Certification

I, Mark Elmendorf, certify that I am currently a qualified environmental professional and that this Site Characterization Work Plan (SCWP) was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10) and DER Green Remediation (DER-31).

2/8/2016	Mark Elmendorf	Mark Elmendorf
Date	Signature	

1. Introduction

Roux Environmental Engineering and Geology, D.P.C. (Roux), on behalf of Metropolitan Realty Associates, LLC (MRA), has prepared this Site Characterization Work Plan (SCWP) for the property located at 47-25 34th Street, Long Island City, New York, which is identified as Block 250, Lot 1 on the New York City Tax Map (the "Site"). A Site Location Map is provided in Figure 1. The Site is identified by the New York City Department of Environmental Protection (NYCDEP) as CEQR #21DOT006Q.

1.1 Environmental Work Plans

Due to the potential presence of contaminated media at the Site, the New York State Department of Environmental Conservation (NYSDEC) has placed notice on the Site operator. The NYSDEC identified the Site as:

Site Name: 47-25 34th Street
Site Address: 47-25 34th Street, Long Island City, NY 11101
Tax Map No.: Block 250, Lot 1
NYSDEC Site No.: 241299

This SCWP was developed in accordance with the DER-10 Technical Guidance for Site Investigation and Remediation, dated May 2010 (DER-10).

The purpose of the Site Characterization(SC) is to determine the nature and extent of contamination at the Site, characterize environmental media, qualitatively assess the potential exposure of receptors to Site contaminants, and develop any other additional data necessary to support the development of a Remedial Action Work Plan (RAWP). This SCWP outlines Phase I of the SC as a potential for additional investigation phases may be warranted following the implementation. Any additional investigation that is required will be conducted by submitting a work plan and receiving approval from both NYSDEC & NYSDOH project managers prior to sampling. Sampling results from the SCWP will be reported via a site characterization report (SCR).

1.2 SCWP Document Organization

This SCWP contains a background (Section 2) describing the Site, its history, and results of previous environmental investigations; a Section 3 defining the objectives and scope of the RI; and Sections 4 and 5 describing the project operations plans (e.g., Quality Assurance/Quality Control, Health and Safety). Reporting requirements and the proposed project schedule are discussed in Section 6. Figures are provided to illustrate Site conditions and the locations of proposed investigation activities.

1.3 Project Team and Contact Information

A list of names, contact information, qualifications and roles of the principal Roux personnel who will participate in the investigation are included below and in the Quality Assurance Project Plan/Field Sampling Plan (QAPP/FSP) in Appendix B.

Roux Personnel	Title	Contact Information
Mark Elmendorf Principal Engineer	Project Principal	(631) 232-2600 melmendorf@rouxinc.com
Rachel Henke Senior Scientist	Project Manager	(631) 232-2600 rhenke@rouxinc.com
To Be Determined	Field Manager	(631) 232-2600
Valerie Sabatasso Senior Scientist	Quality Assurance Office	(631) 232-2600 vsabatasso@rouxinc.com

The name and contact information for the Site is:

Joseph A. Farkas
CEO/Founder
Metropolitan Realty Associates LLC
555 Madison Avenue, 6th Floor
New York, NY 10022
212-350-3701 (office)
jfarkas@metropolitanra.com

Contact information for the major subcontractors involved in the investigation (driller, data validator, and laboratory) are also included below and the QAPP/FSP.

Subcontractor	Company Name	Contact Information
Laboratory Analysis	Pace/Alpha Analytical, Inc., Westborough, Massachusetts	(800) 624-9220
Data Usability Summary Report Preparation	Data Validation Services, North Creek, New York	(518) 251-4429
Drilling	ADT A Cascade Company, Mineola, New York	(516) 616-6026

Pace/Alpha Analytical, Inc. is a New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Program (ELAP)-certified laboratory. Waste disposal and other subcontracted services have not been selected as of the preparation of this SCWP. This information will be provided to the NYSDEC prior to the start of field activities.

2. Background

This section provides pertinent background information, including a description of the Site and its setting, the history of the Site, and the results of previous environmental work conducted at the Site.

2.1 Site Description and Setting

A Site location map is included as Figure 1. The subject property contains a 3-story (east side) and 4-story (West side) multi-tenant commercial building and associated parking lot that occupies the city block bounded by 47th Avenue to the north, 35th Street to the east, 48th Avenue to the south, and 34th Street to the west. Entrance and egress to the Site is provided through a chain link gate located along 47th Street (Northern property boundary). The Site is identified by the City of New York Department of Finance records, as Block 250, Lot 1.

The NYCDOT proposes to lease 149,000 square feet of an approximately 322,390 square foot facility. The NYCDOT lease will include the entirety of the ground floor (55,000 square feet), and the entirety of the mezzanine floor (81,000 square feet) along with approximately eighty (80) of the total 87 parking spaces in the surface parking lot. NYCDOT will occupy approximately 13,000 square feet of the surface parking lot. The multi-use commercial office building is currently vacant on the ground and mezzanine floors (space DOT seeks) and has commercial and manufacturing tenants on the 3rd and 4th floors. The following tenants were identified: Gracie Restorations, Suite 303; Metropolitan Office and Computer Supplies, Suite 304; D.S.C., Suite 305; Kamp Billy, Suite 306; and Shop 67 (Suite 307) and Tech Systems, a technology company (4th Fl).

No visual evidence of underground storage tanks (e.g., vent pipes, fill ports), potable water wells, monitoring wells, clarifiers, dry wells, septic tanks, or leach fields was observed during the Site visit.

The subject property is located in an area characterized by a mix of commercial, manufacturing, and public facilities and institutional uses and buildings with the area zoned as M1-4, manufacturing. The Site building is situated in the city block bounded by 47th Avenue to the north, 35th Street to the east, 48th Avenue to the south, and 34th Street to the west and totals approximately 2.75 acres (120,000 square feet). The existing building also known as “The HUB LIC” has three (3) floors on the eastern portion and four (4) floors on the western portion of the building.

The previous reports generated for the Site are included in Appendix A.

2.1.1 Utilities

Sewer, water and electric services are all provided by the public utility.

2.1.2 Topography

The United States Geological Survey (USGS) 7.5-minute topographic maps of the Brooklyn and Central Park, New York, 7.5 quadrangles indicates that the subject property elevation is approximately 50 feet above mean sea level (USGS, 2013). The Site vicinity is characterized as generally flat with limited areas of gently rolling hills. Topographic relief is note across the Site with an approximately 10 foot change in elevation from the south to the north side of the property. Dutch Kills, a tributary to Newtown Creek, is located approximately ½-mile west of the Site. Newtown Creek is located approximately 1-mile south and

southwest of the subject property with the East River located approximately 1/5 miles to the west. Based upon the observed topography, shallow groundwater flow is anticipated to flow tor\wards the west-southwest.

The local topography, geology, and surficial drainage patterns are tools used to evaluate the properties of local shallow groundwater flow. Groundwater in the Site area probably occurs under water table conditions within the glacial sediments and fill and may also be interconnected through fractures of the underlying bedrock. Based on the topography and surficial drainage patterns shown on the 2013 Unites States Geological Survey (USGS) Brooklyn/Central Park, New York, 7.5 minute series quadrangle maps, it appears that the direction of shallow groundwater flow is downgradient towards the west towards Dutch Kills, a tributary of easterly-flowing Newtown Creek, which flows into the East River, located approximately 1 mile to the west. Depth to groundwater in the vicinity of the Site was identified at depths ranging from 30 to 60 feet bgs.

2.1.3 Wetland Areas and Surface Water Bodies

According to the Environmental Data Resources, Inc. (EDR) report, the Site is not located in or adjacent to regulated wetlands. The Site is not within the 100-year or 500-year flood zones.

2.1.4 Neighboring Properties, landuse and Zoning

The subject property is in the eastern portion of Long Island City, Queens, New York. The subject property lies south of Queens Boulevard and is bound by 34th Street to the west, 47th Avenue to the north, 35th Street to the east, and 48th Avenue to the south. Figure 3 shows land use in the area and Figure 4 shows sensitive receptors in the area. The area is characterized by a mix of commercial, manufacturing, and public facilities, institutional uses and buildings with the area zoned as M1-4, manufacturing. The following properties were noted immediately adjacent to the Site:

- North: 47th Avenue followed by a New York City Fire Department warehouse and a New York City Department of Transportation facility (34-02 Queens Blvd.) with Aviation High School, a public high school run by the Department of Education, is located northeast of the Project Site between 35th and 36th Streets (45-30 36th Street) and the New NY Museum (49-98 34th Street) located to the northwest.
- South: 48th Avenue followed by Amy's Bread Wholesale Bakery (48-09 34th Street) and an FDNY warehouse with Newman's Kitchen Events and Catering (35-02 48th Avenue) to the southeast and a vacant 4-story building to the southwest.
- East: 35th Street followed by Frank DeBono Construction Corp (office) (47-15 35th Street), Axon US and K9 School (Dog Training) (47-31 35th Street), Expedition Logistics, and Jeda Falcon Uniforms, LLC (47-47 35th Street).
- West: 33rd Street followed by BCS International Corp (47-15 33rd Street), M&J Commissary Coffee Shop (47-38 33rd St), and Eclectic Encore Properties (47-51 33rd Street).

The prevailing built form in the area generally comprised of 4-6 story warehouse style buildings that take up entire city blocks.

2.2 Site History

Historical research indicates that the subject property was developed in 1924 with the existing building structure and initially occupied by manufacturing operations including International Motor Co. (1924 to at least 1950), and Neptune Meter Co. (1962 to sometime between 1977 and 1979). In the early 1980s, the

building began being utilized as a multi-tenant facility that included offices, commercial, and manufacturing operations. Manufacturing operations of note include Metropolitan News Co Inc. (1993-1999) and Eveready Hardware Mfg. Co (2005-2009). Site contacts report that a furniture workshop (3rd fl) is currently located on the 3rd floor. Other recent tenants include a locksmith that recently vacated the ground level; Remco Maintenance, a janitorial services firm; Ralph Lauren-Polo offices; Elaine's Bakery; and Feeda Vitamin Company.

2.3 Environmental Conditions / Results of Previous Environmental Investigations

The following environmental reports were available for review:

- Phase I Environmental Site Assessment (ESA), prepared by AECOM in November 2020.
    - AECOM completed a Phase I ESA at the Site in November 2020. AECOM determined that the potential historical use of the subject property as manufacturing is considered a REC. Based upon findings, AECOM recommended an indoor air quality assessment and sub-slab vapor investigation to evaluate what impacts, if any, historical underground storage tanks and other historical uses identified during the Phase I ESA may have on indoor air quality.
- Supplemental Indoor Air Quality and Sub-Slab Investigation Letter Report (SIR), prepared by AECOM in August 2022.
    - AECOM completed a SIR at the Site in June 2022. According to results report by AECOM, contamination was identified in indoor air and sub-slab samples. It does not appear that indoor air samples were co-located with sub-slab soil vapor samples.
    - Seven (7) of the volatile organic compounds (VOCs) including: acetone, carbon disulfide, MIBK, methylene chloride, n-hexane, PCE, and TCE were detected in one or more indoor and/or ambient air samples at concentrations above the applicable range of published background levels and/or its AGV.
    - Twenty-eight (28) of the VOCs were detected above published indoor air background concentrations. Detected VOC's include: 1,1,1-trichloroethane (111-TCA), 1,1-dichloroethane (11-DCA), 1,1-dichloroethene (11-DCE), 1,2,4-trimethylbenzene, total 1,2-dichloroethene (12-DCE), 1,3,5-trimethylbenzene, 1,3-butadiene, 2,2,4-trimethylpentane, 4-ethyltoluene, 4-isopropyltoluene, acetone, benzene, bromodichloromethane, carbon disulfide, chloroform, cis-12-DCE-, cumene, cyclohexane, ethylbenzene, isopropyl alcohol, m,p-xylene, methyl butyl ketone, MEK, MIBK, methylene chloride, n-butane, n-butylbenzene, n-heptane, n-hexane, n-propylbenzene, sec-butylbenzene, styrene, tertbutylbenzene, PCE, toluene, TCE, xylene (total), and o-xylene.
    - Based on Matrix A, for the corresponding indoor air concentration, the recommended action for the sub-slab vapor concentrations of carbon tetrachloride and 11-DCE is "no further action"; however, "mitigation" is the recommended action for the concentration of cis-1,2-dichloroethene and TCE present.
    - Based on Matrix B, for the corresponding indoor air concentration, the recommended action for the sub-slab vapor concentrations of PCE is "no further action"; however, "mitigation" is the recommended action for the concentrations of 111-TCA and methylene chloride present.
    - Since vinyl chloride was not detected in soil vapor samples, a comparison of results to Matrix C of the New York State Department of Health (NYSDOH) Soil Vapor Intrusion Guidance Document May 2017 Matrices Updates was not conducted.

The reports are provided in Appendix A. Figures showing the historic sampling data are included in Appendix A.

2.3.1 NYSDEC Spill Listings

The subject property is identified on the NY Underground Storage Tank (UST) and NY Aboveground Storage Tank (AST) database. The Site address was also identified on the Resource Conservation and Recovery Act (RGRA) Large Quantity Generator (LQG) database and manifests database under REMCO International and in the RCRA-Non Generator/No Longer Regulated (RCRA-NonGen/NLR), and Manifests (related to disposal of hazardous waste) environmental databases, and NY Spills database listing under City & Suburban Delivery Systems. RCRA violations were identified; however, they were informal and issued in 2007 with no subsequent violations noted. City & Suburban Delivery Systems was identified on the NY Spills database with a reported petroleum spill on January 3, 2003. The spill was reported due to an equipment failure due to a "possible leak in discharge line"; the caller was doing a tank closure, and test results showed contamination. This closure may be associated with two UST closures conducted on December 12, 2002. The EDR report indicates that the NYSDEC reviewed the Closure Report and issued a NFA determination. Historically, several USTs, shown below, have been closed in place at the Property:

UST ID	Size -Gal.	Usage	Status	Closed Date
001	4,000	Diesel	Closed-In-Place	12/12/2002
002	4,000	Diesel	Closed-In-Place	12/12/2002
003	6,000	Not Reported	Closed - Removed	12/21/2015
1	10,000	Listed as Empty	Closed-In-Place	12/01/1997
2	10,000	Listed as Empty	Closed-In-Place	12/01/1997

No additional information is known related to the specific locations or management of these USTs.

3. SC Work Plan Objectives, Scope, and Rationale

Roux, on behalf of the Site operator, has developed an SC scope of work that satisfies NYSDEC requirements. Data collected during the RI will determine the basis for remedial actions for the Site.

Standards, Criteria, and Guidance (SCGs) for soil at sites are the numerical SCOs presented in Part 375. The SCOs are categorized into unrestricted use criteria and restricted use (residential, restricted-residential, commercial, or industrial) criteria, as well as criteria for protection of groundwater and ecological resources. The applicability of each category of SCOs is determined based upon the current and reasonably anticipated future use of the Site, as well as cleanup tracks being evaluated. The anticipated use of the Site is commercial/industrial.

The SCGs for groundwater are the NYSDEC AWQSGVs for Class G groundwater – Technical & Operational Guidance Series (TOGS) 1.1.1 (groundwater is not and will not be used for drinking water, as the Site is/will be connected to the public water supply).

3.1 Objectives

The objective of the SC is to further assess the nature and extent of contamination associated with the following AOCs:

- Sub slab vapor results

The SC will evaluate soil, Sub slab vapor results , indoor air and groundwater at the Site to determine the nature and extent of impacted media at the Site and will be used to determine the potential for off-Site impacts and proposed remedial action selection. Environmental data collected during the SC will be used to qualitatively assess the potential exposure of receptors to Site contaminants and develop the information necessary to support the development of a Remedial Action Work Plan (RAWP).

3.2 SC Scope

The scope of the SC will include the collection of sufficient Site investigation data so that, together with the historical data, the entire Site will be sufficiently characterized to support the development of a Site-wide RAWP. To accomplish this, the scope of work for the SC will include the following:

- The performance of Site reconnaissance to confirm proposed sampling locations;
- The advancement of soil borings, installation of permanent groundwater monitoring wells, collection of groundwater samples from new monitoring wells, collection of indoor air samples, installation of sub slab vapor monitoring points, and collection of vapor samples;
- The collection of soil and groundwater data sufficient to define the nature and extent of impacted media and current Site conditions and evaluate potential offsite groundwater migration; and
- The collection of a synoptic round of groundwater level measurements and the collection of additional land survey data as needed for developing a groundwater elevation contour map.

The following section describes the methods and procedures that will be followed during the SC field work, which includes the advancement of soil borings, the collection of soil samples, and the installation and

development of new groundwater monitoring wells collection of sub slab vapor samples, and indoor air samples.. This information will be detailed in the SCWP (Task 1). All work will be performed in accordance with a NYSDEC-approved SCWP.

Soil Borings

To characterize the soil conditions at the Property, a series of 12 borings will be completed, locations are shown on Figure 2. Soil samples will be collected by utilizing a Geoprobe direct-push drill rig. Soil samples will be collected continuously from grade to the terminal depth of the boring which will be approximately 35 feet. It is expected that groundwater will be 30 feet and each boring will be advanced to 5 feet below the first groundwater identified. However, it is understood that groundwater may be deeper at the site. This is the expected depth to groundwater at the property. During soil boring advancement, soil lithology will be recorded, and soil will be inspected for evidence (visual or olfactory) of contamination and field screened continuously for organic vapors using a photoionization detector with a 10.6 electron volt (eV) lamp. The project will place soil borings at least 5 feet below the water table. If visual/olfactory/PID evidence indicate the presence of petroleum or chlorinated solvent contamination at or below the water table interface, additional soil samples will be documented and collected in the saturated zone for volatile organic carbon (VOC) analysis to determine if soil contamination is present above Protection of Groundwater Soil Cleanup Objectives.

Soil samples were collected from within each location from the following intervals and ran for the following analyses:

- 0-inch-2-foot interval (TCL/Part 375 VOC + 10 Tentatively identified compounds (TICs), TCL/Part 375 Base neutral acids (BNA)/Semivolatile organic compounds (SVOCs) + 20 TICs) , TAL Metals total and dissolved, polychlorinated biphenyls (PCBs), pesticides, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS);
- 2–4-foot interval (hold, pending analysis of above interval: TCL/Part 375 VOC + 10 Tentatively identified compounds (TICs), TCL/Part 375 Base neutral acids (BNA)/Semivolatile organic compounds (SVOCs) + 20 TICs; , TAL Metals total and dissolved, polychlorinated biphenyls (PCBs), pesticides, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS);
- 6–8-foot interval (hold, pending analysis of above interval: TCL/Part 375 VOC + 10 Tentatively identified compounds (TICs), TCL/Part 375 Base neutral acids (BNA)/Semivolatile organic compounds (SVOCs) + 20 TICs, , TAL Metals total and dissolved, polychlorinated biphenyls (PCBs), pesticides, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS);
- 8–10-foot interval (hold, pending analysis of above interval: TCL/Part 375 VOC + 10 Tentatively identified compounds (TICs), TCL/Part 375 Base neutral acids (BNA)/Semivolatile organic compounds (SVOCs) + 20 TICs, , TAL Metals total and dissolved, polychlorinated biphenyls (PCBs), pesticides, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS); and
- Below 10 feet to first groundwater, each 4-foot core of soil will be inspected for evidence (visual or olfactory) of contamination and field screened continuously for organic vapors using a photoionization detector with a 10.6 electron volt (eV) lamp. The core with the highest reading will be collected for TCL/Part 375 VOC + 10 Tentatively identified compounds (TICs), TCL/Part 375 Base neutral acids (BNA)/Semivolatile organic compounds (SVOCs) + 20 TICs, , TAL Metals total and dissolved, polychlorinated biphenyls (PCBs), pesticides, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS).

Soil samples will be analyzed for the NYSDEC-required emerging contaminants (ECs)[1]. Additional necessary precautions will be taken when sampling for ECs in the field including, but not limited to:

- Using the proper field clothing or personal protective equipment (i.e., no materials will contain Gore-Tex or Tyvek);
- Avoid using sampling equipment components/containers making contact with aluminum foil, low density polyethylene (LDPE), glass, or polytetrafluoroethylene materials;
- Following PFAS field sampling guidelines (i.e., using sampling materials made from high density polyethylene [HDPE], silicon, or stainless steel and avoid using equipment containing Teflon and using sharpies, permanent markers, adhesives, and waterproof/plastic clipboards and notebooks); and
- Utilizing regular ice for sample presevation and only "PFAS-free" water and Alconox for decontamination.

Groundwater Sampling

Three (3) groundwater monitoring wells will be installed at the Property; locations are shown on Figure 2. The groundwater monitoring wells will be constructed of 2-inch inside diameter, Schedule 40 polyvinyl chloride (PVC) casing and 0.020-inch slot, machined screen. Groundwater monitoring well construction will be as follows:

- The groundwater monitoring wells will be placed a maximum of 60 feet below ground surface. Well screens will be 10 feet long and will be installed with two feet above and ten feet below the observed water table. It is understood that groundwater may be deeper then 30 feet, and drilling will continue until 60 feet to reach groundwater.
- A sand pack will be placed around the well screen, extending two feet above the top of the screened zone.
- A minimum two-foot-thick bentonite pellet seal will be placed above the sand pack. Once the pellets have been allowed to hydrate, cement bentonite grout will be pumped into the remaining annular space from the bottom up.
- The wells will be completed using locking well plugs with stickup covers cemented into place.
- The depth of monitoring wells and screened intervals will be dependent on field conditions, and may require nested or cluster monitoring wells depending on the depth of contamination observed.

Each new groundwater monitoring well to be sampled will be developed to ensure proper hydraulic connection with the aquifer and to reduce/eliminate turbidity of the groundwater. The wells will be developed using a submersible pump, which will be surged periodically until well yield is consistent and has turbidity below 50 nephelometric turbidity units (NTUs), if possible. Detailed procedures regarding well development can be found in the QAPP/FSP.

Prior to sampling any new wells, the depth to groundwater in each monitoring well will be measured using an electronic water level meter and a groundwater contour map will be developed using the survey data. At least one week following redevelopment, all onsite wells will then be sampled consistent with USEPA low-flow sampling requirements using a peristaltic pump and one round of groundwater samples will be collected in accordance with the QAPP/FSP. The SCWP will provide a listing of the groundwater sampling locations, screened intervals, analytical suites and rationale for sampling. Field parameters (e.g., pH,

[1] Emerging Contaminants *(*ECs) list includes 1,4-Dioxane and the 40 Per- and Polyfluoroalkyl Substances (PFAS) which include the 40 compounds listed in the NYSDEC November 2022 "Sampling, Analysis, and Assessment of Per-And Polyfluoroalkyl Substances (PFAS)" . PFAS in soil and groundwater will be analyzed by USEPA Method 1633 and 1,4-Dioxane in groundwater will be analyzed by USEPA Method 8270D SIM and 1,4-Dioxane in soil will be analyzed by USEPA Method 8270D.

dissolved oxygen, oxidation-reduction potential [ORP], etc.) will also be collected using a water quality meter during purging and prior to sampling. It is expected the sampling will include TCL/Part 375 VOC + 10 Tentatively identified compounds (TICs), TCL/Part 375 Base neutral acids (BNA)/Semivolatile organic compounds (SVOCs) + 20 TICs, total and dissolved metals, polychlorinated biphenyls (PCBs), pesticides, and 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS).. A licensed New York State Land Surveyor will survey the monitoring well locations. Roux anticipates one day of surveying to take place during groundwater sampling activities.

Similarly to the collection of soil samples for ECs, additional necessary precautions will be taken when groundwater sampling for ECs in the field including, but not limited to:

- Using the proper field clothing or personal protective equipment (i.e., no materials will contain Gore-Tex or Tyvek);
- Avoid using Grundfos and bladder pumps and sampling equipment components/containers making contact with aluminum foil, low density polyethylene (LDPE), glass, or polytetrafluoroethylene materials;
- Following PFAS field sampling guidelines (i.e., using sampling materials made from high density polyethylene [HDPE], silicon, or stainless steel and avoid using equipment containing Teflon and using sharpies, permanent markers, adhesives, and waterproof/plastic clipboards and notebooks); and
- Utilizing regular ice for sample presevation and only “PFAS-free” water and Alconox for decontamination.

All groundwater samples will be collected and placed in the laboratory-supplied containers and shipped to the laboratory under chain of custody procedures in accordance with Roux’s field sampling SOPs

Sub Slab Vapor Samples

A total of 7 sub slab vapor samples (SV-01 through SV-07) will be collected during the SC to evaluate soil vapor conditions at the Property, as shown on Figure 2. The sample locations will be based on the planned soil borings, it is expected placement the sub slab samples within 4 feet of the soil boring to allow a comparison of the vapor results to the soil results. The sub slab vapor samples will be collected at a target depth of approximately 2 inches below the slab.

New Teflon®-lined tubing will be attached to an expendable vapor sampling point with a 6-inch stainless steel screen.

The vapor samples will be collected using pre-cleaned (batch certified) 6-liter summa canisters with regulators calibrated to collect samples over a 8-hour period and analyzed using USEPA Method TO 15 for VOCs. A helium tracer gas test will be performed on each vapor point prior to sampling in accordance with the procedures outlined in the NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, February 2024. The protocol for using a tracer gas will measure a vapor sample from the probe for the presence of high concentrations (> 10%) of the tracer. Flow rates for both purging and collecting must not exceed 0.2 liters per minute to minimize ambient air infiltration during sampling. Additional details regarding sub slab vapor sampling methods are provided in the QAPP/FSP (Appendix B).

All data will be produced in accordance with NYSDEC Analytical Services Protocol (ASP) Category B deliverables and will be reviewed and validated by Data Validation Services, Inc. (DVS), an independent

data validator. Data Validation Services will prepare a Data Usability Summary Report (DUSR) before data is incorporated into the SC Report (SCR) for the Site. All data will be submitted to NYSDEC in electronic format, in accordance with DER-10, Section 1.15. Detailed field sampling procedures are provided in the Quality Assurance Project Plan/Field Sampling Plan (QAPP/FSP; Appendix B of this SCWP).

Results of sub slab vapor sampling exceeding NYSDOH guidelines will be provided to building tenants within 15 days of receipt. If sampling is not conducted prior to the end of this heating season, the results of the most recent prior indoor air sampling exceeding NYSDOH guidelines should be provided to building tenants.

Indoor Air Sampling

The Indoor Air Sampling (IAQ) sampling will be conducted in general accordance with the NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, dated February 2024 (NYSDOH Vapor Intrusion Guidance Document). The IAQ Survey field activities will include 7 indoor air samples and one ambient air sample for laboratory analysis. Indoor air samples are identified as IA-1 through IA-7 and are shown on Figure 2**.** The samples are co-located and will be collected concurrent with the planned sub slab sampling locations

Indoor and ambient air samples will be collected utilizing individually certified-clean six-liter Summa® canisters. The samples were collected over an eight-hour time period from a height of approximately three to four feet above the floor to simulate the typical breathing zone. Initial and final canister vacuum readings (inches of mercury) and sampling times will be recorded on the laboratory chain-of-custody forms.

The IAQ samples were analyzed for VOCs utilizing USEPA Method TO-15 Select Ion Monitoring (SIM) method in order to meet New York State Indoor Air screening levels on a standard turnaround basis (i.e., 7-14 days). The Summa® canisters will be properly labeled and transported via courier.

3.2.1 Site Reconnaissance and Survey

An inspection of the existing Site conditions will be conducted to determine final locations of soil borings and monitoring wells based on actual field conditions. Proposed sampling locations will be marked with spray paint or flags, and surveyed (horizontal coordinates and elevation) prior to the intrusive work. New York State law requires that New York 811 be notified at least three working days prior to subsurface work is conducted to initiate the utility locating activities. Companies with subsurface utilities present will locate and mark out subsurface utility lines. However, New York 811 contractors will only locate utilities on public property and rights-of-way. Roux will subcontract a subsurface utility locator to perform a geophysical survey of the entire Site footprint prior to commencement of the SC. Subsurface anomalies, including utilities, will be clearly marked with spray paint. A Roux representative will be on-Site during the geophysical survey to record the locations of subsurface anomalies with the subcontractor. Roux will provide a interm report of the findings for review within 10 days of the completion of the work.

3.2.2 Management of Investigating Derived Waste

Management of investigation derived waste (IDW) will be completed in accordance with NYSDEC DER-10, Section 3.3 (e). IDW generated during drilling will be collected in properly labeled USDOT approved storage containers (55-gallon drums) and grouped by environmental matrix (soil, water, PPE/plastic, construction debris). Drums will be tracked and given unique identification codes based on the following:

- A prefix indicating the site where the drum was generated and the drum's contents: i.e., S – Soil, W – Water, and P – PPE/Plastic.
- Following the prefix and a hyphen will be the drum's chronological number of generation. For example, drum S-1 will be the first drum filled with soil for the project; while drum W-8 will be the eighth drum generated and contains water.
- As drums are generated, their identification code, date of generation, contents, source (i.e., drill cuttings from location x, purge water from well y), and date sampled will be entered on a tracking table.

The drums will be centrally stored inside and on-site within a portable containment system such as Rigid-Lock QuickBerm and covered . Subsequently, the waste soils and/or water will be characterized with laboratory analyses for proper disposal. Waste transportation and disposal of all contaminated wastes will be managed by Roux and the subcontractor. Roux anticipates that drummed IDW will be disposed of off the Site to a permitted disposal facility. Roux will retain copies of each waste disposal manifest for documentation.

Following sample collection, boreholes that will not be converted to monitoring wells will be backfilled with soil cuttings to surrounding grade. Well development water and purge water generated during sampling will be placed into sealed and labeled DOT approved 55-gallon drums, pending characterization and off-site disposal at a permitted facility.

3.3 Green Remediation Implementation

This SCWP was prepared consistent with the guidance document: NYSDEC DER-31, Green Remediation Issued August 11, 2010.

Best Management Practices

The section describes the Best Management Practices (BMPs) which will be implemented during the SCWP to best achieve the green remediation concepts described within the NYSDEC DER-31. The following BMPs were identified for the implementation of this SCWP:

- Minimize Mobilizations – Roux will schedule work to ensure advancement of borings and the well installation activities can be completed within one mobilization. Roux will coordinate site activities in conjunction with other site activities (as possible) to minimize the number of trips to site for field staff.
- No Idling of Equipment – Equipment will be shut down if left idling longer than 15 minutes.
- Sampling Equipment:
  - Rechargeable Battery-Powered Sampling Equipment – CAMP equipment (PIDs, DusTraks, Tharmis Antenna), GeoPump Peristaltic Pump, Horiba water quality meter, data loggers, and any other battery-operated equipment will be charged at the Roux facility. Roux estimated in 2022 that 26% of the electricity used at their facility is generated on-site through use of solar panels. This practice will reduce the load on the electrical grid and allow for the use of renewable sources of energy.
  - Sampling tubing or bailers – Roux will leave either the HDPE sampling tubing or bailers in each of the wells once sampling is completed. This practice will reduce sampling waste.
  - Waste Storage Containers – Roux uses cleaned reclaimed 55-gallon drums for the storage of IDW. Roux reuses plastic 5-gallon buckets for the purpose of the collection of groundwater or waste soil generated during the project.

4. Quality Assurance/ Quality Control (QA/QC)

The goal of the QA/QC aspect of the RI is to ensure that suitable and verifiable data results from sampling and analyses are performed. To accomplish this, a QAPP/FSP has been prepared and is provided as Appendix B.

5. Health and Safety

A site-specific Health and Safety Plan (HASP) has been prepared for the Site and is provided in Appendix C. The proposed Community Air Monitoring Plan (CAMP) reporting will occur during all ground intrusive activities.

6. Community Air Monitoring Plan

A real-time CAMP will be implemented if contaminated or potentially contaminated media is handled or during any ground intrusive activities. Ground intrusive activities include, but are not limited to, soil/waste excavation and handling, SSDS installation or trenching. The air monitoring is intended to avoid or minimize exposure of the public to potential environmental hazards in the soil during excavation of such soil. A CAMP is intended to provide a measure of protection for the downwind community from potential airborne contaminant releases as a direct result of investigative and remedial work activities; it is not intended for field personnel directly involved in ground intrusive activities. Results of this air monitoring will be used to determine the appropriate response action, if needed.

The community air monitoring program described herein has been prepared using the air quality limits specified in the NYSDOH Generic Community Air Monitoring Plan and other air monitoring programs previously performed by Roux in New York.

While work zone air monitoring is not described in this SCWP, typical air quality limits for the work zone are provided in the HASP. The Contractor's Health and Safety Plan will need to supplement the HASP if any additional hazards are anticipated during construction.

6.1 VOC Monitoring, Response Levels, and Actions

VOCs will be monitored at the downwind perimeter of the immediate work area (i.e., the exclusion zone) or on a continuous basis during invasive work. Upwind concentrations will be measured at the start of each workday and periodically thereafter to establish background conditions. The monitoring work will be performed using equipment appropriate to measure the types of contaminants known or suspected to be present. The equipment will be calibrated at least daily for the contaminant(s) of concern or for an appropriate surrogate. The equipment will be capable of calculating 15-minute running average concentrations that will be compared to the levels specified below.

- If the ambient air concentration of total organic vapors at the downwind perimeter of the work area or exclusion zone exceeds 5 parts per million (ppm) above background for the 15-minute average, work activities will be temporarily halted and monitoring continued. If the total organic vapor level readily decreases (per instantaneous readings) below 5 ppm over background, work activities will resume with continued monitoring.
- If total organic vapor levels at the downwind perimeter of the work area or exclusion zone persist at levels in excess of 5 ppm over background but less than 25 ppm, work activities will be halted, the source of vapors identified, corrective actions taken to abate emissions, and monitoring continued. After these steps, work activities will resume provided that the total organic vapor level 200 feet downwind of the exclusion zone or half the distance to the nearest potential receptor or residential/commercial structure, whichever is less – but in no case less than 20 feet, is below 5 ppm over background for the 15-minute average.
- If the organic vapor level is above 25 ppm at the perimeter of the work area, activities will be shutdown.

All 15-minute readings must be recorded and be available for NYSDEC and NYCDEP personnel to review and summarized in the SCWP. Instantaneous readings, if any, used for decision purposes will also be

recorded. Readings (both for VOCs and particulate) will be provided to NYSDOH for review. Additionally, any potential exceedances will be reported within 24 hours, and the reporting and notifications will include the reason for the exceedance, what was done to correct it, and if the action was effective.

6.2 Particulate Monitoring, Response Levels, and Actions

Particulate concentrations will be monitored continuously at the upwind and downwind perimeters of the exclusion zone at particulate monitoring stations. The particulate monitoring will be performed using real-time monitoring equipment capable of measuring particulate matter less than 10 micrometers in size (PM-10) and capable of integrating over a period of 15 minutes (or less) for comparison to the airborne particulate action level. The equipment will be equipped with an audible alarm to indicate exceedance of the action level. In addition, fugitive dust migration should be visually assessed during all work activities.

- If the downwind PM-10 particulate level is 100 micrograms per cubic meter (mcg/m3) greater than background (upwind perimeter) for the 15-minute period or if airborne dust is observed leaving the work area, then dust suppression techniques will be employed. Work will continue with dust suppression techniques provided that downwind PM-10 particulate levels do not exceed 150 mcg/m3 above the upwind level and provided that no visible dust is migrating from the work area.
- If, after implementation of dust suppression techniques, downwind PM-10 particulate levels are greater than 150 mcg/m3 above the upwind level, work will be stopped, and a re-evaluation of activities initiated. Work will resume provided that dust suppression measures and other controls are successful in reducing the downwind PM-10 particulate concentration to within 150 mcg/m3 of the upwind level and in preventing visible dust migration.

All 15-minute readings must be recorded and be available for all personnel to review and summarized in the SCR. Instantaneous readings, if any, used for decision purposes will also be recorded.

In addition to reporting any potential exceedances to NYSDEC & NYSDOH within 24 hours and notifications will include the reason for the exceedance, what was done to correct it, and if the action was effective.

6.3 Special Requirements for Work Within 20 Feet of Potentially Exposed Individuals or Structures

When work areas are within 20 feet of potentially exposed populations or occupied structures, the continuous monitoring locations for VOCs and particulates must reflect the nearest potentially exposed individuals and the location of ventilation system intakes for nearby structures. The use of engineering controls such as vapor/dust barriers, temporary negative-pressure enclosures, or special ventilation devices should be considered to prevent exposures related to the work activities and to control dust and odors. Consideration should be given to implementing the planned activities when potentially exposed populations are at a minimum, such as during weekends or evening hours in non-residential settings.

- If total VOC concentrations opposite the walls of occupied structures or next to intake vents exceed 1 ppm, monitoring should occur within the occupied structure(s). Depending upon the nature of contamination, chemical-specific colorimetric tubes of sufficient sensitivity may be necessary for comparing the exposure point concentrations with appropriate pre-determined response levels (response actions should also be predetermined). Background readings in the occupied spaces must be taken prior to commencement of the planned work. Any unusual background readings should be discussed with NYSDOH prior to commencement of the work.

- If total particulate concentrations opposite the walls of occupied structures or next to intake vents exceed 150 mcg/m3, work activities should be suspended until controls are implemented and are successful in reducing the total particulate concentration to 150 mcg/m3 or less at the monitoring point.
- Depending upon the nature of contamination and remedial activities, other parameters (e.g., explosivity, oxygen, hydrogen sulfide, carbon monoxide) may also need to be monitored. Response levels and actions should be pre-determined, as necessary, for each site.

6.4 Special Requirements for Indoor Work with Co-Located Residences or Facilities

Unless a self-contained, negative-pressure enclosure with proper emission controls will encompass the work area, all individuals not directly involved with the planned work must be absent from the room in which the work will occur. Monitoring requirements shall be as stated above under “Special Requirements for Work Within 20 Feet of Potentially Exposed Individuals or Structures” except that in this instance “nearby/occupied structures” would be adjacent occupied rooms. Additionally, the location of all exhaust vents in the room and their discharge points, as well as potential vapor pathways (openings, conduits, etc.) relative to adjoining rooms, should be understood and the monitoring locations established accordingly. In these situations, it is strongly recommended that exhaust fans or other engineering controls be used to create negative air pressure within the work area during remedial activities. Additionally, it is strongly recommended that the planned work be implemented during hours (e.g. weekends or evenings) when building occupancy is at a minimum.

7. Reporting and Schedule

The following will be provided to the NYSDEC during the course of the SC work.

Daily Progress Reports

DEC and DOH will be notified at least 7 days prior to mobilization to the site. Daily progress report submittals will be provided to the NYSDEC and NYSDOH project manager within 24 hours. Daily progress report submittals will include the following.

- Discovery of any previously unknown contaminated media during SC activities will be promptly communicated to NYSDEC's project manager;
- Daily field reports be submitted to the NYSDEC while activity is occurring at the site such as field sampling;
- A Site map will be provided to identify locations discussed in progress reports provided to NYSDEC;
- An update of progress made during the reporting day;
- Locations of work keyed to a map of the Site;
- A summary of CAMP results, including any potential exceedances and a figure showing location of CAMP stations;
- An explanation of notable Site conditions; and
- Photographs of the work.

Daily reports are not intended to be the mode of communication for notification to the NYSDEC of emergencies (accident, spill), requests for changes to the SCWP or other sensitive or time critical information. However, such conditions must also be included in the daily reports. Emergency conditions and changes to the SCWP will be addressed directly to NYSDEC Project Manager via personal communication.

Monthly Reports

Monthly reports will be submitted to NYSDEC and NYSDOH Project Managers by the 10th of the month following the end of monthly reporting period. Monthly reports will commence upon approval of the SCWP and will include:

- Activities relative to the Site during the previous reporting period and those anticipated for the next reporting period;
- Description of approved activity modifications, including changes of work scope and/or schedule;
- Sampling results received following internal data review and validation, as applicable; and
- An update of the remedial schedule including the percentage of project completion, unresolved delays encountered or anticipated that may affect the future schedule, and efforts made to mitigate such delays.

Site Characterization Report

A SCR will be prepared to summarize the results and findings of the SC following NYSDEC approval. The SCR will include all data developed during the SC and will meet the technical requirements of DER-10.

Interim Remedial Measure Work Plan (IRM)

The IRM will present, develop, and evaluate potential remedial alternatives and identify a selected remedial approach for the Site. The IRM will be prepared in accordance with the NYSDEC requirements and will meet the technical requirements of DER-10.

Schedule

The following schedule outlines the major milestones for the Site.

Timeframe	Description
December 2025	Submit SCWP to NYSDEC
January 2026	45 days for NYSDEC and NYSDOH to review
January 2026	Submit Revised SCWP
January/February 2026	Approval and Implementation of SCWP
February 2026	Submit SCR
February/March 2026	Interim Remedial Measure Work Plan (IRM)

Respectfully submitted,

ROUX ENVIRONMENTAL ENGINEERING AND GEOLOGY, D.P.C.

Mark Elmendorf
Principal Scientist

Executive Summary

The New York City Department of Transportation (NYCDOT) contracted with AECOM Technical Services, Inc. (AECOM) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the commercial property located at 47-25 34th Street, Long Island City, Queens County, New York 11101 (subject property). The Site is identified by the City of New York Department of Finance records, as Block 250, Lot 1. This Phase I ESA was performed in general conformance with the scope and limitations of ASTM International, Designation: E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-13). Exceptions to, or deletions from, this practice are described in this report.

The Site visit occurred on October 15, 2020 The subject property contains a 3-story (east side) and 4 story (west side) multi-tenant commercial building and associated parking lot that occupies the city block bounded by 47th Avenue to the north, 35th Street to the east, 48th Avenue to the south, and 34th Street to the west. Entrance and egress to the Site is provided through a chain link gate located along 47th Street (northern property boundary).

The NYCDOT proposes to lease 149,000 square feet of an approximately 322,390 square foot facility. The NYCDOT lease will include the entirety of the ground floor (55,000 square feet), and the entirety of the mezzanine floor (81,000 square feet) along with approximately eighty (80) of the total 87 parking spaces in the surface parking lot. NYCDOT will occupy approximately 13,000 square feet of the surface parking lot. The multi-use commercial office building is currently vacant on the ground and mezzanine floors (space DOT seeks) and has commercial and manufacturing tenants on the 3rd and 4th floors. The operations at other tenant spaces were not visually assessed during the October 15, 2020 reconnaissance, however, the following tenants were identified: Gracie Restorations, Suite 303; Metropolitan Office and Computer Supplies, Suite 304; D.S.C., Suite 305; Kamp Billy, Suite 306; and Shop 67 (Suite 307) and Tech Systems, a technology company (4th Fl).

No visual evidence of underground storage tanks (e.g., vent pipes, fill ports), potable water wells, monitoring wells, clarifiers, dry wells, septic tanks, or leach fields was observed during the Site visit.

The subject property is located in an area characterized by a mix of commercial, manufacturing, and public facilities and institutional uses and buildings with the area zoned as M1-4, manufacturing. The Site building is situated in the city block bounded by 47th Avenue to the north, 35th Street to the east, 48th Avenue to the south, and 34th Street to the west and totals approximately 2.75 acres (120,000 square feet). The existing building also known as “The HUB LIC” has three (3) floors on the eastern portion and four (4) floors on the western portion of the building.

Gasoline service stations and dry cleaners were not observed in the immediate vicinity (approximately 500 feet) of the subject property during the October 15, 2020 Site reconnaissance. Other off-Site sources of concern were not identified in the immediate vicinity.

AECOM’s historical research indicates that the subject property was developed in 1924 with the existing building structure and initially occupied by manufacturing operations including International Motor Co. (1924 to at least 1950), and Neptune Meter Co. (1962 to sometime between 1977 and 1979). In the early 1980s the building began being utilized as a multi-tenant facility that included offices, commercial, and manufacturing operations. Manufacturing operations of note include Metropolitan News Co Inc. (1993-1999) and Eveready Hardware Mfg. Co (2005-2009). Site contacts report that a furniture workshop (3rd fl) is currently located on the 3rd floor. Other recent tenants include a locksmith that recently vacated the ground level, Remco Maintenance, a janitorial services firm, Ralph Lauren-Polo offices; Elaine’s Bakery; and Feeda Vitamin Company. Based on the historical use of the subject property as manufacturing from 1924 through approximately 1977, the historical manufacturing operations are considered a REC at this time.

The subject property is identified on the NY Underground Storage Tank (UST) and NY Aboveground Storage Tank (AST) database. The Site address was also identified on the Resource Conservation and Recovery Act (RGRA) Large Quantity Generator (LQG) database and manifests database under REMCO International and in the RCRA-Non Generator/No Longer Regulated (RCRA-NonGen/NLR), and Manifests (related to disposal of hazardous waste) environmental databases, and NY Spills database listing under City & Suburban Delivery Systems. RCRA violations were identified; however, they were informal and issued in 2007 with no subsequent violations noted. City & Suburban Delivery Systems was identified on the NY Spills database with a petroleum spill was reported on January 3, 2003. The spill was reported as due to an equipment failure due to a "possible leak in discharge line" - caller was doing tank closure and test results showed contamination. This closure may be associated with two UST closures conducted on December 12, 2002. The EDR report indicates that the NYSDEC reviewed the Closure Report and issued a NFA determination.

The site address is listed with five (5) closed (removed) ASTs and six (6) closed (five closed in-place and one removed) USTs. The Site contact did not know of any previous subsurface investigations and no previous subsurface investigation reports were provided to AECOM for review. Based on the database listing and historical information regarding the subject property, the former ASTs and USTs are considered a REC at the subject property at this time.

Based on the above-described activities, the following RECs, historical RECs (HRECs) or de minimis conditions (DMCs) were identified in connection with the subject property.

The following RECs were identified in connection with the subject property:

- AECOM's historical research indicates that the subject property was occupied by manufacturing operations from 1924 through the late 1970s (International Motor Co. - 1924 to at least 1950 and Neptune Meter Co. - 1962 to sometime between 1977 and 1979). The use of hazardous materials, if any, associated with historical manufacturing operations is unknown. The potential historic use of the subject property as manufacturing is considered a REC.

- The subject property utilized up to six fuel oil underground storage tank (UST) for heating purposes. Each of the above referenced USTs were reported as closed in place or removed. Two 4,000-gallon diesel USTs were closed in 2002 and are associated with a NY Spill case that received a NFA determination from NYSDEC in 2003. However, a copy of the UST closure reports or NFA correspondence was not readily available for the other four (4) tank systems. Based on the lack of information regarding location, and regulatory status, AECOM considers these four (4) historical USTs a REC and a VEC.

- Eight (8) metal floor plates that ranged in size from 1 foot by 1 foot to 2 foot by 3 foot were observed within the ground level of the proposed leasehold. Select metal plate covers were lifted and the pits were observed to contain cut and capped piping. The origin of the piping or historical use of the piping is unknown at this time and is considered a REC to the Site.

- The property on the east side of 35th street was historically occupied by six tenants. Each of these six tenant spaces maintained fuel oil tanks and the area labeled Private Garage (47-21 to 47-29 35th Street) included two gasoline tanks of unknown capacity. The EDR Database lists each of the fuel oil storage tanks as closed; however, no listing for closure of gasoline tanks was included in the EDR database search report. Therefore, the gasoline tanks are considered a REC and VEC to the subject property.

The following HREC was identified in connection with the subject property:

- A Tank Closure Report for City & Suburban Delivery Systems, Inc. 47-25 34th Street, Long Island City, New York, prepared by American Resource Technologies of Brooklyn, NY dated January 2002 was obtained and reviewed. The Closure Report documents soil samples collected at two 4,000-gallon diesel USTs (Tanks 001 and 002) that were closed in place in the City & Suburban Delivery Systems space. The tanks were located inside the building in the northeast portion of the building. Six soil borings were advanced around the tank to depth of 10 feet bgs. Soil was screened

for visual evidence of staining, odors and photoionization (PID) readings above background. No PID readings were identified in each boring with the exception of boring SB-05 which exhibited PID readings above background at the 0 to 2.5 ft bgs interval. Soil was collected at the bottom of each boring (9-10 ft bgs) and analyzed for volatile organic compounds and semi-volatile organic compounds per the NYSDEC STARS Memo. An additional soil sample was collected at SB-05 and analyzed for STARS VOCs. Elevated VOCs were detected in sample SB-5(2.5) and spill case # 0210020 was assigned. The report indicates that approximately 1 cubic yard of soil was subsequently excavated and disposed of at SB-5(2.5) and an additional endpoint sample was collected and analyzed for VOCs. The endpoint sample as reported as None-Detected for VOC. Based upon these findings, the NYSDEC closed spill case 0210020.

The following DMCs were identified during this assessment:

- The facility contact reported that a hydraulic elevator historically serviced the leasehold area, however, the elevator system was removed in July/August 2020 as part of building redevelopment. The elevator's hydraulic reservoir was located on the ground level. The area is currently utilized as an electrical closet. Some minor staining was noted on the concrete flooring which was intact with no visual evidence of cracks or deterioration. A floor drain was not noted in the elevator equipment room. The staining inside the former elevator equipment room appeared to be de minimis at the time of the assessment

- Polychlorinated biphenyl (PCB)-containing dielectric fluids have been widely used as coolants and lubricants in transformers, capacitors, and other electric equipment due to their insulating and nonflammable properties. Based on the age of the subject property (pre-1979), the potential exists for PCB-light ballasts to be present on-Site.

1. Introduction

1.1 Purpose

AECOM Technical Services, Inc. (AECOM) was retained by the City of New York Department of Transportation (NYCDOT) to conduct a Phase I Environmental Site Assessment (ESA) of the property located at 47-25 34th Street, Long Island City, Queens County, New York 11101 (Site or subject property). The subject property is identified by the City of New York Department of Finance records as Block 250, Lot 1. This assessment was performed in advance of the potential leasing of the subject property. NYCDOT proposes to lease approximately 13,000 square feet of the surface parking lot, the entirety of the ground floor (55,000 square feet), and the entirety of the mezzanine floor (81,000 square feet) of a multi-tenant building. The purpose of this Phase I ESA is to provide the client with information for use in evaluating recognized environmental conditions (RECs) associated with the subject property and to fulfill the requirements of the City Environmental Quality Review (CEQR) process. This Phase I ESA has been prepared to assist and guide the decision makers in reaching their conclusions and to ensure that they have a full understanding of the environmental consequences of the proposed actions.

Per ASTM International, Designation: E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-13), potential findings can include RECs, historical RECs (HRECs), controlled RECs (CRECs), and de minimis conditions (DMCs). A REC is defined by the ASTM standard as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." The term includes hazardous substances or petroleum products even under conditions in compliance with laws. HRECs are a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. CRECs are a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. DMCs are those situations that do not present a material risk of harm to public health or the environment and generally would not be subject to enforcement action if brought to the attention of the regulating authority.

In addition, a Tier 1 vapor encroachment screening (VES) is completed as part of this assessment. This screening is conducted in general accordance with the ASTM International, Designation: E2600-15, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* dated October 2015 (ASTM E2600-15). The objective of the VES is to evaluate if a vapor encroachment condition (VEC) exists or if a VEC does not exist.

This assessment for the Phase I ESA is based on a review of existing conditions, reported pre-existing conditions, and observed operations at the subject property and adjacent properties.

1.2 Scope of Work

The Phase I ESA included a Site visit, regulatory research, historical review, and a review and an environmental database analysis of the subject property. In conducting the Phase I ESA, AECOM assessed the subject property for visible signs of possible contamination, researched public records for the subject property and adjacent properties (as applicable), and conducted interviews with persons knowledgeable about the subject property.

This project was performed in general accordance with ASTM E1527-13 and Supplemental Task Order No. T4-ISUP dated November 26, 2019. Conclusions reached in this report are based upon the assessment performed and are subject to limitations set forth in Sections 1.3, 1.4, and 1.5 below.

1.3 Study Limitations

This report describes the results of AECOM's Phase I ESA to identify the presence of conditions materially affecting the subject facility and/or property within the limits of the established scope of work as described in our proposal.

As with any due diligence assessment, there is a certain degree of dependence upon oral information provided by facility or Site representatives, which is not readily verifiable through visual observations or supported by any available written documentation. AECOM shall not be held responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed by facility or Site representatives at the time this assessment was performed. In addition, the findings and opinions expressed in this report are subject to certain conditions and assumptions, which are noted in the report. Any party reviewing the findings of the report must carefully review and consider all such conditions and assumptions.

This report and all field data and notes were gathered and/or prepared by AECOM in accordance with the agreed upon scope of work and generally accepted engineering and scientific practice in effect at the time of AECOM's assessment of the subject property. The statements, findings and opinions contained in this report are only intended to give approximations of the environmental conditions at the subject property.

As specified in ASTM E1527-13, it is incumbent that the client and any other parties who review and rely upon this report understand the following inherent conditions surrounding any Phase I ESA:

- Uncertainty Not Eliminated - No Phase I ESA can wholly eliminate uncertainty regarding the potential for REC in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for REC in connection with a property, and this practice recognizes reasonable limits of time and costs. (Section 4.5.1 of ASTM E1527-13)
- Not Exhaustive - "All appropriate inquiry" does not mean an exhaustive assessment of a clean property. There is a point at which the cost of information obtained outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an Phase I ESA and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of ASTM E1527-13)

- Comparison with Subsequent Inquiry – Phase I ESAs must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent Phase I ESAs should not be considered valid standards to judge the appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors. (Section 4.5.4 of ASTM E1527-13)

A similar set of inherent limitations exist in cases where the Phase I ESA included a screening-level assessment of vapor migration or vapor encroachment; such an assessment is a required part of a Phase I ESA when ASTM E1527-13 is employed. According to ASTM E2600-15, the following limitations apply:

- Uncertainty Not Eliminated in Screening - No VES can wholly eliminate uncertainty regarding the identifications of VECs in connection with the target property. (Section 4.5.1 of ASTM E2600-15)
- Not Exhaustive - The guide is not meant to be an exhaustive screening. There is a point at which the cost of information obtained outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of real estate transactions. One of the purposes of this guide is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing a VES and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of ASTM E2600-15)
- Comparison with Subsequent Investigations - It should not be concluded or assumed that an investigation was not adequate because the investigation did not identify any VECs in connection with a property. The VES must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent VESs should not be considered valid bases to judge the appropriateness of any prior screening if based on hindsight, new information, use of developing technology or analytical techniques, or similar factors. (Section 4.5.4 of ASTM E2600-15)

This report was prepared pursuant to an agreement between the NYCDOT (Client) and AECOM and is for the exclusive use of the Client. No other party is entitled to rely on the conclusions, observations, specifications, or data contained herein without first obtaining AECOM's written consent and provided any such party signs an AECOM-generated Reliance Letter. A third party's signing of the AECOM Reliance Letter and AECOM's written consent are conditions precedent to any additional use or reliance on this report.

The passage of time may result in changes in technology, economic conditions, Site variations, or regulatory provisions, which would render the report inaccurate. Reliance on this report after the date of issuance as an accurate representation of current Site conditions shall be at the user's sole risk.

1.4 Site-Related Limiting Conditions

The following Site-specific limitations were encountered during the course of this assessment:

- AECOM's evaluation included a visual inspection of the proposed leasehold areas and common spaces only. Other tenant facilities within the Site building were not visually inspected beyond identification of tenant name/operation. This particular Site-related limiting condition is not expected to have a significant limitation to this assessment.

1.5 Data Gaps/Data Failure

The following data failure/data gaps were encountered during the course of this assessment:

- As specified in the agreed upon scope of work, a title search and environmental lien search were not conducted as part of this Phase I ESA. However, based upon historical data collected from other sources, this data gap is not expected to impact the results of this assessment. In addition, the user was not aware of environmental liens or activity use limitations (AULs) that have been placed on the subject property.
- Per ASTM E1527-13, past owners, operators, and occupants of the subject property who are likely to have material information regarding the potential for contamination at the subject property shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. AECOM was unable to interview past owners and/or operators at the subject property. However, based upon historical data collected from other sources, this data gap is not expected to impact the results of this assessment.
- Per the agreed scope-of-work and ASTM E1527-13, information related to certain Site-specific items should be provided by the Phase I ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM provided the Client (the users) with the User Questionnaire from ASTM E1527-13; at this time the completed form has not been returned for inclusion in this report. However, this data gap is not expected to represent a significant limitation to this investigation given the historical use of the subject property.
- AECOM submitted Freedom of Information Law (FOIL) requests to the City of New York Department of Environmental Protection, City of New York Department of Health, City of New York Fire Department, and New York State Department of Environmental Conservation to determine if they have files related to a historical hazardous materials release that may have occurred at the subject property. As of the date of this report, a response to each of AECOM's FOIL requests have not been received. Based on AECOM's research to date, AECOM does not anticipate the response (if any) from our FOIL requests will significantly alter the conclusions or recommendations of this report. However, if information is received from this FOIL request that significantly impacts the conclusions of this report, this information will be forwarded upon receipt.

2. Site Description

2.1 Site Location and Parcel Description

The subject property is located at 47-25 34th Street in Long Island City, Queens County, New York 11101. The subject property consists of a 3-story (east side) and 4 story (west side) multi-tenant commercial building and associated parking lot that occupies the city block bounded by 47th Avenue to the north, 35th Street to the east, 48th Avenue to the south, and 34th Street to the west. Entrance and egress to the Site is provided through a chain link gate located along 47th Street (northern property boundary).

According to the City of New York Department of Finance records, the subject property consists of a single parcel of land that is designated as Block 250, Lot 1. The approximate location of the subject property is illustrated on Figure 1 - Site Location Map.

The existing structure at the Site (47-25 34th Street) has four levels: ground, mezzanine, third, and fourth floors. Because the ground slopes down from the southern to the northern sides of the structure, the "ground" floor is underground on the south side and at grade on the northernmost side, which is accessible from the parking lot on the north side of the building.

The NYCDOT proposes to lease 149,000 square feet of an approximately 322,390 square foot facility. The NYCDOT lease will include the entirety of the ground floor (55,000 square feet), and the entirety of the mezzanine floor (81,000 square feet) along with approximately eighty (80) of the total 87 parking spaces in the surface parking lot. NYCDOT will occupy approximately 13,000 square feet of the surface parking lot.

The multi-use commercial office building is currently vacant on the ground and mezzanine floors (space DOT seeks) and has commercial and manufacturing tenants on the 3rd and 4th floors.

2.2 Site Ownership

According to the New York City Department of Finance, Office of the City Register, the subject property is owned by MRA HUB 34 OWNER, LLC, c/o Metropolitan Realty Associates Inc. who acquired the subject property on August 25, 2016 from Brickman 34th Street LIC LLC and Building 2013 Partners LLC. Based upon review of the historical deed records the following deed transactions are noted:

Grantor	Grantee	Date	Document ID or Book/Page
BRICKMAN 34TH STREET LIC LLC	MRA HUB 34 OWNER, LLC	8/12/2016	2016000294158
BLDG 2013 PARTNERS LLC	BRICKMAN 34TH STREET LIC LLC	3/14/2014	2014000101098
4725-34 ASSOCIATES LLC	34TH ST LIC ASSOCIATES LLC	2/6/2013	2013000076410
KNFB HOLDING LLC	47-25 ASSOCIATES	5/03/2002	6354/581
KNFBD HOLDINGS	KNFBZ HOLDINGS	2/15/2002	63454/469
KNFB Holdings, LLC	KNFBB Holdings, LLC	December 23,	5811/1892

		2000	
City and Suburban Delivery Systems	KNFB Holdings, LLC	August 4, 1998	500/1885
New York Times Co.	Suburban City and Delivery Systems	April 1, 1999	4329/1116
Metropolitan News Co	NEHOC, Inc.	August 19, 1985	2940/1866
Metropolitan Magazine Co. and 327 Cherry Street Realty Corp	Metropolitan News Co	February 16, 1977	973/649
Neptune Meter Co.	Metropolitan News Co. and 327 Cherry Street Realty Corp.	Sept. 10, 1973	703/1031

Property transaction records prior to 1973 were not readily available for review. According to the building information records the building was first constructed in 1924-1925.

2.3 Site Visit

Ms. Christine Wagner with AECOM's Clifton, New Jersey office visited the subject property on October 15, 2020. During the Site visit, Ms. Wagner was accompanied through the subject property by Mr. Ray Luebeck, Facility Manager. Mr. Luebeck provided information on current operations and history and has been associated with the subject property for approximately 6 years. Site-related limiting conditions encountered during this assessment were previously summarized in Section 1.4.

The Site visit methodology consisted of walking over accessible areas of the subject property, including the leasehold building interior, common mechanical areas, the exterior, the perimeter and portions of the surrounding area. The following sections summarize the results of the Site visit.

2.3.1 Site and Facility Description

The Site building is situated in the city block bounded by 47th Avenue to the north, 35th Street to the east, 48th Avenue to the south, and 34th Street to the west and totals approximately 2.75 acres (120,000 square feet). The existing building, also known as "The HUB LIC", has three (3) floors on the eastern portion and four (4) floors on the western portion of the building. The third and fourth floors are currently occupied and will continue to be occupied by private commercial and light manufacturing businesses (Gracie Restorations, Suite 303; Metropolitan Office and Computer Supplies, Suite 304; D.S.C., Suite 305; Kamp Billy, Suite 306; and Shop 67, Suite 307) and Tech Systems, a technology company (4th Fl).

Entrance and egress to the Site is provided through a chain link gate located along 47th Street (northern property boundary). An asphalt-paved parking area that occupies approximately 13,000 square feet is located on the north side of the Site. The entire property is covered by building and paved surface with no landscaped areas noted.

There is an approximately 10 foot change in elevation from the southern to the northern portion of the city block with the ground sloping down from the southern to the northern sides of the Site

building. The "ground" floor is underground except for the northernmost side, which is accessible from the parking lot on the north side of the building.

A construction trailer is located west of the access gate and a fenced-in area utilized to stage solid waste dumpsters for the various tenants on Site is located east of the access gate, along the north side of the property.

A total of five loading bays are located on the north side of the property, two at grade and three with loading dock height. Site contacts reported that a historical underground storage tank (UST) was located within an area that is now occupied by a ramp to an at grade loading bay. There was no visual evidence of a historical UST in this area during the October 15, 2020 reconnaissance.

The building is of masonry construction with cinderblock walls, concrete columns, concrete decking and flooring. A boiler room that services the site is located at the southeast corner of the building. Four out-of-service and disconnected boilers and one natural gas-fired boiler was observed in the boiler room. The in-service natural gas-fired boiler is registered to MRA HUB 34 Owner LLC c/o Cushman and Wakefield. The natural gas-fired boiler was labeled as manufactured in 1980.

One elevator was noted on the north side of the site building. A former hydraulic elevator was located on the northwest side of the site building; however, site contacts reported that the elevator and associate equipment was recently removed and the area is now utilized a room for electric panels.

A total of eight metal plates were observed on the floor of the ground level. The plates were lifted and observed to contain piping of unknown origin.

During the Site visit, no visual evidence of potable water wells, monitoring wells, dry wells, clarifiers, septic tanks, or leach fields was identified on the subject property. No visual evidence of discolored soil, water, or odors was identified during the Site visit. In addition, no visual evidence of significant corrosion was identified on the floors or walls of the subject property building or on the exterior of the subject property. The general layout of the subject property is illustrated on Figure 2 - Site Plan and Representative Site Photographs are provided in Appendix A.

2.3.2 Surrounding Properties

The subject property is in the eastern portion of Long Island City, Queens. The subject property lies south of Queens Boulevard and is bound by 34th Street to the west, 47th Avenue to the north, 35th Street to the east, and 48th Avenue to the south. The area is characterized by a mix of commercial, manufacturing, and public facilities and institutional uses and buildings with the area zoned as M1-4, manufacturing. The following properties were noted immediately adjacent to the Site:

North: 47th Avenue followed by A New York City Fire Department warehouse and a New York City Department of Transportation facility (34-02 Queens Blvd.) with Aviation High School, a public high school run by the Department of Education, is located northeast of the Project Site between 35th and 36th Streets (45-30 36th Street) and the New NY Museum (49-98 34th Street) located to the northwest.

South: 48th Avenue followed by Amy's Bread Wholesale Bakery (48-09 34th Street) and an FDNY warehouse with Newman's Kitchen Events and Catering (35-02 48th Avenue) to the southeast and a vacant 4-story building to the southwest.

East — 35th Street followed by Frank DeBono Construction Corp (office) (47-15 35th Street), Axon US and K9 School (Dog Training) (47-31 35th Street), Expedition Logistics, and Jeda Falcon Uniforms, LLC (47-4735th Street).

West: — 33rd Street followed by BCS International Corp (47-15 33rd Street), M&J Commissary Coffee Shop (47-38 33rd St), and Eclectic Encore Properties (47-51 33rd Street).

The prevailing built form in the area generally comprised of 4-6 story warehouse style buildings that take up entire city blocks. AECOM did not identify any gasoline service stations or dry cleaners in the immediate vicinity (500 feet) of the subject property. In addition, sensitive receptors (i.e. day care centers, hospitals, water bodies) were not identified as being located adjacent to the subject property. However, a high school (Aviation High School) was identified northeast of the Site and within 100 feet of the subject property. Based on AECOM's Site reconnaissance of the surrounding neighborhood, no off-Site sources of concern were identified.

2.3.3 Petroleum Products and Hazardous Materials

Other than normal commercial cleaning supplies, hazardous materials or petroleum products were not identified at the subject leasehold property during the site reconnaissance, and none were reported by Mr. Luebeck to be located at the subject property.

Two mechanical cable elevators service the subject property building. AECOM observed the elevator machine rooms and no leaks or stains were observed on the floor beneath or around the mechanical equipment.

The facility contact reported that a hydraulic elevator previously serviced the leasehold area, however, the elevator system was removed in July/August 2020 as part of building redevelopment. The elevator's hydraulic reservoir was located on the ground level. The area is currently utilized as an electrical closet. Some minor staining was noted on the concrete flooring which was intact with no visual evidence of cracks or deterioration.

No other hydraulic equipment (transformers, trash compactors, lifts) was identified on the subject property. The on-Site loading docks are manually operated.

2.3.4 Hazardous Waste

No hazardous waste, with the exception of universal waste such as spent fluorescent light tubes, is generated at the subject property. Based on the presumed limited quantities, universal waste generation is not expected to represent a REC.

2.3.5 Polychlorinated Biphenyls

Polychlorinated biphenyl (PCB)-containing dielectric fluids have been widely used as coolants and lubricants in transformers, capacitors, and other electric equipment due to their insulating and nonflammable properties. Based on the age of the subject property (pre-1979), the potential exists for PCB-light ballasts to be present on-Site. However, there was no visual evidence of leaking light ballasts.

2.3.6 Aboveground Storage Tanks

Aboveground storage tanks (ASTs) were not identified during the Site visit.

A total of five (5) ASTs were listed in the Site-specific environmental database report reviewed by AECOM. Two (2) 7,500-gallon heating oil ASTs and three (3) 275-gallon lube oil ASTs were listed in the database research report at the subject property. The ASTs were each listed a single-wall steel tanks with fuel level gauges. A summary of the ASTs identified on-Site is included as follows.

Tank ID	Tank Type	Capacity (gallons)	Content	Status	Date
06	AST	7,500	#2 Heating Oil	Closed - Removed	06/01/1998
07	AST	7,500	#2 Heating Oil	Closed - Removed	06/01/1998
AB	AST	275	Lube Oil	Closed - Removed	02/05/2002
AB2	AST	275	Lube Oil	Closed - Removed	02/05/2002
AB3	AST	275	Lube Oil	Closed - Removed	02/05/2002

The listed ASTs do not appear to be associated with any spills identified at the subject property.

One natural gas-fired emergency generator that is owned and operated by Verizon was observed on the roof level at the subject property. The generator is situated on an elevated platform over intact rubber sheet roofing. Site contacts had no direct knowledge of the volume of motor oil within the generator unit. No evidence of leaks or staining was identified in the vicinity of the natural gas-fired generator.

2.3.7 Underground Storage Tanks

Visual evidence of underground storage tanks (USTs) (e.g., vent pipes, fill ports) was not identified during the Site visit. Mr. Ray Luebeck indicated that a historical heating oil UST located on the north side of the subject property, in the area of a western loading bay ramp, was removed “in the last several years.” However, he had no direct knowledge of the construction of the tank or removal date. Several historical USTs were listed in the Site-specific environmental database report as summarized below.

Tank ID	Tank Type	Capacity (gallons)	Content	Status	Date
001	UST	4,000	Diesel	Closed-In-Place	12/12/2002
002	UST	4,000	Diesel	Closed-In-Place	12/12/2002
003	UST	6,000	Not Reported	Closed - Removed	12/21/2015
1	UST	10,000	Listed as Empty	Closed-In-Place	12/01/1997
2	UST	10,000	Listed as Empty	Closed-In-Place	12/01/1997

3	UST	10,000	#2 Heating Oil	Closed-In-Place	12/01/1997

A *Tank Closure Report for City & Suburban Delivery Systems, Inc., 47-25 34th Street, Long Island City, New York, prepared by American Resource Technologies of Brooklyn, NY dated January 2002* was obtained and reviewed. The Closure Report documents soil samples collected at two 4,000-gallon diesel USTs (Tanks 001 and 002) that were closed in place in the City & Suburban Delivery Systems space. The tanks were located inside the building in the northeast portion of the building. Six soil borings were advanced around the tank to depth of 10 feet bgs. Soil was screened for visual evidence of staining, odors and photoionization (PID) readings above background. No PID readings were identified in each boring with the exception of boring SB-05 which exhibited PID readings above background at the 0 to 2.5 ft bgs interval. Soil was collected at the bottom of each boring (9-10 ft bgs) and analyzed for volatile organic compounds and semi-volatile organic compounds per the NYSDEC STARS Memo. An additional soil sample was collected at SB-05 and analyzed for STARS VOCs. Elevated VOCs were detected in sample SB-5(2.5) and spill case # 0210020 was assigned. The report indicates that approximately 1 cubic yard of soil was subsequently excavated and disposed of at SB-5(2.5) and an additional endpoint sample was collected and analyzed for VOCs. The endpoint sample as reported as None-Detected for VOC. Based upon these findings, the NYSDEC closed spill case 0210020.

Due to the lack of correspondence confirming clean closure of the four additional USTs, the historical USTs are considered a REC at this time.

2.3.8 Solid Waste

to the north of the subject property building in the paved parking area. According to Mr. Ray Luebeck, each tenant contracts with a private hauler for solid waste disposal. No evidence of inappropriate disposal activities and no areas of staining were identified in the vicinity of the dumpsters.

2.3.9 Water

The facility receives its potable water supply from the New York City Department of Environmental Protection (NYCDEP) which receives its water from upstate surface water sources. No potable water wells or groundwater monitoring wells were identified at the subject property or reported by the Site contact to be present on-Site.

2.3.10 Wastewater

Wastewater discharges at the subject property include effluent from human consumptive use and floor drains located in the boiler room, which, according to Site contact, discharge directly to the municipal sanitary sewer system. Staining or visual evidence of a hazardous materials release was not identified in the vicinity of the floor drains observed within the identified leasehold area or common areas.

Trench drain were noted in the ground level boiler room. Site contacts report that the boiler blowdown is discharged to the trench drains and ultimately to the NY City sewer system. No staining was identified associated with the trench drains observed in the boiler room.

2.3.11 Stormwater

Stormwater from the subject property appears to drain via sheet flow to the numerous stormwater drains located throughout the paved portions of the subject property. The subject property discharges wastewater and stormwater through a combined sewer system to the local Newton Creek wastewater treatment plant. No staining was identified in the vicinity of the storm drains.

2.3.12 Heating and Cooling

The DOT leasehold area is heated by 18 gas-fired ceiling-mounted heaters. Air conditioning is provided by individual package units. Consolidated Edison (Con Ed) provides electricity and natural gas to the Site.

The building was historically heated by four (4) fuel-fired steam boilers located in the ground level at the southeast side of the Site building. The boilers remain on-Site but do not service the leasehold area. Eight (8) metal floor plates that ranged in size from 1 foot by 1 foot to 2 foot by 3 foot were observed within the ground level of the proposed leasehold. Select metal plate covers were lifted and the pits were observed to contain cut and capped piping. Site contacts had no direct knowledge of the origin of the piping but speculated that it may be associated with the former steam boiler system. No visual evidence of staining or odors were noted in the pits visually inspected. The origin or historical use of the piping is unknown at this time and therefore is considered a REC to the Site.

3. Environmental Setting

3.1 Topography

The United States Geological Survey (USGS) 7.5-minute topographic maps of the Brooklyn and Central Park, New York, 7.5 quadrangles indicates that the subject property elevation is approximately 50 feet above mean sea level (USGS, 2013). The Site vicinity is characterized as generally flat with limited areas of gently rolling hills. Topographic relief is note across the Site with an approximately 10 foot change in elevation from the south to the north side of the property. Dutch Kills, a tributary to Newton Creek, is located approximately ½-mile west of the Site. Newton Creek is located approximately 1-mile south and southwest of the subject property with he East River located approximately 1/5 miles to the west. Based upon the observed topography, shallow groundwater flow is anticipated to flow tor\wards the west-southwest.

3.2 Soil/Geology

Site-specific geologic information was not identified during the course of this assessment; however, according to state and regional geologic sources, the subject property is located in the New England Upland Physiographic Province. The geology is primarily characterized by complex mountains consisting primarily of metamorphic and igneous rocks of Precambrian and Early Paleozoic age. A small eastern projection of the New England Upland is known as the Manhattan Prong whose igneous and predominantly metamorphic bedrock underlies much of southwestern Connecticut, Westchester County and New York City.

The Site, which is located at an elevation of approximately 50 feet above mean sea level, is located in a highly developed urban area of Long Island City, Queens, New York. The geology of the Site area consists of uplifted metamorphic basement rock overlain by unconsolidated mounds of glacial drift material and fill material. Bedrock in the vicinity of the Site is typically found at depths greater than 100 feet. Basement rocks underlying the New York Metropolitan area consist of Precambrian age Fordham Gneiss, overlain by the Inwood Dolomitic Marble and Ordovician Manhattan Schist. The bedrock surface is shallow at the northern tip of Manhattan and dips gently through Midtown as far as Washington Square where the surface plunges hundreds of feet and reapproaches ground surface in the downtown area. Specifically, based on available information (Schuberth, 1972), it appears that the bedrock in the vicinity of the subject property is probably the Fordham Gneiss. Unconsolidated deposits overlying the bedrock consist of man-made fill material and glacial till and drift composed of clay, sand, gravel and assorted debris. The exact depth to bedrock and the nature of the unconsolidated material underlying the subject property are not known.

3.2 Groundwater/Hydrology

The local topography, geology and surficial drainage patterns are tools used to evaluate the properties of local shallow groundwater flow. Groundwater in the Site area probably occurs under water table conditions within the glacial sediments and fill and may also be interconnected through fractures of the underlying bedrock. Based on the topography and surficial drainage patterns shown on the 2013 Unites States Geological Survey (USGS) Brooklyn/Central Park, New York, 7.5 minute series quadrangle maps, it appears that the direction of shallow groundwater flow is downgradient towards the west towards Dutch Kills, a tributary of easterly-flowing Newton Creek which flows into the East River, located approximately 1 mile to the west.. Depth to groundwater in

the vicinity of the Site was identified at depths ranging from 30 to 60 feet bgs. A hydrogeological investigation would be needed in order to delineate the precise direction of shallow groundwater flow and the depth to shallow groundwater in the vicinity of the Site.

4. Site and Area History

Historical information for the subject properties and surrounding properties is based on AECOM's review and analysis of the following historical sources:

- Aerial photographs dated 1924, 1941, 1951, 1954, 1961, 1966, 1974, 1976, 1980, 1984, 1991, 2006, 2009, 2013 and 2017;
- Topographic maps dated 1897, 1898, 1900, 1947, 1956, 1966, 1967, 1979, 1995, 1997 and 2013. The 1897, 1898 and 1900 maps are a 15-minute series of Brooklyn and Harlem. The 1947, 1956, 1966, 1967,1979, 1995, 1997 and 2013 maps are a 7.5-minute series of Central Park and Brooklyn;
- Sanborn Fire Insurance Rate Maps dated 1898, 1915, 1928, 1936, 1947, 1950, 1970, 1977, 1979, 1980, 1985, 1986, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1999, 2001, 2002, 2003, 2004, 2005, and 2006;
- City directories for the years 1922 to 2017, in approximate five-year intervals.

These references were reviewed for evidence of activities that would suggest the potential presence of hazardous substances at the subject properties and to evaluate the potential for the subject properties to be impacted by off-Site sources of contamination. Historical sources are provided as **Appendix B**.

In addition, an interview was conducted with Mr. Luebeck who has been associated with the subject property for the past six years.

4.1 Aerial Photographs

AECOM reviewed available aerial photographs provided by EDR, covering the subject properties for the following time periods: 1924, 1941, 1951, 1954, 1961, 1966, 1974, 1976, 1980, 1984, 1991, 2006, 2009, 2013 and 2017.The scale of each photograph is 1-inch equals approximately 750 feet. The following observations were made from the aerial photographs. Copies of the historical aerial photographs is included in **Appendix B.**

1924: The subject property is undeveloped with 47th Avenue depicted to the north and 48th Avenue noted on the south side of the city block. However, 34th Street and 35th Street to the west and east are not depicted on the 1924 photograph. Queens Boulevard is a major roadway located further to the north. The immediately adjacent properties are also undeveloped however, some development with small structures is noted further to the north, south, east and west of the Site. Due to the poor quality of the photograph, the exact nature of the features cannot be ascertained. A railyard is located approximately 1,000-feet to the north of the Site and a cemetery is note approximately 1,000-feet south of the Site.

1941: Significant changes are noted from the 1924 to 1941 photograph. The subject property is developed with 47th Avenue to the north, 35th Street to the east, 48th Avenue to the south and 34th Street to the west. A large structure is noted on Site covering about 2/3 of the lot on the southern terminus of the property. The northern most section of the property appears to be a parking lot. The immediately surrounding parcels are developed with a large

aboveground storage tank observed at the structure located immediately the west of the Site.

1951: No significant changes are noted at the subject property from 1941 to 1951 photograph . The surrounding area shows significant development. The building located immediately east of the Site occupies the west side of the city block with the east side of the city block is utilized for vehicle parking. The properties immediately north, west and south appear to have similar footprint than that observed during the October 15, 2020 reconnaissance with the exception of the properties located to the northwest and to the northeast of the Site. Two large cylindrical structures that appear to be hanger-style structures are noted at the southwest corner of the parcel to the northwest with paved parking surrounding these structures located northwest of the Site. The city block located northeast is occupied by parked vehicles with a small structure noted on the northern portion of the city block.

1954: No significant changes are noted at the subject property from 1951 to 1954. The city block located immediately east of the Site is now depicted as occupied by building structures on both the east and west sides of the block. The property identified as Aviation High School to the northeast is depicted as developed on the 1954 photograph and the large tank noted in the property to the west is no longer depicted on the 1954 photograph.

1961 No significant changes are noted at the subject property and immediately surrounding vicinity from the 1954 to the 1961 photograph. The Site remains developed with a structure with the northern portion of the property used for vehicle parking.

1966: No significant changes are noted at the subject property or immediately surrounding vicinity from the 1961 to the 1964 photograph.

1974: No significant changes are noted at the subject property or immediately surrounding vicinity from the 1966 to the 1974 photograph.

1976: No significant changes are noted at the subject property or immediately surrounding vicinity from the 1974 to the 1976 photograph.

1980: No significant changes are noted at the subject property or immediately surrounding vicinity from the 1976 to the 1980 photograph.

1984: No significant changes are noted at the subject property or immediately surrounding vicinity from the 1980 to the 1984 photograph. Due to the poor quality of the photograph, the exact nature of the features cannot be ascertained.

1991: No significant changes are noted at the subject property or immediately surrounding vicinity from the 1984 to the 1991 photograph but due to the quality of the photograph.

2006: No significant changes are noted at the subject property or immediately surrounding vicinity from the 1991 to the 2006 photograph but due to the quality of the photograph.

2009: No significant changes are noted at the subject property or immediately surrounding vicinity from the 2006 to the 2009 photograph.

2013: No significant changes are noted at the subject property or immediately surrounding vicinity from the 2009 to the 2013 photograph.

2017: No significant changes are noted at the subject property or immediately surrounding vicinity from the 2009 to the 2013 photograph.

4.1 Topographic Maps

AECOM reviewed available topographic maps provided by EDR, covering the subject properties for the following time periods: 1897, 1898, 1900, 1947, 1956, 1966, 1967, 1979, 1995, 1997 and 2013. The 1897, 1898 and 1900 maps are a 15-minute series of Harlem. The 1947, 1956, 1966, 1967,1979 1995, 1997 and 2013 maps are a 7.5-minute series of Central Park. A copy of the historical topographic maps are included in **Appendix B.**

1897: The subject property is depicted as undeveloped with no structures located on the property. Several small structures are depicted surrounding the property. The area to the west is labeled Hunters Point with the East River noted approximately 1.5-miles to the west. The East Calvary Cemetery is located to the south and West Calvary Cemetery is located approximately ½-mile to the west of the property. Newtown Creek is located to the south of the subject property with a railroad running parallel to the north side of the creek. An additional rail line is noted running in an east-west direction approximately ½-mile north of the subject property at the subject property and immediately surrounding vicinity and through the area labeled Hunters Point.

1898: No significant changes are noted at the subject property or immediately surrounding vicinity from the 1897 to the 1898 topographic map.

1900: No significant changes are noted at the subject property or immediately surrounding vicinity from the 1898 to the 1900 topographic map.

1947: Significant changes are noted at the subject property and immediately surrounding vicinity. A large building that occupies about 2/3 of the city block is noted on Site and roadways are developed adjacent to and surrounding the subject property. The surrounding area has been developed with commercial properties. National Enamel Co. is identified two to three blocks to the southwest and St. Raphael's is labeled three city blocks to the southeast. The current Queens Boulevard, located to the north, is labeled Boulevard/Route 24. The railyard located further to the north of the property is labeled Sunnyside Yard. Newtown Creek is observed further to the south with a north-south oriented tributary observed approximately ½-mile to the west of the subject.

1956: Building footprints are not depicted on the 1956 topo map but the area and surrounding vicinity are indicated as developed. Queens Vocational High School is located three blocks to the east of the subject property. The north-south oriented tributary to the west of the subject property is now labeled Dutch Kills and the area where the property is located is now labeled "Sunnyside". Industrial development with numerous storage tanks are noted on the south side of Newton Creek located to the south and southwest of the Site. A covered reservoir is located to the south of the Site on the north side of 51st Avenue.

1967: No significant changes are noted at the subject property from the 1956 to the 1967 topographic map. Queens Aviation High School is now depicted to the northeast of the subject property. The covered reservoir located to the south is reduced in size by nearly half.

1979: No significant changes are noted at the subject property or immediately surrounding vicinity from the 1967 to the 1979 topographic map.

1997: No significant changes are noted at the subject property or immediately surrounding vicinity from the 1979 to the 1997 topographic map.

2013: No significant changes are noted at the subject property or immediately surrounding vicinity from the 1979 to the 1997 topographic map with the exception of the covered reservoir located to the south is no longer depicted.

4.3 Sanborn Maps

AECOM reviewed available Sanborn Fire Insurance maps provided by EDR, covering the Properties for the following time periods: 1898, 1915, 1928, 1936, 1948, 1950, 1951, 1967, 1977, 1979, 1981, 1985, 1986, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1999, 2001, 2002, 2003, 2004, 2005, and 2006. The following observations were made from the Sanborn maps. A copy of the Sanborn Fire Insurance maps search report is included in **Appendix B**.

1898: The subject property is depicted as undeveloped residential parcels/paper streets. The city block is labeled as Lot 159. The subject property is depicted with Nott Ave to the North, Anable Ave to the south, Honeywell Street to the east, and Moore Street to the west. The surrounding properties are depicted as primarily undeveloped with small structures (two dwellings, a shed and a coop) noted to the west of the subject property on the city blocks labeled as Lot 163 and 174.

1915: The subject property remains undeveloped. The previously identified structures to the west are no longer depicted. A structure labeled “Manhattan and Queens Traction Co., Temporary Car Barn and Repair Shop” is observed to the northeast on the city block observed as Aviation High School during the October 2020 reconnaissance. Nott Ave to the north is now labeled “Nelson Ave”.

1936: The subject property is developed with a 3 and 4 story structure labeled as built in 1924-25. The building is labeled as “International Motor Co.” with a building footprint covering about 2/3 of the property. Four (4) unknown rectangle features are depicted in the southeast corner of the property. The rectangular structures are likely the out-of-service boilers observed during the October 15, 2020 Site reconnaissance. An incline is observed at the southeast side of the Site. The incline was observed to be an automobile ramp that provides access to the mezzanine level.

A 50,000 gallon sprinkler tank is depicted on the roof of the west side of the property. An additional 5,000-gallon water tank is depicted on the northwest side of the roof. A small structure labeled “vacant, tile” is located at the northeast corner of the undeveloped portion of the property. A structure labeled “shed” is located adjacent to the east.

Some development is noted at the surrounding properties. 47th Avenue is now depicted to the north at what previously was Nelson Ave. 48th Avenue is depicted to the south at what previously was Anable Ave. 34th Street is to the west to what previously was Moore Street. 35th street is depicted to the east to what previously was Honeywell Street. The property on the east side of 35th Street is occupied by six tenants including (north to south): Canada Dry Ginger Ale Private Garage; Lang News Co., Newspaper Distributors; a private garage (labeled 3); Ashcraft Co. Assembly Plant; Bus Garage; and Chemical & Mechanical

Research Laboratories. Each of these six tenant spaces include fuel oil tank and the area labeled Private Garage includes two gas tanks of unknown capacity.

Pepsi Cola is located to the west of the subject property at 47-60 34th Street. Depicted to the south is “The Pullman Co” and within the building is a “Laundry” label. A “Tank Room” and “Boiler Room” are depicted at the southeast side of the Laundry area.

1947: No significant changes are noted at the subject property and footprint of the building from the 1936 to the 1947 Sanborn Map. The Site remains labeled as “International Motor Co” with a note that the plant operates day and night. Some changes are noted at the immediately adjacent properties with additional development noted north, south, east and west of the Site. Some changes are noted in the occupants to the east as follows (north to south): The Ginger Ale area is now labeled “Printed Machine Rebuilding”; the private garage and Ashcraft Co. Assembly Plant; areas are now labeled “Machine Shop” and the Bus Garage; and Chemical & Mechanical Research Laboratories areas are now labeled “Broadway Maintenance Co.” and “Neon Sign Mfg.” The two gasoline tanks in the former fuel oil tanks identified in the former Private Garage (unit 3) are no longer depicted and the Machine shop area fuel oil tanks are no longer present.

Development is noted to the north of the property. An “Auto Parts Storage” building is noted the northwest of the property and the city block immediately to the north is developed and labeled Crawford Clothes Mfg. The adjacent southeast property is labeled as “Deluxe Hosiery Dye Works Inc.” with “Accurate Molding Corp Mfg Plastic Products” identified further to the southeast. The Pepsi Cola building remains depicted to the southwest but has expanded and now occupies the entire city block with a 1,343,000 gallon storage tank labeled “Sugar Syrup” identified. The Morganite Brush Co. Manufacturers of Carbon Brushes has been identified to the southwest at 48-01 34th Street.

1950: No significant changes are noted to the subject property and footprint of the building from the 1947 to the 1950 Sanborn Map with the exception that the structure labeled “vacant. tile” is no longer present at the northeast portion of the subject property.

Some changes are noted at the immediately adjacent properties with additional development noted in the surrounding area. The Pepsi Cola building previously noted to the west is now labeled “Philco Corporation, Television Service and Distributors” and the large steel aboveground tank is no longer depicted. The tenant to the east, at the south portion of the adjacent property is now labeled “Auto Body & Fender Repair School”. The property to the southeast is now labeled “Plastic Box Manufacturing.” and “Accurate Molding Co., Manufacturer of Plastic Products”.

1970: No significant changes are noted to the subject property from the 1950 to the 1970 Sanborn Map with the exception that the small structure in the northeast corner of the property is no longer depicted and the building is now labeled as “Neptune Meter Co.” Due to the poor quality of the 1950 Sanborn Map, various operations and structures are not identifiable. The adjacent property on the west side is now “Simmons Precision Products” A “Filling station” is identified to the property northwest of the Site and the balance of the property is now labeled “Truck Renting”. Aviation High School is noted on the northeast side adjacent to the subject property with a “Hangar” and “Engine Test Room” labeled on the southern portion of the parcel. The property to the east now includes a “Paper Box Co.” in the area previously identified as Auto Body & Fender Repair School. Fuel oil storage tanks remain depicted in these tenant spaces.

1977: No significant changes are noted to the subject property from the 1970 to the 1977 Sanborn Map with the exception that the building is no longer labeled as "Neptune Meter Co." The adjacent property on the west side is no longer labeled with regards to occupant. The filling station identified to the northwest is no longer depicted. New construction (1976) is noted at the property northwest of the Site with the balance of the property now labeled "Parking." No other significant changes have been identified in the Site vicinity from the 1970 to the 1977 maps.

1979: No significant changes are noted to the subject property or immediately surrounding vicinity from the 1977 to the 1979 Sanborn Map.

1980: No significant changes are noted to the subject property or immediately surrounding vicinity from the 1979 to the 1980 Sanborn Map.

1985: No significant changes are noted to the subject property or immediately surrounding vicinity from the 1980 to the 1985 Sanborn Map.

4.4 City Directories

AECOM reviewed available city directory information covering the subject properties and vicinity from EDR dated 1922 to 2017, in approximate five-year intervals. A copy of the City Directory Search abstract is included in **Appendix B**. The following is a listing of the occupants for the Property and adjoining or surrounding Sites:

Address	Year(s)	Listing
47-25 34th Street Long Island City, New York 11101	2017	A J Locksmith Service-24 Hour Bldg Management Thirty Fourth St Brickman Thirty Fourth Street LLC Building 20 13 Parnters LLC Elenis Freeda Vitamins Inc Gracie Inc Metropolitan Office Computer Remco Maintenance Samiro Services Inc Scientific Fire Prevention

Off-Site properties are primarily listed on the City Directories as commercial (catering and food processing facilities), construction companies, warehouse/storage operations, museum, and manufacturing properties. Off-Site properties of note include:

- 47-38 34th Street is identified as Sun Cleaners (2000, 2005), White & White Cleaners (2005, 2017), Griff's Laundry Depot Inc. (2005) and Green World Cleaners (2017). This address was listed in the EDR database as a historic dry cleaner site, State Hazardous Waste Site (SHWS) and a NY Spills database as discussed in detail below.

- 47-15 35th Street is listed as Matrix Mechanical Corp on the 2005 and 2017 directories. This address is listed in the EDR Database as a registered UST site with a tank that was closed in September 1997.

- 47-01 35th Street is listed as Hood Falco Corp Machinery in 1945; G R Products Steel Div., Inc. in 1962 and Mode Plastics Inc in 1983 and 1999. This address is listed in the EDR Database as a registered UST site with a tank that was closed in September 1997.

- 47-27 36th Street is listed as Jan Hardware Mfg Co Inc. on the 1967, 1970 and 1983 directories. This address is listed in the EDR Database as a registered UST site with a tank that was closed in October 1999.

- 35-02 48th Avenue is listed as Simon Adhesive Prods Corp in the 1962 and 1967 directory; as Accurate Molding Co Inc plastic molds in 1983 and Northrop Grumman in 2004. This address was observed to be occupied by Neuman's Kitchen Events & Catering during the October 15, 2020 Site reconnaissance and is listed as Neuman's Kitchen on the 2017 directory, and is considered topographically downgradient to the Site

4.5 Subject Property

Historical research indicates that the subject property was developed in 1924 with the existing building and initially occupied by manufacturing operations including International Motor Co. (1924 to at least 1950), and Neptune Meter Co. (1962 to sometime between 1977 and 1979). In the early 1980s the building began being utilized as a multi-tenant facility that included offices, commercial, and manufacturing operations. Manufacturing operations of note include Metropolitan News Co Inc. (1993-1999) and Eveready Hardware Mfg. Co (2005-2009). City & Suburban Delivery Systems, Inc. operated onsite from approximately 1999 to 2009 as a newspaper distribution center for local distributors. Site contacts report that a furniture workshop is currently located on the 3rd floor on-Site. Other current/recent tenants include a locksmith that recently vacated the ground level (A J Locksmith Service), Remco Maintenance, a janitorial services firm, Ralph Lauren-Polo offices; Elaine's Bakery; and Freeda Vitamin Company.

Based on the historical use of the subject property as manufacturing from 1924 through approximately 1977, and the lack of readily available documentation regarding closure of historical underground storage tanks, the historical manufacturing operations are considered a REC at this time.

4.2 Off-Site Properties

The subject property is located in a highly developed area of long Island City, Queens and is surrounded by commercial, industrial, and warehouse style buildings. While some development of the surrounding properties was noted as early as 1924, significant development of the adjacent properties was first identified on the 1936 and 1947 Sanborn Maps with industrial operations noted north, south, east, and west of the Site. The off-Site property to the east is a multi-tenant with six fuel oil tanks (one per tenant space) and an area labeled Private Garage includes two gas tanks of unknown capacity. The EDR Database search identified closed heating oil USTs but no record of gasoline tank closures was identified for this off-site property. Therefore, the off-site historical tanks (47-21 to 47-29 35th Street) represent a REC to the Site.

47-38 34th Street is identified as Sun Cleaners (2000, 2005), White & White Cleaners (2005, 2017), Griff's Laundry Depot Inc. (2005) and Green World Cleaners (2017). This address was listed in the

EDR database as a historic dry cleaner site, State Hazardous Waste Site (SHWS) and a NY Spills database, The NY Spills case and SHWS case are listed as closed.

4.3 Previously Prepared Environmental Reports

AECOM inquired about existing environmental reports associated with the subject property. Previously prepared environmental reports were not identified during this assessment.

5. Database and Records Review

5.1 User Provided Information

Section 6 of ASTM E1527-13 states that certain tasks, which will help to determine the possibility of RECs associated with the subject property, are generally conducted by the Phase I ESA report user. This includes the following: reviewing title records for environmental liens or activity and land use limitations and considering awareness of any specialized knowledge (e.g., information about previous ownership or environmental litigation), experience related to RECs at the subject property, or significant reduction in the purchase price of the subject property. Per the agreed scope-of-work, information related to these items should be provided by the Phase I ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM has provided the Client (the users) with the User Questionnaire from ASTM E1527-13; however, at this time the completed form has not been returned for inclusion in this report. This data gap is not expected to represent a significant limitation to this investigation based on other documentation reviewed as part of the Phase I ESA.

5.2 Title Records/Environmental Liens

Per the agreed upon scope of work, a chain-of-title and an environmental lien search were not performed as part of this assessment.

5.3 Database Information

In accordance with the scope of work and ASTM E1527-13, a search of various governmental databases was conducted by EDR. The Site-specific environmental database report was reviewed to evaluate if soil and or groundwater from on-Site and/or off-Site sources of concern has the potential to impact the subject properties. The database abbreviations are provided in the Site-specific environmental database report.

The database report includes various reports detailing database information for each of the Sites identified/geocoded within the specified radius. Additional Sites were identified within the database report; however, EDR was not able to map them to specific locations due to insufficient/ contradicting address information. These Sites were included in the database report as "orphan" Sites. Based upon AECOM's review, there does not appear to be any significant concerns associated with any of the orphan Sites. A summary of AECOM's review and analysis of the Site-specific environmental database report is presented below. A copy of the database report is provided in **Appendix C.**

Based on AECOM's research, the subject property is not located on or within a 1-mile radius of tribal lands.

Federal and State List	Last Updated	Search Radius*	No. of Sites within Search Radius	Site Appears on List	RECs, CRECs, or VECs Identified
National Priorities List for Federal Superfund Cleanup (NPL)	7/29/2020	1 mile	0	No	No
Delisted NPL Site List	7/29/2020	1 mile	0	No	No

EDR Historic Auto Sites (Hist Auto)	N/A	1/8th mile	1	No	No

5.3.1 Subject Property

The subject property is identified on the NY Underground Storage Tank (UST) and NY Aboveground Storage Tank (AST) database. The Site address was also identified on the Resource Conservation and Recovery Act (RGRA) Large Quantity Generator (LQG) database and manifests database under REMCO International and in the RCRA-Non Generator/No Longer Regulated (RCRA-NonGen/NLR), and Manifests (related to disposal of hazardous waste) environmental databases, and NY Spills database listing under City & Suburban Delivery Systems. RCRA violations were identified; however, they were informal and issued in 2007 with no subsequent violations noted. City & Suburban Delivery Systems was identified on the NY Spills database with a petroleum spill was reported on January 3, 2003. The spill was reported as due to an equipment failure due to a "possible leak in discharge line" - caller was doing tank closure and test results showed contamination. This spill case is associated with two UST closures conducted on December 12, 2002. The EDR report indicates that the NYSDEC reviewed the Closure Report and issued a NFA determination.

The Site address is listed with five (5) closed (removed) ASTs and six (6) closed (five closed in-place and one removed) USTs. The Site contact did not know of any previous subsurface investigations and no previous subsurface investigation reports were provided to AECOM for review. Based on the database listing and historical information regarding the subject property, the former ASTs and USTs are considered a REC and a VEC at the subject property at this time.

5.3.2 Surrounding Sites

According to the environmental database report, numerous Sites (over 100) were identified within their respective ASTM E1527-13 and/or EDR search distances from the subject property. Based on AECOM's review of these database listings, none of these Sites are expected to present a REC to the subject property based on their distance from the subject property, regulatory status (i.e. closed, no violations found), media impacted (i.e. soil only), and/or topographical position from the subject property (i.e. down-gradient or cross-gradient) with the following exception. Due to its proximity to the subject property, the following Site is discussed in additional detail:

- **Former Liberty Brass Site, 38-01 Queens Blvd. 0.236 miles NE;** The site has a long history of manufacturing brass hardware parts. From 1970 until 2006 manufacturing of screw machine products and hardware occurred on the site. The manufacture of the brass

spray tops for perfume bottles and metal plating was conducted on the site from 1917 to approximately 1950. Remediation is nearly complete for this Conditional Track 1 cleanup. The contaminants of concern were Trichloroethylene (TCE), Tetrachloroethylene (PCE) and cis-1,2-dichloroethylene (DCE). Currently, only TCE exceedances of cleanup objective are present on-site. The ongoing Conditional Track 1 remedy consists of soil vapor extraction and in-situ chemical oxidation for residual soil and groundwater contamination between 32 feet and 50 feet below ground surface (bgs) and a bioremediation reactive barrier to prevent volatile organic compounds from entering the site. The remaining TCE soil contamination ranges from 1.3 ppm (37' bgs) to 2.3 ppm (32' bgs). The Unrestricted Soil Cleanup Objective for TCE is 0.47 ppm. The remaining groundwater contamination of TCE ranges from 5.3 ppb to 6.8 ppb. The groundwater cleanup standard is 5 ppb for TCE. For soil vapor, an active sub slab depressurization system mitigates the remaining soil vapor contamination. The remedy must achieve Unrestricted Soil Cleanup and groundwater quality objectives by December 2023 for the Applicant to maintain their Track 1 cleanup status. Due to the status of the remedial action, and distance to the subject property, this off-site property does not present a REC to the Site.

5.4 Vapor Encroachment Screening

AECOM conducted a Tier 1 VES as part of this assessment. This screening was conducted in general accordance with the ASTM E2600-15. The objective of the VES was to determine if a VEC exists or if a VEC does not exist.

5.4.1 Subject Property

The subject property was utilized as manufacturing operations from 1924/1925 through 1970s. Several petroleum-containing ASTs and USTs were historically located on-Site. No subsurface data was provided for review. Based on this information, a VEC may exist.

5.4.2 Off-Site

To conduct the VES of the nearby area, AECOM conducted a detailed review and analysis of the Site-specific environmental database report with particular focus on the follow two types of Sites:

1. Off-Site properties that are impacted by chlorinated volatile organic compounds (CVOCs) and/or semi-volatile-organic compounds (SVOCs) and are located within approximately 1,750 feet of the subject property, and
2. Off-Site properties that are impacted by petroleum hydrocarbons and are located within approximately 525 feet of the subject property.

The following paragraph summarizes the results of AECOM's VES of the nearby area.

A review of the Site-specific environmental database indicates that 8 CVOC/SVOC and 62 petroleum hydrocarbon impacted Sites are located with the above-described radii of the subject property. However, 7 of the 8 CVOC-impacted, and all 62 petroleum hydrocarbon-impacted Sites can be ruled out due to their regulatory status (i.e. regulatory closure has been issued), media impacted (i.e. soil only), and/or topographical position from the subject property (i.e. down-gradient or cross-gradient). The following bullet discusses the remaining CVOC Site:

- Former Liberty Brass Site, 38-01 Queens Blvd. is located approximately 1250 feet northeast of the subject property. Trichloroethylene (TCE), Tetrachloroethylene (PCE) and cis-1,2-dichloroethylene (DCE) were initially identified in soil and groundwater at this off-site property. Currently, only TCE exceedances of cleanup objective are present on-site with ongoing remedial action including soil vapor extraction and in-situ chemical oxidation for residual soil and groundwater contamination between 32 feet and 50 feet below ground surface (bgs) and a bioremediation reactive barrier to prevent volatile organic compounds from entering the site. The remaining TCE soil contamination ranges from 1.3 ppm (37' bgs) to 2.3 ppm (32' bgs). The remaining groundwater contamination of TCE ranges from 5.3 ppb to 6.8 ppb. Due to the status of the remedial action and distance to the subject property, it is AECOM's opinion that a VEC at the subject property due to this off-Site source does not exist.

5.5 Agency File Review

5.5.1 Local

AECOM submitted Freedom of Information Law (FOIL) requests to the City of New York Department of Health (NYCDOH) New York City Department of Environmental Protection (NYCDEP), and New York City Fire Department to determine if they have files related to a historical hazardous materials release that may have occurred at the subject property. As of the date of this report, a response to AECOM's FOIL request has not been received. Based on AECOM's research to date, AECOM does anticipate that a response (if any) from the City of New York Fire Department to our FOIL request may significantly alter the conclusions or recommendations of this report. If information is received from this FOIL request that significantly impacts the conclusions of this report, this information will be forwarded upon receipt.

5.5.2 State

AECOM submitted Freedom of Information Law (FOIL) requests to the New York State Department of Environmental Conservation (NYSDEC) to determine if they have files related to a historical hazardous materials release that may have occurred at the subject property. As of the date of this report, a response to AECOM's FOIL request to NYSDOH has not been received. If information is received from this FOIL request that significantly impacts the conclusions of this report, this information will be forwarded upon receipt.

The NYSDEC provided readily available petroleum bulk storage (PBS) records for the subject property. PBS registration applications (PBS# 2-600221) dated July 1991 through December 2015 were included in the documents received for review. The PBS applications indicate the following tanks were registered at the subject property:

Tank ID	Tank Type	Owner/Operator	Capacity (gallons)	Content	Date Installed	Status
001 **002**	UST	Metropolitan News Co.	4,000 4,000	Leaded Gasoline	1973	In Service
001 **002**	UST	City & Suburban Delivery Systems, Inc.	4,000 4,000	Diesel	1973	In Service
1 **2**	UST	City & Suburban Delivery Systems, Inc.	10,000 10,000	Empty	NP	Closed in Place

3			10,000			12/1997
AB1, AB2, AB3	AST	City & Suburban Delivery Systems, Inc.	275 275 275	Used Oil Lube Oil ATF	10/991	In Service
06 07	UST	City & Suburban Delivery Systems, Inc.	7,500 7,500	Fuel Oil	NP	Closed in Place 1998
001 002	UST	City & Suburban Delivery Systems, Inc.	4,000 4,000	Diesel	1973	Closed in Place 12/2002
AB1, AB2, AB3	AST	City & Suburban Delivery Systems, Inc.	275 275 275	Lube Oil Lube Oil Lube Oil	10/991	Closed in Place 12/2002
003	UST	47-25 34th Street/Remco Maintenance LLC	6,000	Diesel	NP	Closed in Place 12/19/15

A *Tank Closure Report for City & Suburban Delivery Systems, Inc. 47-25 34th Street, Long Island City, New York, prepared by American Resource Technologies of Brooklyn, NY dated January 2002* was obtained and reviewed. The Closure Report documents soil samples collected at two 4,000-gallon diesel USTs (Tanks 001 and 002) that were closed in place in the City & Suburban Delivery Systems space. The tanks were located inside the building in the northeast portion of the building. Six soil borings were advanced around the tank to depth of 10 feet bgs. Soil was screened for visual evidence of staining, odors and photoionization (PID) readings above background. No PID readings were identified in each boring with the exception of boring SB-05 which exhibited PID readings above background at the 0 to 2.5 ft bgs interval. Soil was collected at the bottom of each boring (9-10 ft bgs) and analyzed for volatile organic compounds and semi-volatile organic compounds per the NYSDEC STARS Memo. An additional soil sample was collected at SB-05 and analyzed for STARS VOCs. Elevated VOCs were detected in sample SB-5(2.5) and spill case # 0210020 was assigned. The report indicates that approximately 1 cubic yard of soil was subsequently excavated and disposed of at SB-5(2.5) and an additional endpoint sample was collected and analyzed for VOCs. The endpoint sample as reported as None-Detected for VOC. Based upon these findings, the NYSDEC closed spill case 0210020.

5.5.3 Federal

AECOM searched the U.S. EPA's Envirofacts and Superfund Enterprise Management System (SEMS) online databases. The SEMS database replaced the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) which has since been retired. SEMS includes the same data fields and content as CERCLIS. The Envirofacts database retrieves information obtained from 17 national systems, including the CERCLIS, Superfund program (NPL Sites), hazardous waste Sites, and potential hazardous waste Sites. The subject property was listed on the Envirofacts database as 47-25 34th St Building, a non-residential building with an air permit (minor, operating). The subject property was also listed as City & Suburban Delivery Systems as a RCRA generator. No compliance issues were identified for these entries.

6. Findings and Opinions

AECOM performed a Phase I ESA of the subject property in conformance with the scope and limitations of ASTM E1527-13, which meets the requirements of Title 40, Code of Federal Regulations Part 312 and is intended to constitute *all appropriate inquiry* for purposes of the landowner liability protections. Any exceptions to, or deletions from, this practice are described in Section 1.3 through 1.5 of this report.

The following sections summarize the findings and opinions of this Phase I ESA of the subject property.

6.1 Recognized Environmental Conditions

Based on the above-described activities, the following RECs were identified during this assessment:

- AECOM's historical research indicates that the subject property was occupied by manufacturing operations from 1924 through the late 1970s (International Motor Co. - 1924 to at least 1950 and Neptune Meter Co. - 1962 to sometime between 1977 and 1979). The use of hazardous materials, if any, associated with historical manufacturing operations is unknown. The potential historic use of the subject property as manufacturing is considered a REC.

- The subject property utilized up to six fuel oil underground storage tank (UST) for heating purposes. Each of the above referenced USTs were reported as closed in place or removed. Two 4,000-gallon diesel USTs were closed in 2002 and are associated with a NY Spill case that received a NFA determination from NYSDEC in 2003. However, a copy of the UST closure reports or NFA correspondence was not readily available for the other four (4) tank systems. Based on the lack of information regarding location, and regulatory status, AECOM considers these four (4) historical USTs a REC and VEC to the Site.

- Eight (8) metal floor plates that ranged in size from 1 foot by 1 foot to 2 foot by 3 foot were observed within the ground level of the proposed leasehold. Select metal plate covers were lifted and the pits were observed to contain cut and capped piping. The origin of the piping or historical use of the piping is unknown at this time and is considered a REC to the Site.

- The property on the east side of 35th street was historically occupied by six tenants . Each of these six tenant spaces maintained fuel oil tanks and the area labeled Private Garage (47-21 to 47-29 35th Street) includes two gasoline tanks of unknown capacity. The EDR Database lists each of the fuel oil storage tanks as closed; however, no listing for closure of gasoline tanks was included in the EDR database search report. Therefore, the gasoline tanks are considered a REC to the subject property.

6.2 Controlled Recognized Environmental Conditions

Based on the above-described activities, no CRECs were identified in connection with the subject property.

6.3 Historical Recognized Environmental Conditions

Based on the above-described activities, the following HRECs were identified during this assessment:

- A Tank Closure Report for City & Suburban Delivery Systems, Inc. 47-25 34th Street, Long Island City, New York, prepared by American Resource Technologies of Brooklyn, NY dated January 2002 was obtained and reviewed. The Closure Report documents soil samples collected at two 4,000-gallon diesel USTs (Tanks 001 and 002) that were closed in place in the City & Suburban Delivery Systems space. The tanks were located inside the building in the northeast portion of the building. Six soil borings were advanced around the tank to depth of 10 feet bgs. Soil was screened for visual evidence of staining, odors and photoionization (PID) readings above background. No PID readings were identified in each boring with the exception of boring SB-05 which exhibited PID readings above background at the 0 to 2.5 ft bgs interval. Soil was collected at the bottom of each boring (9-10 ft bgs) and analyzed for volatile organic compounds and semi-volatile organic compounds per the NYSDEC STARS Memo. An additional soil sample was collected at SB-05 and analyzed for STARS VOCs. Elevated VOCs were detected in sample SB-5(2.5) and spill case # 0210020 was assigned. The report indicates that approximately 1 cubic yard of soil was subsequently excavated and disposed of at SB-5(2.5) and an additional endpoint sample was collected and analyzed for VOCs. The endpoint sample as reported as None-Detected for VOC. Based upon these findings, the NYSDEC closed spill case 0210020.

6.4 Vapor Encroachment Conditions

Based on the above-described activities, no VECs were identified in connection with the subject property.

6.5 De Minimis Conditions

Based on the above-described activities, the following DMCs were identified during this assessment:

- The facility contact reported that a hydraulic elevator historically serviced the leasehold area, however, the elevator system was removed in July/August 2020 as part of building redevelopment. The elevator's hydraulic reservoir was located on the ground level. The area is currently utilized as an electrical closet. Some minor staining was noted on the concrete flooring which was intact with no visual evidence of cracks or deterioration. A floor drain was not noted in the elevator equipment room. The staining inside the former elevator equipment room appeared to be de minimis at the time of the assessment

- Polychlorinated biphenyl (PCB)-containing dielectric fluids have been widely used as coolants and lubricants in transformers, capacitors, and other electric equipment due to their insulating and nonflammable properties. Based on the age of the subject property (pre-1979), the potential exists for PCB-light ballasts to be present on-Site.

7. Conclusions

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM E1527-13 of 47-25 34th Street, Long Island City, New York, the subject property. Any exception to, or deletions from, this practice are described in Sections 1.3 through 1.5 of this report. This assessment has revealed evidence of the following RECs and HRECs in connection with subject property:

The following RECs were identified in connection with the subject property:

- AECOM's historical research indicates that the subject property was occupied by manufacturing operations from 1924 through the late 1970s (International Motor Co. - 1924 to at least 1950 and Neptune Meter Co. - 1962 to sometime between 1977 and 1979). The use of hazardous materials, if any, associated with historical manufacturing operations is unknown. The potential historic use of the subject property as manufacturing is considered a REC.

- The subject property utilized up to six fuel oil underground storage tank (UST) for heating purposes. Each of the above referenced USTs were reported as closed in place or removed. Two 4,000-gallon diesel USTs were closed in 2002 and are associated with a NY Spill case that received a NFA determination from NYSDEC in 2003. However, a copy of the UST closure reports or NFA correspondence was not readily available for the other four (4) tank systems. Based on the lack of information regarding location, and regulatory status, AECOM considers these four (4) historical USTs a REC and VEC to the Site.

- Eight (8) metal floor plates that ranged in size from 1 foot by 1 foot to 2 foot by 3 foot were observed within the ground level of the proposed leasehold. Select metal plate covers were lifted and the pits were observed to contain cut and capped piping. The origin of the piping or historical use of the piping is unknown at this time and is considered a REC to the Site.

- The property on the east side of 35th street was historically occupied by six tenants . Each of these six tenant spaces maintained fuel oil tanks and the area labeled Private Garage (47-21 to 47-29 35th Street) includes two gasoline tanks of unknown capacity. The EDR Database lists each of the fuel oil storage tanks as closed; however, no listing for closure of gasoline tanks was included in the EDR database search report. Therefore, the gasoline tanks are considered a REC to the subject property.

The following HREC was identified in connection with the subject property:

- A Tank Closure Report for City & Suburban Delivery Systems, Inc. 47-25 34th Street, Long Island City, New York, prepared by American Resource Technologies of Brooklyn, NY dated January 2002 was obtained and reviewed. The Closure Report documents soil samples collected at two 4,000-gallon diesel USTs (Tanks 001 and 002) that were closed in place in the City & Suburban Delivery Systems space. The tanks were located inside the building in the northeast portion of the building. Six soil borings were advanced around the tank to depth of 10 feet bgs. Soil was screened for visual evidence of staining, odors and photoionization (PID) readings above background. No PID readings were identified in each boring with the exception of boring SB-05 which exhibited PID readings above background at the 0 to 2.5 ft bgs interval. Soil was collected at the bottom of each boring (9-10 ft bgs) and analyzed for volatile organic compounds and semi-volatile organic compounds per the NYSDEC STARS

Memo. An additional soil sample was collected at SB-05 and analyzed for STARS VOCs. Elevated VOCs were detected in sample SB-5(2.5) and spill case # 0210020 was assigned. The report indicates that approximately 1 cubic yard of soil was subsequently excavated and disposed of at SB-5(2.5) and an additional endpoint sample was collected and analyzed for VOCs. The endpoint sample as reported as None-Detected for VOC. Based upon these findings, the NYSDEC closed spill case 0210020.

The following DMCs were identified during this assessment:

- The facility contact reported that a hydraulic elevator historically serviced the leasehold area, however, the elevator system was removed in July/August 2020 as part of building redevelopment. The elevator's hydraulic reservoir was located on the ground level. The area is currently utilized as an electrical closet. Some minor staining was noted on the concrete flooring which was intact with no visual evidence of cracks or deterioration. A floor drain was not noted in the elevator equipment room. The staining inside the former elevator equipment room appeared to be de minimis at the time of the assessment

- Polychlorinated biphenyl (PCB)-containing dielectric fluids have been widely used as coolants and lubricants in transformers, capacitors, and other electric equipment due to their insulating and nonflammable properties. Based on the age of the subject property (pre-1979), the potential exists for PCB-light ballasts to be present on-Site.

8. Environmental Professional Statement

Ms. Christine Wagner was the Environmental Professional (EP) for this project. Ms. Last Name's EP statement is below and her resume is provided in **Appendix D:**

I declare that, to the best of my professional knowledge and belief, I meet the definition of an EP as defined in §312.10 of 40 Code of Federal Regulations (CFR) and that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2020 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/15/2020 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 8 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 11 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 11 RCRA-VSQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/12/2020 has revealed that there are 19 NY SHWS sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 07/01/2020 has revealed that there is 1 NY SWF/LF site within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/12/2020 has revealed that there are 63 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 71 NY UST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

Records of Emergency Release Reports

EXECUTIVE SUMMARY

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/12/2020 has revealed that there are 27 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/15/2020 has revealed that there are 77 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
FINA MICHAEL C COMPA	4849 33RD ST	SW 0 - 1/8 (0.084 mi.)	I82	359

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 5 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Tank Info:

Tank Number: 06
Tank Id: 54829
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

B00 - Tank External Protection - None
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
H00 - Tank Leak Detection - None
I00 - Overfill - None
C03 - Pipe Location - Aboveground/Underground Combination
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground in subterranean vault with access for inspections.....
Tank in subterranean vault but accessible for inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: Not reported
Capacity Gallons: 7500
Tightness Test Method: 00
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 06/01/1998
Register: True

DEC Memo:	"2500 U/G TANK- NO PBS REGISTRATION SENDING THE PBS FORMS. IT IS BELIEVED THAT OIL IS MIGRATING UP THROUGH THE SIDEWALK FROM AN UNDERGROUND FILL LINE DURING LAST DELIVERY. SURFACE SPILL IS REPORTEDLY CLEANED UP. DEVOE HAS CONTRACTOR COMING TODAY TO EVALUATE. ADVISED DEVOE THAT CONTAMINATED SOIL IS TO BE EXCAVATED AND PROPERLY DISPOSSED OF. ADVISED DEVOE TO CONTACT TIBBE AFTER NOON AND GIVE HIM AN UPDATE. BOB ADENBAUM- LIVES IN FLA. DEVOE IS HANDLING FOR HIM. Prior to Sept, 2004 data translation this spill Lead_DEC Field was M TIBBE 12/29/05 Transferred to E. Hampston via Spill Initiative. Forwarded letter to owner requesting status update/additional information. 6/27/06 - Mike - Building was bought after this incident, new contact Salli Shin 1-718-392-3355. Does not have records or knowledge of this. 4/12/11 - PM still listed from Spill Initiative. Should be re-assigned. 4/13/11 - Austin - Reassigned to Patel in Region 2, to ascertain regulatory and operational status of UST system in question, and to see if we have any current concerns with this spill. - end 04/14/11-Hiralkumar Patel. alternate address: 47-39 to 47-45 35th Street other spill #: 8910739. the spill was reported on 02/09/1990 due to 5 gal spill as van backed into hose and nocked nozzle from fill pipe. case closed. stop work order exists at the site. as per NYC DOB permit application dated 06/12/08, 275 gal fuel tank was replaced. property owner: Jiwon International Corp 47-47 35th Street Long Island City, NY found PBS record under Jiwon International at 47-47 35th Street. PBS #: 2-270830. as per PBS record, site 47-47 had 2,500 gal #2 oil UST which was closed-in-place on 12/10/1999. the subject spill was reported as oil was coming out from ground in sidewalk area and suspected a leak from an underground fill line for 2,500 gal UST. as both properties 47-39 and 47-47 owned by same owner and spill was reported for 2,500 gal UST, spill address could be 47-47 35th Street. 03/19/12-Hiralkumar Patel. 1:45 PM:- visited site. its been occupied by food-cart storage. current tenant doesn't know anything about tanks. found an abandoned fill port along 47-47 35th Street, which is also owned by owner of building 47-39. went to office of Jiwon International Corp. at 47-15 33rd street. person asked to contact Joseph Yun. 4:18 PM:- spoke with Joseph, property manager. informed him about open spill case. he started managing property about a year ago. he asked to send correspondece to property owner. Joseph Yun **property manager** Ransd Inc. 1178 Broadway, 4th Floor New York, NY 10001 Ph. (212) 685-3280 Jiwon International Corp. **property owner** 47-15 33rd Street Long Island

NEW YORK BLOOD CENTER (Continued) **S102560398**

City, NY 11101 Attn.: David Yoo Ph. (718) 392-3355 email: david@bcsroyal.com 03/21/12-Hiralkumar Patel. reviewed NYC DOB record and ACRIS records. as per ACRIS record, Jiwon International baught property 47-47 in July 1997 and property 47-39 in May 2002. before that, both properties were owned by different person/organization. as per NYC DOB ARA application approved on 02/09/08 (copy on e-docs), an abandoned underground tank was replaced by 275 gal aboveground tank in cellar at building 47-39. Ranshaw Fuel filed the application. 9:48 AM:- left message for Mr. Yoo. 10:05 AM:- spoke with Debbie at Ranshaw Fuel, who filed application in Feb. 2008 to replace underground tank. Debbie asked to send email with request for documents. Richard Bonelli Ranshaw Fuel Ph. (718) 767-8600 Debbie Ranshaw Fuel email: debbie@ranshaw.com 10:07 AM:- sent email to Debbie and asked her to submit document/information about tank replacement work at the subject site. 10:13 AM:- received call from Jim from Ranshaw Fuel. he mentioned that they abandoned a 2,500 gal UST in 2008. Jim mentioned that the tank system was tested tight, cleaned, pipes were cut off and sealed and tank was filled with cement slurry. asked Jim to submit documents regarding tank abandonment. Jim Kane Ranshaw Fuel Oil, Plumbing and Heating Ph. (718) 767-8600 (718) 249-2741 (516) 805-7799 (C) email: JimKane@Ranshaw.com based on available information, the tank at 47-39 was never registered. discussed with DEC Leszek who confirmed that property owner has to register the abandoned tank as it was in-service after 1986. 12:03 PM:- received message from Mr. Yoo. 2:31 PM:- spoke with Mr. Yoo. he did not know anything about oil spill and doesn't have any documents in this matter. 3:58 PM:- sent letter to Mr. Yoo requiring soil delineation and endpoint samples. asked him to submit investigation report by 05/11/12. also asked him to submit PBS application, to register former 2,500 gallon tank, by the end of 04/06/12. letter emailed to Mr. Yoo. 03/22/12-Hiralkumar Patel. 9:09 AM:- received email from Jim including tank closure affidavit. as per affidavit, one 2,500 gal fuel oil tank was abandoned on 01/24/08. 04/02/12-Hiralkumar Patel. 1:11 PM:- received call from Joseph. he inquired about PBS registration. asked him to check DEC website for fee and other instructions. 04/05/12-Hiralkumar Patel. 12:40 PM:- received call from Chris from Port Environmental, company hired by property owner. informed him that tank registration is due tomorrow and investigation report due on 05/11/12. gave him contact number for Ranshaw Fuel. Chris requested copy of tank closure affidavit. Chris Mcguire Port Environmental / Port Tank and Fuel Inc. Ph. (631) 902-1408 email: chrishmcguire@hotmail.com 2:27 PM:- sent email to Chris with copy of tank closure affidavit. 04/06/12-Hiralkumar Patel. DEC Brian met with owner's representative who came to office to submit PBS application. Brian found some documents missing and informed to submit all required documents. 04/25/12-Hiralkumar Patel. 11:42 AM:- received call from Chris inquiring about required sampling frequency and depth. informed him that it depends on legth of underground piping. he has a tank location map and will send for review. 04/26/12-HIralkumar Patel. received email from Chris (at 5:16 PM on 04/25/12) including tank location map. as per the map, old supply line was running 9'8 under the sidewalk and then 14' inside the building. 04/30/12-Hiralkumar Patel. 10:32 AM:- received call from Chris. he asked about number of samples required. asked him about location of fill port and exact location of fill line. he mentioned that they did not observed concrete patch on sidewalk (which could be old fill port) and also they prepared site map based

NEW YORK BLOOD CENTER (Continued) **S102560398**

on information provided by tank closing company. he observed a concrete patch inside the building at former tank location, which could be result of tank cleaning operation. as exact location of fill port and fill line is not available, asked him to perform GPR survey (or other method) to locate former fill port and fill line, prior to sampling. he will send schedule for such work. 05/09/12-Hiralkumar Patel. 9:46 AM:- received message from Mr. Yun from Jiwon International. 12:57 PM:- spoke with Mr. Yun. he mentioned that due to higher cost for the required work, he needs approval from the property owner who is out of office until 05/27/12. he requested time extension for report submission. approved his request and asked him to submit report by the end of 06/29/12. asked him about tank registration. he mentioned that he hand delivered PBS application and fee cheque to DEC Lombardo. 06/21/12-Hiralkumar Patel. 8:19 AM:- received message from Fred (516-492-5775), contractor working at the site. him and Chris Tomasello is working on the project. he mentioned that they will start investigation work on 06/25/12 and report will be submitted once work completed. 06/25/12-Hiralkumar Patel. 1:01 PM:- left message for Fred. informed him that the department does not approve any time extension and wants to talk to property manager and contractor. 1:04 PM:- left message for Mr. Yun and informed him that the department does not approve any time extension and asked him to call back. 1:20 PM:- received call from Mr. Yun. he mentioned that borings were completed and now waiting for result. he will ask contractor to call back with report submission date. 3:50 PM:- received call from Chris Tomasello. he mentioned that nobody knows where the tank located. based on site observation, they installed some borings inside and outside the building. out of three outside borings (on sidewalk), they found some contamination in one boring. samples were submitted to lab on 06/22/12. based on available information, approved Chris's request and asked to submit report by the end of 07/06/12. 07/06/12-Hiralkumar Patel. 1:18 PM:- receive email from Chris including investigation report. total of four soil borings were installed to a depth of 12 ft bg. found PID readings in all borings, but petroleum odors were detected at 0-4 ft depth in boring B-3 only. very minor VOC contamination, below limit, was noted in soil sample from B-3. based on submitted report, case closed. 4:25 PM:- sent spill closure letter to Mr. Yoo. letter emailed to Mr. Yoo and Chris."

Remarks: "LEAK IN OIL LINE CAUSED SPILL OF 1/2 GAL OF FUEL OIL ONTO SIDE WALK SPILL HAS BEEN CLEANED UP - CALLER LOOKING FOR REFERRAL FOR A REPAIR COMPANY"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 7/23/2004 Sangesland spoke to neighbor watching events at the site. He was outside talking to the contractor doing tank work. Contractors pressure testing - tank failed - They are now digging the tank up to repair it. They found contaminated soil. Owner does not want to report it and wants the tank covered up ASAP. 7/18/04. J.Krimgold @ site. Workers excavating a 5000 +gallons #2 oil tank. Top of the tank has been exposed and contaminated soil on the top of the tank can be observed. Also strong oil odor from excavation. Excavated soil stockpiled on the site together with contaminated soil. J.Krimgold requested to immediately stop excavation and the

LINEAR PRODUCTS INC (Continued) **1000200165**

owner to contact DEC for further directions. No PBS registration at this address. 10/13/04. Todd Manning (804-379-5702) from Secor International, Inc. called and requested the status of this case. They are an environmental consultant for Citi Corp and performing a site assessment of this site for Citi Corp. YK. 9/23/05. J.Krimgold reviewed a Site Assesment Report prepaired by Empire Env. Services and submitted on 9/20/05. According to the report 5000 gal UST used for #6 oil was removed and a new 3000 gal UST was installed. Contaminated soil found during tank removal was ecxavated and disposed of properly. Two post-excavation soil samples were taken and show no levels above TAGM. NFA letter. "

Remarks: "UNDERGROUDND TANK LEAKING ONTO SOIL AND SATRUATED IT, COMPANY PLANS ON JUST SEALING THE TANK AND COVERING, COULD BE #2 OR #4 OIL, NOT SURE, STATED THAT THEY DIDNT WANT DEC INVOLVED, SUPPOSED TO BE DIGGING AROUDN THE AREA TO PRESSURE TEST TEH TANK, THERE IS A STORN DRAIN 10-15 FT AWAY FROM THE ACTUAL BUILDING"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
AIR SYNTHETIC MINOR
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.
Registry ID: 110009481523

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Sangesland spoke to Bob Laga at Franklin. He said site is the large Fire Dept building in Long Island City which is under renovation. This TTF was due to a Bad Stage 2 line associated with the vent/vapor line in a suction system. The tank is tight. FD gave approval to dig out the line and replace it. DEC Krimgold gave approval to close the case."
Remarks:	"TANK TEST FAILURE ON A 4000 GALLON TANK, UNK IF ANY PRODUCT WAS SPILLED."

SEE FILE FOR SPILL 89-08620 FOR FORMER LEASEWAY FACILITY FOR MANY YEARS OF DOCUMENTATION. 12/04/03 Spill 8908620 has been closed; this spill number will be used to address contamination on this property. 1/14/04 report//supplemental gw sampling results. see file 3/3/04 Penske submitted request to spill compensation fund to address contaminants impacting Penske property from an offsite source. 05/22/06: This spill is transferred from Koon Tang to Q.Abidi. Called Groundwater Envt'l LIC at 1-800-360-9405, left message for Ms. Heather to call me back regarding this spill. -QA 11/06/06: Called Groundwater Enviromental long Island City and talk to Ms. Heather, she said she will try to get the information regarding spill and will call me back. -QA 01/18/07: Mr. Vincent Moresca called from Groundwater Envt'l said he is not involved in this spill but he will find out information & if he gets any information he will call me back. -QA 02/06/07: Called Ms. Don Dought at 1-800-360-9405 Environmental office Long Island City. She was not available left message to call me back. -QA 08/31/07: Called Ms. Connie Ryan (Owner of building @ 34-02 Queens Boulevard, LIC), asked if she has any document regarding tank closure assesment or any tank tightness test rpt (For tank which is in service). I faxed letter to her that we need this info very urgently. -QA 09/04/07: Called Ms. Connie Ryan (Owner of the building 34-02 Queens Boulevard, LIC) at (212)645-7575 and said that contamination is coming from upgradient that is your building to Peske truck leasing 33-17 47th Avenue. She asked me to send letter from which we found that contamination is coming from north side of building. I faxed letter to her (which Mr. Tony Dellaria (Ground Water and Environmental Services, Inc.) had send to NYSDEC. -QA 09/05/07: Called Mr. Richard Alves (Ace Atlas Corp., Boiler & Tank Service Co.) at 718-497-3003 and asked to send documents regarding tank closure and soil sample rpt by fax ASAP. -QA 09/06/07: This spill case transferred from Q. Abidi to J. Kolleeny. Attended meeting with Jane O'Connell & Vadim Brevdo of DEC and reps of Con Edison (new property owner) and their consultant, Jacques Whitford - see attendance sheet in eDocs. JW recently did remedial and geotech investigation of site, summarized in 9/4/07 rpt in eDocs.

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

DEC stated that available data do not conclusively point to off-site source, but suggest residual impacts to soil & GW from original on-site spill, and that Con Ed will be expected to address these impacts, in addition to including mitigation measures in their plans for on-site substation. I changed spill priority ranking from P0 to P1 due to high levels of BTEX in soil & GW. - J. Kolleeny 09/10/07: Received email from Kenneth Kaiser of Con Edison with Meeting Summary Notes for Sept. 6th meeting (in eDocs). - J. Kolleeny 11/16/07: Reviewed Conceptual Remediation Approach letter from Kenneth Kaiser of Con Ed, dated 11/06/07 (in eDocs). Letter summarizes DEC's outstanding concerns: (1) high soil VOCs in smear zone, 25-31 ft. bgs, in northern part of site; (2) high benzene in GW from wells in west-central part of site; (3) high soil VOCs at/below water table (and shallow at one boring location, to be excavated during construction) in east-central part of site. Letter states that Con Ed has rejected excavation as remedial approach due to running sands at site, making shoring unsafe and threatening impacts to structure on adjacent property to north. Instead, Con Ed proposes (1) Injection of modified Fenton's reagent (Isotec) across treatment area via 80 injection points, in 3 separate events to occur in Dec. '07, March and April '08; (2) installation of funnel & gate system bridging water table, to direct GW to treatment gate using activated carbon or similar method; (3) decommissioning of most wells (17), except 6 which would be used to evaluate Isotec before/during/after injections, these 6 wells would be decommissioned before start of construction activities in May '08; (4) Installation of 3 new wells in sidewalk along east side of 33rd Street to monitor remedial progress, one of which would be directly downgradient of gate ; (5) implementation of GW monitoring program to track remedial progress, expected to involve quarterly sampling/gauging for 2 years, with submission of annual monitoring report. Letter further states that upon DEC approval of conceptual approach, Con Ed will prepare RAWP. I sent approval letter to Ken Kaiser of Con Ed, cc to Greg DelMastro of Jacques Whitford, stating that if monitoring shows treatment gate not effective, allowing high levels of GW contam to leave site, an alternative approach such as pump & treat should be considered. Also asked that RAWP provide details of Isotec injections, including diagram of proposed injection locations, quantities to be injected and supporting calculations; asked for design drawings for funnel & gate system; asked that well installed downgrade of gate be sampled once at end of 30-day start up, before routine quarterly sampling begins, and asked that monitoring reports initially be submitted quarterly, which may be modifed later based on progress (letter in eDocs). - J. Kolleeny 12/07/07: On 11/30/07, received email from Greg DelMastro of Jacques Whitford consultants, stating: Please find enclosed letter from Mr. Kenneth Kaiser of Consolidated Edison Co. of New York, Inc. responding to comments in your letter on Conceptual Remediation Approach dated Nov. 17, 2007. In addition, information has been provided regarding initial injection event at the Future Newtown Substation Site. Attached document, Conceptual Remediation Approach / Initial Injection Event dated 11/30/07 (in eDocs), included letter from Ken Kaiser of Con Ed describing injection event planned to start 12/10/07, involving 81 injection points with 500 gals of hydrogen peroxide-phosphoric acid-ferrous sulfate formula to be injected per point, with two injection intervals targeted between 27 and 44 ft bgs, plus site diagram showing proposed injection locations. Con Ed proposes two additional such events in Jan. and

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

Feb. '08. I reviewed and on 12/5/07 sent email to Ken: Can you add to letter a brief discussion of nature of chemical reaction between catalyzed hydrogen peroxide formula, and discussion of any potential health, safety, and env'tal impacts associated with its use? (i.e., does it cause strong exothermic reaction, can reaction cause damage to any subsurface utilities or structures in area, are any dangerous fumes/vapors generated, etc., that type of thing.) If you can attach product information sheets, that would also be helpful. Also, injection plan diagram shows funnel wall & gate as if they exist, and I presume they do not as yet. Should they be shown on diagram as if they currently exist? I see you are planning to inject substantial amount of chemical oxidant, and injection grid looks very comprehensive, so I have no issues with that. If you can make these changes/additions quickly, I will get out an approval letter today or tomorrow, and you should be able to proceed on Dec. 10 as projected. On Dec. 6, '07, received email from Greg DelMastro with revised letter/work plan from Ken Kaiser (in eDocs). I reviewed and emailed approval letter (in eDocs) to Ken Kaiser, cc to Greg DelMastro. Also sent original letter by regular mail to Kaiser. - J. Kolleeny 01/25/08: Jacques Whitford RAWP report (hard copy and CD) hand-delivered. - J. Kolleeny. 01/30/08: Received email from Greg DelMastro of Jacques Whitford on 1/29/08 with attached pdf of revised pages for RAWP. Received hard copies on 1/30/08; inserted in report. - J. Kolleeny 02/01/08: Received call from Greg DelMastro of Jacques Whitford on 1/31/08, asking if I could expedite review of part of RAWP dealing with decommissioning of wells in preparation for site construction. Con Ed wants to maintain 6 wells at site for monitoring, until construction requires those wells to be abandoned, and they want to decommission all remaining wells (monitoring and air sparge/SVE) now, since they'll start another round of chem ox injections next week. While on phone with Greg, we went over past GW data and I requested that another 7 wells (in addition to 6 they want to save) be sampled now prior to decommissioning, to evaluate progress from first 2 rounds of chem ox injections, and said I saw no reason to decom well South-1 in sidewalk along south edge of site, so this well should be kept open. Greg agreed to revise well sampling/decommissioning plan and re-submit. On 2/1/08, received revised proposal (in eDocs), and sent back email approving plan (in eDocs). - J. Kolleeny 02/11/08: On 2/8/08, Ken Kaiser of Con Ed sent Monthly Progress Rpts for Dec.'07 and Jan.'08 (in eDocs), plus lab results for waste characterization samples collected from 2 locations in Jan.'08. Results for SB-5 showed significant VOC levels (TAGM 4046 exceedances). I emailed Ken asking for site plan showing waste charactzn sample locs and results of 2nd sample loc (injection loc 2). On 2/11/08, received email from Ken with site plan (attached to Jan.'08 progress rpt in eDocs), saying results for 2nd location will be sent when available. - JK 02/14/08: Received email from Ken Kaiser of Con Ed with waste characterization soil sample results for Injection Location 2 (in eDocs), as I had requested. Results for sample from 23' to 28' below grade showed 19.8 ug/kg of benzene; no other VOCs or SVOCs detected. - JK 02/21/08: Received email on 2/19/08 from Greg DelMastro of Jacques Whitford with attached letter (in eDocs) saying that while trying to sample wells according to plan I approved on 2/1/08, they found EW-12 & MW-9 filled in with sand/silt. Letter argued cleaning out wells to obtain sample would be difficult or impossible; he recommended abandoning those wells. I looked at data, noted that MW-9 had some of highest GW contam levels

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

at site. Spoke with Greg on 2/20/08, said I'd be willing to approve abandoning EW-12 but I'd like to see another GW sample from MW-9, and that Con Ed's haste to proceed with construction shouldn't be factor in determining all aspects of remediation (also asked that all correspondence about wells at site should have site plan showing well locs). I asked if they could try cleaning well to get GW sample, and if that's impossible, use direct push to get grab sample? Greg noted that they intend to do another sampling event in mid-March, and would it be possible to put off efforts for MW-9 until then, so they can finish up 3rd round of chem ox injections this week? I agreed this was OK, sent email (in eDocs) to Ken Kaiser of Con Ed stating: I have reviewed letter dated 2/19/08 from Gregory DelMastro of JW concerning GW sampling at site. Letter explains that 2 wells scheduled for sampling have become filled in with sand & silt, possibly as result of chem injection events, and cannot be sampled in their current state. Letter states that removal of sand/silt from these wells would be difficult, so Con Ed proposes that wells be eliminated from GW sampling task, overdrilled and abandoned. Proposal to remove well EW-12 from GW sampling program & abandon well is approved. However, well MW-9 had very high levels of dissolved-phase contam when last sampled in 2007, including 8,150 ug/L benzene, 2,750 ug/L ethylbenzene, 14,900 ug/L toluene, 16,030 ug/L total xylenes. This well should be re-sampled to determine current GW conditions and evaluate effectiveness of chem ox injections. DEC requests that efforts be made to rehabilitate well MW-9 so it can be sampled during next GW monitoring round, in mid-March '08. If well cannot be cleaned out and sampled, then you should propose alternate means to obtain GW sample from immediate vicinity of well MW-9. Please include site plan showing well locations with any future correspondence regarding GW monitoring. On 2/20/08, received email reply from Ken Kaiser: Thank you for quick review and response. We have discussed internally and will attempt to clean out MW-9, re-develop and re-sample well. If this does not work, next step would be collection of GW sample using direct-push methods. We will keep you informed of progress. - J. Kolleeny 03/13/08: On 3/7/08, received email from Greg DelMastro of Jacques Whitford with attached monthly progress report for Feb. '08; report presented GW data for 2/13/08 sampling event, but no earlier GW data. On 3/10/08 I wrote back to DelMastro: Thanks for February progress report. Can report be modified to include GW analytical results from previous sampling event (August 2007?) for wells that were sampled in Feb. '08, so that results can be compared to evaluate any effect from chemical oxidation injections? Contaminant levels in recent GW results still seem very high to me and do not suggest much improvement as result of injections. Also, have past monthly progress reports been sent to me as hard copy, in addition to pdfs? If not, that's fine, but if so, can you please make requested change in presentation of GW data before sending out hard copy of Feb. '08 report? On 3/12/08, got email reply from DelMastro: Please find attached revised monthly progress report with GW analytical data from most recent (Feb. '08) GW sampling event and also data from past (July/August '07 and September '07) GW sampling events prior to chemical injection program. It appears from analytical data that GW beneath Site is reacting very well to chemical injections after completion of Injection Events 1 and 2. Reductions in VOC concentrations in GW, some significant, have occurred in wells MW-10, FN-11, MW-3, MW-11, EW-9, FN-8, and South-1. Some monitoring wells such as West-1, MW-5, EW-2, and EW-13 have shown increases. We

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

believe that these wells too will show decreased concentrations in GW following final Round 3 chemical injection event. A hardcopy of progress report, attached analytical data, and map is being sent to you via mail. [Revised Feb. '08 Progress Rpt. is in eDocs] I sent email reply on 3/12/08: Thanks for revised monthly report. Althought data seem mixed to me at this point, I see that contaminant levels have gone down in number of wells, and hopefully we'll see downward trends in all wells (those which still exist) in near future. - J. Kolleeny 03/26/08: Reviewed Jacgues Whitford Jan. '08 RAWP and Jan. '08 Construction Specs document (both in eDocs). Rpt proposes 3 chem ox injection events, GW monitoring events to evaluate chem ox effectiveness prior to abandoning all wells for site construction, excavation of relatively shallow (compared to smear zone) contam soil from limited area around boring SB-5 (former fuel pumps area), and install'n of impermeable barrier wall and permeable reactive barrier system (funnel & gate system), utilizing activated carbon, on west side of site to treat contaminated GW before exiting site. Rpt also mentioned install'n of vapor barrier beneath planned on-site building, but did not provide any details or mention sub-slab depressurization system. On 3/14/08, contacted Greg DelMastro requesting revisions to rpt, and addt'l info regarding vapor barrier, asking if there will also be a sub-slab depress'ztn system. Greg said JW is not handling vapor barrier issues, being handled by separate contractor to Con Ed, he will let Ken Kaiser of Con Ed know about my inquiry. Greg said he would send revised pages for rpt, plus CD with finalized pdf of RAWP & appendices. Received revised pages and CD on 3/21/08 from JW. Also on 3/21/08 received email from Ken Kaiser of Con Ed with attached pdfs of docs related to sub-slab depress system. I told him docs did not provide details of proposed vapor barrier. Visited site on 3/24/08 to observe limited soil excavation from former pumps area (boring SB-5 area), noticed some petroleum odors. Excavation was 20' x 20'. At target depth (28 ft. above SL) excavator created benches to slope excavation walls properly and allow field personnel to enter pit and collect end-point samples. They let pit air out, then collected 4 sidewall and one bottom sample; PID readings were 0.2 to 0.4 ppm (i.e., background levels). On 3/25/08 received email from Ken Kaiser of Con Ed with addt'l details of sub-slab system & vapor barrier, which will be Griffolyn Type-105 7-ply barrier, 15 mils thick, or approved equal (see info in eDocs). On 3/26/08 sent RAWP approval letter to Ken Kaiser of Con Ed, cc to Greg DelMastro of JW (in eDocs). - J. Kolleeny 04/02/08: On 3/31/08, received email from Greg DelMastro of Jacques Whitford with attached post-excavation sample results (in eDocs); email stated: Following your visit to Newtown SS site on March 24, 2008, Jacques Whitford on behalf of Con Edison collected post-excavation soil samples including four sidewall soil samples and one bottom soil sample within SB-5 Area (see attached map). Each soil sample was analyzed for TCL VOCs, TCL SVOCs, and TAL Metals as per RAWP. I have attached analytical soil data from this post-excavation soil sampling event (see attached). Con Edison concludes that only Floor sample contained a VOC (Total xylene) and SVOCs (Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and dibenzo (a,h)anthracene) above their respective TAGM 4046 RSCOs. Based on these VOC and SVOC Floor exceedences, Con Edison is planning on excavating an additional 4 feet vertically (if it is deemed safe by Site HSO) from Floor of SB-5 Area excavation on Tuesday, April 1, 2008. Once we excavate to this depth (elevation 24), we plan on

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

collecting only one bottom soil sample from excavation and analyzing sample for TCL VOCs, TCL SVOCs, and TAL Metals as per RAWP. Based on previous sidewall analytical data, we propose that collection of addt'l sidewall samples is not warranted. Based on safety concerns, we intend to immediately backfill SB-5 Area up to elevation 33. I called Greg on 4/2/08 and he confirmed that they dug an addt'l 4 feet on 4/1/08, took one bottom sample. He was unsure about PID screening results, but said field tech detected no petroleum odors. Lab results pending. - J. Kolleeny 04/03/08: Received email from Greg DelMastro (Jacques Whitford) with attached pdf of Monthly Progress Report #4, March 2008 (in eDocs). Will review. - J. Kolleeny 04/07/08: On 4/4/08 received email from Greg DelMastro of Jacques Whitford with attached lab results of post-ex bottom sample after addt'l excavation on 4/1/08 (in eDocs); email stated: Please find attached post-excavation data associated with SB-5 Area at Future Newtown SS Site. I have also attached sampling location map illustrating where sample SB-5 Area, Floor was collected from, following addt'l removal of soil from Floor to Elevation 24 feet as per my e-mail of 3/31/08. I wrote back to Greg: Results look good, looks like bulk of contaminated material was removed. I'd like to request that future soil & GW result tables only list petroleum-related VOCs and SVOCs in attached tables (plus MTBE) [attached TAGM 4046 petroleum compound tables], and list other compounds only if they are detected. (I assume comprehensive list currently being reported is artifact of reporting format required by our Haz Waste unit?) This will make tables shorter and easier for me to review. On 4/7/08, Greg wrote back: We can make that change on future submittals to you. - J. Kolleeny 04/14/08: Received email from Greg DelMastro, Jacques Whitford, with attached revised data tables for March '08 Monthly Progress Report (in eDocs), as I had requested. - J. Kolleeny 04/15/08: Reviewed JW's Monthly Progress Report #4 (March '08, in eDocs), with revised soil and GW data tables. Soil data from post-ex samples taken after limited soil excav in area of SB-5 show almost no residual contam. GW results for March sampling event show contam levels in some wells have decreased, while others are still high. In MW-9, total VOCs went from 45,380 ug/L on 9/11/07 to 31,435 ug/L on 3/27/08; MW-10 went from 24,667 ug/L on 9/11/07 to 5,743 ug/L on 2/14/08 to 340 ug/L on 3/27/08; FN-11 went from 6,128 ug/L on 9/11/07 to 916 ug/L on 2/14/08 to 235 ug/L on 3/27/08; however, EW-2 total VOCs went from 13,472 ug/L on 8/1/07 to 23,343 ug/L on 2/14/08 to 21,909 ug/L on 3/27/08; West 1 went from 8,656 ug/L on 9/11/07 to 5,940 ug/L on 2/15/08 to 5,121 ug/L on 3/27/08 (with benzene conc. of 7,930 ug/L, 5,490 ug/L and 4,970 ug/L, resp.). All on-site wells are now destroyed to make way for construction, although several perimeter (sidewalk) wells remain. - J. Kolleeny 05/19/08: Reviewed Jacques Whitford Monthly Progress Rpt #5 for April '08 (in eDocs), dated 5/8/08, rec'vd 5/13/08. Activities in April '08 included collection of bottom sample from deepened soil excavation in area of SB-5 (sample results for end-points collected from this area are provided, altho these results have been previously submitted); excavation of ~3,000 cubic yds of material for construction purposes; construction of decontamination pad for upcoming remedial activities; completion of site survey for upcoming remed activities; mobilized equipment for upcoming remed acts, e.g., for temp. sidewalk closure on 33rd st. and drill rig; CAMP performed between 4/1 and 4/30/08. Activities scheduled for May '08 include advancing grout holes adjacent to permeable reactive barrier, begin drilling for remed acts, e.g., drilling caisson for gate installation, delivery and

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

install'n of Waterloo sheeting, CAMP implementation. Report states that remed action is ~70% complete. - J. Kolleeny 05/20/08: Visited site to observe install'n of cylindrical caisson. In light rain, contractor was trying to drive 47-foot long caisson (hollow concrete cylinder) into ground, w/ pneumatic hammer suspended from crane, but having great difficulty, making little progress, possibly needing larger hammer. Once caisson has been driven into ground, soil within will be removed, and GW treatement gate will be installed within caisson. See 2 photos in image folder. - JK 06/13/08: Received Jacques Whitford Monthly Progress Rpt #6, for May 2008 (in eDocs), by email from Greg DelMastro on 6/10/08, got hard copy on 6/12/08. Rpt mentions delivery of caisson to site, advancement of Waterloo sheeting along north wall of planned funnel impermeable barrier, and performance of CAMP throughout month. Rpt mentions that advancement of caisson has been difficult due to dense soils, and they are removing soil from within caisson as they try to install it to help advance it; they may also mobilize larger piece of equipment as alternate approach. Rpt states that remediation project is 85% complete; in June '08 Waterloo sheeting will be advanced along south wall of funnel, caisson installation will be completed and treatment cassette will be installed in caisson. - J. Kolleeny 07/22/08: Reviewed Jacques Whitford Monthly Progress Rpt #7, for June '08 (in eDocs), received as pdf by email on 7/8/08 and hard copy by regular mail on 7/10/08, plus CD with fieldwork photos (in eDocs). Progress rpt indicates Waterloo sheeting has been fully installed, caisson was successfully advanced to target depth, and treatment cassette was installed in caisson, with top manhole. Remaining tasks include grouting of sheeting interlocks, removal of caisson, and installation of 2 monitoring wells in sidewalk along 33rd Street, adjacent to treatment cassette. Also received draft Table of Contents of Final Engineering Report by email on 7/14/08, will review. - J. Kolleeny 08/15/08: On 7/24/08, spoke with Greg DelMastro of Jacques Whitford, suggesting that installation of wells in sidewalk along west side of site (east side of 33rd St.) be post-poned until after contractors do utility installation in that sidewalk; otherwise, wells would be destroyed by contractors, and also delaying submission of Final Engineering Report until after well installations. I agreed this made sense. Greg sent email with attached letter (in eDocs) to document phone conversation. On 8/15/08, I sent email (in eDocs) to Kenneth Kaiser of Con Ed, cc to Greg DelMastro, formally approving this proposal: I have reviewed letter from Gregory DelMastro of Jacques Whitford, documenting phone conversation I had with him on July 24, '08 concerning project schedule for remediation and monitoring of this spill site. As letter indicates, I agree with Mr. DelMastro's proposal to modify project schedule by postponing installation of monitoring wells in sidewalk on east side of 33rd Street until after subsurface utilities associated with planned Con Edison substation have been installed in that sidewalk, and to delay submission of Final Engineering Report for project until after well installation is complete. These modifications to project schedule are clearly sensible and in best interests of successful completion of project. Please feel free to contact me if you have any questions or comments. - J. Kolleeny 08/15/08: Reviewed Jacques Whitford's Monthly Progress Report #8, for July '08 (in eDocs). Rpt states that caisson removal & installation of treatment cassette, with associated carbon, manhole, Bilco doors, etc., was completed, and Waterloo sheeting interlocks were grouted. Sampling of GW from mon wells associated with treatment

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

cassette scheduled for Aug.'08. -JK 08/26/08: Received email from Greg DelMastro of Jacques Whitford: Please find attached tabulated groundwater analytical data and sampling location map from baseline August 2008 GW sampling event at Newtown SS Site. Attached data (in eDocs) present results of GW samples collected in Aug. '08 from wells inside treatment cassette in sidewalk, up- and down-gradient of carbon unit. Rslts show several VOCs present in sample from up-gradient well (i.e., prior to flowing through carbon treatment unit), including benzene at 294 ug/L, ethylbenzene at 28.4 ug/L, m,p-xylene at 29 ug/L, and 1,2,4-trimethylbenzene at 12 ug/L. Sample from down-gradient, post-carbon-treatment well was non-detect for all VOCs. - J. Kolleeny 09/05/08: Had conference call on 9/4/08 with Greg DelMastro of Jacques Whitford and Ken Kaiser & Sa'ed Abuasi of Con Ed regarding scheduling of sidewalk monitoring well install'n and submission of Final Engineering Rpt. On 9/5/08, received email from Greg documenting call: Thank you for taking time out of your schedule to attend conference call between yourself, Mr. Ken Kaiser and Mr. Sa'ed Abuasi of Con Edison and myself yesterday (Sept. 4, 2008). Summary of call and acceptance of path forward by all parties is listed below: 1. Due to construction-related activities on 33rd St associated with Con Ed substation, install'n of 2 monitoring wells (one 20 ft north of MW-15 and one 40 ft south of MW-15) is postponed till Nov.'08. We do not want to jeopardize wells' integrity by installing them at this time. If schedule for install'n of these wells slips further, NYSDEC will be notified. 2. Following install'n of 2 wells in sidewalk along 33rd St & sampling & analyzing initial GW sample from wells, this info will be sent to DEC as Addendum to FER. Future GW sampling and chemical analysis efforts on quarterly basis will be documented in quarterly rpt to NYSDEC. 3. Prep of Final Engineering Report (FER) is on-going, Rpt is approx 60% complete. We expect transmittal of draft FER to Con Ed for their review and comment in Sept. '08. - JK 09/11/08: Reviewed Jacques Whitford's Monthly Progress Rpt #9, for Aug. '08 (in eDocs). Rpt notes that remedial action is 99% complete, mentions postponment of sidewalk well install'n until Nov.'08 followed by submittal of Addendum to Final Engrng Rpt (FER), and projects transmittal of FER to DEC in Sept. '08. Rpt also presents Aug. '08 baseline GW data for treatment cassette wells, received in earlier submission on 8/26/08. - J. Kolleeny 10/20/08: Reviewed Jacques Whitford's Monthly Progress Rpt #10 for Sept.'08 (in eDocs). Rpt notes that remed action is 99% complete, mentions that draft Final Engrg Rpt (FER) has been completed & is under in-house review. Lists remaining actions as completion/submission of FER (in Oct. '08), install'n of two mon wells in sidewalk, and prep/sub of Addendum to FER. - JK 11/26/08: On 11/12/08 received Jacques Whitford's Monthly Prog Rpt #11 for Oct.'08 pdf (in eDocs) by email from Greg DelMastro; got hard copy 11/17/08. Rpt lists actions scheduled for Nov.'08 as Transmittal of FER and SMP to DEC. Sent email to DelMastro on 11/18/08: Thanks for progress rpt. Was my understanding you requested (and I approved) postponing install'n of 2 sidewalk mon wells til Nov.'08, to let constr contractors finish utility work in sidewalk. However, current rpt makes no mention of plans to install wells in Nov. Can you update on well install'n sched? Have contractors completed work in sidewalk? On 11/19/08, got phone message from Ken Kaiser of Con Ed saying well install'n will begin on 11/24/08. On 11/24/08, got email from Greg DelMastro: We will start 0-5 ft bgs utility clearance excav of boreholes today via Vactron along 33rd St. We anticipate tomorrow,

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

Nov. 25 to begin to drill wells. We will also collect quarterly GW samples from wells MW-15 & MW-16 tomorrow. On 11/26/08, I sent email to Greg: Can you update me on install'n of sidewalk mon wells? Were wells successfully installed, was significant contam encountered during install'n? - J. Kolleeny 12/01/08: Received email from Greg DelMastro of Jacques Whitford: As follow-up to your e-mail from last Wed. re status & observations noted during drilling of 2 new wells in sidewalk along 33rd St., I have addt'l info to share with you. One well (MW-17) was installed north of treatment gate. Light to moderate staining of soil was observed from 30-40 ft bgs along with petroleum odors and PID readings. Second well (MW-18) was installed south of treatment gate. No staining, odors or PID readings of/from soil was observed/measured. - J. Kolleeny 12/16/08: Reviewed Monthly Progress Rpt #12, for Nov. '08 by Jacques Whitford (in eDocs). Rpt states that draft Final Engrng Rpt and draft Site Mgmt Plan have been completed and are being finalized; that sidewalk monitoring wells MW-17 and MW-18 have been installed and developed, and that GW samples were collected from wells MW-15 and MW-16 in treatment cassette and submitted for VOC analysis. I sent email to Greg DelMastro of JW, cc to Ken Kaiser of Con Ed: Thanks for sending Monthly Progress Rpt #12; I received hard copy of rpt today. Rpt makes no mention of soil sampling during install'n of sidewalk monitoring wells. Were no soil samples collected? I'm not sure if I specifically asked that soil sampling be performed during well installation, but I assumed that it would be (especially since petroleum impacts were noticed in soil in one well). Determination of presence of vadose zone soil contam in sidewalk area is important, since it could act as source of GW contam outside of sheeting which forms funnel & gate system. Please let me know if soil sampling was performed during well install'n. Received email reply from Greg: Advancement of split-spoons was not performed during drilling, so soil sampling was not performed at MW-17 or MW-18. - JK 12/22/08: Reviewed Monthly Prog Rpt for Nov.'08, dated 12/10/08, by Jacques Whitford (in eDocs). Sent email to Greg DelMastro of JW: Thanks for sending Monthly Prog Rpt #12. I'm puzzled by something - rpt doesn't mention soil sampling during install'n of sidewalk mon wells. Were no soil samples collected? I'm not sure I specifically asked that soil be sampled during install'n, but assumed it would be (esp. since petrol impacts were noticed in soil in one well). Determining presence of vadose zone soil contam in sidewalk area is important, since it could act as source of GW contam outside sheeting of funnel & gate system. Please let me know if soil sampling was done. Greg replied: Advancement of split-spoon samplers was not done during drilling of 2 wells, so soil sampling was not done at either MW-17 or MW-18. Also got email from Ken Kaiser of Con Ed: I do not recall any discussions about taking soil samples off property. On 12/22/08, I wrote back to Ken, cc to Greg DelMastro: It's true we never explicitly discussed collecting soil samples during install'n of wells in sidewalk along 33rd St, but that was because I consider that standard operating procedure during install'n of wells assoc with open spills. In fact, consultants usually contact me for my concurrence when they think it's appropriate to forego collecting soil samples during well install'n, such as if well is being replaced at same loc of well that was damaged/destroyed, or if well is being installed at soil boring loc where soil samples were recently collected. I'm also puzzled that you consider these wells in sidewalk adjoining site to be off property, considering that Con Ed installed caisson with treatment gate and 2 mon wells in same sidewalk, and

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

will monitor & maintain that structure as part of approved remedial plan. I wish to point out it is standard DEC policy to require contam plumes to be zeroed-out before considering investig to be complete and before development of remedial plan. High levels of contam (including high benzene levels) were detected in well formerly in that sidewalk, and I'd have been within my rights to ask for install'n of well across 33rd St (i.e., down-gradient) from site, to evaluate potential off-site migration. I didn't ask for off-site well because Con Ed appeared to be moving relatively aggressively to address contam; however, if new sidewalk wells show high levels of contam that may be migrating off site, I may ask for well (or wells) across street. - J. Kolleeny 01/13/09: Reviewed Mnthly Prog Rpt for Dec.'08, dated 1/8/09, by Jacques Whitford (in eDocs). Rpt says baseline GW samples were collected from new sidewalk wells MW-17 & MW-18 on 12/31/08 (results not available), and presents results of GW samples collected from MW-15 & MW-16 (in treatment cassette in sidewalk) on Aug. 8 & Nov. 25, '08. Results show VOC exceedances in MW-16 (pre-treatment well upgrade of permeable reactive barrier) in Aug.'08 sample, but only benzene exceedance in Nov.'08 sample; both MW-15 samples were clean (post-treatment well, downgrade of barrier. Rpt says qtrly GW mon rpt will be submitted in Jan.'09. - J. Kolleeny 01/16/09: Reviewed Quarterly Groundwater Sampling Report (November 25, 2008) by Jacques Whitford, dated Jan. 12, 2009, received 1/14/09 (in eDocs). Rpt presents same GW data for wells MW-15 and MW-16 (wells within treatment cassette) that were in Dec. '08 Monthly Progress Report. Rpt notes that levels of compounds detected in pre-treatment well MW-16 in Aug. '08 baseline sampling event decreased in Nov. '08 event, except toluene, which was non-detect in Aug.'08 but went to 1 ug/L in Nov.'08. In Aug.'08 event, 5 compounds exceeded standards; in Nov.'08 event, only benzene exceeded std, with 106 ug/L. Again, sample from post-treatment well MW-15 had no exceedances or detections of VOCs. - J. Kolleeny 01/29/09: Reviewed Addendum to Nov. 2008 Quarterly GW Sampling Rpt by Jacques Whitford, dated Jan. 16, 2009 (in eDocs). Rpt presents results of GW samples taken on 12/31/08 from two wells installed in sidewalk along 33rd St. in Nov.'08, which show high levels of VOCs in well MW-17, to north of treatment cassette, which had 17,754 ug/L total VOCs including 1,800 ug/L benzene, and moderate levels of VOCs in well MW-18, to south of treatment cassette, which had 307 ug/L total VOCs including 261 ug/L benzene. Sent letter (in eDocs) to Ken Kaiser of Con Ed, cc to Greg DelMastro of JW, requesting two additional wells to delineate plume and evaluate potential off-site migration - one well to north of MW-17 in sidewalk on east side of 33rd St., and one well across 33rd St. to southwest of MW-17. Letter asked for soil screening and sampling during installation, and noted that if contam is found in either or both new wells, addt'l wells may be needed to delineate contam. Then sent email to Greg DelMastro of JW, cc to Ken Kaiser: I had a couple of additional comments on Jacques Whitford's Addendum to November 2008 Quarterly Groundwater Sampling Report that I didn't want to include in letter I sent a few minutes ago to Ken Kaiser of Con Ed requesting two addt'l monitoring wells for delineation purposes. These comments are: Can compounds listed in groundwater data tables in future reports be reduced to include only gasoline-related VOCs of concern shown on attached table, and can line for Total VOCs be added to table? - J. Kolleeny 02/12/09: On 2/9/09, received Response to NYSDEC Correspondence dated Jan. 29, 2009 by email from Greg DelMastro of JW (in eDocs). Notes that my

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

suggestion of installing well north of MW-18 is not practical, as that would put well in treatment cassette location, and instead proposes 3 new wells: 1 north of MW-17, 1 south of MW-18, and one across 33rd St. to SW of MW-17. I sent email (in eDocs) to Ken Kaiser of Con Ed, cc to Greg DelMastro of JW: Upon review of Response to NYSDEC Correspondence Dated Jan. 29, '09 by Greg DelMastro of JW, dated Feb. 9, '09, I realize I was confused about numbering of sidewalk wells. When I asked for well to north of MW-18 and another to southwest of MW-18, I actually meant to ask for wells to north and southwest of MW-17, which had higher levels of dissolved-phase contam. In any case, Jacques Whitford's proposal to install monitoring wells on east side of 33rd Street north of well MW-17 and south of well MW-18 is approved, but location shown for well proposed across 33rd street, to southwest of MW-18 (which I requested thinking that MW-18 was MW-17) should be relocated further north in sidewalk on west side of 33rd Street, to southwest of well MW-17 and west-southwest of treatment cassette (see attached photocopy of site plan). Please let me know if this is unclear. - J. Kolleeny 04/17/09: Reviewed Quarterly GW Sampling Rpt for March '09 by Jacques Whitford, dated 4/13/09 (in eDocs). March '09 sampling results show total VOCs in influent to treatment cassette decreased from 112 ug/L in Nov. '08 to 20 ug/L in March '09 (i.e., well MW-16); treatment cassette effluent (MW-15) remained Below Reporting Limits; total VOCs in MW-17 decreased from 17,754 ug/L in Dec.'08 to 13,371 ug/L in March'08; TVOCs in MW-18 decreased from 307 ug/L in Dec.'08 to 24 ug/L in March'08, with only benzene exceeding std, at 8.8 ug/L. On 4/15/09, I sent email to Greg DelMastro of JW: Do you know if 3 addt'l delineation wells proposed by Jacques Whitford in February '09 have been installed yet? Please let me know. - J. Kolleeny 04/22/09: Received email from Ken Kaiser of Con Ed: Sorry for not getting back to you sooner on this issue. Currently, construction activities at site have increased and now include lanes on 3 surrounding streets (33rd St., 34th St. & 47th Ave.). Due to these activities, we have been unable to install wells we discussed. I have been pressing our construction mgmt people to give date on when we can have access to 33rd St. to install wells. After discussion, due to construction activities, this area will not be available until week of July 13th. We expect that we will install wells at that time. I have attached recent pictures of area so that you can see construction effort [in eDocs image folder]. - J. Kolleeny 06/15/09: On 6/10/09, received email from Greg DelMastro of Jacques Whitford, with attached letter (in eDocs) explaining that construction equipment covers sidewalk monitoring wells and asking that June '09 GW sampling event be postponed, stating that Con Ed will notify DEC when wells become accessible. Received hard copy of letter on 6/12/09. I sent email to Ken Kaiser of Con Ed on 6/12/09: I've looked at letter re June '09 Quarterly GW Sampling Event, and have question. Letter requests that June sampling be postponed due to equipment covering wells. This suggests relatively short delay, but since no time estimate is provided, I'm wondering if what is really being requested is suspension of quarterly GW monitoring rather than postponement of one event? Letter states Con Ed will update NYSDEC when wells become accessible for sampling; if I approve this request as worded, it's conceivable that you could put off GW mon for 6 months, a year, or longer! Can you give estimate of when equipment will be re-located and wells will be accessible? Can Con Ed expedite constr. activities related to placement of equipment covering wells, so equipment can be

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

moved in near future? On 6/15/09, received email reply from Ken Kaiser: I understand your issues. I spoke to Con Ed Constr. Mgmt folks and asked them about moving crane so we can do sampling. However, moving crane is a big deal - significant cost and it takes day or 2 to take it down, another day or 2 to set up again (not even considering NYC permit issues). This would adversely impact tight constr. sched. My intent was not to skip sampling but to get in as soon as crane was moved. CM folks tell me area should be clear by mid to late July, at which point we can install new wells and sample existing wells. I know busy constr. area makes it hard to monitor GW at this time, but once area is cleared things should be much easier. I sent letter (in eDocs) approving request to postpone June '09 sampling, noting that it's DEC's understanding that wells will become accessible in mid/late July, and that if this won't happen, Con Ed should inform DEC and provide new estimate of when equipment will be moved and wells can be sampled. - JK 07/06/09: Received email from Ken Kaiser, Con Ed: Construction has cleared a bit at Site and we have started GW sampling today. We may start drilling/installing new wells on July 16th, we are just waiting for permits. - J. Kolleeny 07/17/09: On 7/16/09, received email from Greg DelMastro: On behalf of Con Ed , I wanted to update you on sched for install'n of mon wells. We plan to mobilize on 7/20/09 to begin utility clearance (0-5 ft bgs), followed by drilling on 7/21/09. On 7/14/09, reps of Con Ed and Stantec Consulting (formerly Jacques Whitford) met on site to review Code 753 utility markouts & newly installed electrical duct runs & manholes, relative to proposed sampling locs on 33rd & 34th Streets. Proposed well MW-25 on 33rd St (see attached Fig. 2 [in eDocs]) needs to be moved from orig proposed location. There is EMF shielding (steel plating) beneath sidewalk and road surface over area from 10 to 70 ft north of northern curbline of 47th Ave. Moving well north from orig proposed loc would put it 10 ft south of existing well MW-18, i.e., too close to MW-18. We propose to move well south from orig proposed loc as shown on Fig. 2. We seek DEC approval for revised well loc. I sent email response to Ken Kaiser of Con Ed, cc's to Saed Abuasi of Con Ed and Greg DelMastro of Stantec: I have reviewed 7/16/09 email by Gregory DelMastro, as well as site plan showing proposed well locs, with revised loc for proposed well MW-25. Based on most recent available GW data for existing well MW-18, I am not insisting on install'n of well to south of MW-18 at this time. I was more concerned with contam in existing well MW-17, which should be delineated by proposed wells MW-23 and MW-24. If Jacques Whitford wishes to install proposed well MW-25 as precautionary measure, I have no objection to revised loc, considering difficulties with orig proposed loc. Got email reply from Ken Kaiser: Thank you for timely response. In light of your response & due to extensive network of subsurface utilities and related obstructions, we will not install MW-25 at this time. Install'n of proposed wells has been difficult due to these obstructions and we do not want to risk hitting obstructions unless absolutely necessary. If ongoing GW data indicates need for an addt'l well in this loc, we will install well at that time. - J. Kolleeny 07/21/09: Received email from Greg DelMastro of Stantec: On behalf of Consolidated Edison Co. of New York, Inc., I wanted to update you on schedule for monitoring well installation in sidewalks surrounding Site. We plan to begin Vactron work on Wednesday, July 22, 2009, followed by drilling activities on Thursday, July 23, 2009. - J. Kolleeny 07/23/09: Visited site to observe well install'n. Met Stantec field tech Lawrence Moller; ADT

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

is driller. They've put in well on west side of site along 33rd St. (east side of street), north of existing well MW-17, started seeing impacts at 22-23 ft bgs, with 96 ppm on PID, then 826 ppm at 23-25 ft, 174 ppm at 25-26 ft, and 3,074 ppm at 26-27 ft (water table). They can't put in down-grade well across 33rd St. since driving lane has been shifted onto that sidewalk by construction, will have to wait. They are also installing wells on up-gradient, east side of site, but have seen no impacts in those wells. - J. Kolleeny 07/29/09: Received email from Ken Kaiser of Con Ed: I wanted to update you on install'n of addt'l wells. We have scheduling difficulty. Due to construction delays, fencing along 33rd St. is still in place. Due to loc of fence, install'n of MW-24 would require closing 33rd St. We submitted permit app to DOT and expected stipulations that would require weekend or night work to install well. Instead of providing stips, DOT rejected permit, so we cannot install MW-24 until fence is moved. I am working with Con Ed Constr. Mgmt grp to determine when fence will be moved and we can install well. Permit for fence has been extended for 6 weeks. We will continue with install'n, development, surveying & sampling of wells, and will report that info to DEC. I will let you know as soon as I have date for install'n of MW-24. - JK 08/10/09: Received email on 8/7/09 from Greg DelMastro of Stantec: We have completed well install'n at site with exception of MW-24 as per Ken Kaiser's e-mail to you on 7/29/09. Following well install'n, MW-19 located in western sidewalk of 34th St., up-gradient of Site, was observed to contain fine sand within screened interval. We would like to flush out well with water from local fire hydrant before we begin development of this well. Flushed water & sand will be properly containerized in drum and transported off-site for disposal. Prior to implementing this, we wanted to get your approval of this method. After removal of sand, well will be properly developed. Other wells recently installed have already been developed. After speaking with Greg on 8/10/09, sent email: As discussed today on phone, I agree it would be worthwhile to attempt to rehabilitate this well by flushing it out with water in manner you described, and I approve going ahead with procedure. I also understand this will likely result in some delay to scheduled sampling of this & other recently installed wells at site, and agree that delay is acceptable. Please keep me updated on your progress. - JK 09/11/09: Reviewed Quarterly GW Sampling Rpt for 7/6/09, dated 8/21/09 (in eDocs), by Stantec Consulting Svcs (formerly Jacques Whitford). Results of 7/6/09 sampling event showed very high levels of dissolved contam in well MW-17 (north of treatment cassette in sidewalk along 33rd St.), with 3,260 ug/L benzene, 21,950 ug/L mixed xylenes, and 43,029 ug/L total VOCs (up from 13,371 ug/L in March '09). Significant contam also in MW-16, located within treatment cassette on up-gradient side of reactive treatment barrier, with 564 ug/L benzene and total VOCs of 1,036 ug/L (up from 19.6 ug/L total VOCs in March '09). Well MW-15 on down-gradient side of barrier was non-detect for VOCs; MW-18 to south of treatment cassette had minor amts of contam - 3.6 ug/L benzene, 9 ug/L ethylbenzene were only exceedances, and total VOCs were 22.9 ug/L, down slightly from 24 ug/L in March '09. Stantec speculates that increases in contam in wells MW-16 and MW-17 may be attributed to residual soil contam that may have been released into GW by on-going invasive construction activities and/or high amount of rainfall that fell between March and early July 2009. Rpt does not mention that addt'l wells were installed in late July nor include any

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

soil or GW data from those wells. I sent email to Ken Kaiser of Con Ed, cc to Greg DelMastro of Stantec: I just completed quick review of 8/21/09 Quarterly GW Sampling Rpt for 7/6/09 sampling event at site, and have several questions and comments related to rpt and to site activities in general: 1. Report makes no mention of addt'l monitoring wells installed in late July 09, nor present any data from those wells. Is any soil and/or GW data available for new wells? 2. I'd like to ask for few changes/additions to rpt format. In table presenting VOC results for GW sampling event, I'd like to add line at bottom for Total VOCs in future rpts, and I'd like to have data from earlier quarterly mon events either added to that table, or presented in separate table (including most recent results), so I can quickly see trends in data. 3. Do you have any update on when down-gradient well across 33rd Street can be installed? Please let me know if you have any questions about my comments. - J. Kolleeny 11/05/09: Received email from Greg DelMastro of Stantec: I wanted to update you on status of install'n of remaining monitoring well (MW-24) as requested by NYSDEC, located in western sidewalk of 33rd Street and down gradient of treatment cassette (see attached Fig. 2 [in eDocs]). After several scheduling setbacks and coordination with numerous parties (Con Edison construction personnel, Stantec, Aquifer Drilling & Testing (driller) and NYCDOT (permits)), we have scheduled drilling, soil sampling, well install'n and development for Saturday, Nov. 7th. After we install MW-24, we intend to perform next round of GW sampling from 10 monitoring wells during week of Nov. 16th. Upon receipt and validation of analytical data, we will prepare rpt documenting our findings for your review. - J. Kolleeny 11/12/09: Completed review of Dec.'08 Final Engineering Rpt (FER) by Jacques Whitford, which includes Site Management Plan (SMP) as Appendix L. Rpt summarizes remedial actions to address soil & GW contam at site, including chem oxidant injections, excavation of contaminated soil, install'n of sheeting to contain & direct flow of GW with residual dissolved contaminants, and install'n of permeable reactive barrier treatment gate on down-gradient side of site to treat residual GW contam. SMP involves maintenance of permeable reactive barrier treatment cassette, quarterly GW monitoring & sampling of up-gradient and down-gradient monitoring wells to evaluate on- and off-site GW quality, and quarterly reporting. SMP anticipates management of residual GW contam until GW meets State standards for 8 consecutive quarters. Implementation of SMP is to be triggered by DEC approval of FER. I sent letter (in eDocs)approving FER & SMP to Ken Kaiser of Con Ed, cc to Greg DelMastro of Stantec (formerly JW), but requested inclusion of addt'l wells installed after submission of FER, including MW-23 and MW-24 on down-gradient side of site, and at least one of 4 wells installed on up-gradient side of site (MW-19 through MW-22), in quarterly GW monitoring & sampling program, and stated that data from monitoring wells on down-gradient side of site (i.e., MW-17, MW-18, MW-23 and MW-24) be considered to determine when to submit request for spill closure, as well as data from MW-16 (on pre-treatment side of treatment cassette) as proposed in SMP. - J. Kolleeny 12/18/09: Reviewed Annual GW Sampling Rpt (Aug. 2008 - July 2009) by Stantec, dated 9/29/09 (in eDocs). Rpt summarizes quarterly sampling events over past yr, thru July '09 event. Rpt acknowledges that dissolved-phase contam levels have increased in several wells, esp. MW-16 and MW-17 between March & July '09; Stantec speculates that increase could be attributed to residual impacts in soil column that may have been released into GW by on-going invasive construction

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

activities at site and/or from high rainfall in Spring of '09. Rpt states that GW results show treatment cassette is operating properly, since samples from well on down-gradient side of reactove barrier show no contam leaving cassette. Stantec concludes that based on data, change-out of carbon in treatment cassette is not warranted at this time. - JK 04/06/10: Reviewed Mon Well Install'n and Quarterly GW Sampling Rpt (December 2009), dated 2/3/10 by Stantec (in eDocs). Rpt summarizes install'n of 6 new wells: 4 on east, up-grade side of site (MW-19 thru MW-22) and 2 on west side of site: MW-23 to north of existing well MW-17 (east side of 33rd St.) and MW-24 across 33rd St. from existing well MW-18. Rpt also presents Dec.'09 GW sampling data for new and existing wells. Soil samples taken during install'n of new wells showed significant impacts (PID readings, TAGM 4046 RSCO exceedances in lab analysis) in MW-23; soil sample from MW-20 had TAGM exceedances for xylenes in lab analysis, but well install'n log doesn't show significant PID readings from sample interval. GW samples from all up-gradient wells (i.e., on east side of site) showed no impacts. For down-gradient wells, MW-16 (on up-grade side of treatment cassette) had 635 ug/L total VOCs (down from 1,036 ug/L in July '09; MW-17 had 28,907 ug/L tVOCs (down from 43,029 ug/L in July '09); MW-23 had 4,831 ug/L tVOCs, and MW-24 had 1,475 ug/L tVOCs. Rpt does not provide water table contour map (although top of PVC Riser elevations for all wells are listed), but site plan fig. shows inferred GW flow direction, to southeast. I sent letter (in eDocs) to Ken Kaiser of Con Ed (cc to Greg DelMastro of Stantec), asking that water table elevations be calculated for each quarterly sampling event and a water table contour map be included in each quarterly rpt, in addition to data table with depth to water (& product if applicable) msmts. and water table elevations for each well, and asking that two addt'l mon wells be installed to delin contam on west side of site: one well north of MW-23 and one well north of MW-24. Asked for brief work plan for well install'n by April 30, 2010. - J. Kolleeny 04/15/10: Spoke with Ken Kaiser of Con Ed, who asked if it would be acceptable to only install one addt'l well, rather than the 2 I requested in my 4/6/10 letter, suggesting putting in a well north of existing well MW-23 in sidewalk on east side of 33rd St. I said if there were to be only one well, I would prefer well across street, to north of existing well MW-24 (i.e., down-gradient of most impacted well MW-17) to delineate leading edge of off-site plume. I added that if contamination in well MW-23 were to increase dramatically, I would still want a well installed to north of it. Ken agreed to this, said they will submit a work plan for well on west side of 33rd St., north of MW-24. I asked for a water table contour map based on latest water levels msmts in work plan. - J. Kolleeny 05/04/10: Reviewed Work Plan by Stantec, dated April 2010, cover letter dated 4/26/10 (both in eDocs). Plan proposes install'n of one new down-gradient well (MW-25) across 33rd St. from existing well MW-17 at west edge of site, as agreed between me and Ken Kaiser of Con Ed, to better delineate off-site impacts. Plan also says upgradient well MW-19 has been damaged, will be decommissioned and not replaced, and wells MW-18 and MW-23 have been damaged and will be repaired. After install'n of new well and repair of damaged wells, all 3 will be surveyed; all wells associated with site will then be sampled during next quarterly event in July 2010. I sent approval letter (in eDocs) to Ken Kaiser, cc to Greg DelMastro of Stantec. - JK 05/14/10: Received email from Greg DelMastro of Stantec: Stantec on behalf of Con Edison is providing NYSDEC with

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

notice as per your request that we are going to begin implementation of NYSDEC-approved Work Plan starting on Monday May 17. We will begin with decommissioning well on 34th Street and repairing other damaged wells. - J. Kolleeny 05/21/10: On 5/20/10 received email from Ken Kaiser of Con Ed: As follow-up to our Stantec's e-mail to you last Friday, May 14th notifying NYSDEC of start of field work at site, field work has begun. On Monday, MW-19 was decommissioned and MW-18 & MW-23 were repaired as per NYSDEC-approved Work Plan. During May 18th drilling, well install'n & development were completed at monitoring well MW-25 (see attached figure [in eDocs image folder]). MW-25 is located immediately west of MW-17, within western sidewalk of 33rd Street as per NYSDEC s request. During borehole advancement moderate impacts were noted in soil. Stained soil was observed at capillary fringe (25 ft bgs) and continued to approx 40 ft bgs (bottom of borehole) where it was less evident. Soil samples were collected from intervals 13-15 ft bgs and 23-25 ft bgs for off-site chemical analyses as per Work Plan. Because of heavy rain and moisture yesterday, use of PID was limited. Monitoring well was installed and developed. A minor odor was detected from purge water associated with well development. MW-25 is scheduled for collection of GW sampling at next quarterly GW sampling event in July 2010. - J. Kolleeny 07/20/10: Reviewed Stantec's Quarterly GW Sampling Rpt for April 2010, dated 5/10/10 (in eDocs). Results of April 2010 GW sampling showed decreases in total VOCs in down-gradient mon wells, though significant levels of contam remain in wells MW-17, with 7,989 ug/L TVOCs (down from 28,907 ug/L TVOCs in Dec.'09), and MW-23, with 3,026 ug/L TVOCs (down from 4,831 ug/L TVOCs in Dec.'09). Well MW-15 on down-grade side of treatment gate was ND. - J. Kolleeny 10/12/10: Reviewed Stantec's Mon Well Install'n & Quarterly GW Sampling Rpt for July 2010, dated 8/30/10 (in eDocs). Rpt summarizes install'n of 1 addt'l off-site well (MW-25, across 33rd St. from site), closure of 1 damaged well, repair of 2 damaged wells, & collection of GW samples from all wells in July 2010. Results show high levels of GW contam in several wells on west (down-gradient) side of site: MW-17 had 15,647 ug/L total VOCs (up from 7,989 ug/L in April 2010); MW-23 had 10,676 ug/L tVOCs (up from 3,026 ug/L in April 2010); new well MW-25 had 11,888 ug/L tVOCs. I sent letter (in eDocs) to Ken Kaiser of Con Ed, cc to Greg DelMastro of Stantec, requesting two more wells to delin north edge of plume: 1 well north of MW-25 on west side of 33rd St., and 1 well north of MW-23 on east side of 33rd St., with soil sampling during install'n and full round of GW sampling; based on results, more delin wells may be needed and DEC may require addt'l remediation. Asked that summary rpt describe usage of adjacent property to west and make recommendations for addt'l actions as appropriate. - JK 11/29/10: Reviewed Stantec's 11/18/10 Off-Site Work Plan (in eDocs). Plan proposes drilling 7 borings, collecting soil samples, installing temporary well points in each boring, and collecting GW samples from temporary wells. Based on results of soil and GW samples, and in consultation with DEC, permanent wells will be installed at 4 locations to better delineate GW plume and evaluate any impacts from potential off-site sources. I sent approval letter (in eDocs) to Ken Kaiser of Con Ed, cc to Gregory DelMastro of Stantec. - J. Kolleeny 12/10/10: Received email from Greg DelMastro of Stantec: In accordance with your Work Plan approval letter to Mr. Ken Kaiser of Con Edison dated Nov. 29, 2010 and on behalf of Con Edison, Stantec and its drilling subcontractor are preparing to mobilize to site on Thursday, Dec. 16, 2010 to begin utility

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

clearance activities. These activities will be followed by Geoprobe work. We currently are awaiting receipt of NYCDOT permits to implement work. If there are any questions, please contact Mr. Kaiser at (718) 267-3881. - J. Kolleeny 12/29/10: Reviewed Quarterly GW Sampling Rpt (October 2010), dated 11/22/10, received 11/29/10 (in eDocs). Results of Oct. 2010 GW sampling event show total VOCs in three worst wells decreased, though they remain elevated. In MW-17, total VOCs were 9,580 ug/L, down from 15,647 ug/L in July 2010; in MW-23, tVOCs were 8,976 ug/L, down from 10,676 ug/L in July 2010; in MW-25, tVOCs were 9,483 ug/L, down from 11,888 ug/L in July 2010. - J. Kolleeny 01/13/11: On 1/10/11, received email from Greg DelMastro of Stantec with attached pdf file of Transmittal of Off-Site Preliminary Data rpt dated 1/10/11 (in eDocs); on 1/13/11, received hard copy of rpt. Will review. - J. Kolleeny 02/04/11: Reviewed Transmittal of Off-Site Prelim Data rpt, which shows significant impacts at 2 boring/temporary well locations. Con Ed argues that they're seeing impacts from an off-site source; proposed to install permanent wells at 5 of 7 boring locations. I contacted Ken Kaiser of Con Ed, requested boring logs, asked what compounds GW samples were analyzed for (since data table shows only BTEX detections, seems unusual), asked depth of refusal at boring GP-6, and asked what remediation Penske was allegedly planning for property to north (as stated in rpt). Ken said he would research my questions and get back to me. - J. Kolleeny 02/14/11: Received email from Greg DelMastro of Stantec with attached pdf file Transmittal of Addt'l Data - Off-Site Source Delineation rpt dated 2/14/11 (in eDocs). Rpt provided boring logs; rpt stated that GW samples were analyzed for VOCs, SVOCs & MTBE, but that lab did not initially rpt MTBE results, which are now included in revised data table; rpt stated that boring GP-6 met refusal at 6 ft bg in each of 3 attempts, and no impacts were observed to that depth so no soil sample was collected; and rpt stated that in their opinion, based on 10/9/03 letter from DEC to GES, petrol contam along northeast portion of site originated from off-site source, and that Penske was required to install addt'l wells to delin these impacts. I sent email to Greg DelMastro: Thanks for addt'l info. I still have question re: NYSDEC Comment 2, about parameters for which GW samples were analyzed. You state that samples were analyzed for VOCs, SVOCs & MTBE, and your revised data table includes positive results for MTBE; however, data continue to show no detections of compounds other than BTEX in samples, which seems unusual. Can you please provide laboratory data sheets for GW samples? - JK 02/15/11: Received email from Ken Kaiser of Con Ed with attached pdf files of lab data, stating: Please find enclosed portions of analytical data packages. There are another 3,000 pages to these rpts that we figure are not needed - if you do want them, please let me know and we will mail you CDs. On another note, I believe we are seeing different analytical results to north of Newtown SS property because we are seeing impacts of another spill/source area not associated with Con Edison property. I believe we discussed this possibility prior to start of our work. As such, I think this does demonstrate that we have defined northern extent of contamination associated with Newtown SS property. - J. Kolleeny 02/18/11: Spoke with Ken Kaiser of Con Ed. I pointed out that GW samples were not analyzed for full list of gasoline-related compounds usually analzyed (e.g., n-butylbenzene, sec-butylbenzene, tert-butylbenzene, isopropylbenzene, isopropyltoluene, n-propylbenzene, and trimethylbenzene isomers), but that lab sheets

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

he'd sent showed significant detections of trimethylbenzenes and naphthalene as Tentatively Identified Compounds (see report with TICs data in eDocs), and that when these are considered, sample results look more similar to contam they're seeing in other wells installed to delineate their plume. I said I'm not convinced that there's any off-site source, esp. since there's no evidence for gasoline storage/usage on property to north of Con Ed/Penske site. Ken said he does feel there's another source, but stated that Con Ed is committed to addressing contam and wants to move forward to install permanent wells at temp well pt locations as proposed. I sent letter (in eDocs) to Ken Kaiser, cc to Greg DelMastro, stating that DEC does not find that presence of off-site source has been conclusively demonstrated; but that proposals to install permanent wells at locations GP-1, GP-2, GP-3, GP-5 & GP-7, to include new wells in monitoring program, and to properly decomish well pt GP-4 are approved; also stated that based on monitoring results, DEC may request addt'l delin wells, such as at failed boring GP-6. - J. Kolleeny 07/13/11: On 6/9/11, received Monitoring Well Install'n and Quarterly GW Sampling Rpt (March 2011) by Stantec, dated 6/7/11. After preliminary review, I contacted Ken Kaiser of Con Ed on 6/13/11 and requested revisions to rpt, to remove unnecessary sections (such as DUSR), improve readability, move data tables closer to text and figs, and re-organize GW data table. On 7/1/11, received email from Gregory DelMastro of Stantec: Dear Mr. Kolleeny: Earlier today as per your request, revised Rpt as referenced above has been sent to you in PDF format on CD via regular mail. On 7/8/11, received CD with revised version of rpt. On 7/13/11, received email from Greg DelMastro: Dear Mr. Kolleeny: I am following up with you on behalf of Con Edison regarding revised CD (see e-mail below) that NYSDEC requested site. Could you please provide confirmation that CD was received and that it is acceptable to you? I sent email reply: Hi Greg, I did receive CD with revised pdf file, on 7/8/11. I did quick review, and while I appreciate removal of some of unnecessary portions of rpt (e.g., Data Usability Summary Rpt), which has made rpt shorter and pdf file smaller, some of problems I mentioned to Ken remain. For instance, image quality of rpt still looks like pdf was made by scanning a photocopy of printed-out rpt, rather than a direct conversion to pdf from computer files of rpt. This makes it difficult to read well numbers on water table contour map, and to read some of smaller data tables. In particular, I still have problem with Table 4, with current and historical data for VOCs in GW. This table looks like it did in earlier version of rpt -difficult to read, and with results for well MW-17 spread out over 2 pages. There must be a way to organize these data in such a way that results for each well can be presented on one page (not spread over 2), and for print to be larger and clearer. Also, I don't recall if I asked that tables that were interspersed with text be removed; since Table 4 is so difficult to read, now I miss those earlier tables! (Tables A and B.) Finally, I still don't see any discussion of what all data means, other than that total VOCs in such and such well went up or down since last sampling event. I would like to see some evaluation of remedial progress, some analysis of whether or not remedial approach implemented is effectively moving this spill toward closure, or whether some addt'l remedial action(s) may be warranted to expedite spill closure. Perhaps these changes could be made for next quarterly rpt, and I will upload current revised rpt to our database as is. - J. Kolleeny 07/14/11: Received email from Ken Kaiser of Con Ed: Jonathan, Thank you for your input. Since your are

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

giving us option, I would prefer that we make addt'l changes you request in next rpt. I sent reply, OK, that's fine. I will upload revised rpt to our database. Reviewed Revised Monitoring Well Install'n and Quarterly GW Sampling Rpt (March 2011) by Stantec, dated 6/30/11 (in eDocs). Rpt presents GW data for March 2011 showing significant impacts remaining in wells MW-17, MW-23 and MW-25 on down-gradient side of site; MW-17 had 10,603 ug/L total VOCs, up from 9,580 ug/L in Oct. 2010; MW-23 had 8,921 ug/L tVOCs, down slightly from 8,976 in Oct. 2010; MW-25 had 5,970 ug/L tVOCs, down from 9,483 ug/L (or 10,741 ug/L in dup sample) in Oct. 2010. Well MW-16, on upgradient side of treatment gate, had 1,010 ug/L tVOCs, up from 236 ug/L in Oct. 2010; MW-15, on downgradient side of treatment gate, had 2.4 ug/L J (estimated) tVOCs, up from 1.1 ug/L J in Oct. 2010. Rpt states that minor to moderate GW impacts in new wells MW-26, MW-27, MW-28 and MW-29 (worst of new wells, with 561 ug/L tVOCS), located to NW of plume (north of impacted wells along 33rd St), appear to have migrated from a source area located north of site. (I disagree.) Rpt states that next quarterly GW sampling event is scheduled for June 2011. - J. Kolleeny 07/15/11: Received email from Greg DelMastro of Stantec: In response to your e-mailed comments dated 7/13/11, I have revised Table 4 on behalf of Con Edison. If you could please provide your feedback so we can incorporate this modification if it is acceptable to you in next quarterly GW sampling rpt. Next quarterly GW sampling event is scheduled for next week, July 20-22, 2011. Thank you. I uploaded revised Table 4 to eDocs, sent email reply: Layout of table is fine (except that many pages have blank columns off on right side that could be eliminated). Image-wise, it still looks like scanned photocopy. If image clarity could also be improved, that would make table easier to read and would be greatly appreciated. - JK 12/02/11: Reviewed Quarterly GW Sampling Rpt (July 2011) by Stantec Consulting Svcs Inc., dated 9/6/11 (in eDocs). Rpt presents results of July 2011 GW sampling event. Data show well MW-16 (on up-gradient, influent side of treatment gate) had 123 ug/L total VOCs, down from 1,010 ug/L tVOCs in March 2011; well MW-15 (on down-gradient, post-treatment side of gate) remained ND; MW-17 had 4,612 ug/L tVOCs (down from 10,603 ug/L in March 2011); MW-23 had 12,824 ug/L tVOCs (up from 8,921 ug/L in March 2011); MW-25 had 7,022 ug/L tVOCs (up from 5,970 ug/L in March 2011. Next quarterly GW sampling event scheduled for Oct. 2011. - JK 02/24/12: Reviewed Quarterly GW Sampling Rpt (Oct. 2011) by Stantec Consulting Svcs Inc. dated 1/27/12 (in eDocs). GW results for Oct. 2011 show significant decreases in contam levels in some wells: MW-17 had 609 ug/L total VOCs (down from 4,612 ug/L in July 2011); MW-23 had 1,464 ug/L tVOCs (down from 12,824 ug/L in July 2011). However, two wells showed significant increases: MW-25 had 7,808 ug/L tVOCs, up from 7,022 ug/L in July 2011 (but below first baseline sampling result of 11,888 ug/L in July 2010); and MW-27 had 4,656 ug/L tVOCs (up from 23 ug/L in July 2011 and 13 ug/L when first sampled in March 2011). Rpt states that results show good remedial progress; also states that next sampling event in Jan. 2012 has been performed and results will be in next qtrly rpt. - J. Kolleeny 06/20/12: Reviewed Quarterly GW Sampling Rpt (Jan. 2012) by Stantec Consulting Svcs Inc., dated 4/18/12 (in eDocs). GW results for Jan. 2012 show minor rebound in VOCs in two wells of concern, and decreases in VOCs in two other wells of concern: MW-17 had 1,252 ug/L total VOCs, up from 609 ug/L in Oct. 2011; MW-23 had 2,008 ug/L tVOCs, up from 1,464 ug/L in Oct. 2011; MW-25 had 6,417 ug/L tVOCs, down from 7,808 ug/L in Oct. 2011;

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

MW-27 had 1,406 ug/L tVOCs, down from 4,656 ug/L in Oct. 2011. Most wells have decreased from basline high levels, with exception of MW-27 (and MW-26, which has minor contam - 186 ug/L tVOCs, up from 23 ug/L in Oct. 2011 and baseline level of 39.5 ug/L when first sampled in March 2011 after install'n. Rpt states that next qtrly GW sampling event is scheduled for April 2012. - JK 08/16/12: Reviewed Quarterly GW Sampling Rpt (April 2012) by Stantec Consulting Svcs, dated 7/17/12 (in eDocs). GW results for April 2012 show MW-16, on up-gradient (pre-treatment) side of treatment gate, had 1,043 ug/L total VOCs, significant increase from 95 ug/L in Jan. 2012, almost all of increase due to benzene, which was 942 ug/L (up from 67 ug/L in Jan. 2012). However, MW-15 on down-gradient (post-treatment) side of reactive gate, was virtually ND, with only trace (J value) of xylenes (1.8 ug/L J). Well MW-17 had 4,838 ug/L tVOCs, up from 1,252 ug/L in Jan. 2012 and its 2nd increase in a row (it had 609 ug/L in Oct. 2011 and 4,612 ug/L in July 2011); MW-23 had 4,567 ug/L tVOCs, up from 2,008 ug/L in Jan. 2012 (and 2nd increase in a row, up from 1,464 ug/L in Oct. 2011), with significant increase in benzene, from 40 ug/L in Jan. 2012 to 308 ug/L in April 2012; MW-25 had 5,335 ug/L tVOCs, down from 6,417 ug/L in Jan. 2012 and its 2nd decrease in a row (had 7,808 ug/L or DUP 8,062 ug/L in Oct. 2011), however, benzene increased to 827 ug/L in April 2012, up from 551 ug/L in Jan. 2012; MW-26 had 460 ug/L tVOCs, up from 186 ug/L in Jan. 2012 and from 23 ug/L in Oct. 2011, but MW-26 has no BTEX in contrast to most problem wells (Stantec argues that this shows impacts in MW-26 are from unidentified up-gradient off-site source); MW-27 had significant decrease, with 142 ug/L tVOCs, down from 1,406 ug/L in Jan. 2012 and from 4,656 ug/L in Oct. 2011 (Stantec also argues that impacts in MW-27 are from off-site source, however, benzene and xylenes were present, and all BTEX were present in Jan. 2012 and Oct. 2011). Rpt states that next qtrly sampling event had been scheduled for July 2012 but due to ongoing Con Ed work stoppage, will be in August 2012. I sent email response (in eDocs) to 8/1/12 email from Greg DelMastro of Stantec (Dear Mr. Kolleeny: Just inquiring if you received rpt and accompanying CD as per your request that was sent to you on July 17. We look forward to your review and comment.), with cc's to Mariela Gonzalez and Ken Kaiser of Con Ed, replying: Hi Mr. DelMastro: I have reviewed 2nd Quarter 2012 GW Sampling Rpt for this site, prepared by Stantec Consulting Svcs Inc. on behalf of Con Edison and dated 7/17/12. I am a little concerned about increases in total VOCs in wells MW-17 and MW-23, which have occurred in last two quarters. However, I noticed that April 2012 results showed big increase in benzene in well MW-16 on up-gradient side of treatment cassette, and it may be that all these increases are due to temporary fluctuation, perhaps related to changes in water table elevations or precipitation patterns. I also noted that VOC levels in MW-25 decreased from last quarter (altho benzene increased), and that contaminant levels in MW-27 decreased significantly. At this point, I'd like to wait to see results of August 2012 GW sampling event. However, if contaminant levels in MW-17 and MW-23 continue to increase, I may request addt'l actions to help enhance attenuation of GW contamination and expedite movement of this spill case toward closure. Please feel free to contact me if you have any questions. - J. Kolleeny 01/28/13: Reviewed Quarterly GW Sampling Rpt (Sept. 2012) dated 1/8/13 by Stantec (in eDocs). Results of Sept. 2012 GW sampling event show MW-16, on up-gradient (pre-treatment) side of treatment gate, had 2,132 ug/L total VOCs (up significantly from 1,043 ug/L in

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

April 2012, and 2nd major increase since 95 ug/L in Jan. 2012), total was mostly benzene with 1,910 ug/L (up from 942 ug/L benzene in April 2012); MW-17 had 1,670 ug/L tVOCs (down from 4,838 ug/L in April 2012); MW-23 had 7,319 ug/L tVOCs (up from 4,567 ug/L in April and 3rd increase in a row, starting at 1,464 ug/L in Oct. 2011); MW-25 had 4,326 ug/L tVOCs (down from 5,335 ug/L in April 2012). Based on results of 13 quarterly GW sampling events, Stantec concludes that treatment cassette is working as designed to address contam and prevent off-site migration. Next quarterly sampling event scheduled for December 2012. - J. Kolleeny 05/23/13: Reviewed Quarterly GW Sampling Rpt (Dec. 2012) by Stantec, dated 5/6/13 (in eDocs). Results of Dec. 2012 GW sampling event show well MW-23 had 7,367 ug/L total VOCs (up slightly from 7,319 ug/L in Sept. 2012 and well above Dec. 2009 baseline result of 4,830.5 ug/L); well MW-25 had 2,539 ug/L tVOCs (down from 4,326 ug/L in Sept. 2012); well MW-17 had 1,380 ug/L tVOCs (down from 1,670 ug/L in Sept. 2012); well MW-16 on up-gradient side of treatment cassette had 3,810 ug/L tVOCs (up from 3,075 ug/L in Sept. 2012 and way above Aug. 2008 baseline of 373 ug/L); well MW-15 on down-gradient (post-treatment) side of cassette was ND except for 0.74(J) ug/L of naphthalene (J value = below reporting limit). Rpt states that next quarterly event was conducted in March 2013 (results presumably in next rpt). - JK 07/19/13: Reviewed Quarterly GW Sampling Rpt (March 2013) by Stantec, dated 6/12/13 (in eDocs). Results of March 2013 GW sampling event show well MW-16 (on up-gradient side of treatment cassette) had 2,677.5 ug/L total VOCs (down from 3,810 ug/L in Dec. 2012); well MW-15 on down-gradient side of treatment cassette was ND; well MW-17 had 1,392 ug/L tVOCs (up slightly from 1,380 ug/L in Dec. 2012); well MW-23 had 2,257 ug/L tVOCs (down from 7,367 ug/L in Dec. 2012); well MW-25 had 3,237 ug/L tVOCs (up from 2,539 ug/L in Dec. 2012); well MW-26 had 1,081 ug/L tVOCs (up from 811 ug/L in Dec. 2012). Stantec states that contam in MW-26 has different chemical signature from contam in other wells, and based on near absence of contam in wells MW-27, MW-28 & MW-29 (in between on-site source area and well MW-26), they postulate that contam in MW-26 is from a different off-site source, located somewhere to north. Rpt states that next quarterly GW sampling event was scheduled for late June 2013. - J. Kolleeny 08/19/13: Reviewed Quarterly GW Sampling Rpt (July 2013) by Stantec, dated 7/29/13 (in eDocs). Results of July 2013 GW sampling event show well MW-16 (up-gradient side of treatment cassette) had 2,563 ug/L total VOCs (down a little from 2,678 ug/L in March 2013; well MW-15 on down-gradient side of treatment gate was ND; well MW-17 had 1,740 ug/L tVOCs (up from 1,392 ug/L in March 2013); well MW-23 had 4,479 ug/L tVOCs (up from 2,257 ug/L in March 2013); well MW-25 had 3,306 ug/L tVOCs (up a little from 3,237 ug/L in March 2013); well MW-26 had 496 ug/L tVOCs (down from 1,081 ug/L in March 2013). Stantec again states (as in March 2013 rpt) that contam in MW-26 differs in chemical signature from contam in other wells, and based on near absence of contam in wells MW-27, MW-28 & MW-29 (in between on-site source area and well MW-26), they postulate that contam in MW-26 is from an off-site source. Rpt states that next quarterly GW sampling event is scheduled for early October 2013. - J. Kolleeny 03/12/14: Reviewed Quarterly GW Sampling Rpt (October 2013) by Stantec, dated 2/10/14 (in eDocs). Results of Oct. 2013 GW sampling event show well MW-16 (up-gradient side of treatment cassette) had 6,208 ug/L total VOCs (up from 2,563 ug/L in July 2013), with 5,540 ug/L of benzene! Well MW-15 (down-gradient side of treatment cassette) was ND. Well

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

MW-17 had 1,924 ug/L tVOCs (up from 1,740 ug/L in July 2013), well MW-23 had 2,749 ug/L tVOCs (down from 4,479 ug/L in July 2013), wells MW-25 and MW-26 were not sampled due to obstructions in wells. Rpt states that data indicate treatment cassette is working as designed. Next quarterly GW sampling event is scheduled for January 2014. - J. Kolleeny 03/17/14: Reviewed Quarterly GW Sampling Rpt (January 2014) by Stantec, dated 3/7/14, received pdf by email on 3/7/14, received hard copy on 3/14/14 (rpt in eDocs). Results of Jan. 2014 GW sampling show well MW-16 (up-gradient side of treatment cassette) had 3,982.5 ug/L total VOCs (down from 6,208 ug/L in Oct. 2013), of which 3,710 ug/L was benzene (had 5,540 ug/L benzene in Oct. 2013). Well MW-15, on down-gradient side of treatment gate, had 75.1 ug/L tVOCs, all of which was benzene; this was first exceedance ever detected in this well. Well MW-17 had 1,195 ug/L tVOCs (down from 1,924 ug/L in Oct. 2013), well MW-23 had 623 ug/L tVOCs (down from 2,749 ug/L in Oct. 2013), well MW-24 had ~18 ug/L tVOCs (down from 138 ug/L in Oct. 2013), well MW-25 had 630 ug/L tVOCs (not sampled in Oct. 2013; had 3,306 ug/L tVOCs in July 2013), well MW-26 had 148 ug/L tVOCs (not sampled in Oct. 2013; had 496 ug/L tVOCs in July 2013). Rpt states that detection of benzene above stds in well MW-15 for first time may indicate breakthrough of treatment cassette, and that VOCs in MW-15 should be reevaluated next quarter to confirm it benzene detection is reproducible. I called Kimm Perlin of Stantec (PM) to discuss this; he agreed that breakthrough of treatment gate may have occurred, but said they will be sampling wells again in March 2014 and would like to see if breakthru is confirmed before taking corrective actions. We agreed that slug of hi-level contam with lots of benzene seems to have moved thru treatment gate over past few quarters (actually, since April 2012 when total VOCs jumped to 1,043 ug/L from 95 ug/L in Jan. 2012 and benzene jumped to 942 ug/L from 67 ug/L in Jan. 2012), and that this may have overwhelmed treatment gate. Mr. Perlman stated that if March 2014 sampling data confirm breakthru, Con Ed will remove spent carbon from treatment gate and replace with fresh carbon. - J. Kolleeny 06/12/14: Reviewed Quarterly GW Sampling Rpt (March 2014) by Stantec, dated 5/19/14 (in DecDocs). Rpt presents results of GW sampling on 3/20-21/2014, showing well MW-15 (on down-gradient side of treatment cassette) was ND (down from 75.1 ug/L total VOCs in Jan. 2014); well MW-16 had 5,115.5 ug/L tVOCs with 3,780 ug/L of benzene (had 3,982.5 ug/L tVOCs in Jan. 2014, with 3,710 ug/L benzene); well MW-17 had 936.4 ug/L tVOCs (down from 1,195.2 ug/L in Jan. 2014); well MW-23 had 4,231 ug/L tVOCs (up from 623 ug/L in Jan. 2014); well MW-25 had 1,396 ug/L tVOCs (up from 630 ug/L in Jan. 2014); well MW-26 was not sampled due to blockages in well. Rpt states that past 18 quarters of GW data indicate treatment cassette is working as designed to address GW impacts; notes that in Jan. 2014, benzene was detected in well MW-15 on down-gradient side of cassette, but benzene was ND in MW-15 in March 2014. Rpt states that monitoring should continue to confirm that Jan. 2014 benzene detection did not indicate a trend and carbon breakthrough. Next quarterly GW sampling event will take place in June 2014. Rpt states that any questions re: rpt should be directed to Ms. Mariela Gonzalez of Con Ed at 718-204-4226 (i.e., Con Ed rep is no longer Ken Kaiser), or to Kimm Perlin of Stantec (i.e., Stantec rep is no longer Gregory DelMastro). - J. Kolleeny 12/05/14: Reviewed 2nd Quarterly 2014 GW Sampling Rpt (June 2014) by AECOM (new consultant), dated 10/30/14 (in DecDocs). Results of GW gauging/sampling on 6/24-25/2014 showed no LNAPL detected in any wells; for dissolved VOCs, well MW-15 (on

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

down-gradient side of treatment cassette) was ND (same as in March 2014; altho rpt does not provide GW data for Jan. & March 2014 sampling events); well MW-16 (on up-gradient side of treatment cassette) had 4,537 ug/L total VOCs (down from 5,115.5 ug/L in March 2014); well MW-17 had 844 ug/L tVOCs (down from 936 ug/L in March 2014); well MW-18 had 54 ug/L tVOCs (up from ND in March 2014); well MW-23 had 2,234 ug/L tVOCs (down from 4,231 ug/L in March 2014); well MW-24 had 5 ug/L tVOCs (down from 49 ug/L in March 2014); well MW-25 had 1,434 ug/L tVOCs (up from 1,396 ug/L in March 2014); well MW-26 could not be sampled due to a blockage still present in well. Rpt states that based on last 20 quarterly sampling events, treatment cassette is working as designed to prevent migration of contam plume off site. Rpt notes that since April 2012, tVOCs have been on generally increasing trend, driven mainly by increases in benzene concentrations. Rpt states that 3rd quarter 2014 GW sampling event was performed in Sept. 2014 and results will be presented in 3rd Quarter 2014 GW Sampling Rpt. - J. Kolleeny 12/05/14: Reviewed 3rd Quarterly 2014 GW Sampling Rpt (Sept. 2014) by AECOM, dated 11/6/14 (in DecDocs). Results of well gauging/sampling on 9/10-12/2014 showed no LNAPL detected in any wells; for dissolved VOCs, well MW-15 (on down-gradient side of treatment cassette) was ND; data table does not present Sept. 2014 results for well MW-16 (on up-grade side of cassette), but lab sheets show it had 5,069 ug/L total VOCs (up from 4,537 ug/L in June 2014), of which 4,700 ug/L were benzene (had 4,400 ug/L benzene in June 2014); well MW-17 had 1,232 ug/L tVOCs (up from 844 ug/L in June 2014); well MW-18 had 2.4 ug/L tVOCs (down from 53.4 ug/L in June 2014); well MW-23 had 2,168 ug/L tVOCs (down from 2,234 ug/L in June 2014); well MW-25 had 1,016 ug/L tVOCs (down from 1,434 ug/L in June 2014); well MW-26 was not sampled due to a blockage in well. I noticed that GW data table has no data for several gasoline-related VOCs which are typically analyzed for: naphthalene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene, all of which have NA written in data table. I checked lab data sheets, and seems these compounds were not included in their 8260 analyses for some reason. I went back and checked 2nd quarter 2014 rpt by AECOM, and found same problem with these 3 compounds not being analyzed for by lab. 3rd Qtr Rpt states that since April 2012, tVOCs have been on generally increasing trend, driven mainly by increases in benzene concentrations. Also states that consistently elevated VOCs in wells MW-17 & MW-23 may be result of off-site migration from adjacent site to north. Rpt states that 4th Quarter 2014 GW sampling event will take place in Dec. 2014. I called Sara Meissner of AECOM to discuss 2nd & 3rd quarter 2014 rpts. I pointed out problem with lab not analyzing for 3 VOCs; she will look into it with lab. I also noted that rpts have picked up language from Stantec rpts about general trends and asked that rpts provide more up-to-date analysis of data and trends. I also stated that I do not believe contam in wells MW-17 and MW-23 is from off-site, pointing out that adjacent site to north never had gasoline USTs and I am unaware of any gasoline spills at locations to north of site. She agreed to re-examine statements in rpt conclusions. - JK 04/28/15: Reviewed 4th Quarter 2014 GW Sampling Rpt (Dec. 2014) by AECOM, dated 1/12/15 (in DecDocs). Results of well gauging & sampling on Dec. 9 & 10, 2014 showed no LNAPL detected in any well, and showed well MW-15 (on down-gradient side of treatment cassette) was ND for VOCs (same as in Sept. 2014), well MW-16 (on up-gradient side of treatment cassette) had 330 ug/L total VOCs (down from 5,141 ug/L in Sept. 2014), well MW-17 had 21 ug/L tVOCs (down

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

from 1,232 ug/L in Sept. 2014), well MW-23 had 463 ug/L tVOCs (down from 2,168 ug/L in Sept. 2014), well MW-24 had 294 ug/L tVOCs (up from 1 ug/L in Sept. 2014), well MW-25 had 2,452 ug/L tVOCs (up from 1,016 ug/L in Sept. 2014), well MW-26 (to NW of site) was not sampled, but wells MW-27, MW-28 & MW-29 showed very low VOC levels, providing adequate delineation in that area. Based on data, AECOM concludes that treatment cassette is working as designed to prevent off-site migration of GW contamination, and that Dec. 2014 data show significant VOC decreases in several wells, while VOCs in some wells (e.g., MW-25) fluctuated. Rpt states that 1st quarter 2015 GW sampling event will take place in March 2015. - J. Kolleeny 05/04/15: Reviewed 1st Quarter 2015 GW Sampling Rpt (March 2015) by AECOM, dated 4/28/15 (in DecDocs). Results of well gauging & sampling on March 17, 18, & 19 2015 showed no LNAPL detected in any well, and showed well MW-15 (on down-gradient side of treatment cassette) had a 0.21 ug/L J detection of benzene but was otherwise ND for VOCs (same as Dec. 2014), well MW-16 (on up-gradient side of treatment cassette) had 2,147 ug/L total VOCs (up from 330 ug/L in Dec. 2014) with 1,900 ug/L of benzene (up from 210 ug/L benzene in Dec. 2014), well MW-17 had 482 ug/L tVOCs (up from 21 ug/L in Dec. 2014), well MW-23 had 408 ug/L tVOCs (down from 463 ug/L in Dec. 2014), well MW-24 had 146 ug/L tVOCs (down from 294 ug/L in Dec. 2014), well MW-25 had 5,703 ug/L tVOCs (up from 2,452 ug/L in Dec. 2014), with big increases in total xylenes (2,170 ug/L, up from 910 ug/L in Dec. 2014) and 1,2,4-trimethylbenzene (1,400 ug/L, up from 210 ug/L in Dec. 2014). Well MW-26 (to NW of site) was not sampled, but wells MW-27, MW-28 & MW-29 showed very low to ND VOC levels, providing delineation in that area. AECOM concludes that treatment cassette is working as designed to prevent off-site migration of GW contam. Rpt states that 2nd quarter 2015 GW sampling event will take place in June 2015. - JK 10/20/15: Reviewed 2nd Quarter 2015 GW Sampling Rpt (June 2015) by AECOM, dated 7/2/15 (in DecDocs). Results of gauging & sampling of 11 wells on June 3, 4 & 5, 2015 showed no LNAPL detected in any well, and showed well MW-15 (on down-gradient side of treatment cassette) was ND (had 0.21 ug/L J detection of benzene in March 2015), well MW-16 (on up-gradient side of treatment cassette) had 4,034 ug/L total VOCs (up from 2,147 ug/L in March 2015), well MW-17 had 93 ug/L tVOCs (down from 482 ug/L in March 2015), well MW-23 had 800 ug/L tVOCs (up from 408 ug/L in March 2015), well MW-24 had 13 ug/L tVOCs (down from 146 ug/L in March 2015), well MW-25 had 2,933 ug/L tVOCs (down from 5,703 ug/L in March 2015). Rpt concludes that data show treatment cassette is working as designed to prevent off-site migration of on-site GW impacts, and notes that June 2015 data for well MW-16 showed significant increase in VOCs. Rpt states that 3rd quarter 2015 GW sampling event will be conducted in Sept. 2015. - JK 12/21/15: Reviewed 3rd Quarter 2015 GW Sampling Rpt (Sept. 2015) by Tetra Tech (Con Ed's new consultant), dated 11/6/15 (in DecDocs). Results of gauging & sampling of 12 wells on Sept. 14, 15 & 16, 2015 showed no LNAPL detected in any well, and showed well MW-15 (on down-gradient side of treatment cassette) was ND for VOCs (same as in June 2015), well MW-16 (on up-gradient side of treatment cassette) had 5,654 ug/L total VOCs (up from 4,034 ug/L tVOCs in June 2015, with 5,100 ug/L of benzene, up from 3,400 ug/L benzene in June 2015), well MW-17 had 1,844 ug/L tVOCs (up from 93 ug/L in June 2015), well MW-23 had 1,927 ug/L tVOCs (up from 800 ug/L in June 2015), well MW-24 had 24 ug/L tVOCs (up from 13 ug/L in June 2015), well MW-25 had 1,158 ug/L tVOCs (down from 2,933 ug/L in June 2015), well MW-26

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

had 563 ug/L tVOCs (up from 148 ug/L in Jan. 2014; well was not sampled from June 2014 thru June 2015 due to obstruction in well, which has been cleared by Tetra Tech). Rpt concludes that based on data from 25 quarters of GW sampling, treatment cassette is working as designed to prevent off-site migration of on-site GW impacts; rpt notes that Sept. 2015 data for well MW-16 showed significant increase in VOCs over June 2015 data (but does not specifically mention Sept. 2015 increase in well MW-17 in Conclusions Section of rpt). Rpt states that 4th quarter 2015 GW sampling event will be conducted in December 2015. - J. Kolleeny 03/18/16: Reviewed 4th Quarter 2015 GW Sampling Rpt (Dec. 2015) by Tetra Tech, dated 1/20/16 (in DecDocs). Results of gauging & sampling of 12 wells on Dec. 15 & 16, 2015 showed no LNAPL detected in any well, and well MW-15 (down-gradient side of treatment cassette) was ND (same as in Sept. 2015), well MW-16 (up-gradient side of treatment cassette) had 10,127 ug/L total VOCs (up from 5,654 ug/L in Sept. 2015), well MW-17 had 1,373 ug/L tVOCs and duplicate sample had 1,699 ug/L tVOCs (down from 1,773 ug/L in Sept. 2015), well MW-23 had 1,569 ug/L tVOCs (down from 1,927 ug/L in Sept. 2015), well MW-25 had 949 ug/L tVOCs (down from 1,158 ug/L in Sept. 2015), well MW-26 had 534 ug/L tVOCs (down from 563 ug/L in Sept. 2015). Rpt concludes that based on data from 26 quarters of GW sampling, treatment cassette is working as designed to prevent off-site migration of on-site GW impacts; rpt notes that Dec. 2015 data for well MW-16 showed significant increase in VOCs. Rpt states that 1st quarter 2016 GW sampling event will be conducted in March 2016. - J. Kolleeny 05/06/16: Reviewed 1st Quarter 2016 GW Sampling Rpt (March 2016) by Tetra Tech, dated 4/18/16 (in DecDocs). Results of gauging & sampling of 12 wells on March 14 & 15, 2016 showed no LNAPL detected in any wells; well MW-15 (down-gradient side of treatment cassette) was ND (same as in Dec. 2015), well MW-16 (up-gradient side of treatment cassette) had 7,006 ug/L total VOCs (down from 10,127 ug/L in Dec. 2015), well MW-17 had 1,942 or 1,998 ug/L tVOCs (2nd result is duplicate sample)(up from 1,373 or 1,699 ug/L in Dec. 2015, also dup samples), well MW-23 had 3,058 ug/L tVOCs (up from 1,569 ug/L in Dec. 2015), well MW-24 had 94 ug/L tVOCs (up from 9 ug/L in Dec. 2015), well MW-25 had 1,767 ug/L tVOCs (up from 949 ug/L in Dec. 2015), well MW-26 had 119 ug/L tVOCs (down from 534 ug/L in Dec. 2015). Rpt concludes that based on data from 27 quarters of GW sampling, treatment cassette is working as designed to prevent off-site migration of on-site GW impacts; rpt acknowledges that VOCs in several wells increased from Dec. 2015 to March 2016 (MW-17, MW-23, MW-25), however, they remain significantly below baseline levels for those wells. Rpt states that 2nd quarter 2016 GW sampling event will be conducted in June 2016. I contacted Robert Cantagallo of Tetra Tech (project manager), asked that future rpts include well gauging data table and water table contour map. I also noted that impacts in wells MW-17, MW-23 and MW-25 are persisting at levels too high for spill closure, and suggested that Tetra Tech and Con Ed consider addt'l remedial actions to reduce VOC levels and move this case toward closure. Mr. Cantagallo agree to speak with Ms. Mariela Gonzalez of Con Ed and get back to me. - J. Kolleeny 06/14/16: Met with Con Ed & consultant Tetra Tech to discuss appearance of LNAPL in wells MW-23 & MW-25, resulting in new spill #1602542 (meeting sign-in sheet in DecDocs). I suggested they perform vacuum-enhanced fluid recovery (VEFR); they agreed to try this and will update me on progress. - J. Kolleeny 12/14/16: Reviewed 2nd & 3rd Quarter Sampling Rpt by Tetra Tech dated 11/14/16, submitted with Con Ed cover letter

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

dated 11/17/16 (in DecDocs). Rpt presents results of June & Oct. 2016 well gauging & GW sampling, plus Aug. 2016 LNAPL recovery/recharge study. Well gauging in June 2016 showed well MW-23 had 0.46 ft of LNAPL, well MW-25 had 1.37 ft of LNAPL; well gauging in Oct. 2016 showed well MW-23 was dry, wells MW-24 and MW-28 had product on interface probe (not measurable in well), well MW-25 had 0.43 ft of LNAPL, and well MW-27 had 0.03 ft of LNAPL. GW sampling showed well MW-15 was ND for VOCs in June & Oct. 2016 (same as in March 2016), well MW-16 had 7,711 ug/L total VOCs in June 2016 (up from 7,006 ug/L in March 2016) and had 6,050 ug/L tVOCs in Oct. 2016, well MW-17 had 333 ug/L tVOCs in June 2016 (down from 1,942 ug/L in March 2016) and had 479 ug/L tVOCs in Oct. 2016, well MW-18 had 277 ug/L tVOCs in June 2016 (up from ND in March 2016) and had 25 ug/L tVOCs (??) in Oct. 2016 (detected compounds only seem to add up to 6 ug/L tVOCs!?), well MW-24 had 206 ug/L tVOCs in June 2016) up from 94 ug/L in March 2016) and wasn't sampled in Oct. 2016, well MW-26 had 49 ug/L tVOCs in June 2016 (down from 119 ug/L in March 2016) and had 32 ug/L tVOCs in Oct. 2016, well MW-27 had 45 ug/L tVOCs in June 2016 (up from ND in March 2016) and wasn't sampled in Oct. 2016, well MW-29 had 52 ug/L tVOCs in June 2016 (up from 15 ug/L in March 2016) and had 39 ug/L tVOCs in Oct. 2016. Table 6 in rpt shows that in late Aug. 2016, wells MW-23 were gauged for LNAPL, bailed and re-checked, showing recharge to previous thickness in ~24 hrs; over 3-day period ~10 gals of NAPL were recovered. Rpt states that MW-26 has historically had a different chemical signature than other wells at site, suggesting a possible different source, and Tetra Tech speculates that appearance of LNAPL in several wells may be related to this hypothetical off-site source. Tetra Tech recommends review of surrounding property info to locate potential off-site sources for impacts in MW-26 and possibly for LNAPL, and to determine if any local businesses are pumping GW and depressing local water table. Tetra Tech also recommends evaluating different NAPL recovery methods & preparing a NAPL recovery plan for DEC. I sent letter (in DecDocs) to Neil O'Halloran of Con Ed, cc's to Qinling Zheng of Con Ed, Robert Cantagallo of Tetra Tech, stating that (1) available data do not support notion of off-site source for LNAPL, and DEC considers Newtown site (formerly a Penske Truck leasing facility) to be source of LNAPL and regards Con Ed as RP to address LNAPL; (2) recommendation to review surrounding property info to identify potential candidates for off-site contam source and determine if any local businesses are extracting GW does not require DEC approval, Con Ed & Tetra Tech may undertake this review at their own discretion; and (3) recommendations to evaluate methods of LNAPL recovery and prepare LNAPL recovery plan for DEC are approved, NAPL plan should be submitted by 01/30/17. - J. Kolleeny 01/13/17: Had conference call with Neil O'Halloran and Qinling Zheng of Con Edison to discuss LNAPL recovery plan, to address product recently detected in wells along 33rd street down-gradient of site. They proposed gauging wells, doing VEFR on wells with significant product thickness and installing absorbent socks in wells with trace of product, then a week later gauging wells again and bailing any product (replacing socks as needed), and after another two weeks performing VEFR again and replacing socks as needed. I agreed to this approach and requested submission of written work plan for review and approval. - J. Kolleeny 02/08/17: Reviewed LNAPL Recovery Plan dated 2/8/17 by Con Edison (in DecDocs). Plan proposes following tasks: (1) gauge wells MW-23 & MW-25 with oil-water interface probe, perform VEFR if a well

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

has more than 0.1 ft of LNAPL, & install absorbent sock in a well with up to 0.1 ft of LNAPL; (2) one week after completion of 1st task, gauge wells again, perform manual bailing if necessary, and replace absorbent socks; this will be done for two weeks; (3) three weeks after VEFR event in Task 1, gauge wells MW-23 & MW-25 again, replace socks as needed, and perform VEFR again on MW-25. At conclusion of these tasks, product recovery/accumulation will be evaluated and a schedule for addt'l gauging & bailing events will be proposed. I sent letter (in DecDocs) to Neil O'Halloran of Con Ed, cc's to Qinling Zheng of Con Ed and Bob Cantagallo of Tetra Tech, approving this plan but adding that during gauging events, other wells along 33rd St should also be gauged, and if any indications of LNAPL are detected, impacted well(s) should be included in LNAPL recovery tasks, and stating that if well MW-23 is consistently found to be dry, as it has been during recent gauging events, it may be necessary to install a deeper replacement well to better evaluate area for presence of LNAPL and enhance effectiveness of LNAPL recovery efforts. - J. Kolleeny 09/05/17: Reviewed 1st Quarter 2017 GW Sampling Rpt (March 2017) by Tetra Tech dated 6/28/17 (in DecDocs). Rpt summarizes well gauging & GW sampling event in March 2017. Well gauging showed 0.20 ft of LNAPL in well MW-25 and a sheen in well MW-27. GW sampling showed well MW-15 was ND (same as in Dec. 2016), well MW-16 had 3,465 ug/L total VOCs (down from 5,487 ug/L in Dec. 2016), well MW-17 had 25 ug/L tVOCs (down from 70n ug/L in Dec. 2016); wells MW-25 & MW-27 were not sampled due to LNAPL; wells MW-23, MW-29 & MW-30 were not sampled because wells were dry, or went dry during purging. Rpt states that based on past 31 quarters of GW sampling, treatment cassette is working as designed to prevent on-site GW impacts from traveling off-site. Rpt states that next GW sampling event will be in July 2017. - J. Kolleeny 11/09/17: Reviewed 2nd Quarter 2017 GW Sampling Rpt by Tetra Tech dated 9/26/17 (in DecDocs). Rpt summarizes well gauging & GW sampling in June 2017. Well gauging found LNAPL in wells MW-25 & MW-29 (no measurement is given, rpt states that absorbent socks in wells showed product staining), and a petroleum odor was noted in well MW-16. GW samples were not collected from these wells, and wells MW-23 & MW-30 were dry and could not be sampled. GW sampling showed well MW-15 had 1 ug/L of VOCs (altho all individual compounds were listed as undetected, with detection limit of 1 ug/L); well MW-17 had 37 ug/L tVOCs (up from 21 ug/L in March 2017); well MW-18 had 960 ug/L tVOCs, including 860 ug/L of benzene (well was ND in March 2017); well MW-26 had 24 ug/L tVOCs (down from 43 ug/L in March 2017, but again, individual compounds do not seem to add up to tVOC number). Rpt states that next sampling event will be in Sept. 2017; also states that wells MW-23, MW-29 & MW-30 are dry & Tetra Tech will inspect these wells & evaluate them for potential redevelopment. - JK 11/10/17: I sent email to Qinling Zheng of Con Ed, cc to Neil O'Halloran of Con Ed: Ling, I ve looked over 1st & 2nd Quarter 2017 GW Sampling Rpts for Newtown Substation site, and I have comments. First, while both rpts mention presence of LNAPL in a couple of wells, there is no discussion in either rpt of LNAPL Recovery Plan approved by DEC in Feb. 2017. That plan proposed specific tasks at specific time intervals, e.g., VEFR on wells with more than 0.10 ft of LNAPL (MW-25 had 0.20 ft of LNAPL in March 2017), checking wells in a week, placing absorbent socks in wells, checking wells again in 3 weeks, and possibly doing VEFR again. Plan further stated that after these tasks, data would be evaluated and a schedule for addt'l well gauging

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

& bailing events would be proposed. I have not received any proposal for an ongoing well gauging/bailing schedule, & it seems as though actions proposed in LNAPL Recovery Plan were never performed. Also, 2nd quarter 2017 rpt states that a petroleum odor was noted in well MW-16, but does not mention result of gauging well with an interface probe. Table 1 (gauging data) states that MW-16 had a slight odor. Yet rpt states that well MW-16 was not sampled due to free product detected in well. Was there measurable product in MW-16, based on gauging with interface probe? Was there a visible sheen on GW, based on observation of water in bailer? If not, if there was only a slight petroleum odor in well, then a GW sample should have been collected from MW-16. Rpt should be more clear about what was found in MW-16 that resulted in decision to not collect a GW sample. Next, Table 3 in both rpts, which presents GW sampling data, lists wells out of order. This should be corrected in future monitoring rpts. Also, in Table 3; numbers for individual compounds don t seem to add up to tVOC numbers given. Is Tetra Tech adding detection limits for undetected compounds into tVOC numbers? Finally, rpts mention that wells MW-23, MW-29 & MW-30 are consistently dry, & 2nd quarter rpt states that wells will be inspected & evaluated for potential redevelopment. Redevelopment is not enough, at least in case of MW-23 which has historically had high tVOCs as well as LNAPL detections. As I stated in my 2/8/17 letter approving Tetra Tech s LNAPL Recovery Plan, well MW-23 should be replaced with a deeper well if it is consistently found to be dry. At this point, that condition has been met and well should be replaced. Please provide an update on implementation of Feb. 2017 LNAPL Recovery Plan, and please respond to other questions & concerns expressed in this email as soon as possible. Feel free to call to discuss these issues. - J. Kolleeny 11/14/17: On 11/13/17, I was contacted by Neil O'Halloran of Con Ed, set up a conference call for next day (11/14/17) to discuss my 11/10/17 email comments on 2nd quarter 2017 rpt. On 11/14/17, participated in conference call with Qinling Zheng & O'Halloran of Con Ed. They explained that LNAPL recovery plan had been implemented & summary rpt had been prepared but never submitted; they agreed to submit it ASAP. They stated well MW-16 was not sampled because it had visible sheen; they agreed to revise 2nd quarter 2017 rpt to state this more clearly. They also explained that Table 3 VOC totals include all compounds detected by lab (not just STARS list VOCs), but stated they will add a line to table for total target VOCs & will re-submit revised 2nd quarter rpt. - JK 11/17/17: Received email from Qinling Zheng of Con Ed: Jon, This is follow-up email to phone call we had this Tuesday [11/14/17]. I have attached rpt for March & April 2017 VEFR work, along with revised 2nd quarter GW monitoring rpt. Following changes were made to 2nd quarter GW mon rpt: 1. On page 1 of rpt, we included MW-16 had a sheen during gauging 2. Table 3 was modified to include a new row called Sum of Target VOCs 3. Last paragraph on p. 7 of rpt called out VEFR work completed during March & April 2017. Please take a moment to review rpts. If you have any comments/questions, please feel free to contact me. Third quarter GW monitoring rpt is going through final internal review. We should have it ready shortly. Revised 2nd Quarter 2017 GW Sampling Rpt (in DecDocs) addressed my comments in 11/10/17 email (see above) - text states that well MW-16 had sheen and so was not sampled; Table 3 includes line for Total Target VOCs (i.e., STARs List VOCs) and puts well numbers in proper order; text mentions that LNAPL gauging & recovery work was performed in March & April 2017 as per approved

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

plan, and that results plus follow-up recommendations will be submitted as separate rpt. - J. Kolleeny 11/20/17: Reviewed LNAPL Gauging and Recovery rpt by Tetra Tech, dated 11/17/17 (in DecDocs). Rpt states that all wells were gauged on 3/22/17, and MW-25 had 0.20 ft of LNAPL. Rpt summarizes actions performed at site as part of approved Feb. 2017 LNAPL Recovery Plan. On 3/23/17, VEFR was performed on MW-25 and at end of day, no LNAPL was detected in well. Absorbent socks were placed in well MW-27, which had a sheen, and well MW-29, which had a strong petroleum odor. One week later (3/31/17), wells were gauged again. No LNAPL was detected in MW-25 (or other wells), but MW-25 had a petroleum odor, and a sock was placed in well. MW-27 again had a sheen and MW-29 again had an odor; socks were checked but were not significantly stained. A 3rd event was performed a week later (4/7/17); all wells were gauged, MW-25, MW-27 & MW-29 had petroleum odor. Sock in MW-25 showed some staining and was replaced; sock in MW-27 had light staining, sock in MW-29 showed no staining. A final event was conducted following week on 4/14/17. Again, MW-25, MW-27 & MW-29 had petroleum odor; sock in MW-25 showed some staining, sock in MW-27 had light staining, sock in MW-29 showed no staining. Socks were replaced in MW-25 and MW-27. Rpt states that in light of data, gauging of wells for LNAPL should continue on quarterly basis, with next event in Dec. 2017, and absorbent socks should be changed as needed. If MW-25 again exhibits measurable LNAPL or heavy staining of sock, another VEFR event will be considered. Rpt states that well MW-23 has been consistently dry since Oct. 2016, and MW-29 has shown decreasing water levels. Tetra Tech plans to redevelop and surge these wells to try to clear sediment and reestablish connection to surrounding aquifer. If wells continue to show low water levels after redevelopment, Tetra Tech will submit a plan to install replacement wells at these locations. - J. Kolleeny 01/23/18: Reviewed 3rd Quarter 2017 GW Sampling Rpt (Sept. 2017) by Tetra Tech dated 12/21/17 (in DecDocs). Rpt summarizes Sept. 2017 well gauging & sampling event. Well MW-25 was not sampled due to LNAPL staining on absorbent sock, indicating presence of product in well. Well MW-15 (down-gradient side of treatment gate) was ND (had 1 ug/L total VOCs in June 2017), well MW-16 (up-gradient side of treatment gate) had 960 ug/L tVOCs (down from 3,465 ug/L in March 2017), well MW-17 had 19 ug/L tVOCs (down from 20 ug/L in June 2017), well MW-18 had 310 ug/L tVOCs (down from 960 ug/L in June 2017), well MW-23 was dry again, well MW-24 had 6 ug/L tVOCs (same as June 2017), well MW-26 had 21 ug/L tVOCs (down from 24 ug/L in June 2017), well MW-27 had 147 ug/L tVOCs (up from 62 ug/L in June 2017), well MW-28 had 6 ug/L tVOCs (up from 5 ug/L in June 2017), well MW-29 was not sampled due to staining of absorbent sock, suggesting presence of product. Rpt states that 4th quarter 2017 sampling event will take place in December 2017. - J. Kolleeny 02/02/18: On 1/23/18, I sent email to Qinling Zheng of Con Ed, noting that 3rd quarter 2017 mon rpt reverted back to mistakes I mentioned about 2nd quarter 2017 rpt - well MW-16 listed out of order in GW data table, and row for Total of Target VOCs is gone from GW data table, so Total VOCs listed don’t seem to correspond with detections of individual compounds listed in table. I asked that these changes be made permanent for quarterly monitoring rpts moving forward. I also stated that since well MW-23 was again found to be dry, it’s time to install a deeper replacement well. On 2/2/18, I received email from Ling with attached revised 3rd quarter 2017 rpt, stating: Jon, We took some time to revise 3rd quarter rpt to include following

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

items " Table 3 all wells are now in order " There is a line for total target VOCs in Table 3 " December 2008 data has been set as our baseline On page 8 of document, we added a paragraph to discuss replacement of MW-23. Proposed MW-23 will be at least 10 ft below its current depth, or until water table is reached. Please take a moment to review this document. If you have any further comments/questions, feel free to contact me. Revised 3rd quarter 2017 rpt uploaded to DecDocs; will review. - J. Kolleeny 02/12/18: Reviewed revised 3rd Quarter 2017 GW Sampling Rpt by Tetra Tech, dated 2/2/18 (in DecDocs). Rpt has corrections to Table 3 VOC GW Data - well MW-16 is now listed in order, and table has an additional row for Total Target VOCs. Total Target VOC numbers are a little lower than Total VOC numbers listed in bottom row (and cited in my review of 3rd quarter 2017 rpt above in entry dated 1/23/18). Also in Table 3, row showing Baseline Total VOCs now lists Dec. 2008 data instead of Aug. 2008, starting with well MW-17 (baseline data for MW-15 & MW-16 are still from Aug. 2008). Rpt's Recommendations section states that well MW-23 will be replaced with a new well, existing well will be over-drilled & boring will be advanced at least 10 ft below well's current depth or until water table is encountered; new well will be screened across water table. - JK 03/22/18: Received email from Qinling Zheng of Con Ed: Jon, I am writing to submit 4th quarter GW sampling rpt for Newtown Substation. 4th quarter GW sampling was completed in January due to severe weather conditions in December. In this rpt, we included proposal to replace MW-23. New MW-23 will be advanced at least 10 ft below current depth or at least 10 ft below water table. We originally proposed to start work in March, unfortunately current weather condition will delay this field work. We would like to start field work in April when weather gets better. Please take a moment to review this rpt. If you have any questions or comments, please feel free to contact me. I sent reply: Ling, Thanks for sending rpt, I ll review it and let you know if I have any questions or comments. It s fine to replace well MW-23 in April; I m assuming you don t need a formal response/approval from me for that work? (I think I ve already asked for a replacement well in writing.) Will review rpt soon. - J. Kolleeny 05/01/18: Received email from Qinling Zheng of Con Ed: Jon, We are conducting fieldwork at Newtown substation for replacement of MW-23. Existing well will be over-drilled and replaced with a new well. Fieldwork will start on Monday 5/7/2018 and possibly last for three days. If you have any questions or comments, please feel free to contact me. Thank you very much. - J. Kolleeny 05/08/18: Received email from Qinling Zheng of Con Ed: Jon, Here is some update for Newtown substation well redevelopment. Install'n of new well was completed yesterday. There was about 12 ft of sediment at bottom of well MW-23. Old well was pulled out and we installed a new well with 20 ft of screen. We will return to site tomorrow at to develop well. Thank you very much. - JK 05/10/18: Received email from Qinling Zheng of Con Ed: Jon, We completed redevelopment of MW-23 at Newtown substation yesterday. I am writing to summarized what we did on Monday and Wednesday. On Monday 5/7, Tetra tech gauged well and measured about 3 ft of water in well. Driller over-drilled old MW-23, and pulled out 2-inch well. Entire length of well is about 40 ft deep, bottom 12 ft of well was brown sediment. We drilled to 45 ft below grade, and took some soil sample. After that, we installed a brand-new 2-inch well at same location. New well is about 40 ft below grade with 20 ft of screen at bottom. Contractor filled bottom 23 ft of gap outside of well screen with coarse bag sand, rest was filled

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

with Bentonite and grout to top of casing. We left well on site for GW to recover. On Wednesday, we returned to site to develop well. Well was once again gauged in morning and measured with PID. No product was measured in well. Well was pumped at regular rate to allow GW to recover. GW level stabilized around 25 ft below top of casing. After water level stabilized, Tetra Tech purged well until turbidity reached 50 NTU. No product was observed in purge water or in well. Newtown MW-23 redevelopment is complete. We will gauge this well for next round of sampling. If you have any questions, please feel free to contact me. - JK 06/06/18: Reviewed 4th Quarter 2017 GW Sampling Rpt (Jan. 2018) by Tetra Tech dated 3/22/18 (in DecDocs). Rpt summarizes Jan. 2018 well gauging & sampling event. Rpt states that free product was detected in wells MW-25 & MW-29, and that petroleum odors were detected in wells MW-16, MW-18 & MW-25. For both MW-25 & MW-29, well gauging data table does not provide a measured LNAPL thickness, but states in Comments that NAPL was present on absorbent sock. GW sampling showed well MW-15 (on down-gradient side of treatment cassette) was ND (as usual for this well), well MW-16 (on up-gradient side of treatment cassette) had 423 ug/L total VOCs (down from 927 ug/L in Sept. 2017), well MW-17 had 4 ug/L tVOCs (down from 7 ug/L in Sept. 2017), well MW-18 had 490 ug/L tVOCs (up from 267 ug/L in Sept. 2017), well MW-24 had 53 ug/L tVOCs (dupe sample)(had 1 ug/L in Sept. 2017), well MW-27 had 8 ug/L tVOCs (down from 107 ug/L in Sept. 2017). Well MW-23 had about 0.6 ft of water in it and was not sampled (well was replaced in May 2018; see above entry). Rpt states that 1st quarter 2018 GW sampling event will be in March 2018, & that MW-23 will be replaced. - JK 06/06/18: Reviewed 1st Quarter 2018 GW Sampling Rpt by Tetra Tech dated 5/15/18 (in DecDocs). Rpt summarizes March 2018 well gauging & sampling event. Rpt states that free product was detected in well MW-25; absorbent sock in this well contained a light brown, translucent LNAPL and a sheen. Also, a petroleum odor was detected in well MW-27. GW sampling showed well MW-15 (on down-gradient side of treatment cassette) had a J detection of 0.3 ug/L benzene (well is usually ND, but has had benzene detections in past), well MW-16 (on up-gradient side of treatment cassette) had 692.5 ug/L total VOCs, including 660 ug/L of benzene (up from 423 ug/L tVOCs and 370 ug/L benzene in Jan. 2018), well MW-17 had 2.6 ug/L tVOCs (down from 4.2 ug/L in Jan. 2018), well MW-18 had 0.9 ug/L tVOCs, consisting of two J detections of benzene & isopropylbenzene (down from 490 ug/L tVOCs in Jan. 2018), well MW-24 had 43 ug/L tVOCs (down from 53 ug/L in Jan. 2018), well MW-27 had 416 ug/L tVOCs (up from 8 ug/L in Jan. 2018), well MW-29 had 1.1 ug/L tVOCs, only MTBE (down from 139 ug/L tVOCs when last sampled in Dec. 2016). Well MW-23 had insufficient water for sampling (was replaced in May 2018, after March 2018 sampling event). Rpt states that 2nd quarter 2018 GW sampling event will be in June 2018, and that well MW-23 will be replaced. - J. Kolleeny 06/06/18: Sent email to Qinling Zheng of Con Ed, cc to Neil O'Halloran of Con Ed: Ling, I ve reviewed 4th quarter 2017 & 1st quarter 2018 GW monitoring rpts for this site, and have a few comments. I noticed that Tetra Tech rpts no longer include a water table contour map. Each monitoring rpt should include a water table contour map based on most recent well gauging data. (No need to revise existing rpts, but please include water table contour maps in future rpts.) Also, I d like to request that a new site plan Figure be created for future rpts, focusing on wells on down-gradient side of site along 33rd Street. Diagram should include text boxes linked to each well showing total Target VOCs detected in well. In

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

fact, it would be great if text box could show total Target VOCs for past 4 sampling events. Such a figure would allow me to better evaluate spatial distribution of contaminants in GW at site, as well as any trends in contaminant levels. Please let me know if these two requests can be accommodated. - J. Kolleeny 09/13/18: Reviewed 2nd Quarter 2018 GW Sampling Rpt by Tetra Tech dated 8/28/18 (in DecDocs). Rpt states that gauging of all wells in June 2018 showed no free product detected in any wells; however, a petroleum odor was observed in wells MW-16, MW-18, MW-23, MW-25 & MW-27. Sampling of wells on 6/26-27/18 showed well MW-15 (on down-gradient side of treatment cassette) was ND for target VOCs (had 0.28 J detection of benzene in March 2018); well MW-16 (on up-gradient side of cassette) had 350 ug/L total target VOCs, with 330 ug/L of benzene (had 692.5 ug/L tVOCs in March 2018, with 660 ug/L benzene), well MW-17 was ND (had 2.6 ug/L tVOCs in March 2018, with 2 ug/L benzene), well MW-18 was ND (had ~1 ug/L in March 2018, consisting of J detections of two VOCs), well MW-23 (replaced in May 2018) had 18,978 ug/L tVOCs (up from 2,983 ug/L when last sampled in March 2016); a duplicate sample was taken for MW-23 and had 16,565 ug/L tVOCs; well MW-24 had 1.5 ug/L tVOCs (a 1 ug/L detection and a 0.52 J detection)(down from 43 ug/L in March 2018), well MW-25 had 450 ug/L tVOCs (down from 1,661 ug/L when last sampled in March 2016), well MW-27 had 182 ug/L tVOCs (down from 416 ug/L in March 2018); other wells sampled were either ND or had very low tVOCs. Rpt includes water table contour map showing GW flow mainly to SW, but with strong NW component on west side of site; rpt also includes a site plan fig with data boxes, as requested. Rpt states in Overall Trends section that treatment cassette is working as designed. Rpt states that 3rd quarter sampling event will take place in September 2018. - J. Kolleeny 01/02/19: Reviewed 3rd Quarter 2018 GW Sampling Rpt by Tetra Tech dated 11/30/18 (in DecDocs). Gauging of all wells in Sept. 2018 showed no free product detected in any wells; however, a petroleum odor was observed in wells MW-16, MW-23 & MW-27. GW sampling showed well MW-15 (down-gradient side of treatment cassette) had 64 ug/L total VOCs (all benzene, plus a J detection of 0.36 ug/L isopropylbenzene); MW-15 was ND in June 2018; well MW-16 (up-gradient side of cassette) had 206 ug/L tVOCs (190 ug/L benzene), down from 350 ug/L tVOCs (330 ug/L benzene) in June 2018; well MW-17 was ND (same as June 2018), well MW-18 had ~1 ug/L MTBE (was ND in June 2018); well MW-23 had 13,005 ug/L tVOCs (down from 18,978 ug/L or 16,565 ug/L duplicate in June 2018); well MW-24 was ND (down from 1.5 ug/L tVOCs in June 2018); well MW-25 had 252 ug/L tVOCs (down from 450 ug/L in June 2018); well MW-26 had a 0.60 ug/L J detection of MTBE (had 1.2 ug/L tVOCs in June 2018); well MW-27 had 182 ug/L tVOCs (also had 182 ug/L in June 2018); other wells sampled were either ND or had very low tVOCs. Rpt states that based on 37 quarters of data, treatment cassette is working as designed, and that 4th quarter sampling event will take place in December 2018. - J. Kolleeny 04/26/19: Reviewed 4th Quarter 2018 GW Sampling Rpt by Tetra Tech; rpt is dated 4/1/19, Con Ed cover letter is dated 4/17/19, rpt received by email on 4/23/19 (in DecDocs with 4/17/19 date). Gauging of all wells in Dec. 2018 show no LNAPL in any wells, but a petroleum odor was detected in wells MW-16, MW-23, & MW-25. GW sampling showed well MW-15 (down-gradient side of treatment cassette) had 57 ug/L of benzene (down from 64 ug/L benzene in Sept. 2018); well MW-16 (up-gradient side of cassette) had 450 ug/L total VOCs (w/420 ug/L benzene), up from 206 ug/L tVOCs (190 ug/L benzene) in Sept. 2018; well MW-17 was

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

ND (same as in Sept. 2018); well MW-18 had a trace of MTBE (same as in Sept. 2018); well MW-23 had 11,894 ug/L tVOCs (down from 13,005 ug/L in Sept. 2018); well MW-24 was ND (same as in Sept. 2018); well MW-25 had 113 ug/L tVOCs (down from 252 ug/L in Sept. 2018); well MW-26 was ND (had a trace of MTBE in Sept. 2018); well MW-27 had 86 ug/L tVOCs (down from 182 ug/L in Sept. 2018); other wells sampled were either ND or had very low tVOCs. Rpt states that based on 39 quarters of GW data, treatment cassette is working as designed. Tetra tech recommends discontinuing qtrly sampling of wells MW-26, MW-28 & MW-30, arguing that MW-26 shows different water quality signature than other site wells, suggesting an off-site source, and that MW-30 is up-gradient and MW-28 is side-gradient, with both wells showing multiple qtrly events with no VOCs detected. Rpt recommends continuing quarterly GW sampling into 2019. - JK 04/26/19: I sent email to Neil O'Halloran of Con Edison, cc to Robert Cantagallo of Tetra Tech: Dear Mr. O Halloran: I have reviewed 4th Quarter 2018 GW Sampling Rpt for this spill site, prepared by Tetra Tech, Inc. and dated 4/1/19 (with Con Ed cover letter dated 4/17/19, submitted via email link on 4/23/19). Rpt presents results of GW sampling performed at site in Dec. 2018, plus historical GW data. Based on data, Tetra Tech recommends removing monitoring wells MW-26, MW-28 & MW-30 from quarterly sampling program. This recommendation is approved. Wells should not be abandoned, but should remain open for gauging and for collection of a final round of GW samples in support of a spill closure petition. Feel free to contact me if you have any questions. - JK 09/23/19: Received email from Neil O'Halloran of Con Ed, with link to 3rd quarter 2019 GW sampling rpt: Mr. Kolleeny, For your review I have uploaded via NYS FTS, Third Quarter 2019 GW Monitoring Rpt for Newtown Substation site (DEC Spill No. 0305303) in Long Island City for your review. Next GW monitoring event (4Q 2019) is tentatively scheduled for first week of November. I will provide a specific date once that has been confirmed. Please note there have been several changes relative to management of this site since last rpt (i.e., 4Q 2018). First, contract for former consultant (Tetra Tech) with Con Edison expired. Work has subsequently been assigned to Kleinfielder. Second, as you know former Con Edison Project Manager (PM) transferred to another organization within Company and, altho project was re-assigned to another PM, they too subsequently transferred. I recently hired two replacement Senior PMs who will start this fall. This project will be assigned to one of these new PMs. At that time I would like to meet with you to introduce new project team. Please provide any comments/questions on rpt or contact me directly in interim should you wish to discuss rpt and/or plans going forward for ongoing management of this spill site. I sent email reply: Neil, I received your email with link to NYS FTS and I successfully downloaded Third Quarter 2019 GW Sampling Rpt for Newtown Substation spill site. Thanks for explaining about change in project management. I ll be happy to meet with you and new project manager sometime in fall. Just let me know when new PM has been brought on board and you re ready to have meeting, and perhaps suggest some possible dates that would work for you. - J. Kolleeny 09/27/19: Reviewed Third Quarter 2019 Groundwater Sampling Rpt by Kleinfelder dated 9/23/19 (in DecDocs). Well gauging on 8/1/19 showed no LNAPL in any wells, and regional GW flow to SW (with local distortions in water table contours related to funnel & gate system). GW sampling on 8/1/19 showed well MW-15 (on down-gradient side of treatment cassette) was ND for target VOCs (down from 57.45 ug/L when

CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued) **1009218117**

last sampled in Dec. 2018, almost all of which was benzene), well MW-16 (on up-gradient side of treatment cassette) was ND (had 450.46 ug/L tVOCs in Dec. 2018, 420 ug/L of which was benzene); well MW-17 had 373 ug/L tVOCs (was ND in Dec. 2018), well MW-18 was ND except for a J detection of 0.81 ug/L MTBE (had a J detection of 0.71 ug/L of MTBE in Dec. 2018), well MW-23 had 304 ug/L tVOCs (down from 11,894 ug/L in Dec. 2018), well MW-24 was ND (same as in Dec. 2018), well MW-25 reportedly had 112.61 ug/L tVOCs (exactly same as in Dec. 2018, with same concentrations of each VOC analyzed??), well MW-26 was ND (same as in Dec. 2018), well MW-27 had 46.6 ug/L tVOCs (down from 86 ug/L in Dec. 2018), wells MW-28, -29 & -30 were ND (same as in Dec. 2018). Rpt repeats recommendation from Tetra Tech's 4th quarter 2018 rpt that sampling of wells MW-26, MW-28 & MW-30 be discontinued (but that gauging of these wells continue). This recommendation was already approved by email on 4/26/19. - J. Kolleeny 03/04/20: Reviewed Fourth Quarter 2019 GW Sampling Rpt by Kleinfelder dated 2/10/20 (in DecDocs). Well gauging on Nov. 6-7, 2019 showed no LNAPL in any wells (last detection of LNAPL was in March 2018, a sheen in well MW-25), and GW flow to SW. GW sampling showed well MW-15 (on down-gradient side of treatment cassette) was ND (same as in Aug. 2019; had 57.45 ug/L total VOCs (almost all benzene) in Dec. 2018), well MW-16 (on up-gradient side of treatment cassette) was ND (same as in Aug. 2018; had 450.5 ug/L tVOCS in Dec. 2018), well MW-17 had 890 ug/L tVOCs (up from 373 ug/L in Aug. 2019), well MW-18 had a J detection of 0.87 ug/L benzene (had J detection of 0.81 ug/L MTBE in Aug. 2019), well MW-20 was ND (same as when last sampled in Oct. 2010), well MW-23 had 590 ug/L tVOCs (up from 304 ug/L in Aug. 2019; had 11,894 ug/L tVOCs in Dec. 2018), well MW-24 was ND (same as in Aug. 2019), well MW-25 had 331 ug/L tVOCs (up from 290.5 ug/L in Aug. 2019), well MW-26 was ND (same as in Aug. 2019), well MW-27 had 147 ug/L tVOCs (up from 47 ug/L in Aug. 2019), well MW-28 was ND (same as in Aug. 2019), well MW-29 was ND (same as in Aug. 2019). Rpt concludes that while tVOCs increased site-wide in Nov. 2019 compared with Aug. 2019 data, there has been an overall general decreasing trend over time since start of project, with 8 out of 12 wells sampled being ND or close to ND for VOCs. Rpt also states that based on 40 quarters of GW sampling, on-site treatment cassette is working as designed to address residual GW impacts at site. - JK "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Main FD building in Long Island City - Cross Ref to other open spills at this site(Spill#0802987) 3/17/10-HRAHMED-Underground Petroleum Storage Tank Closure Report (Shaw Environmental & Infrastructure, Inc., Ph:914-633-9324 Fax:914-633-4685 Ms. Erika Cozza) The site consists of a vehicle maintenance garage and offices occupied by the FDNY. It lies on the glacial and alluvial deposits and gently slopes downward to the south. Two (2) 12,000 gallon heating oil underground storage tanks were located along the sidewalk of the 34th street, and adjacent to the foundation of the building. They were both encased in concrete. Tank closure activities spanned from September to December of 2009, and included tank removal, washwater and sludge liquid disposal, and tank cleaning operations. The post-excavation soil sampling for the two tanks was conducted on December 1, 2009. One of the tanks was fully removed, but only two thirds of the second tank could be removed due to building foundation concerns as one third of it was abandoned in place. After the removal of concrete encasement, five (5) soil samples were collected at 11 feet below grade: P1 at southwest sidewall, P2 at northwest sidewall, P3 at northeast sidewall, P4 at southeast sidewall, and P5 at south end. VOC and SVOC compounds were not detected below TAGM cleanup objectives. Groundwater was not encountered, but based on the site hydrogeology , the flow direction is estimated to be towards west-southwest (towards Newtown Creek). 7/7/10-HRAHMED-Had a site visit today. Met Mikhail Altshiler (347 672 7169) from FDNY. They already installed two new tanks in the same location where two 12000 gal were and updated the PBS registration#2-357936. Installed new piping for the new tanks and removed old piping. Those old pipings were inside a tunnel. This case is closed. "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

ZELMAN & FRIEDMAN (Continued) **1004759976**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	3780

INTERNATIONAL FINE FOODS INC (Continued) **U001832202**

Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

H00 - Tank Leak Detection - None
G03 - Tank Secondary Containment - Vault (w/o access)
A00 - Tank Internal Protection - None
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
I04 - Overfill - Product Level Gauge (A/G)
D00 - Pipe Type - No Piping

Tank Location:	Aboveground in subterranean vault with access for inspections..... Tank in subterranean vault but accessible for inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Tank Converted to Non-Regulated Use
Pipe Model:	Not reported
Install Date:	12/01/1969
Capacity Gallons:	5000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	12/01/1993
Register:	True

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"7/15/2008 TTF sent to: Bill White, The Liro Group, 48-67 34th St, LIC NY 11101 see eDocs 10/23/09- Zhune called The Fire Departement Fleet Service Division 718-784-6529 spoke to John Kay supervisor. He said call Michael Altshilar 718-784-6510 (Building Maintenance). Somebody said Michael 718-784-6568 is in the field. The tanks for this building are been replaced as part of the construction project. 11/09/09- Zhune spoke to Michael Altshilar. he said they are replacing the two 12.008 gallons tanks. DEC was notified. PMS (Construction Management Group) and Empire are working on this project. This project will be finish by February. Report will be send. 7/7/10-HRAHMED-Shaw Environmental pulled out the tank. FDNY updated the PBS database as closed and removed. This case is closed. "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 1/20/04 transferred from Demeo to Rommel-- abandon 550 gasoline tank removed 7/22/05 E. Hampston: Report in file. Abandoned 550 gal. UST identified during site assessment. Records obtained indicated tank purged and filled in 3/94, but no documentation

45-24 37TH ST (Continued) **S106126833**

available. Owner elected to remove tank. Spill reported when removal contractor, Action Environmental, noted elevated VOCs through field screening during 12/3/03 tank removal. 50 cy of soil excavated and segregated on 12/3/03. On 12/10/03, Action continued soil removal totaling 127 cy. Summary report including confirmatory sampling in file. "

Remarks: "1 abandoned tank was found . they dont know how much gas was spilled out"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND Forwarded Tank Test Failure letter to Pastor of Church Property is on the corner of Greenpoint Ave and has a second address: 35-20 Greenpoint Ave, LIC 12/11/2003 Sangesland spoke with Tom of Pro Test (631-321-4670) He said they pulled out approx. 100 cu yds of contaminated soil on Dec 10th. They got to what looks like clean endpoints and took 5 endpoint samples for testing. They'll put a report together in the next few weeks for submittal. 4/13/2004 Sangesland spoke to Tom of ProTest. He said he has a report dated January 2004. He'll make another copy of it and send it to the DEC ASAP. 4/27/2004 Sangesland reviewed report submitted by ProTest. Report includes a passing tank test, waste manifests, soil sample results from tank pit. 8021 & 8270 all clean for 4 sides and 1 bottom sample. Spill Case Closed"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Tank Info:

Tank Number: OO1
Tank Id: 181076

34-02 QUEENS BLVD (Continued) **A100292168**

Material Code:	0003
Common Name of Substance:	#6 Fuel Oil (On-Site Consumption)

Equipment Records:

E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None
I05 - Overfill - Vent Whistle
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
G01 - Tank Secondary Containment - Diking (Aboveground)
J02 - Dispenser - Suction Dispenser

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - In Place
Pipe Model:	Not reported
Install Date:	11/01/2004
Capacity Gallons:	10000
Tightness Test Method:	NN
Date Test:	Not reported

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D004
Waste Description: ARSENIC

Waste Code: D005
Waste Description: BARIUM

POSTERLOID (Continued) **1004760881**

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D010
Waste Description: SELENIUM

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants.

POSTERLOID (Continued) **1004760881**

AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number: E4
Tank Id: 179752
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

F00 - Pipe External Protection - None
B00 - Tank External Protection - None
K00 - Spill Prevention - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
I03 - Overfill - Automatic Shut-Off
A00 - Tank Internal Protection - None
E00 - Piping Secondary Containment - None
L00 - Piping Leak Detection - None
G01 - Tank Secondary Containment - Diking (Aboveground)
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
C01 - Pipe Location - Aboveground
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 01/01/1986
Capacity Gallons: 50
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 08/13/2007
Register: True
Modified By: NRLOMBAR
Last Modified: 04/14/2017

Tank Number: E5
Tank Id: 220490
Material Code: 0008
Common Name of Substance: Diesel

Equipment Records:

E00 - Piping Secondary Containment - None
K01 - Spill Prevention - Catch Basin
H02 - Tank Leak Detection - Interstitial - Manual Monitoring
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
G09 - Tank Secondary Containment - Modified Double-Walled

LAGUARDIA COMMUNITY COLLEGE (Continued) **A100294725**

(Aboveground)
I01 - Overfill - Float Vent Valve
L00 - Piping Leak Detection - None
C01 - Pipe Location - Aboveground
J00 - Dispenser - None

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 08/01/2008
Capacity Gallons: 450
Tightness Test Method: -

Tank Info:

Tank Number:	001
Tank Id:	21830
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	A00 - Tank Internal Protection - None
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	C01 - Pipe Location - Aboveground
	I04 - Overfill - Product Level Gauge (A/G)
	K00 - Spill Prevention - None
	B00 - Tank External Protection - None
	F00 - Pipe External Protection - None
	E00 - Piping Secondary Containment - None
	G03 - Tank Secondary Containment - Vault (w/o access)
	H00 - Tank Leak Detection - None
	L09 - Piping Leak Detection - Exempt Suction Piping
	I05 - Overfill - Vent Whistle
	J02 - Dispenser - Suction Dispenser
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 03/15/01 Spoke to Liam. He is working for the owner, the landlord previously had LAW Enmtl install temp mw in which they found product - no spill reported. Liam will fax owner info and info from previous investigations. I told him to start with the installation of three wells. JMR 6/20/05 Heitzman: Liam Horgan, consultant for owner, reports that monitoring of the site continues and that levels are just above groundwater standards. The site is just downgradient of 32-69 Gale Aveune (Spill #9813012), and some of the contamination may be coming from that site. The next round of sampling is scheduled for late July 2005. 4/12/06 - Results of the July 2005 sampling, if it ever occurred, have not been received. NEXT STEP: The site is a long term spill that will require on-going monitoring to determine if the ORC injection was successful. 07/14/09: Assigned to Kolleeny/Green. Consultant is Environmental Liability Management (ELM). ELM stated that a RAP will be submitted for the site and remediation of the site will coincide with the adjacent site (spill no. 9813012). Environmental Liability Management, LLC 267 Broadway Fifth Floor New York, NY 10007 www.elmofny.com Tel: 212.962.4301 Fax: 212.962.4302 Keith Brodock - kbrodock@elmofny.com Ext. 311 Mobile: 646.895.3325 (JK/KG) 08/17/09: Rec'd Environmental Site Investigation and Remedial Action Plan dated 8/14/09 submitted by ELM. Uploaded to eDocs in 5 parts. Under review. Owner contact: Robert Zirinsky Hunters Point Realty Co. 60 East 56th Street, Floor 11 New York NY 10022-3204 (212) 751-4625 x1 RobertZ50@aol.com (JK/KG) 08/20/09: Spoke to Keith Brodock about the historical data from the 3 existing monitoring wells. He sent a pdf with VOC concentration graphs for the wells. The last round of groundwater samples were collected in July 2008. Based on the graphs, all 3 wells have VOC concentrations above regulatory standards. (JK/KG) 08/25/09: The remedial action plan proposes in-situ chemical oxidation to address petroleum contamination at the site, and includes collection of a round of groundwater samples to provide baseline data, installation of injection wells, injection of RegenOx, and quarterly groundwater monitoring and reporting. The remedial action plan was not approved. A round of groundwater samples must be collected first, to assess current groundwater conditions. A summary report with conclusions and recommendations is due 10/9/09. The email sent to Brodock is in eDocs. I spoke to Broddock and told him that if the contaminant plume is not delineated, additional wells/borings will need to be installed. The plume should be delineated prior to proposing remedial action. Broddock sent PDFs of the LAW Gibb Site Assessment dated March 16, 2001, the LAW Gibb Geotechnical Exploration dated March 12, 2001, and the letter from ART to DEC PBS dated April 15, 2002.(eDocs). Abstract of LAW reports: Between 2/19 and 2/22/2001 9 borings were conducted at the site. The borings were converted to temporary monitoring wells to monitor the depth to groundwater. Petroleum-like odors were observed during the drilling of boring 8. On 2/27/01 groundwater samples were collected from 4 of the temporary monitoring wells (MW-1B, MW-2B, MW-3B, and MW-8). During GW sampling at MW-8, free-phase product was observed. A soil sample from the drummed drill cuttings from MW-8 was collected and analyzed. Petroleum-related hydrocarbons were detected above regulatory standards in groundwater samples MW-3 and MW-8, and from the MW-8 soil sample. Low levels of petroleum-related hydrocarbons were detected in the MW-2 groundwater sample. (JK/KG) 09/28/09: Rec'd Groundwater Sampling Report dated 9/28/09 and submitted by ELM. Groundwater samples were collected on 8/27/09. GW flow direction is

SPRINT PCS LONG ISLAND CITY (Continued) **S104951447**

west-southwest. Note: the wells were mislabeled in the ESI/RAP and were corrected after the August sampling. ELM recommends installation of 2 additional monitoring wells in addition to the injection wells proposed in the RAP, collection of soil samples, and collection of a round of GW samples as baseline data. ELM also requests approval of the RAP dated 8/14/09. Overview of GW sampling: MW-1: Benzene - 4,800 ug/L, Toluene - 170 ug/L, m&p-xylenes - 710 ug/L, Ethylbenzene - 540 ug/L MW-2: Benzene - 10,000 ug/L, m&p-xylenes - 370 ug/L, Ethylbenzene - 1,100 ug/L, Napthalene - 980 ug/L MW-3: 1,2,4-Trimethylbenzene - 2,500 ug/L, total xylenes - 5,400, Toluene - 1,200 ug/L, Ethylbenzene - 2,600 ug/L, Napthalene - 860 ug/L Email addresses for ELM have changed - kbrodock@elminc.com and mraygorodetsky@elminc.com. (JK/KG) 09/29/09: A letter was sent conditionally approving the RAP and the recommendation to install 2 additional monitoring wells. An additional well should be installed at the SE corner of the intersection of Hunters Point Ave. and 32nd Place. If this well is contaminated an additional well should be installed at the SW corner of the intersection of Hunters Point Ave. and 32nd Place. An investigation summary report with the results of the pre-injection soil and groundwater sampling should be submitted by 12/4/09. A remediation summary and first quarterly groundwater monitoring report should be submitted within 30 days of the first quarterly groundwater sampling event. (JK/KG) 11/03/2009: This spill case was transferred to A. Doronova. - AD 12/04/2009: Received a phone call from Mr. Keith Brodock of Environmental Liability Menagement. He asked for a time extension to perform the approved RAP. Told him to submit an official request to DEC. AD 12/08/2009: Received an e-mail from Mr. K. Brodock of ELM saying: Ms. Doronova, With the attached letter, The ELM Group, on behalf of Hunters Point Realty Co., respectfully requests a 60-day extension in order to complete the soil and groundwater sampling and investigation summary report for the above site. KEITH P. BRODOCK, LEED AP BD+C Tel 212.962.4301 ext 302 - Fax 212.962.4302 - Cell 646.895.3325 DL the letter to eDocs. Will discuss the request with J. Kolleeny. AD 12/10/2009: Discussed the extension request with J. Kolleeny of DEC. Will issue an approval letter. AD 12/11/2009: Sent the approval letter to Mr. R. Zirinsky of Hunters Point Realty Co. DL to eDocs. AD 02/03/2010: Received a phone call from Mimi Raygorodetzky of ELM. She said that the investigation report cannot be submitted on time due to payment issues with the client and asked for another time extention for the report submission. I requested to submit a letter request. Will discuss this with J. Kolleeny of DEC. AD 02/11/2010: Issued an approval letter for a deadline extention. Report is due April 13, 2010. AD 03/24/2010: Received an e-mail from M. Raygorodetsky saying: Ainura, As per our conversation yesterday, please find attached a Supplemental Site Investigation Work Plan for the 32-50 Hunters Point Avenue spill site. This Work Plan outlines the proposed FFD sampling within the on-site structure. Please let me know if you have any questions. Thanks, Mimi MIMI S. RAYGORODETSKY - Associate Tel 212.962.4301 ext 311 - Fax 212.962.4302 - Cell 917.952.9906 DL the work plan to eDocs. Reviewed the Supplemental Site Investigation Work Plan, which proposed additional soil investigation in the basement of the on-site building by advancing five to ten soil borings and screening them using a fuel fluorescence detector (FFD) to better delineate the contamination and determine if any remaining soil contamination maybe impacting the regional groundwater. Discussed the work plan with J. Kolleeny of DEC. Soil and groundwater samples

SPRINT PCS LONG ISLAND CITY (Continued) **S104951447**

should be collected during this investigation. AD 03/25/2010: Spoke with Mimi regarding sampling for analytical analysis. AD 03/26/2010: Issued an approval letter with some modifications regarding soil and groundwater sampling, and intervals of soil sampling. DL to eDocs. AD The work plan was approved on March 26, 2010 with some modifications: A summary report will be submitted to DEC. (A. Doronova) 04/09/2010: Received an e-mail from M. Raygorodetsky saying: Ainura, We have been in contact with our FFD contractor, S2C2, regarding scheduling our approved investigation. The earliest they are available is the week of June 7. We are, however, on a wait list in the event that there are any openings in their schedule in advance of that date. As you may be aware, very few contractors have an FFD probe. And, S2C2 is the only contractor that has it that we are aware of in the tri-state area. We will keep you appraised of any changes in schedule, if they occur. Thank you, Mimi Raygorodetsky MIMI S. RAYGORODETSKY - Associate TEL 212.962.4301 EXT 311 - FAX 212.962.4302 - CELL 917.952.9906 MRaygorodetsky@elminc.com - www.ExploreELM.com 09/07/2010: called and spoke with M. Raygorodetsky regarding site status update info. She will get back with this information till the end of the week. AD 10/07/2010: Still did not receive a response from ELM. Called M. Raygorodetsky and left a message. AD 10/18/2010: Called and left a message to M. Raygorodetsky of ELM. AD 01/04/2011: called and spoke with M. Raygorodetsky regarding implementation of additional investigation. She told me that they re-evaluated their data, and now they are putting together a summary report, which will state that gasoline contamination found in the basement of the on-site building is coming from an off-site source. Asked her to send me an e-mail with a brief update summary. AD 07/12/2011: Received an e-mail from Keith Brodock saying: Hi Ainura, Please find attached the Site Forensic & Spatial Data Review for the site located at 32-50 Hunters Point Ave, Long Island City, NY, Spill #00-12739, without Attachment B. Attachment B is the EDR Report and Sanborn Maps, which are too large to email. The full document, including Attachment B, is being FedEx d to you this evening for delivery tomorrow. We re available to discuss the contents of this letter at your convenience. Please let me know if you have questions during your review. KEITH BRODOCK, PE, LEED AP Tel 212.962.4301 x 302 - Fax 212.962.4302 - Cell 646.895.3325 AD 07/14/2011: Received the report. DL pdf copy of the submitted report to eDocs. Will review. AD 10/05/2011: Reviewed the report. It states that a forensic analysis of groundwater data collected at the Site indicates that results are inconsistent with any potential release sources at the Site. The ELM Group, on behalf of the property owner, Hunters Point Realty Co., conducted a chemical forensics review of the current and historical analytical data and reviewed a regulatory database report dated November 8, 2010 and Sanborn Maps, both from Environmental Data Resources, Inc. to identify potential off-Site sources of contamination at the Site. The results of this analysis indicate that the dissolved-phase petroleum constituents identified in Site groundwater are not related to petroleum products used at the Site, and likely originated off-Site. ELM Group states in the report that there are multiple facilities that involve the use, storage, release, generation or disposal of reformate or distillate fuels in the immediate area and upgradient to the Site with respect groundwater flow direction, including a gasoline station, a jet fuel line, active gasoline spill sites, and facilities that used and disposed of ignitable wastes (likely petroleum). Based on the multiple lines of evidence discussed herein,

SPRINT PCS LONG ISLAND CITY (Continued) **S104951447**

ELM Group have concluded that the VOCs, including gasoline-related constituents, in dissolved-phase groundwater at the Site originated from an off-Site source. As a result of this analysis, ELM Group concludes that the obligation of the property owner to investigate this release has been satisfied (since the only potential on-Site source has been fully investigated and confirmed to have not released petroleum to the Site s subsurface). The consultant formally requests that this release be closed by the Department. To discuss this request with J. Kolleeny of DEC. AD 12/13/2011: Discussed the spill closure request with J. Kolleeny of DEC. It was decided that additional data should be submitted to DEC for review. AD 12/14/2011: Sent the following response to K. Brodock of ELM: Hi Keith: The Department has reviewed the Site Forensic & Spatial Data Review Report pertaining to the above-referenced site, submitted by the ELM Group (ELM)on behalf of Hunters Point Realty Co. The report states that ELM conducted a chemical forensics review of the current and historical analytical data and reviewed a regulatory database report dated November 8, 2010 and Sanborn Maps, both from Environmental Data Resources, Inc. to identify potential off-site sources of contamination at the Site. According to the report, the results of this analysis indicate that the dissolved-phase petroleum constituents identified in the site groundwater are not related to petroleum products used at the Site, and likely originated off-site. ELM Group states in the report that there are multiple facilities that involve the use, storage, release, generation or disposal of fuels in the immediate area and upgradient to the site with respect to groundwater flow direction, including a gasoline station, a jet fuel line, active gasoline spill sites, and facilities that used and disposed of ignitable wastes (likely petroleum). Based on the multiple lines of evidence discussed herein, ELM Group had concluded that the VOCs, including gasoline-related constituents, in dissolved-phase groundwater at the site originated from an off-site source. As a result of this analysis, ELM Group concludes that the obligation of the property owner to investigate this release has been satisfied (since the only potential on-Site source has been fully investigated and confirmed to have not released petroleum to the Site s subsurface) and formally requests that this release be closed by the Department. Please submit the following documents to assist DEC’s decision regarding a spill case closure request: 1. A complete and readable 5,000-gallon UST Closure Report with end-point soil sampling locations map and soil analytical data; 2. A site plan with locations of all associated active and former tanks; 3. A complete Limited Site Assessment Report prepared by LawGibb Group and dated March 16, 2001, with site plan depicting soil boring locations and with soil and groundwater analytical data and soil boring logs; 4. A Site subsurface investigation report prepared by ART in 2001 for installation of three groundwater monitoring wells with soil boring logs, soil and groundwater analytical data; 5. Information regarding fuel oil supplier s company (name, address, phone numbers); 6. Historical analytical groundwater tables indicating all detected gasoline and fuel oil related compounds with TVOCs column. Please submit the required documentation by mail (for each document: one hard copy and PDF copy on a CD). Also, if ELM is still a consultant for 32-69 Gale Avenue, Long Island City site (NYSDEC Spill No. 9813012), please be aware that a RAR submission is overdue for this site. Thank you. Please feel free to contact me if you have any questions or comments. Sincerely, Ainura Doronova Environmental

SPRINT PCS LONG ISLAND CITY (Continued) **S104951447**

Engineer Division of Environmental Remediation NYSDEC Region 2 AD 11/13/2012: called and left a message for M. Raygorodetzky with a request to submit all required data by December 13, 2012. AD 01/23/2013: Called and left a message to RP - R. Zirinsky and to his consultant K. Brodock. ELM changed name to Integral Consulting with the same phone numbers. AD 07/2013: Called and spoke with K. Brodock of Integral Consulting regarding the site. Will issue a letter to RP. AD 12/17/2013: Called and left a message to Cathy Stafford of Sprint PCS - company which currently occupies the site. Received the response call from Sprint's James Lucci - Sprint EHS North Territories Manager. They are leasing the property. Mr. Lucci will get back to DEC with some info regarding their contract. Called and spoke with Mr. Zirinsky. According to him, Sprint is one who is responsible for the spill cleanup, and they were leasing the site for around 15 years. Will wait for Sprint's response. 2:38 PM - Received call from James Lucci. Phone: (718)494-0538 e-mail: james.lucci@sprint.com Requested to verify the Sprint contract responsibilities regarding environmental issues, and start date of the property lease. AD 02/26/2014: I was copied on the following e-mails from Richard Kaldenhoven: Name: richard kaldenhoven Organization: GuthDeConzo Engineers PC Phone: 3475388265 Email: r.kaldenhoven@chp-energy.com Organization Type: consulting engineers Contact Subject: Assistance for Consultants Organization Description: Business - Consultant Comments: I am working on a project for Sprint Communication on 32-50 Hunters Point Avenue in Queens. We are upgrading the utility power and Con-Ed is planning a new transformer vault on 32nd place. There is an existing monitoring well that needs to be relocated so Con-Ed can install the vaults. There is a petroleum pipeline in street so i assume this well monitors this pipeline. Who do I contact to get approval to relocate this well, there are several more wells in sidewalk that can remain. I called the DEP in Queens several times but no response Regards Richard Kaldenhoven and Shaminder Thank you for responding. Please find attached the proposed Con-Ed transformer Layout. As per our telephone conversation, I can relocate this well that is on 32nd Place (closer to the Hunters Point Avenue corner) and move it a few feet closer to our building, this way Con-ed can install the transformer vaults. To move this forward I will need some sort of letter from the DEP stating that I can relocate this Well (at our expense). I need to send this letter to the DOT to receive final approval for this project. Regards Richard Kaldenhoven GuthDeConzo Engineers PC 347 538 8265 Called and spoke with Mr. Kaldenhoven regarding well re-location issue. Sent him the following e-mail: Richard, As per our conversation, I will review the submitted document and will issue a letter. Sincerely, Ainura Doronova AD 02/28/2014: received the following e-mail from Mr. Kaldenhoven: Ainura Is there a specification you can send me that shows how this well needs to be relocated? My contractor needs to come up with a price for my client. When do you think i can expect the letter that states we can relocate or abandon this well? regards richard kaldenhoven GuthdeConzo Engineers PC 347 538 8265 responded with this e-mail: Hi Richard, You will probably receive the DEC response today. You can follow this link if you need specification on monitoring wells installation: http://www.epa.gov/region4/sesd/fbqstp/ Design-and-Installation-of-Monitoring-Wells.pdf Sincerely, Ainura Doronova later in the day, sent Mr. Kaldenhoven a letter approving well re-location. AD 11/28/2016: Received the following e-mail:

SPRINT PCS LONG ISLAND CITY (Continued) **S104951447**

Ainura, Please find attached a response to your December 14, 2011 request for additional information regarding the closure of Spill No. 00-12739 at 32-50 Hunters Point Avenue, Long Island City. I d be happy to answer any questions you have during your review of our response; do not hesitate to reach out to me at any time. Thanks, James James L'Esperance, P.E. - Senior Engineer Integral Consulting Inc. - www.integral-corp.com 2633 Lincoln Blvd #354 - Santa Monica, CA 90405 Tel: 424.238.8299 - Cell: 646.285.4808 - Fax: 212.962.4302 Will review. AD 02/02/2017: Reviewed the report. The report contains the same conclusion that the contamination has an off-site source of origin, and recommendation for the spill case closure. No recent GW data submitted with the report. The requested by DEC information was not submitted in full. According to the old investigation reports by LAWGibb Group attached to this report, a LNAPL was observed in temporary well B-8, which was located in the close vicinity of 5,000-gallon UST. And LAWGibb stated in their report, that there was a release, and called in the spill. So, Integral Consulting statement that the obligation of the property owner to investigate this release has been satisfied (since the only potential on-Site source has been fully investigated and confirmed to have not released petroleum to the Site s subsurface) is not true. To proof the site contamination is only due to the off-site source, off-site investigation should be performed. Also, all site related wells should be sampled to picture current GW conditions at the site. Further actions at the site should be based on the recent GW results. AD 04/05/2017: Spoke over the phone with K. Brodock regarding the submitted report. Informed him that since there is no new data for the monitoring wells, his company should visit the site and collect GW samples. Recommendations for the site should be based on the recent results. For the off-site claim, a work plan should be submitted to DEC which proposes installation of an up-gradient wells on the sidewalk between the site and possible source of contamination. Will discuss the site with J. Kolleeny. AD 04/11/2017: Discussed the site and recommendation for spill closure with J. Kolleeny. It was agreed that all site well should be sampled and further recommendations for the site should be based on the GW results and flow direction. Will issue a letter to the RP. AD 04/13/2017: Issued and sent a closure disapproval letter with the following statements: According to the newly submitted documents, in the report prepared by the LAW Gibb Group (LAW) dated February 28, 2001, a strong petroleum odor and free product were noted in temporary well B-8 installed next to the on-site 5,000-gallon UST. According to LAW, Based on the presence of LNAPL within temporary monitoring well B-8, an apparent release of fuel oil has occurred from the 5,000-gallon fuel oil UST. This statement contradicts Integral s assertion that there was no release at the subject property. Regarding Integral s statement that the spill has been fully investigated, the Department notes that the Supplemental Site Investigation Work Plan dated March 24, 2010, which was approved by DEC, was never implemented, and the groundwater contamination plume has not been fully delineated. Taking into consideration the age of the available groundwater data and the contradictory statements noted above, NYSDEC cannot approve the spill closure request at this time. The Department requires that the on-site wells be gauged and sampled, and that a groundwater monitoring report be submitted with the current groundwater sampling results and a determination of the current groundwater flow direction at the site, plus conclusions and recommendation for further actions. The required monitoring report

SPRINT PCS LONG ISLAND CITY (Continued) **S104951447**

should be submitted to DEC by June 14, 2017. Response is due June 14, 2017. AD 06/13/2017: Received a phone call from Lisa of Integral Consulting. She said that they need time extension for submission of the report due to survey results contradiction. Asked to send me an e-mail with extension request, so I can respond to it. New deadline is July 14, 2017. AD 07/14/2017: Received the following e-mail from IC: Hello, Ainura ~ On behalf of Hunters Point Realty Co., we provide the attached Groundwater Data and Forensic Evaluation Updates with a closure request for Spill No. 00-12739. Please let us know if you have any questions. Thank you, Lisa Tolbert - Senior Scientist / Engineer Integral Consulting Inc. - www.integral-corp.com 719 2nd Avenue, Suite 700 - Seattle, WA 98104 Tel: 206.230.9600 - Direct: 206.957.0356 - Cell: 206.960.1883 Will review. AD 07/18/2017: According to the monitoring report, high levels of petroleum contamination remain in site well MW-3, with 6,644 ug/L of total VOCs. Integral again argues that this contamination does not originate from the site and is coming from an off-site source. However, this statement is not supported by the low levels of VOCs in up-gradient wells MW-1 and MW-2, which were recently surveyed. The Supplemental Site Investigation Work Plan dated March 24, 2010, which was approved by DEC, was never implemented, and the groundwater contaminant plume has not been fully delineated at the site. Called and spoke with K. Brodock of IC. Explained to him that DEC cannot close the spill case with 6,644 ppb of VOCs. Told him that we request a work plan for delineating a GW plume. Off-site source claim should be supported by investigation data. AD 07/21/2017: Sent a closure disapproval letter stating: The Department cannot approve the spill closure request at this time. The Department requires that a work plan for an investigation to delineate the groundwater contamination in the vicinity of well MW-3 be prepared and submitted. The investigation work plan should include a proposal for installation of three permanent monitoring wells, with collection of soil and groundwater samples. An investigation summary report should be submitted to DEC with conclusions and recommendations for further actions. The required work plan should be submitted to DEC by September 21, 2017. Feel free to contact me if you have any questions or comments. Work plan is due. AD 09/07/2017: Received an e-mail with a request for a deadline extension: Hello, Ainura ~ We just received authorization from our client to proceed on preparing the investigation work plan for 32-50 Hunters Point Avenue, per NYSDEC s request via letter dated July 21, 2017. It will be a challenge to complete the work plan before NYSDEC s submittal deadline of September 21st; therefore, Integral would like to request an extension to this deadline of 30 days. Please let me know if a submittal deadline of October 23rd is acceptable to NYSDEC. Thank you, Lisa Tolbert - Senior Scientist / Engineer Integral Consulting Inc. - www.integral-corp.com 719 2nd Avenue, Suite 700 - Seattle, WA 98104 Tel: 206.230.9600 - Direct: 206.957.0356 - Cell: 206.960.1883 Sent the response granting the extension. The new deadline is October 23, 2017. AD 10/23/2017: Received an e-mail from ICI: Hello, Ainura ~ On behalf of Hunters Point Realty Co., we provide the attached Site Investigation Work Plan for Spill No. 00-12739. Please let us know if you have any questions. Thank you, Lisa Tolbert - Senior Scientist / Engineer Integral Consulting Inc. - www.integral-corp.com 719 2nd Avenue, Suite 700 - Seattle, WA 98104 Tel: 206.230.9600 - Direct: 206.957.0356 - Cell: 206.960.1883 AD 10/24/2017: Looked at the proposed wells locations. they are questionable. The contamination in

SPRINT PCS LONG ISLAND CITY (Continued) **S104951447**

well HPA-MW-3 is still not delineated to the south and south-east. Called and left a message to Ms. Tolbert. later in the day received a call from her. Explained to Ms. Tolbert that two more wells should be installed to properly delineate the GW contamination. The off-site wells they are proposing to install do not serve this purpose. These wells are for confirming their off-site source claim. Ms. Tolbert agreed to DEC requirements and asked for a written request for the RP. AD 10/25/2017: Sent the following e-mail to Ms. Tolbert and copied to Mr. Zhirinsky: Dear Ms. Tolbert, The Department reviewed the Investigation Work Plan for the above-referenced site. In its letter dated July 21, 2017, the Department required that a work plan for an investigation to delineate the groundwater contamination in the vicinity of well MW-3 be prepared and submitted. The proposed wells locations do not delineate groundwater contamination plume to the south and south-east of MW-3. Please revise the work plan to include two wells in these directions. The revised work plan should be submitted to DEC by November 22, 2017. Thank you. Sincerely, Ainura Doronova - Environmental Engineer Revised work plan submission is due November 22, 2017. AD 10/27/2017: Received the following response from Ms. Tolbert: Ainura, thank you for your reply. Integral has reviewed the proposed locations for the two additional wells you and I discussed on the phone on Wednesday, and we have some access limitations at the site that impact those locations. To be more efficient, I m sending you a figure of the proposed new wells (a revised Figure 2 from the Site Investigation Work Plan) for your consideration and discussion before we send you the entire revised Site Investigation Work Plan. Please see the attached Figure 2; we have added in two additional new wells to this figure, including one to the southeast of HPA-MW3 (HPA-MW9) and one to the south of HPA-MW3 (HPA-MW10), as discussed. Both locations as proposed during our call are within the footprint of the building, where the only accessible places to install wells are within the basement or within the loading dock area, both of which are now included in Figure 2. HPA-MW9, which you had indicated you would like to be located in line with HPA-MW1 and HPA-MW3 and approximately 25 ft southeast of HPA-MW3, can be installed within the basement of the building but is shown in Figure 2 slightly south of the location you had requested in order to avoid a transformer in the basement (see the basement plan inset). Is this modified location for the southeast well acceptable to the Department? The location for HPA-MW10 as requested (south of HPA-MW3 and halfway between HPA-MW3 and ELM-MW-5) is within the first floor of the building and inaccessible to drilling equipment. Instead, please consider option A and option B on Figure 2. Option A is west of the requested location for HPA-MW10 but accessible to drilling equipment as it is within the loading dock area. Option B is further south of the requested location for HPA-MW10 so that it is accessible outside of the building and slightly west to avoid an outdoor generator. Are either of these options acceptable to the Department as an alternative location for the southern well? Please feel free to follow up with either Keith or myself if you would like to discuss this further. Thank you! Lisa Tolbert Direct: 206.957.0356 - Cell: 206.960.1883 AD 11/09/2017: Discussed the locations for the wells with Ms. Tolbert. It was agreed that the revised work plan with additional two wells will be submitted to DEC for review. AD 11/10/2017: Received the following e-mail from Ms. Tolbert with the revised work plan: Ainura ~ On behalf of Hunters Point Realty Co., we provide the attached Site Investigation Work Plan (SIWP) for Spill

SPRINT PCS LONG ISLAND CITY (Continued) **S104951447**

No. 00-12739. The SIWP has been updated to include two additional wells, as requested by NYSDEC on October 25th. Please let us know if you have any questions. Thank you, Lisa Tolbert - Senior Scientist / Engineer Integral Consulting Inc. - www.integral-corp.com 719 2nd Avenue, Suite 700 - Seattle, WA 98104 Tel: 206.230.9600 - Direct: 206.957.0356 - Cell: 206.960.1883 Will review. AD 11/13/2017: Reviewed the revised work plan. It proposes to advance seven soil borings in the vicinity of the site, including four north of the site, one west of the site, and two onsite, south and east of the exiting Site monitoring wells. Soil borings will be advanced to a depth of approximately 17 ft bgs1 with a track-mounted direct-push rig, with the exception of the soil boring at location HPA-MW10, which will be advanced to a depth of approximately 10 ft bgs with a limited-access direct-push rig. Continuous soil sampling will be performed using 4- or 5-ft macrocores (2-ft macrocores for HPA-MW10) with dedicated acetate liners. The soil retrieved from each macrocore will be field-screened with a photoionization detector (PID) for VOCs and logged by Integral field personnel on boring logs. Integral will observe installation of the soil borings for evidence of contamination (e.g., free petroleum, staining, sheens, odors, elevated PID readings). Integral will collect one soil sample from each soil boring for laboratory analysis. As a default, the soil sample will be collected from the interval exhibiting the highest PID reading or with the greatest observed visual/olfactory impact. If no obvious signs of impacts are observed within the soil column, a soil sample will be collected from the interval directly above the groundwater interface (approximately 10 to 15 ft bgs). Soil samples selected for laboratory analysis will be placed in laboratory-supplied containers, sealed and labeled, and placed in a cooler and chilled to 4C for transport to a New York State Department of Health (NYSDOH) ELAP certified laboratory via courier service under standard chain-of-custody procedures. The soil samples will be analyzed for VOCs by the U.S. Environmental Protection Agency (EPA) Method 8260 and for SVOCs by EPA Method 8270. Integral will install groundwater monitoring wells following the advancement of soil borings at each location. Monitoring wells will be installed using a track-mounted rig outfitted with an approximately 4-in. hollow-stem auger. Permanent monitoring wells will be installed to a depth of approximately 17 ft bgs, straddling the water table, with the exception of HPA-MW-10, which will be installed to a depth of approximately 10 ft bgs. The wells will be constructed of 2 -diameter PVC riser with about 10 ft of 0.020 slotted PVC screen. The seven new wells will be surveyed by a New York State licensed land surveyor and tied into the existing Site survey. The surveyor will provide coordinates in New York State Plane East (NAD 83) and elevations in NAVD88. The newly installed groundwater monitoring wells will be sampled, as well as from all of the existing wells at the site and from multiple existing wells located south-southwest of the Site. The proposed wells to be sampled include site wells HPA-MW1 through HPA-MW10 and, depending on conditions at the time of sampling (e.g., sufficient recharge), offsite wells ELM-MW-4, ELMMW- 5, and MW-1. These offsite wells were selected because they are evenly spread out to the south of the Site between proposed well HPA-MW4 and the site building and, during previous groundwater sampling, all had sufficient recharge. The groundwater samples will be analyzed for fuel oil constituent VOCs by EPA Method 8260 and SVOCs by EPA Method 8270. Only fuel oil constituents listed in CP-51 Table 3 (NYSDEC

SPRINT PCS LONG ISLAND CITY (Continued) **S104951447**

2010b) will be reported. Following completion of the aforementioned site investigation activities, Integral will prepare and submit to NYSDEC a letter report describing the activities performed, laboratory analytical results from groundwater sampling, and our conclusions and recommendations for further action. Will issue an approval letter. AD 11/14/2017: Issued and sent SIWP approval letter to Mr. Zirinsky. AD 08/02/2018: Called and left a message to Ms. Tolbert regarding investigation report submission. AD 08/14/2018: Called and left a message for Ms. Tolbert on her cellphone. AD 10/2018: Called and spoke with Ms. Tolbert. She said that they are planning to compile another forensics review report to submit to DEC to try to prove their off-site source claim without obtaining additional data through DEC approved work plan. Explained Ms. Tolbert that DEC will insist on the additional investigation, since their previous forensic report could not prove the case and supporting data is needed. Ms. Tolbert said that she need to discuss it with her client. AD 01/2019: Called and left a message to Ms. Tolbert. AD 06/12/2019: Sent the following email to Ms. Tolbert: Dear Ms. Tolbert, Please provide the current status of the site and information on implementation of the investigation work plan which was approved by the Department on November 14, 2017. The response should be submitted to DEC in a timely manner. Sincerely, Ainura Doronova - Environmental Engineer AD 01/30/2020: Sent an email to Ms. Tolbert with a request to submit update info for the site. AD "

Remarks: "soil and water samples were taken oil was visable in the water sample that was taken tank was done on 6-11-98 and the tank passed unk what the cause of the oil contamination caller will be to contacting the property owner to do at least a tank test and and discuss clean up and possible tank replacement"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"10/1/12-Vought-Primary off-hours responder. Spill on asphalt roadway and no sewers or drains affected. Spill cleaned using absorbent material as per FDNY protocol. 10/12/12-Vought-DEC Sangesland received email from Officer Ciccone (Ph:718-626-9311) who was calling about a drum in front of spill location. DEC Zhune to perform site visit to see if drum (most likely ten gallon drum due to small spill amount) is liquid or solid. If liquid diesel than drum will be referred to NYCDEP Hazmat and if drum is solid (eg-speedy dry) then it will be referred to NYC Dept of Sanitation. Vought called Officer Ciccone to explain same and Vought returned call and spoke to NYPD 114th Precint Desk Officer and he checked books and no Officer Ciccone at that number. 10/16/12-Vought-DEC Zhune performed site visit and noted that 55-gallon drum filled with liquid diesel fuel in front of 45-02 37th Avenue and that liquid was indeed present inside the drum. Vought called and spoke to NYCDEP Hazmat Haas as well as sent email and he will send out responder to site for drum pick-up. Hazmat Hass returned call and noted to Vought that DEC recovers diesel not DEP Hazmat. Vought called DEC piper as drum run occurring today. 10/16/12- 55 gal pumped. Spill closed."
Remarks:	"1934 THE CALLER ADVISED DISPATCH THE SPIILL WAS CAUSED BY A HOLE IN THE TANK. THE SPILL IS CONTAINED. THE CLEAN UP HAS BEEN CONDUCTED."
