/06-Hiralkumar Patel. Received callfrom Frank Cece from Aberdeen Recycling, who is working there. he asked to send list of contractors who can do required work. faxed list of contractors to Mr. Cece. 05/30/06-Hiralkumar Patel. Received message from Alissa (718-941-7600). they haveremoved tank from location. left message for Alisa. Received call from Alisa. they hadn't found any contamination in any part of tank system what they removed it. 06/02/06-Hiralkumar Patel. REceived message from Doug from Trade winds. Left message for Doug. Doug Trade Winds Environmental Restoration Incorporated 100 Sweeneydale Ave Bay Shore, NY 11706-2211 PH.: (631) 435-8900 (O) (516) 779-7822 (C) 06/16/06-Hiralkumar Patel. Received message from Frank (Ph.: 718-849-8183, Cell: 347-992-3809) asking what kind of work needs to be done to solve this problem. spoke to Frank. he is in process of hiring contractor. asked him to remove all contaminated soil and to take end point samples. 06/28/06-Hiralkumar Patel. Receivedmessage from Frank. he is in process of hiring Harbor Environemtnal Corp. Frank or someone from Harbor will call once they sign contract. 07/28/06-Hiralkumar Patel. received message from Frank. he will start cleanup next week. 08/29/06-HiralkumarPatel. spoke with Frank. he hasn't start any cleanup yet as he need to move some stuff out to get access for cleanup. he is done that and once he gets container in, he will start working. asked Frank to call in next monday sep. 4, 2006 for updates. 09/08/06-Hiralkumar Patel. received message from Frank. spoke with Frank and asked to finish work by end of this month. 09/21/06-Hiralkumar Patel. received call from Kem Walsh (516-876-7940 x 361) from Miller Environmental. they are going to remove contaminated soil probably next week. Kem will take endpoint samples and will send final report. 11/10/06-Hiralkumar Patel. spoke with Adam at Miller. Mr. Walsh is out of country for three weeks on business. as per Adam, they took soil sampleand waiting to get paid for work they have done before doing any soil excavation. Adam has received soil analyticals and will fax to the Department. spoke with Frank at site. as per him, they are waiting for Miller to start work based on soil analyticals. asked Frank to call Miller environment. received fax from Miller containing sample analytical for one soil sample. limit
Benzo(a)Anthracene------1,100-----224 Benzo(a)Pyrene----------1,000------61
Benzo(b)Fluoranthene------930-----220 Benzo(k)Fluoranthene------730-----220
Chrysene----------1,000-----400 11/13/06-Hiralkumar Patel. received message from Frank. as per him, Miller will start soil removal on 11/14/06. 11/16/06-HiralkumarPatel. spoke with Adam at Miller. they are not doing any soil excavation, instead they are only providing containers for soil disposal. owner is doing excavation by himself. Miller will take endpoint samples at the end of work. spoke with Frank at facility, he has dug out about 2 ft of soil and found clean dirt at bottom. as per Frank, person from Miller is monitoring

S&S SPECALITY CORP (Continued) **S106017114**

soil removal activity. 12/01/06-Hiralkumar Patel. spoke with Frank. Miller took sample yesterday and will send report soon. 12/05/06-Hiralkumar Patel. received call from Frank. he got word from Miller that soil sample came back clean. Frank asked should he backfill the excavation. told Frank that its his choice if he wants to backfill based on word from Miller, but theDepartment will keep this case open until it received closure report and shows everything clean. 12/06/06-Hiralkumar Patel. received message from Adam (516-876-7940 Ext. 312) from Miller asking email address to send report. spoke with Adam and gave him my email address. received report in email from Adam (alibuser@millerenv.com). abstract: - 95.9 tons of soil has been removed from site - excavation dimension was 20 ft * 20 ft * 9 ft - took 5 soil endpoint samples no contamination found in any samples. based on available documents, case closed. RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

JAMACIA WATER SUPPLY # 31 (Continued) **S106471787**

Report from GE for spill #0402275. Heating oil tank removed along with 12 tons of contaminated soil. 3 of 9 End-point samples found traces of several SVOCs at 5-8 feet deep.No VOCs or PAHs present. No GW or visible contamination present. J.Kolleeny spoke with Bill Yulinsky from NYSDEP - GW depth roughly 40 feet deep which poses no risk of the contamination reaching water table. Site deemed stable, NFA letter sent andsite is to be closed. - S.Kraszewski END DECRemark - 0402275

Remarks: Start CallerRemark - 0402275 1080 GALLON TANK BEING REMOVED, HAD HOLES AND CONTAMOINATION: END CallerRemark - 0402275

Remarks:	Start DECRemark - 0405142 Prior to Sept, 2004 data translation this spill Lead DEC Field was "SANGESLAND" 8/10/2004 Sangesland spoke with Michael Mitts of NYC DEP (cell # 917-496-6597). He manages a DEP "Well House" which is on a fenced off pieceof land. Next to this DEP property is an Adhesive Company: Allied Adhesive-Burage Glue Division - 91-20 130th St, Queens There is a garden hose coming out the back of the Adhesive Company through the chain link fence and onto the DEP property. In front of this hose is a 2' diameter circle of black residue and out about 6' to 8' is dead grass. The spill report was brought over to the DLE to have an ECO Officer investigate. 3/6/2006 No additional complaints have been made to theDEC - ECO do not have a record of the complaint. Spill Closed END DECRemark - 0405142

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Start DECRemark - 0208119 Prior to Sept, 2004 data translation this spill Lead DEC Field was "VOUGHT" 2/11/2003-Vought-Spill transferred from Sawyer to Vought. Spoke with Stanley Sucharski (Fenly & Nicol) 631-586-4900. 6000 GALLON USTS LINE VAULT-repair is complete and found contaminated soil. 15 yards of soil removed and endpoint samples ready to be taken. Tank is a 6000 gallon fuel oil. Tank is in place and supply line was leaking. Supply line was underground. Depth of excavation is10'. For closure NYSDEC requires disposal manifest, laboratory analyticals, site plan and work invoice. NYSDEC will receive report by 4/11/2003. 2/26/2003-Vought-Spoke with Brian McKay (F&N 631-586-4900x167). 6000 GALLON USTS LINE VAULT-Contaminated soil found around supply/return lines from tank to building. Two USTS's on site (Diesel and mineral oil tank). Soil was excavated (12 yards). Brian will fax site plan, disposal manifest and analyticals. Spill Investigation Report-March2003-Fenley & Nicol-Depth to water is approximately 50'. 6000 GALLON USTS LINE VAULT-Product was found in a concrete vault that contained a portion of the tank piping that runs from the tanks located beneath the western parking area into the building. The components of the tank system were isolated and retested which showed that the lines and not the tanks were the source of failure. Tank piping was replaced for both USTs outside. One UST contained fuel oil and the other contained mop oil. Impacted soils were discovered during piping replacement and 134.53 tons of soil were removed from the site and excavation depth was to 20'. One bottom endpoint soil sample (noted with a slightly "sweet odor" was sent for 8021/8270 analysis (included TCE and PCE) and showed one TAGM exceedance (benzo(a)pyrene at 143ppb). NYSDEC requires:1)TPH modified 8100 analysis from boring performed in area of mop oil line leak and excavation from a depth below 20'(former excavation depth).

UNIFORMS FOR INDUSTRY (Continued) **S106123796**

East Process Water Supply Well is located on site property to south and north process water supply well is located on west side of site. Report recommends spill closure. 5/1/2003-Vought-Site visit by Vought. On-Site were Cheryl Ann Neary (Fenly & Nicol-718-204-4993), Scott Hammerich (Vertex Engineering-631-553-0425) and Jeffrey Mandel(owner-718-846-2993). Site was former laundry processing facility and will be a mini-storage building. 6000 GALLON USTS EXCAVATION-Two empty UST's are on-site (#2 fuel oil-6000 gallons, mop oil-6000 gallons). #2 fuel oil UST failed system tightness test. Tank was isolated and tank passed tank only tightness test. A tank only tightness test was performed on mop oil UST and tank passed tank only test. 6000 GALLON USTS LINE VAULT-Mop oil tank Lines were dug and soil contamination was excavated to a depth of 20' without reaching clean endpoint samples. MOP OIL ROOM-NYSDEC requires: 1)one soil sample between two sumps or two individual samples will be obtained and analyzed for TPH 8100. 2)Perchlorethylene machine-one soil and groundwater sample will be obtained right outside former machine location and analyzed for 8260/8270 as per Shaminder Chawla (NYSDEC Enviro. Remed). PREVIOUSLY ABANDONED USTS-NYSDEC requires: 1)paperwork will be submitted for former abandonment of 4 UST's on-Site FILTER ROOM-NYSDEC requires: 1)one soil boring or two endpoint samples (one wall composite and one bottom sample) will be taken if tanks are removed DRY WELL-NYSDEC requires: 1)submission of historical endpoint analyticals and remedial report. WATER SUPPLY WELLS-at time of site visit, according to site representatives the North Process Water Supply well was not being used and had not been used for many years. Status of East Process Water Supply well was not known. 5/6/2003-Vought-Spoke with Scott Hammerich who inquired about previous spill 9101477. 7/3/2003-Vought-Spoke with Scott Hammerich. 6000 GALLON USTS EXCAVATION-Fuel oil tank (#2 fuel, 6000-gallon which tested tight) was excavated. Contaminated soil found underneath tank. Soil will be excavated to limit reach of excavator and a bottom endpoint sample will be taken. If sample is contaminated further excavation will be performed and then one composite sidewall will be obtained. If bottom sample is clean then a sidewall composite will also be taken. Samples will be analyzed for EPA Method 8270. Hammerich will send investigation report upon field completion. 7/11/2003-Vought-Spoke with Hammerich: 6000 GALLON UST EXCAVATION-Still removing USTs. Refusal at 6' for installation of monitoring well. Deepest sample was 18'. Will Geoprobe week of 7/14. Tanks completely encased in concrete. Vought will schedule site visit on 7/14. 7/16/2003-Vought-Site visit by Vought on 7/14. Visit summary: 6000 GALLON UST EXCAVATION-Two (6000-gallon) UST's are removed: Small amount of soil contamination due to historic overfill. One bottom composite soil sample was taken to confirm removal of impacted material. Mop oil line-soil sampling performed from 20'-30' and non-detect found via PID at 30'. Soil samples sent to laboratory. FILTER ROOM-Three (1500-gallon) USTs encased in concrete. Small amount of contamination found on top of vault. Entire vault including concrete will be removed an two bottom endpoint soil samples will be collected and analyzed for TPH 8100/8270/8260 due to mineral oil, #2 and #4 oil storage history. Wallendpoints will be collected after further excavation. MOP OIL ROOM-Either one improperly abandoned tank or two separate tanks. Geoprobe refusal at 7' and tank invert is at 10'. Owners will decide if abandoning in place or removal. Soil contamination found in tank manways. Vought repeated that UST registration must happen immediately. Six refusals on cobbles for attempt at monitoring well required for water sample due to perc storage as per Region 2 Haz Waste Unit. All historic perc operations and storage occurred above ground. Vought called NYSDEC Haz Waste unit Bob Cozzy for water requirement clarification. Bob Cozzy stated that a water sample is required due to site location in public water supply well area. Vought called Jeffrey Mandel to repeat requirement and spoke to Richard Sena who stated that no letter requiring groundwater sample was necessary and he

UNIFORMS FOR INDUSTRY (Continued) **S106123796**

would convey requirement to owner. Richard also stated that the tank in the mop cleaning room will be removed andnot abandoned in place. 8/22/2003-Vought-email from Scott Hamarich. 6000 GALLON USTS LINE VAULT EXCAVATION-Soil sample obtained from below previous excavation depth shows 6640ppm of THC. 6000-gallon mop oil and 6000-gallon fuel oil UST were excavated and removed. 6000 GALLON UST EXCAVATION-Soil endpoint was analyzed for 8270 and only showed benzo(a)pyrene at 127ppb. Additional soil was excavated and another endpoint soil sample was analyzed for 8270 resulting in no TAGM exceedances.Minor PAH exceedances of benzo(a)anthracene at 345ppb and benzo(a)pyrene at 250ppb in sidewalls of sample due to the presence of fill material. FILTER ROOM-In July 2003 Clean Venture accessed three mineral oil USTs located in the filter room. During removal impacted soils were indentified. Excavation was peformed to a depth of 22' and was bound on all four sides by building footings. Soils at depth of 22' were potentially impacted and as a result a soil boring was performed in the excavation to a depth of 34' and sample sent for 8260/82780. Analyticals showed 9190ppb xylene as only parameter which exceeded TAGM. MOP OIL ROOM-In July 2003 Clean Venture accessed the former UST in the mop oil room. The tank was removed and impacted soils were noted. Excavation was continued to a depth of 22' and was bound on all four sides by building footings. Soils at depth of 22' were potentially impacted and as a result a soil boring was performed in the excavation to a depth of 32' and sample sent for 8260/82780/8100. Analyticals showed 2750ppb xylene and 11700ppb THC by modified 8100. 10/16/03-Vought-contacted Chris Magee (DEC-Albany) for assistance regarding mop oil and mineral oil analyticals. DEC requires: 6000 GALLON USTS LINE VAULT-1)description of mop oil composition including brand names and chemical composition to ensure proper analyses were peformed (due to 6640ppb THC exceedance). 6000 GALLON UST EXCAVATION-1)Possible investigation of mop oil parameters once mop oil composition is submitted. MOP OIL ROOM-1)Groundwater samples by perc operations, downgradient of site, status, sampling ability and ownership of East and North Process Water Supply well 2)site plan with all tanks and piping and historical areas of perc usage, perc recycling and disposal methods 3)description of mop oil composition including brand names and chemical composition to ensure proper analyses were peformed (due to 11700ppb THC exceedance). FILTER ROOM-1)Type ofproduct that was stored in Filter Room USTs (mineral oil vs. mineral spirits) and 8100 results due to storage of mineral spirits. DRYWELL-1)drywell closure report including analyticals and disposal manifest and location on site plan of excavateddrywell and all other drywells. PBS REGISTRATION. 10/16/2003-Vought-Left a message for Hamarich to return call to DEC so above requirements could be discussed. Vought spoke with Hamarich who is putting together info in a report. Vought faxedHamarich copy of spill report (with requirements) and PBS registration. 12/5/2003-Vought-Review of report sent via email from Hammarich on 11/19/03. Email from Hammarich with list of chemicals utilized by UFI with material safety data sheets. List of chemicals were: 1)petroleum process oil 2)stoddard solvent 3)severly hydrated light napthalenic distillate aka process extender oil 4)petroleum lubricating oil base stock 5)severely hydrated heavy napthalenic distillate 6)mineral spirits (petroleum hydrocarbons and stoddard solvent) and 7)petroleum solvent(627 Solvent contains 83 C7-C10 saturated hydrocarbons, .4 toluene, .8 xylene, .2 ethylbenzene and 14 C8+aromatics). 12/5/2003-Vought-Review of report sent via email from Hammarich on 12/1/03. Email from Hammarich including user manual for drycleaning maching (a Bowe-Passat P564 5th generation machine). According to UFI "the drycleaner was self-contained with no external tanks and perc was replenished and disposed by Safety Clean". Mop oils included Severly hydrated heavy napthalenic distillate, petroleum process oil and petroleum lubricating oil base stock. 12/5/2003-Vought-Data and outstanding requirement review: 6000 GALLON UST

UNIFORMS FOR INDUSTRY (Continued) **S106123796**

EXCAVATION-Two USTs (fueloil and mineral oil) passes tank only tightness tests after isolate and retest was performed. Failure due to line leak and for info see 6000 GALLON USTS LINE VAULT. Small amount of contaminated soil found under tank resulting in further excavationand collection of one additional endpoint sample. Soil analyticals show minor PAH exceedance at 345ppb benzo(a)anthracene and 250ppb benzo(a)pyrene due to fill material and non detect napthalene. DEC has no further requirements with respect to this area. 6000 GALLON UST LINE VAULT-Contaminated soil found and 134 tons were removed from site. Additional excavation resulted in collection of one additional endpoint sample showing 6640ppb THC. Vought emailed Tim Lebbaron(DEC Albany) for instruction on 6640ppb result. (Note:mineral oil contains petroleum process oil and napthalenic distillate but these were not analyzed due to DEC requirement of modified 8100 analyses). MOP OIL ROOM-Contained former Perc operations. UST was excavatedand additional soils were removed to a depth of 22' and one endpoint soil sample was collected. Soil analyticals showed 2750ppb xylene and 11700ppb THC. Tetrachlorethene(PCE) was non detect and below 64ppb and napthalene was below standards. DECrequires: 1)groundwater sample 3)PBS registration. Vought emailed Tim Lebbaron(DEC Albany) for instruction on 11700ppb result. Mop oils included Severly hydrated heavy napthalenic distillate, petroleum process oil and petroleum lubricating oil base stock. FILTER ROOM-Excavation of three mineral oil USTs. Contaminated soil was found and additional excavation was performed to a depth of 22'. A boring was performed through the bottom of the excavation and a soil sample was collected at a depth of 34'. Analyticals showed 9190ppb xylene and 5800ppb napthalene. DEC requires: 1)downgradient groundwater sample DRYWELL-DEC requires: 1)drywell closure report (analyticals, site plan and location). 12/5/03-Vought-Called Richard Sena and explained outstanding requirements and also gave permission to backfill 6000 GALLON UST EXCAVATION with material originating ONLY from excavation or from new fill (and NOT from line vault excavation). 12/9/2003-Vought-After discussion with O'Connell(DEC) the difficulty in interpreting analyticals is due to that Modified 8100 should be only used on mineral oil which was stated as the contaminant in question. It was later determined that it was not mineral oil but mineral spirits which should have been anlayzed via 8260/8270. Therefore complete list 8260/8270 will be performed on all future samples. 1/13/2004-Vought-Received message from Scott Hammarich. Vought called Hammarich and line was busy. 1/14/2004-Vought-Called Hammarich(631-758-1580x224) and left message to return call to DEC. 1/23/04-Vought-Received well proposal from Scott Hammarich via email. 2/2/04-Vought-Spoke with DEC Sigona and Chemical Bulk Storage Inspection performed by DEC Zhao. DEC requiressubmission of updated CBS registration. Vought spoke with Hammarich and CBS being prepared for immediate submission. 2/3/04-Vought-Review of well propsal received 1/23/04. Proposal for the installation of one well in the former mop oil room/filter room and groundwater samples will be analyzed for VOCs 8260. DEC requires: 1)complete list 8260/8270 analyses due to napthalenic distillate, TCE, PCE, vinyl chloride 2)additional well at former tank line vault excavation 3)drywell closure report4)collection of deepest dry soil sample and highest PID reading and 8260/8270 complete list analysis at each well location. Additional wells may be required. Vought sent email to Hammarich with requirements. 2/12/04-Vought-Spoke to Scott Hammarich and well installation began of two monitoring wells (one near mop/oil filter room and the second well will be installed at the fuel line vault. Soil samples analyzed for complete list 8260. Samples at soil/water interface and highest PID. DEC will receive report by 3/31/04. 3/2/04-Vought-Spoke with Hammarich and TCE in MW1 is 1.4ppb, MW2 samples will be run due to high detection limits. Hammarich will send results and email additional proposed well locations. 3/2/04-Vought-Receivedemail from Hammarich 3/18/04-Vought-Reviewed email received on 3/18/04. Proposal

UNIFORMS FOR INDUSTRY (Continued) **S106123796**

for two additional wells VMW4(upgradient well) and VMW-3(downgradient well). Email also contained soil and groundwater analyticals from MW1 and MW2 installation.Groundwater analyticals show 650ppb 1,2,4-trimethylbenzene(WMW-1), 280ppb 2-Butanone(WMW-1), 180ppb 4-Isopropyltoluene(WMW-1), 1600ppb acetone(WMW-1), 4500ppb cis-1,2-Dichloroethene(WMW-1), 520ppb m,p-xylene(WMW-1), 120ppb napthalene(WMW-1), 190ppb n-Propylbenzene(WMW-1), 1400ppb p-Ethyltoluene, 320ppb vinyl chloride(WMW-1), 510ppb 3+4-methylphenol(WMW-1), 63ppb 1,2,4-trimethylbenzene(VMW-2), 21ppb 4-isopropyltoluene(VMW-2), 7.4ppb cis-1,2-dichloroethene(VMW-2), 150ppb napthalene(VMW-2), 63ppb p-ethyltoluene(VMW-2), 5.5ppb vinyl chloride(VMW-2), 240ppb 2-methylnapthalene(VMW-2). Vought spoke with Hammarich and approved additional well proposal. 3/25/04-Vought-Will backfill with RCA (crushed stone). One well installed and additional wells being installed today. 4/13/04-Vought-Received message from Hammarich. Vought called Hammarich and left message to return call to DEC. 4/15/04-Vought-Spoke with Hammarich who requested office visit for dropping off PBS registration.Well samples from four monitoring wells taken. Unsure of flow direction. Upgradient well has TCE. 4/20/04-Vought-Meeting at DEC with Hammarich, Sena, DEC Brevdo and Vought for submission of groundwater data and preliminary discussion of possibleproject management via Has Waste and BCP program. Vought sent email to Rommel with TCE, PCE and DCE concentrations for forwarding to Haz Waste group. Petroleum Remediation requirements: 1)define true groundwater 2)well installation downgradient ofVMW1 to delineate 1,2,4-trimethylbenzene, napthalene, ethylbenzene and xylenes 3)well installation at downgradient of expected source 4)surrounding area site plan 5)upgradient source information. Vought spoke with Harmarich and e-mailed requirements. 12/21/04-Vought-Received call from Sena that he wants to know further requirements to close spill. Vought returned call and left a message that site may have a new project manager. 12/28/04 File left for Randy Austin due to Product type. DEC LEAD changed from Vought to Unassigned. Rommel 1/7/05 - Austin - spill report reassigned to Sawyer, due to his prior involvement with this matter - end 1/31/06: Reviewed the spill file and addtional subsurface investigation of UFI, 129-09 Jamaica Avenue, performed by GCE. Met with Dave Smith and Jack Aversa to brief them about present status of the spill and additional subsurface report. One copy of the report added to the file. (Sadique) 12/4/06 - Austin - Reassigned to Kumar for review towards either closing spill, or possible reassignment to Remed. Section "B". - end 12/05/06-Hiralkumar Patel. review entire spill notes. as site has groundwater contamination, after discussed with DEC Austin, case transferred to Remed. section. END DECRemark - 0208119

Remarks: Start CallerRemark - 0208119 test and repair END CallerRemark - 0208119

VCP:

Program Type: BCP
Site Code: 375336
Assessment: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.
Env Problems: Groundwater samples collected throughout the site, as well on the adjacent properties to the south and west,indicate that the site is highly contaminated with chlorinated and petroleum hydrocarbons. PCE, TCE, cis-1,2-DCE and vinyl chloride were found at concentrations up to 230, 91, 7,200, and 900 μg/L, respectively. A downgradient grab sample collected off-site also had elevated concentrations. Total BTEX concentrations were as high as 932 μg/L. A floating product plume,ranging from 1" to 6.06’ in thickness, was encountered at 4 of the 12 wells on site.
Site Desc: This is a new BCP application and pertains to the Uniforms for Industry

UNIFORMS FOR INDUSTRY (Continued) **S106123796**

property located at 129-09 Jamaica Avenue, Richmond Hill, Queens County. This site is approximately 1.72 acres in size. Current use of the property is industrial. Future useof the property is residential and commercial. Known contaminants at this site are petroleum, chlorinated solvents, other VOCs, SVOCs, metals, pesticides, and PCBs. These contaminants are impacting the soil and groundwater. Soil gas is also a concern. This BCP application is currently under review and the Department of Environmental Conservation will determine the application's approval and eligibility in conjunction with the Department of Health.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Start DECRemark - 8800356 Donnague (spill reporter) contact number (516) 747-3704 no longer valid. No further information provided. 3/22/06 Contacted church regarding spill, requested call back. 4/21/06 Reverand Kneafsey (718) 849-4048 indicatedthat the tank was emptied, cleaned and filled in place with sand and that the appropriate documentation was sent to the State. The Church has since been converted to natural gas. 5/26/06 Spoke with new church Priest - Father Morales, he did not have any information regarding the spill and could not find any documentation because the spill was so old. No further information available. 09/14/06 This case was transferred from Albany to Region 2. Zhune spoke to Mary(Ph:718- 291-2540). Rev. Kneafsey is no longer working for the church. She will request Father Morales to call me. A TTF letter was sent to: Our Lady of the Cenacle 136-06 87 Av Richmond Hill, NY 11418 Attn: Rev. Morales END DECRemark - 8800356
Remarks:	Start CallerRemark - 8800356 GROSS LEAK PROBLEM DISCOVERED REPAIR UNDERWAY. END CallerRemark - 8800356

A site investigation report (SIR) is expected to be due on 07/22/06. (Yau) 06/28/06: The ceritifed letter for the owner bounced back. The post office cannot deliver to the owner's address. (Yau) 07/31/06: Received a copy of the invoice and the site investigation report (dated

MALLARD GAS BP (Continued) **S103478256**

08/11/2000) from the Gasoline and Automotive Service Dealers Association, Ltd. (Yau) 08/08/06: Tank closure report indicatedhigh level of BTEX and MTBE. Sent letter to owner through certified mail. Require owner to further delineate soil and groundwater, submit surrounding property sketch, and establish groundwater flow directions. All documents must be submitted to DEC by 10/02/06. (Yau) 10/16/06 Re-assigned from Yau to Chanda (Chanda) 10/24/06 REassign from Chanda to Tang as part of MTBE Pilot Project. (Sun) 10/30/06 Reassigned from Tang to Sun. (JS/MS) 3/19/07: MS contacted Gasoline and Automotive Service Dealers Assoc. (GASDA), who provided the name and contact info for the current property owner: Tony (718.739.6363). Tony informed the DEC that Mrs Patty Badding performed the necessary investigation and gave additional contact info. Mrs Badding stated that she was unsure of who to send the report to and will send by 3/26/07. (JS/MS) 4/2/07: MS spoke to Patty - as she needs to return to site to get surrounding property info, due date extended to 4/27/07. (JS/MS) 4/30/07: SI reportreceived and under review. (JS/MS) 5/7/2007: Based on laboratory results contained within the SIR indicating no VOC contamination in any of the 7 soil samples collected, this spill case has been closed and an NFA letter was sent certified mail tothe RP on 5/7/2007. (JS/MS) END DECRemark - 9806342

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

COLONY CLEANERS (Continued) **1004755614**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Remarks:	11/19/96 MMM: INSPECED SITE WHERE CONSTRUCTION OF AN EXTENSION TO THE BUILDING IS ONGOING. PROPERTY HAD ABOVEGROUND 275 HEATING OIL TANK THAT WAS DIVORCED

MID COUNTY MECHANICAL (Continued) **S102446622**

AND MOVED. NOT LEAKING. PROPERTY ALSO HAS SANITARY CESSPOOL - NEVER TIED INTO SEWER. CHECKED EXISTING SOIL, DARK BUT NO EVIDENCE OF CONTAMINATION.

Remark: CALLER STATES MID COUNTY MECHANICAL IS REMOVING CONTAMINATED SOIL FROM THE ABOVE ADDRESS AND USING IT FOR FILL ON A CONSTRUCTION SITE NEXT DOOR - BOTH SITES ARE OWNED BY MID-COUNTY MECH. AND THEY ARE AWARE THE SOIL IS CONTAMINATED WITH WASTE OIL SEWAGE FROM A LEACH FIELD THEY HAD RUNNING BEHIND BUSINESS

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in

AXEL ELECTRONICS INC (Continued) **1000274127**

regions and states with cooperative agreements, enforcement actions, and settlements.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Start CallerRemark - 0702426 FOUND CONTAMINATED SOIL WHILE TESTING END CallerRemark - 0702426

Remarks: Start DECRemark - 0702426 5/29/07 - Raphael Ketani. Contaminated soil was found at the site while testing was being conducted. The site is at 129-01 Metropolitan Avenue, Jamaica, NY, 11415-2819. The block and lot are 09250 and 0058. The owner is TSQ, Inc., 129-01 Metropolitan Avenue, Jamaica, NY, 11415-2819. The spilled substance was #2 oil. I tried to call up Ray Kahn of ESPO (212) 363-3775, but could only leave a message. I tried calling up Aaron Katz (646) 963-5146. I made contact with Mr. Katz. I told him who I was and why I was calling. I asked him whether he was the owner, or who owned the property. He said he would not give out that information without verifying who I am. I told him there was a report of oil being spilled at the site. He said that was not possible as the site was locked up. I told him that DEC had this information from a company called ESPO. He said he will sue them for trespassing. Mr. Katz refused to answer any other questions I asked him. After thisconversation, I sent a CSL to the above address. 5-31-07- DEC Piper spoke w. Ray. He called in spill b/c owner Katz did not want to . Ray will talk w. Katz about soil removal. 7/2/07- Report to follow shortly. 7/11/2007 Sangesland spoke toa new potential purchaser who wanted to know if there was any pollution history on this site. He is meeting with the owner and would like to know what work will be needed to clean the site up. He says the site had a history of storing #2 oil on site and parking 4 or 5 heating oil delivery trucks. 8/27/07- DEC Piper reviewed phase II. No VOC;s were detected though there were some exceedances in SVOC's. The contamiantion is limited to the surface as test pits revealed no contamiantion. Piper inspected site. Upon arrival, no odors were detected and no elevated PID readings were observed from any soils. The test pits were clean and no staining was observed in the soils other than small areas with surface, less than 1" bgs, was observed. The building owner is planning on pouring a concrete floor. DEC requires epoxy sealing of the new floor to preventvapor migration if any. Once a letter report is submitted with receipts, nfa should be granted. END DECRemark - 0702426

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: Start CallerRemark - 9513867 under ground tanks with unk petroleum or waste oil have caused soil to be contaminated-still under investigation END CallerRemark - 9513867
Remarks: Start DECRemark - 9513867 Prior to Sept, 2004 data translation this spill Lead DEC Field was "KOLLEENY" 09/08/06: Received call from "Eva" at Hydro Tech asking what needs to be done to get this spill closed. She explained there are two closed-in-place 4K tanks beneath the basement floor, and that the basement has vehicle access. I told her that soil borings should be advanced around the tanks and soil and groundwater samples taken to evaluate impacts to those media, and added that if thereis any piping to fill ports or dispensers, that should also be investigated with borings. Eva said they have already put together for their client a proposal to do 8 borings around the tanks, and that they will do a GPR survey to look for underground piping. I said that sounded good, and told her to submit the investigation results to me with a recommendation for further action. - J. Kolleeny 10/25/06: See also related spill no. 9403671. Reviewed Site Investigation Report dated October 6,2006, prepared by HydroTech Environmental and submitted on Oct. 16th. Report was prepared on behalf of potential buyer. Soil borings were advanced near oil/water separator on east end of site and near active diesel USTs on west end of site. Soil samples near oil/water separator had olfactory evidence of petroleum contamination, with PID readings up to >200 ppm, but lab results only showed exceedances for SVOCs. Groundwater grab sample was taken near diesel tanks, but not near oil/water separator which has 2 open spill cases. Sent email to Eva Jakubowski of HydroTech stating that groundwater in vicinity of oil/water separator should be investigated for potential impacts from the confirmed petroleum release. Sent 2nd email later same day requesting electronic version of Site Investigation Report, received email reply from Eva saying she will provide it. - J. Kolleeny 01/24/07: Sent email to Eva at HydroTech noting that I still haven't received an electronic copy of the investigation report, and asking if soil/GW in vicinity of oil/water separator at site have been investigated yet, as I had suggested. Received email reply same day with pdf of Site Investigation Report (in eDocs), saying soil but not groundwater in vicinity of oil/water separator has been investigated, HydroTech has submitted a proposal for GW investigation to their client (potential buyer), but he's negotiating with DOS, and asking if I could send something in writing to RP asking for GW sampling,to speed things along. I wrote back same day asking for name & address of property owner's representative. - J. Kolleeny END DECRemark - 9513867

DEC Memo: Start CallerRemark - 0613046 SOIL BORINGS SHOWED CONTAMINATED SOILS END CallerRemark - 0613046
Remarks: Start DECRemark - 0613046 3/5/07 - Raphael Ketani. I spoke with Jill Guerra (ger-ra) of GCI (631) 851-1600. She said that the contaminated soil was discovered while doing borings for a phase 2 investigation. She said that the owners are Jag Realty at 202 Atlantic Avenue, New Hyde Park, NY, 11040. I asked her for the analytical results and she FAXed them to me. I reviewed the analytical results and found that only samples SB-3 and SB-4 (of the 5 soil samples taken) had any hits. These hits were for SVOCs and only SB-3 had an exceedence of TAGM. This exceedence was for benzo(a)pyrene at 146 ppb. Based upon the analytical results provided by GCI and Ms. Guerra, I am closing the spill case. END DECRemark - 0613046

Remarks: Start DECRemark - 0003304 Prior to Sept, 2004 data translation this spill Lead DEC Field was "TIPPLE" 5/5/03 tipple sent letter to Robinswood Realty requesting cleanup documentation. 4/12/04 tipple sent letter toZ&X --new owner requesting cleanup documentation 4/16/04 Tipple updating///Zhou Weiping from X Z Holding Inc (917-224-0930 cell and 718-426-7871) met with Tipple to discuss the site. This new owner purchased this property not understanding the situation. He requested some guidance in appropriately acheiving a nfa letter for this property. 2/8/06 - Called Zhou Weiping to see if hydraulic lifts had been cleaned out. He said that he spoke with the former owner (Mr. Jeff Dreon) a month ago and was told that samples had beentaken and that he would get report from his lawyer and send. Left message for Mr. Jeffrey Dreon (516) 503-1957 4/14/06 - Called Mr. Weiping again. He said he has been working to get report from Mr. Dreon and thinks that the lawyer may be withholding report. He also says that according to fire department records, the facility never had a hydraulic lift. Anonymous caller and covered with concrete. Close. (EGH) END DECRemark - 0003304

DEC Memo:	Start DECRemark - 8909271 Prior to Sept, 2004 data translation this spill Lead DEC Field was "SUN" 04/12/04 TRANSFERRED FROM SULLIVAN TO SUN. 1/5/06: Case reassigned to Andersen. Refer to spill 88-00849. Sent assessment required letter to Nick Saltamanikas, due back March 2, 2006. 1/10/06: Spoke to Nick Saltamanikas. He is only a tenant and was not the tenant at the time of the spill. He also said that the station is now a BP gasoline station and that the tanks were relined in 1998.The current owner is: Tira Holding 138-10 Hillside Avenue Jamaica, NY 11435 Attn: Ira Katz I brought it to his

SUNOCO (Continued) **S100167792**

attention that he is listed as the current owner on the PBS Facility Information Report, not Tira Holding. 1/11/06: Resent additional additional delineation letter to Ira Katz of Tira Holding. 1/31/06: Spoke with the consultant hired by Ira Katz. He will submit a work proposal by the deadline of 3/8/06. His contant info: Bill Schlageter, fax: 516-213-8213 2/28/06: Workplan deadline extended to March 20, 2006 due to delayed receipt of Fire Department records by Bill Schalegeter of Preffered Environmental. 3/15/06: Spoke to Bill Schlageter. We decided that 8270 was not necessary because we are concerned aboutVOC contamination from the gasoline station. He said he will submit a workplan in the next couple days. 3/21/06: Reviewed workplan. Six boring locations were approved. 12 550-gallon gasoline USTs were abandoned in place and need to be registeredvia PBS. Sent letter to Louis Katz, cc Preferred Env. 5/23/06: Received site investigation report. Four soil borings conducted. Soil samples were all below TAGM. One gw sample collected. 16ppb of 1,2,4,5,-tetramethylbenzene. 70ppb of napthalene.NFA letter issued. END DECRemark - 8909271

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

DEC Memo: Start DECRemark - 0407189 send TTF ltr. 10/18/04 TJD Contractors renovating single family residence cut into 275 gallon AST with a sawzall releasing approximately 100 gallons. RP attempted to recover leaking product using buckets, then dumped contents of buckets into roll-off container in street and along property boundary in back yard along garage. FDNY responded and emptied remaining product from tank and buckets into overpack drum. Owner retained AB oil for cleanup. Entire contents of roll-off to be disposed of under manifest. AB to clean street, basement impacts and excavate contaminated soils along fenceline. AB Oil submitted disposal manifests and summary of work performed. No further action required. Spill closed. END DECRemark - 0407189
Remarks: Start CallerRemark - 0407189 SOME WENT INTO SEWER AND SOME IN BACK YARD: BROKEN TANK HAZMAT ON SCENE: DEP HAS BEEN CALLED END CallerRemark - 0407189

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

removing tanks...samples taken 6/5/02...results cameback today...690 tons of material have been removed. raze and rebuild is being done at site. END CallerRemark - 0205508

Remarks: Start DECRemark - 0205508 Prior to Sept, 2004 data translation this spill Lead DEC Field was "K FOLEY" 12/3/03 Reassigned from Vought to Foley. 12/31/03 Reviewed UST closure report received 9/02. 692 tons of petroleum impacted soil was excavated. PID readings ranged from 4.7-2036ppm. Soil samples were collected subsequent to the over-excavation to install new tank field. Post-ex soil samples identified one VOC concentration (MTBE, SW-4 at 453ppb) in excess of soil cleanup objectives. There were hits for BTEX in SW-4 and SW-5 but none detected above TAGM. END DECRemark - 0205508

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Start CallerRemark - 9809127 THEY REMOVED THE TANKS AND NOTICED CONTAMINATION AROUND THE TANK. THEY WILL LEAVE DIRT THERE AND TREAT IT IN PLACE. END CallerRemark - 9809127
Remarks:	Start DECRemark - 9809127 Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL" 4/12/04-Vought-Spill transferred from Mulqueen to Rommel as per Rommel. Transferred to Rutland During Spill Reduction Initiative. 11/02/06 Reassigned from Rutland to Sun. (JS/MS) 1/25/07 Sun/Sellberg sent letter certified mail to Mr. Stephen M. Halperin (Louhal

PETROL GAS STATION-CLOSED (Continued) **S103573276**

Properties Inc), 1144 Atlantic Avenue, on 1/25/07 requiring that the following be submitted to the NYSDEC by 2/26/07: 1.Tank closure assessment report. 2. Locations of tank and/or line test failure. 3. Subsurface investigation report, including current and historical soil and groundwater analysis. 4. Surrounding property sketch: A surrounding property sketch including property layout and usage must be submitted to NYSDEC. North arrow and scale must also be included on the site plan. If no tank closure report was prepared or no subsurface investigation was conducted before, the Department requires the following be performed and submitted: 1. Submission of a Tank Closure & Site Assessment Including Soil and Groundwater Investigation Results. (JS/MS) 3/12/07: Bill Schlagder of Preferred Environmental called and left a message. He has been retainedby RP regarding this spill. Returned call (516.357.8200) and left voice message on 3/12/07. (JS/MS) 3/15/07: Bill (cell: 917.715.0752) is compiling previous site activities and will submit work details to Berninger Environmental Inc., who will then submit SIWP to the DEC by March 30th 2007. (JS/MS) 4/2/07: Received and approved SIWP which includes: installation of 3 piesometers (GW flow), 12 borings around tank farm, 2 around pump islands, 2 around former fill ports. Approx 5 borings will be converted to temporary wells to get groundwater sample. SIR is due 5/8/07. (JS/MS) END DECRemark - 9809127

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Start DECRemark - 0306780 Prior to Sept, 2004 data translation this spill Lead DEC Field was "DEMEO" From NYC Real Estate Database, Owner is: Val Golden, 2686 Ocean Ave, Brooklyn, NY 11229-4665 Cont. Soil Ltr sent to owner 10/19/2004 New spill report came in on this site # 0407710 Since this is a former gas station site, this spill is transferred DeMeo to Rommel 10/19/04-Vought-Spill transferred from Rommel to Vought as per Rommel. Site visit by Vought due to odor complaint. According to postings site will become a Safeguard Self Storage AC covered loading area and phone number is 718-849-9600. Site also listed demolition contractor as 516-889-4714. Two DOB permits also posted. No personel onsite. One excavator onsite adjacent to soil pit and stockpiled soil covered with plastic sheeting. Contaminated soil (weathered gasoline odor) noted in bottom of excavation (approximate depth was 10' below grade). No groundwater observed and no odors noted at grade level (raining during site visit). No manways, no USTs, no fills, no vents, no dispenser islands observed. Commercial properties to east and west, train(LIRR) to south and residential to north. DEC requires: 1)Collection of soil endpoint samples 2)Collection of a groundwater sample at former tankfield 3)former locations of dispenser islands and remote fills 4)adherence to CAMP during all future excavation activities 5)submittal of disposal documentation 6)plans for new construction (vapor barriers, passive ventilation systems). Vought called David Ray(Safeguard Properties 225-768-8424) to explain requirements and for owners info and left message to return call). 10/28/04-Vought-Spoke to Levant(ATC 212-353-8280x330). Soil was removed last week. ATC was hired last week. Approx 200 yards were removed. No UST found (was removed previously), piping was also removed. Depth of excavation was 10-12'. Excavation size was 20'x30. One remote fill was found and was removed. Ambient air readings were collected due to Health & Safety and will be included in report. Highest PID reading was 5ppm. Highest PID hit was 50ppm. Four endpoint samples collected (two bottom and two sidewall). Groundwater sample from below tankfield and one sample from remote fill port will be collected. Report will be submitted by 12/15/04. No complaints from neighbors ("neighbor who complained no longer resides there)". Adjacent residence was abandoned and locked by NYFD due to DOB violations. New residence will be slab on grade. 1/6/05-Vought-Received call from Nicole (ATC

FMR GAS STATION (Continued) **S106000033**

212-353-8280x372) and she will include air monitoring readings and DEC will receive report by 3/1/05. 6/8/05-Vought-Reviewed Remedial Activities Letter Report (ATC Associates Michael Morris) dated 3/1/05. Site was formerly an automobile repair facility. "Additionally, ATC screened the ambient air for VOCs with the PID during excavation activities. No evidence of VOCs were detected in the ambient air during soil excavation activities." Ambient air data submitted with report. Five endpoint soil samples were collected. A total of 500.55 tons of impacted soil was removed from site. Groundwater sample attmepted using Geoprobe and refusal on seven attempts.At a second soil removal effort an additional 1042 tons of soil was removed. Report requests no further action. Soil analyticals show no TAGM 4046 Required Soil Cleanup Objective exceedence. DEC requires: 1)collection of groundwater sample 2)submission of soil samples from remote fill port. Vought sent letter requiring same. 1/24/06 - Obligado - Called Michael Morris, ATC, to inquire about ground water sample. Said the client never authorized the work. After file review, determine that site is very close to jamaica public supply well. Call back Michael Morris and tell him his client needs to get ground water sample immediately. Send letter with due date of 3/1/06. 2/22/06 - Obligado - Email Michael Morris, drilling scheduled for March 7, requests additional time for sampling and report preparation. Also remote fill location already excavated during construction. DEC grants extension to 4/14/06, and asks for documentation in report that remote fill has already been excavated. Also asks for email of site plan. 3/10/06 - Obligado - Phone call from Sharisa from ATC (917-371-7772) who is field representative doing drilling. Said the proposed boring locations were not feasable due to above ground subway line along Jamaica Avenue. Also said the proposed site sampling plan is innacurate and the tanks were further to the south and aproximately 30 ft from 120th Street. So the proposed locations were upgradient and cross gradient. Sharisa proposed moving the boring location to the south in a parking lot behind the new building, which would be about 30 ft downgradient of the former tankfield. Agreed with her. Asked her to take split spoon samples every 5 ft until 45 ft bgs, then take continuoussamples until encountering ground water. GW anticipated at 50 ft bgs. 4/25/06 - Obligado - Review Remedial Investigation Report dated April 17, 2006. Downgradient monitoring well was installed and sampled. Only 1 VOC - Chloroform at 9.7 ppbdetected. Requests closure based on all tanks and contaminated soil removed, 1500 tons of soil removed, no ground water contamination related to petroleum encountered in downgradient well. After discussion with DEC Sun issue NFA and sent closure letter. END DECRemark - 0306780

Remarks: Start CallerRemark - 0306780 CALLER STATES BUSINESS HAD WASTE OIL TANK REMOVED AND SOIL APPEARS CONTAMINATED - NO CLEAN UP END CallerRemark - 0306780

Remarks:	Start DECRemark - 0204775 Prior to Sept, 2004 data translation this spill Lead DEC Field was "FOLEY" Con Ed e2mis #144387: T.WILLIAMS #17355 OF SUB STA OPS DOING STATION INSPECTIONS REPORTS FINDING THAT ON BUS RUN OF FRD 18001 CAN LEAKED APPROX 1 PINT OF NON PCB DIELECTRIC FLUID ONTO BLUESTONE. NO SEWERS OR WATERWAYS APPEAR AFFECTED, NO FIRE OR SMOKE INVOLVED, NO INJURIES OR PRIVATE PROPERTY INVOLVED. PADS PLACED TO CONTAIN LEAK. CLEANUP BY MAINTANCE TO BEGIN IMMEDIATLY. MAINTANCE TO MAKE REPAIRS. BLUESTONE TO BE REPLACED. 8/05/02 15:35 HRS. -- T. WILLAMS REPORTS CLEANUP COMPLETE. 8/6/02 11:11hrs As per written documentation from S. Cataro, the cleanup supervisor, on 8/5/02 from 1420 to 1545, M. Laino and M. Passerelli removed/recovered all liquids and solids. They used absorbants to remove any residual fluids and also removed all visible traces of oil. The affected area was washed and contaminated soil/bluestone was excavated. All generated waste was placed in a 15gal drum. Maximo #171181 was issued to capture all repair work. UPDATE 11/7/05 W.O. 171181 indicates that work was completed on TR#5, 12/9/2003. Mechanics M. Lanino #86155, M. Passarelli # 85799 and E. Hendrickson #86445 made the rapairs. Thisincident can be closed. Also verified with Jamaica Substation Operator Spence that TR#5 bus run not leaking at this time. END DECRemark - 0204775

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Start CallerRemark - 9907817 10 drops to bluestone - case #128076 END CallerRemark - 9907817
Remarks: Start DECRemark - 9907817 Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL" DEC Inspector Notes: 6-6-01 Foley and Rodriguez inspected Transformer #4. Filter on gas detector requires outage for repair. Some bluestone underneath leaking equipment was found stained. (KMF 6/13/01) 4/12/02 <10 stained surface bluestone to be addressed under SSO's committment letter to DEC on 2/20/02. 8-7-02 Foley and O'Connell inspected transformer #4. Pending repairsand remediation. (KMF)
Con Ed e2mis #137956: 6-29-01 Original e2mis #128076 was voided. Substation Operator, L. Machi, doing inspection and found filter on gas detector leaking approx 1 drop every 10 minutesonto bluestone. Placed diapers to contain leak. Also wet area around throat of transformer, did not hit ground. Diapers placed under transformer. 7-18-02 1354hrs Incident number 109597 has been closed since it pertained to the old unit thatexisted in bank #4. All future remediation will be captured under this incident. 4-12-02 Steve Cataro, supervisor, reports during substation inspection historic contamination was found on bluestone in/around transformer #4. By visual inspection, the surface layer of the bluestone appears to be less than 10 stained/discolored. Contamination may be related to the initial spill report. A station remediation plan will be prepared to determine the priority order for addressing this and other historic incidents as per SSO's letter to NYSDEC dated FEbruary 20, 2002. Housekeeping and maintenance activitied, as required, will be documented. Maximo #105747. 7-30-02 07:54hrs As per R. Betancourt, cleanup supervisor on 7/16/02 from 0800to 1500hrs, Mills and Adamo removed and recovered all liquids and solids. Used absorbants to remove residual fluids and removed all visible traces of oil. They washed the stained areas and sealed the leak. END DECRemark - 9907817

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Start DECRemark - 8907942 Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL" 4/12/04-Vought-Spill transferred from Sullivan to Rommel as per Rommel. 3/22/06 Contacted spill contact number (718) 257-8470 - number for tank supplier. Spoke with Andy Turoff and requested information regarding spill. 4/21/06 Contacted Mr. Turoff and left another message requesting spill information. Letter compiled for Owner (Richard Lilavois - phone # not listed). 5/9/06 Spoke with Mr. Lilavois - property has been converted to Dunkin Donuts. Mr. Lilavois requested that I contact Gasertera. Left voicemail for Lou Preselone. 5/26/06 Received call from Steve Muller - Advanced Site Restoration (consultant for Gasertera). 6/13/06 Notified by ASR that the site is associated with a current spill #9505050 which ASR is working with DEC to investigate groundwater at site. According to information for spill #9505050, the two 550 gallon tanks identified with this spill have been removed and post excavation sampling has been completed. This spill number has been closed and referred to the current spill number 9505050. END DECRemark - 8907942
Remarks:	Start CallerRemark - 8907942 TWO 550 GAL SIPHONED TANKS. FIRST TANK 15:30 HRS SUPER UNLEADED LEAK RATE-0.34GPH. SECONDTANK 17:06 HRS UNLEADED LEAK RATE-0.51GPH. THEY WILL POSSIBLY EXCAVATE AND RETEST. END CallerRemark - 8907942

DEC Memo: Start CallerRemark - 9901679 LEAK RATE IS 50 GAL AN HOUR-CONTAINMENT IS UNKNOWN-NO CONTACT WITH WATERWAYS-CORRECTIVE ACTION - FEEDER REMOVED FROM SERVICE AT 1008 HRS-TRANSMISSIONS OPERATIONS GRP AND GAS CORROSIONS GRP ARE PATROLING THE RUN OF THEFEEDER INSPECTING MANHOLES. END CallerRemark - 9901679
Remarks: Start DECRemark - 9901679 05/03/07 - See e-docs for Con Ed report detailing cleanup and closure. Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL" 5/13/99, 4:10 PM: ERT Dave Perez - inventory discrepancy at JamaicaSubstation pumphouse. Crews inspecting manholes. Also notified NYCTA to inspect subways in Queens Blvd. area. (JHO) 5/20/99, 10:45 AM: John Hegerty (Con Ed TO) - leak has not been found. Feeder is being drained of oil and will be pressurized withair and PFT gas. Until feeder is repaired and re-pressurized with oil, they will not be able to make accurate estimate of leak amount. (JHO) 6/16/99: leak located at 64th Rd and 108th St. Met at site with Ray Turkin and Gerry Matterazo (TO), andJoe Floryshak (Con Ed Remediation). Excavation is approx. 6 feet deep. Visible contamination on floor of excavation. I requested additional 2 feet be excavated before samples collected. Matterazo said he wanted to install a soil boring to determinedepth of contamination. They are unable to excavate much deeper due to shoring issues. I agreed with the understanding that if boring shows contamination only extends another foot or two, Con Ed will have to excavate it. We agreed on the following:(1) install one 2" well (4" auger), (2) boring to extend to water table if contamination is evident through soil column, and (3) continuous sampling of soil to 10' below observed contamination, then every 5' to water table. (JHO) 6/17/99: met on-site with Joe Floryshak. MEG on-site with drill rig. According to MEG geologist, contamination is evident to the water table (approx. 18 feet below grade). Samples for lab analysis collected at (1) 2 feet below bottom of excavation (8' bg), (2) 3 feet above water table and (3) at water table. Samples to be analyzed for BTEX and dielectric fluid. A vac truck will be on-site tomorrow to develop well and allow for collection of water samples. Told Joe F to convey to Matterazzo that he can backfill excavation. (JHO) 6/22/99: Leak amount calcualted at 1503 gallons. (JHO) APPENDIX B SITE 39. (JHO) 11/14/05: e-mail from Mike Pillig (Con Ed): "In an effort to close out our historic spills I have found pertinent information regarding the incident above that may allow us to close. I have attached a report from Jacques Whitford recommending that the monitoring wells at this site be decommissioned and the spill closed out. We have not been at this location during my time here in Trans Ops but I have no information indicating that the wells were actually decommissioned. Could you review the report and advise me accordingly. If you concur with the recommendations in the report I will verify the status of the wells and decommission if necessary." (SKA) 11/22/05: e-mail response to Pillig: "MW-1 was installed pursuant to DEC Spill # 9901679 (e2mis no 124858) and MW-2 was installed pursuant to DEC Spill # 0008886 (e2mis no 134176). Both spills can be closed out based on the JW report. Please verify

FEEDER 18001 (Continued) **S106700119**

status of wells and advise me whether decommissioning is necessary prior to close out." (SKA) Response from Pillig: "These two wells were decommissioned in accordance with DEC Guidelines that were issued in April 2003.The work was completed on 6/7/2006." e2mis no. 124-858: 13-MAY-1999 @ 10:00 HRS TANK LEVEL READINGS ON FDR 1800 AT JAMACIA S/S PUMPHOUSE #1 INDICATE A DECREPANCY OF 1000 GALLONS. WITH A LEAK RATE OF APPROXIMATELY 50 GALLONS PER HOUR. FEEDER RUNS FROM JAMACIA S/S TO CORONA S/S. LEAK COMMITTEE WAS CONVENED AND FEEDER 1800 WAS REQUESTED OOE. TRANSMISSION OPERATIONS AND GAS CORROSSION TO INSPECT MANHOLES ON THE RUN OF FEEDER. TRANSIT AUTHORITY REQUESTED TO INSPECT SUBWAY TUNNELS ON FEEDER RUN. 4 TO crews sent out to check manholes along feeder run. CGO crew sent out to ride feeder route to check for any contractor damage. Feeder OOS out of sevice and on reduced pressure. Leak rate calculated at 35 gph at reduced pressure. IATC on feeder to ID 5 probe locations for installation of probe nipples. 5th crew checking probe locations for accessability of probing. Air trailer ordered for MH 7105 for 23:00 5/13. All manholes checked by 16:00 - no leak found. TO crew going to Astoria West to pick up 3000 gallons of DF500 for Jamaica pumphouse. TO crew going to Corona S/S to drop check the 3" line. Jamaica 3" line could not be checked since the connection is buried in the street. TO crew driving along feeder routeto look for signs of surfacing dielectric fluid. At 18:35 3" line at Corona passed drop check. ID's completed at 19:30. TO signed on and began probing MH22466 (Queens Blvd & 78th Ave). Preliminary indication shows towards Corona S/S. Before second reading could be taken, probe burned up. 2nd probe used. First reading shows towards Corona. Reversal of pressurization delayed because of pumphouse problems at Jamaica S/S. When reversal completed, probe at MH22466 shows leak is on Corona S/S side.Probe crew went to MH93891 (108th St & Martense Ave). At 09:00 Probe readings taken at MH93891 show leak is towards Jamaica. Probe crew went to MH22439 (Queens Blvd & 75th Ave). First indication shows no flow towards Jamaica. Reversal of pressurization held up because of clogged strainers at Jamaica S/S. At 15:00 reversal shows that leak is on the Jamaice side of MH22439. There are no other probe pits between MH93891 and MH22439. Air trailer set up with PFT at MH 7105 and started feeding max 140 psi at 16:15. Pumps at Jamaica S/S and Corona S/S shut down. Draining of feeder started at MH7109 (108th St &67th AVe) and MH 7110 (108th St & 62nd Rd) at approx 17:00. Allstate Power Vac frac tank to be delivered to Corona. At 0:500 5/15 Allstate estimates that 3000 gallons total have been drained from the feeder. On 7-3 shift CGO crew on location checking subsurface along route of feeder between probe pits 93891 and 22439. Also PFT van out making run for background check. At approx 12:00 Allstate vac truck at MH7110 full with 4000 gallons of fluid. Vac truck released and 3rd Allstate vac truck brought on location continuing to drain feeder. Frac tank sent home. Clean Harbors called to supply 2- 5000 gallon vac trucks to relieveAllstate vac trucks when full. CGO crew finished sub-surface search and found nothing. PFT van made feeder run from Jamaica to Corona to make background check - no PFT found. Drain continues. On 5/16 Allstate tanker left with 5000 gallons of drained fluid. Allstate replacement tanker moved into position and draining continued. On 7-3 shift 5/17 CGO crews to re-check sub-surface in area of suspected leak. Also PFT van sent out to run feeder route in area of suspected leak. Nothing found -either with the PFT van or subsurface checks. Draining continues. On 7-3 shift 5/18 PFT van sent out and CGO checked subsurface structures. Again nothing found. At 19:00 both drain locations stopped draining and compressed air began coming out. Drain locations shut down. Will be opened up periodically to continue drain. 2 hour drop check performed 11-7 shift 5/19 - pressure held. No leak confirmed. PFT van made run and found no signs of PFT. Low point between MH7108 & MH7109 is in intersectionof 108th St and 69th Ave. Low point between MH7109 & MH7110 is in intersection of 108th st and 64th Ave. Neither location is good for a probe pit. On 5/20 air trailer at MH7105 was replaced. CGO crew marked out

FEEDER 18001 (Continued) **S106700119**

feeder along 108th St. PFT van continues to run route - no signs of PFT found. Bar holes from Queens Blvd to Martense along 108th St installed by VNR on 5/20. PFT van checked all barholes and found no signs of PFT. Pressure bled down to 90psi and 100 psi rated flowmeter installed onair trailer. Readings taken over 11-7 shift 5/21 show no flow of air into feeder. Feeder pressure raised to 200psi on 3-11 5/21 and 500psi rated flow meter installed. Readings taken over 11-7 shift show no flow. Pressure bled down and vacuum pumps set up at MH7110, 22439 and 7105 as per S&TE procedure on 11-7 shift. Drain from MH7110 to MH12348 started on 3-11 shift 5/23. Completed 3-11 shift 5/24. Pressure reintroduced into feeder up to 90 psi and 100 psi rated flowmeter installed on 11-7 shift. At 06:30 5/25 flow meter shows leak rate of 18 CFH. PFT van sent out to run feeder route. At 20:00 hours leak rate shows 11 CFH. No signs of PFT. Van to continue to run feeder route on 11-7 shift 5/26. No sogns of PFT found. Leak rate down to 6CFH. Drain started at 7110 again. When drain of joint was finished, flow rate checked. Less than 1 CFH. Pressure bled down to 0 psi in feeder at 04:00 5/27. At 07:00 pressure will be brought back up to 90 psi. At 14:15 pressure back up to 90 psi.Flow meter shows greater than 20 CFH flow. At 14:50 signs of PFT picked up on 108th St and 65th Ave. Existing barholes checked and additional barholes requested. On 11-7 shift highest PFT reading pinpointed s/o 64th Rd. Contractor to be in at 07:005/28 to excavate. Could not excavate on 11-7 shift because of residential neighborhood. At 05:00 5/28 air pressure at 85 psi and flow has stopped. Excavation started approx 20 feet south of the intersection. Allstate notified to deliver roll-offcontainers for soil disposal. Flow meter indicates flow has stopped. Dielectric fluid contaminted soil found in excavation. At 12:30 leak found approx 30' south of 64th Rd. Excavation continues to make room for barrel. Coating removal in progress. Temp EPA ID# NYP00403807 for coating disposal. PRessure reduced to 5 psi at 14:45 to keep out moisture. Barrel will need to be 5 feet long to cover corroded area. Corrosion representative on location to investigate leak area. Leak stopped. 2" hole cut in top of pipe to facilitate flushing. Dielectric fluid in pipe. Allstate on location vacuuming up fluid in half drum. Temp clamp installed at 17:00 5/28. Barrel installation completed 03:00 5/29. ETI performed inspection of welds. Evacuation of feeder setup and started on 11-7 shift. Allstate removed 40 cubic yards of debris material from leak location. Chem Lab reports 99-05576 <1.0 ppm PCBs. Evacuation of pipe continues. Vacuum readings at MH7105 and 22439 are good but 7110 still making oil. Allstate to send vac truck on 6/2 to 7110 and connect to bottom of joint and vac out feeder. On 6/3 nitrogen trailer connected to joint in MH7105. Vacuum broken and pipe pressurized with 25 psi. Vac truck at MH 7110 draining feeder. At 08:506/5 vacuum restarted at all 3 locations. Chem Lab reports 99-05582 <0.0046 ppm TCLP Benzene in soil at leak location. On 6/7 vacuum readings at all 3 locations were unde 150 microns. On 6/8 filling of feeder began. On 6/10 feeder was filled. 18,919gallons pumped into feeder. S&TE restoration procedure followed. Made visual inspection of repair barrel on 6/13 at 08:45. TO signed off complete and feeder was returned to service at 20:46 6/13. On 6/14 an additional 5 cubic yards of material was removed from the excavation for cleanup purposes. S&TE working on total loss figures. On 6/16 meeting at leak location held with Jane O'Connell (DEC), Joe Floryshak, Ray Turkin, Jerry Materazzo and MEG geologist and crew. WEll to be installed andsamples taken. on 6/17 well installed by MEG. Contamined soil was found 18 feet deep. Jane O'Connell was on site during well installation and gave permission to backfill after well was installed. Well pumped out on 6/18 and MEG removed 38 gallons ofliquid from well. No significant amount of dielectric fluid was found. Sample of water taken by MEG for DF and BTEX analysis. Monitoring schedule to be set with DEC. On 6/18 the site was backfilled and base concrete poured. On 6/22/99 asphalt was poured over leak site and street restored. CSD and S&TE report total loss of fluid from the feeder was 1503

FEEDER 18001 (Continued) **S106700119**

gallons. On 9/1/99 and 10/20/99 MEG reported to the location and measured water table and product in recovery well. END DECRemark - 9901679

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

CON EDISON - JAMAICA (Continued) **1001489054**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo:

E2MIS 106957 I/R #106957 ABOUT 6:35PM OPERATOR CLOSED RECIRC VALVE FOR 3W F/O PUMP IN ERROR. INCREASED PRESSURE BLEW PLUG FROM RELIEF VALVE RESULTING IN APPROX 25 GALS OF OIL SPILL ON T/F SURFACE & IN MOAT. SPILL WAS CONTAINED. On 5/1/97 approximately 25 gallons of No.6 Fuel Oil leaked from an openend on No.3 West Fuel Oil Pump pressure relief valve as a result of an operator error. No.3 West Fuel Oil Pump was in service recirculating back to No.3 tank. The pump 8" discharge valve and 6" recirculation valve were both open. At 1630 hrs. theTank Farm Operator was in the process of setting up the valving on No.3 West Fuel Oil Pump to supply oil to the South Steam Station and High Pressure Boiler House. The operator closed both the pump discharge valve and recirculation valve to establish the proper fuel oil pressure prior to supplying the system. The operator failed to ensure that the pump strainer drain valve, which drains back to the tank, was open prior to closing the 2 valves to prevent over pressurization of the system before the proper pressure could be established using the pump discharge pressure control valve which dumps oil back to the tank to maintain the pressure. As a result of the operator failing to open the strainer drain valve and closing the pump discharge and recirculation valves, the system over pressurized and the pump safety relief valve lifted relieving the pressure back to the tank. A 3/4" plug on the relief valve was either loose and blew out or was missing and when the

JAMAICA SUB STATION (Continued) **S102239795**

safety valve lifted, approximately 25 gallons of No.6 oil leaked out of the open end on to the tank top concrete floor and into the gutter system, which drains into the tank moat, before the operator could relieve the pressure using the strainer drain valve. . Theoil congealed on the floor and in the gutter system and only 1 gallon of oil actually entered the moat. The oil was contained on the tank top using pads and absorbent material prior to being cleaned up by Clean Venture. The safety valve was replaced while No. 3 tank was out of service for inspection and repair and the tank had just been put back into service. Inspection of the plug hole in the safety valve showed the threads to be in good condition an no evidence of rust on the threads. If the plug was missing there should have been some rust since it is exposed to the weather. This leads me to believe that the plug was installed but by only 1 or 2 threads. The plug however could not be located and therefore it is uncertain if the plugwas loose and blew out or if the plug was never installed. The operator was interviewed concerning the incident and was given a documented formal interview. Clean Venture arrived on site at approximately 1100 hrs and scraped up and high pressure washed the piping and floor in the vicinity of the spill. Oil within the moat was cleaned using absorbent pads and socks. Staining on the tank wall was wiped clean. Clean Venture returned on 5/7/97 and completed clean-up of the congealed oil in the gutter system adjacent to No.3 West Fuel Oil pump. END DECRemark - 9701408

DEC Memo:	Start DECRemark - 0110154 Prior to Sept, 2004 data translation this spill Lead DEC Field was "RODRIGUEZ" E2MIS #141007 NOTES: 22-JAN-2002 17:05 HOURS: WHILE ON LOCATION FOR INSPECTION FOUND APPROXIMATELY 2' X 2' NON-PCB 138 KV DIELECTRIC FLUID DRY STAIN ON SOIL AROUND FILL PORT OUTSIDE THE FENCE OF JAMAICA S.S. FOR PUMO HOUSE #2 FROM SPILL OPERATION. NO WATER INVOLVED. SPILL IS NOT CONTAINED. NO SAMPLE TAKEN. CLEANUP PENDING CREW AVAILABILITY. 6-19-02 1057hrs S. Cataro, cleanup supervisor reports that on 1/23/02 from 0800hrs-1000hrs, Passerelli used absorbant to remove any residual fluids. Removed all visible traces of oil, washed stained areas, and excavated all contaminated bluestone and soil. THe generated waste was placed ina 15gal drum. 7-18-02 1424hrs A permanent containment system was installed to prevent future leaking. 12/01/02 1700 hours As per request of the NYSDEC, subsequent to an inspection conducted 8/7/02, Clean Venture Inc contractors were securedto vactor out more bluestone from underneath the fill port for pump house #2. (5) drums of bluestone /soil were removed. The waste was analyzed and found to be nonhazardous as per LSN 02- 10689-004 to -006. Results posted below. Incident will be resubmitted for closure. It should be indicated that not all 5 drums of soil removed were of contaminated soil. The job was competitively bid to remove a 2' x 4' x 3' area of soil. The area around the fill port had been cleaned prior, and only exhibited superfiscial contamination around the edges of the piping prior to excavation. DEC Remarks:	Con Ed e2mis Notes: 11-21-99 Senior Station Operator reports while filling new transformer with oil, 5 gallons spilled from tap changer down side of transformer onto ground. Bluestone under transformer was previously removed prior to installation of new transformer. 11-24-99 Construction Supervisor confirms telephone conversation that the cleanup was completed at about 1400hrs. The cleanup entailed removing residual fluids and visible traces of oil absorbants, washing stained areas, and excavating contaminated soil and bluestone. Liquid sample taken indicates PCB count of <1ppm. Source of leak was an overpressuri ed line, and there is no more oil leaking at this time. No repairs necessary.
Remark:	EMPLOYEE SPILLED OIL WHILE FILLING TRANSFORMER - NON PCB OIL - CLEAN UP IN

DEC Remarks: DEC Inspector Notes: 6-6-01 Foley and Rodrigue inspected A phase on feeder JKG01. PT fuse did not appear to be leaking. Cleanup had been completed on 3/21/01. Pads were underneath A phase on bluestone. Larry Machi stated that was a precautionary measure. Foley requested that pads be removed and any contaminated bluestone found be removed. KMF 6/13/01) Con Ed e2mis 133195 Notes: 9-5-00 1/2pint dielectric fluid on bluestone from PT fuse A-phase on feeder JKG01. PT was moist but is not leaking now. 1-17-01 Upon visual inspection, the area was found to be clean and the PT was not leaking. 3-28-01 Based upon phone conversation with station supervisor, confirmed that no samples were taken due to the fact that the JKG01 is a newer unit and oil is non-PCB. 3-30-01 As per hardcopy documentation provided by Demato, cleanup was completed on 3/21/01. Contaminated bluestone/soil was excavated and new marriage roll was put down.
Remark: 1/2 qt oil onto bluestone. clean up completed by con ed crews. con ed 133-195. pt fuse a phase feeder jkg01

DEC Remarks: According to Sal Bufamonte, System Ops Manager, the leaking feeder 18002 had been out-of-service for phase regulator flow maintenance. The feeder tank located at Jamaica Substation 137-30 91st Ave) showed a loss of 800 gallons 1,300 gallons total none of which has been recovered). The pressure on the line was decreased from 200 psi to 70 psi when the leak was detected. The pressure decrease temporarily stopped the leak. In an attempt to locate the leak Con Edison fro e the pipe one-quarter of the way to Corona S/S 53-49 99th St.) using free e pits and tested the cable with PFT tracer gas. In addition, Con Ed attempted using sensing equipment and Brookhaven National Lab to locate a source. However, the source of the leak wasnot identified. Con Ed believes that the moisture barrier tape in contact with dielectric fluid may have clogged the source. Sal Bufamonte indicated that once the regulator flow maintenance on the feeder was completed the feeder would be put back in service and closely monitored. The DEC indicated that this may not be the best approach. By 11/2/95, up to 1400 gallons leaked. No product recovery. Leak stopped on its own.

Remark: FEEDER TANK THAT FEEDS UNDERGROUND CABLE. TANK IS MISSING 800 GALS DIELECTRIC OIL. UNKNOWN WERE IT HAS GONE. IN PROCESS OF LOCATING AT THIS TIME

Remarks:	Start DECRemark - 0202434 Prior to Sept, 2004 data translation this spill Lead DEC Field was "RODRIGUEZ" Con Ed e2mis #143209: 6/6/02 1100hrs Machi SSO Jamaica Substation reports Pete Sudol reported to him that he found 1qt dielectric fluid lekaed from fdr JKG01. A phase on to framing and bluestone. 6/12/02 1108hrs As per written documentation from S. Cataro on 6/6/02 from 12:00 noon to 13:30hrs, crew removed/reocvered all liquids and solids. THey used absorbants to remove reidual fluids and removed all visible traces of oil. The stained areas were washed and all contaminated soil/bluestone was excavated. The generated waste was placed in a 55gallon drum. Engineering control of marriage roll and spill containment pools wereleft underneath the leak. An outage will be required to repair or replace the A phase pothead. Maximo #0000105765 was issued to capture the repairs. The A- phase PT on JKG01was replaced on 9/28/02. DEC Inspector Notes: 8/7/02 O'Connell andFoley inspected substation with Joe Susco, Pete Sudol, Walter Kraker, Al Butler, and station operator Steve Cataro. E2mis reports were provided for incidents to be reviewed during inspection. END DECRemark - 0202434

DEC Memo: Start CallerRemark - 0006641 leak was from feeder 18001 a phase pothead. repairs are pending de-energizing. con ed # 133201. END CallerRemark - 0006641
Remarks: Start DECRemark - 0006641 Prior to Sept, 2004 data translation this spill Lead DEC Field was "FOLEY" DEC Inspector Notes: 6-6-01 Foley and Rodriguez inspected feeder 18001. 'A' and 'C' phases both leaking. Equipment still oily. Pads are down.Awaiting outage for repairs.(KMF 6/13/01) 8-7-02 Foley and O'Connell inspected feeder 18001. Both phases appear to have been repaired. No leaking equipment. Con Ed e2mis #133201: 9-5-00 1059hrs A phse pothead leaked 1 pint of oil onto bluestone. Area of bluestone has been cleaned and diapers have been placed. Repairs to pothead will be made on a feeder outage. Splicer from Transmission Operations inspected fdr 18001 on March 24, 2001 and found C phase oil line/filter oozing. Appears that there was an attempt to make a repair. The area under the structure was contained with no evidence of oil drops. The A phase termination also needs to be cleaned and retorqued. Outage requested to conduct repairs. 3-30-01 As per hardcopy documentation provided by Demato, cleanup was completed on 3/23/01 at 1000hrs. Contaminated soil/bluestone was excavated and new marriage roll was put down. Feeder oil is non-PCB. 6-11-02 1415hrs As per e2mis incident #141698, feeder 18001 pothead exploded. It was cleaned up and repaired. All information is captured underneath that incident number. SSO Supervisor Steve Cataro reports that all 3 phases (potheads) were replaced by TO. END DECRemark - 0006641

DEC Memo: Start CallerRemark - 0003728 transformer in substation leaked 1 gal fluid to bluestone and 1 qt on pad - history shows less than 1 ppm pcb - samples taken and clean up pending - con ed #132047 END CallerRemark - 0003728

Remarks: Start DECRemark - 0003728 6-6-01 Foley and Rodriguez inspected Transformer #2. Leak is still active and requires an outage for repair. (KMF 6/13/01) NOTE: This is the "Master Spill Number" for Transformer #2. It is to remain open until all repairs on this equipment and remediation are completed. (JHO, 3/23/06) Con Ed e2mis #132047 (master):
6/23/00 19:00 hrs. John McClean #21159, Substation Operator, reports that at 18:40 hrs. found spill from Transformer #2 in Jamaica Substation -- approx. 1 gal. oil leaked from conservator tank onto bluestone & approx. 1 pt. oil leaked from adjacent valve onto concrete pad. Areas affected are approx. 8 ft. apart and on same side of transformer. Spill was contained with absorbent pads. No

JAMACIA SUB STATION (Continued) **U003074823**

sewers or waterways affected. Placed env. stop tag #170-170 by conservator tank and #170-162 by valve. This is a new transformer but he did know PCB count at this time. He notified his supervisor who will have Substation Maintenance crews respond to make repairs and clean spill. 6/26/00 20:00 hrs -- J. McClean reports that he spoke with Substation Operations shift manager Carlos Vega who informed him that the PCB count for this transformer is known to be <1 ppm. Icalled CIG and gave update to R.Roach. 16-Jan-2001 21:30 E-mail from Angelo Cnapich indicates that incident was cleaned up on 6-27-2000 at 1500 and repair requires outage. 12-APR-2002 Steve Cataro, Supervisor, reports during Substation inspection historic contamination was found on bluestone in/around transformer vault 2. By visual inspection the surface layer of the bluestone appears to be 50-75 stained/discolored. Contamination may be related to the initial spill report. A station remediation plan will be prepared to determine the priority order for addressing this and other historic incidents as per SSO's letter to NYSDEC dated February 20, 2002. Housekeeping and maintenance activities, as required, will be documented. Maximotag # 146087. UPDATE 7/17/02 1400 hours From 5/13/02 to 6/28/02 there was a construction project conducted that required the complete excavation of the area around the transformer pad of Bank #2 for the purpose of installing a concrete moat. Theexcavation work was performed by Allstate Power Vac. This has been completed and all the oily bluestone/soilremoved. NYSDEC is scheduled to inspect the excavation, which can no longer be expanded due to stability concern with the transformer foundation. Post excavation samples were taken using a grid provided by NYSDEC and the results are posted below. Lab Seq #s 02-06234-010 to 02-06234-012 indicate all results less than the MDL for each respective substance. The highest MDL being <1200 ppm for Sun 6 Cable Oil. e2mis no. 147290 (sub): 2/25/03 15:05 HRS. T. WILLIAMS #17355, SR. SUBSTATION OPERATOR AT JAMAICA SUBSTATION, REPORTS AT 14:30 HRS. FOUND APPROX. 1 QT. NON-PCB OIL SPILLED FROM TRANSFORMER #2 ONTO CONCRETE PAD AND BLUESTONE. TRANSFORMER IS STILL LEAKING APPROX. 1 DROP EVERY 45 SECONDS. INITIAL SPILL CLEANED. ABSORBENT PADS PLACED. MAINTENANCE RESPONDING ON NEXT SHIFT TO MAKE REPAIRS AND COMPLETE CLEANUP. 2/26/03 13:00 As per station supervisor S Cataro, on 2/25/03 from 15:00 to 15:30, T. Williams # 17355 and W. Kuss # 03245 removed/recovered all liqid/solids. They used absorbents to remove all residual fluids, leaving no visible traces of oil. The stained areas were washedand a drip plan was placed as engineering control. The generated waste was solid and placed in a 15 gallon drum. The transformer group is set to look at doing the repair, all such repair will be captured in Maximo # 0000197962. e2mis no 156946 (sub): 1/22/2005 10:00 HRS. R. SPENCE #13170, SR. SUBSTATION OPERATOR AT JAMAICA S/S, REPORTS AT 09:40 HRS. FOUND OIL LEAKED FROM TOP OF TRANSFORMER DOWN SIDES AND ONTO BLUESTONE CONTAINED IN A MEMBRANE-LINED CONCRETE MOAT. SOURCEAPPEARS TO BE THE SUDDEN PRESSURE RELIEF DEVICE ON TRANSFORMER -- THEY WILL VERIFY THIS WHEN THEY ARE ABLE TO GET ON TOP OF TRANSFORMER. SPENCE ESTIMATES APPROX. 4 GAL SPILLED BASED ON WHAT HE CAN SEE ON SIDES OF TRANSFORMER AND ON BLUESTONE. SPILLIS CONTAINED. NO SEWERS OR WATERWAYS AFFECTED. NO PRIVATE PROPERTY AFFECTED. NO FIRE OR SMOKE INVOLVED. DIELECTRIC RELEASE TAG # 170-0022 WILL BE PLACED. CHEM LAB HAS BEEN NOTIFIED AND WILL BE TAKING AN OIL SAMPLE FOR PCB TESTING. CLEANUP PENDINGPCB RESULTS FROM CHEM LAB. UPDATE 1/24/05 1200 Hours SSO Supervisor Anthony Locasio reports that spill was cleaned up 1/22/05 at 1200 hours by T Group Mechanics Avarez, Benn and Lee. Supervisor was Willy Rivera. Cleanup was performed using Simple Green, pads and approx 1/4 of a 55 gallon drum of bluestone was removed. The leak is currently being contained and monitored. The repair is pending an equipment outage. MAXIMO 294510. END DECRemark - 0003728

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Start CallerRemark - 0613140 AN AUTOMATIC DELEIVERY CUSTOMER MUST HAVE HAD SOMEONE ELES FILL TANK WITHOUT TELLING OIL COMAPNY AND SOME LEAKED OUT: ALL CLEANED UP END CallerRemark - 0613140
Remarks: Start DECRemark - 0613140 3/7/07 - Raphael Ketani. I spoke to Rich Turchiano of Madison Oil (718) 444-3400. He said that his driver tried to deliver oil, but the whistle cut out quickly-he was only able to deliver about 13 gals. He believes someoneelse delivered oil and had filled up the tank. So a little oil seeped out of the tank through the guage. He said that his driver sucked out the excess oil so that the guage wouldn't leak and put down absorbent on the floor next to the tank. He saidthat everything got cleaned up. Based upon my conversation with Mr. Turchiano and the small size of the spill, I am closing the spill case. END DECRemark - 0613140

DEC Memo:	Start DECRemark - 9100059 This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. This spill site cleanup hase been consolidated under Spill No. 9100059. 7/98 Tank excavation assessment report prepared by GSC. 8/13/04 Received closure request letter from GSC. The spill number was due to a tank test failure. The tanks that failed the tightness test were closed and removed 12/97. In 12/97, six USTs were closed and removed. Five 4000gal single-walled gas USTs, one 1200gal single-walled fuel oil UST and one 550gal single-walled waste oil UST and piping was removed. Based on elevated PID readings from the soil within the former tank excavation, spill #9710432 was opened. A total of 4175 tons of impacted material was removed from the site. Post-ex soil samples were collected and analyzed for VOCs and SVOCs. The sample results were all below TAGM guidance levels. A closure letter was submitted by Exxon Company on 1/28/99. Subsequently, spill #9710432 was closed. 3/8/05 NFA issued. (KMF) Bureau B, unassigned, due to low priority. Transferred from R-2 on April 27, 2005. Formerly R-2, unassigned. END DECRemark - 9100059

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V

DEC Memo: Start CallerRemark - 0600208 water in a diesel pump: tyree will pump out END CallerRemark - 0600208
Remarks: Start DECRemark - 0600208 4/10/2006 Sangesland spoke with Melissa Gliden of Cumberland Farm Safety Dept. She said the spill appeared minor, but she hasn't received the "close out" paperwork yet from the field rep. When she gets it, she'll send ita closure request to the DEC. 6/14/2006 Sangesland reviewed the "closure document" submitted by Melissa Glidden of Cumberland Farms. Spill appears to have been minor and was taken care of by Tyree. Spill Closed 4/17/06 - Raphael Ketani. I spoke to Ms. Gliden and she said that the description of the problem was water in the diesel sump. She said that she has a stack of closure paperwork on her desk and she send the closure report to Mr. Sangesland of Spills. END DECRemark - 0600208

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource

EXXON DIV OF CFI #70300 (Continued) **1004757676**

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D009	MERCURY
D035	METHYL ETHYL KETONE
F005	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 08/09/2007
Date Data Arrived at EDR: 09/05/2007
Date Made Active in Reports: 10/11/2007

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 08/27/2007

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/23/2007
Date Data Arrived at EDR: 06/20/2007

Last EDR Contact: 12/06/2007
Next Scheduled EDR Contact: 03/17/2008
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

RCRA: Resource Conservation and Recovery Act Information

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

STATE AND LOCAL RECORDS

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2005
Date Data Arrived at EDR: 06/15/2007
Date Made Active in Reports: 08/20/2007

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

LIRR2
127-90 89TH STREET
RICHMOND HILL, NY 11418

TARGET PROPERTY COORDINATES

Latitude (North):	40.69929 - 40° 41' 57.4''
Longitude (West):	73.82258 - 73° 49' 21.3''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	599475.2
UTM Y (Meters):	4505831.5
Elevation:	59 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	40073-F7 JAMAICA, NY
Most Recent Revision:	1994

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

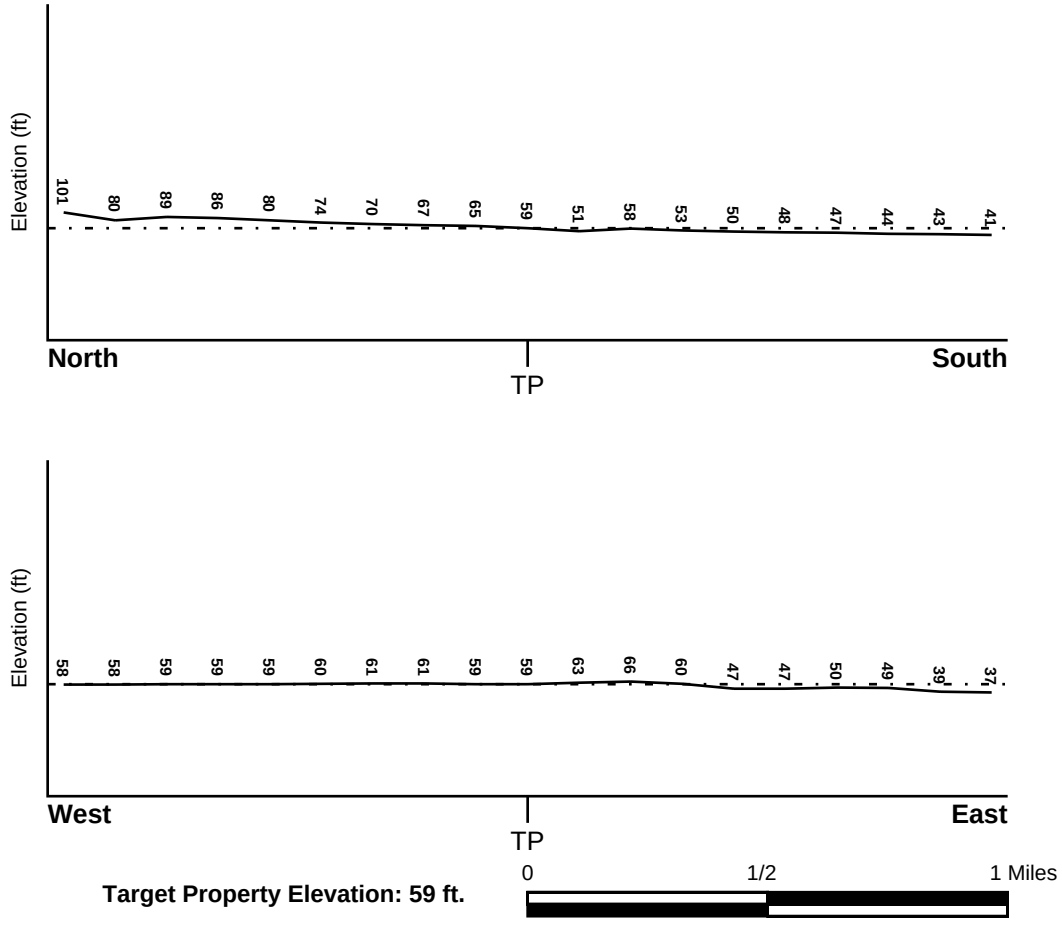
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 59 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
QUEENS, NY	Not Available

Flood Plain Panel at Target Property: Not Reported

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
JAMAICA	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Pleistocene
Code:	Qp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Total Maps: 29

TRC Environmental Consultants (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report AS IS. Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

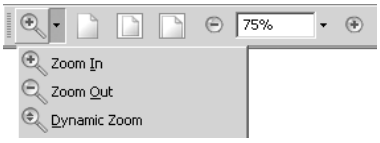
USER'S GUIDE

This User's Guide provides guidelines for accessing Sanborn Map® images and for transferring them to your Word Processor.



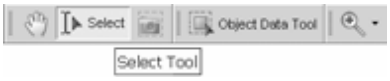
Reading Sanborn Maps

- Sanborn Maps document historical property use by displaying property information through words, abbreviations, and map symbols. The Sanborn Map Key provides information to help interpret the symbols and abbreviations used on Sanborn Maps. The Key is available from EDR's Web Site at: http://www.edrnet.com/reports/samples/key.pdf

Organization of Electronic Sanborn Image File

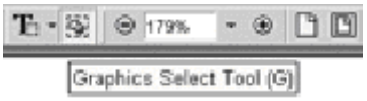
- Sanborn Map Report, listing years of coverage
- User's Guide
- Oldest Sanborn Map Image
- Most recent Sanborn Map Image

Navigating the Electronic Sanborn Image File



1. Open file on screen.
2. Identify TP (Target Property) on the most recent map.
3. Find TP on older printed images.
4. Using Acrobat® Reader®, zoom to 250% in order to view more clearly. (200-250% is the approximate equivalent scale of hardcopy Sanborn Maps.)
   A. On the menu bar, click "View" and then "Zoom to..."
   B. Or, use the magnifying tool and drag a box around the TP

Printing a Sanborn Map From the Electonic File



- EDR recommends printing images at 300 dpi (300 dpi prints faster than 600 dpi)
- To print only the TP area, cut and paste from Acrobat to your word processor application.

Acrobat Versions 6 and 7

1. Go to the menu bar
2. Click the "Select Tool"
3. Draw a box around the area selected
4. "Right click" on your mouse
5. Select "Copy Image to Clipboard"
6. Go to Word Processor such as Microsoft Word, paste and print.

Acrobat Version 5

1. Go to the menu bar
2. Click the "Graphics Select Tool"
3. Draw a box around the area selected
4. Go to "Menu"
5. Highlight "Edit"
6. Highlight "Copy"
7. Go to Word Processor such as Microsoft Word, paste and print.

Important Information about Email Delivery of Electronic Sanborn Map Images

- Images are grouped intro one file, up to 2MB.
- In cases where in excess of 6-7 map years are available, the file size typically exceeds 2MB. In these cases, you will receive multiple files, labeled as "1 of 3", "2 of 3", etc. including all available map years.
- Due to file size limitations, certain ISPs, including AOL, may occasionally delay or decline to deliver files. Please contact your ISP to identify their specific file size limitations.

1.0 INTRODUCTION

This report presents the findings of an Additional Subsurface Investigation at the Uniforms for Industry property located at 129-09 Jamaica Avenue, Richmond Hill, New York 11418 (the Property), conducted by G. C. Environmental, Inc. (GCE) in accordance with the Consulting Services Agreement signed prior to initiation of the investigation, and GCE Proposal No. 05006.

1.1 Purpose

The main objectives of this Additional Subsurface Investigation are:

- To obtain additional information concerning the extent and nature of current groundwater contamination plume(s) below the Site;
- To obtain soil quality data in selected areas of the Site; and
- To offer recommendations for further investigation or corrective action, if warranted.

1.2 Site Background

The Site is located at 129-01 Jamaica Avenue, Richmond Hill, NY 11418. The building was formerly owned and operated by Vortex Laundry, which utilized a petroleum dry cleaning machine during the 1930's through 1950's. Uniforms for Industry (UFI) acquired the property in the 1950's and conducted laundry operations with limited dry cleaning operations (including use of tetrachloroetylene from 1995-98) through November 2002, when all operations were ceased.

The Site consists of an approximately 1.72 acre irregular-shaped parcel of land and is developed with two (2) interconnected one (1)- to two (2)-story vacant industrial buildings, hereafter referred to as the "Main Building" and the "New Building", located on the central and southeastern portions of the Site, respectively. The on-site facility, constructed of brick, steel, wood and concrete in 1929 and expanded several times in the 1950s and 1960s with the New Building constructed in 1991, occupies approximately sixty-five percent (65%) of the Site. The remainder of the Site consists of gravel-lined land located on the western portion of the Site and adjacent to the eastern exterior wall of the on-site facility, concrete-paved land located on the western and eastern portions of the Site and adjacent to the northern exterior wall of the on-site facility, vegetated land located on the northern and eastern portions of the Site and asphalt-paved parking areas and driveways located throughout the remainder of the Site.

Please refer to Figures 1 and 2 for Site Locus Map and Site Plan, respectively.

2.0 INVESTIGATION FIELD ACTIVITIES

2.1 Soil Investigation

2.1.1 Soil Borings

On April 28, 2005, GCE contracted Summit Drilling Co., Inc., of Bound Brook, New Jersey (Summit), to advance soil borings and to install groundwater monitoring wells at the Site. In accordance with GCE's Proposal No. 05006, the soil boring and well installation was to be performed utilizing a Geoprobe or truck-mounted hollow-stem auger drilling rig. However, due to the presence of underground obstructions, most likely cobbles and/or small boulders, Summit was not able to advance soil borings below the depth of approximately 7 feet below grade.

Based on the inability of a hollow-stem drilling rig to advance below this depth, on June 20 through August 4, 2005, GCE contracted Warren George, Inc., of Jersey City, New Jersey (WGI), to advance soil borings and to install groundwater monitoring wells at the Site using ODEX drilling and 5-inch inner diameter casing.

Prior to commencement of the work, GCE arranged for a public underground utilities mark-out to be performed at the Site. The selection of the boring locations was based on previously identified areas of environmental concern, the accessibility of the Site, on-site conditions, and the locations of public underground utilities.

The soil borings were advanced as follows: soil borings B-1 and B-2 were advanced on the central portion of the Site at the location of the three removed 2,000-gallon mineral spirit USTs; soil boring B-3 was advanced in the central portion of the Site at the location of the removed 7,500-gallon mop oil UST; soil borings B-4, B-5, B-6, B-7 and B-8 were advanced inside the southern portion of the main building where numerous trenches, holes, and ditches associated with the historical wastewater discharge system were located; soil borings B-9 and B-10 were advanced on the central portion of the western parking lot at the location of two removed 6,000-gallon No. 2 fuel oil and mop oil USTs; soil boring B-11 was advanced inside the eastern portion of the new building at the former location of the historic filling station with four gasoline tanks; and soil boring B-12 was advanced on the eastern portion of the property, approximately 20 feet to the south of the dry well DW-2. Monitoring well MW-8 was installed in the central portion of the Site, down-gradient of the location of the removed 10,000-gallon mop oil UST; monitoring well MW-12 was installed on the southwestern portion of the western parking lot down-gradient of dry well DW-3; and monitoring well MW-5 was installed on the southeastern portion of the property, down-gradient of the

dry well DW-1. Soil samples were collected from all of the monitoring well locations from surface grade to groundwater, or when portable photoionization detector (PID) readings indicated no elevated levels of total VOCs.

The boring locations are presented in Figure 2 - Site Plan. The boring logs are presented in Appendix B.

2.1.2 Soil Sampling

Subsurface soil samples were collected from soil borings B-1 through B-12 and from monitoring wells MW-5, MW-8 and MW-12 at 5 foot intervals using a 2-inch diameter split-spoon sampler. The soil samples were visually classified and logged by GCE's on-site geologist for soil characterization purposes. Laboratory obtained glassware was used for the soil samples and consisted of the following:

- Volatile Organic Compounds (VOCs) – one 4-ounce glass jar equipped with teflon-lined cap per sample;

- Semi-Volatile Organic Compounds Base Neutrals (B/N) – one 8–ounce glass jar equipped with teflon-lined cap per sample.

The soil samples from the borings were placed into glass containers equipped with teflon-lined caps. Air in the head space of the 8-oz glass container (B/N) was allowed to develop. The head space were field screened for the presence of total VOCs using a Thermo Environmental Instruments Inc. Model 580B portable PID with a 10.6 e.V. lamp, calibrated for isobutylene standards.

Based on the field screening results and observations, samples with elevated levels of total VOCs and the deepest samples in soil borings with no elevated levels of total VOCs were submitted to the laboratory for analysis. The following sixteen (16) soil samples were submitted to the laboratory:

Sample ID	Boring No.	Depth, Feet below grade	PID Readings, parts per millions (ppm)
B-1 S-8	B-1	37-37	512.0
B-2 S-8	B-2	35-37	621.0
B-3 S-8	B-3	35-37	24.0
B-4 S-7	B-4	30-32	2.9
B-5 S-7	B-5	30-32	2.9
B-6 S-6	B-6	30-32	1.8
B-7 S-7	B-7	30-32	0.2
B-8 S-7	B-8	30-32	1.0
B-9 S-7	B-9	30-32	0.2
B-10 S-7	B-10	30-32	0.3
B-11 S-2	B-11	5-7	120.0
B-11 S-7	B-11	30-32	0.0

The soil samples were logged and transferred under a chain-of-custody protocol to Chemtech Consulting Group, Inc. (Chemtech), Mountainside, New Jersey, a New York State ELAP-approved laboratory. All soil samples were analyzed for the presence of VOCs using EPA Method 8260 and B/Ns using EPA Method 8270.

2.2 Groundwater Investigation

2.2.1 Monitoring Well Installation

On June 20 through August 4, 2005, GCE observed the installation and development of eight (8) monitoring wells (MW-5 - MW-12) at the Site by WGI. The selection of the monitoring well locations was based on previously identified areas of environmental concern, the accessibility of the Site, on-site conditions and the locations of public underground utilities.

Monitoring well MW-5 is located on the eastern portion of the Site in the general area of closed and covered dry wells; MW-6 and MW-7 are located along the eastern and northern property boundaries; MW-8 is located in the gravel-paved land immediately down-gradient of the leaking and removed mop oil, mineral oil, solvents and mineral spirits USTs, MW-9 is located inside the new building, in the area of the historical gasoline tanks; MW-10 is located inside the main building in the main laundry area; MW-11 and MW-12 are located on the western parking lot, along the northern and western property boundaries. Please refer to the Figure 2 for the Site Plan and location of existing monitoring wells.

The monitoring wells were installed using the ODEX drilling method with a five-inch inner diameter casing. The monitoring wells were constructed

of Schedule 40, 2.0-inch diameter PVC riser pipe, attached with threaded joints to schedule 40, 2.0-inch diameter, 0.020-inch slotted PVC well screen. A 15-foot screen section was placed at each well. All wells were extended to a depth of approximately fifty feet below grade, which is approximately ten feet below the water table. Clean silica filter sand No.2 was placed in the annulus of the borehole to minimize the amount of fine sediment entering the well, to a depth of approximately two feet above the well screen. A two-foot thick bentonite seal was installed above the sand filter pack to prevent the infiltration of surface water into the well. Bentonite/cement grout was placed from the top of the bentonite seal to approximately one foot below ground surface.

The monitoring wells were fitted with eight-inch diameter flush-mounted protective watertight manholes set to prevent tampering and provide protection from the surface water runoff. After installation, the monitoring wells were developed using a submersible pump until the groundwater appeared to be free of sediments. Approximately 55 gallons of water were pumped out from the each monitoring well into DOT-approved 55-gallon drums which will be disposed of off-site in accordance with all applicable regulations. The newly installed wells were allowed to stabilize and equilibrate for approximately two weeks.

The monitoring well locations are presented in the Figure 2 – Site Plan. Details of monitoring well construction are presented in the Monitoring Well Logs shown in Appendix B.

2.2.2 Monitoring Well Survey and Groundwater Level Measurement

On August 11, 2005, GCE conducted an elevation survey of the newly installed monitoring wells and groundwater level measurements. An elevation survey was conducted using the floor of the gate of the existing new building as a benchmark with an elevation of approximately 60 feet above mean sea level.

Depth to groundwater and free product was measured using a Solinst oil/water interface probe equipped with a fiberglass measuring tape. The same probe and measuring tape were used for all measurements. All of the groundwater level measurements were taken from an etch mark at the top of the PVC casing of each well.

In monitoring wells with measurable free product, a correction was made for the water table deflection caused by the free product, using the following equation:

$H_c = H_m + (H_o * p_o/p_w)$

where:
H_c = corrected ground water elevation (ft)
H_m = measured groundwater elevation (ft)
H_o = apparent (observed) thickness of free product (ft)
p_o = density of free product (g/ml) = 0.88
p_w = density of water (g/ml), usually assumed = 1.0

The corrected groundwater elevation value is then used to prepare a potentiometric surface map or groundwater contours map for the aquifer.

2.2.3 Groundwater Sampling

On August 11, 2005, GCE collected groundwater samples from the two existing and seven newly installed monitoring wells. Monitoring wells MW-1, MW-2, MW-8, and MW-11 were not sampled due to the presence of free product in these wells. A free-product sample was collected from MW-8. Laboratory obtained glassware was used for the groundwater and free product samples and consisted of the following:

- Volatile Organic Compounds (VOCs) – two (2) 40-ml glass vials preserved with hydrochloric acid and with a teflon-lined cap;

- Semi-Volatile Organic Compounds Base Neutrals (B/N) – one (1) 1-liter glass container equipped with a teflon-lined cap.

All nine (9) groundwater samples, MW-3 WS-1, MW-4 WS-1, MW-5 WS-1, MW-6 WS-1, MW-7 WS-1, MW-8 WS-1, MW-9 WS-1, MW-10 WS-1 and MW-12 WS-1, were logged and transferred under a chain-of-custody protocol to Chemtech Consulting Group, Inc. (Chemtech), Mountainside, New Jersey, a New York State ELAP-approved laboratory for analysis of VOCs using EPA Method 8260 and B/N using EPA Method 8720.

2.3. Quality Assurance/Quality Control Program

This section provides information on the Site specific quality assurance/quality control program.

Soil Borings and Monitoring Well Installation

All drilling equipment utilized in well advancement was steam cleaned prior to initial use. All metal parts were cleaned using mechanical and chemical cleaning procedures which consisted of brushing and sweeping off loose dirt followed by detergent washing and potable water rinsing. During the advancement of the

boreholes, soil cuttings were collected into DOT-approved 55-gallon steel drums and labeled accordingly. No oil, grease or any petroleum products were used to lubricate rods. Care was taken to insure that no oil, grease or other lubricant was leaking from the drill rig and entering the borehole.

The PVC riser pipes and screens were transported to the Site and stored, prior to their installation, in their original polyethylene shipping sleeves. To prevent possible contamination of the wells by VOCs, no glue, tape or other solvent containing materials were used to join pipe sections together.

Groundwater Sampling

Prior to sampling, the standing water volume was calculated by using the depth to groundwater and total depth of the well. Three to five standing volumes of water were purged from the monitoring wells prior to sampling in order to evacuate the water that has stagnated and/or thermally stratified in the well casing. The wells were purged using a submersible pump. Purged groundwater was discharged into DOT-approved 55-gallon drums which will be disposed of in accordance with all applicable regulations. When the calculated quantity of water was purged from each well, a water sample was obtained using a dedicated disposable bailer.

The sampling procedure used by GCE utilized a bottom-fill check valve disposable bailer. The bailer, made of polyethylene, was slowly lowered into the well by hand. Once in position, the attached cord was pulled to set the check valve and the bailer was then retrieved. The sample was then transferred into sample containers as listed below which were then packed and shipped back to the laboratory in a laboratory-supplied cooler with sufficient ice packs to maintain the sample temperature at 4°C at all times during shipping to the laboratory.

Chain-of-custody protocols were maintained from sample collection to delivery to the laboratory. Field information was recorded in field report and sampling log sheets. Full documentation was made as to the location and depth of all samples collected. Each sample was labeled with GCE's project number, the sample location and depth interval, the date and time, the initials of the sampler and the requested analysis.

As part of the quality control measures, a trip blank and four field blanks were included among the samples submitted to the Chemtech laboratory and analyzed for VOCs using EPA Method 8260.

3.0 PHYSICAL CHARACTERISTICS OF THE SITE

3.1 Site Topography

According to the US Geological Survey (USGS) Topographic Map of Jamaica,

New York Quadrangle, US Geological Survey (USGS), dated 1966, photorevised 1979, the Site's elevation is approximately 60 feet above mean sea level. Topographically, the Site is level with no abrupt changes in elevation. The topography in the vicinity of the Site slopes gently to the south towards Jamaica Bay located approximately 4 miles to the south of the Site. Please refer to Figure 3 for the USGS Topographic Map.

3.2 Geology and Hydrogeology

3.2.1 Regional Geology and Hydrogeology

According to the Hydrogeologic Framework of Long Island, New York, U.S. Geological Survey, 1989, the geology in the area of the Site consists of approximately 150 feet of glacial deposits composed of clay, sand, gravel and boulders, which form Upper Glacial Aquifer, underlain by approximately 125 feet of sand, clay and gravel, which form the Magothy aquifer. The Magothy aquifer is underlain by approximately 180 feet of clay, which form Raritan confining unit, underlain by approximately 195 feet of sand and gravel, which form Lloyd aquifer. The bedrock in the area of the Site consists of crystalline metamorphic and igneous rocks and is approximately 650 feet below grade.

Based on GCE's review of plans prepared by ACE Boring, Inc., dated September 18, 1994 and provided by the Client, the geology in the area of the Site to the explored depth of approximately 30 feet below grade consists of medium fine sand, trace silt and gravel, some boulders.

Based on the USGS Water Table on Long Island New York, March-April 1984, regional groundwater flow direction is to the north-northeast towards a cone of depression, located approximately 1.6-miles to the north-northeast of the Site. Depth to groundwater in the area of the Site is approximately 56 feet below grade.

3.2.2 Site Geology

Based on the information gathered during the Additional Subsurface Investigation, the geology of the Site to the explored depth of approximately 50 feet below grade consists of dense, brown-gray (beneath the free product – light-gray), fine-coarse sand with some fine-coarse gravel and occasional cobbles and small boulders. Please refer to the Figure 4 for the schematic geological cross-section of the Site.

3.2.3 Site Hydrogeology

Based on the results of monitoring well survey and groundwater level measurement (see Tables 3 and 4), groundwater flow direction at the Site

is to the southwest. Depth to groundwater below the Site is approximately 40 feet below grade (see Figure 4). Water table is rather flat, but forms a small groundwater mound in the vicinity of monitoring well MW-1. This localized groundwater mound is inducing free product to migrate outward in all directions from the source of the release. Please refer to the Figure 5 for the Groundwater Contours. Hydraulic conductivity (not measured) should be rather high due to rather coarse sediments (fine-coarse sand and gravel). Hydraulic gradient is opposite, very low (between MW-1 and MW-12 the gradient is about 0.55/280 = 0.002 ft/ft.

3.3 Sensitive Environmental Receptors

According to the 1980 U.S. Department of the Interior, Fish and Wildlife Service, National Wetlands Inventory Map for Jamaica, New York Quadrangle, the nearest designated wetlands is unnamed pond located approximately 4,800 feet to the northwest of the Site which is designated as Palustrine, Forested, Broad Leaved Deciduous, Seasonal Saturated (PFO1E). According to the 1975 New York State Department of Environmental Conservation (DEC) Freshwater Wetlands Map for Jamaica, Queens County, New York Quadrangle, the nearest designated wetlands is Willow Lake located approximately 6,000 feet to the north of the Site which is designated as "JA-1".

4.0 INVESTIGATION RESULTS

Visual inspection and laboratory analysis of soil and groundwater samples indicated that the Site is heavily contaminated. Two types of contamination were revealed below the Site: petroleum hydrocarbons and chlorinated hydrocarbons (chlorinated solvents).

4.1 Petroleum Hydrocarbons

Petroleum hydrocarbons, which are LNAPL (light nonaqueous phase liquids) and are less dense than water, occurred below the Site in all three phases:

Residual phase hydrocarbons are found only in the soil borings B-1 and B-2 (see Table 1) located on the gravel-lined land in the area of removed underground storage tanks formerly storing mop oil, solvents and mineral spirits (demolished former filter and mop oil rooms). These soil borings indicated that excavation and removal of contaminated soil was extended only to approximately 14 feet below grade, but not to 22 feet as was indicated in previous reports. Below 14 feet down to the saturated zone approximately 38 feet below grade, soil consists of in-situ dark-gray fine-coarse sand and gravel with strong petroleum odor and elevated total volatile organic compounds (TVOC) concentrations via photoionization detector (PID) up to 500-600 parts per million (ppm) (see Figure 4). Soil sample collected from 35-37 feet below grade in the soil boring B-2 indicated elevated concentrations of m/p-xylene, o-xylene, n-butylbenzene, p-isopropyltoluene,

1,3,5-trimethylbenzene and 1,2,4-trimethylbenzene (see Table 1). It should be noted that petroleum odor and elevated TVOC concentrations via PID up to 100-160 ppm were also observed in all soil samples collected below 15.5 feet below grade in MW-8 (see Figure 4). However, analytical results indicated that all compounds were non-detect, or detected below their detection limit (see Table 1).

Liquid phase hydrocarbons (free product) float on the surface of the water table and cover an area of approximately 12,000 square feet on the central portion of the Site (see Figure 6). Petroleum fingerprint analysis revealed that free product, assumed to be mop oil, consists of a mixture of kerosene and 40W lubricating oil. According to the laboratory results, the density of free product collected in well MW-8 is 0.88 g/cc.

Free product was observed in monitoring well MW-8, where in the central portion of the plume it has apparent (observed) thickness of 6.06 feet. In monitoring wells MW-1, MW-2 and MW-11 free product is wedged out and has a thickness of 0.14, 0.18 and 0.09 feet, respectively. An actual formation free product thickness and consequently the exact volume of the free product cannot be calculated on the basis of just one monitoring well. Furthermore, the actual formation thickness is usually less than the observed thickness in the monitoring well, especially in the fine-grained soil due to capillary effects (see Figure 4).

Aqueous or dissolved phase hydrocarbons, producing petroleum groundwater contamination, are present under the main portion of the Site as well as beneath the residential properties located adjacent to the west (see Figure 6). The groundwater plume was not delineated from the west and could cover more extensive area beneath the residential properties. Due to insufficient data, free product contour and main petroleum compounds - BTEX (benzene, toluene, ethylbenzene and xylenes) isopleths are constructed manually in accordance with groundwater flow directions.

4.2 Chlorinated Hydrocarbons

Chlorinated hydrocarbons are present at the Site including tetrachloroethene (PCE), trichloroethene (TCE), dichloroethene (DCE) and vinyl chloride (VC), which are DNAPL (dense nonaqueous phase liquids). Being denser than water, these compounds have a different fate and distribution under the Site and are not detected in all soil borings or detected far below their detection limits (see Table 1). However, groundwater samples results indicated that PCE, TCE and DCE occupied practically the entire area beneath the Site and beyond its boundaries with higher concentrations located along the northern, eastern and southern boundaries of the Site (see Table 2). Minimal concentrations or lack of contamination is observed in the central portion of the Site. The western portion of the site is still not fully investigated (see Figures 7, 8 and 9). The distribution of the VC is slightly different and higher concentrations were present in the central

and western portions of the Site where petroleum free product is present (see Figure 10).

Please refer to Tables 1 and 2 for a Summary of the Detected Compounds. The laboratory analytical report is included in Appendix C.

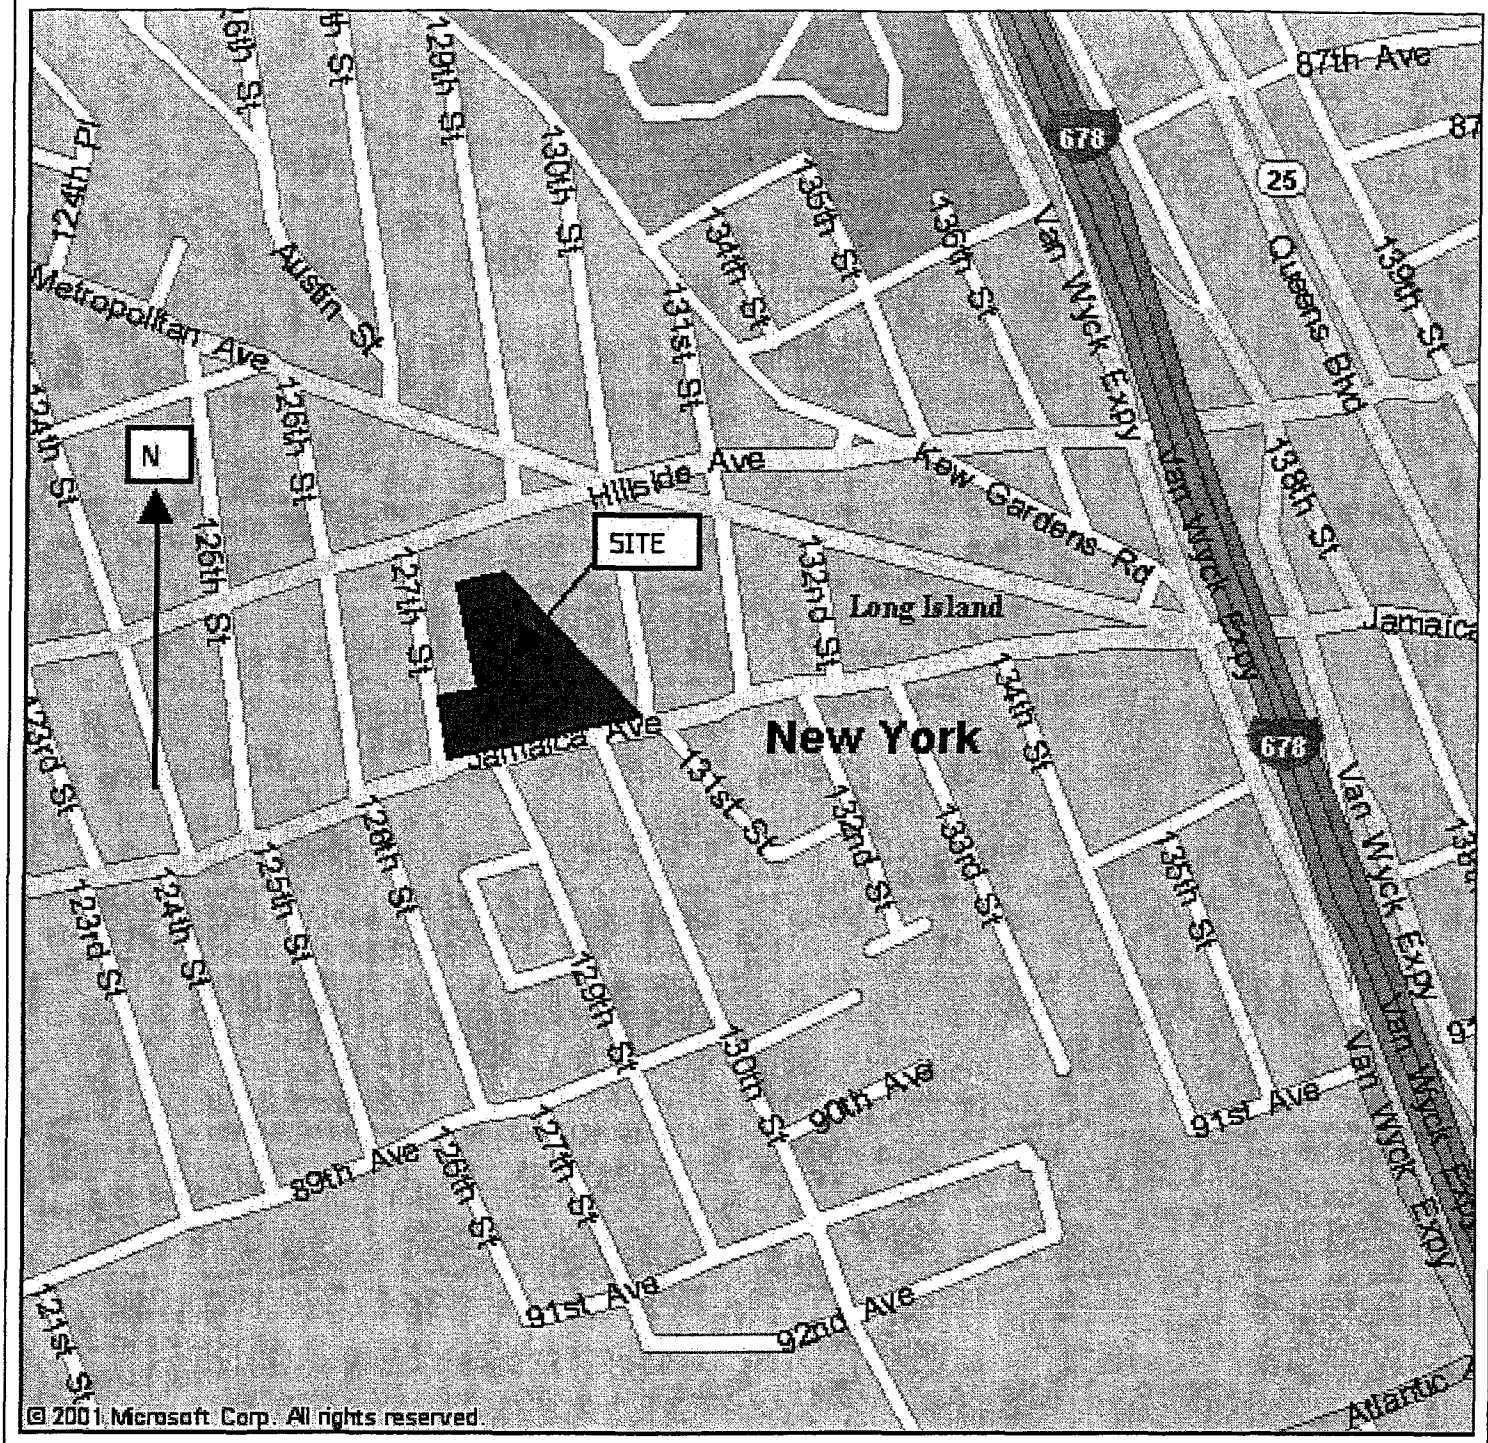
5.0 DISCUSSION

Residual phase and liquid phase hydrocarbons (free product) indicate on-site source(s) of petroleum contamination – most likely leaking underground tanks in the vicinity of soil borings B-1 and B-2 (demolished former filter and mop oil rooms).

During excavation and removal of several USTs, the mop oil and filter rooms were demolished and the area was filled in with sand and gravel fill, effectively creating an infiltration gallery for rain water, which may have transported contamination to the groundwater and promoted an increase in the volume of free-product. This could explain why free product was not revealed during previous round of groundwater sampling in October 2004.

6.0 SUMMARY OF FINDINGS AND RECOMMENDATIONS

6.1 Summary of Findings



In April - August 2005, GCE performed an Additional Subsurface Investigation at the subject Site, which consisted of advancement of twelve (12) soil borings and the installation of eight (8) groundwater monitoring wells and subsequent elevation survey, collection of groundwater level measurements and groundwater samples, to determine the groundwater flow direction and the extent and origin of the soil and groundwater contamination discovered at the Site during the previous subsurface investigations. GCE's investigation revealed the following:

The existing petroleum contamination originated from on-site sources, most likely from the leaking underground tanks in the vicinity of soil borings B-1 and B-2.

For a better understanding of subsurface geochemical conditions on the Site, soil and groundwater should be analyzed for additional compounds including TPH, Total Organic Carbon, Dissolved Oxygen, Chemical Oxygen Demand, Oxidation Reduction Potential and pH. Lack of these data and insufficient data in the western portion of the Site do not allow for us to determine the source of chlorinated solvents unambiguously.

6.2 Recommendations

Further investigation is warranted to determine the source and better define the extent of the contamination on the Site.

LIMITATIONS AND SERVICE CONSTRAINTS

Limitations

The findings set forth in the attached environmental site assessment report are strictly limited in time and scope to the date of the evaluation(s). The conclusions presented in the report are based on the services described in the report, and not on scientific tasks or procedures beyond the scope of work agreed in the purchase order/work order prior to the initialization of this assessment or the time and budgeting restraints imposed by the client.

This report may contain recommendations, which are partially based on the analysis of data accumulated at the time and locations set forth in the report through the subsurface investigation. However, environmental, geological, and geotechnical conditions can vary from those encountered during this investigation, and that the limitation on available data results in some level of uncertainty with respect to the interpretation of these conditions, despite the use of standard professional care and skill. Therefore, further investigations may reveal additional data or variations of the current data, which may require the enclosed recommendations to be reevaluated.

Chemical analyses may have been performed for specific parameters during the course of this assessment, as described in the text. However, it should be noted that additional chemical constituents not searched for during the current study may be present in soil and/or groundwater at the subject site.

Partial findings of this assessment are based on data provided by others. No warranty is expressed or implied with the usage of such data.

Because of these limitations, full and complete determination as to whether a certain piece of land is or is not free from environmental contamination cannot be made. The extent of testing and statistical confidence associated with an environmental site assessment is balanced against a reasonable project budget; therefore, 100 percent confidence in environmental site assessment conclusions can never be reached. Therefore, G. C. Environmental, Inc. does not provide guarantees, certifications, or warranties that a property is free from environmental contamination.

Service Constraints

Much of the information provided in this report is based upon personal interviews and research of all practically reviewable documents, records, and maps held by appropriate government and private agencies. This is subject to limitations of historical documentation, availability, and accuracy of pertinent records and the personal recollection of those persons contacted.

The initial site-investigation took into account the natural and man-made features of the subject site, including any unusual or suspect phenomenon. These factors, combined with the subject site's geology, hydrology, topography, and past and present land uses served as a basis for choosing a methodology and location for subsurface investigation as well as soil and/or groundwater sampling, if conducted. The analytical results of the subsurface investigation, if provided, are meant as a representative overview of the subject site's conditions.

The locations and type of analyses of soil and/or groundwater samples, if provided, were chosen based on the same considerations listed in the paragraphs above. If samples were analyzed, they were analyzed for those parameters unique to the subject site as determined during the preceding site-evaluation.

The presence of radioactive materials or wastes, biological hazards, asbestos or lead-based paint was not investigated unless specifically noted otherwise.

This report was prepared for the exclusive use of the client and/or the parties listed on the cover of the report, and is intended for the use listed in a proposal/work order or a Consulting Services Agreement signed prior to initiation of the assessment. The use of this report by any other parties or in any other manner than that listed in a proposal/work order or a Consulting Services Agreement signed prior to initiation of the assessment requires the written consent of G. C. Environmental, Inc. This report must be presented in its entirety.

n/s	No standards
	Compounds were non-detected or detected below their detection limit.
460	Compounds were detected above the New York Groundwater Quality Standards & Guidances values.

Note: Monitoring wells MW-1, MW-2 and MW-11 were not sampled due to a presence of a thin free product in these wells.

GW results from MW-1 and MW-2 are from the second round of groundwater sampling conducted on 11/24/04.

Motoring well MW-8 was sampled for a fre product , not for groundwater.

Corrected GW elevations in wells with a free product, were calculated using a formula: $H_c=H_m+(H_o*p_o/p_w)$

where:
H_c=GW elevation corrected
H_m= measured GW elevation
H_o= Thickness of free product
p_o= density of free product = 0.88 g/ml
p_w= density of water = 1 g/ml

Environmental Assessment for Chemical Bank at Five UFI, Inc. Properties Richmond Hill, Queens, New York

Clayton Project No. 15450-49

1.0 INTRODUCTION

Mr. Alfred Knauer of UFI, Inc. retained Clayton Environmental Consultants, Inc. to evaluate the potential for environmental damage and associated liabilities at five UFI, Inc. properties located at 129-01 Jamaica Avenue, 127th Street and Jamaica Avenue, 130-16 91st Avenue, 130-29 91st Avenue, and 87-17 124th Street, in Richmond Hill, Queens, New York. The environmental assessment was requested in conjunction with an application for financing from Chemical Bank.

Ms. Mary Ann Kelly, Environmental Consultant of Clayton's Edison, New Jersey, office, inspected the properties on April 20, 1988. Mr. Derrick Miller, Vice President of UFI, Inc., was available to answer questions and to provide access to the properties. A facility manager at each site accompanied Ms. Kelly during the inspection. Ms. Kelly inspected the property for:

- The presence and sources of hazardous and toxic materials or wastes, including, but not limited to, polychlorinated biphenyls (PCBs), petroleum products, and suspect asbestos-containing building materials.
- Evidence of existing environmental contamination.
- The risk of environmental contamination from past and present activities at the site and surrounding properties.
- Regulatory compliance and potential liabilities from onsite storage of chemical products in underground storage tanks.

The assessment entailed a visual walkthrough inspection of the properties and a regulatory review of applicable Federal, state, and city environmental regulations. No samples were collected for chemical analysis. On the basis of Clayton's assessment, the UFI, Inc. properties located at 127th Avenue and Jamaica Avenue, 130-16 91st Avenue, and 130-29 91st Avenue present a low risk for environmental contamination and associated liabilities.

The properties located at 129-01 Jamaica Avenue and 87-17 124th Street, however, present the risk for environmental damage and associated liabilities from underground storage tanks, wastewater, and solid waste management.

Clayton's findings are presented in greater detail on the following pages.

2.0 PROPERTY DESCRIPTION

The five properties owned by UFI, Inc., included in this environmental assessment, are located within a five-block area of Richmond Hill, Queens, New York. The area is a mixed commercial, residential, and industrial section of Richmond Hill. The properties are described in the following sections.

2.1 129-01 JAMAICA AVENUE

A laundry and dry cleaning plant, a two-story brick office building, and a storage shed occupy the 74000-square foot property. The one-story plant, measuring approximately 25,000 square feet, contains 2800 square feet of second floor office and storage space at the northern end of the building. A partially paved asphalt parking area is located along the west side of the building.

The plant is constructed of cinderblock with concrete floors and a sheet metal roof. The brick office building has a wooden roof and concrete floors. Both buildings are heated and cooled by natural gas. Electrical power is supplied by Consolidated Edison Co. of New York, Inc. The property is served with New York City water and sewer utilities. Water for clothes washing operations is provided by two onsite deep wells.

The-two story office building located on the property is currently vacant. The basement contains two empty 275-gallon aboveground storage tanks. According to Mr. Miller, UFI, Inc. plans to demolish the building in the near future.

The property is bounded on the north by private residences, on the east by 130th Street, on the south by Jamaica Avenue, and on the west by 129th Street.

2.1.1 Site Operations

The UFI, Inc. plant launders cloths, mops, and mats. Industrial uniforms are dry cleaned or laundered.

Cotton cloths and uniforms are laundered in large washing machines with nonphosphate detergent. Washing machine wastewater is discharged to the New York City sewer system. The uniforms are spun in large extractors and dried in electric and natural gas powered dryers or a steam heated tunnel.

Mats are washed with soap and water and rinsed in an automatic electric mat washer. The mats are hung on a continuously moving loop to air dry.

A mop washing machine uses treatment oil to extract dust and dirt from used mops. The treatment oil is recycled in a closed-loop system from a 2000-gallon underground storage tank which is periodically replenished. Mop washing operations generate a petroleum-based sludge. The sludge is disposed in the dumpster located outside the building.

Dry cleaning is conducted in the northeast portion of the building. The dry cleaning solvent, varisol, is pumped and applied to the uniforms during the cleaning process. Waste solvent from the process is collected, contained, and recycled in a metal still, where solid particles are removed. Solid particles or sludge is placed in a 15-gallon drum and removed offsite by Safety Clean, a hazardous waste transporter.

2.1.2 Site History

Mr. Miller provided Ms. Kelly with information concerning the site history. UFI, Inc. has operated the laundry and dry cleaning plant for the past 20 years. To Mr. Miller's knowledge, laundry and dry cleaning operations have been conducted at the building for approximately 15 years before UFI, Inc. purchased the facility.

UFI, Inc. has utilized the two-story brick building for office space since it occupied the premises approximately 20 years ago. Before UFI's occupancy, the building was a private residence.

2.2 127TH STREET AND JAMAICA AVENUE

The property at 127th Street and Jamaica Avenue is a 24000-square foot asphalt-paved parking lot. A cinder block building occupies 3200 square feet of the southwest corner of the property. The building is used to store floor mats. Ms. Kelly was unable to access the interior of the building.

The lot and building are enclosed by a chain link fence. An electric gate provides access to and from 129th Street. An entrance from Jamaica Avenue is located at the west side of the property.

The fence enclosed lot contained four partially burned wooden pallets and two steel drums used for garbage. The asphalt pavement was intact. No oil staining, chemical spills, or excavations were observed to indicate that the property was used for hazardous waste disposal.

The property is bounded on the north by Jamaica Avenue, on the east by 129th Street, on the south by a four-story masonry building and private residences, and on the west by multitenant, two-story residences. The UFI, Inc. laundry and dry cleaning is located across Jamaica Avenue.

2.2.1 Site History

Information on site history was provided by Mr. Miller. The eastern half of the property was paved in 1970; the western half was paved in April 1988. The western portion of the property was used as a children's playground before it was recently paved. To Mr. Miller's knowledge, the area has been used for parking for at least 35 years.

2.3 130-16 91ST AVENUE

A 5000-square foot warehouse occupies the entire property at 130-16 91st Avenue. The warehouse is occupied by Perfect Care Medical Service for storage of paper products and disposable diapers.

The warehouse contains a small overhead mezzanine used for office space. The building is constructed of cinderblock and concrete reinforced with steel. The floor is concrete, and the roof is constructed of sheet metal.

The building is heated by natural gas radiant heaters and uses normal electric voltage provided by Consolidated Edison Co. of New York, Inc.

The contents of the warehouse are limited to prepackaged disposable paper products and two battery operated forklifts.

The property is bounded on the north by 91st Avenue, on the east by Atlantic Food Warehouse, on the south by private residences, and on the west by an alley owned by Specialty Forklift Company. Atlantic Packaging and Distribution, Bora Machine and Die Works, and a UFI, Inc. truck maintenance shop are located across 91st Avenue.

2.3.1 Site History

Mr. John Forris, Fleet Manager, and Mr. Donald White, Warehouse Manager, accompanied Ms. Kelly during the inspection and provided information on the site history. According to Messrs. Forris and White, UFI, Inc. began the warehousing operation in January 1988. Bora Machine and Die Works occupied the building for approximately 30 years before UFI, Inc. purchased the property in 1988.

2.4 130-29 91ST AVENUE

The property at 130-29 91st Avenue is completely occupied by an approximately 7500-square foot one-story building. UFI, Inc. uses the premises to maintain its delivery trucks. Mr. Lester Stahl, Manager of the maintenance garage, accompanied Ms. Kelly during the inspection.

The garage stores transmission fluid, motor oil, antifreeze, petroleum based solvent, and windshield wiper fluid.

An air compressor located at the southeast corner of the garage supplies compressed air for powered tools and two car lifts. The compressor appeared to be new and well-maintained.

A 550-gallon underground storage tank is located between the two car lifts. The tank contains waste crankcase oil and waste solvents from parts degreaser. According to Mr. Stahl, the tank is pumped annually by a licensed liquid waste transporter.

250 Gal? Oil, fuel, solvent Gear oil Trans. ?

The property is bounded on the north by a masonry building, on the east by Bora Machine and Die Works, on the south by 91st Avenue, and on the west by Atlantic Packaging and Distribution.

2.4.1 Site History

Information on site history was provided by Mr. Stahl. According to Mr. Stahl, the truck repair shop has occupied the property for approximately 5 years. Before UFI, Inc. occupied the property, it was used for printing and painting display signs.

2.5 87-17 124TH STREET

The property at 87-17 124th Street is occupied by the 124th Street Garage. UFI, Inc. garages and fuels its delivery trucks within the 10,000-square foot building.

The building is constructed of cinderblock and concrete. The floor is concrete, and the roof is constructed of sheet metal. The building is heated by natural gas and requires normal electric power which is provided by Consolidated Edison Co. of New York, Inc.

One 275-gallon aboveground storage tank is located in a small chamber under the sidewalk along 91st Avenue. The tank, previously used for storage of No. 2 fuel oil, is currently used to store small quantities of waste oil generated onsite.

Small quantities of chemicals are stored on the premises for emergency repairs and light maintenance of trucks. The chemicals include antifreeze, degreasing solvent, and lubricating oil. Minor spillage of the chemicals was observed in this storage area. Oil-absorbant material is applied to the spills to prevent oil and chemical runoff. One diesel fuel and one gasoline pump are within the garage. The diesel fuel is stored in two 550-underground storage tanks. The gasoline is contained in one 4000-gallon underground storage tank. The condition and integrity of the tanks are unknown.

2.5.1 Site History

Mr. Hundertmark, Manager of the parking and fueling garage, provided information to Ms. Kelly on the site history. According to Mr. Hundertmark, UFI, Inc. utilized the building to garage and fuel its trucks since 1970. Before 1970, Cupid Diaper Service repaired its delivery trucks on the premises for approximately 20 years.

3.0 REVIEW OF HISTORICAL AERIAL PHOTOGRAPHS

To obtain information on the past land use of the site and surrounding properties, Ms. Kelly examined available historical aerial photographs, dated July 10, 1962, and June 10, 1978.

The photographs show the buildings on the properties as they currently exist. The surrounding area is highly urbanized. The Long Island Railroad Depot is located southeast of the properties. Directly to the north is a cemetery. A large wooded area is located approximately one mile to the northwest.

No evidence of major soil disturbances or waste burial was evident on the properties or in the surrounding area.

4.0 ENVIRONMENTAL CONCERNS

The underground storage tanks located at 129-01 Jamaica Avenue, and 87-17 124th Street present the risks for soil and groundwater contamination. The ages of the tanks present a concern for current and future tank integrity. The underground storage tanks and associated piping may have corroded and leaked product into surrounding soils. At present, the underground tanks have not been precision tested; therefore, the condition of the tanks is unknown.

The properties located at 127th Street and Jamaica Avenue and 130-16 and 130-29 91st Avenue present low risks for liability resulting from environmental damage. No major areas of environmental concern have been identified at these properties.

Environmental concerns at the properties are described in greater detail in the following sections.

4.1 129-01 JAMAICA AVENUE

Seven underground tanks storing treatment oil, No. 2 fuel oil, and varisol are located on the properties. Based on a review of the NYDEC tank registration documents and information provided by Mr. Miller, the tanks are at least 18-years old. The tanks are properly registered with the NYDEC; however, they have not been precision tested as required by New York State regulations. The City of New York, Division of Fire Prevention also requires the periodic pressure testing and registration of underground tanks.

Information on the tanks' contents, size, and age is provided below.

CONTENTS	CAPACITY (GALLONS)	AGE (YEARS)
No. 2 Fuel Oil	6300	Unknown
No. 2 Fuel Oil	7500	18
Varisol	3000	18
Varisol	2000	18
Varisol	2000	18
Treatment Oil	6300	Unknown
Treatment Oil	2000	Unknown

The useful life of a steel underground storage tank varies from site to site. Factors, such as the physical and chemical characteristics of local surficial soil deposits, the presence of other buried metal objects in the vicinity of the tank, and the nature of the product stored in the tank, affect the rate of corrosion and life of the steel underground storage tank.

The life of a steel underground storage tank that does not have cathodic protection against corrosion is typically 15 to 20 years. The age of the underground tank located on the property raises concerns for its current or future integrity.

Varisol, a petroleum aliphatic solvent, is considered hazardous because of its combustible characteristics and high percentage of petroleum hydrocarbons. According to Mr. Miller, food-grade treatment oil used in the mop cleaning operation is nonhazardous. The waste oil, however, may contain trace amounts of solvents and hydrocarbons from the dirty mops.

Wastewater generated onsite includes process water from washing operations, sanitary waste, and roof and surface runoff. Process water from the clothes washing machines and mat washing process is supplied by two onsite deep wells and is discharged to the New York City sanitary sewer system. According to Mr. Irwin Saldanhia, Plant Manager, approximately 120,000 gallons of water are generated daily from washing operations. No wastewater is generated from the dry cleaning or mop cleaning process. Roof and surface runoff collects in catch basins located in the parking lot. Evidence of oil was observed in the catch basins.

Based on the quantities of wastewater generated at the facility, UFI, Inc. may be required to obtain a permit under a broad interpretation of Title III of the New York City Department of Environmental Protection (NYCDEP) Rules and Regulations Relating to the Use of the Public Sewer, Including Sewer Surcharges. These regulations are provided in the Appendix.

The NYCDEP prohibits the discharge of toxic pollutants in excess of Federal and local pretreatment standards into the city sewer system. According to Mr. Miller, representatives from the NYCDEP periodically monitor the discharge for target parameters and pH. Mr. Miller informed Ms. Kelly that no violations have been cited to UFI, Inc. by the NYCDEP for wastewater discharges.

Solid waste generated onsite includes paper, cardboard, and plastic from office and packaging operations and sludge from the mop cleaning operations. The waste is disposed in a dumpster and removed and dispoed offsite by Five Counties Carting of Queens, New York. The sludge contains waste treatment oil from soiled mops. During the inspection, the treatment oil was leaking from the dumpster. Treatment oil and sludge spills were noted in the parking lot in the vicinity of the dumpster.

A shed containing two air compressors adjoins the east wall of the plant. The asphalt-paved floor of the compressor shed was covered with lubricating oil from the compressors. The asphalt floor most likely prevented major soil contamination. Ms. Kelly, however, observed some cracks in the floor. It is possible that some oil may have leaked through cracks and into underlying soils.

Ms. Kelly inspected building materials and observed suspect asbestos-containing materials in the plant and in the two-story office building. Ms. Kelly reviewed an asbestos survey on the two-story office building prepared by Mr. George Kan, PE, a New York City Certified Asbestos Investigator. The survey indicated that 21 linear feet of pipe wrap in the office building contained asbestos. According to the NYCDEP, any asbestos-containing pipe wrap less than 25 feet is not considered an asbestos project for buildings to be demolished.

The investigator must submit NYCDEP Form ACP-5 "Not an Asbestos Project Form" to Chemical Bank for submission to NYCDEP and the Building Department before demolition. New City law requires that the asbestos-containing material removal follow work practices outlined in New York City, Occupational Safety and Health Administration (OSHA), and Environmental Protection Agency (EPA) regulations. In accordance with USEPA, all asbestos-containing materials must be removed before demolition.

No asbestos survey was conducted in the plant. Suspect asbestos-containing materials were observed on overhead piping within the plant. No insulation was observed on the boilers.

4.2 127TH STREET AND JAMAICA AVENUE

No hazardous industrial materials or wastes are generated, handled, or disposed onsite. During visual inspection of the property, Ms. Kelly observed no evidence of major soil or groundwater contamination. Available historical information indicates that the property has never been used for industrial purposes or as a waste disposal site.

Wastewater onsite is limited to runoff which collects in catch basins along Jamaica Avenue. No oil or chemical stains were observed on the asphalt of this paved parking area. The property is properly secured to discourage dumping of miscellaneous debris and wastes.

4.3 130-16 91ST AVENUE

No environmental concerns were identified at this property. Although the Bora Corporation most likely stored and handled industrial hazardous materials and waste during past operations, no evidence of contamination was present in the building during the inspection. No floor drains or other potential pathways to soils and groundwater were located in the building. Ms. Kelly observed no evidence of past industrial discharges or spills.

4.4 130-29 91ST AVENUE

The primary environmental concern at the truck maintenance shop is the management and disposal of oils, solvents, and wastes.

Transmission fluid, motor oil, and petroleum-based solvent are stored in 55-gallon drums within the garage. The 55-gallon steel drums were new and properly labeled. Minor spillage was observed in the vicinity of the drums. Eight to ten drums are usually stored at the premises at any given time.

Liquid hazardous waste generated onsite includes waste oil from truck maintenance and spent solvent from the parts degreaser. The liquid waste is contained in the onsite 550-gallon underground storage tank. According to Mr. Stahl, the liquid waste oil and solvents are pumped from the tank and removed offsite by a hazardous waste transporter approximately once a year. Available information from Messrs. Miller and Stahl indicates that the tank was installed in 1982.

4.5 87-17 124TH STREET

The three underground storage tanks located at this garage are the main environmental concern. Information concerning the tanks was provided by Messrs. Miller and Hundertmark. The 4000-gallon unleaded gasoline tank was installed in 1982. The remaining two tanks, 550-gallons each, store diesel fuel. The ages of the two diesel fuel tanks are unknown.

A review of documents for the tanks indicate that they have been registered with the City of New York Division of Fire Prevention and "pressure" tested in accordance with regulations. The "pressure tests" performed on the tanks, however, do not comply with NYDEC Petroleum Bulk Storage regulations (6NYRR614). The NYDEC requires certified "precision" tank integrity testing performed in accordance with the regulations. The "pressure" tests performed in accordance with City of New York regulations are not acceptable under the new NYDEC regulations. The tanks were not registered or precision tested by December 27, 1987, for compliance with the NYDEC regulations. The NYDEC requires reregistration and precision testing of each tank every five years.

Small quantities of degreaser, lubricant oil, and antifreeze are stored in steel drums in the garage for emergency repairs. Minor spillage was noted on the cement floor near the drums. Absorbent material is applied to absorb minor spills. The used absorbent material is disposed with normal refuse and removed offsite by the New York City Department of Sanitation.

A floor drain, located in the building, was clogged and no longer in use. No evidence of spillage or disposal was observed near the drain. The floor drain discharges to the New York City sewer system.

An abandoned 275-gallon aboveground storage tank is located in a concrete underground chamber below the sidewalk along 91st Avenue. The tank most likely was used to store fuel oil to heat the building before the conversion to gas heat. Ms. Kelly observed no evidence of tank failure or oil spill-over in the chamber.

4.6 REGULATORY REVIEW

Ms. Kelly reviewed the NYDEC publication Inactive Hazardous Waste Disposal Sites, Annual Report, December 1987, to identify possible state "Superfund" designations for the properties or in the immediate area. Based on the review, no regulated hazardous sites on New York State lists are located in the vicinity of the UFI properties in Richmond Hill, Queens. The only designations located in Queens County are present in Maspeth, Rockaway, College Point, and Long Island City.

5.0 SUMMARY AND RECOMMENDATIONS

The summary and recommendations for each property are provided in the following sections.

5.1 129-01 JAMAICA AVENUE

The property located at 129-01 Jamaica Avenue currently occupied by UFI, Inc. presents the following environmental concerns:

- Seven underground storage tanks located at the property are at least 18 years old. The tanks store varisol, fuel oil, and treatment oil. The condition of the tanks is currently unknown. Steel tanks greater than 20-years old present a risk of product leakage due to corrosion of the tank shell and piping. If the tanks have corroded and leaked, the product released may have contaminated surrounding soils and possibly groundwater.

- The underground storage tanks at the facility are currently registered with the NYDEC. The tanks, however, have not been precision tested, as required under NYDEC Petroleum Bulk Storage regulations. The property owners are currently in violation of this regulation. In addition, the tanks have not been registered with the City of New York Division of Fire Prevention.

- UFI, Inc. is pumping approximately 120,000 gallons of water daily from the two onsite deep water wells for washing operations. Wastewater is discharged to the New York City Sanitary Sewer System. Under NYCDEP Bureau of Sewers and Water Pollution Control regulations, facilities discharging greater than 10,000 gallons of wastewater may need a written permit from the Commissioner of the NYCDEP. According to Mr. Miller, field personnel from the Bureau of Sewers periodically monitor wastewater for target parameters.

- The sludge generated from the mop cleaning operation may contain hazardous chemicals. The source and contents of the dirty mops is not known. The sludge is currently disposed with normal solid waste refuse. Treatment oil from the sludge has leaked from the dumpster onto the paved parking area. Parking lot surface runoff, possibly containing treatment oil and varisol from past spillage, is collected in the catch basins and discharges to the city sewer system. The runoff may be adversely affecting the property and migrating onto neighboring properties.

- The sludge may be classified as hazardous waste under the Federal Resource Conservation and Recovery Act (RCRA), and Appendix 22 of the New York Identification and Listing of Hazardous Wastes

(NYCRR, Title 6, Chapter 371). Under these Federal and State Regulations, solid hazardous waste must be properly manifested and disposed at an EPA and NYDEC licensed and permitted treatment, storage, or disposal facility.

- According to Mr. Miller, UFI, Inc. generates approximately 300 pounds of varisol sludge per month. That amount is classified as a small quantity under Federal and State regulations. Mr. Miller stated that he submits a hazardous waste generator annual report to the EPA and NYDEC, as required under RCRA and New York State hazardous waste regulations.

  Sludge containing spent varisol is collected in 15-gallon plastic lined pails and transported offsite by Safety Clean, a hazardous waste transporter.

- Spillage of varisol sludge was apparent near the settling tank where the sludge is manually discharged into 15-gallon pails.

To ensure compliance with Federal, NYCDEP, and NYDEC environmental regulations and to minimize environmental risks and liabilities, Clayton recommends the following.

- All underground storage tanks located at the facility should be precision integrity tested by a qualified contractor. If results of the tank tests fail to meet National Fire Protection Association (NFPA) 329 tank tightness criteria, the tank, its contents, and any oil contaminated soil must be removed, as required by the NYDEC Petroleum Bulk Storage Regulations. Costs to remove underground storage tanks and dispose of contaminated soils, depending on the extent of the contamination, could range in the tens to hundreds of thousands of dollars. The tanks must be registered with the NYC Division of Fire Prevention.

- UFI, Inc. must contact the NYCDEP, Bureau of Water Pollution and Bureau of Sewers to determine if specific wastewater permitting requirements apply to the facility.

- Clayton recommends that UFI, Inc. retain copies of NYCDEP monitoring reports for their files. Results of wastewater monitoring should be in compliance with applicable requirements under the NYCDEP regulations and Federal Clean Water Act.

- Sludge generated from mop cleaning operations should be sampled and analyzed for all applicable RCRA

hazardous waste characteristics. RCRA characterictic testing for UFI would include total petroleum hydrocarbons, pesticides/herbicides, PCBs, EP-Tox metals, reactivity, ignitibility, corrosivity, and volatile organics. A qualified environmental laboratory should be retained to analyze the sludge for the RCRA parameters. Results of analysis will dictate the type of disposal methods in accordance with RCRA, NYCDEP, and NYDEC regulations.

- Sludges, liquids, and residues from dry cleaning operations are listed as hazardous waste under RCRA. UFI, Inc. should comply with RCRA regulations for small quantity generators for proper hazardous waste management as follows:

  — Continue to label pails containing sludge "Hazardous Waste" and properly date upon accumulation.

  — Manifest and dispose of waste at an EPA licensed Treatment, Storage, or Disposal (TSD) facility.

  — Submit EPA generator annual report to EPA Region II and quarterly reports to the NYDEC.

  — Store waste onsite less than 90 days

  — Retain pertinent environmental records for a minimum of three years.

- UFI, Inc. manually accumulates sludge waste from a discharge valve to a 15-gallon container. To avoid future spillage of the hazardous sludge, UFI should design a closed system from the valve to the container.

- To determine if the suspect asbestos-containing pipe insulation contains asbestos, UFI, Inc. should retain a New York City certified asbestos inspector to conduct a survey and collect bulk samples. If the pipe insulation contains asbestos, it should be removed by a qualified asbestos abatement firm in accordance with NYCDEP and New York State regulations.

5.2 127TH STREET AND JAMAICA AVENUE

Based on the visual inspection and available information on site history, the property located at 127th Street and Jamaica Avenue presents a low risk of liabilities

resulting from environmental contamination. No visual evidence of major soil or groundwater contamination was observed by Clayton personnel.

5.3 130-16 91ST AVENUE

The building located at 130-16 91st Avenue is clean and well maintained. The property presents a low risk for environmental damage and associated liabilities.

Perfect Care Medical Service does not handle, generate, store, or dispose any hazardous materials or waste. Clayton observed no evidence of past waste disposal or chemical spills from previous owners.

5.4 130-29 91ST AVENUE

The current activities at the truck maintenance garage located at 130-29 91st Avenue present a low risk for environmental damage and associated liabilities.

Because of its size, the waste oil tank is not subject to the NYDEC mandatory tank testing schedule. Clayton recommends, however, that the tank be precision tested to determine the condition of the tank and its piping. The tank must be registered and tested in accordance with regulations of the NYC Division of Fire Prevention.

Although the tank is six years old, early detection of any possible product leakage would reduce the extent of possible soil contamination and associated costs.

The material used to absorb minor spillage of oil, antifreeze, and degreasing solvent should be analyzed for RCRA characterization parameters to determine the proper disposal method.

5.5 87-17 124TH STREET

The three underground storage tanks at the the UFI, Inc. parking garage present the risk for soil and groundwater contamination. The tank shell and its piping may have corroded and contaminated surrounding soils and possibly groundwater. To further evaluate the risk for possible soil contamination, the tanks should be precision tested by a qualified company in accordance with NYDEC regulations.

Under NYDEC Petroleum Bulk Storage Regulations, the tanks must also be registered with the NYDEC regional office, as well as the NYC Division of Fire Prevention.

If the results of the precision test indicate that the tank has failed to meet NFPA tank tightness criteria, the tanks, product, and any soil contamination must be removed and disposed in accordance with NYCDEP and NYDEC regulations.

The disposal of oil-containing absorbent material into normal refuse should be discontinued. Absorbent material used to absorb oil from minor spills on the floor should be sampled and analyzed for RCRA parameters to determine the proper disposal method. If results of RCRA analysis indicate that the oil-containing absorbant material is hazardous, it must be removed and disposed offsite by a hazardous waste transporter.

APPENDIX

RULES AND REGULATIONS RELATING TO THE USE OF PUBLIC SEWERS, INCLUDING SEWER SURCHARGES

NEW YORK CITY DEPARTMENT OF ENVIRONMENTAL PROTECTION
BUREAU OF WATER POLLUTION CONTROL
AND BUREAU OF SEWERS

Rules and Regulations Relating to the Use of The Public Sewers, Including Sewer Surcharges.

(212) 860-9337

The City of New York

GEORGE J. COMNINAKIS
ENVIRONMENTAL IMPACT COORDINATOR
INDUSTRIAL WASTES CONTROL SECTION
DEPARTMENT OF ENVIRONMENTAL PROTECTION
WARDS. ISLAND. NEW YORK 10035

NEW YORK CITY DEPARTMENT OF ENVIRONMENTAL PROTECTION
BUREAU OF WATER POLLUTION CONTROL
AND BUREAU OF SEWERS

Promulgation of Rules and Regulations Relating to the Use of The Public Sewers, Including Sewer Surcharges.

PURSUANT TO THE AUTHORITY VESTED IN THE COMMISSIONER BY Section 1403 of the New York City Charter and by Sections 683a4-1.0 through 683a4-19.0, 687-1.0 and 689-1.0 of the Administrative Code of the City of New York and in compliance with Section 1105 of the New York City Charter, notice is hereby given of the promulgation of Rules and Regulations Relating to the Use of the Public Sewers, Including Sewer Surcharges. The regulations are hereby promulgated to read as follows:

CONTENTS

Title		
I	-	Authority
II	-	Definitions
III	-	The Disposal of Wastewater Stormwater, and Groundwater
IV	-	Materials and Substances Excluded From Public Sewers
V	-	Toxic Substances Accepted Conditionally
VI	-	Terms and Conditions for the Issuance of a Permit
VII	-	Removal, Transportation and Disposition of Scavenger Wastes
VIII	-	Imposition and Computation of Sewer Surcharge
IX	-	Reserved
X	-	Reserved
XI	-	General Provisions
XII	-	Repeal

TITLE I

AUTHORITY

SECTION 1.1 AUTHORITY: These rules and regulations pertaining to the use of the public sewers of the City of New York, including sewer surcharges, are promulgated by the authority vested in the Commissioner by Sections 1105 and 1403 of the New York City Charter, and by Sections 683a4-1.0 through 683a4-19.0, 687-1.0 and 689-1.0 of the Administrative Code of the City of New York.

TITLE II

DEFINITIONS

For purpose of these regulations, the meaning of terms shall be as follows (unless the context specifically indicates otherwise):

SECTION 2.1 "BOD" (denoting Biochemical Oxygen Demand) shall mean the laboratory determination of the quantity of oxygen utilized in the biochemical oxidation of organic matter in a given time and at a specified temperature. It is expressed in parts per million (ppm) or (mg/L) of oxygen used in a period of five days at 20° C.

SECTION 2.2 "Catchbasin" shall mean a structure or device designed to collect and convey stormwater to a storm or combined sewer. It captures some of the debris and heavy solids carried by the flow in a settlement chamber and stores this material for periodic removal.

SECTION 2.3 "Combined Sewage" shall mean sewage originating from sanitary and/or industrial wastewater and stormwater.

SECTION 2.4 "Combined Sewer" shall mean a sewer receiving sanitary and/or industrial wastewater, commingled with stormwater.

SECTION 2.5 "Commissioner" shall mean the Commissioner of Environmental Protection.

SECTION 2.6 "Contributory Area" shall mean the area from which the intercepted sewage flow is controlled by a regulator chamber.

SECTION 2.7 "Cooling Water" shall mean the water discharged from any system of condensation, air conditioning, cooling, refrigeration, or other sources. It shall contain no polluting substances which would produce BOD or SS in excess of 10 mg/L or toxic substances in concentrations or amounts greater than those specified herein.

SECTION 2.8 "Cost per Pound of Removing Pollutants" shall mean the cost per pound (in dollars) of removing from sewage the BOD and SS contained in wastewater discharged into the sewerage system expressed to the nearest tenth of a cent as certified by the Commissioner pursuant to paragraph 14 of subdivision a of Section 687-1.0 of the Administrative Code.

SECTION 2.9 "Department" shall mean the Department of Environmental Protection of the City of New York.

SECTION 2.10 "Direct Discharge" shall mean a discharge to a public sewer from a house sewer.

SECTION 2.11 "Diversion Chamber" shall mean a structure which diverts sanitary sewage into a regulator chamber under dry-weather conditions. During wet-weather it directs combined sewage, in excess of treatment plant capacity, to overflow into a tide gate chamber.

SECTION 2.12 "Drainage Area" shall mean the geographical area which contributes flow to a particular location in the sewerage system.

SECTION 2.13 "Effluent" shall mean wastewater, treated or untreated, which is discharged directly or indirectly to a public sewer.

SECTION 2.14 "Flammable" shall mean any liquid or mixture, substance,or compound that emits flammable vapors at a temperature below 100oF, when tested in a Tagliabue closed cup tester.

SECTION 2.15 "Groundwater" shall mean any water removed from the ground, including water from springs, and natural underground streams but excluding water from wells used for the delivery of potable or process water.

SECTION 2.16 "House Drain" (building drain) shall mean that part of the lowest horizontal piping of a house drainage system which receives the discharge from soil, waste and other drainage pipes of the building and conveys such drainage to the house sewer.

SECTION 2.17 "House Drainage System" shall mean that part of the plumbing system which receives, conveys and removes liquid and waterborne wastes to a public or private sewer.

SECTION 2.18 "House Sewer" shall mean that part of a house drainage system which extends from a house drain to a connection with a public or private sewer.

SECTION 2.19 "Indirect Discharge" shall mean a discharge from a private sewer to a public sewer, or other wastewater discharged so as to enter a public sewer.

SECTION 2.20 "Influent" shall mean wastewater which flows into a pretreatment device or facility, or into a sewage treatment plant.

SECTION 2.21 "Industrial Wastes" shall mean any liquid, gaseous or solid substance, or a combination thereof, resulting from any process of industry, manufacturing, trade or business or from the development or recovery of any natural resources.

SECTION 2.22 "Interceptor" shall mean a sewer which receives the dry-weather flow from a number of transverse combined or sanitary sewers and conducts such sewage to a water pollution control plant. During storms it receives predetermined quantities of dry-weather flow admixed with stormwater and conducts commingled sewage to a water pollution control plant.

SECTION 2.23 "Interceptor-Collector" shall mean a sewer which not only intercepts existing combined sewers to convey the flow to a sewage treatment plant, but also serves as a local sanitary sewer.

SECTION 2.24 "Laboratory Determination" shall mean the measurements, tests and analyses of the characteristics of waters and wastes in accordance with the methods contained in the latest edition at the time of any such measurements, tests and analysis, of "Standard Methods for Examination of Water and Waste Water", a joint publication of the American Public Health Association, the American Waterworks Association and the Water Pollution Control Federation or in accordance with any other methods prescribed by the Commissioner in these rules and regulations or in any other rules and regulations.

SECTION 2.25 "May" is permissive.SECTION 2.26 "mg/L" shall mean a unit of concentration expressed in milligrams per litre.

SECTION 2.27 "Oil and Grease" shall mean the measurement of freon (trichlorotrifluoroethane) extractable matter such as biodegradable animal fats and vegetable oils, and relatively non-volatile, non-biodegradable petroleum hydrocarbons. The absolute quantity of a specific substance is not determined by this extraction procedure.

SECTION 2.28 "Other Wastes" shall mean garbage (shredded or unshredded), refuse, decayed wood, sawdust, shavings, bark, sand, lime, cinder, ashes, and all other discarded matter not sewage or industrial waste.

SECTION 2.29 "Person" shall mean any individual, firm, company, association, society, corporation, institution or group.

SECTION 2.30 "Petroleum Hydrocarbons" shall mean that portion of the total oil and grease which is not eliminated from a freon (trichlorotrifluoroethane) solution by silica gel adsorption.

SECTION 2.31 "pH" shall mean the logarithm of the reciprocal of the hydrogen ion concentration. It indicates the intensity of acidity or alkalinity expressed in terms of pH scale running from 0 to 14. A pH value of 7.0, the midpoint of the scale, represents neutrality. Values above 7.0 indicate alkalinity and those below 7.0 acidity.

SECTION 2.32 "Pollutants" shall mean substances which may be present in sewage, industrial waste or other waste, whether gaseous, liquid or solid, the amount of which, shall be determined by the sum of the BOD and the SS present therein.

SECTION 2.33 "Premises" shall mean any parcel of real property including land, improvements or appurtenances, such as buildings.

SECTION 2.34 "Pretreatment" shall mean any measures to be taken by a user of the public sewer which are necessary in order that the characteristics or amounts of substances discharged to a public sewer, either directly or indirectly, comply with Titles IV or V of these regulations, including but not limited to the alteration of plant or processes, the installation of equipment and/or the implementation of procedures designed to reduce the discharge of pollutants and toxic substances so that compliance with Titles IV or V is attained.

SECTION 2.35 "Private Sewer" shall mean a sewer located either in public or private property, which is privately owned and is controlled by public authority to the extent provided by law.

SECTION 2.36 "Public Sewer" shall mean a sewer which is owned by the City of New York.

SECTION 2.37 "Pumping Station" shall mean a structure in the sewerage system housing pumps and appurtenances to lift sewage from a lower to a higher level.

SECTION 2.38 "Receivable Industrial Waste" shall mean wastewater (not subject to the sewer surcharge) having all the following characteristics:

BOD Biochemical O_2 demand	2500 lbs. per million gallons (300 parts per million or 300 mg/L) or less
Chlorine Demand	208 lbs. per million gallons (25 parts per million or 25 mg/L) or less
SS suspended solids	2916 lbs. per million gallons (350 parts per million or 350 mg/L) or less

1100-1300 Jay Goodman

Jay for Combining houses

94 mark 2.5 increased to 3 on waste 4.5 Vols. indicator

Ether Soluble Material	417 lbs. per million gallons (50 parts per million or 50 mg/L) or less
pH	not less than 5.0 and not more than 9.5

The Commissioner hereby imposes the additional characteristic of:

Oil and Grease	417 lbs. per million gallons (50 mg/L) or less

SECTION 2.39 "Regulator" shall mean a device or apparatus for controlling the quantity of combined sewage from a contributory area admitted to an interceptor or interceptor collector. It is usually comprised of a regulator chamber, a diversion chamber and a tide gate chamber.

SECTION 2.40 "Regulator Chamber" shall mean a structure and related appurtenances, which limits the quantity of flow to an interceptor or interceptor-collector.

SECTION 2.41 "Sanitary Sewage" shall mean bodily wastes, wash water, culinary wastes, or similar matter, which is present in a sewer.

SECTION 2.42 "Sanitary Sewer" shall mean a sewer which conveys only sanitary or industrial sewage.

SECTION 2.43 "Scavenger Wastes" shall mean the sludge derived from sanitary wastewater discharged into cesspools, septic tanks or privies located within the City of New York.

SECTION 2.44 "Sewage" shall mean and include, for purpose of these regulations, water and waterborne materials and substances of every kind and description which are present in a sewer, including but not limited to wastewater, human or animal wastes, industrial waste or other waste, or infiltration and inflow.

SECTION 2.45 "Sewerage System" or "Sewer System" shall mean and include all sewers, including storm sewers, sanitary sewers, combined sewers and intercepting sewers and manholes, sewage pumping treatment and disposal works and any other plants, works or equipment and accessories within the city, which are used or useful in connection with the collection, treatment or disposal of sewage and waste, and which are owned, operated or maintained by the City as part of the public sewer system.

SECTION 2.46 "Sewage Treatment Works, Sewage Treatment Plant or Water Pollution Control Plant" shall mean a City owned facility for the treatment of sewage.

SECTION 2.47 "Sewer" shall mean a pipe or conduit for carrying sewage.

SECTION 2.48 "Sewer Surcharge" shall mean a charge applied to premises discharging wastewater, directly or indirectly, into a public sewer which contains BOD and/or SS in concentrations exceeding those specified in Section 2.38.

SECTION 2.49 "Shall" is mandatory.

SECTION 2.50 "Shredded Garbage" shall mean garbage shredded to such a degree that all particles will be carried freely under flow conditions normally prevailing in public sewers, with no particle having a dimension greater than 1/2 inch in any direction.

SECTION 2.51 "SS" (denoting Suspended Solids) shall mean the laboratory determination of the dry weight expressed in parts per million (ppm) or mg/L of solids that either float on the surface or are in suspension in sewage and can be removed by filtration.

SECTION 2.52 "Storm Sewer" shall mean a sewer, the specific purpose of which is to carry only stormwater.

SECTION 2.53 "Stormwater" shall mean the excess water running off from the surface of a drainage area during and immediately following a period of precipitation.

SECTION 2.54 "Tide Gate Chamber" shall mean a structure and related appurtenances which allows bypassing or overflow of excess combined sewage of a combined sewer or the flow of stormwater of a storm sewer to enter the receiving waters and prevents backflow of the receiving waters into the sewerage system.

SECTION 2.55 "Toxic Substance" shall mean any substance on the list of toxic pollutants or combination of pollutants published by the Administrator of the federal Environmental Protection Agency pursuant to section 307(a) (1) of the Federal Water Pollution Control Act, commonly referred to as the Clean Water Act, as amended, or any substance whether gaseous, liquid or solid, which when discharged to the sewerage system may tend to (i) interfere with or inhibit any sewage treatment plant process or disposal operation or (ii) be detrimental to the health of human beings, animals or to aquatic life.

SECTION 2.56 "Unshredded Garbage" shall mean solid waste from preparation, cooking and dispensing of food or food products and from handling, storing and sale of produce.

SECTION 2.57 "User" shall mean any person which causes a direct or indirect discharge to a public sewer.

SECTION 2.58 "Wastewater" shall mean the contents of a house drainage system including sanitary wastes, industrial wastes or other wastes which are discharged directly or indirectly to a public sewer.

TITLE III

DISPOSAL OF WASTEWATER, STORMWATER AND GROUNDWATER

SECTION 3.1 Except with the written approval of the Commissioner, no stormwater outlet such as from a building, yard, or catchbasin, nor any drain from a body of water such as a lake, swamp, pond or swimming pool shall be connected to a public sewer, or to a private sewer connected to a public sewer, or to an interceptor-collector.

SECTION 3.2 No stormwater shall be allowed to enter a house drainage system within any area served by a separate sanitary sewerage system. Within any such area, no down spout or leader, gutter or other pipe, drain or channel which may at any time carry stormwater, subsurface drainage derived from hydraulic pressure or from well points, cooling water, or sea water shall be connected to any sanitary sewer. No down spout or leader shall be used as a soil, waste or vent pipe. Every joint in the connection of a house drain to a sanitary sewer shall be made watertight so that no leakage into or from any such drain shall occur.

SECTION 3.3 Except with the written approval of the Commissioner, no industrial or sanitary wastewater shall be allowed to enter a storm sewer.

SECTION 3.4 No connection to an interceptor or interceptor-collector shall be made without the written approval of the Commissioner.

SECTION 3.5 No wastewater originating from premises, other than stormwater, shall be discharged so as to enter a catchbasin, without the written approval of the Commissioner.

SECTION 3.6 (a) No person shall discharge, or cause to be discharged, directly or indirectly, over 10,000 gallons per day of groundwater into a public sewer without a groundwater discharge permit from the Commissioner.

(b) The Commissioner may impose any terms or conditions in a groundwater discharge permit that he deems necessary. If those terms or conditions are not complied with at all times, the permit may be revoked.

(c) The Commissioner may consult with the United States Environmental Protection Agency and the New York State Department of Environmental Conservation prior to granting a groundwater discharge permit; for discharges to combined or sanitary sewers, and at their suggestion, may include such conditions as he deems appropriate.

SECTION 3.7 The commissioner may approve an application for a groundwater discharge permit upon demonstration by the applicant, satisfactory to the Commissioner, that: (1) substantial property damage will result unless such groundwater is removed; (2) there is no feasible alternative method of disposal; (3) allowing the discharge will not overload the hydraulic capacity of the sewer; and (4) such discharge will not cause an unacceptable dilution of the influent to the water pollution control plant receiving the groundwater discharge.

SECTION 3.8 (a) Permits for the discharge of groundwater into storm sewers shall require, at a minimum, compliance with the following conditions: (1) the discharger shall develop and implement, pursuant to a schedule set by the Commissioner, an alternative method of disposal, unless the applicant demonstrates to the satisfaction of the Commissioner that no such alternative method of disposal exists or can be developed or implemented; (2) the discharger shall indemnify and hold the City of New York harmless for any damage or liability incurred by the City of New York either directly or indirectly, in the event that the discharge results in overloading the capacity of such storm sewer, or otherwise causes flooding, and shall also post and maintain such cash or surety bond as may be required and will be satisfactory to the Commissioner and shall supply evidence of such bond when required; (3) the discharger shall pay a sewer rent or charge equivalent to the one imposed by the Department pursuant to Section 683a4-9.0 of the Administrative Code.

(b) Approvals for the discharge of groundwater into either combined or sanitary sewers, shall require, at a minimum, compliance with the following conditions: (1) the discharger shall develop and implement, pursuant to a schedule set by the Commissioner, an alternative method of disposal, unless the applicant demonstrates to the satisfaction of the Commissioner that no such alternative method of disposal exists or can be developed and implemented; (2) the discharger shall indemnify and hold the City of New York harmless for any damage or liability incurred by the City of New York either directly, or indirectly, in the event that the discharge results in overloading the capacity of such sewer, causes a bypass away from the sewage treatment plant to which it would have otherwise flowed, or otherwise causes flooding, and shall also post and maintain such cash or surety bond, as may be required and will be satisfactory to the Commissioner and shall supply evidence of such bond when required; (3) the discharger shall pay a sewer rent or charge equivalent to that imposed by the Department pursuant to Section 683a4-9.0 of the Administrative Code.

SECTION 3.9 A groundwater discharge permit issued by the Commissioner, unless sooner terminated or revoked; is effective for one year. The permit may be renewed by the Commissioner thereafter for additional one-year periods upon new application by the discharger.

TITLE IV

MATERIALS AND SUBSTANCES EXCLUDED FROM PUBLIC SEWERS

SECTION 4.1 Except as hereinafter provided no person shall discharge or cause to be discharged, or allow to run, leak, or escape into any public sewer, pipe, channel, pumping station, catch basins or any other sewer appurtenances, or waterway connecting with any public sewer, or into any private sewer connected with a public sewer any of the following described materials, substances or wastes except such small quantitites as may be present in normal household wastes:

(a) Construction materials, ashes, cinders, sand, mud, straw, shavings, metal, glass, rags, feathers, tar, plastic, wood, paunch manure, coffee grounds, fur, wax, or any solids or viscous substances capable of causing obstruction to the flow in sewers or other interference with the proper operation of the sewerage system;

(b) Snow and ice at unauthorized locations;

(c) Steam or wastewater above 150o Fahrenheit;

(d) Flammable or explosive liquids, solids or gases, including but not limited to gasoline, benzene and naphtha (notwithstanding anything to the contrary contained in these regulations, under no circumstances may any such substances be discharged into the sewerage system);

(e) Oil sludges;

(f) Petroleum hydrocarbons, as defined in Section 2.30, in concentrations greater than 50 mg/L for any given time as determined by sampling the surface of the discharged wastewater or the sewage in the public sewer. However, animal fats and vegetable oils may be discharged to public sewers, provided that they do not adhere to sewer structures or appurtenances, or cause interference with sewage treatment processes. If there is evidence of such interference or adherence to sewer structures or appurtenances so as to cause blockage in the sewerage system, then, upon order of the Commissioner, the wastewater containing such materials must be effectively treated to remove such animal fats and vegetable oils by a process or device, such as a grease or oil interceptor, before discharge to a public sewer;

(g) Coal tar, its derivatives and waste;

(h) Paints and waste products from paint manufacturing which tend to clog or otherwise interfere with the operation of the sewerage system;

(i) Wastewaters having a pH lower than 5.0 or higher than 9.5 or having any other corrosive property likely to cause damage to structures or equipment of the sewerage system or create a hazard to personnel;

(j) Toxic substances in such quantities, which the person knows or has reason to know, may when discharged from a single source or in combination with other sources: (i) interfere with any sewage treatment process, including sludge digestion; (ii) limit the City's options for operating its sewerage system or disposing of the sewage sludge, grit or scum generated at water pollution control plants; (iii) be detrimental to the health of human beings, animals, or aquatic life; (iv) create any adverse effect in the receiving waters; or (v) violate federal or state laws or regulations or the requirements of a discharge permit of a sewage treatment plant issued pursuant to Section 402 of the Federal Water Pollution Control Act, commonly referred to as the Clean Water Act, as amended, or any other permit issued pursuant to federal or state law.

(k) Toxic substances in such quantities which, when discharged from a single source or in combination with other sources: (i) violate any federal or state laws, regulations, rules or standards governing such discharge; or (ii) violate the toxic discharge limits to be set by the Commissioner, contained in a list to be maintained by the Commissioner and which may be published from time to time in the City Record, or (iii) violate any discharge limit contained in Section 5.1 or ordered pursuant to Section 5.2.

(l) Any liquids or wastes containing pollutants of such quality and/or quantity that become burdensome in the operation and maintenance of a sewage treatment plant;

(m) Any noxious or malodorous gas or substance capable of creating a public nuisance;

(n) Any wastewater or substance, which in the opinion of the Commissioner, will result in a violation of any applicable federal, state or local water quality standard concerning discoloration or other undesirable physical change in the appearance of the receiving waters.

SECTION 4.2 Under no circumstances will the discharge of unshredded garbage or refuse be permitted into a public sewer. The discharge of shredded garbage or refuse into the sewerage system or the installation of "garbage grinders" for the purpose of grinding or shredding garbage before discharge into a public sewer is expressly prohibited except in those drainage areas where there are separate storm and sanitary sewers. Moreover, in said separate system drainage areas non-stormwater must not be capable of being directed to a receiving water without first passing through a sewage treatment plant or its bypass.

SECTION 4.3 When in the opinion of the Commissioner the solids in an industrial waste or other wastes require comminution before discharge to the public sewer, not only must the necessary comminution facilities be approved by the Commissioner for adequacy but also the operating results must satisfactorily, in the opinion the Commissioner, abate the problem which such solids may tend to create in the sewerage system.

SECTION 4.4 (a) Every person shall provide protection from accidental discharge of any materials or substances prohibited or regulated by any provision of any section of any title of these regulations. Facilities to prevent accidental discharges, such as spill prevention equipment, shall be provided and maintained by the person at his expense. The Commissioner may require the construction and/or installation of special facilities to prevent accidental discharges and the submission of detailed plans, for review, prior to the construction and/or installation.

(b) In the event of a discharge in violation of any provision of any section of any title of these regulations, the person involved in the accidental discharge, shall immediately notify the Department, at any hour, by telephone at (212) 966-7500, and shall give such other additional notice as the Commissioner may direct. The telephone notification shall include, the name of the person reporting the discharge, the exact time and location of the discharge, the nature of the discharge, including quantity, what it contains and any other information the Commissioner may request. The Commissioner may require additional notification and reporting, including written reports in a form he may prescribe.

(c) All establishments using or storing toxic or other substances the discharge of which would be prohibited, restricted, or regulated by these regulations, shall post a notice of the procedures to be followed in the event of an accidental discharge. The Commissioner may prescribe the size, form and content of this notice. This notice shall be posted at the location of the storage and use of toxic and other substances, the discharge of which would be prohibited, restricted or regulated by these regulations.

SECTION 4.5 The control of all odors which arise in premises from a public sewer shall at all times be the responsibility of the owner or occupiers of premises. The cost of such control shall be borne by the owner or occupiers of premises.

SECTION 4.6 All pretreatment devices, including but not limited to a grease or oil interceptor, whether required to be installed by order of the Commissioner or by any other law or regulation and located on any premises, shall be the proper device and correctly installed, maintained and operated.

SECTION 4.7 No person shall discharge or cause to be discharged any radioactive material either directly or indirectly into the sewerage system, unless all restrictions, prohibitions, and requirements of Article 175 of the New York City Health Code are fully complied with.

TITLE V

TOXIC SUBSTANCES ACCEPTED CONDITIONALLY

SECTION 5.1 The concentration in wastewater of any of the following toxic substances shall not exceed the specified concentrations listed below before discharge to a public sewer;

Toxic Substance	Permissible Concentration for any given time (mg/L)
Cadmium	2
Chromium (hexavalent)	5
Copper	5
Cyanide (amenable)	0.2
Lead	2
Mercury	0.05
Nickel	3
Zinc	5

SECTION 5.2 (a) Notwithstanding anything contained in Section 5.1 above, when the volume of a single toxic discharge or the combined toxic discharges of a group of establishments within a single drainage area is large enough, in the opinion of the Commissioner, to create unacceptable total concentrations of a toxic substance either in the influent entering a sewage treatment plant or in the receiving waters, the Commissioner may by order impose more stringent concentration limits than those listed in Section 5.1, or impose mass limits upon the person or persons so discharging. Conversely, when a toxic discharge is sufficiently diluted or rendered innocuous before reaching a sewage treatment plant or the receiving waters, the Commissioner may, in his absolute discretion, grant written permission for discharge concentrations greater than those listed in Section 5.1.

(b) The Commissioner may by order impose maximum amounts or concentrations of a toxic substance which may be discharged directly or indirectly to a public sewer from an industrial source notwithstanding that such amounts or concentrations are less than those demanded by other sections of this title or that the substance is not regulated by such sections for that source, provided that such amounts or concentrations are economically achievable by that source as determined by the Commissioner. Within 20 days after service of the Commissioner's determination and order, the person discharging the toxic substance may request a hearing at which evidence may be presented only upon the issue of the economic achievability of the maximum amounts or concentrations of the toxic substance, as imposed by the Commissioner, to be discharged to the public sewer. Following

such hearing, the hearing officer designated by the Commissioner shall report his findings and recommendations to the Commissioner who, in his discretion, may sustain, revoke, or modify his original determination and order. The Commissioner shall, upon his decision to sustain or modify his original determination and order, issue a final order to the person discharging the toxic substance to comply with such decision.

SECTION 5.3 Pursuant to Section 687-1.0(e)(2) of the Administrative Code, all pretreatment standards and requirements promulgated pursuant to the Federal Water Pollution Control Act, commonly referred to as the Clean Water Act, as amended, including time limitations for compliance with such standards, monitoring of wastewater and the reporting of the results of such monitoring are hereby incorporated into these regulations and all such reports shall also be made to the Commissioner. All sources of pollutants or toxic substances to the public sewers, subject to such pretreatment standards, shall discharge wastewaters to the public sewers in conformance with such standards, provided however, that if a more stringent standard is applicable under Sections 5.1 or 5.2 or any other section of these regulations then the said more stringent standard shall be controlling.

SECTION 5.4 Pretreatment systems shall be maintained in good working order and operated properly so as to insure continued compliance with Titles IV and V of these regulations.

SECTION 5.5 No person shall increase the use of process water or in any way attempt to dilute a discharge as a partial or complete substitute means of pretreatment in order to comply with any provision of any section of any title of these regulations.

TITLE VI

TERMS AND CONDITIONS FOR THE ISSUANCE OF A PERMIT

SECTION 6.1 No person shall discharge, directly or indirectly, into a public sewer any wastewater, sewage, industrial waste, or other waste or any other substance, the characteristics of which violate any provision in Titles IV or V of these regulations. A person wishing to temporarily discharge effluents to a public sewer in violation of the provisions of Titles IV or V, until a pretreatment system is in place that will bring the discharged effluents in compliance with the provisions of Title IV or V, may apply for a permit to do so. The applicant for a permit shall comply with the requirements of Section 6.2. The Commissioner, in his discretion, may issue such a permit and in the permit may impose such terms and conditions he deems necessary. Such terms and conditions may include the requirements of: (i) a limitation upon the volume or rate of flow of effluent discharge; (ii) the installation and maintenance, by the permittee at his own expense, of facilities or equipment for intermittent or continuous measurement of the effluent discharged; (iii) the installation and maintenance of detention tanks or other facilities or equipment for reducing the maximum rates of discharge; (iv) or any other equipment, devices, limitation or requirement he deems necessary.

SECTION 6.2 (a) The applicant for a permit from the Commissioner to temporarily discharge any substance, the characteristics of which violate any provision of Titles IV or V of these regulations shall comply with the following requirements:

(1) Upon application, or by such later date as the Commissioner may direct, submission of a properly completed departmental industrial wastes questionnaire, which shall include such information, as the Commissioner may direct, concerning the characteristics of the effluents from industrial processes. If, in the opinion of the Commissioner, such information requires the performance of laboratory tests, such tests shall be made at the expense of the applicant for the permit and shall be performed in such manner as the Commissioner directs. The samples of wastewater for which laboratory determinations are to be made shall be taken in accordance with the direction of the Commissioner. Any information to be included in the industrial wastes questionnaire which is designated confidential business information by the applicant, except effluent characteristics, is to be treated in accordance with applicable law and procedures established by the Commissioner.

(2) Upon application, or by such later date as the Commissioner may direct, submission of plans and such other information, as required by the Commissioner which show and explain the proposed pretreatment system. The pretreatment system shall, if required by the Commissioner, include a suitable station, acceptable to the Commissioner, to be used for the sampling and or gauging of effluents to be discharged to the public sewer.

Thereafter, the Commissioner may conduct a review and approval of such plans. The review and approval of such plans shall apply only to the pretreatment system. The requirements of other sections of the Administrative Code shall be fully complied with and all necessary approvals obtained by applicant from the appropriate agencies. A copy of a certificate of such approval or approvals shall be submitted with the plans for the pretreatment system.

In lieu of the submittal of permits from appropriate City agencies having jurisdiction, a report by a professional engineer or registered architect may be submitted stating that the applicant has complied with all the requirements of law in the preparation of plans submitted for approval under this section.

Approval of such plans, by the Commissioner, shall be limited by him to the determination of whether such plans for pretreatment of wastewater conform in principle to the accepted practices in the field of waste treatment. Such approval shall be conditional upon satisfactory performance of the installed pretreatment facilities. No such permit or approval shall be deemed to waive, nor shall any permit or approval be held to limit, the power of the Commissioner to enforce any requirement of these or any other regulations, or of the Administrative Code or of any other law. The Department, by such approval, shall not incur any liabilities or obligations for the failure of the effluent from such facilities to comply with these or any other regulations, the Administrative Code or any other law.

Any approval by the Commissioner of a type, kind or capacity of an installation shall not relieve the applicant of the responsibility of altering, enlarging or otherwise modifying an installation to accomplish its intended purpose to the degree necessary to comply with Title IV and V herein.

(3) Upon application, or by such later date as the Commissioner may direct, submission of an implementation schedule, satisfactory to the Commissioner, for the completion and operation of the pretreatment system necessary so that effluents discharged to the public sewer comply with provisions of Titles IV or V herein.

(4) A statement signed by the applicant which obligates such applicant to comply with all of the following requirements and with such additional conditions as the Commissioner may require:

A. In the event the installation of a pretreatment facility is planned to exceed a time period of 9 months, periodic reports, at intervals of not greater than three months, shall be submitted to the Commissioner, showing the progress toward the installation and operation of the pretreatment facility.

B. Pretreatment effluent monitoring reports shall be submitted to the Commissioner in conformance with and at such intervals as required by Section 5.3 herein, if applicable, or as otherwise required by the Commissioner. This provision shall survive the expiration or revocation of a permit issued pursuant to this Title.

C. Components of the pretreatment system shall be maintained in good working order and operated properly so as to insure continued compliance with Titles IV and V of these regulations. Employees of the Department shall be allowed entry upon the premises to inspect the pretreatment system and the industrial processes, to sample wastewater influents and effluents from such industrial processes and/or the pretreatment system and to obtain such information as is relevant in determining compliance with Titles IV or V herein or compliance with the implementation schedule referred to in paragraph (3) of this Section. This provision shall survive the expiration or revocation of a permit issued pursuant to this Title.

(b) Non-compliance with any of the terms and conditions of the permit, shall be grounds for revocation of the permit to discharge wastewater into the public sewer; such revocation shall be effective immediately upon notice to the permittee of such revocation.

SECTION 6.3 (a) Upon direction or order by the Commissioner, any user of a public sewer shall: (i) complete an industrial wastes questionnaire form; (ii) allow an inspection of the user's processes which contribute wastewater to a public sewer; (iii) measure and sample for the purposes of determining volume and characteristics of effluents which are discharged to a public sewer. Any information included in the industrial wastes questionnaire which is designated confidential business information by the user of the public sewer, except effluent characteristics, is to be treated in accordance with applicable law and procedures established by the Commissioner.

(b) An industrial waste questionnaire shall include:

(i) Details of production, number of employees, water consumption and usage, waste disposal facilities, and other pertinent data to enable the Commissioner to properly determine the nature of the waste being discharged;

(ii) A plan of the property showing accurately all sewers, drains and house sewer connections;

(iii) A laboratory determination of the characteristics of the wastewater discharged to a public sewer, if required by the Commissioner. Such a laboratory determination shall be made at the expense of the applicant, and when the applicant has neither the facilities nor professional personnel to properly perform this laboratory determination in accordance with the methods prescribed in the definition of laboratory determination under Section 2.23 of these regulations, he shall have the laboratory determination performed and attested to by a person or agency of recognized professional standing. The samples of wastewater for which a laboratory determination is to be made shall be taken in accordance with the direction of the Commissioner and the results shall be transmitted to the Commissioner.

SECTION 6.4 For discharges which conform or are expected to conform to Titles IV or V herein, the Commissioner, nevertheless, may require the installation and maintenance, by a date set by the Commissioner, at the sole expense of the user of the public sewer, of facilities or equipment for the measurement and sampling by departmental personnel of wastewater discharged to a public sewer.

SECTION 6.5 No person shall cause or allow a new connection to a public sewer of premises, in which one or more establishments that will discharge industrial wastes or other wastes, as defined in these regulations are to be located, without a written permit from the Commissioner, pursuant to Section 683a4-6.0 of the Administrative Code. No such permit shall issue unless the Commissioner shall have determined that the characteristics of such discharges will comply with the provisions of Titles IV or V herein and approves such connection. If pretreatment facilities are required in order that the discharge to the public sewer comply with Titles IV or V herein, review and/or approval by the Commissioner of plans for such facilities shall be limited by him to the determination of whether such plans conform in principle to the accepted practices in the field of waste treatment. No such permit or approval shall be deemed to waive, nor shall any such permit or approval be held to limit the power of the Commissioner to enforce any requirements of these or any other regulations or of the Administrative Code or of any other law. The Department, by such approval, shall not incur any liabilities or obligations for the failure of the effluent from such facilities to comply with these or any other regulations, the Administrative Code or any other law.

TITLE VII

REMOVAL, TRANSPORTATION AND DISPOSITION OF SCAVENGER WASTES

SECTION 7.1 (a) Scavenger wastes shall be admitted into the sewerage system at designated manholes only. The discharge, directly or indirectly, of scavenger wastes into the sewerage system without a valid permit or in contravention of the terms of a permit shall constitute a violation of these regulations. Persons desiring to discharge scavenger wastes at such designated manholes shall be required to obtain a scavenger wastes permit from the Commissioner.

(b) The disposal of such wastes to the City's sewerage system from sources outside of New York City is prohibited.

(c) Sludges from cesspools or septic tanks containing substances derived from non-sanitary wastewater will not be admitted into the sewerage system except by special permit issued by the Commissioner.

(d) The discharge of these wastes shall be made only at a designated manhole location on a combined or sanitary sewer as shall be stated in said permit or as may be relocated by the Commissioner.

SECTION 7.2 The applicant for scavenger wastes permit or special permit shall be the owner or lessee of the vehicle to which the permit is to apply. Any false, untruthful or misleading statements in any application for a scavenger wastes permit or special permit or in any material submitted in support of said application will invalidate the permit. All scavenger wastes permit or special permits issued by the Commissioner shall be for one (1) year, unless stated otherwise. A copy of the scavenger wastes permit or special permit must be carried in every truck for which a scavenger wastes permit or special permit has been issued, and must be presented on demand of the Commissioner.

The person shall at all times conduct discharging operations so as to maintain the safety and cleanliness of the designated manhole and its surrounding area.

The scavenger wastes permit or special permit may be suspended or revoked at any time by the Commissioner for violation of these rules and regulations:

SECTION 7.3 All applicants for a permit to discharge scavenger wastes into the sewerage system shall furnish the following information with each application:

(a) Name of Firm or Individual and Address;

(b) Department of Sanitation Certificate Number;

(c) Department of Consumer Affairs License Number;

(d) Volume of scavenger wastes removed each year for the last three years; new applicants to submit an estimate of volume for the first year.

(e) Number of scavenger vehicles in collection service.

(f) Completed copy of the New York State Department of Environmental Conservation Septic Tank Cleaner Permit.

SECTION 7.4 The scavenger waste permit is applicable for vehicles transporting only scavenger wastes and is not valid for vehicles which, at times, transport other wastes.

TITLE VIII

IMPOSITION AND COMPUTATION OF SEWER SURCHARGE

SECTION 8.1 IMPOSITION OF SEWER SURCHARGE: In addition to any other fees, charges or sewer rents provided by Section 683a4-9.0 of the Administrative Code or any other law, the owner of any parcel of real property connected with the sewerage system, including but not limited to real property connected with the sewerage system by means of a private sewer or drain emptying into the sewerage system, shall pay a sewer surcharge for the use of the sewerage system for discharging any wastewater or other substances in which the characteristics, resulting from pollutants contained therein, exceed the maximum values of such characteristics in receivable industrial waste as defined under Section 2.38 of these regulations.

SECTION 8.2 COMPUTATION OF SEWER SURCHARGE: The sewer surcharge shall be computed by the Commissioner pursuant to the provisions of subparagraph 2(a) of subdivision (b) of Section 687-1.0 of the Administrative Code of the City of New York as follows:

The amount of the sewer surcharge shall equal the product of the following four factors:

> (1) The cost per pound of removing pollutants as defined in Section 2.8 of these regulations; (2) a conversion factor; (3) the volume of wastewater discharged into a public sewer; (4) the sum of (a) the weighted average SS concentration in the wastewater discharged into a public sewer in excess of 350 mg/L, and (b) the weighted average BOD concentration in the wastewater discharged into a public sewer in excess of 300 mg/L.

The quality-quantity formula* expressed in symbols is:

$Ds = C \times F \times V \times [(SS - 350) + (BOD - 300)]$ where:

Ds = amount of surcharge in dollars;
C = cost per pound (in dollars) of removing pollutants;
$F = \frac{62.4}{1{,}000{,}000}$ (this factor converts mg/L to pounds per million cubic feet);
V = volume, in cubic feet of wastewater discharged into the public sewer.

(*If the SS is less than 350 mg/L, and/or the B.O.D. is less than 300 mg/L, then either one or both of these particular pollutant factors shall be eliminated from the formula.)

SECTION 8.3 VOLUME DETERMINATION: In applying the sewer surcharge formula the Commissioner may use any one or combination of the following as the figure representing the number of cubic feet of wastewater discharged into a public sewer: (1) the amount of water supplied to the premises by the City or a private water company as indicated by the water meter(s) if the premises are metered; or (2) if the premises are supplied with river water or water from private wells, the amount of water supplied from such sources as determined by the Commissioner, pursuant to paragraph four, subdivision b of Section 683a4-9.0 of the Administrative Code; or (3) if such premises are used for an industrial or commercial purpose of such nature that the water supplied to the premises is not entirely discharged into a public sewer, the determination of the amount of wastewater discharged into a public sewer made by the Commissioner pursuant to the provisions of paragraph five of subdivision b of Section 683a4-9.0 of the Administrative Code; or (4) the actual quantity as determined by measurements taken at a gauging station installed by the owner of the property served by a public sewer, at his own expense, which is acceptable to the Commissioner; or (5) a figure determined by the Commissioner by any combination of the foregoing or by any other equitable method.

SECTION 8.4 DETERMINATION OF POLLUTANT CONCENTRATIONS.

(a) The pollutant concentrations of any wastewater shall usually be determined from representative samples of the effluent discharged to a public sewer, taken by representatives of the Commissioner at sampling stations as described under Title VI, Section 6.3 of these rules and regulations or at other locations determined by the Commissioner.

The intent of any sampling procedure is to establish the BOD and SS concentrations in the wastewater discharged during an average or typical working day. These concentrations may be derived, according to the best judgment of the Commissioner, by repeated samplings during one or more days.

The analyses of samples taken shall be performed in the Industrial Waste Laboratory of the Department and the sewer surcharge shall be based upon said analyses.

(b) All sewer surcharges shall be based on the analyses of the total wastewater from any premises. The concentrations of pollutants in the wastewater, once determined as prescribed in this section, shall be used in calculating the sewer surcharge. The concentrations of pollutants shall remain in effect until the person affected shall prove, to the satisfaction of the Commissioner, or the city shall determine that a change in the manufacturing process or production or the installation or

alteration of pretreatment facilities warrants a reanalysis. The revised pollutant concentrations shall then be used in calculating the sewer surcharge and shall become effective as of the date of the request for resampling.

(c) Whenever the wastes discharged from premises to a public sewer might be expected to show appreciable periodic variations during the year due to manufacturing process or production variation due to seasonal changes, the Commissioner may average the results of two or more series of analyses taken to reflect these variations and thereby determine an average annual pollutant concentration.

(d) Average Pollutant Concentrations as a Basis for Sewer Surcharge: The Commissioner may establish average pollutant concentrations of the wastewater discharged into the public sewer by each industry or segment of an industry. These average pollutant concentrations may be determined by sampling the wastewater of one or more establishments judged by the Commissioner as typical for that industry or from figures obtained from professional or trade literature. The determined averages may be expressed in concentration units, pounds of pollutants related to units of production, or some other suitable measure, and then converted to the factors involved in the formula for the computation of the sewer surcharge in accordance with Section 8.2 of this Title. Where sampling and gauging of specific premises is not practical for physical, economic or other reasons, the appropriate averages may be applied in determining the sewer surcharge. These average pollutant concentrations shall remain in effect until such time as the person; (i) submits data which, in the absolute discretion of the Commissioner, indicates that these average pollutant concentrations are no longer valid for the industry or are being improperly applied to him; or (ii) makes his premises amenable to sampling. In the event that the person makes the premises amenable to such sampling it shall be at his sole expense.

SECTION 8.5 POLLUTANT CONCENTRATIONS DISPUTED BY A USER OF A PUBLIC SEWER: In the event that the pollutant concentrations of the wastewater discharged to a public sewer, as determined under Section 8.4 of this Title, is disputed by the user of a public sewer, a program of resampling and gauging with subsequent analyses may be instituted as follows:

(a) The person must submit a request for resampling and gauging of wastewater to the Commissioner who shall determine if such resampling is warranted. The person shall bear all of the expenses incurred by the City in the resampling and gauging and subsequent analyses of the wastewater if the sewer surcharge billings, based upon the resultant concentrations, are less than fifteen percent below or five percent above the sewer surcharge billings based upon the disputed pollutant concentrations.

(b) A consultant of recognized professional standing in the employ of the person must confer with representatives of the Commissioner in order that an agreement may be reached as to the various factors which must be considered in a new sampling program.

(c) The results of the resampling and the reanalyses in the Department's laboratory shall be considered to be the current analyses of the wastewater discharged to the public sewer and shall be used for determining the sewer surcharge and/or acceptability of the wastewater as of the date of the user's request for such resampling.

SECTION 8.6 STANDARD METHODS FOR THE EXAMINATION OF WATER AND WASTEWATER: The handling, storage, and analyses of all samples taken for the determination of the characteristics of wastewater shall be performed in accordance with the latest edition of "Standard Methods for the Examination of Wastes and Wastewater," (a joint publication of the American Public Health Association, the American Water Works Association and the Water Pollution Control Federation).

SECTION 8.7 FIRM WITH MULTIPLE BUILDINGS: Where a firm is operating as an integrated manufacturing complex involving more than one building with varying processes and having separate house sewer connections within the same contributory area, as defined under Section 2.6, such firm may be considered as one unit with multiple house sewers. Pollutant concentrations for each house drain, determined by sampling and gauging at each house sewer, may be combined and the weighted averages of the results thus obtained may be used as the measure of the pollutant concentrations of the wastewater discharged into the public sewers by said firm.

SECTION 8.8 A BLOCK AND LOT WITH MULTIPLE BUILDINGS: Where a parcel of real property consisting of one block and lot is occupied by multiple buildings having tenants with unrelated manufacturing processes, such a complex of buildings may be considered as one unit with multiple house sewers. Pollutant concentrations for each house sewer, determined by sampling and gauging at such house drain, may be combined and the weighted average of the results thus obtained may be used as the measure of the pollutant concentrations of the wastewater discharged into the public sewers from buildings on said block and lot.

SECTION 8.9 MULTI-TENANTED INDUSTRIAL BUILDING: Where a parcel of real property, consisting of one block and lot or lots, is occupied by a multi-tenanted industrial building connected to the public sewers by one or more house sewers and the tenants in said building discharge wastewater into the house drainage system, if the Commissioner shall so direct, the determination of the pollutant concentrations of such wastes shall be taken at a

suitable control manhole or manholes where the wastes combine and discharge through the house sewer or sewers into the public sewers. Pollutant concentrations for each house sewer, determined by sampling and gauging at each house drain, may be combined and the weighted averages of the results thus obtained may be used as the measure of the pollutant concentrations of the wastes discharged into the public sewer from said building.

SECTION 8.10 INDUSTRIAL PARK AND/OR INDUSTRIAL BUILDING COMPLEX: Where a parcel of real property consists of more than one block and lot and one or more buildings on said parcel occupy a single block, each such building or buildings may be considered as a multi-tenanted industrial building and the pollutant concentrations of the wastewater discharged from said building or buildings to the public sewers shall be determined as prescribed under Section 8.9 of this Title.

TITLE XI

GENERAL PROVISIONS

SECTION 11.1 DELEGATION OF AUTHORITY: All actions or approvals required by or permitted to the Commissioner may be taken by the Director of the Bureau of Water Pollution Control or the Director of the Bureau of Sewers or by an authorized representative of the Commissioner or either of the Directors.

SECTION 11.2 PROTECTION FROM DAMAGE: (a) No unauthorized person shall enter any regulator or other element of the sewerage system and no person shall dispose of or allow to discharge directly or indirectly into the public sewer any material or substance excluded by these rules and regulations from the public sewers. No person shall damage or tamper with the operation of any mechanism nor shall any person change the operation of any device without proper authorization from the Commissioner.

(b) No person shall knowingly, or negligently break, damage, destroy, uncover, deface or tamper with any structure, appurtenance, or equipment which is a part of the sewerage system.

SECTION 11.3 NON-INTERFERENCE WITH AUTHORIZED EMPLOYEES: Authorized employees of the Department shall be in charge of the operation of the sewerage system and no person or persons shall interfere with such employees in the performance of their duties nor shall any material which will impair the operation of such system be thrown or placed or cause to be thrown or placed in or about such system, or in or about the parts or appurtenances of the operating machinery, or devices of such system. No person shall in any way interfere with or obstruct the operation of the machinery or devices of such system and no person other than an authorized employee or agent of the Department shall operate or attempt to operate or change the operation of any appurtenance of a sewage treatment works.

SECTION 11.4 No person shall interfere with or obstruct duly authorized employees of the Department, bearing proper credentials and identification, from entering upon all properties, public or private, for the purpose of inspection, observation, sampling and testing as is necessary to determine compliance with the requirements of any section herein or in executing the orders of the Commissioner. Refusal to permit such entry or the tampering with any device placed within the premises for purposes of sampling or testing shall be a violation of these regulations.

SECTION 11.5 COOPERATION BY PRIVATE PERSONS, WATER COMPANIES AND PUBLIC AGENCIES: (a) The Commissioner may require every person who owns or occupies real property within the city, and

every private water company supplying water to property within the city, to furnish him with such information as may be necessary to carry out the provisions of these rules and regulations.

(b) The Commissioner shall have the power to hold hearings and subpoena any such persons or company, or any officer, employee or agent of any such company, and direct the production of books and records in order to carry out the provisions of these rules and regulations.

(c) Every such person, water company or public official or municipal agency, officer or employee shall cooperate with the Commissioner in carrying out the provisions of Section 687-1.0 of the Administrative Code and shall comply with all rules and regulations promulgated pursuant to said section.

SECTION 11.6 PENALTIES AND SANCTIONS: Any person who is in violation of, or fails to comply with any provision of any section of any title of these regulations or any order or determination issued pursuant to these regulations shall be subject to the fines, penalties and other sanctions provided in Section 689-1.0 of the Administrative Code of the City of New York.

SECTION 11.7 The Commissioner shall cause to be published annually, in the largest daily newspaper published in the City of New York, a list of persons that, during the previous twelve months, were significantly violating applicable pretreatment standards or other pretreatment requirements as defined in Part 403.8(f)(2)(vii) of Title 40 of the Code of Federal Regulations.

SECTION 11.8 Nothing contained in any section of any title of these regulations shall be deemed to waive any requirement of the New York City Administrative Code or of any other city, state or federal law or regulation.

TITLE XII

REPEAL

SECTION 12.1 These rules and regulations replace and supersede those "Rules and Regulations Relating to the Use of the Public Sewer System for the Discharge of Sewage, Industrial Waste and Other Wastes, Including Surcharges and Penalties", adopted on September 30, 1963, and any subsequent amendments, and those "Rules and Regulations Restricting the Discharge of Groundwater into the New York City Sewer System" adopted on March 31, 1982 and any subsequent amendments, which are hereby repealed.

APPENDIX A

ENFORCEMENT AND PENALTIES
(ADMINISTRATIVE CODE, §689-1.0)

Enforcement and penalties.

a. Notwithstanding any other provision of law, the commissioner of environmental protection and the environmental control board shall enforce the provisions of Sections 683a4-2.0 through 683a4-19.0 and 687-1.0 and the regulations promulgated pursuant thereto. Such commissioner and board shall have the power to issue such orders as may be provided for therein and such additional orders as may be necessary for the enforcement of such provisions.

b. 1. Whenever the commissioner has reasonable cause to believe that a discharge in violation of the provisions of sections 683a4-2.0 through 683a4-19.0 and 687-1.0 or any order, rule or regulation issued by the board or commissioner or in violation of the conditions of any permit issued pursuant to such provisions creates or may create an imminent danger to the sewer system or to the public health or to the life or safety of persons, the commissioner may issue a cease and desist order requiring any person who owns, leases, operates, controls or supervises any building, structure, facility or installation from which the unlawful discharge is emitted to take such action as may be necessary to halt or prevent such discharge.

2. If service of the order cannot be made personally because such person cannot be located at such time then service may be made by delivering a copy to a person of suitable age and discretion at the residence or place of business of the person sought to be served. If service cannot be made personally or by such delivery to a person of suitable age and discretion because of inability to locate or to obtain the name or address of such person at such time, service may be made by conspicuously posting a copy of such order upon the property to which it relates. The posting of such order shall be sufficient notice of such order to

all persons having a duty in relation thereto under the provisions of this subdivision.

3. If the order is not complied with or so far complied with as the commissioner may regard as reasonable, within the time specified therein the Commissioner may act to halt or prevent such discharge by:

(a) sealing, blocking, or otherwise inactivating any equipment facility or device;

(b) terminating the water supply to the premises;

(c) sealing, blocking or otherwise inactivating any private sewer or drain emptying directly or indirectly into the sewer system;

(d) any other means or method that is reasonable under the circumstances. For such purpose the commissioner or his deputies or such other officers or employees as are designated by the Commissioner may enter on any public or private property.

4. Any person affected by such an order may make written application to the environmental control board for a hearing. Such hearing shall be provided, pursuant to the rules and regulations of the board, and shall be held within forty-eight hours after the receipt of such application. The board may suspend, modify or terminate such order.

c. 1. In the case of any continued or knowing violation of any of the provisions of Sections 683a4-2.0 through 683a4-19.0 and 687-1.0 or any order, rule or regulation issued by the board or commissioner pursuant thereto or of the conditions of any permit issued pursuant to such provisions or where the board finds that the violation of any of such provisions or of the conditions of any such permit presents or may present a danger to the environment or threatens to interfere with the operation of the sewer system, the board after notice and the opportunity for a hearing in accordance with the rules and regulations of the board, may issue a cease and desist order requiring any person who owns, leases, operates, controls or supervises any building, structure, facility or installation to cease and desist from any activity or process which causes or is conducted so as to cause

such violation within the time specified in such order.

2. Such order may provide that if the order is not complied with or so far complied with as the commissioner of environmental protection may regard as reasonable within the time specified therein, the commissioner may take such action as shall be specified therein, including but not limited to:

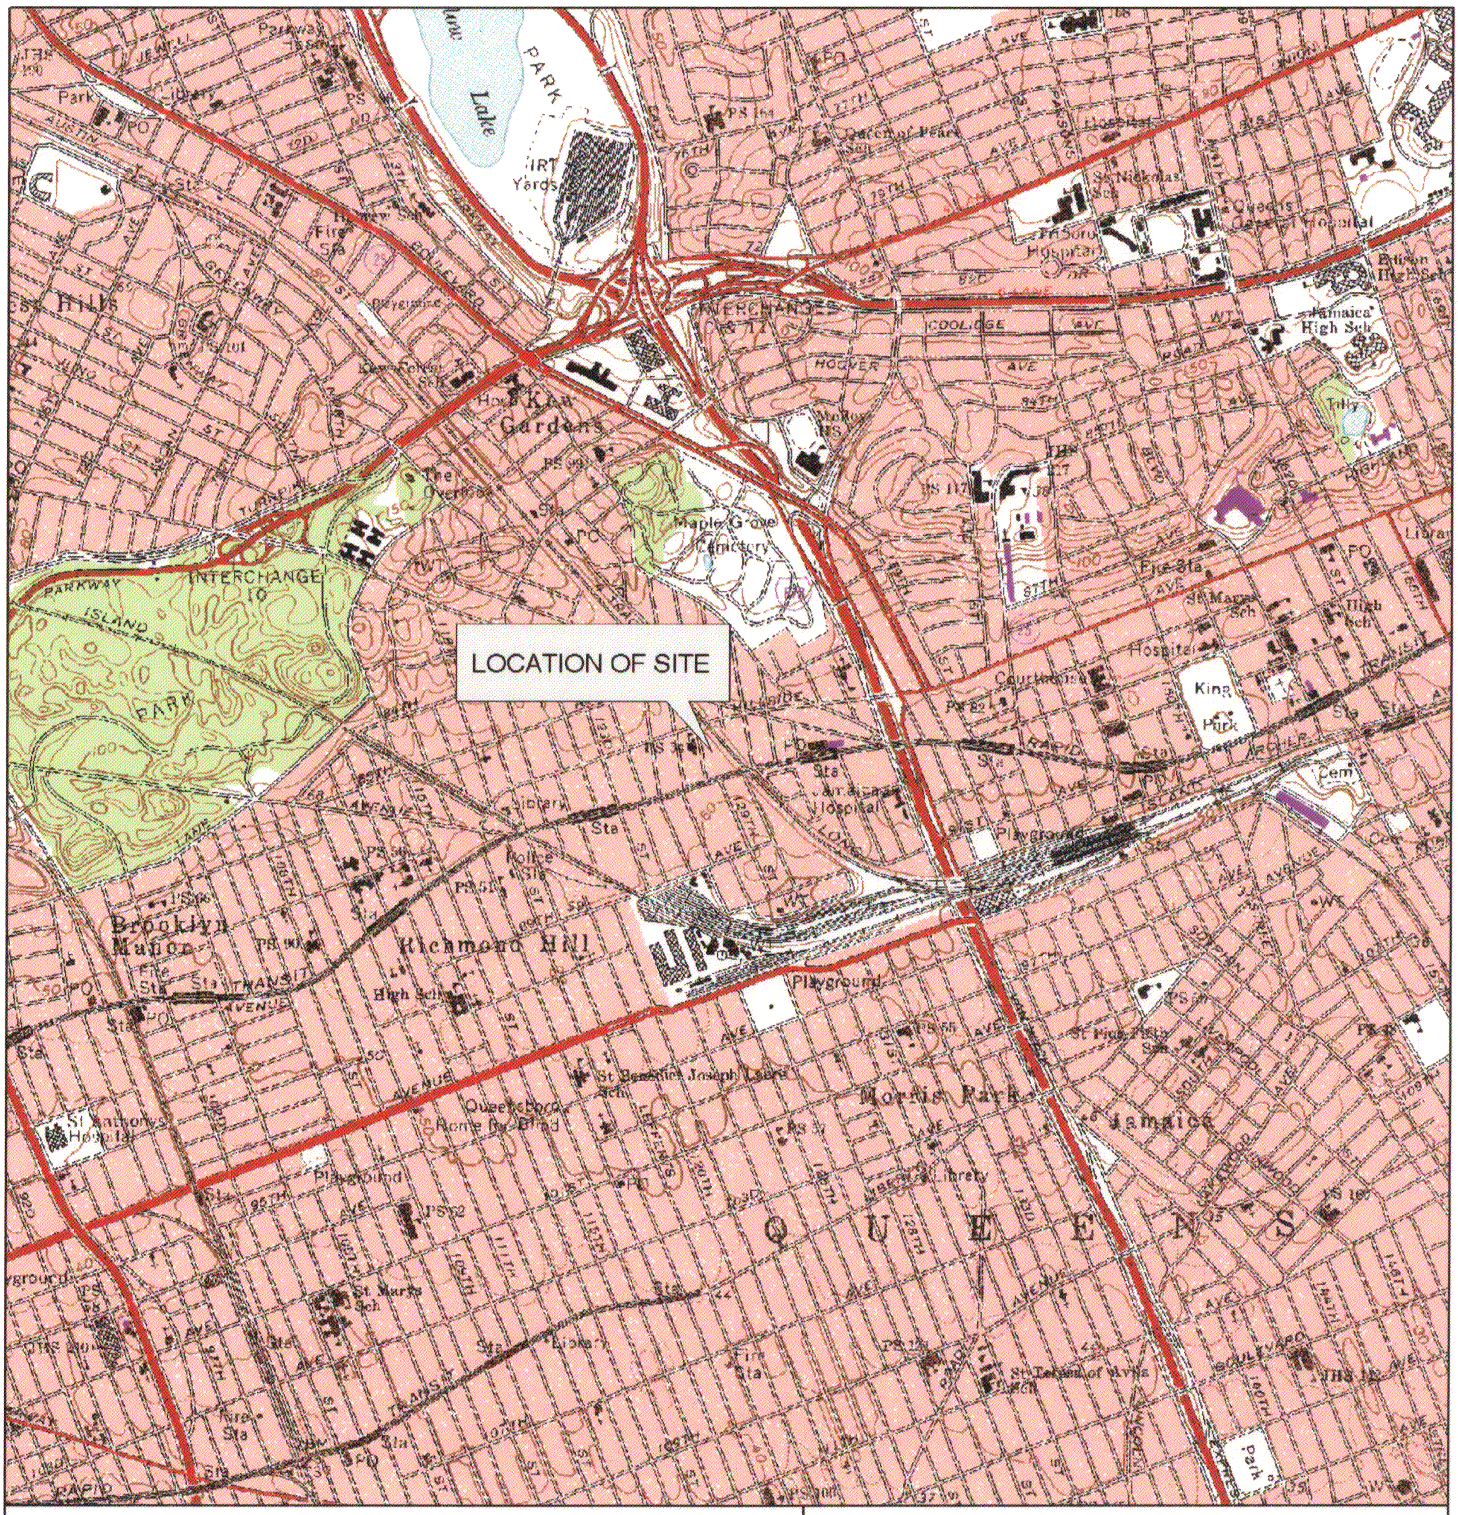
(a) sealing, blocking or inactivating any equipment facility or device;

(b) terminating the water supply to the premises;

(c) sealing, blocking or otherwise inactivating any private sewer or drain emptying directly or indirectly into the sewer system.

For such purpose the commissioner or his deputies or such other officers or employees as are designated by the commissioner may enter on any public or private property.

d. If the respondent fails to comply with any order issued by the board or commissioner or with the conditions of any permit, or the board or commissioner otherwise deems it necessary, the corporation counsel, acting in the name of the city, may maintain an action or proceeding in a court of competent jurisdiction to compel compliance with or restrain by injunction the violation of any order or permit issued by the board or commissioner.



e. Any person who violates or fails to comply with any of the provisions of Sections 683a4-2.0 through 683Aa4-19.0 and 687-1.0 or any order, rule or regulation issued by the board or commissioner pursuant thereto shall be liable for a civil penalty of not less than fifty nor more than one thousand dollars for each violation. In the case of a continuing violation each days continuance shall be a separate and distinct offense. The environmental control board shall have the power to impose such civil penalties. A proceeding to impose such penalties shall be commenced by the service of a notice of violation returnable to such board. Such board, after a hearing as provided by the rules nd regulations of the board, shall have the power to enforce its

final decisions and orders imposing such civil penalties as if they were money judgements pursuant to subdivision d of section fourteen hundred four of the New York City charter. A civil penalty imposed by the board may also be collected in an action brought in the name of the city. The board, in its discretion, may, within the limits set forth in this subdivision in any court of competent jurisdiction establish a schedule of civil penalties indicating the minmum and maximum penalty for each separate offense.

f. In addition to the civil penalties set forth in subdivision f of this section, any person who knowingly violates any provision of sections 683a4-2.0 through 683a4-19.0 or 687-1.0 or any order, rule or regulation issued by the commissioner or board pursuant thereto shall be guilty of a misdemeanor and, upon conviction thereof, shall be punished by a fine of not less than two hundred fifty nor more than one thousand dollars, or by imprisonment not exceeding thirty days, or both for each violation. In the case of a continuing violation each days continuance shall be a separate and distinct offense.

g. Any person who violates or fails to comply with any of the provisions of sections 683a4-2.0 through 683a4-19.0 and 687-1.0 or any order, rule or regulation issued pursuant thereto or with the conditions of any permit issued pursuant thereto shall be liable to the city for any expense, loss or damage suffered by the city by reason of such violation.

h. Unless otherwise provided in this section, service of any notice or order required by this section may be made either personally or by mail addressed to the last known address of the person to be served.

Applicant Relationship to Property

129 Jamaica Avenue Reclamation LLC (Volunteer) – Contract Vendee
UFI, Inc., (Participant) – Current Owner

Property Description Narrative

The Site is located at 129-09 Jamaica Avenue, Richmond Hill, New York 11418. The building was formerly owned and operated by Ideal Vortex Laundry, which utilized a petroleum dry cleaning machine during the 1930's through 1950's. Uniforms for Industry (UFI) acquired the property in the 1950's and continued laundry operations through November 2002, when all operations were ceased.

The Site consists of an approximately 1.72-acre irregular-shaped parcel of land and is developed with two (2) interconnected one (1)- to two (2)-story vacant industrial buildings, located on the central and southeastern portions of the Site, respectively. The onsite facility, constructed of brick, steel, wood, and concrete in 1929, with a series of additions in the 1950s and the 1960s, with the last addition constructed in the 1990s, occupies approximately sixty-five percent (65%) of the Site.

Ten (10) underground storage tanks (USTs) were historically located on the Site as follows: one (1) 10,000-gallon No. 6 fuel oil UST; three (3) 2,000-gallon mineral spirit USTs; one (1) 7,500-gallon mop oil UST; one (1) 6,000-gallon No. 2 fuel oil UST; one (1) 6,000-gallon mop oil UST; and three (3) 2,000-gallon mineral oil USTs. During the 2003 removal of the underground tanks located throughout the property, suspect impacted soils were identified.

On February 17-18 and March 26, 2004, VERTEX installed four (4) groundwater monitoring wells at the Site. The Additional Subsurface Investigation performed by GC Environmental in August 2005 included twelve (12) soil borings and the installation of eight (8) groundwater monitoring wells. The main results of these investigations are as follows:

- Soil contamination includes compounds associated with petroleum products, as well as chlorinated organic compounds. Petroleum contamination present in the soil is believed to originate with leaking fuel oil and mop oil underground storage tanks, which have been removed. The likely source of chlorinated solvents is from spills and/or discharges over time from historical operations at the Site and from potentially offsite sources.

- Concentrations of petroleum compounds in soil vary widely in the areas sampled, and appear to be concentrated in the general area of two specific borings, B-1 and B-2, where total VOCs range from 11,121 micrograms per kilogram (µg/Kg) in soil boring B-1 to 181,400 µg/Kg in soil boring B-2.

- Groundwater contamination is highest in MW-8, where separate-phase free product has also been observed. Contamination includes significant levels of petroleum compounds, as well as chlorinated solvent compounds. Total volatile organic compounds (TVOC) range from 11 micrograms per liter (µg/L) in MW-12 to 281,2000 µg/L in MW-8 (free product sample). The next highest TVOC concentration was detected in MW-1 (11,887 µg/L).

- Separate-phase free product has been observed in up to four onsite monitoring wells at measured thicknesses up to 6 feet (MW-8). Based on multiple water level gauging rounds, it does not appear that the free product plume is migrating offsite.

- The extent of chlorinated solvent and petroleum contamination throughout the Site is most likely associated with releases over an extended period of time from dry cleaning operations and leaking USTs onsite into the soil, and potentially from offsite sources.

APPENDIX B

Project Description

Project Description
This Site is currently vacant (building structures are present) and impacted soil and groundwater have been discovered during recent investigation activities. The project involves completing the investigation and remediation of soil and groundwater impacts, including work required to address NYSDEC spill numbers 05-07800 and 02-08119. The Volunteer plans on redeveloping this property as a mix of commercial and low-income housing as part of community revitalization. More specifically, the proposed development consists at this stage of a seven-story building that fronts on Jamaica Avenue, partitioned into retail, residential, and community space at street level and residential units on all remaining floors. The rear (north) of the Site is proposed to be divided into a parking lot (circa 65 parking spaces) and outdoor space (see following page for conceptual model).

A key aspect of this project will be the completion of a true "brown to green" redevelopment. The Volunteer's consultant, Roux Associates, Inc., in addition to DOMANI Sustainability Consulting, LLC (a subsidiary of Roux Associates), will complete investigation and remediation activities, and ultimately assist in the design and implementation of green building and sustainable land use practices.

Estimated Project Schedule
The following schedule listing anticipated tasks is approximate and takes into account NYSDEC review of project plans, public comment periods, and the potential for multiple field mobilizations.

Project Phase	**Approximate Timeframe**
BCP Application	November 2006
Notification of Acceptance	December 2006
Signing of BCP Agreement	January 2007
Investigation Work Plan	Spring 2007
Investigation and Reporting	Spring 2007– Fall 2007
Remedy Selection	Winter 2007
Remedial Action	Spring 2008

APPENDIX E

Proximity to Real Property

According to the Zoning Ordinance of the City of New York and based on Roux Associates' visual inspection, the surrounding area is utilized for industrial, commercial, educational, transportation, and residential purposes.

To the north of the Site are residential properties, a portion of the Long Island Rail Road, Primary Electrical Supply, Regency Collision Co. and Hillside Avenue, beyond which are CVS Pharmacy, Hillside Car Wash and Express Lube Detailing Center, Mystic Wholesale Motors, a Getty gasoline service station, and additional commercial properties, including French Cleaners, a dry cleaning establishment, and residential properties.

To the east of the Site is a portion of the Long Island Rail Road, beyond which are residential properties, 130th Street, and commercial properties.

To the south of the Site is Jamaica Avenue, beyond which is the New York City Transit Authority (NYCTA) 129th Street Yard and additional commercial and residential properties.

To the west of the Site is 127th Street, beyond which is Los Amigos restaurant, Paris Flowers and Party Goods, and additional commercial, residential, and educational properties.

APPENDIX F

Potential Vulnerability of Groundwater to Contamination

Potable water in the area of the Site is provided by the municipal system from upstate reservoirs. Groundwater contamination has been identified at the Site. There are no known wellhead protection or groundwater recharge areas in the area of the Site.

APPENDIX G

Geography and Geology of the Site

According to the US Geological Survey (USGS) Topographic Map of Jamaica, New York Quadrangle, USGS, dated 1966, photorevised 1979, the Site's elevation is approximately 60 feet above mean sea level. Topographically, the Site is level with no abrupt changes in elevation. The topography in the vicinity of the Site slopes gently to the south towards Jamaica Bay, located approximately 4 miles to the south of the Site.

According to the Hydrogeologic Framework of Long Island, New York, USGS, 1989, the geology in the area of the Site consists of approximately 150 feet of glacial deposits composed of clay, sand, gravel, and boulders, which form the Upper Glacial Aquifer, underlain by approximately 125 feet of sand, clay, and gravel, which form the Magothy Aquifer. The Magothy Aquifer is underlain by approximately 180 feet of clay, which form the Raritan Confining Unit, underlain by approximately 195 feet of sand and gravel, which form the Lloyd Aquifer. The bedrock in the area of the Site consists of crystalline metamorphic and igneous rocks and is approximately 650 feet below grade.

Based on the information gathered during site investigation activities, the geology of the Site to the sampled depth of approximately 50 feet below grade consists of dense, brown-gray, fine-coarse sand with some fine-coarse gravel and occasional cobbles and small boulders.

Based on the results of monitoring well survey and groundwater level measurement, groundwater flow direction at the Site is to the southwest. Depth to groundwater below the Site is approximately 40 feet below grade. The water table is rather flat, but forms a small groundwater mound in the vicinity of Monitoring Well MW-1.

RE: April 2006 Offsite Investigation Activities Summary
Former UFI Jamaica Facility
129-09 Jamaica Avenue
Richmond Hill, Queens, New York

Provided below is a summary of the investigation activities completed by Roux Associates, Inc. at the former UFI Jamaica facility located at 129-09 Jamaica Avenue, Richmond Hill, Queens, New York (Site) from April 17-26, 2006.

- Investigation activities performed included the gauging and purging of the 12 onsite monitoring wells; the collection of groundwater samples from all onsite monitoring wells; the collection of two free product samples from onsite monitoring wells MW-8 and MW-11; the completion of four offsite soil borings (SB-2 through SB-5) within the sidewalks along Jamaica Avenue and 127th Street; and the collection of a soil and groundwater sample from each offsite soil boring location. It should be noted that offsite soil boring SB-1 (located within the sidewalk along Jamaica Avenue, to the east of SB-2) could not be completed due to drilling refusal.

- Soil and groundwater samples collected were submitted to Severn Trent Laboratories (STL) for analysis for volatile organic compounds (VOCs) via EPA Method 8260. Free product samples collected were submitted to Torkelson Geochemistry for density, viscosity, interfacial tension and hydrocarbon characterization analysis.

- Offsite soil sample analysis (Table 2) indicated that the concentrations of VOCs in soil just below the water table were non-detect for all major contaminants of concern (i.e., chlorinated solvents and benzene, toluene, ethylbenzene and xylene (BTEX) compounds), with the exception of SB-5 where toluene was detected at a very low level (1.7 micrograms per kilogram [ug/kg]).

- Based on the monitoring well gauging data (Table 1), groundwater appears to flow in a south – southwesterly direction beneath the Site (Figure 1). In general, the water table appeared to be approximately one foot higher in elevation than it was during the previous monitoring round performed in August 2005 by G.C. Environmental, Inc.

- Dissolved chlorinated solvent impacts (Table 3, Table 4, and Figure 2, respectively) were detected to varying degrees at all onsite monitoring wells and two offsite soil boring groundwater sampling locations (SB-2 and SB-3). In general, the isomers of dichloroethene (DCE) comprised the greatest percentage of the total chlorinated solvent concentration, followed by vinyl chloride, tetrachloroethene (PCE), and, to a lesser degree, trichloroethene (TCE). The only exceptions to this general trend were the results for monitoring wells MW-2, MW-8, and MW-10, where vinyl chloride was the predominant chlorinated solvent compound present. For the offsite sampling locations, significant chlorinated solvent concentrations were found in the area southwest of the Site and low to non-detect concentrations were found along the western border of the Site (i.e., 127th Street).

- The distribution of total dissolved chlorinated solvent impacts from the monitoring well and offsite groundwater data indicated that these impacts are concentrated in two distinct areas, including the east – northeast region of the Site in the vicinity of monitoring wells MW-1 and MW-8, and the south – southwestern region of the Site in the vicinity of monitoring well MW-4 and offsite soil boring location SB-2.

- Free product was detected in three onsite monitoring wells (MW-8, MW-11 and MW-2) during the monitoring well gauging activities (Table 1). Unlike the previous gauging round conducted in August 2005 by G.C. Environmental, Inc., no free product was detected in monitoring well MW-1. Laboratory analysis of the free product physical properties indicates that free product in the vicinity of MW-8 is relatively heavy and viscous, with a density of 0.88 g/cm^3 and a viscosity of 18.5 centipoise (cP), while the free product present in the vicinity of MW-11 and MW-2 is slightly lighter and significantly less viscous, with a density of 0.86 g/cm^3 and a viscosity of 5.7 cP.

- Hydrocarbon characterization analysis indicates that the free product beneath the Site is composed of a mixture of light petroleum distillates and middle distillates, although the composition of the middle distillate component varied between the two locations sampled. The light distillate component of both samples appears to be a naphtha-based petroleum solvent (a.k.a. mineral spirits), similar to a Stoddard Solvent (which is also known by more specific trade names, such as Varsol, etc.). The middle distillate component of MW-11 appeared to be a weathered No. 2 fuel oil, while the middle distillate component of MW-8 appeared to be a heavier fuel oil, such as No. 4 fuel oil, and / or a specialty lubricating oil (lighter than motor oil). The difference in the heavier component composition between MW-8 and MW-11 corresponds to the difference in density and viscosity data between these two monitoring wells. It should be noted that according to historical background information, mineral spirits, Stoddard Solvent, No. 2 fuel oil, and No.4 fuel oil were used/stored at the Site during previous UFI operations.

- The concentrations of total BTEX in groundwater (Table 3, Table 5, and Figure 3, respectively) were greatest in the east-northeast region of the Site, in the vicinity of monitoring well MW-1, and decreased downgradient of this area to non-detect levels along the southern and western border of the Site. In addition, the samples from the monitoring wells located along the northeastern border of the Site and upgradient of MW-1 (i.e., monitoring wells MW-7, MW-3, MW-6 and MW-5) were either non-detect

or contained very low concentrations of BTEX compounds. No dissolved BTEX constituents were detected in any of the offsite soil boring groundwater samples.

- The distribution of total BTEX beneath the Site consisted primarily of xylene compounds, followed by progressively smaller concentrations of ethylbenzene, toluene and benzene, respectively. This trend is similar to the distribution of BTEX compounds within the free product samples shown by the hydrocarbon characterization analysis and is consistent with the free product being the source of dissolved BTEX impacts beneath the Site.

- The results of the April 2006 investigation indicated the following:
  - The soil in the vicinity of the water table beneath the offsite areas to the south and west of the Site does not appear to be impacted by past Site operations.

  - The groundwater beneath the majority of the Site continues to show chlorinated solvent concentrations that exceed, and in some locations, significantly exceed the New York State Department of Environmental Conservation Ambient Water Quality Standards and Guidance Values (NYSDEC AWQSGVs). In addition, the dissolved chlorinated solvent plume appears to have migrated offsite in a southerly – southwesterly direction, as indicated by the dissolved chlorinated solvent concentrations found at offsite sampling locations SB-2 and SB-3. The extent of this migration cannot yet be determined without the collection of additional data, but based on the magnitude of the concentrations found at SB-2 (total chlorinated solvents concentration of 513 micrograms per liter [ug/L]), the plume may extend significantly beyond the southern boundary of the Site and Jamaica Avenue.

  - Free product was found beneath the Site, as expected based on the results of G.C. Environmental, Inc.'s August 2005 investigation, though it was only detected at three monitoring wells during this investigation. The lack of free product in MW-1, where it was found during August 2005, may be due to the effects of a rising water table since groundwater elevations were typically higher during this investigation than they were in August 2005. The extent of the free product plume and the connection between the two areas where it was detected (i.e., MW-11/MW-2 and MW-8) is difficult to determine without the installation of additional monitoring wells; however, the free product analysis data indicates that there are similarities between the lighter distillate components at both locations, which may indicate a connection between the two areas where free product was detected. The presence of both light and middle distillate components in the product, as well as the varying composition of the middle distillate component between the two samples collected, indicates multiple sources contributed to the free product plume(s) beneath the Site.

  - The groundwater beneath the majority of the Site does continue to show BTEX concentrations that exceed the NYSDEC AWQSGVs. However, these concentrations appear to significantly decrease along the south – southwestern border of the Site and, based on a review of the offsite groundwater sampling data, the BTEX plume does not appear to currently be migrating offsite.

Phase I Environmental
Site Assessment

129-01 Jamaica Avenue
Richmond Hill, New York 11418

August 20, 2002

Fenley & Nicol, Environmental, Inc. (F&N) appreciates the opportunity to work for Mr. Zarate at the property located at 129-01 Jamaica Avenue in Richmond Hill, New York.

Should you have any questions or comments regarding the contents of this report, please feel free to contact us at your convenience.

Very truly yours,
Fenley & Nicol Environmental, Inc.

EXECUTIVE SUMMARY

Fenley & Nicol Environmental, Inc. (F&N) has performed a Phase I Environmental Site Assessment of the property located at 129-01 Jamaica Avenue in Richmond Hill, Queens, New York. The property will hereinafter be referred to as the *"subject property"* or the *"subject site"*. The Phase I Environmental Site Assessment was performed to meet or surpass the American Standard of Testing Materials (ASTM) Standard for Phase I Environmental Site Assessments E 1527-00.

The results of the Phase I Environmental Site Assessment are contained in this report. The Phase I Environmental Site Assessment has revealed the following Recognized Environmental Conditions (RECs):

- The presence of open containers of petroleum product (§3.2.3)
- The pit in the area of the active groundwater supply well is filled with debris (§3.2.1)
- An active spill number associated with a 3,000 gallon tank failure is listed with the NYSDEC (§8.7)
- The floors in the upstairs portion of the original building contain 9x9 square inch floor tiles which are considered suspect ACM (§3.2.2) (§4.9)
- The ceiling of the second floor of the original building appears to be stained and may possibly contain mold (§3.2.2)
- PCBs may be present in the light ballasts. PCBs may also be present in the "diaper lift" (§4.6)
- The drywells designated as DW-1 and DW-2 may have been impacted by contamination (§3.2.2) (§4.4)
- The pre-hot/hot water tanks located to the west of the boiler rooms may contain suspect ACM (§3.2.2) (§4.9)

No effort has been made by F&N to perform any investigation beyond what is included in this report. The observations included herein summarize the apparent environmental integrity of the subject property up to the date of the visual inspection of the property and the date of this report.

The following sections provide the details and specific information pertaining to the various components of the Phase I Environmental Site Assessment.

1.0 INTRODUCTION

Fenley & Nicol Environmental, Inc. (F&N) has been retained by Mr. Luis Zarate of Uniforms for Industry (UFI) to perform a Phase I Environmental Site Assessment of the property located at 129-01 Jamaica Avenue in Richmond Hill, New York. The purpose of a Phase I Environmental Site Assessment is to determine the presence of Recognized Environmental Conditions (RECs). As defined by ASTM, a REC is, "the presence or likely presence of any *hazardous substances* or *petroleum products* on a property under conditions that indicate an existing release, a past release or a material threat of a release of any *hazardous substances* or *petroleum products* into structures on the property or into the ground, groundwater or surface water of the property."[1]

To this end, F&N has collected information through a number of sources including, but not limited to: a property and neighborhood inspection by a trained environmental geologist, a review of historical and current information collected from various federal, state, county and municipal agencies and personnel interviews. Recommendations are offered where prudent. Firms subcontracted by F&N may have collected some information used in this report.

[1] ASTM E 1527-97, §1.1.1.

2.0 SCOPE OF WORK

The activities of the Phase I Environmental Site Assessment includes the performance of the following activities:

- A detailed inspection of the site and its vicinity
- A review of all available regulatory agency documents
- A review of any available previous investigation information
- A neighborhood hazardous waste survey utilizing Federal and State databases
- Interviews with appropriate property representatives

In addition to those items outlined by ASTM E 1527-00, asbestos-containing materials, radon, lead-based paint and lead in water were also included in the scope of work.

3.0 SITE DESCRIPTION

3.1 Site Vicinity

The subject property is situated on the northern side of Jamaica Avenue in Richmond Hills, New York. Richmond Hills is situated within the central portion of Queens County, New York.

Figure 1 provides a Site Location Map/Site Plan.

The vicinity of the site consists of a combination of light industrial, commercial and residential properties. The land in the vicinity of the site consists of asphalt and concrete surfaces, as well as, landscaped areas in the vicinity of the residential properties.

3.2 Site Details

The subject site is comprised of addresses 129-01 through 129-09 Jamaica Avenue. Uniforms For Industry (UFI) utilize the subject property as the main plant for commercial laundry processes. At the time of the site inspection the main plant was utilized for the cleaning of garments, diapers, mops and rugs. Portions of the facility are also utilized for the storage of new garments and the repair of damaged garments.

The laundering process for UFI has historically consisted of five (5) main divisions. The Water Laundry Division wash, iron and assemble for customer use uniforms and diapers. The Dust Division wash industrial mops and mats in a mineral-oil base solution under a "Closed Cycle." The articles are tumbled and extracted utilizing the principles of centrifuge force. Oil is utilized in a continuous cycle. There is no waste oil generated. The Dry Cleaning Division has not been operational for the last year. Formerly, mineral oil was utilized in the process and was replaced by PERC approximately seven (7) years ago. The Towels Division sends all articles to a washing facility upstate due to the stringent regulations for discharging of wastewater. The Mat Division utilizes high- pressure water washing. Sand and other particulates are collected in the dust collector.

One (1) large, multi-level, masonry-block and brick building is located on the property. The building has a corrugated flat steel and wood-framed roof. According to UFI representative, the main plant was built in 1929 as an industrial laundry facility. An extension was constructed in the 1990s. At the time of the site inspection there were no dry-cleaning activities taking place on the site. Previously, dry cleaning operations were performed on the subject

property. For approximately one (1) year prior to the site visit, UFI did not operate the one (1) dry cleaning machine at the facility. The dry cleaning unit is still present at the site.

The parcel is irregular in shape due to a New York City Transit rail line truncating the northeastern section of the site.

Figure 2 provides a Site Plan of the internal building.

3.2.1 Utilities & Sewage Disposal

Electric service to the subject property is supplied and maintained by Con Edison. The electric service enters the property from an underground conduit off of Jamaica Avenue. The main electrical service area is located on the south side of the building.

Ceiling-mounted, gas heaters primarily heat the building. Natural gas is supplied to the subject property by Brooklyn Union Gas. Eight (8) boilers heated by a dual-fired burner provide hot water for the laundry's processes. Primarily, natural gas is utilized, however, when necessary, fuel oil is available.

A local municipal water authority supplies potable water. The site has two- (2) private, groundwater supply wells utilized to supply the large volume of water required by the laundry's processes. At the time of the site inspection only one (1) well was being utilized. A well is located on the eastern portion of the property in the vicinity of the railroad tracks, which is not being utilized presently. The active well is located adjacent to the northwestern corner of the building. The well has a depth of approximately 120 feet and pumps 150 gallons per minute (gpm). The pit in the area of the well is filled with debris.

Sewage is disposed through the New York City sewer system. Water utilized in the laundering process is filtered and treated prior to discharge into the public sewer system.

3.2.2 Building Interior

The building interior is divided into two (2) sections: the original building and the building addition. The original building has a basement under approximately the northern two-thirds (2/3) of the building. The north half of the building is two (2) stories while the south half of the building has an open ceiling to accommodate large pieces of laundry equipment.

Original Building

The first floor of the original building is utilized for the washing of garments, rugs and mops. In the upstairs portion of the building, decals are placed on the uniforms and repairs are made to the garments.

The southern portion of the building is a large open room with an approximate 18- foot ceiling that has a mezzanine that runs along the south and westside. The mezzanine contains office space.

On the south end of this section of building is a repair shop for different types of equipment used in the main plant. At the time of the site inspection there were several electrical motors being repaired. The floor and bench tops in this area were badly stained with oil and grease. There were no floor drains in this room and the floor was in good condition, therefore this should not impact on the environmental quality of the subject property.

To the north of the workshop was a large open room utilized for the cleaning on carpets and laundry. Along the west wall of this room is a bay door with a hydraulic lift. According to Mr. Luis Zarate, the lift is not currently in operation. To the south of the lift is a drum storage area where three (3) 55gallon drums of oil are stored. To the north of the lift are three (3) Aboveground Storage Tanks (ASTs). The ASTs contain liquids utilized in the laundering process. This room contains the bulk of the laundering machines. The floor in this section contains several floor drains that collect the wash water and carry the water to the on-site treatment area. All of the wastewater generated during the laundering process is treated prior to discharge to the public sewer system. This area of the building is on a slab. The floor in this area contains numerous patches and a variety of flooring materials consisting of poured concrete, brick and tile. The usage of the property does not pose a threat to the environmental quality of the site, therefore the poor condition of the floor does not ~~constitute a REC~~.

To the north of the large room the elevation of the floor increases by approximately three (3) feet. The floor is ramped to accommodate the change. On the east side of the section of the building is the boiler area. This area consists of two- (2) boiler rooms. Each room contains four (4) boilers. The boilers are gas fired with oil as a backup fuel source. The floor in this section of the building is badly stained, however, does not appear to be badly damaged. F&N does not believe the conditions encountered in this area should pose a threat to the environmental quality of the site or surrounding area.

To the west of the boiler rooms are two-(2), active, hot water, storage tanks each with approximately 2,000-gallon capacity. The tanks store hot water for the laundering process. At the time of the site inspection the insulation on

both tanks appeared to be damaged and possible ACM material. The remainder of this room is utilized for the repair and pressing of the uniforms. To the north of the boiler room is the mop cleaning room and the former dry cleaning area. This is surrounded by a cement dike designed to prevent the migration of any fluids out of the room in the event of a spill. According to Mr. Zarate, the dry cleaning machine in this room has not been in operation for the past year. The mop-cleaning machines are currently the only operational equipment in this room. The floor in this section of the building is poured-concrete. There were no floor drains present and the floor was in good condition with no evidence of cracks that would facilitate the leakage from any spill to the subsurface.

The remainder of the building is utilized for the sorting and processing of cleaned uniforms. The northern wall of the building has a series of bay doors utilized for the loading of trucks.

The northern most section of the building contains a second floor utilized for the storage and labeling of uniforms. The walls in this section of the building are a combination of painted drywall and concrete block. The floor consists of wood and 9 inch by 9-inch vinyl tiles. The ceiling in this area consist of 12 inch by 12 inch cellulose tiles. The ceiling of the second floor appears to be stained and may have mold associated with the stain. Ceiling-mounted fluorescent light fixtures provide lighting in this area. The northern most section of the building also contains a basement. The basement is divided into two sections. One (1) small area is utilized as a second repair shop for laundering equipment, located in the southern-central portion. The remaining portion of the basement is utilized for the storage of new uniforms and garments. Both areas have poured-concrete floors. At the time of the site inspection there were no floor drains observed. There were no stains or evidence of spills observed in the area.

Building Addition

The extension to the building is a two- (2) story addition with the lower floor having an 18-foot ceiling and the second floor having a standard ceiling. At the time of the site inspection the second floor was being utilized as administration and sales office space. The construction of the building consists of masonry-block and steel- framed construction in most areas and wood framed in some of the older sections. The ground floor of the addition is utilized primarily for the storage of clean carpets and mops, and the packaging of clean mops. The north side of the building contains three (3) bay doors utilized for the loading and unloading of inventory. The floor in this section of the building consists of poured-cement. There were no visible floor drains present. There was no staining or evidence of spillage in the new section of the building.

The primary entrance to the building is through a door on the eastern side of the building. Bay doors are located along the north side of both sections of the building. Bay doors are also located on the eastern section of the older portion of the building. A door is also located on the southern portion of the building, with the staircase leading to the second floor.

A fire suppression sprinkler system is located throughout the building.

The HVAC system is roof-mounted.

3.2.3 Building Exterior

The main access to the property is via Jamaica Avenue. The building exterior is constructed of masonry material. An asphalt lot is located to the north,

east and west of the building. A city-owned, concrete sidewalk is adjacent to the building parallel to Jamaica Avenue.

A total of four (4) storm water drywells were observed on the subject property. These drywells have been labeled on the site plan with the designation DW for drywell. The storm water drywells DW-1 and DW-2 are located on the eastern portion of the property. The pools for the drywells are filled with liquid to an approximate level of four (4) feet below ground surface (bgs). Visual observation confirmed the presence of a sheen on the water. DW-3 is located on the western portion of the property, in an area to the south of the petroleum tank mat. Based on visual observation, it appears an overflow pool is located to the west of the DW-3. DW-4 is located to the north of the trench drain in the loading dock area to the north of the original building.

The western portion of the property consists of an asphalt parking area. A straddled storage drum (utilized as a AST) is located adjacent and perpendicular to the western exterior wall of the building. Open pails of petroleum product are stored adjacent to the drum. There is no containment around either the drum or the pails. This is an environmental concern since rainwater may potentially overflow the product onto the parking area and impact the drywell.

A chain-link fence bounds the property on the western and northern sides.

Tanks utilized for equalization of the wastewater prior to discharge to the sewer system are located to the east of the building.

3.3 *Adjacent and Surrounding Land Use*

The subject property is located in an industrial, commercial and residential area. The following properties were identified immediately adjacent to the site:

To the North:	Residential Buildings
To the South:	Truck Yard and Fence Company
To the West:	Commercial properties
To the East:	Long Island Railroad Tracks, Commercial Properties

F&N does not believe that these or other properties identified in the immediate vicinity of the site should impact upon the environmental quality of the subject property.

3.4 Proximity to Environmentally Sensitive Areas

The results of the site inspection and evaluation of the topographic map containing the site does not indicate any naturally occurring, environmentally sensitive areas in the immediate vicinity of the site.

The results of the sensitive-receptor database search area indicate that there is one (1) sensitive receptor located within the search area. A sensitive receptor is defined as a facility, such as hospitals, schools or nursing homes which may house individuals deemed sensitive to environmental discharges due to their fragile immune systems. Public School 54 is located less than a quarter mile.

3.5 Environmental Setting

The site is located in the central portion of Queens County, New York. The elevation of the subject property is approximately 60 feet above mean sea level *(U.S.G.S. Jamaica, New York Quadrangle, 1979).*

Long Island consists of a wedge-shaped mass of unconsolidated deposits that overlie ancient basement rock. The thickness of these deposits ranges from approximately 100 feet on the Island's north shore, to approximately 2,000 feet in some portions of the south shore. These deposits contain ground water that is the sole source of drinking water for the Island's over 3.1 million residents.

The major landforms of Long Island of importance to the hydrologic system are the moraines and outwash plains, which originated from glacial activity. The moraines represent the farthest extent of the glacial advances. The moraines consist of till, which is a poorly sorted mixture of sand, silt, clay, gravel and boulders. The till is poorly to moderately permeable in most areas. Outwash plains are located to the south of the moraines. The outwash plains were formed by the action of glacial meltwater streams, which eroded the headland material of the moraines and laid down deposits of well-sorted sands, silts and gravels. These outwash deposits are moderately to highly permeable.

The **Upper Glacial Aquifer** is the uppermost hydrogeologic unit. This aquifer encompasses the moraine and outwash deposits, in addition to some localized lacustrine, marine, and reworked materials. A relatively high horizontal hydraulic conductivity and a low vertical hydraulic conductivity characterize the outwash plain portion of this unit. Since the water table is situated in the Upper Glacial Aquifer, the water quality has been degraded in many areas due to industrial activities.

The **Magothy Formation** directly underlies the Upper Glacial Aquifer in the vicinity of the site. This formation is a Cretaceous coastal-shelf deposit, which consists principally of layers of sand and gravel with some interbedded clay. This formation ranges from poorly to moderately or highly permeable. A clay layer in some parts of Long Island confines the uppermost portion of the aquifer. The Magothy is Long Island's principal aquifer for public water supply. The United States Environmental Protection Agency (USEPA) has classified the Long Island aquifer system as a sole source aquifer.

The **Raritan Formation** is the deepest unit and rests directly above the bedrock units. This formation is comprised of a sand member (**Lloyd Aquifer**) and a clay member (**Raritan Clay**). The Lloyd sand extends southward from Flushing Bay to the Atlantic Ocean. The thickness of the sand member increases to the southeast and ranges in depth from 200 to 800 feet below sea level (from northwest to southeast). The clay member acts as an aquitard confining the lower Lloyd aquifer between the clay and the underlying bedrock.

. The depth to groundwater in the vicinity of the subject property is approximately 40-45 feet below grade. The groundwater flow direction beneath the subject property, as determined from the Department of Public Works Upper Glacial Aquifer Map (March 1998) is toward the south.

Figure 3 provides a Regional Groundwater Gradient Map.

Long Island has a humid, temperate climate that is strongly influenced by Long Island Sound and the Atlantic Ocean. These bodies of water temper extremes of heat in summer and cold in winters. Climate affects the formation of soil through its influence on chemical, biological and physical processes. The amount and content of rainwater, as it percolates through the soil, chemically alters the composition of the soils. Chemical and biological processes are also affected by temperature changes. The physical weathering of the soil and rocks is affected by freezing and thawing activities.

The soils of Long Island are relatively young, having developed since the last recession of glaciation approximately 25,000 years ago. Over thousands of years, the minerals in the bedrock debris slowly decayed and disintegrated, providing the necessary substrate to support biological activity. Rock-forming minerals such as feldspars and micas, that are rich in potassium and aluminum, release their important elements as they are converted to clays. Soils formed in glacial drift are commonly known as loam, a mixture of sand, silt and clay.

4.0 SITE RECONNAISSANCE

On June 24, 2002, Cheryl Neary and Brian McCabe of F&N performed the site inspection portion of the Phase I Assessment. Mr. Luis Zarate, the representative of the property owner provided access to the property. The following sections detail the results of the site inspection. **Table 1** provides a summary of the site inspection.

Appendix A provides photographs of the subject property.

Table 1

Site Inspection Summary

129-01 Jamaica Avenue, Richmond Hill, New York

Topic	Conditions are Known/Suspected?	Recognized Environmental Condition?
Industrial Processes	Yes	Yes
Hazardous Chemicals	Yes	Yes
Storage Tanks	Yes	Yes
Subsurface Drainage Structures	Yes	Yes
Chemical Spills	Yes	Yes
PCBs	Yes	No
Radon	No	No
Lead-Based Paint	No	No
Asbestos-Containing Materials	Yes	Yes
Lead in Drinking Water	No	No
Monitoring Wells	No	No

The following sections provide the details of the site inspection.

4.1 Industrial Processes

The subject property is currently occupied by Uniforms for Industry and currently utilized as a commercial laundry for garments, mops and rugs. In previous years, dry cleaning was performed utilizing Perc.

All waters utilized in the laundering process are stored and treated in the two (2) equalizer tanks located to the east of the building prior to discharging to the municipal sewer system.

A certified waste hauler is utilized to remove waste generated from the site.

Based on F&N site inspection, the industrial processes should not impact upon the environmental quality of the subject site.

4.2 Hazardous Chemicals

There are approximately thirty (30) chemicals stored and utilized on the subject property. All products are labeled and contained. These products should not impact upon the environmental quality of the site.

4.3 Storage Tanks

At the time of the Phase I visual inspection, aboveground storage tanks (ASTs) were identified at the subject property. Evidence of underground storage tanks, such as fill pipes or vent pipes and concrete mat were identified at the subject property.

Per the New York State Department of Environmental Conservation (NYSDEC) database, two (2) active, PBS USTs and nine (9) active, CBS ASTs are registered to the subject property.

4.4 Subsurface Drainage Structures

Four (4) storm water drywells were identified on the subject property. A petroleum sheen was present on drywells designated as DW-1 and DW-2 located on the eastern portion of the subject property, in the vicinity of the loading dock.

Due to standing water, it could not be determined which drywells may be connected with an overflow pool. Historically, contaminated soil has been encountered at the subject site. There is a potential that one (1) or both of the drywells may have been impacted.

DW-3 is located to the west of the building. DW-4 is located to the north of the building in the vicinity of a trench drain. There was no staining associated with these drywells or the trench drain. F&N believes that DW-3 and DW-4 and the trench drain should not impact upon the environmental quality of the subject property.

4.5 Chemical Spills

Evidence of housekeeping spills was observed in the building. There are areas of staining, however, the floors of the building did not have any cracks nor were any floor drains observed. The small spills should not have impacted the environmental quality of the subject property.

4.6 Polychlorinated Biphenyl (PCB)-Containing Equipment

Polychlorinated biphenyls (PCBs) are a group of liquid chemicals utilized for electrical insulation in fluorescent light ballasts and transformers. Short-term exposure to these chemicals may cause severe skin reactions; where as carcinogenic effects may be detected after long-term exposure.

Based on the age of the original building, PCBs may be present in the lighting ballasts. However, if the building is not being demolished, then the ballasts do not pose a threat to the environmental integrity of the subject property.

The lift located along the west side of the building, south of the washing machines identified as the "diaper lift" may be a potential source of PCBs.

4.7 Naturally-Occurring Radon

Radon 220 is a naturally occurring radioactive gaseous isotope of radon. It is a member of the thorium decay series and a daughter product of Radium 224. Radon gas may be present under natural circumstances in soils and may enter buildings through foundation cracks or basement drains. Long-term exposure to radon gas has been linked to lung cancer.

According to the New York State Department of Environmental Conservation (NYSDEC), average background levels for Radon in the Long Island/NYC area do not exceed 1.4 Picocuries per liter (pC/L) of air. This is significantly lower than the USEPA action level of 4.0 pC/L of air. Consequently, F&N believes there is minimal chance of naturally occurring Radon contamination at the site.

4.8 Lead-Based Paint

The toxic effects of lead exposure have received widespread attention within recent years. Specifically, it has been documented that the ingestion or inhalation of lead particles can cause permanent physical and neurological disorders. Lead exposure may be facilitated through its use in paint.

No evidence of lead base paint, such as peeling paint was observed on the subject property.

4.9 Asbestos Containing Materials (ACM)

A visual inspection for asbestos-containing materials was conducted in accordance with the USEPA document "Guidance For Controlling Asbestos Containing Materials in Buildings" (EPA 560/5-85-024, June 1985). This asbestos inspection pertains only to those materials and conditions present at the time of the inspection and does not include any suspect material that may be present on the roofs or within walls of any building.

At the time of the site inspection, suspect ACM was identified at the property. The areas of concern are the floor tiles in the upstairs area of the northern portion of the original building and the insulation wrapping of the prehot/hot water tanks located to the west of the boiler rooms.

4.10 Lead in Drinking Water

The testing of drinking water for lead is beyond the scope of this Phase I Environmental Site Assessment. However, the property is supplied potable water via a municipal water authority. Federal law mandates all municipal water authorities to perform periodic testing of potable water for various constituents, including lead.

4.11 Monitoring Wells

At the time of the site inspection there were no monitoring wells observed on neither the subject property nor the adjacent properties.

5.0 REGULATORY AGENCY DOCUMENTS

5.1 Tax Assessor & Zoning Department

The Tax Map numbers for the parcel are Block 9281, Lot 44. The property is zoned as F9, Factory/Industrial. There is one (1) job filing listed, zero 90) actions and complaints and Environmental Control Board (ECB) Violations. There were nineteen (19) Department of Building violations with thirteen (13) open violations as of 07/31/02.

5.2 Building Department

A FOIL request was submitted to the New York City Building Department. As of the date of this report, the NYCDOB has not made the file available. Any pertinent records will be transmitted as soon as they have been received and evaluated.

5.3 Department of Health

A FOIL request was submitted to the New York City Department of Health (NYCDOH). As of the date of this report, the NYCDOH has not made the file available. Any pertinent records will be transmitted as soon as they have been received and evaluated.

5.4 Fire Department

F&N submitted a FOIL request to the New York City Fire Department (FDNY). There were no violations issued for the subject site.

Appendix B provides copies of the regulatory agency documents.

6.0 SITE HISTORY

Based on information obtained from Luis Zarate, the property is currently and historically utilized as a commercial laundry.

The main plant was built in 1929 as an industrial laundry facility. An extension was constructed in the 1990s. At the time of the site inspection there were no dry-cleaning activities taking place on the site. Previously, dry cleaning operations were performed on the subject property. For approximately six (6) months prior to the site visit, UFI did not operate the one-(1) dry cleaning machine at the facility. The dry cleaning unit is still present at the site.

6.1 Previous Environmental Investigations

A subsurface investigation, which included the drilling of eight (8) soil borings and collection of 5 soil samples took place on the subject property in April 1993. Tyree Environmental of Farmingdale, New York performed this investigation. The soil samples were analyzed for total petroleum hydrocarbons (TPH) and semi-volatile organic compounds (SVOCs). The sample taken from soil boring SB-8 exhibited levels of hydrocarbons exceeding the NYSDEC Petroleum Contaminated Soil Guidance Policy.

Appendix C provides a copy of the Previous Report, Waste Manifest and MSDS

7.0 INTERVIEWS

During the course of the Phase I Assessment, interviews were conducted with respect to the site operations and site history. The following person provided information during the performance of the Phase I Assessment:

- Mr.Luis Zarate, UFI – Maintenance Engineer

Mr. Zarate provided information pertaining to many of the current and historical conditions of the site based upon his own knowledge of the property.

8.0 NEIGHBORHOOD HAZARDOUS WASTE DATABASES

Federal and State hazardous waste databases were reviewed with respect to the subject property and surrounding properties. **Table 2** provides a summary of the hazardous waste database evaluations.

Appendix D provides a copy of the Environmental Databases Search Results, including the database maps.

Table 2
Regulatory Database Summary
126-01 Jamaica Avenue, Richmond Hill, New York

Database	Subject Property	Number of Surrounding Properties	Recognized Environmental Condition?
	EPA Databases		
NPL	No	0	No
CERCLIS	No	0	No
RCRA TSD Facilities	No	1	No
RCRA COR	No	1	No
RCRA Generator/Transporter	Yes	6	No
RCRA NLR	No	62	No
	NYSDEC Databases		
Inactive Hazardous Waste Disposal Sites	No	0	No
Toxic Release Inventory System	No	2	No
NPDES/SPDES	No	0	No
Reg PBS/CBS	Yes	17	No
LUST	Yes	31	Yes
Spills	Yes	149	Yes
SWMF	No	0	No

The following sections provide the details of the hazardous waste database evaluations.

8.1 EPA National Priorities List (NPL)

The NPL list, published by the USEPA, is a database of potential and documented hazardous waste sites requiring remedial investigation, feasibility study or remediation design.

An electronic search of USEPA file indicates that the subject property is not identified as an NPL site. There are no NPL sites identified by the database within a one (1) mile radius of the subject property.

8.2 EPA Comprehensive Environmental Responsibility Compensation and Liability Information System (CERCLIS)

The EPA utilizes the CERCLIS database for two purposes: to maintain an automated inventory of inactive, uncontrolled and/or abandoned hazardous waste sites and to communicate the current status of remedial efforts at documented CERCLA facilities.

A review of the files maintained at the USEPA indicates that the subject property is not listed as a CERCLIS site. There are no CERCLIS sites listed in the database located within a one-half (½) mile radius of the subject property.

8.3 Resource Conservation Responsibility Act (RCRA): Hazardous Waste Treatment/Storage/Disposal (TSD) Facilities, Corrective Action Sites, Generators & Sites No Longer Regulated

The RCRA of 1976 requires industrial facilities involved with the generation or transport of hazardous wastes to comply with specific federal environmental regulations (e.g.: monitoring, community right to know disclosure, registration, etc.). A site's inclusion on the EPA RCRA list does not imply it has mismanaged or released hazardous materials.

The subject property is not listed as a TSD site. There is one (1) Treatment, Storage or Disposal Facility located within a one-half (½) mile radius and one (1) Corrective Action Site within a one- (1) mile radius of the subject

property. Both sites are the Long Island Railroad, located downgradient of the subject site.

The subject property is listed as a small quantity generator (SGN). The subject site received and resolved a EPA GSQ- generator small quantity requirements violation on October 25, 1999.

Six (6) additional sites are listed by the database as RCRA Hazardous Waste Generators. Of the six-(6) sites, two (2) sites are located up-/cross-gradient. One- (1) of the sites is listed as UFI, a small quantity generator at 126-16. Lees French Cleaners is located at 130-17 Hillside Avenue, approximately 0.24 mile northeast and is listed as a small quantity generator. No information is listed for Lees Cleaners or UFI at the 126-16 address. Due to the quantity generated, these sites should not impact upon the environmental quality of the subject property.

RCRA NLR sites are sites that create less than 100 kg of hazardous waste per month, or have been previously listed on a RCRA database but no longer possesses the conditions of that list.

The subject property is not listed as a RCRA NLR site. A total of 62 sites are listed as RCRA NLR within a mile radius of the subject property. Based on the fact that these sites are no longer regulated, they should not effect the environmental quality of the subject site.

8.4 Wastewater Discharge Facilities

Pursuant to the EPA's National Pollution Discharge Elimination System (NPDES), the NYSDEC is authorized to permit wastewater discharges under the

State Pollution Discharge Elimination System (SPDES). Discharge standards are based on the substance's potential to impact surface/ground waters. Additionally, SPDES permits contain substance monitoring and reporting requirements to regulatory agencies.

A review of files maintained by the NYSDEC indicates that the subject property is not listed as Wastewater Discharge facility. There are no Wastewater Discharge facilities located within a one-quarter (¼) mile radius of the subject property.

8.5 Toxic Release Inventory

The USEPA maintains an inventory of sites that release, manufacture, process, import of export toxic chemicals into the air, land or water in measurable quantities.

According to the database, two (2) sites are listed within a one-quarter (¼) mile radius. The site, known as Raymac Cabinet Company Inc., is listed twice and as closed and should not effect the environmental integrity of the subject property.

8.6 NYSDEC Inactive Hazardous Waste Disposal Sites (State Sites)

The NYSDEC publishes an annual directory of Inactive Hazardous Waste Disposal Sites currently being investigated or which require investigation. Sites are rated on a scale from 1 to 5 ranging from those believed to be an imminent

danger to public health and the environment (1) to those having been properly closed and requiring no further action (5).

A review of the files maintained at the NYSDEC indicates that the subject property is not identified in the IHWDS listing. There are no IHWDS sites listed within a one (1) mile radius of the subject property.

8.7 Hazardous Material Spills and Leaking Underground Storage Tanks (Spills & LUSTS)

Reviewed NYSDEC databases include Leaking Underground Storage Tanks (LUSTs) and surface spills (Spills) reported to the NYSDEC and the USEPA. The electronic file to which F&N subscribes to is updated on a quarterly basis.

The subject property is listed in the Spills database. An active spill is listed for the property located at 129-01 Jamaica Avenue. Spill number 9101477 has been issued for the release of unknown material in a 3,000 gallon tank which failed the routine tank test. According to the records of the NYSDEC, three (3) underground storage tanks with a storage capacity of 3,000 gallons were either closed or removed. No date is available for the abandonment or removal.

A review of the database indicates that there are 149 additional spills located within a one-half (½) mile radius of the subject property. Of the 149 spills, 59 are listed as active. Of the 59 active spills, 22 are located up/cross-gradient. Of the 22 up/cross gradient reported spills, 17 affected land, one- (1) affected the sewer and four-(4) impacted groundwater. All four (4) active spills, which are reported as impacting groundwater are the results of tank test failures.

F&N believes the active sites should not impact upon the environmental quality of the subject property.

The subject property is listed on the LUST database for the tank failure of a 3,000gallon UST. The tank failure was assigned spill number 9101477 (See previous paragraphs).

A review of the database identifies 31 leaking UST sites within a one-half (½) mile radius. Of these 31 sites, only 12 are listed as active. Of these, nine-(9) are up/cross-gradient of the subject property. Those sites are listed below.

Name	Address	Location	Spill Date
127-01 Metropolitan Ave	127-01 Metropolitan Avenue	0.21 NE	10/10/89
130-14 Hillside Ave	130-14 Hillside Avenue	0.27 NE	10/11/89
Max & Romy Gas Station	131-09 Hillside Avenue	0.29 NE	12/10/98
131-09 Hillside Ave	131-09 Hillside Avenue	0.33 NE	02/07/94
Mallard Gas BP	133-02 Jamaica Avenue	0.36 NE	08/21/98
T & C Auto Services	133-02 Jamaica Avenue	0.36 NE	06/20/00
Kew Gardens	8316-8334 Lefferts Blvd	0.42 NW	04/27/88
132-53 Metropolitan Ave.	132-53 Metropolitan Ave.	0.45 NE	05/05/97
Our Lady Senacal	136-06 87th Ave.	0.47 NE	04/11/88

Due to the age of the spills, hydrogeological gradient and proximity these sites should not impact upon the environmental quality of the subject property.

8.8 Solid Waste/Landfills (SWL)

The NYSDEC SWL database lists active facilities involved with landfilling of mixed industrial, construction and demolition, domestic or incinerated solid waste. The electronic SWMF file to which F&N subscribes is updated as information is received by the NYSDEC.

The subject property is not identified on the SWMF database. No SWMF sites are located within a one (1) mile radius of the subject property.

8.9 Registered Tanks

The NYSDEC defines a PBS facility as "any petroleum storage facility with a combined capacity between 1,100 and 400,000 gallons". Regulatory requirements for such facilities include registration and periodic tank testing.

The CBS database is a cumulative NYSDEC listing of facilities that store specific toxins, known or suspected carcinogens, explosive or otherwise hazardous solids, liquids or gases.

The subject property is identified as a registered PBS facility, assigned number 2-248541. According to the records of the NYSDEC, two (2) active, 6,300 gallon, USTs storing fuel oil and other (mop oil) product are assigned tank 001 and 002, respectively.

The subject property is also listed as a Chemical Bulk Storage (CBS) facility, assigned number 2-000109. The following aboveground storage tanks store the following products:

Tank #1:	4,000 gallon	Sodium Hydroxide
Tank #2:	1,200 gallon	Sodium Hydroxide
Tank #3:	410 gallon	Sodium Hypochlorite
Tank #4:	410 gallon	Ammonium Silicofluoride
Tank #5:	290 gallon	Sodium Hypochlorite
Tank #6:	320 gallon	Sodium Hydroxide
Tank #7:	330 gallon	Sodium Hydroxide
Tank #8:	384 gallon	Sodium phosphate
Tank #9:	1,200 gallon	Sodium Hydroxide

A review of the files maintained by the NYSDEC reveals that there are 17 additional registered PBS facilities located within one-quarter (¼) mile radius of the subject property. Of the 17 PBS sites listed by the database, 11 sites are listed as up/cross-gradient. These PBS sites are listed below.

Name	Address	Location	Type/Vol.	Product
124-06 Hillside Ave	124-06 Hillside Ave	0.09 NW	UST-3,000 gal	F/O
102 Precinct	87-34 118th St	0.12 NE	AST-2,500 gal	F/O
			UST-1,000 gal	Diesel
Gheith Realty LLC	87-50 111th St	0.12 NE	AST-3,000 gal	F/O
87-60 113th St	87-60 113th St	0.12 NE	UST- 5,000 gal	F/O
Andrew Gouzoulis	87-57 108th St	0.12 NE	AST-2,000 gal	F/O
Neo Realty	87-14 129th St	0.12 NE	AST-5,000 gal	F/O
Kew Gardens Car	122-11 Hillside Ave.	0.14 NW	UST-4,000 gal	Gasoline
Boulevard Taxi	127-01 Metropolitan Ave.	0.21 NE	UST-4,000 gal	Gasoline
Minas Fuel Oil Corp	129-01 Metropolitan Ave.	0.22 NE	UST-4,000 gal	Diesel
R&K Oil	125-24 Metropolitan Ave.	0.23 NW	UST-4,000 gal	Gasoline
			UST-4,000 gal	Gasoline
			UST-4,000 gal	Gasoline
Hillside Equities	120-05 Hillside Ave	0.24 NW	AST 5,000 gal	F/O

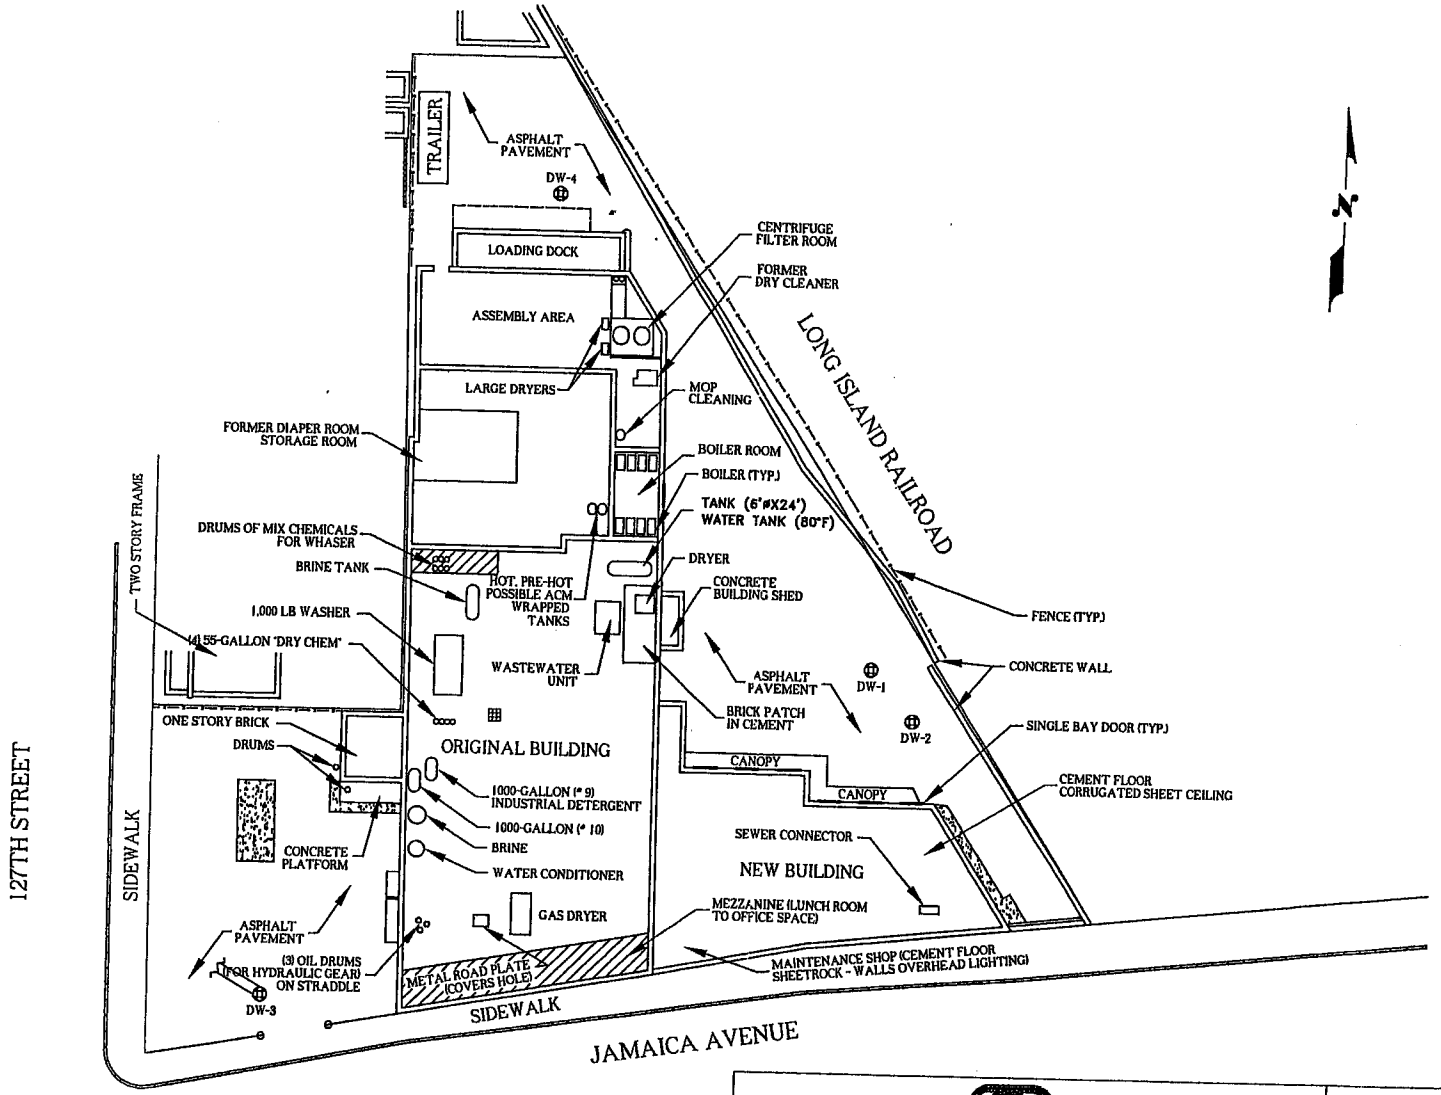
AST=Aboveground Tank UST=Underground Tank F/O = Fuel Oil

None of the above sites have an active spill associated with the storage tanks. F&N believes none of the above sites should impact upon the environmental quality of the subject property.

9.0 CONCLUSIONS

Fenley & Nicol Environmental, Inc. (F&N) has performed a Phase I Environmental Site Assessment of the property located at 126-20 Jamaica Avenue in Richmond Hill, Queens, New York. Based upon the findings of the Phase I Environmental Site Assessment, the following Recognized Environmental Conditions have been identified:

- The presence of open containers of petroleum product
- The pit in the area of the active groundwater supply well is filled with debris
- An active spill number associated with a 3,000 gallon tank failure is listed with the NYSDEC
- The floors in the upstairs portion of the original building contain 9x9 square inch floor tiles which are considered suspect ACM
- The ceiling of the second floor of the original building appears to be stained and may possibly contain mold
- PCBs may be present in the light ballasts. PCBs may also be present in the "diaper lift"
- The drywells designated as DW-1 and DW-2 may have been impacted by contamination
- The prehot/hot water tanks located to the west of the boiler rooms may contain suspect ACM



10.0 RECOMMENDATIONS

Based upon the conclusions presented above, Fenley & Nicol Environmental, Inc. provides the following recommendations:

- All debris from the active groundwater supply well should be removed
- The NYSDEC should be contacted to determine what requirements are necessary to close the "active" spill number assigned to the subject property
- The floors in the upstairs area should be sampled to confirm the presence of ACM. However, this material does not need to be removed unless the building is to be demolished
- The stained section of the second floor ceiling and the insulation should be removed and if a leak is found, be repaired. The area should be reinsulated with the ceiling reinstalled
- If the former "diaper lift" is no longer utilized, then the hydraulic fluid should be sampled for the presence of PCBs and the lift should be removed
- Drywells DW-1 and DW-2 should be sampled
- The insulation surrounding the prehot/hot tanks should be sampled for the presence of ACM. If ACM is present, then it should be removed by a licensed abatement contractor

11.0 DISCLAIMER

Fenley & Nicol Environmental (F&N) is engaged in the environmental assessment of real estate. F&N has expertise and experience in conducting such investigations in accordance with the accepted practices and standards of the environmental consulting industry. No effort has been made to perform any investigation beyond what is included in this report. The observations included herein summarize the apparent environmental integrity of the subject property up to the date of the visual inspection of the property and the date of this report. Any incidents occurring subsequent to that date have not been included or accounted for. This report is intended to be utilized solely by the client unless otherwise indicated.

RECORD SEARCH REQUEST
FUEL (HEATING) OIL

MAIL TO: Fenley + Nicol
Attn: Cheryl Neary
445 Broadhollow
Deer Park, NY 11729
631 586-4900

Search No. 15861

The undersigned requests the following information re: Premises

129-01 Jamaica Avenue — Queens
ADDRESS — BOROUGH

For Fuel (Heating) Oil Tanks Only

1. No. and Size of tanks (includes date of installation) ..... Fee: $10.00
2. No. and Size of sealed and/or removed tanks ..... Fee: $10.00

Searched by _____ Date _____

3. Pending Headquarters violation orders ..... Fee: $10.00
4. Other _____ Fee: $10.00

Note: The N.Y.C. Fire Department Does Not Conduct Tests on Fuel (Heating) Oil Tanks.

State Applicants interest in or relation to premises:

Phase 1 - Environmental Site Assessment

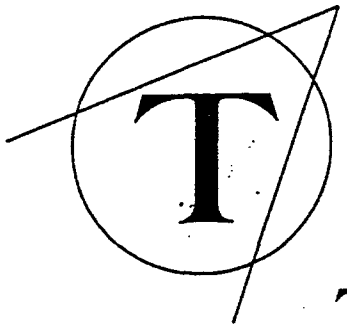
Signed Stephen Salvesi

Date 7/29/02

DO NOT WRITE BELOW THIS LINE

Gentlemen:

In reply to your request concerning the premises mentioned above, please be advised that as of 9 A.M., _____ our records show the following:



(MAKE ADDITIONAL COMMENTS ON REVERSE SIDE)

Searched by: _____

VIOLATIONS RECORDED ABOVE ARE ONLY THOSE WHICH ARE A MATTER OF RECORD IN HEADQUARTERS OF THE BUREAU OF FIRE PREVENTION, AND MAY NOT INCLUDE VIOLATIONS ISSUED BY LOCAL UNITS, UNLESS A SUMMONS FOR "FAILURE TO COMPLY" WAS ISSUED. ALL REPORTED TANK INFORMATION COMES FROM RECORDS WHICH EXIST IN THE FIRE DEPARTMENT DISTRICT OFFICE FOLDERS OR ON COMPUTER FILES.

MAXIMUM RESPONSE TIME 20 BUSINESS DAYS

Laboratory Analytical Results
Boring Logs

Tyree Brothers Environmental Services, Inc. 208 Route 109 Farmingdale, New York 11735	**Figure 1: Boring Locations** **U.F.I.** 129-09 Jamaica Avenue Richmond Hill, New York	Drawn By: M. Mulqueen Date: 4-29-93 Scale: 1" = 20' (Approximate) ⊕ Boring Location UST - Underground Storage Tank

LABORATORY RESULTS

All of the samples submitted for laboratory analysis exhibited elevated levels of TPH. The sample collected from boring #8 had levels of Acetone, Ethylbenzene, and Xylenes that exceed the NYSDEC petroleum contaminated soil guidance policy.

The remaining contaminants that comprise most of the TPH values are most likely polynuclear aromatic hydrocarbons molecules, that may be associated with the mop oils or 624 solvent used at the facility. Complete laboratory results are included in the Appendix.

DISCLAIMER

This site assessment and report was prepared for the use of Mr. Derrick Miller of U.F.I. Reasonable due diligence was exercised by the staff of Tyree Brothers Environmental Services, Inc. (TBES). The conclusions provided by (TBES) in this assessment are based solely on the information reported in this document. Future investigative site information which was not available to TBES at the time of this assessment may result in a modification of the conclusions. The conclusions presented are based upon the current regulatory climate and may require revision if future regulatory changes occur. This report has been prepared in accordance with generally accepted practices. No other warranty, expressed or implied is made.

RE: Contaminated soil removal
Stock piled in yard area

Gentlemen:

We propose to remove and dispose of the contaminated soil by transport to Soil Safe of Maryland. The material has been accepted for recycling at that facility.

Your cost will be $83.50 per ton plus tax if applicable.

Very truly yours,

THE FRANKLIN COMPANY CONTRACTORS, INC.

William T. Klein, President

Richmond Hill, New York 11418

RE: Tank Base Installation
129-01 Jamaica Avenue

Gentlemen:

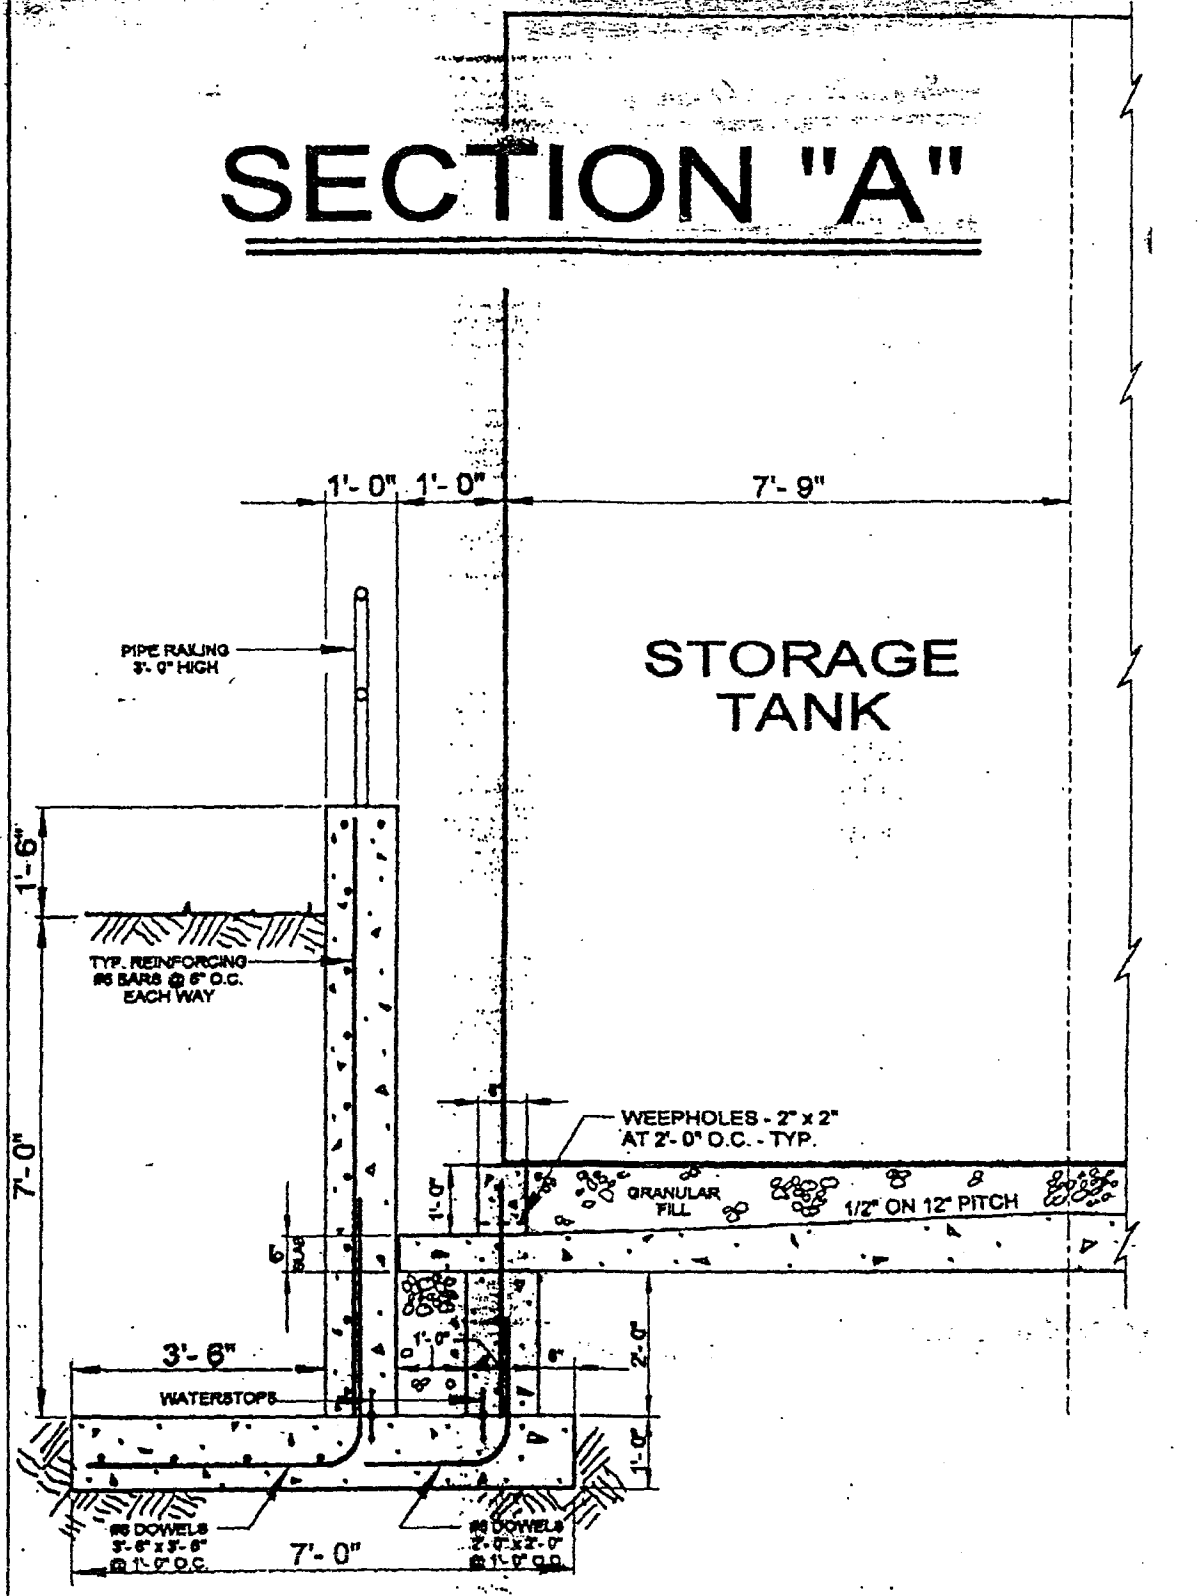
We propose to construct two tank bases, roughly 16' in diameter in the area over and adjacent to that of the tank removal. The concrete around the new tanks will be replaced with a 6" reinforced concrete surface.

We will set 6 6" pipe bollards to protect the tanks using 6" pipe salvaged from the tank removal project.

The above will be performed for $20,500.00 plus tax or as a capital improvement.

Alternate:
To build a one-sided, (outside) form and pour against earth on the inside with a concrete "floor" over the encircled area you may deduct
$1,500.00

Very truly yours,



THE FRANKLIN COMPANY CONTRACTORS, INC.

William T. Klein, President

UNUSUAL FIRE AND EXPLOSION HAZARDS

IGNITION OF HYDRODGE EVOLVED FROM PRODUCT REACTION WITH METALS LISTED UNDER "STABILITY"

OSHA STANDARD

EFFECTS OF OVEREXPOSURE: Caustic soda is a strong alkali in contact with skin and eyes-produces severe burns. It also destroys wool and leather. It is very active with aluminum, tin, lead, zinc and alloys containing these metals releasing hydrogen.

EMERGENCY AND FIRST AID PROCEDURES: 1. Avoid contact with body and clothing-do not swallow. 2. Wear goggles (not contact lenses) 3. Wear rubber gloves, shoes and apron to fit snugly about the neck and wrists (do not wear wool) Flush contacted areas immediately with water.

SECTION VI—REACTIVITY DATA

STABILITY	UNSTABLE		CONDITIONS TO AVOID
	STABLE	X	

INCOMPATABILITY (Materials to avoid): Aluminum, tin, lead, zinc, wool, H_2O_2

HAZARDOUS DECOMPOSITION PRODUCTS: HYDROGEN

HAZARDOUS POLYMERIZATION	MAY OCCUR		CONDITIONS TO AVOID
	WILL NOT OCCUR	X	

SECTION VII—SPILL OR LEAK PROCEDURES

STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED: Avoid contact, soak up spillage with an approved absorbant (expanded clay), shovel into drums for disposal or neutralize and flush away where local regulations permit.

WASTE DISPOSAL METHOD

SECTION VIII—SPECIAL PROTECTION INFORMATION

RESPIRATORY PROTECTION (Specify type): Approved mist-type respirator

VENTILATION	LOCAL EXHAUST	SPECIAL
	MECHANICAL (General)	OTHER

PROTECTIVE GLOVES: Rubber or neoprene

EYE PROTECTION: Splash-type goggles

OTHER PROTECTIVE EQUIPMENT

SECTION IX—SPECIAL PRECAUTIONS

PRECAUTIONS TO BE TAKEN IN HANDLING AND STORING: Use only trained personnel, wear personal protective gear. Provide shower and eye bath.

PRECAUTIONARY LABELING: Placarded corrosive per 172.407 -I.C.C. 172.442 B.O.E. 6000;

OTHER PRECAUTIONS: Have technical data available relating to safety and medical management in handling caustic soda.

B. FIRST AID MEASURES

EMERGENCY PHONE NUMBER
(800) 631-8050

EYES: Immediately flush with plenty of water, for at least 15 minutes. **Get medical attention.**

SKIN: Immediately wash with plenty of soap and water. Remove contaminated clothing and wash before reuse.

INHALATION: Remove to fresh air. **Get immediate medical attention** if signs of suffocation, irritation or other symptoms develop.

INGESTION: Give plenty of water or milk to drink. If conscious, induce vomiting by touching finger to back of throat. **Get immediate medical attention.** Never give anything by mouth to an unconscious person.

C. HAZARDS INFORMATION

HEALTH

INHALATION

Contact with acids, water and/or ice, releases sulfur dioxide gas which may be harmful or deadly if inhaled. May cause severe or deadly allergic reactions in some asthmatics and sulfite sensitive individuals. Inhalation of dust or mist can irritate the respiratory tract. Possible signs and symptoms of allergic reactions include bronchoconstriction, sweating, flushing, hives, rapid heart rate, decreased blood pressure and anaphylaxis.

INGESTION

May irritate gastrointestinal tract. Very large doses cause death, violent colic, diarrhea and depression.
Reference (b). May cause severe or deadly allergic reaction in some asthmatics and sulfite sensitive individuals.

SKIN

Repeated or prolonged contact with dust may cause irritation.
Contact with solution will irritate. See pH, Section F.

EYES

Dust or mist may irritate or burn eyes. Solutions will irritate or burn. See pH, Section F.

PERMISSIBLE CONCENTRATION: AIR (SEE SECTION J)	BIOLOGICAL
ACGIH/TLV: 5 mg/M³ OSHA/TWA: 5 mg/M³	None established.

UNUSUAL CHRONIC TOXICITY

Medical conditions aggravated by exposure: May cause severe or deadly allergic reactions if inhaled or in some asthmatics and sulfite sensitive individuals. See hazard information for inhalation

C. HAZARDS (Cont.)

FIRE AND EXPLOSION

FLASH POINT	AUTO IGNITION TEMPERATURE	FLAMMABLE LIMITS IN AIR (% BY VOL.)
Not Flammable °C ☐ OPEN CUP ☐ CLOSED CUP	Not applicable °C	LOWER — Not applicable UPPER — Not applicable

UNUSUAL FIRE AND EXPLOSION HAZARDS

See Hazardous Decomposition Products, Section G.

D. PRECAUTIONS/PROCEDURES

FIRE EXTINGUISHING AGENTS RECOMMENDED

Not applicable.

FIRE ESTINGUISHING AGENTS TO AVOID

Not applicable.

SPECIAL FIRE FIGHTING PRECAUTIONS

Wear NIOSH-approved self-contained breathing apparatus.

VENTILATION

Local exhaust if dusty or misty condition prevails. The TLV may be exceeded without visual warning. Do not use in unventilated spaces, e.g., the holds of fishing boats, walk-in coolers or confined spaces.

NORMAL HANDLING

Avoid contact with skin, eyes, clothing. Avoid breathing dust or mist. Use normal personal hygiene and housekeeping. Keep away from water, ice, acids, or heat.

STORAGE

Cool, dry, well-ventilated space away from water, ice, acids and oxidizing agents. (Dry to avoid tendency of product to cake.) Releases sulfur dioxide gas slowly at ambient temperatures — (see odor, Section F.)

SPILL OR LEAK (ALWAYS WEAR PERSONAL PROTECTIVE EQUIPMENT — SECTION E)

Promptly sweep up with minimum dusting and shovel into an empty container and close. Cautiously spray residue with plenty of water. Provide ventilation to clear sulfur dioxide fumes which may be generated as a result of water contact. See Hazards Information (Section C) for information on the hazards of this product when mixed with water.

SPECIAL: PRECAUTIONS/PROCEDURES/LABEL INSTRUCTIONS

SIGNAL WORD - WARNING!

Avoid contact with water, ice, acid, and oxidizers. Use of this product in confined spaces may cause suffocation leading to death.

E. PERSONAL PROTECTIVE EQUIPMENT

RESPIRATORY PROTECTION

Where required, use a NIOSH-approved respirator for dust, mist, and/or sulfur dioxide gas, as conditions indicate. Some exposures may require NIOSH-approved self-contained breathing apparatus or supplied-air respirator.

EYES AND FACE

Wear hard hat (or other head covering) and chemical safety goggles. Do not wear contact lenses.

HANDS, ARMS, AND BODY

For handling dry material, wear cotton gloves and full work-clothing, including long-sleeved shirt and trousers. When handling solutions and there is prolonged or repeated contact, wear impervious gloves, clothing and boots.

OTHER CLOTHING AND EQUIPMENT

Eye-wash/safety shower facility.

F. PHYSICAL DATA

MATERIAL IS (AT NORMAL CONDITIONS):	APPEARANCE AND ODOR	
☐ LIQUID ☒ SOLID ☐ GAS ☐	Fine, white granular product. Pungent sulfur dioxide gas odor.	
BOILING POINT °C Decomposes above 150°C MELTING POINT °C	SPECIFIC GRAVITY (H_2O = 1) 1.48	VAPOR DENSITY (AIR = 1) Not applicable.
SOLUBILITY IN WATER (% by Weight) 39% at 16°C	pH 1% Solution, pH = 4.3 (approx.)	VAPOR PRESSURE (mm Hg at 20°C) ☐ (PSIG) ☐ Not applicable.
EVAPORATION RATE (Butyl Acetate = 1) ☐ (Ether = 1) ☐ Not applicable.	% VOLATILES BY VOLUME (At 20°C) Not applicable.	

G. REACTIVITY DATA

STABILITY	CONDITIONS TO AVOID
☐ UNSTABLE ☒ STABLE	Temperatures above 150°C cause evolution of toxic and corrosive gas (sulfur dioxide).

INCOMPATIBILITY (MATERIALS TO AVOID)

Oxidizers may cause strong exothermic reactions.
Acids, water and ice yield sulfur dioxide gas, which is toxic, corrosive, and potentially deadly.
Water and/or ice speeds the production of sulfur dioxide gas.

HAZARDOUS DECOMPOSITION PRODUCTS

Sulfur dioxide gas; see above comments.
Sodium sulfide residue: flammable, dangerous fire risk, strong irritant to skin and tissue, incompatible with acids.

HAZARDOUS POLYMERIZATION	CONDITIONS TO AVOID
☐ MAY OCCUR ☒ WILL NOT OCCUR	Not applicable.

H. HAZARDOUS INGREDIENTS (Mixtures Only)

GULATORY STANDARDS	D.O.T. CLASSIFICATION: ORM-B	49 CFR 173

DA regulations apply to use food and NF grades (21 CFR). DOT ID NO.: NA 2693
ood use in meats or in food recognized as a source of vitamin 1 is prohibited (21 CFR 132.3766).

ERAL

) ACGIH, Documentation of the Threshold Limit Values, 4th ED., 1981, Am. Conf. of Governmental Industrial Hygienists, Cincinnati 45202 — a review for this material with 4 references.

) Coast Guard CHRIS system form covering Sodium Bisulfite and Metabisulfite, "SBS", October 1978.

ADDITIONAL INFORMATION

is product is not for food or drug use unless material is labeled "food grade" or "NF grade," as applicable.

r food grade product, the following applies;

) Effective August 8, 1987, the F.D.A. has banned the use of "Sulfiting Agents" or "Sulfites" on fruits and vegetables intended to be served raw or sold raw to consumers.

) Effective January 9, 1987, the F.D.A. is requiring when a sulfite is present in a detectable amount in a finished food, regardless of whether it has been directly or indirectly added via one or more of the food ingredients, it must be declared on the label. The regulation defines a "detectable amount" of sulfite to be 10 ppm.

) Sulfiting agents or sulfites are not to be used on foods or meats recognized as source of Vitamin B1.

REACTIVITY	NR[2]

SECTION II PERSONAL PROTECTION INFORMATION

RESPIRATORY PROTECTION

12.5mg/m³ or less: A single-use dust respirator. 25mg/m³ or less: Any dust respirator (except single-use or ¼ mask respirator), any supplied air respirator or self-contained breathing apparatus. All respirators should be NIOSH/MSHA approved.

ENGINEERING CONTROLS

Adequate ventilation to maintain fluoride concentrations below applicable standards, when possible.

SKIN PROTECTION

Employees should be required to use personal protective equipment and protective clothing necessary to prevent repeated or prolonged contact.

EYE PROTECTION

Employees should be required to wear splash-proof goggles where there is a splash hazard.

OTHER PROTECTIVE EQUIPMENT

Impervious clothing, gloves, face shield (eight inch minimum) should be worn where splash or mist containing flouride may occur.

SECTION III HEALTH INFORMATION

OSHA Permissible Exposure Limit (PEL)[3] 2.5mg/m³	ACGIH Threshold Limit Value (TLV)[3] 2.5mg/m³

LISTED IN: IARC Monographs NO NTP List NO

OSHA HAZARD CLASSIFICATION	PRIMARY ROUTE(S) OF ENTRY
Toxic	Inhalation

SYMPTOMS OF OVEREXPOSURE[4]

ACUTE: Fluoride dust may cause irritation to eyes and respiratory tract. Swallowing fluoride dust may cause vomiting, abdominal pain, diarrhea, shortness of breath, difficulty in speaking, thirst, weakness of pulse, disturbed color vision, muscular weakness, convulsions, loss of consciousness and death. Kidney injury and bleeding from injury may occur.

CHRONIC: Repeated exposure above the PEL or TLV to fluoride dust may cause excessive calcification of ligaments of the ribs, pelvis and spinal column. Stiffness and limitation of motion may result. Repeated or prolonged exposure to the skin may cause skin rash.

AGGRAVATED MEDICAL CONDITION

Preexisting respiratory disease including asthma and emphysema.

TOXIC DATA

LD_{LO}: 100 mg/kg (Oral-rat)
LD_{LO}: 150 mg/kg (Oral-gpg)

CONTACT:

If fluoride or liquids containing fluoride get into the eyes, wash eyes immediately with large amounts of water, lifting the lower and upper lids occasionally. If irritation is present after washing, get medical attention.

SKIN CONTACT:

If fluoride or liquids containing fluoride get on the skin, promptly wash the contaminated skin using soap or mild detergent and water. If fluoride or liquids containing fluoride soak through the clothing, remove the clothing promptly and wash the skin using soap or mild detergent and water. If irritation persists after washing, get medical attention.

INHALATION:

If a person breathes in large amounts of fluoride, move the exposed person to fresh air at once. If breathing has stopped, perform artificial respiration. Keep the affected person warm and at rest. Get medical attention as soon as possible.

INGESTION:

When liquids containing fluoride have been swallowed and the person is conscious, give the person large quantities of water immediately. After the water has been swallowed, induce vomiting. Get medical attention.

NOTE TO THE PHYSICIAN:

Symptomatic treatment only.

UNUSUAL FIRE AND EXPLOSION HAZARDS

NA[4]

SECTION IX STORAGE AND SPECIAL PRECAUTIONS

HANDLING AND STORING PRECAUTIONS

Wear recommended personal protective equipment (Section II) as required by nature of work. Store in original container; do not store near food or feed since appearance is similar to salt and sugar.

OTHER PRECAUTIONS

Segregate from strong acids.

SECTION X TRANSPORTATION REQUIREMENTS

DEPARTMENT OF TRANSPORTATION CLASSIFICATION	REPORTABLE QUANTITY
ORM-B	RQ 1000 lbs.

DOT PROPER SHIPPING NAME	UN/NA IDENTIFICATION NUMBER
Ammonium Silicofluoride	UN 2854 - International Shipment Only
	STANDARD TRANSPORTATION COMMODITY CODE 49 441 35

OTHER REQUIREMENTS

When shipping, comply with DOT Hazardous Materials Regulations.

SECTION XI EMERGENCY ACTION – (SPILL OR LEAK)

EMERGENCY ACTION:

Keep unnecessary people away; isolate hazard area and deny entry. Avoid breathing dust and prolonged contact with skin. Wear respiratory protection and personal protective clothing as needed.

SMALL SPILLS:

With clean shovel, place material into clean dry container and cover; move containers from spill site.

LARGE SPILLS:

Use same procedures as above.

FOOTNOTES:

1. This NFPA rating applies only to short term exposure, such as might be encountered under fire or related emergency conditions.
2. Note: NR means Not Related.
3. As Fluoride.
4. Note: NA means Not Applicable.
5. Symptoms of overexposure are based on generic fluoride dust. Information not available on sodium silicofluoride perse.

DISCLAIMER

The information and recommendations herein are taken from data contained in independent, industry recognized references, including NIOSH, OSHA, ANSI and NFPA. Thus Agrico Chemical Company itself makes no guarantee, warranty or other representation concerning this substance, since the conditions of its use are beyond our control. Agrico Chemical Company disclaims any liability for loss or damage incurred in connection with the use of this substance.

*Regulated as a Toxic Chemical under Section 313 of Title III/SARA, and 40 CFR Part 372.

NONHAZARDOUS COMPONENT

Water	7732-18-5	0-22

HAZARDOUS REACTIVITY

INSTABILITY
Stable, but reacts violently with water and organic materials with evolution of heat.

INCOMPATIBILITY
Vigorous reactions occur with water; alkaline solutions; metals; metal powders; carbides; chlorates; fulminates; nitrates; picrates; strong oxidizing, reducing, or combustible organic materials. Hazardous gases are evolved on contact with chemicals such as cyanides, sulfides, and carbides.

DECOMPOSITION
Releases sulfur dioxide at extremely high temperatures.

POLYMERIZATION
Will not occur.

FIRE AND EXPLOSION DATA

FLASH POINT
Will not burn.

FLAMMABLE LIMITS IN AIR, % BY VOL.
LOWER Not applicable.
UPPER Not applicable.

AUTOIGNITION TEMPERATURE
Not applicable.

AUTODECOMPOSITION TEMPERATURE
Not available.

FIRE AND EXPLOSION HAZARDS
Reacts with most metals, especially when dilute, to give flammable, potentially explosive hydrogen gas.

EXTINGUISHING MEDIA
Use media as appropriate for combustibles in area. Use water spray to cool containers exposed to fire; do not get water inside containers.

SPECIAL FIREFIGHTING INSTRUCTIONS
Evacuate personnel to a safe area. Keep personnel removed and upwind of fire. Generates heat upon addition of water, with possible spattering. Wear full protective clothing. Runoff from fire control may cause pollution. Neutralize runoff with lime, soda ash, etc., to prevent corrosion of metals and formation of hydrogen gas. Wear self-contained breathing apparatus (SCBA) if fumes or mists are present.

HEALTH HAZARD INFORMATION

PRINCIPAL HEALTH HAZARDS (Including Significant Routes, Effects, Symptoms of Overexposure, and Medical Conditions Aggravated by Exposure)

Causes severe burns to eyes, skin and all body tissues. Inhalation of mist may cause lung damage.

Inhalation 1-hour LC_{50}: 347 ppm in rats
Oral LD_{50}: 2140 mg/kg in rats

The concentrated compound is corrosive to the skin and the eye of animals. By ingestion it is moderately toxic in animals causing corrosion of mucosal surfaces. Toxic effects described in animals from single exposures by inhalation include respiratory irritation. Animal testing indicates that this compound does not have the potential to produce carcinogenic, mutagenic, embryotoxic, or reproductive effects.

Human health effects of overexposure to the liquid by skin or eye contact may cause eye corrosion with corneal or conjunctival ulceration; or skin burns or ulceration. Ingestion of the liquid may cause severe burns to the mucous membranes of the mouth and esophagus. Repeated or prolonged contact with mists may cause eye irritation with discomfort, tearing, or blurring of vision; or skin irritation with discomfort or rash. Human health effects of overexposure by inhalation may include irritation of the upper respiratory passages or erosion of dental surfaces. Higher exposures by inhalation may lead to temporary lung irritation effects with cough, discomfort, difficulty breathing, or shortness of breath; or possibly modest initial symptoms, followed in hours by severe shortness of breath, requiring prompt medical attention.

HEALTH HAZARD INFORMATION (cont'd)

Although two epidemiology studies did suggest a possible association between sulfuric acid exposure and respiratory tract tumors, conclusions from these studies are very limited because of significant deficiencies. In one study for example, only a small number of workers was sampled, and there was exposure to other materials including diethyl sulfate, an IARC and NTP carcinogen. In the other study there was exposure to other acids, plus the smoking histories of the workers were ignored in the development of the study conclusion. Based on the overall weight of evidence from all human and chronic animal studies, we conclude that no causal relationship between sulfuric acid exposure and respiratory tract tumors has been shown.

Individuals with preexisting diseases of the lungs may have increased susceptibility to the toxicity of excessive exposures.

CARCINOGENICITY

Not listed as a carcinogen by IARC, NTP, OSHA, or ACGIH.

EXPOSURE LIMITS [PEL (OSHA), TLV (ACGIH), AEL (DU PONT), ETC.]

OSHA 8-hour Time Weighted Average (TWA) and ACGIH TLV(R)-TWA are 1 mg/m^3 (ACGIH STEL = 3 mg/m^3). The Du Pont AEL 8 and 12-hour TWA is 1 mg/m^3.

SAFETY PRECAUTIONS

Do not get in eyes, on skin, on clothing.
Avoid breathing vapor or mists.
Keep containers closed.
Do not add water to contents while in container because of violent reaction.
Wash thoroughly after handling.

FIRST AID

In case of contact: immediately (within seconds) flush the skin or eyes with plenty of water (preferably cold water) for at least 15 minutes while removing contaminated clothing and shoes. Call a physician. Wash clothing before reuse.

While the patient is being transported to a medical facility, apply compresses of iced water. If medical treatment must be delayed, immerse the affected area in iced water. If immersion is not practical, compresses of iced water can be applied. Avoid freezing tissues.

Note to Physician: Continued washing of the affected area with cold or iced water will be helpful in removing the last traces of sulfuric acid. Creams or ointments should not be applied before or during the washing phase of the treatment.

If inhaled: Remove to fresh air immediately and have patient lie down and remain quiet. Apply artificial respiration if breathing has stopped. Give oxygen if breathing is difficult. Call a physician.

If swallowed: Do not induce vomiting. Give large quantities of water. Call a physician. Do not give carbonates. Never give anything by mouth to an unconscious person.

MATERIAL SAFETY DATA SHEET

(7)

DIAMOND CHEMICAL COMPANY INC.
Page & Schuyler Avenues, Lyndhurst, N.J. 07071
(201) 935-4300

PRODUCT NAME: PERCHLORO-ETHYLENE

MSDS DATE: 11/11/85

I. PRODUCT IDENTIFICATION

3 HEALTH HAZARD, 0 FIRE HAZARD, & 0 REACTIVITY rating based on NIOSH "Identification System for Occupationally Hazardous Materials" (1974)

MANUFACTURER'S NAME AND ADDRESS: Diamond Shamrock Chemicals Company, Chlor-Alkali Division, 351 Phelps Court, P.O. Box 152300, Irving, Texas 75061-2300

CHEMICAL NAME: Tetrachloroethylene CAS NUMBER: 127-18-4

SYNONYMS/COMMON NAMES: Perc

CHEMICAL FORMULA: $Cl_2C=CCl_2$

DOT PROPER SHIPPING NAME: Perchloroethylene

DOT HAZARD CLASS: ORM-A

DOT I.D. NUMBER: UN1897 HAZARDOUS SUBSTANCE: NA

II. HAZARDOUS INGREDIENTS

MATERIAL OR COMPONENT	HAZARD DATA	CAS NUMBER	%
Perchloroethylene	PEL = 100 ppm (8 hr. TWA) PEL = 200 ppm Ceiling Value PEL = 300 ppm for 5 minutes in any 3 hr. TLV = 50 ppm (8 hr. TWA), skin	127-18-4	100
Proprietary Stabilizers	(See Section V)		<0.007

This product is listed in the TSCA Inventory.

III. PHYSICAL DATA

BOILING POINT @ 760 mm Hg: 121.2°C VAPOR DENSITY (Air=1): 5.83

EVAPORATION RATE (BuAc=1): 0.12 FREEZING POINT: -22.4°C

VAPOR PRESSURE: 18 mm Hg @ 25°C % VOLATILES BY VOL.: 100

SPECIFIC GRAVITY (H_2O=1): 1.62 SOLUBILITY IN H_2O % BY WT: 0.015

APPEARANCE AND ODOR: Clear, colorless liquid with an ether-like odor

pH: N/A

CAS = Chemical Abstract Service Number
PEL = OSHA Permissible Exposure Limit
TLV = TLV®, ACGIH Threshold Limit Value, Current
N/A = No relevant information found or not available
NA = Not Applicable

IV. FIRE AND EXPLOSION DATA

FLASH POINT: N/A AUTOIGNITION TEMPERATURE: N/A

FLAMMABLE LIMITS IN AIR, % BY VOLUME- UPPER: Nonflammable
LOWER: Nonflammable

EXTINGUISHING MEDIA:
Water spray, dry chemical, carbon dioxide, or foam may be used where this product is stored.

SPECIAL FIRE FIGHTING PROCEDURES:
Pressure-demand, self-contained breathing apparatus should be provided for firefighters in buildings or confined areas where this product is stored. Storage containers exposed to fire should be kept cool with a water spray in order to prevent pressure build-up.

UNUSUAL FIRE AND EXPLOSION HAZARD:
Product is nonflammable and nonexplosive under normal conditions of use. At high temperatures, product decomposes to give off hydrochloric acid as gas plus other toxic and irritation vapors such as phosgene. If storage containers are exposed to excessive heat, over-pressurization of the containers can result.

V. HEALTH HAZARD INFORMATION

HEALTH HAZARD DATA:
Acute Oral LD_{50} = 2.6 gm/kg (Rat)
Acute Inhalation LC_{50} = 5040 ppm, 34.2 mg/l for 8 Hrs. (Rat).

IARC lists this product as having inadequate evidence in humans and limited evidence in animals to evaluate carcinogenicity. (Group 3).

A 1985 National Toxicology Program report notes that PERC when administered via inhalation to rats and mice produce "clear evidence of carcinogenicity" in both species.

ROUTES OF EXPOSURE

INHALATION:
Excessive inhalation may produce symptoms of central nervous system depression, ranging from light-headedness, nausea and vomiting, to unconsciousness and death.
SKIN CONTACT:
Mildly irritating to skin. Skin contact may produce a burning sensation. Prolonged or repeated contact may cause skin to become reddened, rough, and dry due to the removal of natural oils and may result in dermatitis.
SKIN ABSORPTION:
May be absorbed through the skin, although not expected to produce toxicity through this route.
EYE CONTACT:
An irritant of the eyes causing pain, lacrimation and general inflammation.
INGESTION:
May cause irritation of the gastrointestinal tract with vomiting. If vomiting results in aspiration, chemical pneumonia could follow. Absorption through the gastrointestinal tract may produce symptoms of central nervous system depression ranging from light-headedness to unconsciousness.

EFFECTS OF OVEREXPOSURE

ACUTE:
Excessive inhalation or ingestion may produce symptoms of central nervous depression ranging from light-headedness; to unconsciousness and death. Exposure of the eyes and skin may produce irritation.
CHRONIC:
Can cause headache, mental confusion, depression, fatigue, loss of appetite, nausea, vomiting, cough, loss of sense of balance, and visual disturbances. Prolonged or repeated skin contact may cause dermatitis.

V. HEALTH HAZARD INFORMATION ...continued

EMERGENCY AND FIRST AID PROCEDURES

EYES:
OBJECT IS TO FLUSH MATERIALS OUT IMMEDIATELY THEN SEEK MEDICAL ATTENTION. IMMEDIATELY flush eyes with large amounts of water for at least 15 minutes, holding lids apart to ensure flushing of the entire surface. Seek medical attention.

SKIN:
Wash contaminated areas with plenty of soap and water. A soothing ointment may be applied to irritated skin after thorough cleansing. Remove contaminated clothing and footwear and wash clothing before reuse. Discard footwear which cannot be decontaminated. Seek medical attention.

INHALATION:
Get person out of contaminated area to fresh air. If breathing has stopped, resuscitate and administer oxygen if readily available. Seek medical attention immediately.

INGESTION:
NEVER give anything by mouth to an unconscious person. Have conscious patient drink several glasses of water then induce vomiting by having patient tickle back of throat with finger. Keep airway clear. Seek medical attention immediately.

VI. REACTIVITY DATA

CONDITIONS CONTRIBUTING TO INSTABILITY:
Under normal conditions, this material is stable.

INCOMPATIBILITY:
Avoid contacting this product with pure oxygen, alkali metals, open flames, and electrical arcs.

HAZARDOUS DECOMPOSITION PRODUCTS:
At high temperatures, this product decomposes to give off hydrogen chloride gas and small quantities of other toxic and irritation vapors such as phosgene.

CONDITIONS CONTRIBUTING TO HAZARDOUS POLYMERIZATION.
Material is not known to polymerize.

VII. ENVIRONMENTAL PROCEDURES

SPILLS OR RELEASES:
If a material is spilled or released to the atmosphere, steps should be taken to contain liquids and prevent discharges to streams or sewer systems; and control or stop the loss of volatile materials to the atmosphere. Spills or releases should be reported, if required, to the appropriate local, state and federal regulatory agencies.

DISPOSAL OR STORAGE:
Clean-up action should be carefully planned and executed. Shipment, storage, and/or disposal of waste materials are regulated and action to handle spilled or released materials must meet the applicable rules. If any questions exists, the appropriate agencies should be contacted to assure proper action being taken.

VIII. INDUSTRIAL HYGIENE CONTROL MEASURES

VENTILATION REQUIREMENTS:
Work in well-ventilated areas. Where engineering controls are not feasible, use adequate local-exhaust ventilation.

SPECIFIC PERSONAL PROTECTIVE EQUIPMENT

RESPIRATORY:
Use a NIOSH/MSHA approved respirator following manufacturer's recommendations.

EYE:
Face shield and goggles or chemical goggles should be worn.

GLOVES:
Gloves should be worn. Gloves may be decontaminated by air drying. Gloves of neoprene-latex have been used satisfactorily.

OTHER CLOTHING AND EQUIPMENT:
Standard work clothing. Fully closed laboratory coat or wrap-around smock. Allow contaminated clothing to dry before reuse.

IX. SPECIAL PRECAUTIONS ...continued

STORAGE AND DISPOSAL

STORAGE:
Under normal conditions. This product may be stored satisfactorily in galvanized iron, black iron or steel. Aluminum is not generally recommended for storage or handling. Store drums in a cool place (bungs up and closed tightly). Ventilation should be provided at the floor level. Do not store in pits, depressions, basements or unventilated areas. All tanks should have a top and bottom mannole and a vent of a diameter at least equal to that of the fill or discharge pipe. Vent indoor tanks outside in a location such that escaping vapor will not contaminate any work space air. Vertical tanks should be of the closed top design. Normally, a dryer and safety seal on the vent is recommended.

DISPOSAL:
The material resulting from clean up operations may be hazardous waste and therefore, subject to specific regulations. Purchaser, store, transport, and disposal of all clean up materials and any contaminated equipment in accordance with all applicable federal, state, and local health and environmental regulations. Shipments of waste materials may be subject to manifesting requirements per applicable regulations. Appropriate disposal will depend on the nature of each waste material and should be performed by competent and properly permitted contractors. Ensure that all responsible federal, state, and local agencies receive proper notification of disposal.

III. INGREDIENTS

HAZARDOUS INGREDIENTS:	WT PCT (APPROX)	EXPOSURE LIMITS MG/M3	PPM	SOURCES (AND NOTES)
PETROLEUM DISTILLATES	100	575	100	A*

KEY TO SOURCES: A=ACGIH-TLV, A*=SUGGESTED-TLV, W=WHALE, O=OSHA
NOTE: LIMITS SHOWN ARE FOR GUIDANCE ONLY. FOLLOW APPLICABLE REGULATIONS.

IV. HEALTH HAZARD SUMMARY

THRESHOLD LIMIT VALUE: NO TLV ESTABILSHED. A SUGGESTED TWA EXPOSURE LIMIT OF 100 PPM.

EFFECTS OF OVEREXPOSURE: SLIGHT SKIN IRRITATION. RESPIRATORY IRRITATION, DIZZINESS, NAUSEA, LOSS OF CONSCIOUSNESS. THIS PRODUCT MAY CONTAIN TRACE QUANTITIES OF POLYCYCLIC AROMATIC HYDROCARBONS (PCAH). UNDER CONDITIONS OF POOR PERSONAL HYGIENE AND PROLONGED, REPEATED CONTACT, SOME PCAH HAVE BEEN SUSPECTED AS A CAUSE OF SKIN CANCER IN HUMANS.

V. EMERGENCY AND FIRST AID PROCEDURES

EYE CONTACT: FLUSH WITH WATER.
SKIN CONTACT: WASH CONTACT AREAS WITH SOAP AND WATER.
INHALATION: REMOVE FROM FURTHER EXPOSURE. IF UNCONSCIOUSNESS OCCURS, SEEK IMMEDIATE MEDICAL ASSISTANCE AND CALL A PHYSICIAN. IF BREATHING HAS STOPPED, USE MOUTH TO MOUTH RESUSCITATION.
INGESTION: DO NOT INDUCE VOMITING. ADMINISTER VEGETABLE OIL. GET MEDICAL ASSISTANCE. (NOTE TO PHYSICIAN: MATERIAL IF ASPIRATED INTO THE LUNGS MAY CAUSE CHEMICAL PNEUMONITIS. TREAT APPROPRIATELY.)

VI. FIRE AND EXPLOSION DATA

FLASHPOINT: F(C) (ASTM D-93)
NO. 1: 100(40) NO. 2: 125(52)

FLAMMABLE LIMITS:
LEL: NE UEL: NE

REACTIVITY 0

EXTINGUISHING MEDIA:
CO2, FOAM, DRY CHEMICAL OR WATER FOG
SPECIAL FIRE FIGHTING PROCEDURES:
FIREFIGHTERS MUST USE SELF-CONTAINED BREATHING APPARATUS.
UNUSUAL FIRE AND EXPLOSION HAZARDS:
MATERIAL IS COMBUSTIBLE.

VII. REACTIVITY DATA

STABILITY: STABLE
CONDITIONS TO AVOID: HEAT, SPARKS, FLAME AND BUILD UP OF STATIC ELECTRICITY
INCOMPATABILITY (MATERIALS TO AVOID): STRONG OXIDIZERS
HAZARDOUS DECOMPOSITION PRODUCTS: CARBON MONOXIDE (CO) FROM INCOMPLETE COMBUSTION.
HAZARDOUS POLYMERIZATION: WILL NOT OCCUR. CONDITIONS TO AVOID: NA

VIII. SPILL OR LEAK PROCEDURES

ENVIRONMENTAL IMPACT: REPORT SPILLS AS REQUIRED TO APPROPRIATE AUTHORITIES. IN CASE OF ACCIDENT OR ROAD SPILL NOTIFY CHEMTREC (800)424-9300. U.S. COAST GUARD REGULATIONS REQUIRE IMMEDIATE REPORTING OF SPILLS THAT COULD REACH ANY WATERWAY INCLUDING INTERMITTENT DRY CREEKS. THE COAST GUARD'S TOLL FREE NUMBER IS (800) 424-8802.

HEATING OILS CONT'D.

(VIII. CONT'D)

PROCEDURES IF MATERIAL IS RELEASED OR SPILLED: ADSORB ON FIRE RETARDANT TREATED SAWDUST, DIATOMACEOUS EARTH, ETC. SHOVEL UP AND DISPOSE OF AT AN APPROPRIATE WASTE DISPOSAL FACILITY IN ACCORDANCE WITH CURRENT APPLICABLE LAWS AND REGULATIONS, AND PRODUCT CHARACTERISTICS AT TIME OF DISPOSAL.
WASTE MANAGEMENT: DISPOSE OF WASTE BY SUPERVISED INCINERATION IN COMPLIANCE WITH APPLICABLE LAWS AND REGULATIONS.

IX. SPECIAL PROTECTION INFORMATION

EYE PROTECTION: NO SPECIAL EQUIPMENT REQUIRED.
SKIN PROTECTION: IF PROLONGED OR REPEATED SKIN CONTACT IS LIKELY, IMPERVIOUS GLOVES SHOULD BE WORN. GOOD PERSONAL HYGIENE PRACTICES SHOULD ALWAYS BE FOLLOWED.
RESPIRATORY PROTECTION: NO SPECIAL REQUIREMENTS UNDER ORDINARY CONDITIONS OF USE AND WITH ADEQUATE VENTILATION.
VENTILATION: VENTILATION DESIRABLE AND EQUIPMENT MUST BE EXPLOSION PROOF. USE IN WELL VENTILATED AREA. SEE COMMENTS ON H2S UNDER SPECIAL PRECAUTIONS.

X. SPECIAL PRECAUTIONS

STORED MATERIAL MUST BE LABELED AS: COMBUSTIBLE
STORAGE: STORE IN A COOL AREA.

XI. TOXICOLOGICAL DATA

ACUTE

ORAL TOXICITY: SLIGHTLY TOXIC (ESTIMATED) BASED ON TESTING OF SIMILAR PRODUCTS AND/OR THE COMPONENTS.
DERMAL TOXICITY: (RABBITS) SLIGHTLY TOXIC (ESTIMATED) BASED ON TESTING OF SIMILAR PRODUCTS AND/OR THE COMPONENTS.
INHALATION TOXICITY: (RATS) SLIGHTLY TOXIC (ESTIMATED) BASED ON TESTING OF SIMILAR PRODUCTS AND/OR THE COMPONENTS.
EYE IRRITATION: (RABBITS) EXPECTED TO BE NON-IRRITATING BASED ON TESTING OF SIMILAR PRODUCTS AND/OR THE COMPONENTS.
SKIN IRRITATION: (RABBITS) MAY CAUSE SLIGHT IRRITATION ON PROLONGED OR REPEATED CONTACT (ESTIMATED) BASED ON TESTING OF SIMILAR PRODUCTS AND/OR THE COMPONENTS.

CHRONIC OR SPECIALIZED SUMMARY

THIS PRODUCT IS LIKELY TO CONTAIN POLYCYCLIC AROMATIC HYDROCARBONS, SOME OF WHICH HAVE BEEN SHOWN TO CAUSE SKIN CANCER IN LABORATORY ANIMALS AFTER PROLONGED, REPEATED SKIN CONTACT.

INFORMATION GIVEN HEREIN IS OFFERED IN GOOD FAITH AS ACCURATE, BUT WITHOUT GUARANTEE. CONDITIONS OF USE AND SUITABILITY OF THE PRODUCT FOR PARTICULAR USES ARE BEYOND OUR CONTROL. ALL RISKS OF USE OF THE PRODUCT ARE THEREFORE ASSUMED BY THE USER AND WE EXPRESSLY DISCLAIM ALL WARRANTIES OF EVERY KIND AND NATURE, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE IN RESPECT TO THE USE OR SUITABILITY OF THE PRODUCT. NOTHING IS INTENDED AS A RECOMMENDATION FOR USES WHICH INFRINGE VALID PATENTS OR AS EXTENDING LICENSE UNDER VALID PATENTS. APPROPRIATE WARNINGS AND SAFE HANDLING PROCEDURES SHOULD BE PROVIDED TO HANDLERS AND USERS.

MATERIAL SAFETY DATA SHEET

L-4559-C
May 1985

UNION CARBIDE

An explanation of the terms used herein may be found in OSHA 29 CFR 1910.1200, available from OSHA regional or area offices.
(Essentially similar to U.S. Department of Labor Form OSHA-20 and generally accepted in Canada for information purposes)
Do Not Duplicate This Form. Request an Original.

I. PRODUCT IDENTIFICATION

PRODUCT	Acetylene		
CHEMICAL NAME	Acetylene	**SYNONYMS**	Acetylen, Ethine, Ethyne, Narcylene
FORMULA	C_2H_2	**CHEMICAL FAMILY**	Alkyne
		MOLECULAR WEIGHT	26.038
TRADE NAME	Acetylene (This product is intended for welding and cutting use.)		

II. HAZARDOUS INGREDIENTS

This section covers the materials from which this product is manufactured. The fumes and gases produced during welding and cutting with the normal use of this product are covered by Section VI. The term "hazardous" should be interpreted as a term required and defined in OSHA 29 CFR 1910.1200 and does not necessarily imply the existance of any hazard.

MATERIAL (CAS NO.)	Vol (%)	1984-1985 ACGIH TLV-TWA (OSHA-PEL)
Acetylene (74-86-2)	100	Simple asphyxiant (None currently established)

III. PHYSICAL DATA

BOILING POINT, 760 mm. Hg	Not Applicable	**SUBLIMATION POINT**	−84°C (−119.2°F) @ 760mm Hg
SPECIFIC GRAVITY (H_2O = 1)	Not Applicable	**VAPOR PRESSURE AT 21°C.**	635 psig
VAPOR DENSITY (air = 1)	0.91	**SOLUBILITY IN WATER, % by wt.**	Slight
PERCENT VOLATILES BY VOLUME	100	**EVAPORATION RATE (Butyl Acetate = 1)**	Not Applicable

APPEARANCE AND ODOR Colorless gas at normal temperature and pressure; garlic-like odor.

EMERGENCY PHONE NUMBER

IN CASE OF EMERGENCIES involving this material, further information is available at all times:
In the USA 304 — 744-3487 In Canada 514 — 645-5311
For routine information contact your local supplier

L-4559-C

Union Carbide requests the users of this product to study this Material Safety Data Sheet (MSDS) and become aware of product hazards and safety information. To promote safe use of this product a user should (1) notify its employees, agents and contractors of the information on this MSDS and any product hazards and safety information, (2) furnish this same information to each of its customers for the product, and (3) request such customers to notify their employees and customers for the product of the same product hazards and safety information.

IV. HEALTH HAZARD DATA

THRESHOLD LIMIT VALUE

The ACGIH 1984-85 recommended limit for welding fume, not otherwise classified (NOC), is 5mg/m³.
LV-TWA's should be used as a guide in the control of health hazards and not as fine lines between safe and dangerous concentrations. See Section VI for specific fume constituents which may modify this TLV-TWA.

EFFECTS OF OVEREXPOSURE AND EMERGENCY AND FIRST AID PROCEDURES

orking with welding and cutting may create one or more of the following health hazards:

FUMES AND GASES can be dangerous to your health and may cause serious lung disease.*

EAT RAYS *(INFRARED RADIATION* from the flame or hot metal) can injure eyes.

NOISE can damage hearing.

cetylene is an asphyxiant. Moderate concentrations may cause headache, drowsiness, dizziness and unconsciousness. Lack of oxygen can cause death. Keep your head out of the fumes. Do not breathe fumes and gases caused by the process. Use enough ventilation, local exhaust, or both to keep fumes and gases from your breathing zone and the general area. The type and amount fumes and gases depend on the equipment and supplies used. Possibly dangerous materials may be found in fluxes, coatings, ases, and metals. Get a Material Safety Data Sheet (MSDS) for every material used. Air samples can be used to find out what respiratory protection is needed.

ear correct ear, eye, and body protection.

Short term overexposure to fumes may result in discomfort such as dizziness, nausea, or dryness or irritation of nose, throat, or eyes.

IXTURES: When two or more gases, or liquefied gases are mixed, their hazardous properties may combine to create additional, unexpected hazards. Obtain and evaluate the safety information for each component before you produce the mixture. Consult an Industrial Hygienist, or other trained person when you make your safety evaluation of the end product. Remember, gases and liquids ive properties which can cause serious injury or death.

A detailed description of the Health Hazards and their consequences may be found in Linde's free safety booklet L-2035. You may obtain copies from your local supplier, or by writing to Union Carbide Corporation, Linde Division, Communications Department, 39 d Ridgebury Road, Danbury, Connecticut, 06817-0001.

FIRST AID IN CASE OF EMERGENCY — Call for medical aid. Employ First Aid techniques recommended by the American Red Cross. IF BREATHING IS DIFFICULT give oxygen. Call a physician. IF NOT BREATHING, begin artificial respiration, preferably mouth-mouth. If no detectable pulse, begin external heart massage. Immediately call a physician. IN CASE OF EYE BURN call a physician.

***NOTES TO PHYSICIAN:**

Acute — Gases, fumes, and dusts may cause irritation to the eyes, lungs, nose, and throat. Some toxic gases associated with welding and related processes may cause pulmonary edema, asphyxiation, and death. Acute overexposure may include signs and symptoms such as watery eyes, nose and throat irritation, headache, dizziness, difficulty breathing, frequent coughing, or chest pains.

Chronic — Protracted inhalation of air contaminants may lead to their accumulation in the lungs, a condition which may be seen as dense areas on chest x-rays. The severity of change is proportional to the length of exposure. The changes seen are not necessarily associated with symptoms or signs of reduced lung function or disease. In addition, the changes on x-rays may be caused by non-work related factors such as smoking, etc.

VIII. SPECIAL PROTECTION INFORMATION

RESPIRATORY PROTECTION (specify type) — Use respirable fume respirator or air supplied respirator when working in confined space or where local exhaust or ventilation does not keep exposure below TLV. Select as per OSHA29 CFR1910.134.

VENTILATION	**LOCAL EXHAUST** — Use enough ventilation, local exhaust or both, to keep the fumes and gases below TLV's in the worker's breathing zone and the general area. Train the worker to keep his head out of the fumes.	
	MECHANICAL (general)	ALWAYS WORK WITH ENOUGH VENTILATION
	SPECIAL	Not applicable
	OTHER Depends on specific use conditions, and location. Use adequate ventilation or personal respiratory protection. See Section IX and OSHA29 CFR1910.252.	
PROTECTIVE GLOVES		Welding gloves recommended

EYE PROTECTION — Wear goggles with filter lens selected as per ANSI Z49.1. Provide protective screens and goggles, if necessary, to protect others. Select as per OSHA29 CFR1910.133.

OTHER PROTECTIVE EQUIPMENT — As needed, wear hand, head, and body protection which help to prevent injury from radiation, and sparks. See ANSI Z49.1. At a minimum this includes welder's gloves and protective goggles, and may include arm protectors, aprons, hats, shoulder protection, as well as substantial clothing. Train the worker not to touch live electrical parts.

IX. SPECIAL PRECAUTIONS

Fumes and gases cannot be classified simply. The composition and quantity of both are dependent upon the metal being worked, the process, procedure and electrodes used. Other conditions which also influence the composition and quantity of the fumes and gases to which workers may be exposed include: coatings on the metal being worked (such as paint, plating, or galvanizing), the number of workers and the volume of the work area, the quality and amount of ventilation, the position of the worker's head with respect to the fume plume, as well as the presence of contaminants in the atmosphere (such as chlorinated hydrocarbon vapors from cleaning and degreasing activities).

One recommended way to determine the composition and quantity of fumes and gases to which workers are exposed is to take an air sample from inside the worker's helmet if worn or in the worker's breathing zone. See ANSI/AWS F1.1, available from the American Welding Society, 550 N.W. Le Jeune Rd., Miami, FL 33126.

Read and understand the manufacturer's instructions and the precautionary label on the product. See American National Standard Z49.1, "Safety In Welding And Cutting" published by the American Welding Society and OSHA Publication 2206 (29CFR1910), U.S. Government Printing Office, Washington, D.C. 20402 for more details. For further safety and health information refer to Linde's free safety booklet L-2035.

OTHER HANDLING AND STORAGE CONDITIONS

Heat and sparks during use could be the source of ignition of combustible materials. Prevent fires.

Refer to NFPA 51B "Cutting and Welding Processes" and NFPA 50 "Oxygen-Fuel Gas Systems." Use piping and equipment adequately designed to withstand pressures to be encountered. Gas can cause rapid suffocation due to oxygen deficiency. Store and use with adequate ventilation. Close valve when not in use and when empty. Never work on a pressurized system.

The opinions expressed herein are those of qualified experts within Union Carbide. We believe that the information contained herein is current as of the date of this Material Safety Data Sheet. Since the use of this information and these opinions and the conditions of use of the product are not within the control of Union Carbide, it is the user's obligation to determine the conditions of safe use of the product.

THRESHOLD LIMIT VALUE: 5,000 ppm—ACGIH (1984-85).

EFFECTS OF A SINGLE (ACUTE) OVEREXPOSURE:

SWALLOWING — A highly unlikely route of exposure. Frostbite of the lips and mouth may result from contact with the liquid.

SKIN ABSORPTION — No evidence of adverse effects from available information.

INHALATION — Asphyxiant. Moderate concentrations may cause headache, drowsiness, dizziness, stinging of the nose and throat, excitation, rapid breathing, excess salivation, vomiting, and unconsciousness. Lack of oxygen can cause death.

SKIN CONTACT — No harmful effect expected from vapor. Liquid may cause frostbite.

EYE CONTACT — Vapor may cause a stinging sensation; liquid may cause frostbite.

EFFECTS OF REPEATED (CHRONIC) OVEREXPOSURE: No evidence of adverse effects from available information.

OTHER EFFECTS OF OVEREXPOSURE: Damage to retinal ganglion cells and central nervous system may occur.

MEDICAL CONDITIONS AGGRAVATED BY OVEREXPOSURE: A knowledge of the available toxicology information and of the physical and chemical properties of the material suggest that overexposure is unlikely to aggravate existing medical conditions.

SIGNIFICANT LABORATORY DATA WITH POSSIBLE RELEVANCE TO HUMAN HEALTH HAZARD EVALUATION: None currently known.

EMERGENCY AND FIRST AID PROCEDURES:

SWALLOWING — This product is a gas at normal temperature and pressure.

SKIN CONTACT — For exposure to liquid, immediately warm frostbite area with warm water (not to exceed 105°F). In case of massive exposure, remove clothing while showering with warm water. Call a physician.

INHALATION — Remove to fresh air. Give artificial respiration if not breathing. Give oxygen if breathing is difficult. Call a physician.

EYE CONTACT — In case of splash contamination, immediately flush eyes thoroughly with water for at least 15 minutes. See a physician, preferably an ophthalmologist, immediately.

NOTE TO PHYSICIAN: *There is no specific antidote. Treatment of overexposure should be directed at the control of symptoms and the clinical condition.*

FLASH POINT (test method)	Not applicable	AUTOIGNITION TEMPERATURE	Not applicable

FLAMMABLE LIMITS IN AIR, % by volume	LOWER Not applicable	UPPER	Not applicable

EXTINGUISHING MEDIA: Carbon Dioxide cannot catch fire. Use media appropriate for surrounding fire.

SPECIAL FIRE FIGHTING PROCEDURES: Evacuate all personnel from danger area. Immediately deluge containers with water spra from maximum distance until cool, then move containers away from fire area if without risk.

UNUSUAL FIRE AND EXPLOSION HAZARDS: Gas cannot catch fire. Container may rupture due to heat of fire. No part of a containe should be subjected to a temperature higher than 52°C (approximately 125°F). Most containers are provided with a pressure relie device designed to vent contents when they are exposed to elevated temperature.

STABILITY	
UNSTABLE	STABLE
	X

CONDITIONS TO AVOID: See Section IX.

INCOMPATIBILITY (materials to avoid): Alkali metals, alkaline earth metals, metal acetylides, chromium, titanium above 550°C, uranium above 750°C.

HAZARDOUS DECOMPOSITION PRODUCTS: In the presence of an electrical discharge, carbon dioxide is decomposed to form carbon monoxide and oxygen.

HAZARDOUS POLYMERIZATION	
May Occur	Will not Occur
	X

CONDITIONS TO AVOID: None currently known.

STEPS TO BE TAKEN IF MATERIAL IS RELEASED OR SPILLED

Evacuate all personnel from danger area. Use self-contained breathing apparatus where needed. Shut off leak if without risk. Ventilate area of leak or move leaking container to well-ventilated area. Test area, especially confined areas, for sufficient oxygen content prior to permitting re-entry of personnel.

WASTE DISPOSAL METHOD: Slowly release into atmosphere outdoors. Discard any product, residue, disposable container or liner in an environmentally acceptable manner, in full compliance with federal, state and local regulations.

MATERIAL SAFETY DATA SHEET

An explanation of the terms used herein may be found in OSHA 29 CFR 1910.1200, available from OSHA regional or area offices.

Notice of Disclaimer

Due to the limitations, constraints, inaccuracies and incompleteness of government information and computer mapping data currently available to DataMap Technology Corp., certain conventions have been utilized in preparing the locations of all federal, state and local agency sites residing in DataMap Technology Corp.'s databases. All EPA NPL and state landfill sites are depicted by a rectangle approximating their location and size. The boundaries of the rectangles represent the eastern and western most longitudes; the northern and southern most latitudes. As such, the mapped areas may exceed the actual areas and do not represent the actual boundaries of these properties. All other sites are depicted by a point representing their approximate address location and make no attempt to represent the actual areas of the associated property. Actual boundaries and locations of individual properties can be found in the files residing at the agency responsible for such information.

Waiver of Liability

Although DataMap Technology Corp. uses its best efforts to research the actual location of each site, DataMap Technology Corp. does not and can not warrant the accuracy of these sites with regard to exact location and size. All authorized users of DataMap Technology Corp.'s services proceeding are signifying an understanding of DataMap Technology Corp.'s searching and mapping conventions, and agree to waive any and all liability claims associated with search and map results showing incomplete and or inaccurate site locations.

Environmental FirstSearch
New York Databases and Sources

1. **State Sites:** The New York State Department of Environmental Conservation's Registry of Inactive Hazardous Waste Disposal Sites. The database contains information on all Class 1, Class 2, Class 2a, Class 3, Class 4, and Class 5 locations maintained by the Division of Hazardous Waste Remediation.

   Updated quarterly.

   The Hazardous Substance Waste Disposal Site Study list maintained by the New York State Department of Environmental Conservation is also included within the State Sites database.

   Updated as available.

2. **Spills:** The New York State Department of Environmental Conservation's database of emergency response actions and spill releases maintained by the Division of Spills Management.

   Updated quarterly.

3. **Landfills:** The New York State Department of Environmental Conservation's Active Facilities Registry maintained by the Division of Solid and Hazardous Materials.

   Updated annually.

4. **UST:** The New York State Department of Environmental Conservation 's database of Petroleum Bulk Storage (PBS) facilities, Major Oil Storage Facilities (MOSF), and Chemical Bulk Storage (CBS) facilities maintained by the Division of Spills Management and delegated Counties (Nassau, Suffolk, Rockland, and Cortland Counties).

   Updated quarterly.

5. **PWS:** The State of New York Department of Health database of Public Water Supply (PWS) wells maintained by the Bureau of Public Water Supply.

   Updated annually.

6. **LUST:** The New York State Department of Environmental Conservation's database of Leaking Underground Storage Tanks (LUSTs) maintained by the Division of Spills Management. The database is derived from the Spills database.

   Updated quarterly.

RELEASES: ***Air and Surface Water Releases.*** A subset of the EPA's ERNS database which have impacted only air or surface water.

Updated quarterly.

NPDES: ***National Pollution Discharge Elimination System.*** The EPA's database of all permitted facilities receiving and discharging effluents to and from the environment.

Updated semi-annually.

FINDS: ***The Facility Index System.*** The EPA's Index of identification numbers associated with a property or facility that the EPA has investigated or has been made aware of in conjunction with various regulatory programs. Each record indicates the EPA office that may have files on the site or facility.

Updated quarterly.

TRIS: ***Toxic Release Inventory System.*** The EPA's database of sites that release, manufacture, process, import, or export toxic chemicals into the air, land, or water in measurable quantities.

Updated upon release from the EPA.

RECEPTORS: 1995 TIGER census listing of schools and hospitals that may house individuals deemed sensitive to environmental discharges due to their fragile immune systems.

Environmental FirstSearch
Federal Databases and Sources

NPL: ***National Priority List.*** The EPA's list of confirmed or proposed Superfund sites.

Updated quarterly.

CERCLIS: ***Comprehensive Environmental Response Compensation and Liability Information System.*** The EPA's database of current and potential Superfund sites currently or previously under investigation.

Updated quarterly.

RCRA TSD: ***Resource Conservation and Recovery Information System Treatment, Storage, and Disposal Facilities.*** The EPA's database of RCRIS sites which treat, store, dispose, or incinerate hazardous waste. This information is also reported in the standard RCRIS detailed data.

Updated quarterly.

RCRA COR: ***Resource Conservation and Recovery Information System Corrective Action Sites.*** The EPA's database of RCRIS sites with reported corrective action. This information is also reported in the standard RCRIS detailed data.

Updated quarterly.

RCRA GEN: ***Resource Conservation and Recovery Information System Large and Small Quantity Generators.*** The EPA's database of RCRIS sites that create more than 100kg of hazardous waste per month or meet other RCRA requirements. Included are RAATS (RCRA Administrative Action Tracking System) and CMEL (Compliance Monitoring & Enforcement List).

Updated quarterly.

RCRA NLR: ***Resource Conservation and Recovery Information System sites No Longer Regulated.*** The EPA's database of RCRIS sites that create less than 100kg of hazardous waste per month or do not meet other RCRA requirements.

Updated quarterly.

ERNS: ***Emergency Response Notification System.*** The EPA's database of EPA emergency response actions.

Updated quarterly.

DEC REMARKS:
2/9/2000 SANGESLAND SPOKE TO BILL JEBAILY AT BAY RIDGE FUEL (718-836-9222) HE SAID THE OWNER ORDERED 2,000 GAL. HE DELIVERED 2,000 GAL, WHICH SLIGHTLY . OVERFILLED THE TANK IN THE BASEMENT. AT SOME POINT IN THE PAST, THE OWNER HAD SOMEONE COME IN AND INSPECT THE TANK. THERE WAS NO MANHOLE, SO THE TEST COMPANY CUT A HOLE IN THE TOP AND THEN PATCHED IT WITH AN EPOXY COVER. DURING THE OVERFILL, THIS PATCH LEAKED APPROX 20 GAL ONTO THE FLOOR. PETROLEUM TANK CLEANERS IS ON SITE NOW (2/9/2000) DOING CLEAN UP. SANGESLAND CALLED MANAGER OF CO-OP: MR. WATSON 516-262-7505 - LEFT A MESSAGE TELLING HIM TO HAVE THE TANK LID PROPERLY REPAIRED.

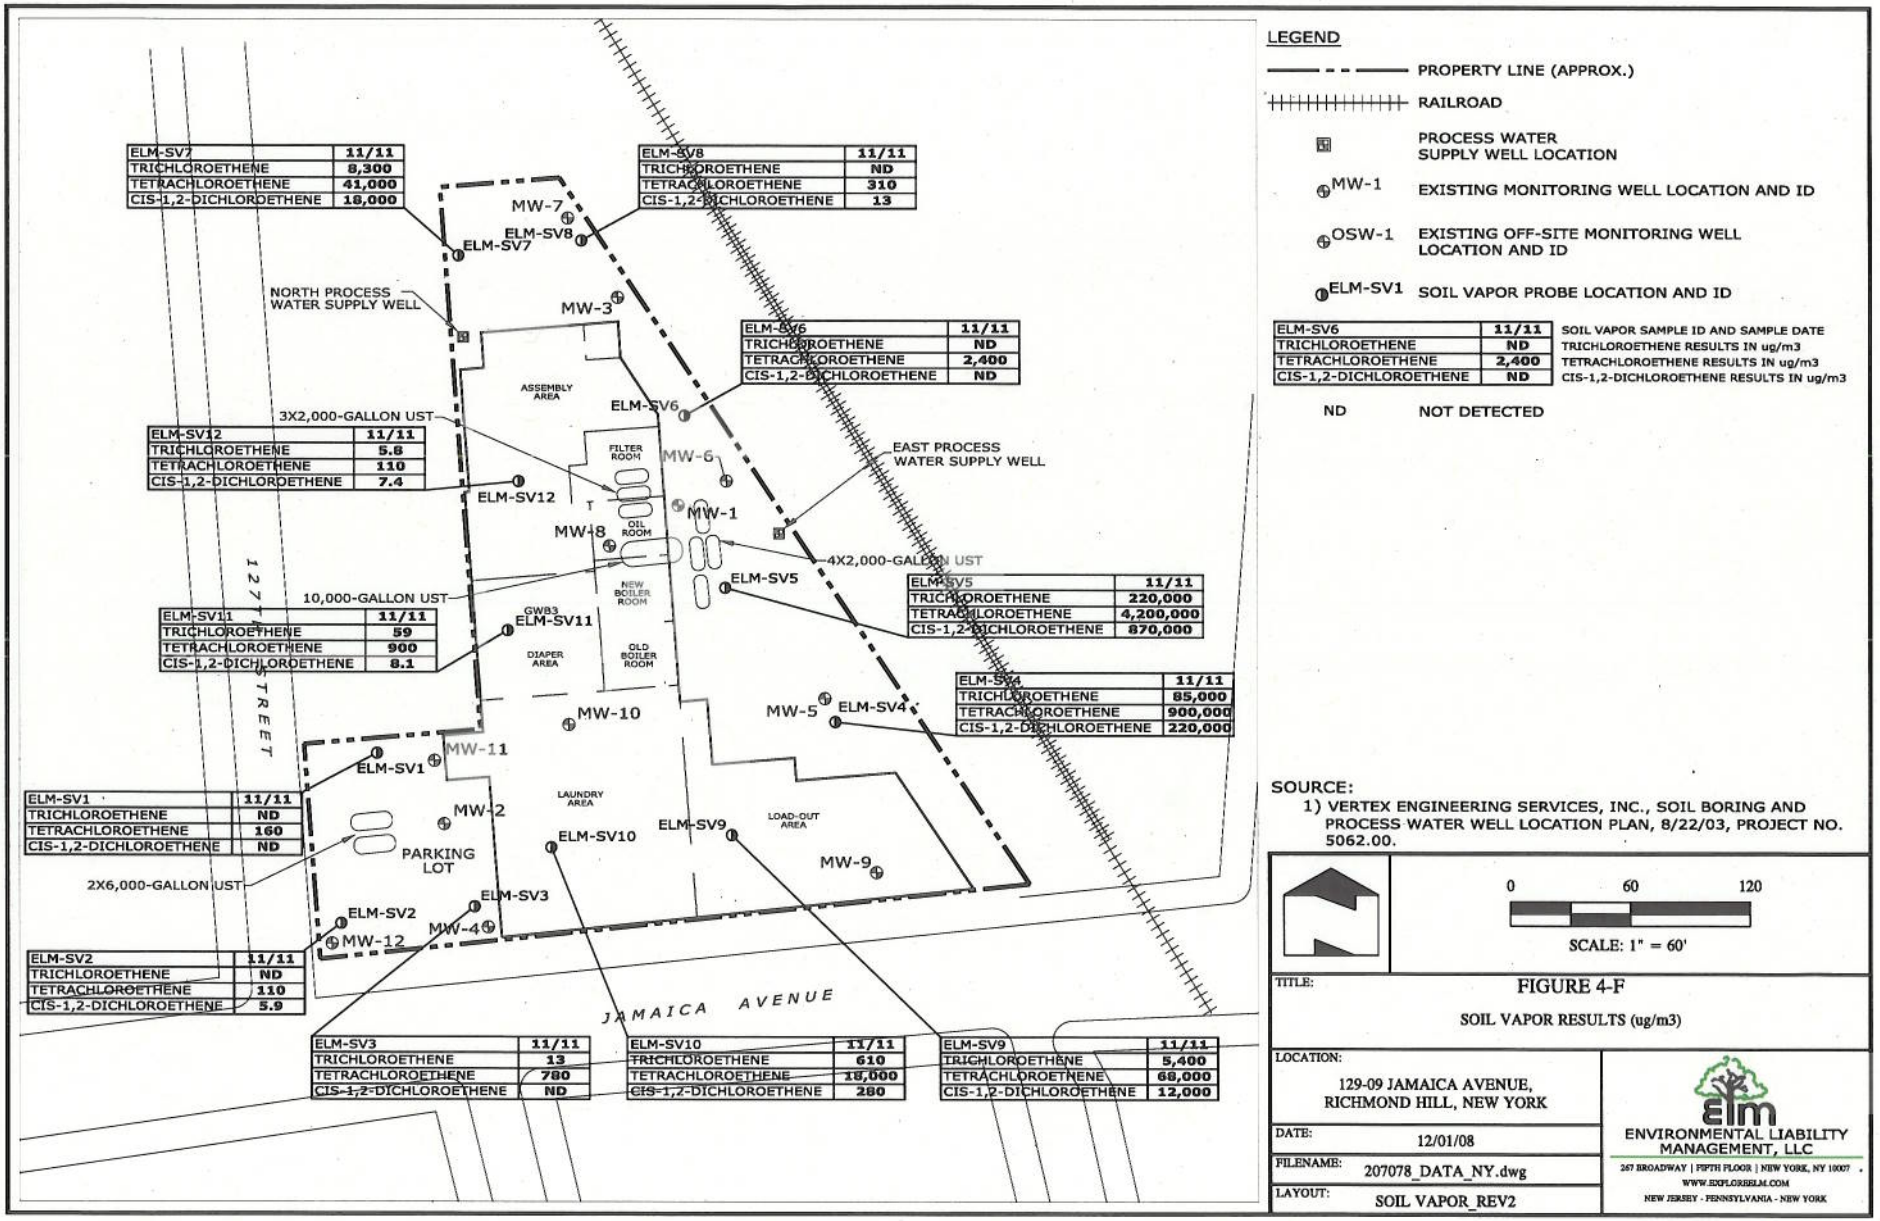
Subject: Uniforms for Industry - NYSDEC BCP Site #C241103 - Task 5.2.4 Soil Vapor Results
Attachments: 207078_DATA_NY_SOIL_VAPOR_REV2.pdf; Table 3_SV sample results 120108.pdf

Ronnie,

Provided herein are the results of the Remedial Investigation Work Plan, Task 5.2.4 - Soil Vapor Sampling for the Uniforms for Industry Project, (NYSDEC BCP Site #C241103).

The interim report details the soil vapor investigation findings and also provides ELM with information to support the future drilling activities related to the real-time investigation.



Please let me know if you have any questions or comments on the report,

A hard copy will be forwarded to your office.

APPENDIX F

Data Evaluation and Data Usability Summary Reports (DUSRs)

Data Usability Summary Report

Site: Long Island Railroad
Laboratory: Chemtech, Mountainside, NJ
Case No.: X5831
Reviewer: Lorie MacKinnon/TRC Environmental Corporation
Date: February 7, 2007

Samples Reviewed and Evaluation Summary

VOCs:	15/Groundwaters/	MW15-60, MW06-168, MW3-168, MW16-60, MW6-60, MW6-60 DUP, MW21S, MW21D, MW-3U-60, MW4-60, MW19-60, MW12-60, MW5-60, MW5-180, MW26S
	1/Field Blank/	Field Blank
SVOCs:	15/Groundwaters/	MW15-60, MW06-168, MW3-168, MW16-60, MW6-60, MW6-60 DUP, MW21S, MW21D, MW-3U-60, MW4-60, MW19-60, MW12-60, MW5-60, MW5-180, MW26S
	1/Field Blank/	Field Blank

The above-listed samples were collected on December 6, 7, and 8, 2006 and were analyzed for target compound list (TCL) volatile organic compounds (VOCs) by SW-846 method 8260B and for base neutral (BN) semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was performed in accordance with the *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review, EPA 540/R-99/008* (October 1999), modified as necessary to accommodate the non-CLP methodologies used, the project specific QC criteria detailed in the Quality Assurance Project Plan (QAPP), and Region II validation actions.

The organic data were evaluated based on the following parameters:

	• Overall Evaluation of Data and Potential Usability Issues
*	• Data Completeness
*	• Holding Times and Sample Preservation
*	• Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	• Initial and Continuing Calibrations
	• Blanks
	• Surrogate Recoveries
	• Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
	• Internal Standards
	• Laboratory Control Sample (LCS) Results
	• Field Duplicate Results
	• Sample Quantitation and Reported Quantitation Limits
*	• Target Compound Identification
	• Tentatively Identified Compounds

* - All criteria were met.

Overall Evaluation of Data and Potential Usability Issues

All results are usable for project objectives.

Qualifications applied to the data as a result of sampling error are discussed below.

- The positive results for fluorene and phenanthrene in samples MW 6-60 and MW 6-60 DUP were qualified as estimated (J) due to high relative percent differences for these compounds in the evaluation of the field duplicate pair. The direction of the bias cannot be determined from this nonconformance. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results which were below the lowest calibration standard and quantitation limit. These results were qualified as estimated (J) in the associated samples by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The positive results for fluorene in samples, MW4-60, MW 6-60, and MW 6-60 DUP were qualified as estimated (J) due to initial calibration nonconformances. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The positive and nondetect results for chloroethane and 1,1-dichloroethane in all samples and bis(2-ethylhexyl)phthalate, indeno(123-cd)pyrene, dibenzo(ah)anthracene, and benzo(ghi)perylene in samples MW21S and MW21D were qualified as estimated (J/UJ) due to continuing calibration nonconformances. These results can be used for project objectives as estimated values and nondetects with estimated quantitation limits with which may have a minor impact on the data usability.

- The positive result for trichloroethene in sample MW3-168 was qualified as estimated (J) as the result was above the calibration range. The result can be used for project objectives as an estimated value which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the NYSDEC ASP Category B deliverables.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met for the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met for the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

All criteria were met in the initial calibration. The following table summarizes compounds that exhibited percent differences (%Ds) outside of the acceptance criteria in the continuing calibrations (CCs).

Instrument ID	MSVOAH
Compound	CC 12/15/06
chloroethane	XX (40.6)
1,1-dichloroethane	XX (32.4)
Samples Affected	All Samples

X= Initial calibration verification (ICV) %D >25%; estimate (J) positive results only.
XX = Continuing calibration (CC) %D >25 and < 90; estimate (J/UJ) all positive and nondetect results

The positive and nondetect results for chloroethane and 1,1-dichloroethane in all samples were qualified as estimated (JUJ) due to continuing calibration nonconformances.

SVOC

The following table summarizes compounds that exhibited %Ds outside of the acceptance criteria in the initial calibrations (ICs) and/or continuing calibrations (CCs).

Instrument ID	BNAF	BNAF
Compound	ICV 12/20/06	CC 12/21/06
fluorene	XX (26.1)	
4-chlorophenyl-phenylether	XX (35.0)	
indeno(123-cd)pyrene	XX (332)	XX (43.6)
benzo(k)fluoranthene	XX (27.6)	
bis(2-ethylhexyl)phthalate		XX (27.2)
dibenzo(ah)anthracene		XX (35.7)

Instrument ID	BNAF	BNAF
Compound	ICV 12/20/06	CC 12/21/06
benzo(ghi)perylene		XX (45.6)
Samples Affected	All Samples	MW 6-60 DL, MW 6-60 DUP DL, MW21S, MW21D

X= Initial calibration verification (ICV) %D >25%; estimate (J) positive results only.
XX = Continuing calibration (CC) %D >25 and < 90; estimate (J/UJ) all positive and nondetect results

All criteria were met in the initial calibration. The laboratory analyzed a mid-level initial calibration verification (ICV) sample following the initial calibration. The positive results for fluorene in samples MW4-60, MW 6-60, and MW6-60 DUP were qualified as estimated (J). Validation actions were not taken for the affected compounds in the remaining samples as the results were nondetect.

The positive and nondetect results for indeno(123-cd)pyrene, bis(2-ethylhexyl)phthalate, dibenzo(ah)anthracene, and benzo(ghi)perylene in samples MW21S and MW21D were qualified as estimated (J/UJ) due to continuing calibration %D nonconformances. Validation actions were not required for the affected analytes in samples MW 6-60DL and MW 6-60 DUP DL as these results were not reported from the diluted analyses.

Blanks

VOC

Target compounds were not detected in the method blanks or field blank associated with the samples in this data set. Although a trip blank sample was present on the sample chain of custody, the laboratory noted that the sample was not received.

SVOC

Target compounds were not detected in the method blanks or field blank associated with the samples in this data set. Tentatively identified compounds (TICs) were detected in the method and field blank samples. TICs, which were detected in the field samples at levels less than ten times those in the method and field blank samples were rejected (R).

Surrogate Recoveries

VOC

The recovery of surrogate 1,2-dichloroethane-d4 (140%) was above the control limits in sample MW3-168 DL. Validation actions were not required as results were not reported from this analysis.

SVOC

All criteria were met.

MS/MSD Results

MS/MSD analyses were not associated with this sample group. Validation action was not required on this basis.

Internal Standards

VOC

All criteria were met.

SVOC

The following table summarizes the internal standard recoveries that failed to meet the acceptance criteria:

Sample	IS	Recovery	Validation Action
MW3-168	Chrysene-d12	227	Validation actions were not required as the associated compound results were nondetect.
MW5-60	Chrysene-d12	219	Validation actions were not required as the associated compound results were nondetect.
MW4-60	Chrysene-d12	210	Validation actions were not required as the associated compound results were nondetect.
MW15-60	Chrysene-d12	203	Validation actions were not required as the associated compound results were nondetect.

LCS Results

VOC

The following table summarizes the LCS recoveries that failed to meet the acceptance criteria:

Compound	%R	QC Limits	Action
Bromomethane	135	70-130	No validation actions were required since bromomethane was nondetect in all associated samples.

SVOC

All criteria were met.

Field Duplicate Results

Samples MW6-60 and MW6-60 DUP were submitted as the field duplicate pair with this sample group.

VOC

The following table summarizes the relative percent differences (RPDs) of the detected results, all of which were either within the acceptance criteria or not calculable (NC) due to a nondetect result in the original sample. No validation actions were required on this basis.

Compound	MW 6-60 (µg/L)	MW 6-60 DUP (µg/L)	RPD
methyl tert-butyl ether	5.5	5.8	5.3
cyclohexane	4.1	4.3	4.8
methylcyclohexane	6.4	6.4	0
benzene	9.0	9.0	0
ethyl benzene	16	16	0
isopropylbenzene	9.4	9.9	5.2
chlorofluoromethane	5.5	5.5	0
m/p-xylenes	10 U	1.3	NC

Criteria : When both results are ≥5x the quantitation limit, RPDs must be <30.
When both results are <5x the quantitation limit, RPDs must be <60.

SVOC

The following table summarizes the RPDs of the detected results, all of which were within the acceptance criteria or NC, with the exception of fluorene and phenanthrene. The positive results for fluorene and phenanthrene in samples MW 6-60 and MW 6-60 DUP were qualified as estimated (J).

Compound	MW 6-60 (µg/L)	MW 6-60 DUP (µg/L)	RPD
naphthalene	68	54	23.0
2-methylnaphthalene	300	230	26.4
acenaphthene	13	7.4	54.9
fluorene	27	14	63.4
phenanthrene	37	14	90.2

Compound	MW 6-60 (µg/L)	MW 6-60 DUP (µg/L)	RPD
carbazole	11	13	16.7
dibenzofuran	10 U	7.1	NC

Criteria : When both results are ≥5x the quantitation limit, RPDs must be <30.
When both results are <5x the quantitation limit, RPDs must be <60.

Sample Quantitation and Reported Quantitation Limits

Sample calculations were spot-checked; there were no errors noted. It should be noted that the laboratory included both method detection limits and quantitation limits (QLs) on the final summary sheets. Only the QLs should be used for decision-making purposes.

VOC

Select VOC results were reported which were below the lowest calibration standard level and quantitation limit. These results were qualified as estimated (J) by the laboratory.

All QLs were approximately 5x higher than the required QLs. However, all QLs were found to be less than or equal to the project action limits, with the exception of vinyl chloride, benzene, 1,2-dichloropropane, 1,1,2-trichloroethane, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichlorobenzene, 1,2-dichloroethane, cis-1,3-dichloropropene, trans-1,3-dichloropropene, 1,2-dibromoethane, and 1,2-dibromo-3-chloropropane.

Sample MW3-168 was analyzed at a 10-fold dilution due to the concentration of trichloroethene which exceeded the calibration range in the undiluted analysis. The diluted result (100 ug/L) was much lower than the undiluted analysis (160 ug/L). Based on professional judgment, the result from the undiluted analysis was reported and qualified as estimated (J) due to the calibration range exceedance.

Sample MW5-180 was analyzed at a 25-fold dilution due to the concentration of trichloroethene which exceeded the calibration range in the undiluted analysis. The validator combined the results of the diluted and undiluted analyses in order to report the lowest possible quantitation limits and all results within the calibration range.

SVOC

Select SVOC results were reported which were below the lowest calibration standard level and quantitation limit. These results were qualified as estimated (J) by the laboratory.

Samples MW6-60 and MW 6-60 DUP were analyzed at 5-fold dilutions due to the concentration of 2-methylnaphthalene which exceeded the calibration range in the undiluted analysis. The validator combined the results of the diluted and undiluted analyses in order to report the lowest possible quantitation limits and all results within the calibration range.

Target Compound Identification

All criteria were met in the VOC and SVOC analyses.

Tentatively Identified Compounds

VOCs

TICs were not requested for the VOC analysis.

SVOCs

The SVOC tentatively identified compound, tetrachloroethylene, reported in sample MW5-180, was rejected (R). Volatile target compound list (TCL) compounds should not be reported as SVOC TICs.

Data Usability Summary Report

Site: Long Island Railroad
Laboratory: Air Toxics Ltd., Folsom, CA
Case No.: 0810062 and 0810082
Reviewer: Lorie MacKinnon/TRC Environmental Corporation
Date: December 30, 2008

Samples Reviewed and Evaluation Summary

VOCs:

0810062:
4/Air Samples/ SG-23, SG-22, SG-15, SG-16

0810082:
7/Air Samples/ SG-17, SG-18, SG-24, SG-21, SG-20, SG-19, SG-25
1/Trip blank/ Trip blank

The above-listed air samples and trip blank sample were collected on October 1 and 2, 2008 and were analyzed for volatile organic compounds (VOCs) by EPA Method TO-15. The data validation was performed in accordance with the *USEPA Region II Guidelines for Validating Air Samples for the Volatile Organic Analysis of Ambient Air in Canister by Method TO-15, HW-3* (October 2006).

The organic data were evaluated based on the following parameters:

	♦	Overall Evaluation of Data and Potential Usability Issues
*	♦	Data Completeness
*	♦	Holding Times and Sample Preservation
*	♦	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	♦	Initial and Continuing Calibrations
	♦	Blanks
*	♦	Surrogate Recoveries
*	♦	Laboratory Duplicate Results
*	♦	Internal Standards
	♦	Laboratory Control Sample (LCS) Results
NA	♦	Field Duplicate Results
	♦	Sample Quantitation and Reported Quantitation Limits
*	♦	Target Compound Identification

* - All criteria were met.

NA – A field duplicate sample was not associated with this sample set.

Overall Evaluation of Data and Potential Usability Issues

All results are usable for project objectives.

Qualification of the data as a result of sampling error was not required. Qualifications applied to the data as a result of analytical error are discussed below.

- The positive results for 1,4-dichlorobenzene in samples SG-23, SG-22, SG-15, and SG-16 were qualified as estimated (J) due to initial calibration nonconformances. These results can be used for project objectives as estimated values. This qualification may have a minor impact on the data usability.

- The positive and nondetect results for methyl tert-butyl ether and chlorodifluoromethane in samples SG-23, SG-22, SG-15, and SG-16 were qualified as estimated (J/UJ) due to calibration nonconformances. These results can be used for project objectives as estimated values and nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

- The nondetect results for 1,2,4-trichlorobenzene and hexachlorobutadiene in samples SG-23, SG-22, SG-15, and SG-16 were qualified as estimated (UJ) due to the low LCS recoveries. The results may be biased low. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The results for acetone in sample SG-18, methylene chloride in samples SG-22, SG-16, and SG-25, 2-butanone in samples SG-23, SG-22, SG-15, and SG-16, carbon disulfide in sample SG-20, chlorobenzene in sample SG-21, styrene in samples SG-17, SG-24, SG-21, SG-20, SG-19, and SG-25, 1,4-dichlorobenzene in samples SG-18 and SG-21, and 1,2,4-trichlorobenzene in sample SG-21 were qualified as nondetect (U) at the quantitation limits or reported values due laboratory blank contamination. The results can still be used for project objectives as nondetects which may have a minor impact on the data usability.

The validation recommendations listed above were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the NYSDEC ASP Category B deliverables.

Holding Times and Sample Preservation

All criteria were met.

GC/MS Tunes

All criteria were met.

Initial and Continuing Calibrations

The percent relative standard deviations (%RSDs) of 1,4-dichlorobenzene (31.4) and 1,2-dichlorobenzene (34.0) were outside of the acceptance criteria in the initial calibration standard associated with samples SG-23, SG-22, SG-15, and SG-16. The positive results for 1,4-dichlorobenzene in samples SG-23, SG-22, SG-15, and SG-16 were qualified as estimated (J). Validation actions were not required for 1,2-dichlorobenzene as positive results only are affected due to initial calibration nonconformances and this compound was not detected in the associated samples.

The percent differences (%Ds) of methyl tert-butyl ether (36) and chlorodifluoromethane (36) were outside of the acceptance criteria in the continuing calibration standard associated with samples SG-23, SG-22, SG-15, and SG-16. The positive and nondetect results for methyl tert-butyl ether and chlorodifluoromethane in samples SG-23, SG-22, SG-15, and SG-16 were qualified as estimated (J/UJ).

The percent relative standard deviation (%RSD) of bromomethane (32.9) was outside of the acceptance criteria in the initial calibration standard associated with samples SG-17, SG-18, SG-24, SG-21, SG-20, SG-19, SG-25, and trip blank. Validation actions were not required for bromomethane as positive results only are affected due to initial calibration nonconformances and this compound was not detected in the associated samples.

Blanks

Target compounds were detected in the associated method blanks. Target compounds were not detected in the trip blank sample. The presence of blank contamination indicates that false positives may exist for these compounds in the associated samples. An Action Level (AL) was established at 5x the concentration detected for the laboratory contaminants. The following table summarizes the ALs.

Compound	Blank	Associated Samples	Concentration Detected	Action Level
Methylene chloride	Method	SG-23, SG-22, SG-15, SG-16	0.11 ppbv	0.55 ppbv
2-Butanone	Method	SG-23, SG-22, SG-15, SG-16	0.24 ppbv	1.2 ppbv
Acetone	Method	SG-17, SG-18, SG-24, SG-21, SG-20, SG-19, SG-25	0.55 ppbv	2.75 ppbv

Compound	Blank	Associated Samples	Concentration Detected	Action Level
Carbon disulfide	Method	SG-17, SG-18, SG-24, SG-21, SG-20, SG-19, SG-25	0.064 ppbv	0.32 ppbv
Methylene chloride	Method	SG-17, SG-18, SG-24, SG-21, SG-20, SG-19, SG-25	0.13 ppbv	0.65 ppbv
Trans-1,2-dichloroethene	Method	SG-17, SG-18, SG-24, SG-21, SG-20, SG-19, SG-25	0.24 ppbv	1.2 ppbv
1,2-Dichloroethane	Method	SG-17, SG-18, SG-24, SG-21, SG-20, SG-19, SG-25	0.050 ppbv	0.25 ppbv
Trans-1,3-dichloropropene	Method	SG-17, SG-18, SG-24, SG-21, SG-20, SG-19, SG-25	0.12 ppbv	0.60 ppbv
1,2-Dibromoethane	Method	SG-17, SG-18, SG-24, SG-21, SG-20, SG-19, SG-25	0.11 ppbv	0.55 ppbv
Chlorobenzene	Method	SG-17, SG-18, SG-24, SG-21, SG-20, SG-19, SG-25	0.077 ppbv	0.39 ppbv
Styrene	Method	SG-17, SG-18, SG-24, SG-21, SG-20, SG-19, SG-25	0.071 ppbv	0.36 ppbv
1,3-Dichlorobenzene	Method	SG-17, SG-18, SG-24, SG-21, SG-20, SG-19, SG-25	0.14 ppbv	0.70 ppbv
1,4-Dichlorobenzene	Method	SG-17, SG-18, SG-24, SG-21, SG-20, SG-19, SG-25	0.19 ppbv	0.95 ppbv
Alpha-chlorotoluene	Method	SG-17, SG-18, SG-24, SG-21, SG-20, SG-19, SG-25	0.14 ppbv	0.70 ppbv
1,2-Dichlorobenzene	Method	SG-17, SG-18, SG-24, SG-21, SG-20, SG-19, SG-25	0.12 ppbv	0.60 ppbv
1,2,4-Trichlorobenzene	Method	SG-17, SG-18, SG-24, SG-21, SG-20, SG-19, SG-25	0.28 ppbv	1.4 ppbv

Sample results were qualified as follows:

- If sample concentration was < the quantitation limit (QL) and ≤ the Action Level, qualify the result as a nondetect (U) at the QL.
- If sample concentration was > the QL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
- If the sample concentration was > the QL and > the Action Level, qualification of the data was not required.

The results for acetone in sample SG-18, methylene chloride in samples SG-22, SG-16, and SG-25,

2-butanone in samples SG-23, SG-22, SG-15, and SG-16, carbon disulfide in sample SG-20, chlorobenzene in sample SG-21, styrene in samples SG-17, SG-24, SG-21, SG-20, SG-19, and SG-25, 1,4-dichlorobenzene in samples SG-18 and SG-21, and 1,2,4-trichlorobenzene in sample SG-21 were qualified as nondetect (U) at the QLs or reported values due laboratory blank contamination.

SUMMA® canister cleaning certification analyses were not submitted with these samples. Validation action was not taken on this basis.

Surrogate Recoveries

All criteria were met.

Laboratory Duplicate Results

A laboratory duplicate analysis was performed on sample SG-23. All criteria were met.

Internal Standards

All criteria were met.

LCS Results

Chlorodifluoromethane and dichlorofluoromethane were not present in the LCS spiking solution. Validation actions were not taken due to the lack of LCS recovery information.

The recoveries for methyl tert-butyl ether (151%), 1,2,4-trichlorobenzene (64%), and hexachlorobutadiene (58%) were outside of the acceptance criteria in the LCS associated with samples SG-23, SG-22, SG-15, and SG-16. Validation action was not required for methyl tert-butyl ether on this basis as the results were nondetect in the associated samples and therefore not affected by the potential high bias. The nondetect results for 1,2,4-trichlorobenzene and hexachlorobutadiene in samples SG-23, SG-22, SG-15, and SG-16 were qualified as estimated (UJ).

Field Duplicate Results

A field duplicate pair was not associated with this sample set. Validation action was not required on this basis.

Sample Quantitation and Reported Quantitation Limits

Sample calculations were spot-checked; there were no errors noted.

Sample SG-18 was analyzed at a 22.4-fold dilution due to the elevated concentrations of non-target compounds. Sample SG-23 was analyzed at a 4.56-fold dilution due to the concentrations of target compounds which would have exceeded the calibration range if not diluted. Quantitation limits for

these samples were elevated accordingly by the laboratory.

Target Compound Identification

All criteria were met.

Data Usability Summary Report

Site: Long Island Railroad
Laboratory: Con-test Analytical Laboratory, East Longmeadow, MA
Case No.: 20543
Reviewer: Elizabeth Denly/TRC
Date: January 6, 2009

Samples Reviewed and Evaluation Summary

VOCs:	4/Groundwaters/	MW31D, MW32D, MW33D, DUP 1
	1/Field Blank/	FB 1
	1/Trip Blank/	TB

The above-listed samples were collected on October 14, 2008 and were analyzed for target compound list (TCL) volatile organic compounds (VOCs) plus select chlorofluorocarbons by SW-846 method 8260B. The data validation was performed in accordance with the *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review, EPA 540/R-99/008* (October 1999), modified as necessary to accommodate the non-CLP methodology used and Region II validation actions.

The organic data were evaluated based on the following parameters:

	• Overall Evaluation of Data and Potential Usability Issues
	• Data Completeness
*	• Holding Times and Sample Preservation
*	• Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	• Initial and Continuing Calibrations
	• Blanks
*	• Surrogate Recoveries
	• Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	• Internal Standards
	• Laboratory Control Sample (LCS) Results
	• Field Duplicate Results
	• Sample Quantitation and Reported Quantitation Limits
*	• Target Compound Identification

* - All criteria were met.

Overall Evaluation of Data and Potential Usability Issues

All results are usable for project objectives.

Qualifications applied to the data as a result of sampling error are discussed below.

- The positive results for chloroform, cis-1,2-dichloroethene, methyl tert butyl ether, and tetrachloroethene were qualified as estimated (J) in samples MW31D and DUP 1 due to field duplicate variability. The direction of the bias cannot be determined from this nonconformance. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The positive results for acetone in samples MW32D and MW33D were qualified as nondetects (U) due to field blank and trip blank contamination. These results are still usable for project objectives as nondetects. This qualification has a minor impact on the data usability.

Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC results which were below the lowest calibration standard and quantitation limit. These results were qualified as estimated (J) in the associated samples by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The nondetect results for methyl acetate, 1,2-dibromo-3-chloropropane, and bromomethane in all samples were qualified as estimated (UJ) due to continuing calibration nonconformances. These results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The nondetect results for difluorochloromethane and 1,2-dibromo-3-chloropropane in all samples were qualified as estimated (UJ) due to low recoveries in the LCS and LCS duplicate analyses. These results may be biased low. These results can be used for project objectives as nondetects with estimated quantitation limits with which may have a minor impact on the data usability.

- The positive result for dichlorodifluoromethane in sample MW32D was qualified as estimated (J) due to MS/MSD recoveries less than 10%. This result may be biased low. This result can be used for project objectives as an estimated value which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the NYSDEC ASP Category B deliverables with the following exception:

- Spectra for positive results in samples and blanks were not provided with the original data submittal. Upon request from the laboratory during validation, the spectra were provided.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met.

GC/MS Tunes

All criteria were met.

Initial and Continuing Calibrations

All criteria were met in the initial calibration. The following table summarizes compounds that exhibited percent differences (%Ds) outside of the acceptance criteria in the continuing calibrations (CCs).

Instrument ID	**GC/MS VOA 2**
Compound	**CC 10/17/08**
Methyl acetate	XX (27.5)
1,2-Dibromo-3-chloropropane	XX (44.6)
Bromomethane	XX (62.8)
Samples Affected	**All samples**

XX = Continuing calibration (CC) %D >25 and < 90; estimate (J/UJ) all positive and nondetect results

The nondetect results for methyl acetate, 1,2-dibromo-3-chloropropane, and bromomethane in all samples were qualified as estimated (UJ) due to continuing calibration nonconformances.

Blanks

1,2,4-Trichlorobenzene was detected in one of the method blanks associated with the samples in this data set. Acetone was detected in the field blank and trip blank. The presence of blank contamination indicates that false positives may exist for these compounds in the associated samples. Action Levels were established at 5x the concentration detected for 1,2,4-trichlorobenzene and at 10x the maximum concentration detected for acetone. The following table summarizes the ALs.

Compound	**Blank**	**Associated Samples**	**Concentration Detected**	**Action Level**
1,2,4-Trichlorobenzene	Method blank	All samples	0.11 ug/L	0.55 ug/L

Compound	Blank	Associated Samples	Concentration Detected	Action Level
Acetone	Field blank	All samples	1.49 ug/L	14.9 ug/L

Sample results were qualified as follows:

- If sample concentration was < the quantitation limit (QL) and ≤ the Action Level, qualify the result as a nondetect (U) at the QL.
- If sample concentration was > the QL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
- If the sample concentration was > the QL and > the Action Level, qualification of the data was not required.

The positive results for acetone in samples MW32D and MW33D were qualified as nondetects (U) at the QL due to the blank contamination. Qualification of the data for 1,2,4-trichlorobenzene was not required since this compound was not detected in any of the field samples.

Surrogate Recoveries

All criteria were met.

MS/MSD Results

Sample MW32D was designated for MS/MSD analyses with this sample set. The following table summarizes the compounds which exhibited recoveries outside of the acceptance criteria. Professional judgment was used to qualify the positive result for dichlorodifluoromethane in sample MW32D as estimated (J) due to MS/MSD recoveries less than 10%.

Compound	MS % Recovery	MSD % Recovery
1,1,2-Trichloro-1,2,2-trifluoroethane	--	65.6
Chlorodifluoromethane	68	69
Vinyl chloride	62	57
Chloromethane	61	56
Bromomethane	67	--
1,2,4-Trichlorobenzene	--	140
Dichlorodifluoromethane	-15	-12
Methylcyclohexane	66	64

Internal Standards

All criteria were met.

LCS Results

The following table summarizes the compounds which exhibited recoveries outside of the acceptance criteria in the LCSs or LCS Duplicates.

LCS ID	Compound	LCS %R	LCS Duplicate %R	Action
LCS-87246 (10/17/08)	Difluorochloromethane	67	68	Estimate (UJ) the nondetect results for difluorochloromethane and 1,2-dibromo-3-chloropropane in all samples.
	1,2-Dibromo-3-chloropropane	62	58	
Affected Samples: All samples				
LCS-87247 (10/18/08)	1,2,4-Trichlorobenzene	--	146	No validation action required; 1,2,4-trichlorobenzene was not reported from the associated diluted analyses or reanalysis.
Affected Samples: MW-33D DL, MW-32D DL, MW-32D RE				

Field Duplicate Results

Samples MW31D and DUP 1 were submitted as the field duplicate pair with this sample group. The following table summarizes the relative percent differences (RPDs) of the detected results. The positive results for chloroform, cis-1,2-dichloroethene, methyl tert butyl ether, and tetrachloroethene were qualified as estimated (J) in samples MW31D and DUP 1due to the high RPDs. The RPDs for bromodichloromethane and 1,1-dichloroethene were was not calculable (NC) due to a nondetect result in the original sample; qualification of the data on this basis was not required.

Compound	MW31D (µg/L)	DUP 1 (µg/L)	RPD (%)
Cis-1,2-Dichloroethene	4.1	5.6	31
Methyl tert-butyl ether	15.8	11.2	34
Tetrachloroethene	14.4	10.5	31
Trichloroethene	27.2	22.1	21
Vinyl chloride	13.4	10.1	28
Chloroform	0.42 J	3.8	160
Benzene	0.09 J	0.1	11
Dichlorodifluoromethane	1.11 J	0.85 J	27
1,1-Dichloroethane	0.3 J	0.26 J	14
1,1,1-Trichloroethane	0.17 J	0.165 J	3.0
Bromodichloromethane	1.0 U	0.33 J	NC
1,1-Dichloroethene	1.0 U	0.11 J	NC

Criteria : When both results are ≥5x the quantitation limit, RPDs must be <30.
When both results are <5x the quantitation limit, RPDs must be <60.

Sample Quantitation and Reported Quantitation Limits

Sample calculations were spot-checked; there were no errors noted.

Select VOC results were reported which were below the lowest calibration standard level and quantitation limit. These results were qualified as estimated (J) by the laboratory.

Sample MW33D was analyzed at a 100-fold dilution due to the concentrations of trichloroethene and tetrachloroethene which exceeded the calibration range in the undiluted analysis. Sample MW32D was analyzed at a 10-fold dilution due to the concentration of trichloroethene which exceeded the calibration range in the undiluted analysis. The laboratory combined the results of the diluted and undiluted analyses in order to report the lowest possible quantitation limits and all results within the calibration range.

It should be noted that sample MW32D was reanalyzed undiluted to confirm there was no carryover in the original analysis which was performed directly after sample MW33D. The results of the reanalysis confirmed there was no carryover in the original results. It is unclear why the laboratory reported the results of the reanalysis. Since the results of the original analysis were deemed acceptable and were slightly higher than the reanalysis, the results of the original analysis were reported.

Target Compound Identification

All criteria were met.

1.0 INTRODUCTION

The overall purpose of this qualitative exposure assessment is to satisfy the requirements for a human health exposure assessment for a Remedial Investigation Report (RIR) in accordance with the New York State Department of Environmental Conservation (NYSDEC) Draft DER-10 Technical Guidance for Site Investigation and Remediation (December 2002). The exposure assessment qualitatively evaluates on-site and off-site exposures to human health from environmental contamination associated with historic releases at the Long Island Railroad Morris Park Yard (Site). Evaluation of off-site impacts to the environment was not part of the scope of this human health exposure assessment, but is addressed in the Fish and Wildlife Resource Impact Analysis in the RIR.

The Site encompasses approximately 23 acres located in the Richmond Hill section of Queens, New York. The Site is bounded by the LIRR Richmond Hill Yard to the north, Atlantic Avenue to the south, 121st Street to the west, and the Van Wyck Expressway to the east. Figure 1 shows the project Site location.

The surrounding area consists of mixed residential, light industrial and commercial zones. Figure 2 shows the uses of the surrounding area, with sensitive receptors, such as hospitals and schools.

The soils at the Site and in the surrounding area consist of outwash sands and tills extending from the surface to the Gardiners Clay. Groundwater in these unconsolidated glacial deposits at the Site (the "Unconsolidated Upper Aquifer") is encountered at approximately 40 feet below ground surface (ft bgs), and groundwater flow direction is to the southwest, towards the Jamaica Bay. According to the RIR by STV (STV, 1996), the hydraulic conductivity of the Unconsolidated Upper Aquifer has been estimated at 270 feet/day.

The Gardiners Clay underlying the Unconsolidated Upper Aquifer consists of greenish-gray clays and silts, with some interbedded sands, and represents a confining layer. The Gardiners Clay at the Site is generally encountered at about 140 to 160 ft bgs. The hydraulic conductivity of this geologic unit is very low, and it is considered to be relatively impermeable.

2.0 IDENTIFICATION OF CONTAMINANTS OF POTENTIAL CONCERN (COPCS)

Extensive sampling has been performed at the Site as part of the Remedial Investigation (RI) and testing by others. The results of the RI and other studies are discussed in detail in the RI report (RIR; TRC, 2009).

Based upon the findings of the RI and prior investigations by others, the principal contaminants of potential concern (COPCs) associated with either off-site or on-site sources are chlorinated solvents, tetrachloroethene (PCE), trichloroethene (TCE) and vinyl chloride (VC); petroleum-related compounds, benzene, ethylbenzene, methyl tert-butyl ether (MTBE) and naphthalene; isopropylbenzene; and chlorofluorocarbons (CFCs), trichlorofluoromethane (TCFM) and flurodichloromethane (DCFM). Summary statistics for soil, groundwater and soil vapor are presented in Tables 1 to 7. The following table summarizes the COPCs in groundwater, soil and soil vapor and identified whether they originate from the Site (i.e., "Site-related") or originate from off-site sources (i.e., "not Site related").

Medium	Contaminants of Potential Concern	Description
Groundwater	Tetrachloroethene (PCE) Trichlorethene (TCE) Vinyl chloride	Concentrations of PCE and TCE above Class GA groundwater standards are present in the deep groundwater (i.e., 140 feet bgs) at on-site and off-site locations. Vinyl chloride was detected above the Class GA groundwater standard in one deep groundwater sample collected at an off-site location. These chemicals are not considered Site-related.
	Trichlorofluoromethane (TCFM) Flurodichloromethane (DCFM)	Concentrations of TCFM and DCFM above Class GA groundwater standards are present in the shallow groundwater (i.e., 40 feet bgs) at on-site and off-site locations. These chemicals are considered Site-related.

Medium	Contaminants of Potential Concern	Description
	1,2-Dichloroethylene	Concentrations of 1,2-dichloroethylene above Class GA groundwater standards are present in the deep groundwater at both on-site and off-site locations. This chemical is not considered Site-related.
	Methylene chloride	Methylene chloride was detected above the Class GA groundwater standard in one shallow groundwater sample collected on-site. This compound is not considered Site related.
	Benzene, Ethyl benzene Isopropylbenzene	Benzene, ethylbenzene and isopropylbenzene were detected above Class GA groundwater standards in two shallow groundwater samples collected on-site. Benzene was detected above the USEPA Residential Vapor Intrusion (VI) screening criteria (USEPA 2002) in two shallow groundwater samples collected on-site. These chemicals are considered Site-related.
	Naphthalene	Naphthalene was detected above the Class GA groundwater standard and VI screening criteria (USEPA 2002) in one shallow groundwater sample collected on-site. This chemical is considered Site-related.
	Methyl tert-butyl ether (MTBE)	Concentrations of MTBE above Class GA groundwater standards are present in the deep groundwater at off-site locations. This chemical is not considered Site-related.
	Bis(2-ethylhexyl)phthalate	Bis(2-ethylhexyl)phthalate was detected above the Class GA groundwater standard in two shallow and one deep groundwater samples collected from off-site locations. This chemical is not considered Site-related.

Soil		No chemicals were detected above NYSDEC Restricted Residential Soil Cleanup Objectives (SCOs) in soil on-site or off-site.
Soil Vapor	Chloroform	Chloroform was detected above the VI screening criteria (USEPA 2002) in a soil gas sample collected from seven feet bgs at one off-site location. This chemical is not considered Site-related.
	Trichloroethene (TCE) Tetrachloroethene (PCE)	Concentrations of TCE and PCE above the VI screening criteria (USEPA 2002) were detected in soil vapor samples collected from seven feet bgs and 27 feet bgs at two on-site soil vapor sample locations at the property boundary (SG-13/23 and SG-22) and at two off-site locations (SG-6/24 and SG-18). These soil vapor sampling locations are adjacent to historic off-site potential sources of chlorinated solvents (a dry cleaner and an ink manufacturer). These compounds in soil vapor are not considered Site-related. Concentrations of TCE and PCE at other locations of the Site are below VI screening criteria.

3.0 EXPOSURE PATHWAY ANALYSIS

The exposure pathway analysis follows the scope outlined by NYSDEC Draft DER-10 Technical Guidance for Site Investigation and Remediation (NYSDEC 2002). According to the DER-10 document, an exposure pathway consists of the following five elements:

1. Contamination source,
2. Contaminant release and transport mechanisms,
3. Point of exposure,
4. Route of exposure, and
5. Receptor population.

An exposure pathway is considered to be complete when all five of these elements exist. An exposure pathway is considered to be incomplete if it can be demonstrated that any one of the five elements has not existed, does not exist in the present, or will not exist in the future. In Section 2.0, Site-related and non-Site-related COPCs were identified and discussed.

3.1 Contaminant Release and Transport Mechanisms

Potential contaminant release and transport mechanisms for known contamination in soil and groundwater include the following:

- Migration of VOCs into surrounding buildings via soil vapor intrusion, and
- Migration of COPCs in groundwater.

3.2 Point of Exposure

The potential for exposure to Site contaminants in soil does not exist as only very low concentrations of chemicals below Restricted Residential SCOs (NYSDEC 2006) were detected in soil. In addition, these low concentrations were detected in soil located at least 30 feet below ground surface. Therefore, the potential for exposure to Site-related and non-Site-related COPCs in soil does not exist.

The potential for vapor intrusion associated with VOCs in soil gas and shallow groundwater was evaluated by comparing the analytical data to the USEPA Residential Vapor Intrusion (VI) screening criteria (USEPA 2002). Concentrations below these criteria indicate that the VI exposure pathway is not significant. The attenuation factor for groundwater was determined to

be 3E-04 based on a soil type of sand and the depth to groundwater. The cancer risk level selected is 1E-06 and the screening criteria for noncarcinogenic compounds were reduced by a factor of 10 corresponding to a hazard quotient (HQ) of 0.1. The attenuation factor for soil vapor was determined to be 1E-03 based on a sand soil type and the depth of the soil vapor samples. Only two Site-related COPCs, benzene and naphthalene, were identified in groundwater at concentrations slightly above the VI screening criteria. These compounds were only detected within the track yard in monitoring well MW-6, and the only potential for exposure exists should a building be constructed in this area. There are no construction plans for the track yard currently or in the future. Any future construction plans would follow a site-specific Health and Safety Plan that would minimize worker exposure. Therefore, shallow groundwater is not considered a point of exposure for the vapor intrusion exposure pathway for site-related contaminants. Deep groundwater is not considered a point of exposure for the vapor intrusion exposure pathway due to the overlying shallow groundwater that eliminates the volatilization of VOCs from deep groundwater into vadose zone soils where vapor intrusion into buildings could occur. The potential for exposure to Site-related and non-Site related COPCs in groundwater through direct ingestion by all receptors does not exist due to the fact that the unconsolidated aquifer in the area is not utilized as a source of drinking water and that, if utilized, the city would pre-treat the water prior to human consumption.

No Site-related COPCs were identified in on-Site soil vapor samples. However, three non-Site-related COPCs, chloroform, TCE and PCE, were detected in soil vapor samples collected off-Site (SG-12) above the VI screening criterion indicating the potential for exposure by off-site residents. TCE and PCE were also detected in soil vapor samples collected on-Site at the south property boundary (SG-13 and 23) at concentrations above the VI screening criteria indicating the potential for exposure via vapors intruding into buildings where inhalation by on-Site workers may occur. As previously discussed, these soil vapor samples were collected at locations adjacent to historic off-site sources of chlorinated solvents. Currently, there are no buildings at the on-Site soil vapor SG-13 and SG-23 location. Therefore, there are no current exposure pathways. Should construction activities occur in the future, the potential exists for construction and industrial worker receptors to be exposed to TCE and PCE via the vapor intrusion exposure pathway. In the event that construction activities occur at the south property boundary, an appropriate construction worker Health and Safety Plan would be developed and implemented to prevent construction worker exposure to these chemicals during construction.

3.3 Routes of Exposure

There is no potential for exposure to Site-related COPCs for all identified receptors except for industrial workers who may be exposed to two Site-related groundwater COPCs, benzene and naphthalene, under a hypothetical future exposure scenario where worker exposure occurs via inhalation of vapors in air inside a building constructed in the track yard. There are no plans to construct a building in the track yard; therefore, the potential for exposure under this future exposure scenario is remote.

No direct contact routes of exposure (i.e., direct ingestion or dermal contact exposure) exist for soil and groundwater due to the depth of contamination in soil and no current or potential future use of the Unconsolidated Upper Aquifer as a potable water supply at the Site or surrounding area.

The potential exists for exposure by future on-Site industrial worker receptors to two non-Site-related soil gas COPCs, TCE and PCE, via the vapor intrusion exposure pathway. Potential future construction worker exposure is eliminated through the implementation of a construction worker Health and Safety Plan.

The potential exists for exposure to one non-Site-related soil gas COPC, chloroform, via the vapor intrusion exposure pathway for off-site residential receptors.

3.4 Receptor Population

This human health exposure assessment has identified the following potential receptors:

- Current and future industrial workers (adult)
- Future construction workers (adult)
- Current and future off site residents (adult and child)

Note that visitors to the Site and to off-site residences are also considered receptor populations; however, exposure by industrial workers and off-site residents is considered to be protective of these receptor populations, respectively.

4.0 CONCLUSIONS

This qualitative exposure assessment evaluated the potential for exposure associated with site-related and non-Site-related COPCs identified in groundwater, soil and soil vapor. The only potentially complete exposure pathway for Site-related COPCs is the vapor intrusion exposure pathway for future industrial workers. Benzene and naphthalene, two Site-related COPCs, were identified above VI screening criteria in shallow groundwater in a small area in the track yard. The vapor intrusion exposure pathway is also potentially complete for future industrial workers associated with TCE and PCE identified in soil vapor samples SG-13/23 and SG-22 located at the property boundary. The potential for exposure exists only if a building is constructed in this area. However, there are no plans for the construction of a building in the track yard. The only potentially complete exposure pathway for non-Site-related chemicals is the vapor intrusion exposure pathway for off-Site residents associated with TCE, PCE and chloroform detected above VI screening criteria in off-Site soil vapor samples. The table below summarizes the results of this exposure assessment.

Potential Receptor	Exposure Scenario	Exposure Potential
Current/future Industrial Worker	• Inhalation of VOCs in indoor air associated with vapor intrusion from subsurface sources	The potential for current exposure to Site-related COPCs does not exist as only low concentrations of two site-related chemicals were detected in an area of the Facility where no current exposure is occurring. The potential for future exposure to two Site-related COPCs (benzene and naphthalene) exists for industrial workers should a building be constructed where concentrations of VOCs above VI screening criteria were identified in one on-Site groundwater sample, MW-6. The potential exists for future exposure by industrial workers should a building be constructed where concentrations of non-Site-related TCE and PCE were identified in on-Site soil vapor samples SG-13/23 and SG-22.

Potential Receptor	Exposure Scenario	Exposure Potential
	• Inhalation of volatiles and particulates in ambient air.	**None:** Subsurface sources of contamination are covered with at least 30 feet of clean soil and volatilization of low concentrations of VOCs into ambient air is considered insignificant.
	• Direct contact with Site contaminants in soil.	**None:** No COPCs were identified in soil at depths where exposure is likely to occur.
	• Direct contact with Site contaminants in groundwater.	**None:** Direct contact with contaminated groundwater will not occur as there is no current or potential future use of groundwater as a potable water supply.
Future Construction Workers	Inhalation of VOCs in indoor air associated with vapor intrusion from subsurface sources	**None:** The potential for exposure to Site-related COPCs does not exist as only low concentrations of two site-related chemicals were detected in an area of the Facility where no current or future construction activities are planned. The implementation of a Health and Safety Plan eliminates the potential for exposure by future construction workers to VOCs should construction activities occur in the future.

	Inhalation of volatiles and particulates in ambient air.	**None:** Subsurface sources of contamination are covered with at least 30 feet of clean soil and volatilization of low concentrations of VOCs into ambient air is considered insignificant.
	Direct contact with Site contaminants in soil.	**None:** No COPCs were identified in soil at depths where exposure is likely to occur.
	Direct contact with Site contaminants in groundwater.	**None:** Direct contact with contaminated soil will not occur due to the depth to groundwater. In addition, groundwater is not used as a potable water supply.
Off-Site Residents	Inhalation of VOCs in indoor air associated with vapor intrusion from subsurface sources	No Site-related COPCs were identified above VI screening criteria at off-Site locations. The potential exists for off-site residents to be exposed to non-Site-related COPCs (TCE, PCE and chloroform) identified in off-Site soil vapor samples.
	Inhalation of volatiles and particulates in ambient air.	**None:** Subsurface sources of contamination are covered with at least 30 feet of clean soil and volatilization of low concentrations of VOCs into ambient air is considered insignificant.
	Direct contact with COPCs in soil.	**None:** No COPCs were identified in soil at depths where exposure is likely to occur.
	Direct contact with Site contaminants in groundwater.	**None:** There are no known current or known potential future uses of groundwater as a potable water supply.
