Re: Supplemental Investigation Letter Report
Richmond Hill Yard
189-02 89th Avenue
Richmond Hill, New York 11418
NYSDEC Spill Case No. 89-08760

Dear Mr. Ketani:

This Supplemental Investigation Letter Report (the "Report") documents the soil boring and groundwater monitoring well installation and sampling activities performed in accordance with the *Richmond Hill Yard Supplemental Investigation Work Plan for Petroleum Spill Nos. 89-08760 and 09-08574*, prepared by TRC Engineers, Inc. (TRC), dated March 2011 (the "Work Plan"). The Work Plan was approved by the New York State Department of Environmental Conservation (NYSDEC) in a letter, presented in Attachment A, dated May 4, 2012. The Report documents investigation activities performed in connection with NYSDEC Spill Case No. 89-08760, assigned to the Metropolitan Transportation Authority (MTA) Long Island Rail Road (LIRR) Richmond Hill Yard (the "Site"), located at 189-02 89th Avenue in Richmond Hill, New York. The Site location is shown in the attached Figure 1. The area of investigation, which is the Former East Fueling Yard, and nearby structures are shown in Figure 2.

As requested by NYSDEC in a meeting on February 14, 2013, this letter report has been prepared in lieu of a Remedial Investigation Report, as specified in the Work Plan. Investigation activities performed in connection with the investigation of NYSDEC Spill Case No. 09-08574 will be documented in a separate report.

Site Description

The Site is located in the Richmond Hill section of Queens, New York, bordered by 89th and 91st Avenues to the north, the LIRR Morris Park Yard to the south and west, and 126th and 132nd Streets to the east. The primary uses of the Site are inspection, maintenance, fueling, and storage of diesel train locomotives. The Site is an active LIRR operations area which encompasses a complex arrangement of tightly spaced tracks, buried utilities and other railroad infrastructure. The Former East Fueling Yard is located south of the Sheridan Shop. As described in the Work Plan, several petroleum spills have occurred at the Site, including in the Former East Fueling Yard, and remain active on the NYSDEC spill database. These spill cases have been consolidated into NYSDEC Spill Case No. 89-08760.

Site Geology and Hydrogeology

Based on the results of investigations performed by TRC on the adjacent LIRR Morris Park Yard, the upper glacial deposits at the Site consist of outwash gravels, sands and silty sands extending from land surface to the Gardiners Clay. Groundwater in the unconsolidated glacial deposits at the Site (the

"Unconsolidated Upper Aquifer") is encountered at approximately 40 to 50 feet below ground surface (bgs), and local groundwater flow direction is predominantly to the southwest, towards Jamaica Bay.

The Gardiners Clay underlying the Unconsolidated Upper Aquifer consists of greenish-gray clays and silts, with some interbedded sands, and represents a confining layer. The Gardiners Clay at the Site is generally encountered at about 140 to 160 feet bgs.

Remedial History

In 1997 STV Incorporated of New York ("STV") performed a subsurface soil investigation south of the Sheridan Shop in the Storage Yard as part of planning for the construction of an addition to the shop. As documented in the memo titled *Richmond Hill Storage Yard – UST Removal*, dated April 10, 1995, approximately 1,180 tons of petroleum-impacted material were excavated from the Storage Yard during construction activities and disposed of off-Site. In 2007 Gannet Fleming conducted a subsurface soil and groundwater investigation, which included the advancement of soil borings and installation of groundwater monitoring wells, in the Block End of the Storage Yard and an area south of the McGurl Building. As documented in the memo titled *PN-39 Richmond Hill/Morris Park Improvements – CR-04 Removal of Contaminated Soil – Back-Up Information*, dated March 8, 2007, approximately 4,200 tons of petroleum-impacted material were excavated in the vicinity of the McGurl Building, during the construction of a retaining wall, and disposed of off-Site. In 2009 LIRR conducted a subsurface soil and groundwater investigation, which included the advancement of soil borings and installation of groundwater monitoring wells in the vicinity of the McGurl Building. As documented in the report titled *Phase I Supplemental Investigation of Petroleum Contamination at the Richmond Hill and Morris Park Facilities*, dated June 2, 2009, petroleum-related compounds were not detected in soil samples at concentrations greater than applicable criteria. Buildings and the locations of existing groundwater monitoring wells are presented on Figure 2. A more detailed summary of Site remedial history, including investigation and remedial efforts associated with other NYSDEC Spill Case Nos., is presented in the Work Plan.

As described in the Work Plan, previous investigations could not be completed, due to the presence of unidentified subsurface obstacles, in the Former East Fueling Yard. Therefore, additional investigation of soil and groundwater in the Former East Fueling Yard was required to delineate impacts related to petroleum releases associated with NYSDEC Spill Case No. 89-08760. The planned scope of the Supplemental Investigation, as described in the Work Plan, consisted of the advancement of two (2) soil borings, installation of monitoring wells in the boreholes, and collection of soil and groundwater samples for laboratory analysis.

Supplemental Investigation for NYSDEC Spill Case No. 89-08760

TRC supervised the completion of utility locating and soil boring and monitoring well installation activities on July 12, September 11, 12 and 25, 2012. Photographs documenting the soil boring and monitoring well installations are presented in Attachment B. Hager-Richter Geoscinces, Inc. (Hager-Richter) was retained by TRC for utility locating services. Aquifer Drilling & Testing, Inc. (ADT) of Mineola, NY was retained by TRC as a drilling subcontractor. Site conditions and boring locations are shown on Figure 2 and 3.

Soil Sampling

On July 12, 2012, the utility locating survey was performed in the vicinity of soil boring and monitoring well locations MW-38S and MW-39S (between Tracks 6 and 7, shown on Figure 3). Groundwater monitoring well MW-38S was located in the concrete area between Tracks 6 and 7 (due to space restrictions). The effectiveness of the geophysical survey equipment was limited in this area, and other concrete areas, due to heavy steel rebar reinforcement. In addition, visual inspection of the concrete area between Tracks 6 and 7 revealed an underground drainage pipe located approximately eight (8) feet below top of concrete. Groundwater monitoring well MW-39S was located in an asphalt paved area.

On September 11, 2012, in order to advance soil borings, Tracks 6 and 7 were temporarily taken out of service by the Richmond Hill Yard Station Master. ADT attempted, utilizing a jackhammer and a 10-inch diameter diamond-tipped concrete core, to remove the concrete at monitoring well location MW-38S. One-quarter-inch diameter rebar (oriented both vertically and horizontally in the concrete) was encountered at approximately two (2) inches below the top of the concrete. Therefore, MW-38S was re-located to an asphalt covered location approximately 40 feet southwest of the original location.

ADT removed the overlying asphalt via jackhammer and hand-cleared the second attempted location to a depth of 2.5 feet below ground surface (bgs) before encountering an unidentified underground obstruction. The same obstruction was encountered at the same depth approximately five (5) feet further southwest between the gauge of Track 7 during a third attempt to hand-clear the boring for MW-38S. ADT then returned to and attempted to core the concrete at the original location. However, after approximately 3.5 hours the coring was advanced only 28 inches and ADT was directed to halt coring activities and proceed to hand-clear soil boring location MW-39S. ADT was able to remove the overlying asphalt via jackhammer at soil boring location MW-39S and hand-cleared the soil boring to approximately five (5) feet bgs.

On September 12, 2012, Tracks 6 and 7 were again temporarily taken out of service and soil boring MW-39S was advanced to total depth of 53 feet bgs via hollow stem augers. Groundwater was encountered at approximately 49 feet bgs. Soil samples were continuously collected utilizing a split spoon sampler. The characteristics of each soil sample were logged and each soil sample was screened for VOCs with a PID by TRC's field geologist. Soils primarily consisted of coarse silty sands and gravel. Elevated PID measurements were recorded at depth intervals of nine (9) to 13 feet and 21 to 31 feet bgs. The maximum PID measurement [148 parts per million (ppm)] was recorded from the soil sample collected from 25 to 27 feet bgs. Petroleum odors were detected in soil samples collected from 21 to 31 feet bgs. Neither staining nor free product were observed in any soil samples collected. A soil boring log is presented in Attachment C.

Discrete soil samples were collected and submitted for laboratory analysis, in accordance with the Work Plan. As indicated above, the interval 25 to 27 feet bgs exhibited the greatest indications of petroleum impacts and soil sample MW-39S (25-27) was submitted for laboratory analysis. Soil sample MW-39S (47-49), collected directly above the groundwater table from 47 to 49 feet bgs, was also submitted for laboratory analysis. One (1) equipment blank and one (1) duplicate sample were collected and submitted to the laboratory for quality control purposes. In addition, a trip blank provided by the laboratory was analyzed. The samples were containerized in accordance with applicable protocols. Each container was properly labeled, preserved, and placed in a cooler for transport to Chemtech Consulting Group, Inc. (Chemtech) of Mountainside, New Jersey. Chemtech is a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified analytical laboratory.

Standard chain-of-custody procedures were followed. Samples were analyzed for VOCs and semi-volatile organic compounds (SVOCs) listed in Table 3 of Commissioner Policy-51 (CP-51).

On September 25, 2012, ADT resumed coring with a 10-inch diameter core bit at soil boring location MW-38S and installed a groundwater monitoring well at soil boring location MW-39S. After approximately 6.5 hours the core was advanced to approximately 16 inches below the top of concrete and it was concluded that a soil boring could not be installed at or near location MW-38S. As a result, the planned collection of subsurface soil samples at this location, including planned matrix spike (MS) and matrix spike duplicate (MSD) soil samples, could not be performed.

Monitoring Well Installation

As indicated above, on September 25, 2012, groundwater monitoring well MW-39S was installed via hollow stem auger at the location of soil boring MW-39S to a depth of approximately 66.75 feet bgs. MW-39S was constructed with four (4)-inch diameter flush threaded Schedule 40 polyvinyl chloride (PVC) well casing (45 feet) and 10-slot well screen (21.75 feet). Clean silica sand, Morie No. 1, was placed in the annular space to an elevation approximately three (3) feet above the top of the well screen. Concrete/bentonite grout was installed above the sand and the well installation was finished with a flush-mount stainless steel protective covering. A well construction diagram for MW-39S is provided in Attachment D.

Following installation, on October 4, 2012, groundwater monitoring well MW-39S was developed using a submersible pump. Groundwater quality indicator parameters [pH, conductivity, temperature, dissolved oxygen and oxidation-reduction potential (ORP)] were monitored using a Horiba U-52 water quality meter equipped with a flow-through cell. MW-39S was developed until at least three (3) well volumes were purged and the water was reasonably free of turbidity. At the completion of development, turbidity was less than fifty nephelometric turbidity units (NTUs). Approximately 55 gallons of groundwater were purged during development activities. Purged groundwater was containerized in a 55-gallon drum and staged at the adjacent LIRR Morris Park Yard. The groundwater monitoring well development log is presented in Attachment E.

Groundwater Sampling

On December 12, 2012, TRC collected a groundwater sample, following USEPA procedures described in *Groundwater Sampling Procedure Low Stress (Low Flow) Purging and Sampling* (USEPA, January 2010), from monitoring well MW-39S. Sampling of MW-39S was performed in conjunction with the December 2012 quarterly sampling event at the Site.

Prior to sampling the "head space" in the well was screened using a PID and the depth to water was measured with an electronic oil/water interface probe. The "head-space" reading was 0.4 ppm. Non-aqueous phase liquid (NAPL) was not detected. Groundwater was purged from monitoring well MW-39S utilizing a dedicated bladder pump and groundwater quality indicator parameters were monitored using a Horiba U-52 water quality meter equipped with a flow-through cell. Groundwater was purged until indicator parameters stabilized. Purged groundwater did not exhibit a visible sheen or petroleum odors. Purged groundwater was containerized in a 55-gallon drum and staged at the adjacent LIRR Morris Park Yard. The groundwater sampling log is presented in Attachment F.

A groundwater sample was collected immediately after purging in accordance with the USEPA protocol. Groundwater was allowed to flow directly from the Teflon-lined tubing into pre-cleaned laboratory-supplied sample glassware. One (1) equipment blank, one (1) matrix spike, one (1) matrix spike duplicate, and one (1) duplicate sample were collected for quality control purposes during the quarterly sampling event. In addition, a trip blank was provided by the laboratory. Each container was properly labeled, preserved, and placed in a cooler for transport to Chemtech. Standard chain-of-custody procedures were followed.

The groundwater collected from MW-39S was analyzed for Target Compound List (TCL) VOCs by USEPA Method 8260 and TCL SVOCs by Method 8270. The groundwater was also analyzed for iron and manganese by Method 6010.

Results of Analyses

The results of analyses of soil samples were presented in *MTA Long Island Rail Road Richmond Hill Yard (Spill# 89-08760) Progress Report #24*, dated September 2012. In Progress Report #24, results of analyses of the soil samples are compared to Soil Cleanup Levels (SCLs) listed in Table 3 of NYSDEC CP-51. The results of analyses of groundwater samples were presented in *MTA Long Island Rail Road Richmond Hill Yard (Spill# 89-08760) Progress Report #25*, dated December 2012. In Progress Report #25, results of analyses of the groundwater samples are compared to New York State Groundwater Water Quality Standards and Guidance Values ("Class GA Values") in the NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1, "Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations".

Soil Sampling

Results of analyses of soil samples collected from soil boring MW-39S indicate that VOCs and SVOCs were not detected at concentrations greater than SCLs listed in NYSDEC CP-51. Results of analyses of soil samples are summarized in Table 1 and Table 2. The laboratory analytical package is presented in Attachment G.

Groundwater Sampling

Results of analyses of the groundwater sample collected from monitoring well MW-39S indicate that the only VOC detected at a concentration greater than the Class GA Value was tetrachloroethene (PCE). PCE was detected in the groundwater and duplicate groundwater sample collected from monitoring well MW-39S at a concentration of 37 ug/L, exceeding the Class GA Value of 5 ug/L. SVOCs were not detected in the groundwater sample collected from monitoring well MW-39S. Results of analyses of groundwater samples (including results of analyses of other groundwater samples collected during the December 2012 quarterly sampling event) are summarized in Tables 3, 4 and 5. The laboratory analytical package is presented in Attachment G. Figure 4 presents the results of analyses of groundwater samples collected during the December 2012 quarterly sampling event that exceed Class GA Values. Figure 5 presents groundwater surface elevation contours.

Conclusions and Recommendations

Results of analyses indicate petroleum-related compounds were not detected at concentrations greater than the SCLs in soil samples collected from soil boring MW-39S. Results of analyses also indicate petroleum-related compounds were not detected in the groundwater sample collected from monitoring well MW-39S. However, PCE was detected at a concentration greater than the Class GA Value in the groundwater sample collected from monitoring well MW-39S. Chlorinated VOCs, including PCE, have historically been detected at concentrations greater than Class GA Values in off-Site wells upgradient and cross-gradient of MW-39S. As documented in *Remedial Investigation Report – Morris Park Yard*, prepared by TRC, dated March 2009 (the "RI Report"), several potential sources of chlorinated VOCs are located upgradient of MW-39S. Attachment H presents Figure 14 from the RI Report indicating potential chlorinated VOC sources located hydraulically upgradient. As such, and considering PCE impacts to groundwater are separate from NYSDEC Spill Case No. 89-08760, LIRR seeks NYSDEC approval for no further action (i.e., no additional remedial investigation) in the East Fueling Yard in connection with NYSDEC Spill Case No. 89-08670. Surveying of the horizontal location of MW-39S, and vertical elevations of the inner casing and adjacent ground surface, will be completed. Furthermore, monitoring well MW-39S will be included in the LIRR Richmond Hill Yard groundwater monitoring well network.

Please do not hesitate to contact me at 718-558-3826 if you have any questions or require additional information.

Sincerely,

Maria T. Hall

Notes:

Concentrations shaded and bold exceed standard or guidance value

[a] NYSDEC Class GA Standards and Guidance Values for Groundwater

[b] Sample labeled as DUP-A in analytical data package.

[c] Sample labeled as EQUIPMENTBLANK in analytical data package.

VOC= Volatile Organic Compound

J = Estimated value

ug/L = micrograms per liter

NC = No criteria

U = Analyte not detected at the indicated concentration

Q = Indicates laboratory controlled sample control criteria did not meet requirements

Concentrations shaded and bold exceed standard or guidance value

[a] NYSDEC Class GA Standards and Guidance Values for Groundwater
[f] The Class GA Standard for total phenols is 1 ug/L
[c] Sample labeled as DUP-A in analytical data package.
[d] Sample labeled as EQUIPMENTBLANK in analytical data package.
SVOC = Semi-Volatile Organic Compound
J = Estimated value
ug/L = micrograms per liter
E = Exceeded calibration range of the equipment
NC = No criteria
U = Analyte not detected at the indicated concentration
Q = Indicates laboratory controlled sample control criteria did not meet requirements

Results of Analyses of Groundwater for Iron and Manganese

Sample ID		MW-39S	
Lab Sample Number		D5165-01	
Sampling Date		12/12/2012	
Dilution Factor		1	
Units		ug/L	
Metals	**Class GA Value[a] (ug/L)**		
Iron	NA	59.8	
Manganese	NA	1,580	U

[a] NYSDEC Class GA Standards and Guidance Values for Groundwater

NA = Not applicable. Iron and manganese analyses were performed in support of evaluating remedial alternatives. Therefore results are not compared to NYSDEC Class GA Values.

Richmond Hill Yard	Morris Park Yard	Holban Yard
Richmond Hill Storage	91-53 121st Street	93-59 183rd Street
Richmond Hill, NY	Richmond Hill, NY	Hollis, NY

Dear Ms. Hall:

The New York State Department of Environmental Conservation (the Department) has reviewed and approved the following documents:

- Richmond Hill Yard March 2011 Supplemental Investigation Work Plan
- Richmond Hill and Morris Park yards Quarterly Progress Report #22
- Morris Park Yard March 2011 Revised Engineering Report
- Holban Yard Quarterly Progress Report #21

In regards to the Richmond Hill Yard March Supplemental Investigation Work Plan, staff at the Department have a number of comments concerning groundwater monitoring well construction, development and sampling. These comments are listed below:

1) After a well is constructed, the Long Island Rail Road should wait at least 48 hours before developing the well. This will give the grout time to harden sufficiently;

2) Appropriate air pressure should be used to develop a well. Otherwise, the well screen may be damaged;

3) Each well must be developed sufficiently in order to ensure that accurate results are obtained;

4) After development, the wells should sit for one month in order to allow the disturbed water with its fines to pass out of the vicinity of the well screen. Then sampling may begin;

RE: Spill #8908760	#9212990	#0205634
Richmond Hill Yard	Morris Park Yard	Holban Yard
Richmond Hill Storage	91-53 121st Street	93-59 183rd Street
Richmond Hill, NY	Richmond Hill, NY	Hollis, NY
May 4, 2012		

5) The Long Island Rail Road must insure that low flow sampling take place under conditions that allow for a minimal amount of fines to be entrained in each groundwater sample in order that the results may be more accurate.

Should you have any questions or wish to discuss the matter, please feel free to contact me at (718) 482-4634.

Sincerely,

Raphael Ketani, CPG
Engineering Geologist II

CHEMTECH

CASE NARRATIVE

TRC Companies, Inc.
Project Name: LIRR Richmond Hill
Project # N/A
Chemtech Project # D4153
Test Name: VOC-STARS

A. Number of Samples and Date of Receipt:
3 Solid samples were received on 09/12/2012.
2 Water samples were received on 09/12/2012.

B. Parameters
According to the Chain of Custody document, the following analyses were requested: Encore Kit, SVOCMS Group1, VOC-STARS and VOC-STARS. This data package contains results for VOC-STARS.

C. Analytical Techniques:
The analysis performed on instrument MSVOA_F were done using GC column RTX-VMS, which is 20 meters, 0.18 mm id, 1.0 um df, Restek Cat. #49914. The Trap was supplied by Supelco, VOCARB 3000, Tekmar 2000 Concentrator.The analysis performed on instrument MSVOA_G were done using GC column RTX-VMS which is 20 meters, 0.18 mm id, 1.0 um df, Restek Cat. #49914. The Trap was supplied by OI Analytical, OI #10 Trap , OI Eclipse 4660 Concentrator.The analysis performed on instrument MSVOA_H were done using GC column RTX-VMS which is 20 meters, 0.18 mm id, 1.0 um df, Restek Cat. #49914. The Trap was supplied BY OI Analytical, OI #10 Trap , OI Eclipse 4660 Concentrator.The analysis of VOC-STARS was based on method 8260C.

D. QA/ QC Samples:
The Holding Times were met for all analysis.
The Surrogate recoveries met the acceptable criteria.
The Internal Standards Areas met the acceptable requirements.
The Retention Times were acceptable for all samples.
The MS recoveries met the requirements for all compounds .
The MSD recoveries met the acceptable requirements .
The RPD recoveries met criteria .
The Blank Spike met requirements for all samples .
The Blank Spike Duplicate met requirements for all samples .
The Blank analysis did not indicate the presence of lab contamination.
The Initial Calibration met the requirements .
The Continuous Calibration met the requirements .
The Tuning criteria met requirements.

CHEMTECH

E. Additional Comments:

F. Manual Integration Comments:

I certify that the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. The laboratory manager or his designee, as verified by the following signature has authorized release of the data contained in this hard copy data package.

CASE NARRATIVE

TRC Companies, Inc.
Project Name: LIRR Richmond Hill
Project # N/A
Chemtech Project # D4153
Test Name: SVOCMS Group1

A. Number of Samples and Date of Receipt:
3 Solid samples were received on 09/12/2012.
2 Water samples were received on 09/12/2012.

B. Parameters
According to the Chain of Custody document, the following analyses were requested: Encore Kit, SVOCMS Group1, VOC-STARS and VOC-STARS. This data package contains results for SVOCMS Group1.

C. Analytical Techniques:
The samples were analyzed on instrument BNA_F using GC Column RTX-5 SILMS which is 20 meters, 0.18 mm ID, 0.36 um df, Catalog # 42704.The analysis of SVOCMS Group1 was based on method 8270D and extraction was done based on method 3510.

D. QA/ QC Samples:
The Holding Times were met for all analysis.
The Surrogate recoveries met the acceptable criteria.
The Internal Standards Areas met the acceptable requirements.
The Retention Times were acceptable for all samples.
The MS recoveries met the requirements for all compounds .
The MSD recoveries met the acceptable requirements .
The RPD recoveries met criteria .
The Blank Spike met requirements for all samples .
The Blank analysis did not indicate the presence of lab contamination.
The Initial Calibration met the requirements .
The Continuous Calibration met the requirements .
The Tuning criteria met requirements.
Samples MW-39S(25-27), DUP-1 were diluted due to high concentrations.

E. Additional Comments:

F. Manual Integration Comments:

I certify that the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. The laboratory manager or his designee, as verified by the following signature has authorized release of the data contained in this hard copy data package.

DATA REPORTING QUALIFIERS- ORGANIC

For reporting results, the following " Results Qualifiers" are used:

Value	If the result is a value greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10 U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
ND	Indicates the analyte was analyzed for, but not detected
J	Indicates an estimated value**.** This flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3 ug/L was calculated report as 3 J. This is flag is used when similar situation arise on any organic parameter i.e. Pest, PCB and others.
B	Indicates the analyte was found in the blank as well as the sample report as "12 B".
E	Indicates the analyte 's concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide/PCB target analyte when there is >25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on Form 1 and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
A	This flag indicates that a Tentatively Identified Compound is a suspected aldol-condensation product.
Q	Indicates the LCS did not meet the control limits requirements

APPENDIX A

QA REVIEW GENERAL DOCUMENTATION

Project #: D4153

	Completed
For thorough review, the report must have the following:	
GENERAL:	
Are all original paperwork present (chain of custody, record of communication,airbill, sample management lab chronicle, login page)	✓
Check chain-of-custody for proper relinquish/return of samples	✓
Is the chain of custody signed and complete	✓
Check internal chain-of-custody for proper relinquish/return of samples /sample extracts	✓
Collect information for each project id from server. Were all requirements followed	✓
COVER PAGE:	
Do numbers of samples correspond to the number of samples in the Chain of Custody on login page	✓
Do lab numbers and client Ids on cover page agree with the Chain of Custody	✓
CHAIN OF CUSTODY:	
Do requested analyses on Chain of Custody agree with form I results	✓
Do requested analyses on Chain of Custody agree with the log-in page	✓
Were the correct method log-in for analysis according to the Analytical Request and Chain of Castody	✓
Were the samples received within hold time	✓
Were any problems found with the samples at arrival recorded in the Sample Management Laboratory Chronicle	✓
ANALYTICAL:	
Was method requirement followed?	✓
Was client requirement followed?	✓
Does the case narrative summarize all QC failure?	✓
All runlogs and manual integration are reviewed for requirements	✓
All manual calculations and /or hand notations verified	✓

1,3,5-Trimethylbenzene	3.263	3.507		7.48	
tert-Butylbenzene	3.219	3.310		2.83	
1,2,4-Trimethylbenzene	3.343	3.496		4.58	
sec-Butylbenzene	4.382	4.711		7.51	
p-Isopropyltoluene	3.285	3.398		3.44	
n-Butylbenzene	3.584	3.776		5.36	
Naphthalene	2.37	2.195		-7.38	
1,2-Dichloroethane-d4	0.865	0.835		-3.47	
Dibromofluoromethane	0.409	0.416		1.71	
Toluene-d8	1.029	1.059		2.92	
4-Bromofluorobenzene	0.44	0.442		0.45	

All other compounds must meet a minimum RRF of 0.010.

CHEMTECH

VOLATILE CONTINUING CALIBRATION CHECK

Lab Name: CHEMTECH Contract: TRCE03

Lab Code: CHEM Case No.: D4153 SAS No.: D4153 SDG No.: D4153

Instrument ID: MSVOA_H Calibration Date/Time: 09/20/2012 13:41

Lab File ID: VH049298.D Init. Calib. Date(s): 09/13/2012 09/13/2012

Heated Purge: (Y/N) N Init. Calib. Time(s): 13:10 15:29

GC Column: RTX-VMS ID: 0.18 (mm)

COMPOUND	RRF	RRF050	MIN RRF	%D	MAX%D
Methyl tert-butyl Ether	1.554	1.618		4.12	
Benzene	1.234	1.220		-1.13	
Toluene	0.776	0.754		-2.84	20
Ethyl Benzene	0.447	0.474		6.04	20
m/p-Xylenes	0.573	0.589		2.79	
o-Xylene	0.593	0.641		8.09	
Isopropylbenzene	2.519	2.659		5.56	
n-propylbenzene	2.984	3.038		1.81	
1,3,5-Trimethylbenzene	2.001	2.038		1.85	
tert-Butylbenzene	2.032	2.184		7.48	
1,2,4-Trimethylbenzene	2.16	2.341		8.38	
sec-Butylbenzene	2.302	2.473		7.43	
p-Isopropyltoluene	1.914	2.198		14.84

SEMIVOLATILE INTERNAL STANDARD AREA AND RT SUMMARY

Lab Name: CHEMTECH

Lab Code: CHEM Case No.: D4153 SAS No.: D4153 SDG NO.: D4153

EPA Sample No.: SSTDCCC040 Date Analyzed: 09/17/2012

Lab File ID: BF058667.D Time Analyzed: 16:58

Instrument ID: BNA_F GC Column: RTX-5 ID: 0.18 (mm)

		IS4 (PHN) AREA #	RT #	IS5 (CRY) AREA #	RT #	IS6 (PRY) AREA #	RT #
	12 HOUR STD	407310	9.95	347573	13.98	304080	16.07
	UPPER LIMIT	814620	10.45	695146	14.48	608160	16.57
	LOWER LIMIT	203655	9.45	173786.5	13.48	152040	15.57
	EPA SAMPLE NO.						
01	MW-39S(25-27)DL	332988	9.97	302863	13.97	286105	16.07
02	DUP-1DL	338850	9.97	302282	13.98	287912	16.06

IS4 (PHN) = Phenanthrene-d10
IS5 (CRY) = Chrysene-d12
IS6 (PRY) = Perylene-d12

AREA UPPER LIMIT = +100% of internal standard area
AREA LOWER LIMIT = -50% of internal standard area
RT UPPER LIMIT = +0.50 minutes of internal standard RT
RT UPPER LIMIT = -0.50 minutes of internal standard RT

Column used to flag values outside QC limits with an asterisk.
* Values outside of QC limits.

SAMPLE CONDITION RECORD

Are samples submitted with a chain of custody?	Yes
Are the number of samples the same as stated on the chain of custody?	Yes
Are bottle caps tight and securely in place?	Yes
Were all containers intact when received?	Yes
Were samples submitted in an ice chest?	Yes
Were samples received cold?	Yes
Were samples within the holding time for the requested test(s)?	Yes
Is the volume of sample submitted sufficient for the requested test(s)?	Yes
Are all samples for volatile organic analyses free of headspace?	Yes

CASE NARRATIVE

TRC Companies, Inc.
Project Name: Morris Park & Richmond Hill Yards
Project # N/A
Chemtech Project # D5165
Test Name: VOCMS Group1

A. Number of Samples and Date of Receipt:
19 Water samples were received on 12/13/2012.

B. Parameters
According to the Chain of Custody document, the following analyses were requested: Metals Group3, SVOCMS Group1 and VOCMS Group1. This data package contains results for VOCMS Group1.

C. Analytical Techniques:
The analysis performed on instrument MSVOA_N were done using GC column RXI-624SIL MS 30m 0.25mm 1.4 um. Cat#13868.The analysis of VOCMS Group1 was based on method 8260-Low.

D. QA/ QC Samples:
The Holding Times were met for all analysis.
The Surrogate recoveries met the acceptable criteria.
The Internal Standards Areas met the acceptable requirements.
The Retention Times were acceptable for all samples.
The MS recoveries met the requirements for all compounds .
The MSD recoveries met the acceptable requirements .
The RPD recoveries met criteria .
The Blank Spike met requirements for all samples .
The Blank analysis did not indicate the presence of lab contamination.
The Initial Calibration met the requirements .
The Continuous Calibration met the requirements .
The Tuning criteria met requirements.

E. Additional Comments:
F. Manual Integration Comments:

I certify that the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. The laboratory manager or his designee, as verified by the following signature has authorized release of the data contained in this hard copy data package.

CASE NARRATIVE

TRC Companies, Inc.
Project Name: Morris Park & Richmond Hill Yards
Project # N/A
Chemtech Project # D5165
Test Name: SVOCMS Group1

A. Number of Samples and Date of Receipt:
19 Water samples were received on 12/13/2012.

B. Parameters
According to the Chain of Custody document, the following analyses were requested: Metals Group3, SVOCMS Group1 and VOCMS Group1. This data package contains results for SVOCMS Group1.

C. Analytical Techniques:
The samples were analyzed on instrument BNA_E using GC Column RXI-5 SILMS which is 30 meters, 0.25 mm ID, 0.50 um df, Catalog # 13638-124.The samples were analyzed on instrument BNA_F using GC Column ZB-5MS which is 20 meters, 0.18 mm ID, 0.36 um df, Catalog # 7FD-G010-53.The samples were analyzed on instrument BNA_G using GC Column RXI-5 SILMS which is 30 meters, 0.25 mm ID, 0.50 um df, Catalog # 13638-124.The analysis of SVOCMS Group1 was based on method 8270D and extraction was done based on method 3510.

D. QA/ QC Samples:
The Holding Times were met for all analysis.
The Surrogate recoveries met the acceptable criteria.
The Internal Standards Areas met the acceptable requirements.
The Retention Times were acceptable for all samples.
The MS recoveries for {D5165-10MS} with File ID: BE080793.D met requirements for all samples except for Phenol[26%], 3+4-Methylphenols[56%], 4-Chloroaniline[46%], 3-Nitroaniline[58%], 4-Nitrophenol[32%], N-Nitrosodiphenylamine[141%] and 3,3-Dichlorobenzidine[56%] .The MS recoveries for {D5165-16MS} with File ID: BE080797.D met requirements for all samples except for Phenol[26%], 3+4-Methylphenols[58%], 4-Chloroaniline[50%], 3-Nitroaniline[56%] and 4-Nitrophenol[29%] .
The MSD recoveries for {D5165-10MSD} with File ID: BE080794.D met requirements for all samples except for Phenol[23%], 3+4-Methylphenols[55%], 4-Chloroaniline[41%], 3-Nitroaniline[53%], 4-Nitrophenol[34%] and 3,3-Dichlorobenzidine[54%] .The MSD recoveries for {D5165-16MSD} with File ID: BE080798.D met requirements for all samples except for Phenol[24%], 3+4-Methylphenols[54%], 4-Chloroaniline[45%], 3-Nitroaniline[50%] and 4-Nitrophenol[30%] .
The RPD recoveries met criteria .

CHEMTECH
284 Sheffield Street, Mountainside, NJ 07092 Phone: 908 789 8900 Fax: 908 789 8922

The Blank Spike for {PB67493BS} with File ID: BE080800.D met requirements for all samples except for 2-Methylphenol[106%], 3+4-Methylphenols[99%],4-Chloroaniline[24%], 3-Nitroaniline[37%] and 3,3-Dichlorobenzidine[39%] .
The Blank analysis did not indicate the presence of lab contamination.
The Initial Calibration met the requirements .
The Continuous Calibration File ID BG008959.D met the requirements except for 2,4-Dinitrophenol but it was not detected in any sample.
The Tuning criteria met requirements.
Sample MW-GF-18 was diluted due to high concentration.

E. Additional Comments:

F. Manual Integration Comments:

I certify that the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. The laboratory manager or his designee, as verified by the following signature has authorized release of the data contained in this hard copy data package.

CASE NARRATIVE

TRC Companies, Inc.
Project Name: Morris Park & Richmond Hill Yards
Project # N/A
Chemtech Project # D5165
Test Name: Metals Group3

A. Number of Samples and Date of Receipt:
19 Water samples were received on 12/13/2012.

B. Parameters:
According to the Chain of Custody document, the following analyses were requested: Metals Group3, SVOCMS Group1 and VOCMS Group1. This data package contains results for Metals Group3.

C. Analytical Techniques:
The analysis of Metals Group3 was based on method 6010B and digestion based on method 3010 (waters).

D. QA/ QC Samples:
The Holding Times were met for all analysis.
The Blank Spike met requirements for all samples.
The Duplicate analysis met criteria for all samples.
The Matrix Spike analysis met criteria for all samples except for Iron.
The Matrix Spike Duplicate analysis met criteria for all samples except for Iron.
The Blank analysis did not indicate the presence of lab contamination.
The Calibration met the requirements.
The Serial Dilution met criteria for all samples except for Iron.

E. Additional Comments:

I certify that the data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. The laboratory manager or his designee, as verified by the following signature has authorized release of the data contained in this hard copy data package.

DATA REPORTING QUALIFIERS- INORGANIC

For reporting results, the following " Results Qualifiers" are used:

J	Indicates the reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL), but greater than or equal to the Instrument Detection Limit (IDL).
U	Indicates the analyte was analyzed for, but not detected.
ND	Indicates the analyte was analyzed for, but not detected
E	Indicates the reported value is estimated because of the presence of interference
M	Indicates Duplicate injection precision not met.
N	Indicates the spiked sample recovery is not within control limits.
S	Indicates the reported value was determined by the Method of Standard Addition (MSA).
*	Indicates that the duplicate analysis is not within control limits.
+	Indicates the correlation coefficient for the MSA is less than 0.995.
D	Indicates the reported value is from a secondary analysis with a dilution factor. The original analysis exceeded the calibration range.
M	Method qualifiers **"P"** for ICP instrument **"PM"** for ICP when Microwave Digestion is used **"CV"** for Manual Cold Vapor AA **"AV"** for automated Cold Vapor AA **"CA"** for MIDI-Distillation Spectrophotometric **"AS"** for Semi –Automated Spectrophotometric **"C"** for Manual Spectrophotometric **"T"** for Titrimetric **"NR"** for analyte not required to be analyzed
OR	Indicates the analyte's concentration exceeds the calibrated range of the instrument for that specific analysis.
Q	Indicates the LCS did not meet the control limits requirements

DATA REPORTING QUALIFIERS- ORGANIC

For reporting results, the following " Results Qualifiers" are used:

Value	If the result is a value greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10 U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
ND	Indicates the analyte was analyzed for, but not detected
J	Indicates an estimated value**.** This flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3 ug/L was calculated report as 3 J. This is flag is used when similar situation arise on any organic parameter i.e. Pest, PCB and others.
B	Indicates the analyte was found in the blank as well as the sample report as "12 B".
E	Indicates the analyte 's concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide/PCB target analyte when there is >25% difference for detected concentrations between the two GC columns. The lower of the two values is reported on Form 1 and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
A	This flag indicates that a Tentatively Identified Compound is a suspected aldol-condensation product.
Q	Indicates the LCS did not meet the control limits requirements

APPENDIX A

QA REVIEW GENERAL DOCUMENTATION

Project #: D5165

	Completed
For thorough review, the report must have the following:	
GENERAL:	
Are all original paperwork present (chain of custody, record of communication,airbill, sample management lab chronicle, login page)	✓
Check chain-of-custody for proper relinquish/return of samples	✓
Is the chain of custody signed and complete	✓
Check internal chain-of-custody for proper relinquish/return of samples /sample extracts	✓
Collect information for each project id from server. Were all requirements followed	✓
COVER PAGE:	
Do numbers of samples correspond to the number of samples in the Chain of Custody on login page	✓
Do lab numbers and client Ids on cover page agree with the Chain of Custody	✓
CHAIN OF CUSTODY:	
Do requested analyses on Chain of Custody agree with form I results	✓
Do requested analyses on Chain of Custody agree with the log-in page	✓
Were the correct method log-in for analysis according to the Analytical Request and Chain of Castody	✓
Were the samples received within hold time	✓
Were any problems found with the samples at arrival recorded in the Sample Management Laboratory Chronicle	✓
ANALYTICAL:	
Was method requirement followed?	✓
Was client requirement followed?	✓
Does the case narrative summarize all QC failure?	✓
All runlogs and manual integration are reviewed for requirements	✓
All manual calculations and /or hand notations verified	✓

SAMPLE CONDITION RECORD

Are samples submitted with a chain of custody?	Yes
Are the number of samples the same as stated on the chain of custody?	Yes
Are bottle caps tight and securely in place?	Yes
Were all containers intact when received?	Yes
Were samples submitted in an ice chest?	Yes
Were samples received cold?	Yes
Were samples within the holding time for the requested test(s)?	Yes
Is the volume of sample submitted sufficient for the requested test(s)?	Yes
Are all samples for volatile organic analyses free of headspace?	Yes
