ES EXECUTIVE SUMMARY

The following provides a brief summary of the controls implemented for the Site, as well as the reporting activities required by this Site Management Plan:

Site Identification: Site No. 241220 Foot of 216th Street, Bayside, Queens, New York

Institutional Controls:	1. The property may be used for Industrial use;
	2. Deed Restriction
Reporting:	
1. Periodic Review Report	Annually

Further descriptions of the above requirements are provided in detail in the latter sections of this Site Management Plan.

1.0 INTRODUCTION

1.1 General

This Site Management Plan (SMP) is a required element of the remedial program for the Site located in Bayside, New York (hereinafter referred to as the “Site”). See Figure 1. The Site is currently in the New York State (NYS) State Superfund Program, Site No. 241220, which is administered by New York State Department of Environmental Conservation (NYSDEC or Department).

The Long Island Rail Road entered into a Voluntary Cleanup Agreement (VCA) in November 2004, and subsequently an Order on Consent in July 2018, with the NYSDEC to remediate the Site. A figure showing the site location and boundaries of this Site is provided in Figure 2. The boundaries of the Site are more fully described in the metes and bounds site description that is part of the Deed Restriction provided in Appendix A. The Site boundary for the Deed Restriction will include the portion of Area 1 that is outside of the fenced area.

After completion of the remedial work, some contamination was left at this Site, which is hereafter referred to as “remaining contamination”. Institutional Controls (ICs) have been incorporated into the site remedy to control exposure to remaining contamination to ensure protection of public health and the environment. A Deed Restriction granted to the NYSDEC, and recorded with the Queens County Clerk, requires compliance with this SMP and all ICs placed on the Site.

This SMP was prepared to manage remaining contamination at the Site until the Deed Restriction is extinguished in accordance with ECL Article 71, Title 36. This plan has been approved by the NYSDEC, and compliance with this plan is required by the grantor of the Deed Restriction and the grantor’s successors and assigns. This SMP may only be revised with the approval of the NYSDEC.

It is important to note that:

- This SMP details the site-specific implementation procedures that are required by the Deed Restriction. Failure to properly implement the SMP is a violation of the Deed Restriction, which is grounds for revocation of the Certificate of Completion (COC);

- Failure to comply with this SMP is also a violation of Environmental Conservation Law, 6 NYCRR Part 375 and the Order on Consent for the Site, and thereby subject to applicable penalties.

All reports associated with the Site can be viewed by contacting the NYSDEC or its successor agency managing environmental issues in New York State. A list of contacts for persons involved with the Site is provided in Appendix B of this SMP.

This SMP was prepared by AECOM, on behalf of the LIRR, in accordance with the requirements of the NYSDEC's DER-10 ("Technical Guidance for Site Investigation and Remediation"), dated May 2010, and the guidelines provided by the NYSDEC. This SMP addresses the means for implementing the ICs that are required by the Deed Restriction for the Site.

1.2 Revisions

Revisions to this plan will be proposed in writing to the NYSDEC's project manager. The NYSDEC can also make changes to the SMP or request revisions from the remedial party. Revisions will be necessary upon, but not limited to, the following occurring: a change in media monitoring requirements, upgrades to or shutdown of a remedial system, post-remedial removal of contaminated sediment or soil, or other significant change to the Site conditions. In accordance with the Deed Restriction for the Site, the NYSDEC project manager will provide a notice of any approved changes to the SMP, and append these notices to the SMP that is retained in its files.

1.3 Notifications

Notifications will be submitted by the property owner to the NYSDEC, as needed, in accordance with NYSDEC's DER – 10 for the following reasons:

1. 60-day advance notice of any proposed changes in Site use that are required under the terms of the Order on Consent, 6 NYCRR Part 375 and/or Environmental Conservation Law.

2. 7-day advance notice of any field activity associated with the remedial program.
3. 15-day advance notice of any proposed ground-intrusive activity pursuant to the Excavation Work Plan. If the ground-intrusive activity qualifies as a change of use as defined in 6 NYCRR Part 375, the above mentioned 60-day advance notice is also required.
4. Notice within 48 hours of any non-routine maintenance activities.

Any change in the ownership of the Site or the responsibility for implementing this SMP will include the following notifications:

1. At least 60 days prior to the change, the NYSDEC will be notified in writing of the proposed change. This will include a certification that the prospective purchaser/Remedial Party has been provided with a copy of the Order on Consent, and all approved work plans and reports, including this SMP.
2. Within 15 days after the transfer of all or part of the Site, the new owner's name, contact representative, and contact information will be confirmed in writing to the NYSDEC.

Table 1 on the following page includes contact information for the above notifications. The information on this table will be updated as necessary to provide accurate contact information. A full listing of Site-related contact information is provided in Appendix B.

* Note: Notifications are subject to change and will be updated as necessary.

** Note: Numbers in this column reference the numbered bullets in the notification list in this section.

2.0 SUMMARY OF PREVIOUS INVESTIGATIONS AND REMEDIAL ACTIONS

2.1 Site Location and Description

The Site is located in Bayside, Queens County, New York (see Figure 1). The Site is an approximately 0.25-acre area and is bounded by 41st Street to the north, the LIRR tracks to the south, residential properties to the east, and a commercial property to the west (see Figure 2 – Site Layout Map). The boundaries of the Site are more fully described in Appendix A – Deed Restriction. The owner(s) of the Site parcel(s) at the time of issuance of this SMP is: Metropolitan Transit Authority/Long Island Rail Road. The operator(s) of the Site parcel(s) at the time of issuance of this SMP is: Long Island Rail Road.

2.2 Physical Setting

2.2.1 Land Use

The Site consists of the following: a 1,800 sqft brick building with a 3,600 sqft transformer yard secured by a chain-link fence. A parking area is located immediately north of the substation building. The Site is zoned commercial/industrial and is currently used for industrial/commercial purposes. Site occupants include substation workers.

The properties adjoining the Site and the neighborhood surrounding the Site primarily include mixed-use commercial and residential properties. The properties immediately south of the Site include the LIRR; the properties immediately north of the Site include 41st street and residential properties; the properties immediately east of the Site include residential properties; and the properties to the west of the Site include a commercial property.

2.2.2 Geology

The geology of Bayside, Queens consists of unconsolidated Pleistocene aged glacial moraine and outwash deposits underlain by coastal plain sediments including the Gardiner's Clay and the Magothy Formation.

2.2.3 Hydrogeology

Hydrogeology at the Site consists of an unconfined aquifer comprised of glacial outwash and moraine deposits. While no groundwater elevation data from the previous investigations was provided, the Remedial Action Work Plan (RAWP) states that the depth to groundwater at the Site is approximately 75 ft below surface grade (ft bsg) and groundwater flow is towards the east.

2.3 Investigation and Remedial History

The following narrative provides a remedial history timeline and a brief summary of the available project records to document key investigative and remedial milestones for the Site. Full titles for each of the reports referenced below are provided in Section 8.0 - References.

The LIRR entered into a Voluntary Cleanup Agreement with the NYSDEC to investigate and remediate potential mercury contamination associated with the operation, decommissioning, and removal of mercury-containing rectifiers at several substation facilities, including the Bayside Electrical Substation. A chronological history of investigative and remedial activities conducted at the Bayside Substation is provided below. The investigative and remedial activities were documented in the following reports:

Site Assessment of 20 Substations for Mercury Contamination, December 2000

Delineation Phase II Site Assessment Investigation Report for the Bayside Substation, November 2009

LIRR Bayside Substation Remedial Action Work Plan (NYSDEC VCA No. V00386-2, May 2011

Please note that all analytical data collected in the previous investigations was compared to the Technical and Administrative Guidance Memorandum (TAGM) 4046 Recommended Soil Cleanup Objectives (RSCOs); however, in December 2006, the NYSDEC mandated new cleanup objectives based on Site usage and based on direction from the NYSDEC at the time, all soil samples collected at the Site have been reevaluated and compared to the NYSDEC's CP-51 Soil Cleanup Guidance and NYCRR Subpart 375 Soil Cleanup Objectives (SCOs) for Industrial and Residential Use.

In 1999, the LIRR conducted an environmental assessment of the Bayside Substation. The results of the assessment were included in a report entitled *Site Assessment of 20 Substations for Mercury Contamination*, dated December 2000. The report stated that mercury concentrations at the Bayside Substation were found at concentrations which exceeded the NYSDEC SCOs. A Phase II Site Assessment was conducted to delineate the mercury impacted soil in September 2005 with follow up sampling conducted in March 2009. Information gathered during the Phase II Site Assessment was presented in a report entitled *Delineation Phase II Site Assessment Investigation Report for the Bayside Substation*, dated November 2009. Dvirka and Baritlucci Consulting Engineers (D & B) prepared a report entitled, *Delineation Phase II Site Assessment for Bayside Substation Remedial Action Work Plan*, dated May 2011 to provide a work plan for remediation of mercury impacted soil at the Site.

According to data provided in the workplan, 42 surface soil samples, 59 subsurface soil samples, and three groundwater samples were collected at the Site for laboratory analysis. The analysis revealed that mercury was present in surface and subsurface soil to the west and east of the substation building. Elevated arsenic concentrations were detected in surface and subsurface soil to the east of the substation building. The highest mercury concentrations were identified in surface soil located in the vicinity of the concrete

platform and steps located on the northeast corner of the substation building, with a maximum mercury concentration of 158 mg/kg. Elevated concentrations of arsenic were also detected in surface and subsurface soil within the transformer yard to the east of the substation building. The highest arsenic concentrations were detected in surface soil located in the transformer yard, with a maximum arsenic concentration of 69.0 mg/kg. Arsenic concentrations detected throughout the substation transformer yard are not likely associated with the historical operation of the substation, but are most likely associated with the byproducts of coal combustion (i.e. coal ash and clinker) found in the soil located throughout the transformer yard east of the substation building.

During the Delineation Phase II Site Assessment D & B inspected the communications manhole, located approximately 8 feet northwest of the substation building, and found it had a solid bottom with no sediment or discharge piping within the structure; therefore, D & B did not collect samples from the communications manhole. Investigation of the high tension manhole, located approximately 22 feet north east of the substation building, included the advancement of a single soil boring east of the manhole, which was assumed direction of groundwater flow at the Site. D & B collected one soil sample from 6 to 8 ft bsg from the boring and had it analyzed for Underground Injection Control (UIC) parameters. The analytical results revealed that no detected analyte concentrations exceeded their respective SCOs. Analysis of a water sample collected from within the high tension manhole found that the water sample contained lead at a concentration of 35.4 microgram per liter ($\mu\text{g/L}$), which exceeded the Class GA standard of 25.0 $\mu\text{g/L}$. No other reported UIC parameter concentrations exceeded their respective Class GA Standards.

D & B used pile snakes and discharge testing to investigate the discharge point of the substation's lavatory. The investigation found that the lavatory discharged to a sewer manhole located 38 ft west of the substation; however, no sediment was found in the manhole and no sample was collected.

During the Initial Site Assessment, an excavation was conducted to investigate the rectifier discharge piping exiting the southwest corner of the substation building. The discharge point of the rectifier piping was unable to be determined during this excavation. As such, the discharge point of the rectifier pit piping was further investigated during the Delineation Phase II Site Assessment. A geophysical survey, consisting of a GPR and EM survey, was performed in order to further investigate the rectifier discharge piping. The geophysical survey was unable to identify the rectifier discharge piping at that time. During the April 2008 additional delineation field work, an exploratory excavation was performed, in which the rectifier discharge piping was uncovered and tracked to a dry well located approximately 35 ft west of the substation building. One soil sample was collected for UIC parameter analysis from the sediment located within the dry well and compared to the TAGM SCOs. No analyte was detected at concentrations exceeding their respective TAGM SCOs, with the exceptions of mercury and benzo(a)pyrene. Mercury was detected at a concentration of 2.2 mg/kg, which exceeds its TAGM SCO of 0.10 mg/kg. Benzo(a)pyrene was detected at a concentration of 210 ug/kg, which exceeds its TAGM SCO of 61.0 ug/kg.

In November 1999, a mercury vapor evaluation, consistent with the NYSDOH's Soil Vapor Intrusion Guidance (SVIG), was completed in the existing substation building. The mercury vapor evaluation included a 56-point mercury vapor survey, with 32 mercury vapor sample locations collected from within the substation building and 24 mercury vapor sample locations collected from the exterior of the substation building. A Jerome 431X mercury vapor analyzer (MVA) was used to collect the mercury data. For reference purposes only, the data was re-evaluated and compared to the Public Employee Safety and Health (PESH) 8-hour time-weighted average (TWA) concentration of 0.050 mg/m³. The mercury vapor analyzer data found that mercury vapor at a concentration of 0.060 mg/m³ was present at the sample location in the southeast corner of the substation's sub-basement. D & B stated that no further investigation or action was warranted as only one of the 56 mercury vapor samples exhibited a mercury vapor concentration and the observed mercury vapor concentration only slightly exceeded the PESH concentration of 0.050 mg/m³.

In April 2000, the LIRR conducted an Interim Remedial Measure (IRM) to reduce the potential for public exposure to mercury found in the surface soil near the concrete platform and stairs located west of the substation building. The IRM included the removal of 0.5 ft of soil and the placement of polyethylene sheeting, which was then covered with crushed stone. Prior to placing the polyethylene sheeting, D & B collected three post-excavation soil samples, which were found to contain mercury at concentrations ranging from 8.0 milligrams per kilogram (mg/kg) to 68.4 mg/kg. Removal of this soil was proposed as part of the RAWP.

Based on the information presented in these reports, a conceptual model of the Site shows mercury impacts are the result of mercury discharge from the rectifiers along the western, northern, and eastern sides of the building. Arsenic concentrations resulting from historic fill containing coal ash are limited to the transformer yard. The majority of the areas where arsenic and mercury are found at the Site are covered by crushed stone and behind a chain link fence limiting further migration of the contaminants of concern and preventing exposure to the public. No offsite sampling was conducted during the previous investigations.

2.4 Remedial Action Objectives

The Remedial Action Objectives (RAOs) for the Site as listed in the RAWP dated May 11, 2011 are as follows:

Soil

RAOs for Public Health Protection

- Prevent ingestion/direct contact with contaminated soil.
- Prevent inhalation of, or exposure to, contaminants volatilizing from contaminants in soil.

RAOs for Environmental Protection

- Prevent migration of contaminants that would result in groundwater or surface water contamination.
- Prevent impacts to biota due to ingestion/direct contact with contaminated soil that would cause toxicity or bioaccumulation through the terrestrial food chain.

2.5 Remaining Contamination

2.5.1 Soil

Mercury and arsenic concentrations in soils remaining exceed the Unrestricted SCOs. However, it should be noted that no concentrations exceed the applicable Industrial SCOs of 5.7 mg/kg for mercury and 16 mg/kg for arsenic as these sampling locations are on LIRR property within a fenced area. Table 2 and Figure 3 summarize the results of all soil samples collected that exceed the Unrestricted Use SCOs at the Site after completion of the remedial action.

No demarcation layer was placed inside the excavation prior to backfilling.

2.5.2 Sediment

No impacted sediment is present at the Site.

2.5.3 Groundwater

Based on the results from three groundwater samples collected in 2009, no impacted groundwater was identified at the Site.

2.5.4 Surface Water

There are no surface water bodies present at or adjacent to the Site.

2.5.5 Soil Vapor

In November 1999, a mercury vapor evaluation consisting of a 56-point mercury vapor survey using a Jerome 431X MVA found that mercury vapor at a concentration of 0.060 mg/m³ was present at the sample location in the southeast corner of the substation's sub-basement. D & B stated that no further investigation or action was warranted as only one of the 56 mercury vapor samples exhibited a mercury vapor concentration and the observed mercury vapor concentration only slightly exceeded the PESH concentration of 0.050 mg/m³.

3.0 INSTITUTIONAL CONTROL AND ENGINEERING CONTROL PLAN

3.1 General

Since remaining contamination exists at the Site, Institutional Controls (ICs) are required to protect human health and the environment. This IC Plan describes the procedures for the implementation and management of all ICs at the Site. The IC Plan is one component of the SMP and is subject to revision by the NYSDEC project manager. No Engineering Controls are required.

This plan provides:

- A description of all ICs on the Site;
- The basic implementation and intended role of each IC;
- A description of the key components of the ICs set forth in the Deed Restriction;
- A description of the controls to be evaluated during each required inspection and periodic review;
- A description of plans and procedures to be followed for implementation of ICs, such as the implementation of the Excavation Work Plan (EWP) (as provided in Appendix C for the proper handling of remaining contamination that may be disturbed during maintenance or redevelopment work on the Site; and
- Any other provisions necessary to identify or establish methods for implementing the ICs required by the Site remedy, as determined by the NYSDEC project manager.

3.2 Institutional Controls

A series of ICs is required by the RAWP to: (1) implement, maintain and monitor Engineering Control systems; (2) prevent future exposure to remaining contamination; and (3) limit the use and development of the Site to industrial/commercial uses only. Adherence to these ICs on the Site is required by the Deed Restriction and will be implemented under this SMP. ICs identified in the Deed Restriction may not be discontinued without an

amendment to or extinguishment of the Deed Restriction. The IC boundaries are shown on Figure 4. These ICs are:

- The property may be used for: industrial use;
- The use of groundwater underlying the property is prohibited without necessary water quality treatment as determined by the NYSDOH or the New York City Department of Health and Mental Hygiene to render it safe for use as drinking water or for industrial purposes, and the user must first notify and obtain written approval to do so from the Department;
- Data and information pertinent to site management must be reported at the frequency and in a manner as defined in this SMP;
- All future activities that will disturb remaining contaminated material must be conducted in accordance with this SMP;
- Access to the Site must be provided to agents, employees or other representatives of the State of New York with reasonable prior notice to the property owner to assure compliance with the restrictions identified by the Deed Restriction;
- The potential for vapor intrusion must be evaluated for any buildings developed in the area within the IC boundaries noted on Figure 4, and any potential impacts that are identified must be monitored or mitigated;
- Vegetable gardens and farming on the Site are prohibited; and
- An evaluation shall be performed to determine the need for further investigation and remediation should large scale redevelopment occur, if any of the existing structures are demolished, or if the subsurface is otherwise made accessible.

3.3 Engineering Controls

No Engineering Controls are required.

4.0 MONITORING PLAN

4.1 General

This Monitoring Plan describes the measures for evaluating the overall performance and effectiveness of the remedy. This Monitoring Plan may only be revised with the approval of the NYSDEC project manager.

This Monitoring describes the methods to be used for:

- Evaluating site conditions periodically to confirm that the remedy continues to be effective in protecting public health and the environment;

To adequately address these issues, this Monitoring Plan provides information on:

- Annual inspection and periodic certification.

Reporting requirements are provided in Section 7.0 of this SMP.

4.2 Site – wide Inspection

Site-wide inspections will be performed at a minimum of once per year. These periodic inspections must be conducted when the ground surface is visible (i.e. no snow cover). Site-wide inspections will be performed by the remedial party or Site owner. Modification to the frequency or duration of the inspections will require approval from the NYSDEC project manager. During these inspections, an inspection form will be completed as provided in Appendix D – Site Management Form. The form will compile sufficient information to assess the following:

- Compliance with all ICs, including Site usage;
- General Site conditions at the time of the inspection;
- Whether stormwater management systems, such as basins and outfalls, are working as designed; and,

- Confirm that Site records are up to date.

A comprehensive Site-wide inspection will be conducted and documented according to the SMP schedule, regardless of the frequency of the Periodic Review Report. The inspections will determine and document the following:

- Compliance with requirements of this SMP and the Deed Restriction; and,
- If Site records are complete and up to date.

Reporting requirements are outlined in Section 7.0 of this plan.

Inspections in the event of an emergency are not required because there are no ECs.

4.3 Post-Remediation Media Monitoring and Sampling

No monitoring is required because soil was remediated to levels below the Industrial SCOs and the current Site use is Industrial. No other impacted media was identified for this Site.

5.0 OPERATION AND MAINTENANCE PLAN

5.1 General

The Site remedy does not rely on any mechanical systems, such as groundwater treatment systems, sub-slab depressurization systems or air sparge/soil vapor extraction systems to protect public health and the environment. Therefore, the operation and maintenance of such components is not included in this SMP.

6.0 PERIODIC ASSESSMENTS/EVALUATIONS

6.1 Climate Change Vulnerability Assessment

Climate change vulnerability assessments are not included in the SMP because there are no ECs.

6.2 Green Remediation Evaluation

NYSDEC's DER-31 Green Remediation requires that green remediation concepts and techniques be considered during all stages of the remedial program including site management, with the goal of improving the sustainability of the cleanup and summarizing the net environmental benefit of any implemented green technology. However, because there are no ECs or monitoring requirements, Green Remediation is not applicable for this Site.

7.0. REPORTING REQUIREMENTS

7.1 Site Management Reports

All site management inspection events will be recorded on the appropriate site management form provided in Appendix D. These forms are subject to NYSDEC revision. All site management inspection events will be conducted by the remedial party or Site owner.

All applicable inspection records generated for the Site during the reporting period will be provided in electronic format to the NYSDEC in accordance with the requirements of Table 3 and summarized in the Periodic Review Report.

Table 3: Schedule of Interim Monitoring/Inspection Reports

Task/Report	Reporting Frequency*
Inspection Report	Annually
Periodic Review Report	Annually

* The frequency of events will be conducted as specified until otherwise approved by the NYSDEC project manager.

All interim monitoring/inspections reports will include, at a minimum:

- Date of event or reporting period;
- Name, company, and position of person(s) conducting monitoring/inspection activities;
- Description of the activities performed;
- Where appropriate, color photographs or sketches showing the approximate location of any problems or incidents noted (included either on the checklist/form or on an attached sheet);
- Copies of all field forms completed;
- Any observations, conclusions, or recommendations.

7.2 Periodic Review Report

A Periodic Review Report (PRR) will be submitted to the NYSDEC project manager beginning sixteen (16) months after the Final Engineering Report is issued. After submittal of the initial Periodic Review Report, the next PRR shall be submitted annually to the NYSDEC project manager. In the event that the Site is subdivided into separate parcels with different ownership, a single Periodic Review Report will be prepared that addresses the Site described in Appendix A - Deed Restriction. The report will be prepared in accordance with NYSDEC's DER-10 and submitted within 30 days of the end of each certification period. The report will include:

- Identification, assessment and certification of all ICs required by the remedy for the Site.
- Results of the required annual site inspections.
- All applicable site management forms and other records generated for the Site during the reporting period in the NYSDEC-approved electronic format, if not previously submitted.
- A site evaluation, which includes the following:
 - The compliance of the remedy with the requirements of the site-specific Remedial Action Work Plan (RAWP) and Decision Document;
 - Recommendations regarding any necessary changes to the remedy;
 - The overall performance and effectiveness of the remedy.

7.2.1 Certification of Institutional and Engineering Controls

Following the last inspection of the reporting period, a qualified environmental professional as defined in 6 NYCRR Part 375 will prepare, and include in the Periodic Review Report, the following certification as per the requirements of NYSDEC DER-10:

“For each institutional control identified for the Site, I certify that all of the following statements are true:

- The inspection of the Site to confirm the effectiveness of the institutional controls required by the remedial program was performed under my direction;*
- The institutional control employed at this Site is unchanged from the date the control was put in place, or last approved by the Department;*
- Nothing has occurred that would impair the ability of the control to protect the public health and environment;*
- Nothing has occurred that would constitute a violation or failure to comply with any site management plan for this control;*
- Access to the Site will continue to be provided to the Department to evaluate the remedy, including access to evaluate the continued maintenance of this control;*
- Use of the Site is compliant with the Deed Restriction;*
- To the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the Site remedial program; and*
- The information presented in this report is accurate and complete.*

I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class “A” misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Magdalena Rychtecka, of 146-01 Archer Avenue, MC 1428, Jamaica, NY 11435, am certifying as Owner’s/Remedial Party’s Designated Site Representative .

At the end of each certifying period, as determined by the NYSDEC project manager, the following certification will be provided to the NYSDEC project manager:

“For each institutional control identified for the Site, I certify that all of the following statements are true:

- *The institutional control employed at this Site is unchanged from the date the control was put in place, or last approved by the Department;*
- *Nothing has occurred that would impair the ability of the control to protect the public health and environment;*
- *Nothing has occurred that would constitute a violation or failure to comply with any site management plan for this control;*
- *Access to the Site will continue to be provided to the Department to evaluate the remedy, including access to evaluate the continued maintenance of this control;*
- *If a financial assurance mechanism is required under the oversight document for the Site, the mechanism remains valid and sufficient for the intended purpose under the document;*
- *Use of the Site is compliant with the Deed Restriction.*
- *The information presented in this report is accurate and complete.*

I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Magdalena Rychtecka, of 146-01 Archer Avenue, MC 1428, Jamaica, NY 11435, am certifying as Owner's Designated Site Representative.

7.3 Corrective Measures Work Plan

If any component of the remedy is found to have failed, or if the periodic certification cannot be provided due to the failure of an institutional or engineering control or failure to conduct site management activities, a Corrective Measures Work Plan will be submitted to the NYSDEC project manager for approval. This plan will explain the failure and provide the details and schedule for performing work necessary to correct the failure. Unless an emergency condition exists, no work will be performed pursuant to the Corrective Measures Work Plan until it has been approved by the NYSDEC project manager.

7.4 Remedial Site Optimization Report

A Remedial Site Optimization Report is not required for this Site.

r. Conveyance pursuant to divorce or separation
s. Other (describe) DEED RESTRICTIONS

Table for recording officer's use with columns: Amount received (Schedule B, Part 1, 2, 3), Date received, and Transaction number.

Schedule B – Real estate transfer tax return (Tax Law, Article 31)

Part 1 – Computation of tax due *(in addition to the tax on line 4, you must compute the tax on lines 5a and 5b, if applicable)*

1 Enter amount of consideration for the conveyance <i>(if you are claiming a total exemption from tax, mark the exemption claimed box, enter consideration and proceed to Part 4)</i> <input type="checkbox"/> Exemption claimed	1.	0 00
2 Continuing lien deduction <i>(see instructions if property is taken subject to mortgage or lien)</i>	2.	0 00
3 Taxable consideration <i>(subtract line 2 from line 1)</i>	3.	0 00
4 Tax: \$2 for each \$500, or fractional part thereof, of consideration on line 3	4.	0 00
5a Tax: \$1.25 for each \$500, or fractional part thereof, of consideration for the conveyance of residential real property located in New York City if the amount on line 3 is \$3 million or more <i>(see instructions)</i>	5a.	0 00
5b Tax: \$1.25 for each \$500, or fractional part thereof, of consideration for the conveyance of property located in New York City other than residential real property, if the amount on line 1 is \$2 million or more <i>(see instructions)</i>	5b.	0 00
6 Total before credit(s) claimed <i>(add lines 4, 5a, and 5b)</i>	6.	0 00
7 Amount of credit claimed for tax previously paid <i>(see instructions and attach Form TP-584.1, Schedule G)</i>	7.	0 00
8 Total tax due* <i>(subtract line 7 from line 6)</i>	8.	0 00

Part 2 – Computation of additional tax due on the conveyance of residential real property for \$1 million or more *(see instructions)*

1 Enter amount of consideration for conveyance <i>(from Part 1, line 1)</i>	1.	0 00
2 Taxable consideration <i>(multiply line 1 by the percentage of the premises which is residential real property, as shown in Schedule A)</i> ...	2.	0 00
3 Total additional transfer tax due* <i>(multiply line 2 by 1% (.01))</i>	3.	0 00

Part 3 – Computation of supplemental tax due on the conveyance of residential real property, or interest therein, located in New York City, for \$2 million or more *(see instructions)*

1 Enter amount of consideration for conveyance <i>(from Part 1, line 1)</i>	1.	0 00
2 Taxable consideration <i>(multiply line 1 by the percentage of the premises which is residential real property, as shown in Schedule A)</i> ...	2.	0 00
3 Total supplemental transfer tax due* <i>(multiply line 2 by tax rate, see instruction for rates)</i>	3.	0 00

* **The total tax (from Part 1, line 8; Part 2, line 3; and Part 3, line 3 above) is due within 15 days from the date of conveyance.**

Part 4 – Explanation of exemption claimed on Part 1, line 1 *(mark any boxes that apply)*

The conveyance of real property is exempt from the real estate transfer tax for the following reason:

- a. Conveyance is to the United Nations, the United States of America, New York State, or any of their instrumentalities, agencies, or political subdivisions (or any public corporation, including a public corporation created pursuant to agreement or compact with another state or Canada)..... a
- b. Conveyance is to secure a debt or other obligation..... b
- c. Conveyance is without additional consideration to confirm, correct, modify, or supplement a prior conveyance..... c
- d. Conveyance of real property is without consideration and not in connection with a sale, including conveyances conveying realty as bona fide gifts..... d
- e. Conveyance is given in connection with a tax sale..... e
- f. Conveyance is a mere change of identity or form of ownership or organization where there is no change in beneficial ownership. (This exemption cannot be claimed for a conveyance to a cooperative housing corporation of real property comprising the cooperative dwelling or dwellings.) Attach Form TP-584.1, Schedule F..... f
- g. Conveyance consists of deed of partition..... g
- h. Conveyance is given pursuant to the federal Bankruptcy Act..... h
- i. Conveyance consists of the execution of a contract to sell real property, without the use or occupancy of such property, or the granting of an option to purchase real property, without the use or occupancy of such property..... i
- j. Conveyance of an option or contract to purchase real property with the use or occupancy of such property where the consideration is less than \$200,000 and such property was used solely by the grantor as the grantor’s personal residence and consists of a one-, two-, or three-family house, an individual residential condominium unit, or the sale of stock in a cooperative housing corporation in connection with the grant or transfer of a proprietary leasehold covering an individual residential cooperative apartment..... j
- k. Conveyance is not a conveyance within the meaning of Tax Law, Article 31, § 1401(e) *(attach documents supporting such claim)* k

Schedule C – Credit Line Mortgage Certificate (Tax Law, Article 11)**Complete the following only if the interest being transferred is a fee simple interest.**I (we) certify that: *(mark an X in the appropriate box)*

1. The real property being sold or transferred is not subject to an outstanding credit line mortgage.
2. The real property being sold or transferred is subject to an outstanding credit line mortgage. However, an exemption from the tax is claimed for the following reason:
- a The transfer of real property is a transfer of a fee simple interest to a person or persons who held a fee simple interest in the real property (whether as a joint tenant, a tenant in common or otherwise) immediately before the transfer.
- b The transfer of real property is (A) to a person or persons related by blood, marriage or adoption to the original obligor or to one or more of the original obligors or (B) to a person or entity where 50% or more of the beneficial interest in such real property after the transfer is held by the transferor or such related person or persons (as in the case of a transfer to a trustee for the benefit of a minor or the transfer to a trust for the benefit of the transferor).
- c The transfer of real property is a transfer to a trustee in bankruptcy, a receiver, assignee, or other officer of a court.
- d The maximum principal amount secured by the credit line mortgage is \$3,000,000 or more, and the real property being sold or transferred is **not** principally improved nor will it be improved by a one- to six-family owner-occupied residence or dwelling.

Note: for purposes of determining whether the maximum principal amount secured is \$3,000,000 or more as described above, the amounts secured by two or more credit line mortgages may be aggregated under certain circumstances. See TSB-M-96(6)-R for more information regarding these aggregation requirements.

- e Other *(attach detailed explanation)*.
3. The real property being transferred is presently subject to an outstanding credit line mortgage. However, no tax is due for the following reason:
- a A certificate of discharge of the credit line mortgage is being offered at the time of recording the deed.
- b A check has been drawn payable for transmission to the credit line mortgagee or his agent for the balance due, and a satisfaction of such mortgage will be recorded as soon as it is available.
4. The real property being transferred is subject to an outstanding credit line mortgage recorded in _____ (insert liber and page or reel or other identification of the mortgage). The maximum principal amount of debt or obligation secured by the mortgage is _____. No exemption from tax is claimed and the tax of _____ is being paid herewith. *(Make check payable to county clerk where deed will be recorded or, if the recording is to take place in New York City but not in Richmond County, make check payable to the **NYC Department of Finance**.)*

Schedule D – Certification of exemption from the payment of estimated personal income tax (Tax Law, Article 22, § 663)

Complete the following only if a fee simple interest or a cooperative unit is being transferred by an individual or estate or trust.

If the property is being conveyed by a referee pursuant to a foreclosure proceeding, proceed to Part 2, mark the second box under Exemptions for nonresident transferor(s)/seller(s), and sign at bottom.

Part 1 – New York State residents

If you are a New York State resident transferor(s)/seller(s) listed in Form TP-584-NYC, Schedule A (or an attachment to Form TP-584-NYC), you must sign the certification below. If one or more transferors/sellers of the real property or cooperative unit is a resident of New York State, each resident transferor/seller must sign in the space provided. If more space is needed, photocopy this Schedule D and submit as many schedules as necessary to accommodate all resident transferors/sellers.

Certification of resident transferor(s)/seller(s)

This is to certify that at the time of the sale or transfer of the real property or cooperative unit, the transferor(s)/seller(s) as signed below was a resident of New York State, and therefore is not required to pay estimated personal income tax under Tax Law, § 663(a) upon the sale or transfer of this real property or cooperative unit.

Signature	Print full name	Date
Signature	Print full name	Date
Signature	Print full name	Date

Note: A resident of New York State may still be required to pay estimated tax under Tax Law, § 685(c), but not as a condition of recording a deed.

Part 2 – Nonresidents of New York State

If you are a nonresident of New York State listed as a transferor/seller in Form TP-584-NYC, Schedule A (or an attachment to Form TP-584-NYC) but are not required to pay estimated personal income tax because one of the exemptions below applies under Tax Law, § 663(c), mark the box of the appropriate exemption below. If any one of the exemptions below applies to the transferor(s)/seller(s), that transferor(s)/seller(s) is not required to pay estimated personal income tax to New York State under Tax Law, § 663. Each nonresident transferor/seller who qualifies under one of the exemptions below must sign in the space provided. If more space is needed, photocopy this Schedule D and submit as many schedules as necessary to accommodate all nonresident transferors/sellers.

If none of these exemption statements apply, you must complete Form IT-2663, *Nonresident Real Property Estimated Income Tax Payment Form*, or Form IT-2664, *Nonresident Cooperative Unit Estimated Income Tax Payment Form*. For more information, see *Payment of estimated personal income tax*, on Form TP-584-NYC-I, page 1.

Exemption for nonresident transferor(s)/seller(s)

This is to certify that at the time of the sale or transfer of the real property or cooperative unit, the transferor(s)/seller(s) (grantor) of this real property or cooperative unit was a nonresident of New York State, but is not required to pay estimated personal income tax under Tax Law, § 663 due to one of the following exemptions:

- The real property or cooperative unit being sold or transferred qualifies in total as the transferor's/seller's principal residence (within the meaning of Internal Revenue Code, section 121) from _____ Date to _____ Date (see instructions).
- The transferor/seller is a mortgagor conveying the mortgaged property to a mortgagee in foreclosure, or in lieu of foreclosure with no additional consideration.
- The transferor or transferee is an agency or authority of the United States of America, an agency or authority of the state of New York, the Federal National Mortgage Association, the Federal Home Loan Mortgage Corporation, the Government National Mortgage Association, or a private mortgage insurance company.

DECLARATION of COVENANTS and RESTRICTIONS

THIS COVENANT is made the 12th day of OCTOBER 2021 by MTA Long Island Rail Road (LIRR), a subsidiary public benefit corporation of the MTA and has its offices for the transaction of business at 93-02 Sutphin Boulevard, Jamaica, NY 11435.

WHEREAS, Bayside Substation is the subject of a Consent Order, DEC Index No. CO 1-20180613-127, with an effective date of which is July 13, 2018 (together with exhibits, appendices and any subsequent modifications "the July 2018 Order"). executed by the LIRR as part of the New York State Department of Environmental Conservation's (the "Department's) inactive hazardous waste disposal site remedial programs pursuant to Article 27, Title 13 of the Environmental Conservation Law ("ECL") and Part 375 of Title 6 of the Official Compilation of Codes Rules and Regulations ("6 NYCRR") Program, namely that parcel of real property located on 216th Street and 41st Avenue situated at Bayside in the Third Ward of the Borough of Queens, County of Queens, State of New York, which is part of lands conveyed by Janet Lawrence to Long Island Rail Road Company by deed dated September 29, 1902 and recorded in the Queens County for NYC Deeds in Book 128 and Page 165, and being more particularly described in Appendix "A," attached to this declaration and made a part hereof, and hereinafter referred to as "the Property"; and

WHEREAS, the Department approved a remedy to eliminate or mitigate all significant threats to the environment presented by the contamination disposed at the Property and such remedy requires that the Property be subject to restrictive covenants.

NOW, THEREFORE, MTA Long Island Rail Road, for itself and its successors and/or assigns, covenants that:

First, the Property subject to this Declaration of Covenants and Restrictions is as shown on a map attached to this declaration as Appendix "B" and made a part hereof.

Second, unless prior written approval by the Department or, if the Department shall no longer exist, any New York State agency or agencies subsequently created to protect the environment of the State and the health of the State's citizens, hereinafter referred to as "the Relevant Agency," is first obtained, where contamination remains at the Property subject to the provisions of the Site Management Plan ("SMP"), there shall be no construction, use or occupancy of the Property that results in the disturbance or excavation of the Property which threatens the integrity of the engineering controls or which results in unacceptable human exposure to contaminated soils.

Third, the owner of the Property shall not disturb, remove, or otherwise interfere with the installation, use, operation, and maintenance of engineering controls required for the Remedy, which are described in the SMP, unless in each instance the owner first obtains a written waiver of such prohibition from the Department or Relevant Agency.

Fourth, the owner of the Property shall prohibit the Property from ever being used for purposes other than for railroad and/or transportation purposes without the express written waiver of such prohibition by the Department or Relevant Agency.

Fifth, the owner of the Property shall prohibit the use of the groundwater underlying the Property without treatment to render it safe for drinking water or for industrial purposes, as appropriate, and the user must first notify and obtain written approval to do so from the Department or Relevant Agency.

Sixth, the owner of the Property shall provide a periodic certification, prepared and submitted by a professional engineer or environmental professional acceptable to the Department or Relevant Agency, which will certify that the institutional and engineering controls put in place are unchanged from the previous certification, comply with the SMP, and have not been impaired.

Seventh, the owner of the Property shall continue in full force and effect any institutional and engineering controls required for the Remedy and maintain such controls, unless the owner first obtains permission to discontinue such controls from the Department or Relevant Agency, in compliance with the approved SMP, which is incorporated and made enforceable hereto, subject to modifications as approved by the Department or Relevant Agency.

Eighth, this Declaration is and shall be deemed a covenant that shall run with the land and shall be binding upon all future owners of the Property, and shall provide that the owner and its successors and assigns consent to enforcement by the Department or Relevant Agency of the prohibitions and restrictions that the Consent Order requires to be recorded, and hereby covenant not to contest the authority of the Department or Relevant Agency to seek enforcement.

Ninth, any deed of conveyance of the Property, or any portion thereof, shall recite, unless the Department or Relevant Agency has consented to the termination of such covenants and restrictions, that said conveyance is subject to this Declaration of Covenants and Restrictions.

IN WITNESS WHEREOF, the undersigned has executed this instrument the day written below.

MTA Long Island Rail Road :

C-1 NOTIFICATION

At least 15 days prior to the start of any activity that is anticipated to encounter remaining contamination or breach or alter the Site’s cover system, the Site owner or their representative will notify the NYSDEC contacts listed in the table below. Table 1 includes contact information for the above notification. The information on this table will be updated as necessary to provide accurate contact information. A full listing of site-related contact information is provided in Appendix A.

Table 1: Notifications*

Name	Contact Information
Long Island Rail Road System Safety Magdalena Rychtecka, Director	mrychte@lirr.org
NYSDEC Project Manager Charlie Post	(518) 402-9793 charles.post@dec.ny.gov
NYSDEC Project Manager’s Supervisor Gerard Burke	(518) 402-9767 gerard.burke@dec.ny.gov
Chief, Site Control Section	New York State Department of Environmental Conservation Division of Environmental Remediation 625 Broadway Albany, NY 12233-7020
NYSDOH Project Manager Anthony Perretta	1-518-402-7860 Anthony.perretta@health.ny.gov

* Note: Notifications are subject to change and will be updated as necessary.

This notification will include:

- A detailed description of the work to be performed, including the location and areal extent of excavation, plans/drawings for Site re-grading, intrusive elements or utilities to be installed below the soil cover, estimated volumes of contaminated soil to be excavated, any modifications of truck routes, and any work that may impact an engineering control;
- A summary of environmental conditions anticipated to be encountered in the work areas, including the nature and concentration levels of contaminants of concern, potential presence of grossly contaminated media, and plans for any pre-construction sampling;
- A schedule for the work, detailing the start and completion of all intrusive work;
- A summary of the applicable components of this EWP;
- A statement that the work will be performed in compliance with this EWP and 29 CFR 1910.120;
- A copy of the contractor's health and safety plan (HASP), in electronic format, if it differs from the HASP provided in Appendix G of this SMP;
- Identification of disposal facilities for potential waste streams; and
- Identification of sources of any anticipated backfill, along with the required request to import form and all supporting documentation including, but not limited to, chemical testing results.

C-2 SOIL SCREENING METHODS

Visual, olfactory and instrument-based (e.g. photoionization detector) soil screening will be performed during all excavations into known or potentially contaminated material (remaining contamination) or a breach of the cover system. A qualified environmental professional as defined in 6 NYCRR Part 375, a PE who is licensed and registered in New York State, or a qualified person who directly reports to a PE who is licensed and registered in New York State will perform the screening. Soil screening will be performed when invasive work is done and will include all excavation and invasive work performed during development, such as excavations for foundations and utility work, after issuance of the COC.

Soils will be segregated based on previous environmental data and screening results into material that requires off-site disposal and material that requires testing to determine if the material can be reused on-site as soil beneath a cover or if the material can be used as cover soil.

C-3 SOIL STAGING METHODS

Soil stockpiles will be continuously encircled with a berm and/or silt fence. Hay bales will be used as needed near catch basins, surface waters and other discharge points.

Stockpiles will be kept covered at all times with appropriately anchored tarps. Stockpiles will be routinely inspected and damaged tarp covers will be promptly replaced.

Stockpiles will be inspected at a minimum once each week and after every storm event. Results of inspections will be recorded in a logbook and maintained at the Site and available for inspection by the NYSDEC.

C-4 MATERIALS EXCAVATION AND LOAD-OUT

A qualified environmental professional as defined in 6 NYCRR Part 375, a PE who is licensed and registered in New York State, or a qualified person who directly reports to a PE who is licensed and registered in New York State will oversee all invasive work and the excavation and load-out of all excavated material.

The owner of the property and remedial party (if applicable) and its contractors are responsible for safe execution of all invasive and other work performed under this Plan.

The presence of utilities and deed restrictions on the Site will be investigated by the qualified environmental professional. It will be determined whether a risk or impediment to the planned work under this SMP is posed by utilities or deed restrictions on the Site. A

Site utility stakeout will be completed for all utilities prior to any ground intrusive activities at the Site.

Loaded vehicles leaving the Site will be appropriately lined, tarped, securely covered, manifested, and placarded in accordance with appropriate Federal, State, local, and NYSDOT requirements (and all other applicable transportation requirements).

Locations where vehicles enter or exit the Site shall be inspected daily for evidence of off-site soil tracking.

The qualified environmental professional will be responsible for ensuring that all egress points for truck and equipment transport from the Site are clean of dirt and other materials derived from the Site during intrusive excavation activities. Cleaning of the adjacent streets will be performed as needed to maintain a clean condition with respect to Site-derived materials. Material accumulated from the street cleaning and egress cleaning activities will be disposed off-site at a permitted landfill facility in accordance with all applicable local, State, and Federal regulations.

C-5 MATERIALS TRANSPORT OFF-SITE

All transport of materials will be performed by licensed haulers in accordance with appropriate local, State, and Federal regulations, including 6 NYCRR Part 364. Haulers will be appropriately licensed and trucks properly placarded.

Material transported by trucks exiting the Site will be secured with tight-fitting covers. Loose-fitting canvas-type truck covers will be prohibited. If loads contain wet material capable of producing free liquid, truck liners will be used.

Truck transport routes are as follows: head north on 216th St. toward 40th Ave.; turn left onto 40th Ave.; turn right onto Bell Blvd.; turn left onto 35th Ave.; exit onto Route 295 (Figure C1). All trucks loaded with Site materials will exit the vicinity of the Site using

only these approved truck routes. This is the most appropriate route and takes into account: (a) limiting transport through residential areas and past sensitive sites; (b) use of city mapped truck routes; (c) prohibiting off-site queuing of trucks entering the facility; (d) limiting total distance to major highways; (e) promoting safety in access to highways; and (f) overall safety in transport;

Trucks will be prohibited from stopping and idling in the neighborhood outside the project Site.

Egress points for truck and equipment transport from the Site will be kept clean of dirt and other materials during site remediation and development.

Queuing of trucks will be performed on-site in order to minimize off-site disturbance. Off-site queuing will be prohibited.

C-6 MATERIALS DISPOSAL OFF-SITE

All material excavated and removed from the Site will be treated as contaminated and regulated material and will be transported and disposed off-site in a permitted facility in accordance with all local, State and Federal regulations. If disposal of material from this Site is proposed for unregulated off-site disposal (i.e. clean soil removed for development purposes), a formal request with an associated plan will be made to the NYSDEC project manager. Unregulated off-site management of materials from this Site will not occur without formal NYSDEC project manager approval.

Off-site disposal locations for excavated soils will be identified in the pre-excavation notification. This will include estimated quantities and a breakdown by class of disposal facility if appropriate, (e.g. hazardous waste disposal facility, solid waste landfill, petroleum treatment facility, C&D debris recovery facility) Actual disposal quantities and associated documentation will be reported to the NYSDEC in the Periodic Review Report.

This documentation will include, but will not be limited to waste profiles, test results, facility acceptance letters, manifests, bills of lading and facility receipts.

Non-hazardous historic fill and contaminated soils taken off-site will be handled consistent with 6 NYCRR Parts 360, 361, 362, 363, 364 and 365. Material that does not meet Unrestricted SCOs is prohibited from being taken to a New York State C&D debris recovery facility (6 NYCRR Subpart 360-15 registered or permitted facility).

C-7 MATERIALS REUSE ON-SITE

The qualified environmental professional as defined in 6 NYCRR part 375 will ensure that procedures defined for materials reuse in this SMP are followed and that unacceptable material (i.e. contaminated) does not remain on-site. Contaminated on-site material, including historic fill and contaminated soil, that is acceptable for reuse on-site will be placed below the demarcation layer or impervious surface, and will not be reused within a cover soil layer, within landscaping berms, or as backfill for subsurface utility lines.

Proposed materials for reuse on-site must be sampled for full suite analytical parameters including per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. The sampling frequency will be in accordance with DER-10 Table 5.4(e)10 unless prior approval is obtained from the NYSDEC project manager for modification of the sampling frequency. The analytical results of soil/fill material testing must meet the Site use criteria presented in NYSDEC DER-10 Appendix 5 – Allowable Constituent Levels for Imported Fill or Soil for all constituents listed, and the NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances January 2021 guidance values. Approvals for modifications to the analytical parameters must be obtained from the NYSDEC project manager prior to the sampling event.

Soil/fill material for reuse on-site will be segregated and staged as described in Sections C-2 and C-3 of this EWP. The anticipated size and location of stockpiles will be provided in the 15-day notification to the NYSDEC project manager. Stockpile locations

will be based on the location of Site excavation activities and proximity to nearby site features. Material reuse on-site will comply with requirements of NYSDEC DER-10 Section 5.4(e)4. Any modifications to the requirements of DER-10 Section 5.4(e)4 must be approved by the NYSDEC project manager.

Any demolition material proposed for reuse on-site will be sampled for asbestos and the results will be reported to the NYSDEC for acceptance. Concrete crushing or processing on-site will not be performed without prior NYSDEC approval. Organic matter (wood, roots, stumps, etc.) or other solid waste derived from clearing and grubbing of the Site will not be reused on-site.

C-8 FLUIDS MANAGEMENT

All liquids to be removed from the Site, including but not limited to, excavation dewatering, decontamination waters and groundwater monitoring well purge and development waters, will be handled, transported and disposed off-site at a permitted facility in accordance with applicable local, State, and Federal regulations. Dewatering, purge and development fluids will not be recharged back to the land surface or subsurface of the Site, and will be managed off-site, unless prior approval is obtained from NYSDEC.

Discharge of water generated during large-scale construction activities to surface waters (i.e. a local pond, stream or river) will be performed under a SPDES permit.

C-9 BACKFILL FROM OFF-SITE SOURCES

All materials proposed for import onto the Site will be approved by the qualified environmental professional, as defined in 6 NYCRR Part 375, and will be in compliance with provisions in this SMP prior to receipt at the Site. A Request to Import/Reuse Fill or Soil form, which can be found at <http://www.dec.ny.gov/regulations/67386.html>, will be

prepared and submitted to the NYSDEC project manager allowing a minimum of 5 business days for review. A copy of the form is presented in Appendix D.

Material from industrial sites, spill sites, other environmental remediation sites, or potentially contaminated sites will not be imported to the Site.

All imported soils will meet the backfill and cover soil quality standards established in 6 NYCRR 375-6.7(d) and DER-10 Appendix 5 for commercial/industrial use. Based on an evaluation of the land use, protection of groundwater and protection of ecological resources criteria, the resulting soil quality standards are listed in Table 4. Soils that meet 'general' fill requirements under 6 NYCRR Part 360.13, but do not meet backfill or cover soil objectives for this Site, will not be imported onto the Site without prior approval by NYSDEC project manager. Soil material will be sampled for the full suite of analytical parameters, including PFAS and 1, 4-dioxane. Solid waste will not be imported onto the Site.

Trucks entering the Site with imported soils will be securely covered with tight fitting covers. Imported soils will be stockpiled separately from excavated materials and covered to prevent dust releases.

C-10 STORMWATER POLLUTION PREVENTION

Barriers and hay bale checks will be installed and inspected once a week and after every storm event. Results of inspections will be recorded in a logbook and maintained at the Site and available for inspection by the NYSDEC. All necessary repairs shall be made immediately.

Accumulated sediments will be removed as required to keep the barrier and hay bale check functional.

All undercutting or erosion of the silt fence toe anchor shall be repaired immediately with appropriate backfill materials.

Manufacturer's recommendations will be followed for replacing silt fencing damaged due to weathering.

Erosion and sediment control measures identified in the SMP shall be observed to ensure that they are operating correctly. Where discharge locations or points are accessible, they shall be inspected to ascertain whether erosion control measures are effective in preventing significant impacts to receiving waters.

Silt fencing or hay bales will be installed around the entire perimeter of the construction area.

C-11 EXCAVATION CONTINGENCY PLAN

If underground tanks or other previously unidentified contaminant sources are found during post-remedial subsurface excavations or development related construction, excavation activities will be suspended until sufficient equipment is mobilized to address the condition. The NYSDEC project manager will be promptly notified of the discovery.

Sampling will be performed on product, sediment and surrounding soils, etc. as necessary to determine the nature of the material and proper disposal method. Chemical analysis will be performed for a full list of analytes [TAL metals, TCL volatiles and semi-volatiles (including 1,4-dioxane), TCL pesticides and PCBs, and PFAS], unless the Site history and previous sampling results provide sufficient justification to limit the list of analytes. In this case, a reduced list of analytes will be proposed to the NYSDEC project manager for approval prior to sampling. Any tanks will be closed as per NYSDEC regulations and guidance.

Identification of unknown or unexpected contaminated media identified by screening during invasive site work will be promptly communicated by phone within two hours to NYSDEC's Project Manager. Reportable quantities of petroleum product will also

be reported to the NYSDEC spills hotline. These findings will be also included in the Periodic Review Report.

C-12 COMMUNITY AIR MONITORING PLAN

Real-time air monitoring, for volatile compounds and particulate levels at the perimeter of the work area, is necessary. The plan must include the following:

1. Mercury vapors must be monitored at the downwind perimeter of the work area on a continuous basis during construction. If total mercury vapor levels exceed 0.01 mg/m³ above background, work activities must be halted and techniques must be employed to reduce the downwind mercury vapor level. If any mercury vapors are identified 200 feet downwind from the work area or half the distance to the nearest residential or commercial property, whichever is less, all work activities must be halted. If efforts to abate the emission source are unsuccessful and mercury vapor is detected for more than 30 minutes within 20 feet of the perimeter of the nearest residential or commercial structure, then all emergency response contacts will be notified, the local police authorities shall immediately be contacted by the safety manager and advised of the situation, and frequent air monitoring shall be conducted at 30 minute intervals within the 20 foot zone. If two successive readings below action levels are measured, air monitoring may be halted or modified by the safety manager.
2. Volatile organic compounds must be monitored at the downwind perimeter of the work area on a continuous basis during construction. Downwind VOC limit is 5 parts per million (ppm) for a 15-minute average. If VOC concentrations ranged from 5 ppm to 25 ppm, work must be halted until VOC emission sources could be identified and corrective action taken. Work may resume provided that VOCs 200 feet downwind of the exclusion zone or half the distance to the nearest potential receptor, whichever is less (but no less than 20 feet) is below 5 ppm for a 15-minute average. Work activities must cease if VOCs at the perimeter of the work area exceed 25 ppm. All readings must be recorded and be available for LIRR's review.
3. Particulate monitoring equipment must be capable of measuring particulates less than 10 micrometers in diameter (PM-10) and integrating readings over a 15-minute

period. Equipment must have an audible alarm that sounds if the action level is exceeded. The action level for PM-10 is 100 micrograms per cubic meter (mcg/m³) greater than background. Dust suppression techniques must be employed. Work can continue during suppression provided downwind readings are below 150 mcg/m³ above the upwind readings and no visible dust is migrating from the work area. If downwind readings are 150 mcg/m³ above the upwind readings work must cease until dust suppression measures and other controls reduce PM-10 concentrations to 150 mcg/m³ or below. All readings must be recorded and be available for LIRR's review.

A figure showing the location of air sampling stations based on generally prevailing wind conditions is shown in Figure C2. These locations will be adjusted on a daily or more frequent basis based on actual wind directions to provide an upwind and at least two downwind monitoring stations. A fixed monitoring station will be located at the Site perimeter because of the adjacent residential areas.

Exceedances of action levels listed in the CAMP will be reported to NYSDEC and NYSDOH Project Managers.

C-13 DUST CONTROL PLAN

Particulate monitoring must be conducted according to the Community Air Monitoring Plan (CAMP) provided in Section B-13. If particulate levels at the Site exceed the thresholds listed in the CAMP or if airborne dust is observed on the Site or leaving the Site, the dust suppression techniques listed below will be employed. The remedial party will also take measures listed below to prevent dust production on the Site.

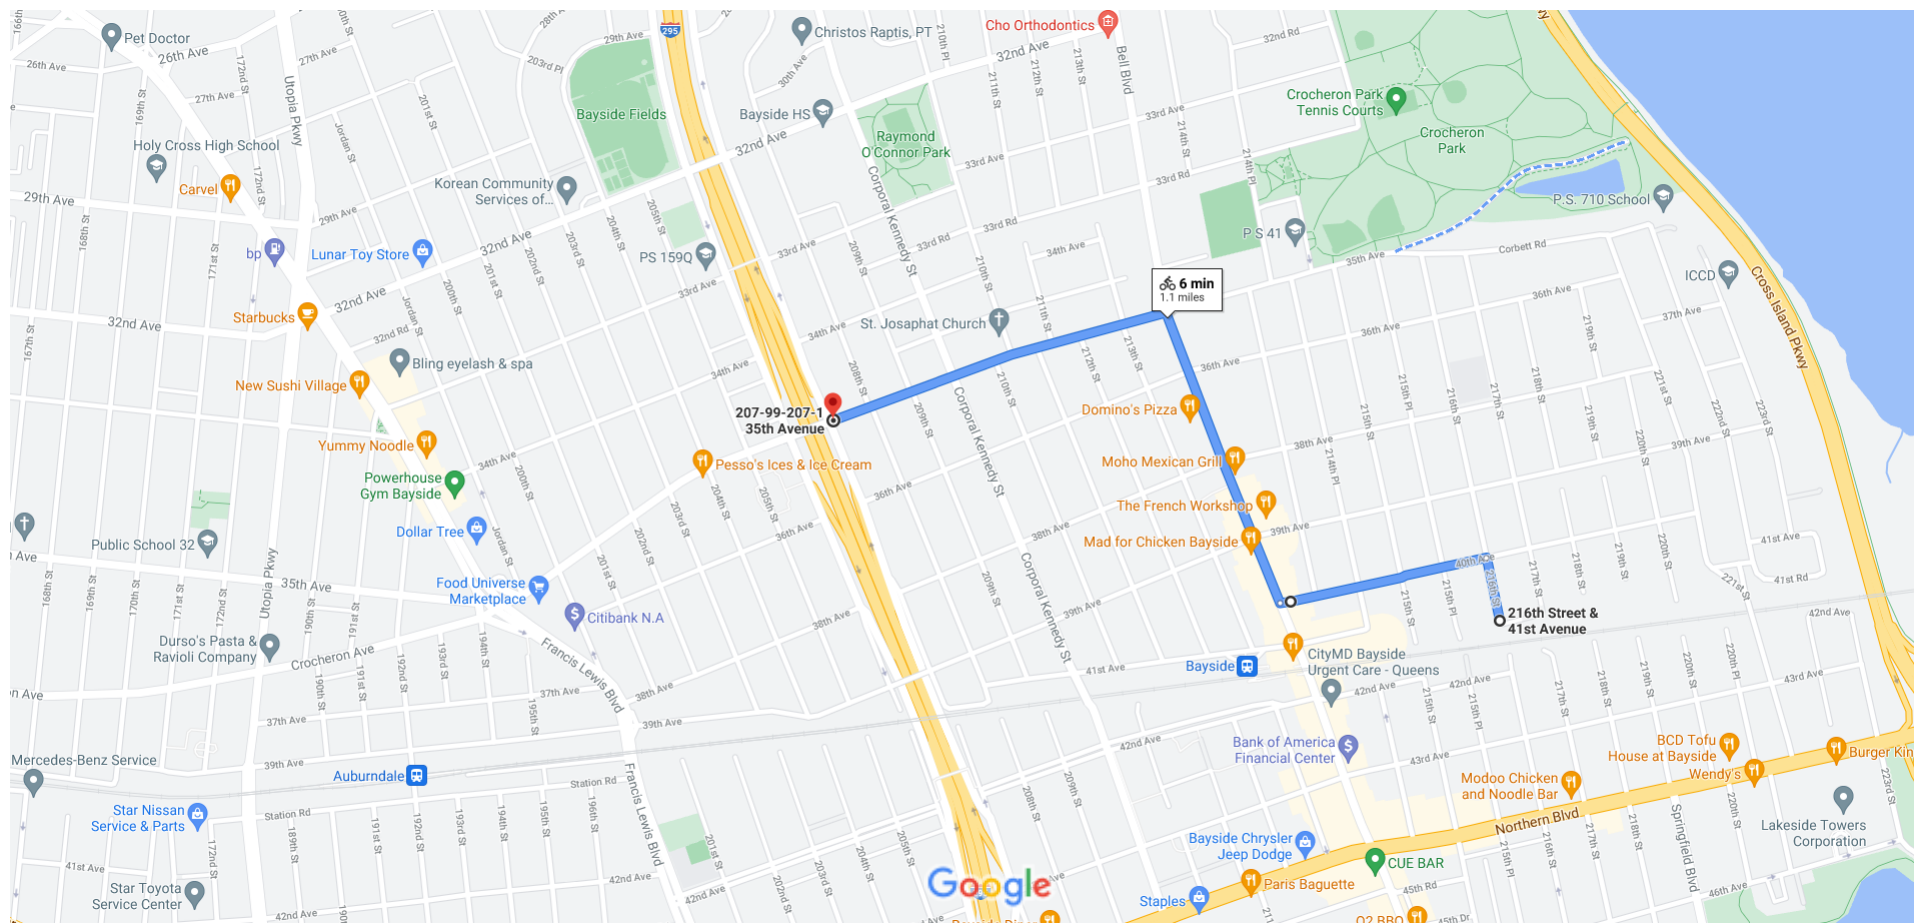

A dust suppression plan that addresses dust management during invasive on-site work will include, at a minimum, the items listed below:

- Dust suppression will be achieved using a dedicated hose/ sprinkler from a hydrant.

C-14 OTHER NUISANCES

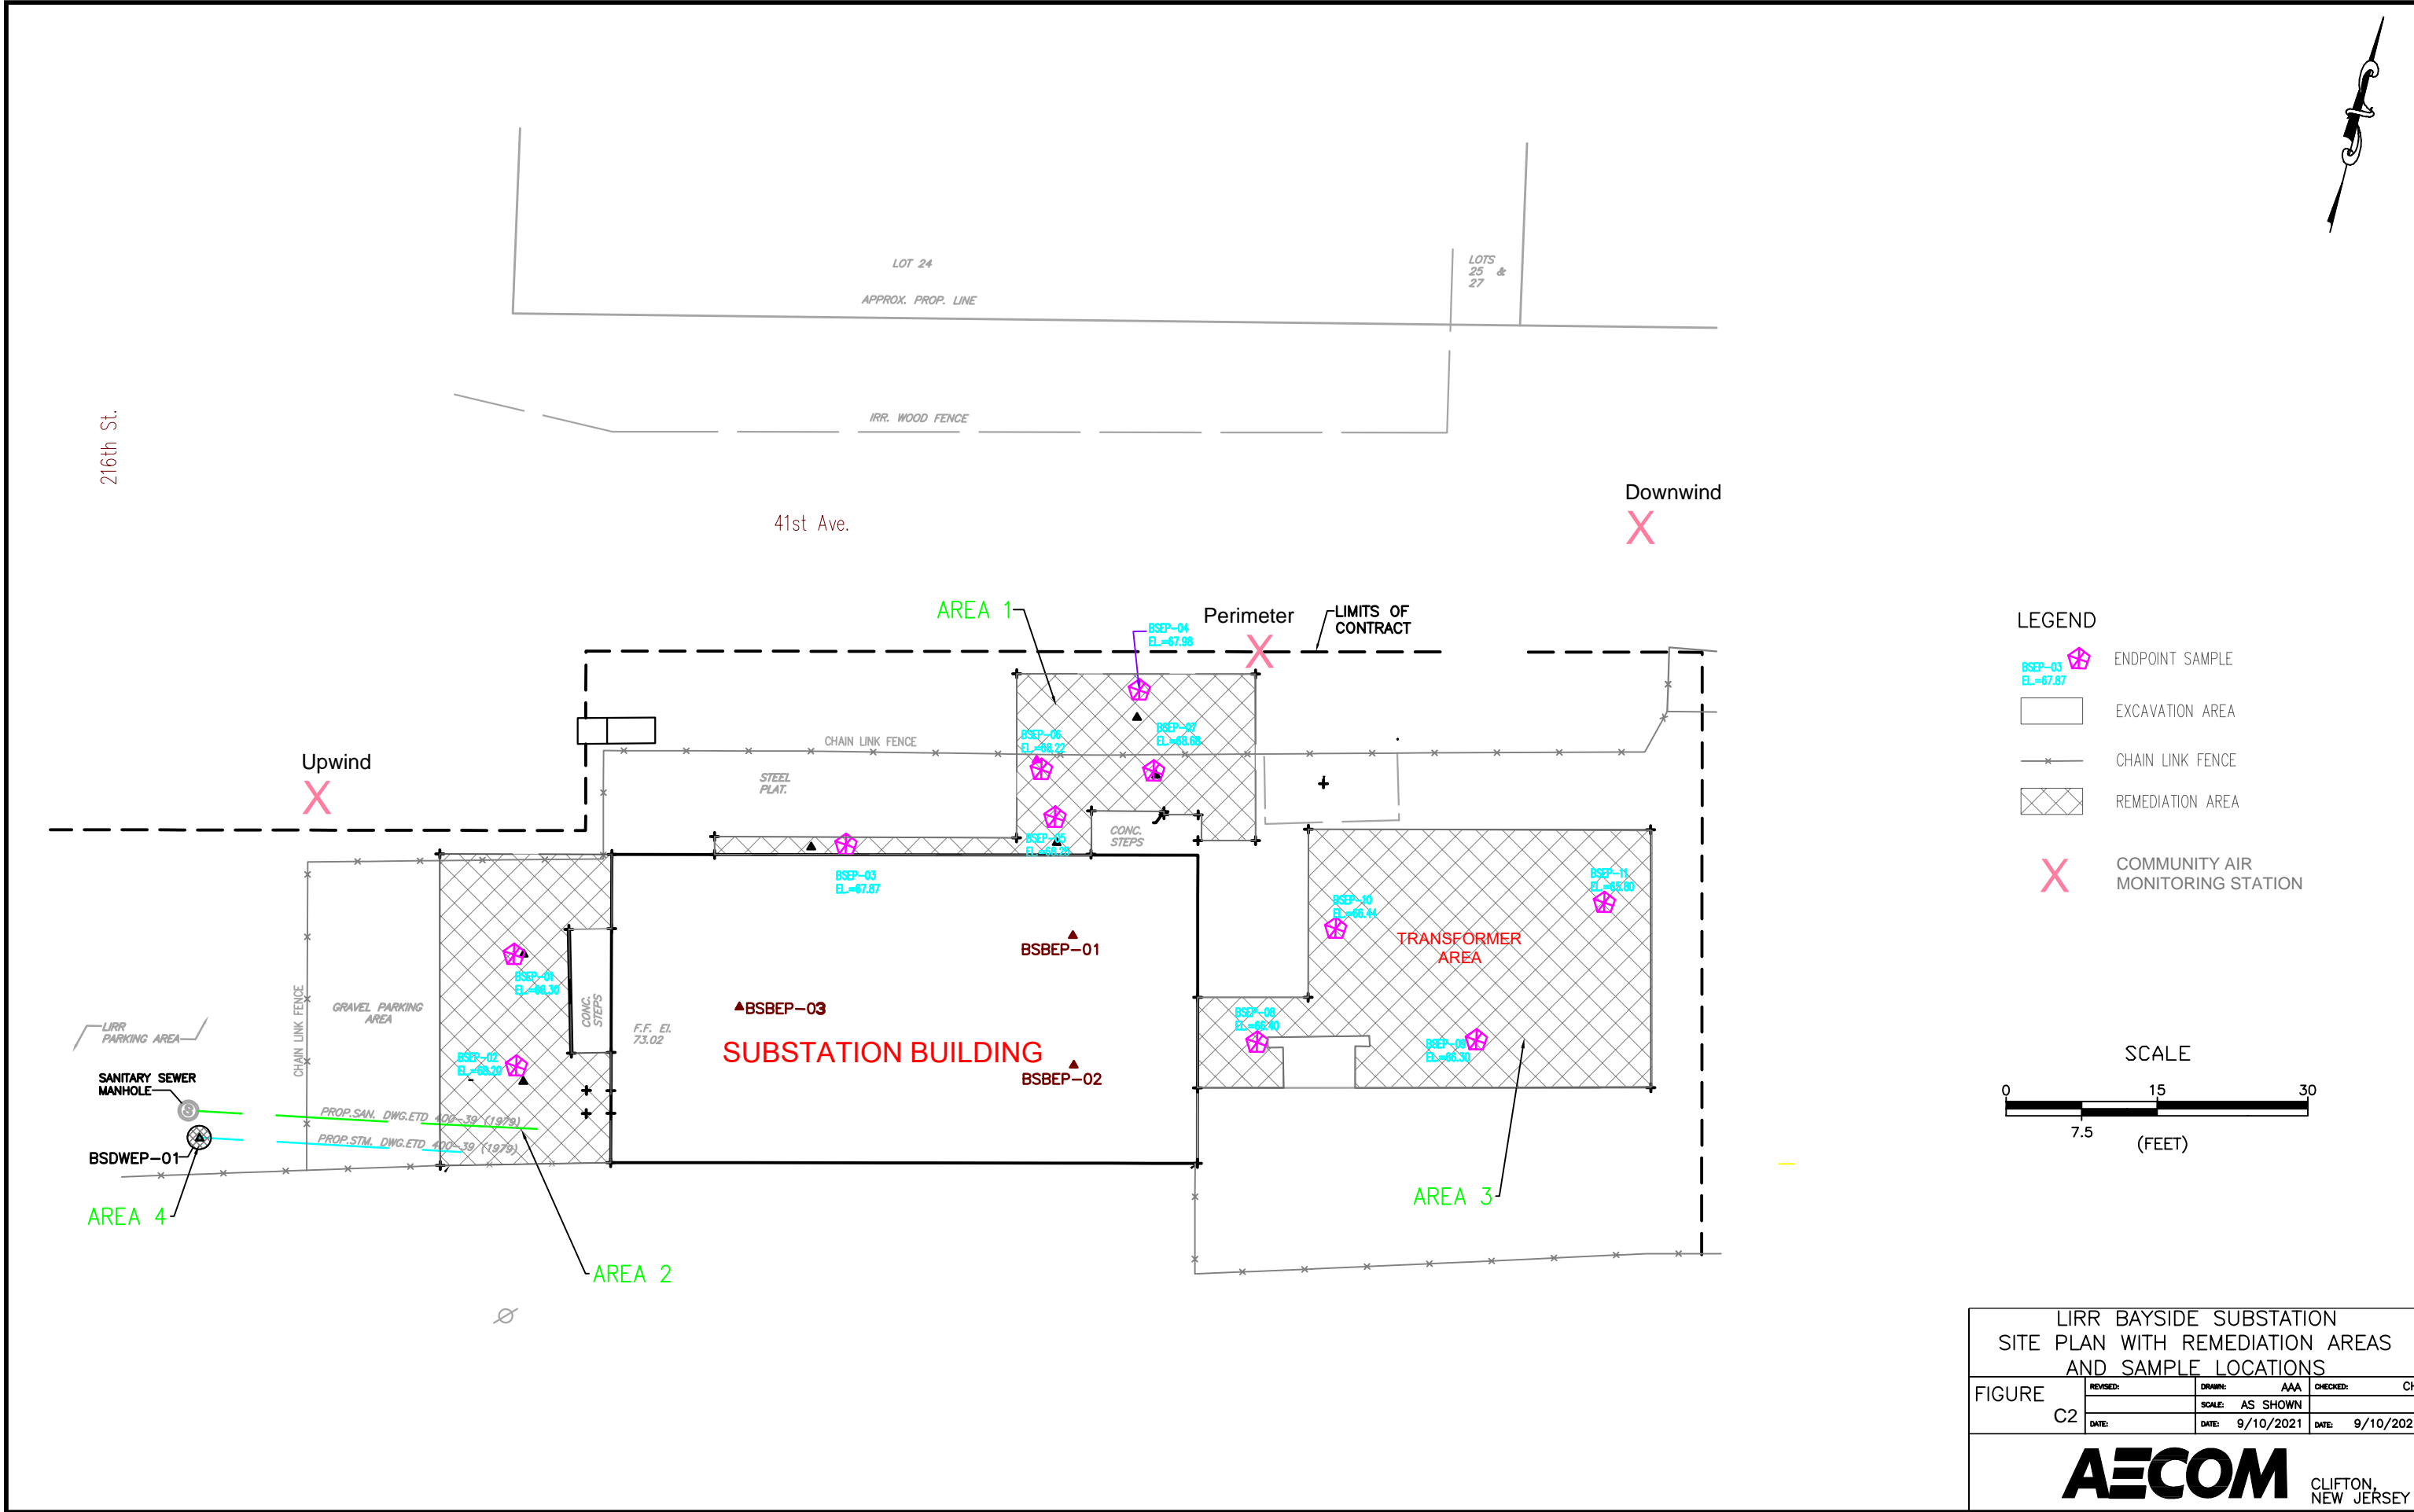

Trucks will be loaded on a sheet of 6-mil thick polyethylene sheeting to prevent potential migration of impacted soil during loading. Trucks will not enter the excavation area; therefore, no truck wash will be used prior to Site egress.
