## (Fact Sheet Begins Next)

## Act Now to Continue Receiving Information About This Site!

DEC's Division of Environmental Remediation (DER) now distributes information about contaminated sites *electronically by email*.

If you would like to continue to receive information about the contaminated site featured in this fact sheet:

## You <u>must</u> sign up for the DER email listserv:

www.dec.ny.gov/chemical/61092.html

DER cannot register your email address - only the email address owner can do so. If you already have signed up for the listserv for the county in which the site is located, you need do nothing.

## Why You Should Go "Paperless":

- $\blacksquare$  Get site information faster and share it easily;
- ☑ Receive information about all sites in a chosen county read what you want, delete the rest;
- $\blacksquare$  It helps the environment and stretches your tax dollars.

If "paperless" is not an option for you, call or write to the DER project manager identified in this fact sheet. Indicate that you need to receive paper copies of fact sheets through the Postal Service. Include the site name in your correspondence. The option to receive paper is available to individuals only. Groups, organizations, businesses, and government entities are assumed to have email access.

# FACT SHEET

State Superfund Program

LIRR Far Rockaway (Inwood) Substation Redfern Avenue Far Rockaway, NY 11691

SITE No. 241210 NYSDEC REGION 2

### May 2025

## Investigation to Resume at State Superfund Site

The Long Island Rail Road ("remedial party") will soon begin a supplemental environmental study at the LIRR Far Rockaway (Inwood) Substation site ("site") located at Redfern Avenue, Far Rockaway, NY. Please see the map for the site location.

**Investigation Work Plan:** The investigation work plan, called a "Supplemental Remedial Investigation Work Plan (SRIWP)," was submitted to NYSDEC under New York's State Superfund Program. The site is listed as a Class "A" site. A Class A site is assigned to a non-registry site where work is underway and not yet complete. NYSDEC and the New York State Department of Health (NYSDOH) will oversee the investigation.

- Access the SRIWP and other project documents online through the DECinfo Locator: <u>https://www.dec.ny.gov/data/DecDocs/241210/</u> and <u>https://www.dec.ny.gov/data/DecDocs/V00391/</u>
- Documents also are available at the locations identified at left under "Where to Find Information."

**Highlights of the Site Investigation:** The investigation will define the extent of the soil contamination identified on-site and off-site during previous investigations.

Past investigations in the area have determined that mercury contamination exists in subsurface soil at the site. Mercury is a contaminant often associated with mercury rectifiers, which are historic railroad devices used to power LIRR locomotives and electric passenger car fleets.

Key components of the investigation work include:

• Installing and sampling soil borings to complete delineation of the nature and extent of soil contamination.

# STATE SUPERFUND PROGRAM

**Next Steps:** When the investigation is completed, a Remedial Investigation Report summarizing the results will be submitted to NYSDEC. NYSDEC and NYSDOH will review the report, make any necessary revisions and when appropriate, approve the report.

After the investigation, a proposed cleanup plan, called a "Draft Remedial Work Plan" will be developed by the remedial party. The cleanup plan will include an alternatives analysis to evaluate potential ways to clean up contamination related to the site. The information collected during the site investigation may also support a recommendation that no action or no further action is needed to address site-related contamination. The goal of the cleanup plan is to ensure the protection of public health and the environment.

NYSDEC will announce the availability of the draft cleanup plan in a future fact sheet and will present it to the public for its review and comment during a 45-day comment period.

NYSDEC will keep the public informed throughout the investigation and cleanup of the site.

**Site Description:** The substation consists of an approximately 625 square foot one-story brick building with an adjacent 2,100 square foot transformer yard.

The LIRR built, owned, and operated the substations from the early 1930s. Until the 1980s, the substations housed mercury rectifiers, devices used to power LIRR locomotives and electric passenger car fleets. During the 1980s, the mercury rectifiers were removed from the substations and replaced with non-mercury containing solid state equipment. However, past work practices employed during the operation and maintenance of the mercury rectifiers may have affected the site and surrounding environment. Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the site ID, 241210) at: https://www.dec.ny.gov/cfmx/extapps/derexternal/inde x.cfm?pageid=3

**State Superfund Program:** New York's State Superfund Program (SSF) identifies and characterizes suspected inactive hazardous waste disposal sites. Sites that pose a significant threat to public health and/or the environment go through a process of investigation, evaluation, cleanup and monitoring.

NYSDEC attempts to identify parties responsible for site contamination before committing State funds for investigation and cleanup.

For more information about the SSF, visit: <u>https://www.dec.ny.gov/chemical/8439.html</u>

We encourage you to share this fact sheet with neighbors and tenants, and/or post this fact sheet in a prominent area of your building for others to see.
