Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was M TIBBE 05/11/05: Recieved tank closure report for the in-place closure of a 5k #2 oil tank..This is the tank that failed the test which prompted this spill notification. The report was prepared by AKRF. The investigation is inadequate and does not meet the minimum requirements of an in-place closure. Only 2 borings performed to 25 & 26 feet without encountering bedrock or groundwater. Only 1 soil sample collected from each boring at the 12-14 foot interval. The tank is approximately 8 feet in diameter and buried approximately 3 feet down; therefore the samples were taken at the approximate depth of the bottom of the tank. No samples were taken from the bottom of the borings and, obviously, no water samples were taken since they did not continue the borings to the proper depth. Also, there is no scale on the map nor is there a description of the distance from the tank to the borings. MCT 04/12/06 - Hough - Next Step: Need to follow-up with Owner / AKRF as per remarks above, to determine if additional information is available,, and if not request additional investigation for proper tank closure. 09/16/08. J. Krimgold reviewed the closure report and a letter from AKRF dated 9/16/08. Based on information provided no release occured from this tank. NFA. "
Remarks:	"test subed out to caller contact is the oil company for above addess"

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

DEC Region: 2
DER Facility ID: 250287
DEC Memo: "3/94: MW-4 had a sheen of product. MW-1 had 7500 ppb, MW-2 had 9600 ppb and MW-3 had 350 ppb of benzene. 8/94: Installed MW-5,6 & 7. MW-4 had 0.19 ft of LPH. Depth to water 13 ft. The SVE system is operable and manifolded to MW-2,3 & 4. MW-1 had 3000 ppb, MW-2 had 5200 ppb, MW-3 had 360 ppb, MW-5 had 1400 ppb, MW-6 had 590 ppb and MW-7 had 24 ppb benzene. Sunoco will investigate and submit current tank test results. 12/10/2003 Reassigned from Tipple to Sun.
02/03/2004-Sun-File Update by Sun: Quarterly Monitoring and Sampling Report (October through December 2003), by EnviroTrac (Anthony Fiorentine, 631-471-1500): On 11/08/2003, liquid phase hydrocarbons (LPH) were detected in MW-4 at a thickness of 0.20 feet (ft.). The depth to water ranged from 22.78 ft. (MW-6) to 26.00 ft. (MW-4) below the surface on 11/8/2003. Six (6) wells (MW-1,2, 3, 5, 6 & 7) were sampled on 11/8/2003. BTEX concentrations ranged from not detected (ND) in 3 of the 7 wells to 58,000 micrograms per liter (ug/l) (MW-2).MTBE concentrations ranged from ND (MW-3) to 3,800 ug/l (MW-7). On 11/8/2003 and 12/21/2003, a three percent Biosolve surfactant and water solution was injected into MW-4. MW-4 was then han surged with a surge block and groundwater was removed from a down-gradient well (MW-7) with a submersible pump. LPH was not detected during the December 2003 short term remediation event (STRE). 03/11/2004-Sun-File Update by Sun: On 03/10/2004, Sun sent a letter and Stipulation Agreement to Russell Hammond of Sunoco requiring complete delineation of soil and groundwater contamination, submittal of an Investigation Summary Report followed by a Remedial Action Plan. The Department set a deadline of March 31, 2004 for signing the Stipulation Agreement by the Respondent. 10/31/05: Project reassigned from Sun to Andersen. Enhanced fluid recovery and Biosolve application are being utilized in two hotspots, MW2 and MW4. 12/8/05: December 8 meeting between Sunoco, DEC, and EnviroTrac. Biosolve remediation is not very successful. EnviroTrac and Sunoco think that source may be present and plan to do soil borings to identify source. Soil is likely very heterogenous. Site is now a pay commuter parking lot, so work can only be done on weekends. 1/4/06: Reviewed the quarterly report dated January 2006. Six wells sampled on November 20, 2005. Trace amounts of LPH in MW-4. Max BTEX 28,300 (MW-2) and 560 ppb (MW-2). Biosolve last used in August 2005. 5/3/06: Reviewed the first quarterly 2006 report. Wells sampled on 1/21/06. LPH is present in MW 4 at a depth of 0.25 ft. Max BTEX 22,900 in MW2. Max MTBE 91 ppb in MW7. Sent RAP required letter, due 7/3/06. 8/18/06: Meeting on 8/17/06 with Sunoco, EAR, and NYSDEC. RAP submitted. Regenox will be used. Three monthly Regenox installations will be completed. Regenox will be injected into twelve temporary borings, with injection span the vertical interval 15 to 35 feet below grade. Monitoring wells will be gauged and sampled monthly during Regenox application. RAP approved. 10/20/06: First mobilization to drill borings for Regenox application will occur on 10/21/06 8am-4pm. 11/9/06: Second mobilization for Regenox application will occur on 11/11/06. 12/18/06: Sent email to Jamie Brown of EAR to followup on status of next quarterly report. Received email from Jamie Brown: The next report will be completed and submitted to you mid - January 2007. Please let me know if you have any other questions. 2/13/07: Emailed Jamie Brown to followup on the status of the next quarterly report. 2/20/07: Reviewed update report. Regenox in use. Wells sampled on 12/23/06. Max BTEX 58,900 ppb (MW4),

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

max MTBE 220 ppb (MW7). LPH in MW2 at depth of 0.48 ppb. 3/23/07: Meeting on 3/22/07 with Sunoco, NYSDEC, and EnviroTrac. LPH appeared last quarter because the Regenox mobilized contaminants. The second phase of Regenox application may be scheduled for April 2007. 4/13/07: Regenox application scheduled for 4/14/07. 6/11/07: Received update report. Wells sampled on 3/24/07. Max BTEX 37,400 ppb (MW4), max MTBE 120 ppb (MW7). LPH in MW2 at a depth of 0.29 ft. Product recovered from MW2 and an absorbent sock put in well. Overall decrease in contaminant concentration. 10/12/07: Emailed Russell Hammond regarding overdue report. 10/16/07: Received email from Russell Hammond. Report will be submitted by the end of this week. 3/18/08: Reviewed October 2007 - December 2007 Project Status Report. Max BTEX 47,100 ppb (MW4). Max MTBE 140 ppb (MW2). When will the next phase of Regenox application occur? 3/19/08: Received email from Karen Waryas (Waryas@ENVIRO-ASMNT.COM): Phase 2 of the Regenox application at SUN-LIC32-32 occurred in April and May of 2007. It was mentioned in the June 2007 PSR, but regretfully was not put into the site history section of the September or December 2007 PSRs. I apologize for this oversight, and it will be remedied for future submissions. I put in an inquiry with my supervisor today as to when the third phase is expected to occur and will let you know as soon as I hear any information. 5/15/08 - Carlson: Reviewed January - March 2008 Project Status Report. Wells sampled on 3/22/08. Maximum BTEX concentration 23,600 ppb (MW2). Maximum MTBE concentration 74 ppb (MW2). Geochemical parameters are being monitored to evaluate progress of Regenox. When will third phase of Regenox occur? 9/4/08 - Carlson: Reviewed April - June 2008 Project Status Report. Wells sampled on 6/28/08. Maximum BTEX concentration 31,800 ppb (MW2). Maximum MTBE concentration 110 ppb (MW7). General increase in contaminant concentrations. When will third phase on Regenox application occur? 10/8/08 - Carlson: Meeting with Russell Hammond of Sunoco and Karen Waryas of EAR. Regenox won't be used again. Workplan for soil borings due by 10/30/08. A new RAP will be required afterwards. 11/5/08 - Carlson: Received email with Subsurface Summary letter. Email stated that a workplan will be submitted in two weeks. 12/22/08 - Carlson: Reviewed July 2008 - September 2008 Project Status Report. Wells sampled on 9/20/08. Maximum BTEX concentration 29,700 ppb (MW2). No mention of overdue workplan in report. Emailed Karen to followup on workplan submittal. 12/29/08 - Carlson: Received email from Karen. Workplan will be submitted when Russell Hammond gets back from vacation. 1/8/09 - Carlson: Approved investigation workplan for installation of three soil borings. 1/28/09 - Carlson: Reviewed September 2008 - December 2008 Update Report. Wells sampled on 12/20/08. Maximum BTEX concentration 37,620 ppb (MW4). On-site borings will be completed. 1/29/09 - Carlson: Meeting with Sunoco and Envirotrac. 4/5/09 - Carlson: Received investigation letter-report dated April 8, 2009. Three soil borings installed. High soil impact in all borings. A workplan for additional soil delineation will be submitted by may 8th. 5/22/09 - Carlson: Reviewed update report. Wells sampled on 3/28/09. Maximum BTEX concentration 37,700 ppb (MW4). Maximum MTBE concentration 64 ppb (MW2). Workplan for additional delineation overdue. 6/1/09 - Carlson: Meeting held with Sunoco and EAR. 6/5/09 - Carlson: Reviewed work plan dated 5/29/09. Five soil borings proposed. Sent email requiring revision workplan with 1) deeper minimum boring depth to account for smear zone and 2) continuous sampling of entire boring for all on-site borings except SB1. Revised work plan due in 30 days. 8/6/09 - Carlson: Approved

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

revised work plan. Investigation Report due in 90 days. 10/6/09 - Carlson: Reviewed update report. Wells sampled on June 27, 2009. High dissolved concentrations in MW2 and MW4. No update on work plan implementation provided. 12/3/09 - Carlson: Reviewed update report. Wells sampled on 9/19/09. Trace LNAPL in MW1. Maximum BTEX concentration 27,800 ppb (MW2). Investigation report overdue. 12/8/2009 - Carlson: Meeting with Sunoco. Upgradient source?, access issue on upgradient property. 3/18/2010 - Carlson: Received notification. Field work scheduled for 3/20/2010. 3/19/2010 - Carlson: Reviewed October 2009 - December 2009 Quarterly Update Report. LNAPL sheen in MW1 in October 2009. However, low dissolved concentrations in MW1 in December 2009. Field work cancelled, will probably be rescheduled for next Saturday. 4/7/2010 - Carlson: Received notification - field work scheduled for 4/7 and 4/10. 7/2/2010 - Carlson: Reviewed January - March 2010 update report and RIR. SB4 - SB 6 installed. Soil and gw impact in SB4. Three more borings will be installed, as per 7/17/09 work plan. 9/9/2010 - Carlson: Reviewed April - June 2010 Quarterly Report. SB- 7 - 9 installed. Soil impact in SB- 4, 7, 8, 9. Issued letter requiring work plan for installation of three monitoring wells at SB-4, SB-7, and to the south of SB-9, and one soil boring adjacent to MW1. Due 10/11/2010. 1/31/11 - Obligado - I reviewed an investigation workplan. The workplan didn't propose a well at SB7. I emailed a letter to Jaime Brown and Russel hammond requiring revised work plan with well at SB7. Due within 15 days. 3/30/11 - Obligado - I reviewed a revised work plan which incorporated the changes I requested. Sent approval letter. 11/28/11 - Carlson: Reviewed 2nd and 3rd Quarter 2011 Update Reports. MW8-10 installed. Groundwater impact in all three new monitoring wells. 11/30/11 - Carlson: Issued letter requiring an off-site delineation work plan and a remedial action plan by 1/13/2012. 2/10/2012 - Carlson: Reviewed December 2011 update report. Delineation workplan and RAWP to be submitted. 1/10/2013 - Reviewed 1Q2012 dated 4/2012, 2Q2012 dated 7/2012 and 3Q2012 dated 10/2012. DTW 22.57 (MW-7) to 28.44 (MW-8) on 9/15/2012. MW-6, 30 BTEX, 1.2 MTBE. MW-2, 25,100 BTEX, less than 140 MTBE. MW-9, 34,030 BTEX, less than 400 MTBE. MW-4, 18,399 BTEX, less than 250 MTBE. MW-8, 798 BTEX, less than 76 MTBE. MW-7, 2,790 BTEX, less than 100 MTBE. MW-1, 18.1 BTEX, less than 13 MTBE. MW-3, 10.3 BTEX, less than 21 MTBE. MW-10, 15,740 BTEX, less than 93 MTBE. 4/5/2013 - 4Q2012, 1/9/2013, by CGE. Groundwater sampled on 12/15/2012. DTW 22.87 (MW-7) to 28.62 (MW-8). NO LNAPL. MW-6, 96 BTEX. MW-9, 27,650 BTEX, less than 190 MTBE. MW-4, 23,210 BTEX, less than 280 MTBE. MW-8, 1,851 BTEX, less than 160 MTBE. MW-2, 24,220 BTEX, less than 62 MTBE. MW-7, 2,040 BTEX, 31 MTBE. MW-1, 22.4 BTEX, less than 9.0 MTBE. MW-10, 15,960 BTEX,, less than 150 MTBE. 7/26/2013 - 1Q2013, 4/2013, by CGE. The monitoring was done on 3/23/2013. DTW 22.81 (MW-7) to 28.77 (MW-8). NO LNAPL. MW-6, 170 BTEX, 6.1 MTBE. MW-2, 21,780 BTEX, less than 76 MTBE. MW-9, 35,130 BTEX, less than 290 MTBE. MW-4, 22,684 BTEX, less than 270 MTBE. MW-7, 1,870 BTEX, less than 42 MTBE. MW-10, 10,440 BTEX, less than 110 MTBE. 06/27/2014: This spill case was transferred to A. Doronova. - AD 08/05/2014: Sent the following e-mail to Sunoco contact - Russell Hammond (e-mail: rhammond@sunocoinc.com) and copied to Anthony Fiorentine (afiorentine@cg-env.com): Dear Mr. Hammond: My name is Ainura Doronova. I am a NYSDEC project manager for the following spill cases, which were recently transferred to me: 1. Spill No. 1011266, 550 Humbolt Street, Brooklyn; 2. Spill No. 0913725, 1626 Steelwell

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

Avenue, Brooklyn; 3. Spill No. 0809869, 42-02 21st Streeet, Queens; 4. Spill No. 0708451, 972 Remsen Avenue, Brooklyn; 5. Spill No. 0502868, 1781 Bay Ridge Parkway, Brooklyn; 6. Spill No. 0407558, 5 Flatbush Avenue, Brooklyn; 7. Spill No. 0304033, 805 65th Street, Brooklyn; 8. Spill No. 9909665, 175-33, Horace Harding Expressway, Queens; 9. Spill No. 9900619, 1650 Forest Avenue, Staten Island; 10. Spill No. 9808686, 188-06 Hillside Avenue, Queens; 11. Spill No. 9711173, 2310 Tillotson Avenue, Bronx; 12. Spill No. 9609282, 1781 Arthur Kill Rd., Staten Island; 13. Spill No. 9501327, 2701 Knapp Stret, Brooklyn; 14. Spill No. 8905358, 32-32 Queens Boulevard, New York; 15. Spill No. 8904831, 38-15 Queens Boulevard, Queens; 16. Spill No. 8904151, 161-15 46th Avenue, New York; 17. Spill No. 8808987, 135-45 Cross Bay Boulevard, Queens; 18. Spill No. 8706272. 2052 Victory Boulevard, Staten Island. From now on, please submit all your future documentation (letters, reports, work plans, RAPs) related to these spill cases to my attention. Please note, that you should submit one hard copy of the document (report/work plan) and e-copy on a CD by regular mail. Please, do not submit large size documents via e-mail, since we have limited storage capacity, so it should be used only for correspondence. Feel free to contact me if you have any questions. Thank you. Sincerely, Ainura Doronova Environmental Engineer 1 Division of Environmental Remediation NYS Department of Environmental Conservation Region 2 (718) 482-6453 AD 02/2015: Contacted Mr. Fiorentine regarding general sites meeting. Requested list of the Sunoco sites managed by Clean Globe Env. AD 03/20/2015: Received the following response from Mr. Fiorentine: Hello Ms. Doronova, Clean Globe Environmental is currently responsible for the following 11 Sunoco spill sites: " 2319 Tillotson Avenue, Bronx " 32 Highland Boulevard, Brooklyn " 805 65th Street, Brooklyn " 1781 Bay Ridge Parkway, Brooklyn " 161-15 46th Avenue, Flushing " 38-15 Queens Boulevard, Long Island City " 32-32 Queens Boulevard, Long Island City " 135-45 Cross Bay Boulevard, Ozone Park " 1650 Forest Avenue, Staten Island " 1781 Arthur Kill Road, Staten Island " 2052 Victory Boulevard, Staten Island Let me know if you have any dates that are free so that we may set up a meeting to review the status of these sites. Thank you , Tony Fiorentine Anthony M. Fiorentine / Principal / CGE / P.O. Box 446, Kings Park, NY 11754 (631) 338-4170 mobile / (888) 454-5923 office & fax / afiorentine@cg-env.com 03/24/2015: The meeting is scheduled for April 23, 2015. AD 04/23/2015: DEC met with a Sunoco representative - Russel Hummond and Sunoco s consultants: Tony Fiorentino of Clean Globe Env. (CGE), and Todd Painter of Environmental Assessment and Remediation (EAR) to discuss the current status of each site, go over historical monitoring and recovery data, and discuss further actions to help expedite closure of the spills. DEC received updated remedial progress and monitoring reports. High-priority sites and potential spill closure candidates were discussed. Sunoco s consultants reported overall progress in reducing BTEX levels in soil and groundwater at the sites. It was agreed that reports recommending spill closure will be prepared for several sites. - A Site Status Report for a period from October through December 2014 was submitted to DEC on this meeting. Will review AD 06/10/2015: Reviewed the report. It states that there are ten (10) monitoring wells (MW-1 through MW-10) at the site. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The average depth to water was 24.97 feet and ranged from 22.65 feet (MW-7) to 28.72 (MW-8) ft. below top of casing on December 27, 2014.

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

GW sampling: Nine (9) groundwater samples were collected (MW-1 through MW-9) on December 27, 2014. Samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tert-butyl ether (MTBE) via EPA method 602. MW-10 was not accessible. It is behind a locked gate. GW data: During the December 27th sampling event, BTEX concentrations ranged from 3.1 (MW-3) to 28,200 micrograms per liter (ug/L) (MW-4). MTBE concentrations were below the detection limit in all wells sampled. The quarterly GW sampling will continue at the site. If GW quality in well MW-4 will not show improvement in the next sampling round, some actions need to be taken to expedite the cleanup. AD 08/04/2015: Received a first quarter 2015 report. Will review. AD 09/01/2015: Reviewed the 1st quarter 2015 report. The report states that there are ten (10) monitoring wells (MW-1 through MW-10) at the site. No free product was detected in any of the site wells. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The average depth to water was 25.16 feet and ranged from 22.65 feet (MW-7) to 28.52 (MW-8) ft. below top of casing on March 28, 2015. GW sampling: Nine (9) groundwater samples were collected (MW-1 through MW-9) on March 28, 2015. Samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tert-butyl ether (MTBE) via EPA method 602. MW-10 was not accessible. It is behind a locked gate. GW data: During the March 28th sampling event, BTEX concentrations ranged from 17.0 (MW-3) to 30,100 micrograms per liter (ug/L) (MW-4). MTBE concentrations were below the detection limit in all wells sampled. GW data from well MW-4 indicated increase in BTEX levels from 28,200 in December 2014 to 30,000 ug/L in March 2015. Will contact Clean Globe Env. AD 09/03/2015: Received a second quarter 2015 report. Will review. AD 10/13/2015: Reviewed the second quarter 2015 report. The report states that there are ten (10) monitoring wells (MW-1 through MW-10) at the site. No free product was detected in any of the site wells during the June 13, 2015 sampling event. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The depth to water ranged from 22.60 feet (MW-7) to 28.42 (MW-8) ft. below top of casing on June 13, 2015. GW sampling: Nine (9) groundwater samples were collected (MW-1 through MW-9) on June 13, 2015. Samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tert-butyl ether (MTBE) via EPA method 602. MW-10 was not accessible. It is behind a locked gate. GW data: During the June 13th sampling event, BTEX concentrations ranged from 3.0 (MW-1 and MW-3) to 25,992 ug/L in MW-4 which is a decrease from March 2015 sampling data at 30,100 micrograms ug/L in this well. MTBE concentrations were below the detection limit in wells (MW-1, 2, 3, 4, 5, and 9) to 1,109 ug/L in MW-8. Area of groundwater contamination located in the central northern part of the site along the Queens Boulevard. TBTEX concentrations in this area are: 1. MW-2 - 20,100 ug/L; 2. MW-4 - 25,992 ug/L; 3. MW-9 - 16,010 ug/L. Some additional actions should be proposed for this part of the site to expedite the spill cleanup. Will call the consultant. Quarterly groundwater sampling will continue at the site. AD 03/10/2016: Received third and fourth quarters 2015 reports. Will review. AD 04/05/2016: Reviewed the third quarter 2015 report. The report states that there are ten (10) monitoring wells (MW-1 through MW-10) at the site. No free product was detected in any of the site wells during September 26, 2015 sampling event. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The depth to

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

water ranged from 23.09 feet (MW-6) to 28.69 (MW-8) ft. below top of casing on September 26, 2015. GW sampling: Ten (10) groundwater samples were collected (MW-1 through MW-10) on September 26, 2015. Samples were analyzed for volatile organic compounds on the CP-51 List via EPA Method 8260C. GW data: During the September 26th sampling event, BTEX concentrations ranged from ND (MW-3) to 22,277 micrograms per liter (ug/L) (MW-4). MTBE concentrations were below the detection limit for all the wells sampled (MW-1 through MW-10). Area of groundwater contamination located in the central northern part of the site along the Queens Boulevard. TBTEX concentrations in this area are: Well September June 2015 1. MW-2 - 13,850 ug/L 20,100 ug/L; 2. MW-4 - 22,277 ug/L 25,992 ug/L; 3. MW-9 - 13,412 ug/L 16,010 ug/L. 4. MW-10 6,830 ug/L NS Plans for the site include continuation of quarterly monitoring and sampling. The next sampling round is scheduled for December 2015. AD 04/28/2016: Reviewed the fourth quarter 2015 report. The report states that there are ten (10) monitoring wells (MW-1 through MW-10) at the site. No free product was detected in any of the site wells during December 19, 2015 sampling event. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The depth to water ranged from 23.38 feet (MW-6) to 28.81 (MW-8) ft. below top of casing on December 19, 2015. GW sampling: Nine (9) groundwater samples were collected (MW-1 through MW-9) on December 19, 2015. Samples were analyzed for volatile organic compounds on the CP-51 list via EPA Method 8260C. GW data: During the December 19th sampling event, BTEX concentrations ranged from ND (MW-3) to 22,277 micrograms per liter (ug/L) (MW-4). MTBE concentrations were below the detection limit for all the wells sampled (MW-1 through MW-10). Well December September June 2015 1. MW-2 - 21,030 ug/L 13,850 ug/L 20,100 ug/L; 2. MW-4 - 24,348 ug/L 22,277 ug/L 25,992 ug/L; 3. MW-9 - 18,600 ug/L 13,412 ug/L 16,010 ug/L. 4. MW-10 NS 6,830 ug/L NS The BTEX levels indicate fluctuating trend. Sensitive receptors: The surrounding area use is heavily industrial and commercial. Queens Boulevard is to the North and the MTA Subway elevated platform runs above the Boulevard. The current property use is a parking lot for commuter parking. The closest water body is a tributary of Newtown Creek located approximately 2,000 feet to the Southwest. Plans for the site include continuation of quarterly monitoring and sampling. The next sampling round is scheduled for March 2016. Future analysis will include volatiles on the CP-51 list by EPA Method 8260C. AD 01/2017: Called and spoke with Mr. Fiorentine regarding submission of all missing reports for Sunoco sites and scheduling an annual meeting to discuss the priority sites and further actions. AD 03/03/2017: Received a cluster of reports for the Sunoco sites for 2016. Will review. AD 03/20/2017: Reviewed the 1st quarter 2016 report. According to the report, there are ten (10) monitoring wells (MW-1 through MW-10) at the site. No free product was detected in any of the site wells during March 19, 2016 sampling event. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The depth to water ranged from 25.32 feet (MW-6) to 29.89 (MW-8) ft. below top of casing on March 19, 2016. GW sampling: Ten (10) groundwater samples were collected (MW-1 through MW-10) on March 19, 2016. Samples were analyzed for volatile organic compounds on the CP-51 list via EPA Method 8260C. GW data: During the March 19th sampling event, BTEX concentrations ranged from ND (MW-7) to 35,600 micrograms per liter (ug/L) (MW-2). MTBE concentrations were below the detection limit for all the wells sampled, except for well MW-7

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

with 160ug/L. Well December 2015 March 2016 (BTEX in ug/L) 1. MW-1 - 51 916 2. MW-2 - 21,030 35,600 3. MW-3 - 32 912 4. MW-4 - 24,348 29,128 5. MW-5 - 252 38 6. MW-6 - 1,229 223 7. MW-7 - 1,400 ND 8. Queens Boulevard is to the North and the MTA Subway elevated platform runs above the Boulevard. The current property use is a parking lot for commuter parking. The closest water body is a tributary of Newtown Creek located approximately 2,000 feet to the Southwest. Plans for the site include continuation of quarterly monitoring and sampling. Weekly site visits will be conducted to monitor and remove free product. AD 04/04/2017: Reviewed the 4th quarter 2016 report. According to the report, there are ten (10) monitoring wells (MW-1 through MW-10) at the site. Free product was detected in monitoring wells: MW-4, MW-9 and MW-10 during September 30, 2016 sampling event. As a result, weekly free product recovery events were conducted at the site since that time. Absorbent socks were used in the wells. LPH recovered during this period - 0.11 gallon. The depth to water ranged from 28.19 feet (MW-6) to 32.69 (MW-8) ft. below top of casing on December 3, 2016. GW sampling: Seven (7) groundwater samples were collected (MW-1 through MW-7) on December 30, 2016. Samples were analyzed for volatile organic compounds on the CP-51 list via EPA Method 8260C. GW data: During the December 3rd sampling event, BTEX concentrations ranged from ND (MW-7) to 28,800 micrograms per liter (ug/L). MTBE concentrations were below the detection limit for all the wells sampled. MW-2 had the highest TVOCs with 32,100 ug/L. Well December 2015 March 2016 July 2016 September December 2016(BTEX ppb) 1. MW-1 - 51 916 447 519 348 2. MW-2 - 21,030 35,600 33,100 60,800 28,800 3. MW-3 - 32 912 643 1,266 1,266 4. MW-4 - 24,348 29,128 36,724 FP FP 5. MW-5 - 252 38 10 2,889 3,083 6. MW-6 - 1,229 223 3,524 7,540 10,640 7. MW-7 - 1,400 ND ND ND ND 8. MW-8 - 1,598 1,228 1,542 895 917 4. MW-9 - 18,600 28,610 31,741 FP FP 5. MW-10 NS 8,110 NS FP FP The BTEX levels indicate an increasing trend in wells: MW-5, MW-6 and MW-8. Wells: MW-4, MW-9 and MW-10 had LNAPL. Sensitive receptors: The surrounding area use is heavily industrial and commercial. Queens Boulevard is to the North and the MTA Subway elevated platform runs above the Boulevard. The current property use is a parking lot for commuter parking. The closest water body is a tributary of Newtown Creek located approximately 2,000 feet to the Southwest. Plans for the site include continuation of quarterly monitoring and sampling. LNAPL recovery site visits will continue on a bi-weekly basis for the 1st quarter 2017. This will include well gauging of the 4 wells: MW-2, MW-4, MW-9 and MW-10. AD 04/20/2017: DEC had an annual meeting with a Sunoco representative and their consultants to discuss remedial progress at each site. High-priority sites and three potential spill closure candidates were discussed. Plans for additional investigation and/or remediation were discussed for priority sites with persistently high levels of contamination, and it was agreed that work plans will be submitted to DEC for review and approval within the next few months. Remediation and monitoring of these sites will continue on a regular basis. AD 05/31/2017: Received an e-mail from Mr. Fiorentine: Dear Ms. Doronova, Attached please find the Remedial Action Plan for the proposed work at the above referenced site. We would like to start this work as soon as possible so we ask that you reply with any comments or questions by the end of the week if possible. The product recovery portion of the RAP is already in progress. Thank you, Tony Anthony M. Fiorentine /

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

Principal / CGE / P.O. Box 446, Kings Park, NY 11754 (631) 338-4170 mobile / (888) 454-5923 office & fax / afiorentine@cg-env.com Will review. AD 06/08/2017: Reviewed the work plan. CGE proposes to perform site remediation in two stages: First, as an interim remedial measure (IRM) to address the LNAPL present in monitoring wells MW-2, MW-3, MW-4, MW-9, and MW-10, CGE will perform Vacuum Enhanced Fluid Recovery (VEFR) events. The total gallons of liquid removed will be documented during each visit along with LNAPL thickness measurements before and after treatment. VEFR events will be scheduled on a weekly basis until LNAPL thickness in the effected wells decreases below 0.05 feet. In order to aid in the recovery of LNAPL, two additional wells, MW-11 and MW-12 will be installed in the former UST area. The wells will be constructed of 4 inch diameter PVC and will be 40 feet in total depth. Then, CGE will use In Situ Chemical Oxidation as the remedy for the site. It is anticipated that two or more treatments may be required to remediate petroleum compounds to acceptable levels. Therefore, this remedial action plan includes two treatments. The oxidant selected for this project is Sodium persulfate. The product that has been selected is Klozur. It is a form of sodium persulfate used in environmental applications and is manufactured by PeroxyChem. Approximately 6,800 pounds of Klozur will be used during this initial ISCO treatment. The initial treatment will consist of a minimum of 9 injection points approximately 20 feet apart. A geoprobe will be used to advance points into the subsurface. The rods of the geoprobe will be raised and lowered as the solution is injected into the subsurface at the impacted zones. The secondary treatment may vary in number of injection borings and or quantity of Klozur based on the observations and implementation of the initial treatment. Quarterly GW sampling and monitoring will continue at the site. The site plan with new wells locations is missing in the work plan. To call Mr. Fiorentine. AD 06/09/2017: Called and spoke with Mr. Fiorentine. Requested to submit the site plan with proposed wells locations. AD. 06/14/2017: Received the revised work plan. AD 06/15/2017: Issued and sent a RAP approval letter. AD 02/21/2018: Received a following e-mail from Mr. Fiorentine: Hi Ainura, I am going to send you a link to the 4 reports for 32-32 Queens Blvd for 2017. Sorry that these are all coming at one time. We did a lot of work at the site and have been out there multiple times per week. The water table has dropped 7 to 8 feet here due to extensive dewatering that is going on in the area. This has resulted in LNAPL showing up in a lot of the wells. Let me know if you have any problems with the link. Thanks, Tony Anthony M. Fiorentine / Principal / CGE / P.O. Box 446, Kings Park, NY 11754 (631) 338-4170 mobile / (888) 454-5923 office & fax / afiorentine@cg-env.com Uploaded 4 reports. Will review. AD 03/23/2018: Reviewed the 1st quarter 2017 report. It states that there are 12 monitoring wells at the site. Liquid phase hydrocarbons (LPH) were detected in monitoring wells MW-3, MW-4, MW-9 and MW-10 during the 1st quarter 2017. LPH monitoring was conducted twice in January, once in February and 4 times in March this quarter. A vacuum truck was used to recover groundwater and LPH from the wells by using a drop tube extending to the water table and vacuuming vapor and liquid from the wells with LPH. This process known as enhanced fluid recovery (EFR) was conducted on March 20th and 23rd of 2017. LPH/water Recovered this Period: 475 gallons. Water Table Elevation: The water table elevation has dropped significantly since October of 2016. This suspected cause of the drop is extensive dewatering from ongoing construction projects in the area. The average depth to water

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

was 30.09 feet and ranged from 21.25 feet (MW-7) to 34.07 (MW-3) ft. below top of casing on March 28, 2017. Quarterly Sampling: Six (6) groundwater samples were collected (MW-1, 2, 5, 6, 7, and MW-8) on March 28, 2017. Samples were analyzed for volatile organic compounds on the CP-51 list via EPA Method 8260C. During the March 28th sampling event, BTEX concentrations ranged from 2 ug/L (MW-7) to 35,500 ug/L (MW-2). MTBE concentrations ranged from below the detection limit (MW-1, 2, 5, 6, and MW-8) to 4 micrograms per liter (ug/L) (MW-7). MW-2 had the highest total volatiles on the CP-51 list at 39,780 ug/L. MW-3, MW-4, MW-9, and MW-10 were not sampled due to the presence of LPH. The surrounding area use is heavily industrial and commercial. Queens Boulevard is to the North and the MTA Subway elevated platform runs above the Boulevard. The current property use is an empty lot. The former service station building remains but is out of service. The closest water body is a tributary of Newtown Creek located approximately 2,000 feet to the Southwest. Remedial work performed: Two EFR events were conducted in March which removed a mixture of 475 gallons of groundwater and LPH. Additionally, hand bailing of LPH was was conducted twice in January, once in February, and twice in March. The bailed LPH was stored in a drum. The drum was emptied during the EFR events and the total liquid recovered was included with the 475 gallons reported. Conclusions: Due to the drop in the water table, LPH has appeared in monitoring wells MW-3, MW-4, MW-9, and MW-10. The maximum LPH thickness in each well during the quarter was 4.66' in MW-3, 2.72' in MW- 4, 2.99' in MW-9, and 0.14' in MW-10. In order to recover the LPH, monitoring will be conducted on a weekly basis. Additionally, weekly EFR events will be scheduled. The EFR events will continue on a weekly basis until the LPH thickness is reduced. Plans for the site include continuation of quarterly groundwater sampling from wells which do not contain LPH. The next sampling round is scheduled for June 2017. Analysis will include volatiles on the CP-51 list by EPA Method 8260C. AD 04/05/2018: Reviewed the 2nd quarter 2017 report. It states that Liquid phase hydrocarbons (LPH) were detected in monitoring wells MW-3, MW-4, MW-9, MW-10, and MW-11 during the 2nd quarter 2017. LPH monitoring was conducted six times in April, seven times in May, and eight times in June this quarter. A vacuum truck was used to recover groundwater and LPH from the wells by using a drop tube extending to the water table and vacuuming vapor and liquid from the wells with LPH. This process known as enhanced fluid recovery (EFR) was conducted on April 5, 7, 12, 14, and 21; May 12, 19 and 30; June 2, 9, 16, 23, and 30. LPH/Water Recovered this Period: 5,604 gallons. Total LPH/Water Recovered: 6,079 gallons The average depth to water was 31.09 feet and ranged from 28.56 feet (MW-6) to 33.73 (MW-8) ft. below top of casing on July 28, 2017. GW sampling: Seven (7) groundwater samples were collected (MW-1, 2, 5, 6, 7, 8, and MW-12) on July 28, 2017. Samples were analyzed for volatile organic compounds on the CP-51 list via EPA Method 8260C. During the July 28th sampling event, BTEX ranged from below the less than MDL/ND (MW-7) to 27,400 ug/L (MW-2). MTBE were below the method detection limit for all wells sampled. MW-2 had the highest total volatiles on the CP-51 list at 37,870 ug/L. MW-3, MW-4, MW-9, MW-10 and MW-11 were not sampled due to the presence of LPH. Investigation work: Two monitoring wells were installed this quarter. The wells, labeled MW-11 and MW-12 were installed using hollow stem auger drill rig. Well MW-11 was installed to the Southwest of MW-9 in order to further delineate LPH in the area of the former tank field and to assist with

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

LPH recovery. MW-12 was installed South of MW-4 in order to delineate LPH to the south. Both wells were constructed of 4 diameter PVC with 20 ft of screen and 20 feet of riser. Remediation work: Thirteen EFR events were conducted in the 2nd quarter which removed a mixture of 5,604 gallons of groundwater and LPH. Additionally, on a weekly basis, submersible pneumatic pumps are used to skim LPH and water from the top of the water table from wells containing LPH. The pumped liquid is stored in stored in 55 gallon drums. The drums are emptied during the EFR events and the total liquid recovered was included with the 5,604 gallons reported. Conclusions: LPH thicknesses have consistently been measured in monitoring wells MW-3, MW-4, MW-9, MW-10, and MW-11. The maximum LPH thickness in each well during the quarter was 4.28' in MW-3, 1.03' in MW-4, 3.53' in MW-9, 1.05' in MW-10, and 0.71ft in MW-11. In order to recover the LPH, monitoring will be conducted on a minimum of a weekly basis. Additionally, weekly EFR events will be continued until LPH thickness is reduced. Plans for the site include continuation of quarterly groundwater sampling from wells which do not contain LPH. The next sampling round is scheduled for September 2017. Analysis will include volatiles on the CP-51 list by EPA Method 8260C. A Remedial Action Plan (RAP) to address the LPH and perform remedial action at the site was submitted to the NYSEC in June 2017. The RAP was approved on June 15, 2017. AD 04/27/2018: Reviewed the 3rd quarter 2017 report. It states that Liquid phase hydrocarbons (LPH) were detected in monitoring wells MW-2, MW-3, MW-4, MW-9, MW-10, and MW-11 during the 3rd quarter 2017. LPH monitoring was conducted five times in July, eight times in August, and twelve times in September this quarter. A vacuum truck was used to recover groundwater and LPH from the wells by using a drop tube extending to the water table and vacuuming vapor and liquid from the wells with LPH. This process known as enhanced fluid recovery (EFR) was conducted on July 7, 14, 21, and 28; August 11, 18, and 25; September 1, 11, 15, and 29. LPH/Water Recovered this Period: 4,469 gallons. Total LPH/Water Recovered: 10,548 gallons GW sampling: Seven (7) groundwater samples were collected (MW-1, 2, 5, 6, 7, 8, and MW-12) on September 20, 2017. Samples were analyzed for volatile organic compounds on the CP-51 list via EPA Method 8260C. BTEX ranged from ND in (MW-7) to 31,200 ug/L (MW-2). MTBE were below the method detection limit for all wells sampled. MW-2 had the highest total volatiles on the CP-51 list at 37,638 ug/L. MW-3, MW-4, MW-9, MW-10 and MW-11 were not sampled due to the presence of LPH. A sample of the LPH was collected from MW-3, MW-4, MW-9, MW-10, and MW-11 and sent to Torkelson Geochemistry, Inc. in Tulsa, OK. The samples were analyzed by GC for a fingerprint analysis. The resulting chromatograms were evaluated by Bruce Torkelson and the samples from MW-3, 4, 9 and 10 appear to be a moderately weathered regular grade gasoline that was probably manufactured some time after 1993 . The sample from MW-11 appears to be a severely weathered gasoline. The sample is too weathered to estimate the grade or age . Remedial work: Twelve (12) EFR events were conducted in the 3rd quarter which removed a mixture of 4,469 gallons of groundwater and LPH. Additionally, at a minimum of a weekly basis, submersible pneumatic pumps are used to skim LPH and water from the top of the water table from wells containing LPH. The pumped liquid is stored in stored in 55 gallon drums. The drums are emptied during the EFR events and the total liquid recovered was included with the gallons reported. LPH thicknesses have consistently been measured in monitoring wells MW-3, MW-4, MW-9, MW-10, and MW-11. Also, trace amounts of LPH were

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

measured in MW-2 in September. The maximum LPH thickness in each well during the quarter was 0.02' in MW-2, 1.33' in MW-3, 0.17' in MW-4, 5.69' in MW-9, 1.60' in MW-10, and 2.02 ft in MW-11. In order to recover the LPH, monitoring will continue to be conducted on a minimum of a weekly basis. Additionally, weekly EFR events will be continued until LPH thickness is reduced. Plans for the site include continuation of quarterly groundwater sampling from wells which do not contain LPH. The next sampling round is scheduled for December 2017. Analysis will include volatiles on the CP-51 list by EPA Method 8260C. A Remedial Action Plan (RAP) to address the LPH and perform remedial action at the site was submitted to the NYSEC in June 2017. The RAP was approved on June 15, 2017. The RAP is being implemented, however, the chemical oxidation portion of the RAP is on hold pending the reduction of the LPH in the wells. AD 05/11/2018: Reviewed the 4th quarter 2017 report. It states that Liquid phase hydrocarbons (LPH) were detected in monitoring wells MW-2, MW-3, MW-4, MW-9, MW-10, and MW-11 during the 4th quarter 2017. LPH monitoring was conducted thirteen times in October, eight times in November, and six times in December this quarter. A vacuum truck was used to recover groundwater and LPH from the wells by using a drop tube extending to the water table and vacuuming vapor and liquid from the wells with LPH. This process known as enhanced fluid recovery (EFR) was conducted on October 6, 13, 20, and 27; November 7, 14, 21, and 28; December 19. LPH/Water Recovered this Period: 5,171 gallons. Total LPH/Water Recovered: 15,719 gallons GW sampling: Seven (7) groundwater samples were collected (MW-1, 2, 5, 6, 7, 8, and MW-12) on December 29, 2017. Samples were analyzed for volatile organic compounds on the CP-51 list via EPA Method 8260C. BTEX ranged from ND (MW-7) to 36,600 ug/L (MW-2). MTBE were below the method detection limit for all wells sampled except MW-7 at 30 ppb. MW-2 had the highest total volatiles on the CP-51 list at 42,828 ug/L. MW-3, MW-4, MW-9, MW-10 and MW-11 were not sampled due to the presence of LPH. Remedial work: Nine EFR events were conducted in the 4th quarter which removed a mixture of 5,171 gallons of groundwater and LPH. Additionally, on a weekly basis in October and November submersible pneumatic pumps were used to skim LPH and water from the top of the water table from wells containing LPH. The pumped liquid was stored in stored in 55 gallon drums. The drums were emptied during the EFR events and the total liquid recovered was included with the gallons reported. This was suspended in December due to freezing temperatures making the storage of water at the site impractical. Conclusions: LPH thicknesses have consistently been measured in monitoring wells MW-3, MW-4, MW-9, MW-10, and MW-11. Also, trace amounts of LPH were measured in MW-2 in October. The maximum LPH thickness in each well during the quarter was 0.03' in MW-2, 1.13' in MW-3, 0.35' in MW-4, 2.36' in MW-9, 1.09' in MW-10, and 0.92 ft in MW-11. Due to the cold weather, the LPH recovery has been limited to EFR events only. Plans for the site include continuation of quarterly groundwater sampling from wells which do not contain LPH. The next sampling round is scheduled for March 2018. Analysis will include volatiles on the CP-51 list by EPA Method 8260C. A Remedial Action Plan (RAP) to address the LPH and perform remedial action at the site was submitted to the NYSEC in June 2017. The RAP was approved on June 15, 2017. The RAP is being implemented, however, the chemical oxidation portion of the RAP is on hold pending the reduction of the LPH in the wells. AD 05/17/2018: Received the following e-mail from Mr. Fiorentine: Hi Ainura, Attached please find a letter describing proposed

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

modifications to the approved RAWP for the above referenced site. We have increased the scope to include the installation of more wells, use of surfactants for LNAPL recovery, and added an SVE component. Please review and let me know if you approve of the modifications. Thanks, Tony Anthony M. Fiorentine / Principal / CGE / P.O. Box 446, Kings Park, NY 11754 (631) 338-4170 mobile / (888) 454-5923 office & fax / afiorentine@cg-env.com Will review. AD 05/21/2018: CGE has prepared this letter to present modifications to the Remedial Action Work Plan (RAWP) that was approved on June 15, 2017. The modifications are due to developments regarding the site access and plans for site improvements. Previous plans to begin construction of a building on the site have been postponed. This has provided additional access for the treatment of impacted soils and groundwater at the site. This modification briefly describes additional efforts that are underway and planned. LNAPL Recovery: As per the approved RAWP, wells MW-11 and MW-12 were installed for delineation purposes and to assist with the recovery of light non-aqueous phase liquid (LNAPL). This RAWP modification includes the installation of an additional twenty (20) wells. The wells were constructed of 2-inch diameter PVC and were installed using Sonic drilling methods. The wells are generally installed to 40 feet total depth and have 20 feet of well screen and 20 feet of riser pipe. The purpose of the wells are to: 1. Assist with LNAPL recovery, 2. Delineate the horizontal extent of LNAPL, 3. Delineate the horizontal and vertical extent of soil impacts, 4. Delineate the horizontal extent of groundwater impacts, 5. Determine if up-gradient sources of impacts are present, and 6. Provide a network of wells to be utilized for remediation purposes including; Soil Vapor Extraction, VEFR Events, Injection of Surfactants, and Injection of ChemOx reagents. As per the approved RAWP, vacuum enhanced fluid recovery (VEFR) events have been implemented. This RAWP modification also includes the injection of PetroCleanze and RegenOx Part A into selected wells to assist with the recovery of LNAPL. VEFR events will continue following the injection of PetroCleanze and RegenOx Part A to recover LNAPL and impacted groundwater. This process will be repeated three (3) times or until no more than 0.05 ft. of LNAPL is measured in any of the wells. Once the LNAPL thickness is below 0.05 ft, the final remedy of Chemical Oxidation will be implemented as per the approved RAWP. A fact sheet for PetroCleanze is provided as an attachment. Soil Vapor Extraction: Also included in this RAWP modification, is the use of soil vapor extraction (SVE) as an additional interim remedial measure. The SVE will be utilized to remediate impacts in the vadose zone. Since there is no electric power on the site, a portable generator will be used as a source of electricity. No trenching and/or below grade piping is proposed at this time. The SVE system will consist of a regenerative blower connected to 2 vacuum hoses through a series of manifolds run above ground to selected wells. The exhaust from the blower will be connected to two (2) 500-pound vapor phase granular activated carbon vessels for treatment prior to discharge. It is anticipated that between 4 to 6 vacuum wells will be connected simultaneously to the SVE system. The generator will not be allowed to run unattended. Therefore, the SVE system operation will be limited to daytime hours 5 days per week. Additionally, as vapor concentrations diminish at individual wells, other wells will be substituted to optimize the vapor recovery rate. Schedule: The following schedule is based on anticipated LNAPL removal rates. Adjustments to the schedule or the number of rounds of injections may

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

vary based on site conditions. Description of Work Completion Date: Inject PetroCleanze and RegenOx Part A & Conduct VEFR Events Round 1 - May 25, 2018 Inject PetroCleanze and RegenOx Part A & Conduct VEFR Events Round 2 - July 6, 2018 Inject PetroCleanze and RegenOx Part A & Conduct VEFR Events Round 3 - August 24, 2018 Soil Vapor Extraction System Operation Start - June 4, 2018 Soil Vapor Extraction System Operation End - October 31, 2018 InSitu Chemical Oxidation Injections Round 1 - September 7, 2018 InSitu Chemical Oxidation Injections Round 2 - October 24, 2018 AD 08/06/2018: Received the following e-mail: Ainura: Clean Globe Environmental, on behalf of Evergreen Resources Management Operations, is submitting the attached Q1 2018 Site Status Report for the above referenced former Sunoco station. Let me know if you have any questions or require additional information. Thank you, Al Albert M. Tonn / Senior Project Manager / CGE / 72 Cain Drive, Brentwood, NY 11717 /(888) 454-5923 X709 office & fax / atonn@cg-env.com Will review. AD 09/12/2018: Reviewed the 1st quarter 2018 report. It states that there are twelve (12) existing monitoring wells (MW-1 through MW-12). Fifteen (15) new monitoring wells (MW-13 through MW-21 and MW-23 through MW-28) were installed between March 23rd and 30th, 2018. Liquid phase hydrocarbons (LPH) were detected in monitoring wells MW-3, MW-4, MW-9, MW-10, and MW-11 during the 1st Quarter 2018. LPH monitoring was conducted three times in January, four times in February, and nine times in March this quarter. A vacuum truck was used to recover groundwater and LPH from the wells by using a drop tube extending to the water table and vacuuming vapor and liquid from the wells with LPH. EFR was conducted on January 30th, February 8th, 16th, 22nd, and 27th, and March 6th, 13th, 16th, 20th, 23rd, and 27th. Manual product bailing was conducted on January 18th, March 13th and 19th. Pumping of LPH was conducted on March 14th, 29th, and 30th. LPH/Water Recovered this Period: 4,123 gallons. Total LPH/Water Recovered since 3/20/17: 19,842 gallons. The average depth to water was 28.60 feet and ranged from 24.45 feet (MW-7) to 32.37 (MW-8) ft. below top of casing on March 27, 2018. This was an approximate two foot rise in elevation since December 2017. GW sampling: Nine (9) groundwater samples were collected (MW-1, 2, 3, 5, 6, 7, 8, 10, and MW-12) on March 27, 2018. Samples were analyzed for volatile organic compounds (VOCs) on the CP-51 list via EPA Method 8260C. During the March 27th sampling event, BTEX ranged from ND (MW-7) to 27,500 ug/L (MW-2). MTBE were below the method detection limit for all wells sampled. MW-2 had the highest total volatiles on the CP-51 list at 31,400 ug/L. MW-4, MW-9, and MW-11 were not sampled due to the presence of LPH. Investigation work: Nine (9) soil borings were advanced on February 13th-15th and 23rd and eight (8) soil samples collected. Fifteen (15) monitoring wells (MW-13-21 and MW-23-28) were installed between March 23rd and 30th. Eight (8) soil samples were collected for analysis of CP-51 List of VOCs via EPA Method 8260C. Remedial work: Eleven (11) EFR events were conducted in the 1st Quarter 2018 which removed 4,123 gallons of a LPH/groundwater mixture. Additionally, on three days submersible pneumatic pumps were used to skim LPH and water from the top of the water table from wells containing LPH and manual LPH bailing was conducted on three other days. The pumped and manual bailed liquid was stored in 55 gallon drums. The drums were emptied during the EFR events and the total liquid recovered was included with the gallons reported. A total of 19,842 gallons of LPH/groundwater has been recovered since March 20, 2017. Conclusions: LPH thicknesses have consistently been measured in monitoring wells

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

MW-3, MW-4, MW-9, MW-10, and MW-11, but at reduced thicknesses towards the end of the 1st Quarter 2018. The maximum LPH thickness in each well during the quarter was 2.94' in MW-3, 1.03' in MW-4, 1.52' in MW-9, 1.47' in MW-10, and 1.61 ft. in MW-11. The plans for the second quarter are to include EFR events, injection of surfactants, initiate SVE events, and to complete the well installations. Groundwater sampling of the newly installed wells was completed in April while the quarterly groundwater sampling was pushed back to July to allow for the surfactants to dissipate. A Remedial Action Plan (RAP) to address the LPH and perform remedial action at the site was submitted to the NYSEC in June 2017. The RAP was approved on June 15, 2017. The RAP is being implemented, however, the chemical oxidation portion of the RAP is scheduled to begin in August 2018. AD 09/21/2018: Received a following e-mail from Mr. Tonn: Ainura: Clean Globe Environmental, on behalf of Evergreen Resources Management Operations, is submitting the attached Q2 2018 Site Status Report for the above referenced former Sunoco station. Let me know if you have any questions or require additional information. Thank you, Al Albert M. Tonn / Senior Project Manager / CGE / 34 Cain Drive, Brentwood, NY 11717 (888) 454-5923 X709 office & fax / atonn@cg-env.com Will review. AD 10/16/2018: Reviewed the 2nd quarter 2018 report. it states that there are twenty-seven (27) existing monitoring wells (MW-1 through MW-21 and MW-23 through MW-28) at the site. Five new monitoring wells (MW-22 and MW-29 through MW-32) were installed on April 16th - 17th, 2018. Liquid phase hydrocarbons (LPH) were detected in monitoring wells MW-4, MW-9, MW-11, and MW-26 during the 2nd Quarter 2018. LPH monitoring was conducted three times in April, once in May and once in June. A vacuum truck was used to recover groundwater and LPH from the wells by using a drop tube extending to the water table and vacuuming vapor and liquid from the wells with LPH. This process known as enhanced fluid recovery (EFR) was conducted on May 23rd, 25th, and 30th, and June 1st, 13th, 15th, and 19th. A total of 4,051 gallons of LPH-water mixture was recovered. LPH/Water Recovered this Period: 4,051 gallons. Total LPH/Water Recovered since 3/20/17 - 23,893 gallons. On April 10, 2018, the average depth to water was 28.24 feet and ranged from 24.25 feet (MW-7) to 30.18 (MW-20) ft. below top of casing. GW sampling: The recently installed monitoring wells were sampled this quarter. Fourteen (14) groundwater samples were collected (MW-13, 15-17, 19-21, and 23-28) on April 10, 2018. Five (5) groundwater samples were collected (MW-22, MW-29 - 32) on April 30, 2018. Samples were analyzed for volatile organic compounds (VOCs) on the CP-51 list via EPA Method 8260C. During the 2nd quarter 2018 sampling event, BTEX concentrations ranged from 37 ug/L) (MW-31) to 53,400 ug/L (MW-23). MTBE were ND for all wells sampled, except for 1 ug/L in MW-17. MW-23 had the highest total volatiles on the CP-51 list at 55,880 ug/L. Investigation work: Five (5) monitoring wells (MW-22 and MW-29-32) were installed on April 16th-17th. Two (2) soil samples were collected for analysis of CP-51 List of VOCs via EPA Method 8260C. Remedial work: Seven EFR events were done in the 2nd Quarter 2018 which removed 4,051 g. of a LPH/groundwater mixture. Additionally, on nine days submersible pneumatic pumps were used to skim LPH/Groundwater from the top of the water table from wells that had injections performed. The pumped liquid was stored in 55 gallon drums and tanks. The drums and tanks were emptied during the EFR events and the total liquid recovered was included with the gallons reported. A total of 23,893 gallons of LPH/groundwater has been recovered since

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

March 20, 2017. Two rounds of surfactants (PetroCleanze"!) and oxidizer (RegenOx Part A) injections were performed during the 2nd quarter. The first round was conducted on May 9th, 14th, and 15th and included injecting 20 pounds of PetroCleanze"!, 20 pounds of RegenOx Part A, and 50 gallons of water into each of the following 20 wells: MW-2-4, 9-12, 15,16, 20-30. This was followed by flushing each well with 10 gallons water. The second round was performed on June 5th-6th and included injecting 20 pounds of PetroCleanze"!, 20 pounds of RegenOx Part A into each of the following 16 wells: MW-2-4, 9-11, 15, 16, 22-22-30 and 40 pounds of PetroCleanze"! and 40 pounds of RegenOx Part A into MW-9. This was followed by flushing each well with 10 gallons water. Following the first round of injections on May 16, 17th, and 18th, sparge injections were performed on each of the injection wells using a portable air sparge compressor and packers. Air was injected into each well for 1/2-hour to 3/4-hour. Then on May 22nd, 24th, 29th, and 31st groundwater/LPH was pumped out of each well using a submersible pneumatic pump and temporarily stored in drums and tanks. These were then followed by EFR events as mentioned above. Following the second round of injections on June 7th, 8th, and 11th, sparge injections were performed on each of the injection wells using a portable air sparge compressor and packers. Air was injected into each well for 1/2-hour to 3/4-hour. Then on June 11th, 12th, 14th, 15th, and 18th groundwater/LPH was pumped out of each well using a submersible pneumatic pump and temporarily stored in drums and tanks. These were then followed by EFR events as mentioned above. Temporary soil vapor extraction (SVE) events were conducted 17 times between June 7th and 29th. During each SVE event, SVE was alternately performed on six out of the following 14 wells: MW-9,10, 15-17, 22-30. The wells with the higher concentrations (MW-23, 24, and 25) were connected more frequently. Approximately 104.78 pounds of hydrocarbons were recovered during the SVE events. Conclusions: The consultant states that PH thicknesses have consistently been measured in monitoring wells MW-3, MW-4, MW-9, MW-10, and MW-11, but at reduced thicknesses towards the end of the 2nd Quarter 2018. The maximum LPH thickness in each well during the 2nd Quarter was 2.94' in MW-3, 1.03' in MW-4, 1.52' in MW-9, 1.47' in MW-10, and 1.61 ft. in MW-11. The plans for the third quarter are to conduct additional SVE events and to conduct per-sulfate (Klozur) injections. Post-surfactant injection groundwater sampling was conducted during the third quarter. Postper-sulfate (Klozur) injection groundwater sampling will be postponed until the per-sulfate has a chance to be consumed as confirmed by the Klozur sampling test kits. AD 11/28/2018: Received the following e-mail from Mr. Tonn: Ainura: Clean Globe Environmental, on behalf of Evergreen Resources Management Operations, is submitting the attached Q3 2018 Site Status Report for the above referenced former Sunoco station. Let me know if you have any questions or require additional information. Thank you, Al Albert M. Tonn / Senior Project Manager / CGE / 34 Cain Drive, Brentwood, NY 11717 (888) 454-5923 X709 office & fax / atonn@cg-env.com Will review. AD 12/05/2018: Received the following e-mail from :Mr. Tonn: Ainura: Clean Globe Environmental, on behalf of Evergreen Resources Management Operations, is submitting the attached Remedial Action Plan Modification #2 for the above referenced former Sunoco station. Let me know if you have any questions or require additional information. Thank you, Al Albert M. Tonn / Senior Project Manager / CGE / 34 Cain Drive, Brentwood, NY 11717 (888) 454-5923 X709 office & fax / atonn@cg-env.com Will

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

review. AD 12/14/2018: Reviewed the 3rd quarter 2018 report. It states that there are thirty-two (32) existing monitoring wells (MW-1 through MW-32). Liquid phase hydrocarbons (LPH) were not detected in the monitoring wells during the 3rd Quarter 2018. Total LPH/Water Recovered since 3/20/17 - 23,893 gallons. On July 3, 2018, the average depth to water was 27.44 feet and ranged from 23.18 feet (MW-7) to 31.10 (MW-31) ft. below top of casing. GW sampling: Post-surfactant injection groundwater sampling of all monitoring wells was performed during this quarter. Thirteen (13) groundwater samples were collected on July 3, 2018 and nineteen (19) groundwater samples were collected on August 2-3, 2018. Samples were analyzed for volatile organic compounds (VOCs) on the CP-51 list via EPA Method 8260C. During the 3rd quarter 2018 sampling event, BTEX ranged from below the method detection limit (MW-6 and MW-7) to 43,300 micrograms per liter (ug/L) (MW-24). MTBE concentrations were below the method detection limit for all wells sampled, except for 2 ug/L in MW-1 and 280 ug/L in MW-13. MW-24 had the highest total volatiles on the CP-51 list at 48,270 ug/L. Sensitive receptors: The surrounding area use is heavily industrial and commercial. Queens Boulevard is to the North and the MTA Subway elevated platform runs above the Boulevard. The current property use is an empty lot. The former service station building remains but is out of service. The closest water body is a tributary of Newtown Creek located approximately 2,000 feet to the Southwest. Remediation: Temporary soil vapor extraction (SVE) events were conducted 15 times during July 2018, 18 times during August 2018, and twice during September 2018. During each SVE event, SVE was alternately performed on six out of the following 14 wells: MW-9,10, 15-17, 22-30. The wells with the higher concentrations (MW-9, MW-23, MW-24, and MW-25) were connected more frequently. Approximately 671.81 pounds of hydrocarbons were recovered during the SVE events this quarter and 776.59 pounds through the end of September 2018. Sodium per-sulfate injections were performed on all wells, with the exception of MW-1 (clean well), between August 28 and September 20, 2018. Injections consisted of a mixture of PeroxyChem's Klosur SP plus 40 gallons of water and 10 gallons of sodium hydroxide. The amount of per-sulfate injections ranged from 50 gallons in MW-7 up to 350 gallons in MW-4. Conclusions: According to the consultant, the water table continues to rise. The water table rose approximately 1.7 feet in MW-2 and 1.6 feet in MW-9 during this quarter. LPH was not detected in MW-9 during this quarter. LPH was first discovered during the September 2016 groundwater sampling event in wells MW-4, 9, and 10. The plans for the fourth quarter are to conduct additional SVE events. Post- per-sulfate (Klozur) injection groundwater sampling will be postponed until the per-sulfate has a chance to be consumed as confirmed by the Klozur per-sulfate sampling test kits. AD 12/17/2018: Reviewed the Remedial Action Plan Modification #2. It states that the first round of per-sulfate chemical injections (Klozur) was completed during September 2018. Currently per-sulfate is still present in the groundwater and will likely persist for another one to two months. Based upon recent groundwater sampling results conducted during November 2018, a second round of per-sulfate chemical injections will be required and will take place during early part the 1st Quarter 2019, weather permitting. In addition, the water table has risen approximately two feet over the past six months, thus reducing the amount of adsorbed hydrocarbons exposed within the vadose zone. This RAWP Modification #2 is to supplement the soil vapor extraction (SVE) events with air sparging (AS). This RAWP

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

Modification proposes the use of AS to supplement the SVE. The SVE will be utilized to remediate adsorbed hydrocarbons within the vadose zone, while the AS will be utilized to remediate adsorbed hydrocarbons below the water table. The SVE will also capture vapors generated by AS. Since there is no electric power on the site, a portable generator will be utilized as a source of electricity. The generator will not be allowed to run unattended. Therefore, the AS/SVE system operation will be limited to daytime hours 5 days per week. Additionally, as vapor concentrations diminish at individual wells, other wells will be substituted to optimize the vapor recovery rate. Schedule: The use of air sparging will commence during December 2018 and will continue until the second round of per sulfate chemical injections is started. AD 01/17/2019: Received the following e-mail from Mr. Tonn: Ainura: Clean Globe Environmental, on behalf of Evergreen Resources Management Operations, is submitting the attached Q4 2018 Site Status Report for the above referenced former Sunoco station. Let me know if you have any questions or require additional information. Thank you, Al Albert M. Tonn / Senior Project Manager / CGE / 34 Cain Drive, Brentwood, NY 11717 (888) 454-5923 X709 office & fax / atonn@cg-env.com Will review. AD 01/31/2019: Reviewed the report. It states that there are thirty-two (32) existing monitoring wells (MW-1 through MW-32) at the site. Liquid phase hydrocarbons (LPH) were not detected in the monitoring wells during the 4th Quarter 2018. Total LPH/Water Recovered since 3/20/17: 23,893 gallons. On November 8, 2018, the average depth to water was 26.13 feet and ranged from 22.56 feet (MW-7) to 29.61 (MW-31) ft. below top of casing. GW sampling: Post per-sulfate injection groundwater sampling of all monitoring wells was performed during this quarter. Thirty-two (32) groundwater samples were collected on November 8, 2018. Samples were analyzed for volatile organic compounds (VOCs) on the CP-51 list via EPA Method 8260C. GW data: During the 4th quarter 2018 sampling event, BTEX concentrations ranged from below the method detection limit (MW-5, MW-6, MW-7, and MW-8) to 36,100 micrograms per liter (ug/L) (MW-24). MTBE concentrations were all below the method detection limit for all wells sampled. MW-24 had the highest total volatiles on the CP-51 list at 42,380 ug/L. The surrounding area use is heavily industrial and commercial. Queens Boulevard is to the North and the MTA Subway elevated platform runs above the Boulevard. The current property use is an empty lot. The former service station building remains but is out of service. The closest water body is a tributary of Newtown Creek located approximately 2,000 feet to the Southwest. Remedial work: Temporary SVE events were conducted 18 times during October 2018, 16 times during November 2018, and 13 times during December 2018. During each SVE event, SVE was alternately performed on six out of the following 15 wells: MW-2, 9, 10, 15-17, 20, and 22-30. The wells with the higher concentrations (MW-9, MW-23, MW-24, and MW-25) were connected more frequently. As per the December 5, 2018 RAP Modification letter, air sparging was introduced into MW-9, MW-24, and MW-29, the wells with the higher dissolved hydrocarbon concentrations. Air sparging (AS) began on December 7th and AS was conducted in conjunction with SVE 12 times during December 2018. Approximately 310.04 pounds of hydrocarbons were recovered during the SVE events this quarter and 1,086.64 pounds of hydrocarbons through the end of December 2018. On October 3, 2018, air samples were collected from the influent and effluent to the carbon vessel utilizing SUMMA canisters. The influent benzene concentration was 1,100 ppbv or 1.1 ppmv, while the effluent benzene

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

concentration was 300 ppbv (0.300 ppmv). With an average flow rate of approximately 150 cfm during this quarter and a stack height of 15 feet, as per the stipulation agreement, the allowable benzene emission is 2.66 ppmv (2,660 ppbv). The effluent result was considerably below this concentration. Sodium persulfate (KlozurSP) injections were not performed during this quarter to allow time for the persulfate injected during the 3rd Quarter 2018 to be consumed. Conclusions and recommendations: The hydrographs of MW-2 and MW-9 illustrate that the water table continues to rise. The water table rose approximately 0.9 feet in MW-2 and 1.1 feet in MW-9 during this quarter. LPH was not detected in MW-9 during this quarter. LPH was first discovered during the September 2016 groundwater sampling event in wells MW-4, 9, and 10. Overall dissolved hydrocarbon concentrations have declined. The plan for the first quarter of 2019 is to conduct the second round of sodium persulfate (KlozurSP) injections during January 2019. Groundwater sampling will be conducted prior to the per-sulfate injections. Additional SVE events will also be conducted after the per-sulfate has been injected and air sparging will commence after the persulfate has been consumed. AD 05/14/2019: Received the following e-mail from Mr. Tonn: Ainura: Clean Globe Environmental, on behalf of Evergreen Resources Management Operations, is submitting the attached Q1 2019 Site Status Report for the above referenced former Sunoco station. Let me know if you have any questions or require additional information. Thank you, Al Albert M. Tonn / Senior Project Manager / CGE / 34 Cain Drive, Brentwood, NY 11717 (888) 454-5923 X709 office & fax / atonn@cg-env.com Will review. AD 05/30/2019: Reviewed the report. It states that there are thirty-two (32) existing monitoring wells (MW-1 through MW-32) at the site. Liquid phase hydrocarbons (LPH) were not detected in the monitoring wells during the 1st Quarter 2019. Total LPH/Water Recovered since 3/20/17: 23,893 gallons. On January 7, 2019, the average depth to water was 24.97 feet and ranged from 21.65 feet (MW-7) to 28.45 feet (MW-31) below the top of casing. On February 22, 2019, the average depth to water was 24.78 feet and ranged from 21.98 feet (MW-7) to 28.15 feet (MW-31) below the top of casing. Groundwater elevation data from January 7th and February 22nd, 2019 are shown on Figures 1A and 1B, respectively. GW sampling: Groundwater sampling of all 32 monitoring wells was performed after sodium persulfate injection round #1, but prior to sodium persulfate injection round #2, on January 7, 2019. Post-sodium persulfate injection round #2 groundwater sampling was performed on February 22nd, 2019. Samples were analyzed for volatile organic compounds (VOCs) on the CP-51 list via EPA Method 8260C. Results from the January 7th sampling event indicated BTEX concentrations ranging from below the laboratory reporting limit (MW-3, MW-12, MW-13, MW-16, and MW-31) to 27,300 ug/L (MW-2). MTBE concentrations were all below the laboratory reporting limit for all wells sampled. MW-2 had the highest total VOCs at 33,900 ug/L. The results from the February 22nd sample event indicated BTEX ranging from ND (MW-5, MW-6, MW-8, MW-16, MW-17, MW-18, MW-31, and MW-2) to 26,300 ug/L (MW-2). MTBE were all below the laboratory reporting limit, except for MW-7 at 30 ug/L. Sensitive Receptors: The surrounding area use is heavily industrial and commercial. Queens Boulevard is to the North and the MTA Subway elevated platform runs above the Boulevard. The current property use is an empty lot. The former service station building remains but is out of service. The closest water body is a tributary of Newtown Creek located approximately 2,000 feet to the Southwest. Remediation:

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

Temporary air sparge and soil vapor extraction (AS/SVE) events were conducted 11 times during January 2019 and 11 times during February 2019. During each SVE event, SVE was alternately performed on three to five out of the following 8 wells: MW-2, 9, 11, 23, 24, 25, 27, and 30. The wells with the higher concentrations (MW-9, MW-23, MW-24, and MW-25) were connected more frequently. Air sparging was performed on two to three wells out of the following wells: MW-9, MW-23, MW-24, MW-24 and MW-29, the wells with the higher dissolved hydrocarbon concentrations. Air sparging was conducted in conjunction with SVE once during January and six times during February 2019. Sparging was limited in January due to the injection work. Approximately 83.39 pounds of hydrocarbons were recovered during the SVE events this quarter and 1,170.03 pounds of hydrocarbons through the end of February 2018. On January 4, 2019, air samples were collected from the influent and effluent to the carbon vessel utilizing SUMMA canisters. The influent benzene concentration was 100 ppb by volume (ppbv) or 0.100 parts per million by volume (ppmv), while the effluent benzene concentration was 730 ppbv (0.730 ppmv). The air laboratory report is attached. With an average flow rate of approximately 100 cfm during this quarter and a stack height of 15 feet, as per the stipulation agreement, the allowable benzene emission is 4.00 ppmv (4,000 ppbv). The effluent result was considerably below this concentration. The AS-SVE equipment was removed at the end of February to allow the persulfate time to reduce dissolved phase hydrocarbons. Round #2 of sodium persulfate (KlozurSP) injections were performed during January - February 2019. Sodium hydroxide was mixed with equal parts of water, approximately 15-34 gallons, and was injected into each of the wells. This was followed by injecting a 50-gallon mixture of persulfate (55.1 pounds of persulfate to 40 gallons of water) into each well. The total volume of persulfate mixture injected into the wells ranged from 50 gallons for the cleaner wells up to 300 gallons for the more impacted wells This was then followed by another round of sodium hydroxide injections. Conclusions: LPH was not detected during this quarter. Hydrographs of MW-2 and MW-9 are attached. The hydrographs illustrate that the water table continues to rise. The water table rose approximately 1.3 feet in MW-2 and in MW-9 during this quarter as compared to last quarter. LPH was not detected in MW-9 during this quarter. LPH was first discovered during the September 2016 groundwater sampling event in wells MW-4, 9, and 10. Overall dissolved hydrocarbon concentrations have declined. The plan for the 2nd Quarter 2019 is to monitor for residual persulfate and to conduct groundwater sampling. AD 05/31/2019: Received the following e-mail from Ms. Kistler: Hi Ainura, I wanted to send you some dates that we are available to meet with you to review sites. Please let me know if any of these days work for your schedule. 6/20 11am meeting 7/18 11am meeting Thank you, Amanda Kistler Evergreen Resources Group, LLC 2 Righter Parkway, Suite 120 Wilmington, DE 19803 Mobile: (302) 513-0338 Work: (302) 485-4082 Scheduled the meeting for July 18, 2019 for 11:00 AM. AD 07/18/2019: I and J. Kolleeny met with Amanda Kistler of Sunoco/Evergreen, Albert Tonn and Tony Fiorentine of Clean Globe Env. to discuss the 8 Sunoco sites managed by them. AD 07/26/2019: Received the following e-mail from Mr. Tonn: Ainura: Clean Globe Environmental, on behalf of Evergreen Resources Management Operations, is submitting the attached Q2 2019 Site Status Report for the above referenced former Sunoco station. Let me know if you have any questions or require additional information. Thank you,

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

Al Albert M. Tonn / Senior Project Manager / CGE / 34 Cain Drive, Brentwood, NY 11717 (888) 454-5923 X709 office & fax / atonn@cg-env.com Will review. AD 07/30/2019: Reviewed the report. It states that there are thirty-two (32) existing monitoring wells (MW-1 through MW-32) at the site. Liquid phase hydrocarbons (LPH) were not detected in the monitoring wells during the 2nd Quarter 2019. LPH has not been detected since April 30, 2018. Total LPH/Water Recovered since 3/20/17: 23,893 gallons. On April 18-19, 2019, the average depth to water was 23.71 feet and ranged from 20.05 feet (MW-5) to 27.00 feet (MW-31) below the top of casing. GW sampling: Groundwater sampling of all 32 monitoring wells was performed on April 18 and 19, 2019. Samples were analyzed for volatile organic compounds (VOCs) on the CP-51 list via EPA Method 8260C. Results from the April 18th-19th sampling event indicated BTEX concentrations ranging from below the laboratory reporting limit (MW-31) to 34,500 micrograms per liter (ug/L) (MW-25). MTBE concentrations were below the laboratory reporting limit for all wells sampled, except for 76 ug/L in MW-7. MW-25 had the highest total volatiles on the CP-51 list at 38,860 ug/L. The surrounding area use is heavily industrial and commercial. Queens Boulevard is to the North and the MTA Subway elevated platform runs above the Boulevard. The current property use is an empty lot. The former service station building remains but is out of service. The closest water body is a tributary of Newtown Creek located approximately 2,000 feet to the Southwest. Conclusions and recommendations: LPH was not detected during this quarter. The water table at the site continues to rise. The water table rose approximately 1.1 feet since the last groundwater sampling event in February. There were increases in dissolved hydrocarbon concentrations in some wells. However, overall dissolved hydrocarbon concentrations have declined. The plan for the 3rd Quarter 2019 is to conduct groundwater sampling while the groundwater reaches static conditions. AD 01/21/2020: Received the following email from Mr. Tonn: Ainura: Clean Globe Environmental, on behalf of Evergreen Resources Management Operations, is submitting the attached Q4 2019 Site Status Report for the above referenced former Sunoco station. Let me know if you have any questions or require additional information. Thank you, Al Albert M. Tonn / Senior Project Manager / CGE / 34 Cain Drive, Brentwood, NY 11717 (888) 454-5923 X709 office & fax / atonn@cg-env.com www.cg-env.com Will review. AD 02/19/2020: Reviewed the report. It states that there are thirty-two (32) existing monitoring wells (MW-1 through MW-32) at the site. Liquid phase hydrocarbons (LPH) were not detected in the monitoring wells during the 4th Quarter 2019. LPH has not been detected since April 30, 2018. On October 15, 2019, the average depth to water was 24.00 feet and ranged from 21.43 feet (MW-6) to 27.35 feet (MW-31) below the top of casing. GW sampling: Groundwater sampling of all 32 monitoring wells was performed on October 15-16, 2019. Samples were analyzed for volatile organic compounds (VOCs) on the CP-51 list via EPA Method 8260C. Results from the October 15th-16th sampling event indicated BTEX concentrations ranging from below the laboratory reporting limit (MW-1, MW-29, MW-31, and MW-32) to 38,500 micrograms per liter (ug/L) (MW-24). MTBE concentrations were all below the laboratory reporting limit with the exception of 3 ug/L in MW-7 and 2 ug/L in MW-13. MW-24 had the highest total volatiles on the CP-51 list at 44,920 ug/L. Sensitive receptors: The surrounding area use is heavily industrial and commercial. Queens Boulevard is to the North and the MTA Subway elevated platform runs above the Boulevard. The

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

current property use is an empty lot. The former service station building remains but is out of service. The closest water body is a tributary of Newtown Creek located approximately 2,000 feet to the Southwest. Conclusions and recommendations: LPH was not detected during this quarter. Hydrographs of MW-2, MW-9, MW-11, MW-23, and MW-26 are included in the report. Overall, the hydrographs illustrate that the water table has finally stabilized and had a decline. The water table declined approximately 0.38 feet since the last groundwater sampling event in July. There were increases in dissolved hydrocarbon concentrations in many wells and declines in some other wells, but mostly within recent fluctuations . Overall dissolved hydrocarbon concentrations have declined significantly since the baseline sampling. The consultant plans for the 1st Quarter 2020 is to conduct groundwater sampling to observe groundwater concentration trends under static conditions. AD 02/20/2020: Received the following email from Mr. Tonn: Ainura: Clean Globe Environmental (CGE), on behalf of Evergreen Resources Management Operations, is submitting the attached Remedial Action Work Plan Modification #3 for the above referenced former Sunoco station. This modification includes the installation of four additional soil borings/injection-monitoring wells in the area with the highest dissolved hydrocarbon concentrations and to follow-up with additional chemical injections. The soil boring installation will start on Tuesday, February 25th. Let me know if you have any questions or require additional information. Thank you, Al Albert M. Tonn / Senior Project Manager / CGE / 34 Cain Drive, Brentwood, NY 11717 (888) 454-5923 X709 office & fax / atonn@cg-env.com Will review. AD 02/25/2020: Reviewed the report. It presents a modification to the Remedial Action Work Plan (RAWP) Modification that was submitted to DEC on May 17, 2018. Two rounds of sodium persulfate injections were completed during 2018-2019. The first round of persulfate chemical injections (KlozurSP) was completed during September 2018 and the second round was completed during February 2019. On-going monitoring of water levels and geochemical parameters have indicated static/background levels have been reached. Dissolved hydrocarbon concentrations have reduced significantly in most wells, but remain elevated in several wells, mainly MW-2, MW-23, MW-24, and MW-25. CGE will implement the following tasks to address the residual hydrocarbons: " Installation of four soil borings/injection-monitoring wells in the vicinity of MW-2, MW-23, MW-24, and MW-25; " Additional injections of Regenesis PetroCleanze"! in MW-2, MW-23, MW-24, MW-25, and the four new wells; and " Additional injections of KlozurSP in the most contaminated wells. Soil boring/injection-well installations will be completed during the 1st Quarter 2020. PetroCleanze"! injections and in-well sparging will be completed during 1st Quarter 2020, while the vacuum truck extractions will take place during the 2nd quarter. The KlozurSP injections will take place during the 2nd Quarter 2020. Groundwater sampling will continue on a quarterly basis. AD 03/25/2020: Received the following email from Mr. Tonn: Ainura: Clean Globe Environmental, on behalf of Evergreen Resources Management Operations, is submitting the attached Injection/Monitoring Well Installation and Soil Sampling Report for the above referenced former Sunoco station. Let me know if you have any questions or require additional information. Thank you, Al: Will review. AD 04/06/2020: Reviewed the report. It summarizes the injection/monitoring well installation and soil sampling conducted as part of the Remedial Action Work Plan (RAWP) Modification #3. Soil Borings/

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

Injection-Monitoring Well Installations: Four soil borings/ injection-monitoring wells, designated MW-33, MW-34, MW-35, and MW-36 were installed in the vicinity of MW-2, MW-23, MW-24, and MW-25, the wells that have the highest dissolved phase hydrocarbon concentrations. On February 25-26, 2020, the soil borings were advanced utilizing direct-push technology via a Geoprobe 7822DT. Soil samples were collected continuously to final depths of 10 feet below grade (fbg) in MW-33, 25 fbg in MW-34, 40 feet below grade in MW-35, and 35 fbg in MW-36. Due to site geology consisting of fine, highly compacted sand causing the liners to jam, the final soil boring depths in MW-33 and MW-34 were shallower than originally planned. On February 27 and 28 and March 2, 2020, the wells were installed utilizing the Geoprobe 7822DT equipped with hollow stem augers. The wells were installed to a depth of approximately 35 feet and were constructed of 15 feet of 2-inch diameter schedule 40 PVC, 10 slot well screen and 15 feet of 2-inch schedule 40 PVC well casing. On March 5, 2020, the wells were developed by surge and pumping. Soil Analytical Results: The soil analytical results indicate that the shallow soil samples were below NYSDEC CP-51 Soil Clean-up Levels (SCLs) for all of the shallow samples, except for MW-35(0 -5) and MW-36(0 -5). However, these two samples were below the NYSDEC Commercial-Use Soil Clean-up Objectives (SCOs). The deeper samples (all at or below the water table) contained between 9 and 11 compounds above CP-51 SCLs. Three of the soil samples, MW-34(24 -25), MW-36(20 -25), and MW-36(30 -35) contained two to three compounds above Commercial-Use SCOs. AD 04/15/2020: Received the following email from Mr. Tonn: Ainura: Clean Globe Environmental, on behalf of Evergreen Resources Management Operations, is submitting the attached Q1 2020 Site Status Report for the above referenced former Sunoco station. Let me know if you have any questions or require additional information. Thank you, Al Albert M. Tonn / Senior Project Manager / CGE / 34 Cain Drive, Brentwood, NY 11717 (888) 454-5923 X709 office & fax / atonn@cg-env.com www.cg-env.com Will review. AD 05/05/2020: Reviewed the report. It states that thirty-two (32) existing monitoring wells (MW-1 through MW-32) and four (4) newly installed wells (MW-33 through MW-36) at the site. Liquid phase hydrocarbons (LPH) were not detected in the monitoring wells during the 1st Quarter 2020. LPH has not been detected since April 30, 2018. Total LPH/Water Recovered since 3/20/17 - 23,893 gallons. On January 9, 2020, the average depth to water was 24.20 feet and ranged from 21.62 feet (MW-6) to 27.61 feet (MW-31) below the top of casing. Groundwater sampling of all 32 monitoring wells was performed on January 9-10, 2020. Samples were analyzed for volatile organic compounds (VOCs) on the CP-51 list via EPA Method 8260C. Results from the January 9th-10th sampling event indicated BTEX concentrations ranging from below the laboratory reporting limit (MW-1, MW-3, MW-6, MW-12, MW-13, MW-14 ,MW-16, and MW-26) to 33,380 micrograms per liter (ug/L) (MW-24). MTBE concentrations were all below the laboratory reporting limit with the exception of 2 ug/L in MW-7. MW-2 had the highest total volatiles on the CP-51 list at 40,200 ug/L. Field work: Between February 25th and March 2nd, CGE installed the four new wells (MW-33 through MW-36) and collected soil samples. The soil sampling results were presented in the March 25, 2020 Injection/Monitoring Well Installation and Soil Sampling Report. Seven out of 13 soil samples contained one or more VOCs above NYSDEC CP-51 Soil Clean-up Levels. However, only three out of the 13 samples contained VOCs above NYSDEC CP-51 Commercial-Use Soil Clean-up Objectives. These

32-32 QUEENS BLVD/SUNOCO (Continued) **S100145562**

three samples were collected at or below the water table. On March 21st, CGE injected a mixture of 40 pounds of Regenesis PetroCleanze"!, 40 pounds of Regenesis RegenOx Part A, and 50 gallons of water into each of the following wells: MW-2, MW-23-25, and MW-33-36. Each well was then flushed with 5 gallons of water. On March 24th-26th, in-well sparging was performed on each of these wells to further disperse the chemicals. Vacuum extraction of each of these wells will be performed during Q2 2020. Conclusions and recommendations: LPH was not detected during this quarter. The water table declined approximately 0.20 feet since the last groundwater sampling event in October 2019. Overall, there were decreases in dissolved hydrocarbon concentrations, but a few wells did increase in concentrations. Dissolved hydrocarbon concentrations have declined significantly since the baseline sampling. The plan for the 2nd Quarter 2020 is to conduct vacuum extractions on the wells that were injected with PetroCleanze. Groundwater samples will then be collected. Finally, KlozurSP will be injected into the most impacted wells. AD"

Remarks: "(5) 550 GALLON TANKS FAILED PETRO TITE WITH A LEAK RATE OF 0.737GPH, WILL EXCAVATE & TEST (5) MORE TANKS ON 8/31/89."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL C 4/12/04-Vought-Spill transferred from Miller to Rommel as per Rommel. 3/28/05 - also see 8804104. KST 12/29/05 Transferred to E. Hampston via Spills Initative. Wrote letter to owner requesting update/information. 11/02/06 Reassigned to Sun.(MS) 12/18/06 Sun sent letter certified mail to Jean Satoski (LIC Service Station), 49-01 Van Dam Street, on 12/14/06 requiring that the following be submitted to the NYSDEC by 1/14/07: 1. Tank closure assessment report. 2. Locations of tank and/or line test failure. 3. Subsurface investigation report, including current and historical soil and groundwater analysis. 4. Surrounding property sketch: A surrounding property sketch including property layout and usage must be submitted to NYSDEC. North arrow and scale must also be included on the site plan. If no tank closure report was prepared or no subsurface investigation was conducted before, the Department requires the following be performed and submitted: 1. Submission of a Tank Closure & Site Assessment Including Soil and Groundwater Investigation Results. (JS/MS) 2/27/07: Based on TCR results Sun/Sellberg sent a letter to Alex Javic of LIC Service Station requiring additional investigation be performed, and a report sent to the DEC by 4/13/2007. Letter is as follows: The investigation at a minimum must include the installation of soil borings/wells: around the area of the the former nine (9) 550-gallon underground storage tanks. Groundwater monitoring wells should be installed to the south (former location of S6), east (former location of S1) and west (former location of S4) of this area and groundwater flow direction will be determined. During drilling, the soil must be screened continuously with a PID. The deepest dry soil sample and the sample with the highest PID reading in each boring/well will be sent for EPA Method 8260/8270 analyses and the results will be sent to the Department. Following well installation, a water sample must be obtained and submitted for EPA Method 8260/8270 analyses. Note that MTBE must be included on all soil and groundwater analyses. Prior to drilling

SPILL NUMBER 9107165 (Continued) **S106703575**

activities, all utilities must be located and marked out. A report summarizing the findings of the subsurface investigation including boring logs, soil and groundwater sample analyses, site plan, and conclusions and recommendations must be submitted to the Department by April 13, 2007. (JS/MS) 4/5/07: MS spoke to Jill Haimson of Preferred Environmental (516)647-4211. She will submit a SIWP by 4/16/07. (JS/MS) 4/24/07: DEC received and approved the SIWP. SIR to be submitted by 7/16/07. Sent letter certified mail to RP and faxed same to consultant (Jill Haimson). (JS/MS) 6/6/07: MS called J. Haimson to check status of site investigation. Due to difficulties in obtaining on-site access, work had been delayed. SIR will be submitted later than original timeline.(JS/MS) 6/27/07: Preliminary results (field observations) were discussed by the DEC and the consultant via telephone on June 11th, and again on June 21st, 2007. RP is claiming an upgradient source to be the problem. (JS/MS) 9/21/07: An additional visit was done by the consultant in mid September to better assess surrounding properties as additional investigation is warranted. This investigation will include the evaluation of a suspected up-gradient source which may/may not be contributing to on-site groundwater contamination. (JS/MS) 10/18/07: Upon threat of legal action, Preferred finally submitted SIR (apparently RP had not given consent to submit?). DEC is currently reviewing. Onsite contamination exists in both soil and mainly groundwater across the site. Additional delineation will be necessary as well as possible ORC injection/treatment. (JS/MS) 11/14/07: Alex Javick met with JS and MS today to sign STIP and discuss remedial options. Plan is to start with ORC (iSOCS) - 6months, if not effective use chemical injection. Monitoring will take place quarterly. Submit signed stip to regional director on 11/15/07. (JS/MS) 11/26/07: STIP executed on 11/16/07 and returned on 11/21/07. Sent copy to owner via mail and consultant via email today. MS to discus remediation details with Jill Haimson of Preferred. (JS/MS) 11/28/07: MS spoke to Jill. She will submit a RAP by 12/7/07 detailing use and placement of iSOCS as well as injection of regen-ox to boost remediation. (JS/MS) 12/17/07: DEC approved RAP as follows: ...The RAP proposes the application of Regen-Ox (manufactured by Regenesis) to address petroleum related soil and groundwater contamination at the site. In addition, Preferred proposed the installation of In-Situ submerged Oxygen Curtain (inFusionTM/iSOC) probes within four (4) onsite well locations. Pursuant to the Stipulation Agreement signed and dated effective November 16, 2007, the Department requires that within 45 days of the Department s approval of the RAP, Respondent shall implement the work outlined in the RAP. The Department approves the RAP with the following condition: Please specify the number, location and spacing between all proposed Regen-Ox injection points. RP has 45 days from RAP approval to perform the work outlined in the RAP. MS sent letter today to RP and will email Preferred tomorrow regarding injection points follow-up. (JS/MS) 1/17/08: Alex Javick in to meet about remedial systems. Will send STIP to Ms. Jean Satoski once received address from Mr. Javick. (JS/MS) 1/22/08: Stip #2 sent today to Ms Jean Satoski at 84 Gun Club Road, Northport, NY 11768. Signed stip is due by 2/5/08. Added following to original letter to include operator's cooperation and Ms. Satoski's roles as RP: Presently, the operator of your station has initiated the required actions to address the above and has been fully cooperating with the Department. However, according to Department records, you are the certified

SPILL NUMBER 9107165 (Continued) **S106703575**

property owner of 49-01 Van Dam Street, LIC, NY 11101 and therefore, also a responsible party. Signed STIP is due by 2/5/08. (JS/MS) 2/27/08: Received signed Stip from Satoski. Signed by Regional Director, Region 2 (JS/MM) 3/4/08: Sent photocopy of executed Stip to Satoski. Informed J. Hamison from Preferred about executed stip signed by both parties. (JS/MM) 4/17/08: RAP not executed yet. Satoski and Javic have not agreed on payment. Sent out violation of stip letters. Waiting for responses. (JS/MM) 4/22/08: Called Javic, not in office. Expecting phone call today. (JS/MM) 5/18/08: Received already approved RAP from Preferred. (JS/MM) 6/23/08: No info received from Preferred. (JS/MM) 08/11/08: Transferred to Kolleeny/Mandac (JK/MM) 12/12/08: Received Quarterly Groundwater Sampling/Baseline Sample Report from Bill Schlageter of Preffered Environmental dated 11-19-08. Under review. Next sampling event in December 2008. (JK/KG) 12/16/08: RAP implemented. May 28 and 29, 2008 - 14 wells were installed (4 groundwater monitoring wells, 4 solinst emitter wells, 6 chemical injection wells) July 24 and 25, 2008 - Regen-Ox injected into 6 injection wells August 21, 2008 - Solinst Waterloo Oxygen Emmitter Probes were installed in 4 wells September 8, 2008 - Groundwater samples were collected at MW-1, 2, 3, 4 and IW-1. Total VOCS: MW-1 2,192 ug/L, MW-2 11,950 ug/L, MW-3 19,898 ug/L, MW-4 7,963 ug/L, IW-1 3,070 ug/L IW-6 and E-2 were found to have product, 1.47 ft and 0.04 ft respectively. Wells are checked biweekly for product. If product is encountered it is hand balied. Dissolved oxygen concentrations have increased since oxygen emmitters were installed. Next sampling event is scheduled for December 2008. (JK/KG) 12/18/08: Spoke with Bill Schalageter (Prefferred Env.). I asked him about the well with 1.47 ft of product. He said Alex Javic is still checking the well twice a week. He is bailing the product and disposing of it into the waste oil tank on site. Bill said the product is about an inch to a couple of inches. He will send someone out within the next week to verify how many inches of product are in the well and will send me an email with the details. Based on the amount of product they will need to be more aggressive in removing the product. I suggested a vac truck. I also asked Bill to have the wells surveyed and include GW flow direction, gradient, and scale on the map. (JK/KG) 12/30/08: Spoke with Jill Haimson (Preferred Env.) about product in well. She will talk to Bill and find out if someone went to the site to gauge the product. She will email me the details. If no one went to the site she will have someone go this week. (JK/KG) 01/29/09: Have not received details about product in well or product recovery. Emailed Jill and Bill requesting an update. (JK/KG) 02/02/09: Rec'd following email from Schalageter on 1/29/08. Since we spoke, Preferred was out the site twice including a quarterly sampling event conducted January 23, 2009. During the first visit (January 5, 2009) , approximately eight inches of product was present in well (IW-6), none was detected in any other of the wells. The product was bailed from IW-6 and disposed of, subsequent to bailing, Preferred gauged the wells for twenty minutes and no product recharge was observed. During the January 23, 2009 sampling event, approximately 4 inches of product was detected in IW-6, again no recharge of product was observed subsequent to removal. No product was detected in any of the other wells on January 23, 2009. A complete description of monitoring and sampling events will be provided in the Quarterly sampling report to be submitted upon receipt of sampling data. Please feel free to contact me with any questions or concerns. Regards, Bill (JK/KG) 02/03/09: Responded to

SPILL NUMBER 9107165 (Continued) **S106703575**

Bill, After talking with Jon, please continue with product recovery on a regular basis. If the amount of product increases or doesn't appear to be decreasing, a more aggressive remedial measure will be necessary. Based on the VOC concentrations in MW-2 and MW-3, further delineation or more injections may be necessary. First, I will need to review the results of the latest sampling event (when they are ready). (JK/KG) 04/14/09: Rec'd pdf of Quarterly Groundwater Sampling Report on 4/13/09; under review. (JK/KG) 04/15/09: Rec'd hardcopy of QMR. Wells were surveyed; groundwater flow direction is to the southwest. Weekly product recovery will continue and the next quarterly event is scheduled for April 2009. Groundwater on 1/23/09: MW-1: BTEX - 1,422 ug/L, Total VOCs - 2,533 ug/L, MTBE - 170 ug/L MW-2: BTEX - 3,590 ug/L, Total VOCs - 4,909 ug/L, MTBE - 180 ug/L MW-3: BTEX - 15,150 ug/L, Total VOCs - 21,338 ug/L, MTBE - 2,700 ug/L MW-4: BTEX - 11,174 ug/L, Total VOCs - 21,425 ug/L, MTBE - 1,600 ug/L IW-1: BTEX - 1,715 ug/L, Total VOCs - 2,739 ug/L, MTBE - 280 ug/L IW-4: BTEX - 1,652 ug/L, Total VOCs - 2,501 ug/L, MTBE - 200 ug/L E-4: BTEX - 4,664 ug/L, Total VOCs - 8,201 ug/L, MTBE - 1,700 ug/L (JK/KG) 04/20/09: Spoke to Schlageter on 4/16/09. I asked him to include historical analytical data in future reports. We discussed the product in IW-6; he said it appears to be old gasoline and the station manager is still hand bailing it. The product is being disposed of in the on-site waste oil tank. I told Schlageter that the product can not be disposed of in the waste oil tank. Preferred has gauged the wells since the January sampling event. I asked him to send me the gauging data by Monday (4/20). (JK/KG) 04/28/09: Rec'd March gauging data (in eDocs). On 3/6 product in IW-6 was about 6 inches and on 3/27 it was about 0.25 inches. (JK/KG) 05/04/09: Letters sent to J. Satoski and A. Javik on 4/30/09. A more aggressive approach to product recovery should be implemented by using mobile vacuum extraction. A RAP should also be prepared and submitted. It should propose additional remedial actions, such as another round of RegenOx injections. The next QMR is due 6/19/09. (JK/KG) 05/07/09: Spoke to Mr. Javick, he said he doesn't have the money to pay for the cleanup. He was reminded that he signed the Stipulation Agreement and that a report is due in June. (JK/KG) 06/22/09: Rec'd call from Bill Schlageter. He said quarterly monitoring has not been performed and Mr. Javick is not willing to pay for the cleanup. I called Mr. Javick and he said Ms. Satoski will pay 100%. I then spoke to Ms. Satoski and she confirmed that she has agreed to pay for remediation of the site. She will advise Preferred to proceed with site work once some checks clear in her bank account. Preffered is prepared to submit a supplemental RAP. (JK/KG) 06/23/09: Rec'd Supplemental Remedial Action Work Plan dated 6/23/09 and submitted by Preferred Environmental. Under review. (JK/KG) 06/25/09: Rec'd revised SRAWP dated 6/24/09. SRAWP proposes proposes additional injections of RegenOx into the existing on-site injection wells, monitoring of groundwater field parameters, continued groundwater treatment via in-situ emitter probes, continued quarterly groundwater monitoring, and submission of monitoring reports to NYSDEC. A round of groundwater samples will be collected from monitoring wells MW-1, MW-2, MW-3, and MW-4 prior to the RegenOx injections. If free-phase product is detected in well IW-6, the product will be removed using vacuum-enhanced fluid recovery prior to the injections. The SRAWP was approved and letters were sent to Satoski and Javick. The deadline for submission of a groundwater monitoring report, with the results of the pre-injection samples from the four on-site monitoring wells,

SPILL NUMBER 9107165 (Continued) **S106703575**

is August 7, 2009. The deadline for submission of a report summarizing the remedial injections and presenting the follow-up quarterly groundwater sampling results is September 25, 2009. Email for Satoski is williamtaggard@mac.com (JK/KG) 07/20/09: Rec'd the following email from Schlageter: We will be conducting the injection this week (Monday-Wednesday) at 49-01 Van Dam Street, LIC. Prior to the injection, the required pre-injection sampling will be conducted from monitoring wells. Bryan from our office will be on-site and as always, you can contact me or Jill with any questions. Thank You, Bill (JK/KG) 08/31/09: Spoke to Haimson. She didn't realize a report with the results of the baseline sampling was due 8/7/09. The report will be prepared and submitted next week. (JK/KG) 09/30/09: Follow-up with Preferred as the groundwater monitoring report, with the results of the pre-injection samples from the four on-site monitoring wells, and the report summarizing the remedial injections and presenting the follow-up quarterly groundwater sampling results have not been submitted. (JK/KG) 11/03/2009: This spill case was transferred to A. Doronova. - AD 03/23/2010: Received a pdf copy of Quarterly Monitoring Report for October 2009. DL to eDocs. Will review. AD 07/27/2010: Received an e-mail from Mr. Schlageter: Ainura: As we discussed, attached is the supplemental RAP for the above-referenced project. Please review and contact me to discuss. Thank you Bill William J. Schlageter Operations Manager/Senior Hydrogeologist Will review. AD 08/24/2010: Reviewed the supplemental work plan. It proposes to conduct EFR on a weekly basis for two months period on the site wells exhibiting a free product (wells IW-6 and E-4); to continue employment of 3 out of 4 oxygen emmiters; to conduct monthly monitoring activities; to perform air sparging of aquifer; and once free product has been addressed, to rehabilitate and re-install emmiter probe into E-4 and reconnect oxygen supply to this well. Discussed this work plan with J. Kolleeny of DEC. As it was noted, air sparging method usually combained with SVE to control vapors in unsatutated zone. Since SVE is not proposed here, implementation of air sparging alone is questionable. AD 08/26/2010: Called and spoke with B. Schlageter of Prefferred. Requested to revise the work plan. AD 08/11/2010: Received a pdf copy of the 1st quarter 2010 GW monitoring report. DL the report to eDocs. AD 09/16/2010: Received an e-mail from Bill: Ms. Doronova: As we discussed, attached is the revised Supplement to the Remedial Action for the above-referenced property. The Supplemental action has been revised to omit the mobile air-spare treatment upon your request. Please review and contact me with any comments. Upon your approval, we will implement the proposed action within one week. Thank you, Bill William J. Schlageter Operations Manager/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES Certified Port Authority of New York and New Jersey (PANYNJ), NYS and NYC Women-Owned Business Enterprise (WBE) 323 Merrick Avenue North Merrick, New York 11566 Tel: (516) 546-1100 ext. 22 Fax: (516) 213-8213 Cell: (917) 715-0752 www.preferredenv.com DL the work plan to eDocs. Will review. AD 09/17/2010: Reviewed the revised work plan. It proposes to conduct weekly VEFR on two site wells (IW-6 and E-4) which exhibit free product, for a period of two months. Operation and maintenance of three oxygen emitters at the site will continue on a monthly basis. Preferred also recommends to suspend quarterly GW monitoring for a six months. AD 09/20/2010: Discussed this WP with J. Kolleeny of DEC. AD 09/21/2010: Issued and sent an approval letter to Ms. Joan Satowski with the following comments: " Although Preferred requests that quarterly groundwater

SPILL NUMBER 9107165 (Continued) **S106703575**

monitoring at the site be suspended for six months, the Department requires that quarterly groundwater monitoring continue; " Following completion of the VEFR events, quarterly groundwater monitoring data should be evaluated. If the results do not indicate significant improvement of groundwater quality at the site, and/or if free product continues to appear in the two affected wells, then an alternative remedial measure should be proposed to DEC. Dl pdf copy of the letter to eDocs. AD 04/11/2011: Received an e-mail from Bill: Ainura: Attached is the quarterly sampling report for February 2011 for the above-referenced property. The report summarizes activities conducted from November 2010 through February 2011. Results of the quarterly sampling are favorable significant reduction of dissolved phase VOCs, however some residual free product remains present within IW-6. The next quarterly sampling is scheduled for May 2011. Please feel free to contact me with any questions. Thank you Bill William J. Schlageter DL the report to eDocs. Will review. AD 06/30/2011: Reviewed the report. It states that on February 2011 sampling, thirteen of the fourteen on-site wells were observed to be free of floating product however, free product was observed in IW-6 during the February 2011 quarterly sampling event (.49 ft). Floating product was also observed during the prior monitoring events in October 2010(.06 ft), November 2010 (.02 ft), and December 2010 (.21 ft). An absorbent pad was installed within IW-6 to address free product. Free product had previously been detected in the E-4 well location, however, product removal activities has successfully mitigated the free product. Depth to GW water ranged from 6.48 ft. (E-2) to 8.37 ft. (MW-4) bgs. Groundwater flow has historically been determined to have a westerly influence within both northwesterly and south westerly flows historically observed. A total of seven (MW-1 through MW-4, IW-1, IW-4 and E-4) of the 14 on-site wells were selected for on-site sampling. Gasoline-related VOCs were detected in all of the groundwater samples at concentrations exceeding NYSDEC SGVs. The highest TVOCs was detected in MW-3 (7,625ug/L), which is located crossgradient of the tank farm and downgradient of the Luk Oil Station to the southeast. Concentrations of BTEX detected in groundwater samples ranged from 5,110 ug/L in the MW-3 to 61.5 ug/L in the MW-1 at an upgradient location, MTBE concentrations ranged from 17 ug/L in the IW-1 (crossgradient) location to 1,100 ug/L in the MW-3 location. Preferred states that TVOCs have dropped across the site by up to 94% and by more than 50% since the implementation of the supplemental remedial action. They report that MTBE concentrations have also significantly decreased across the site and conclude that the RegenOx injection and oxygen emitters are successfully providing mitigation of the gasoline-related impacts. The next quarterly sampling suppose to be conducted in May of 2011. AD 11/2011: Did not received ane reports. AD 01/12/2012: Called and spoke with B. Schlageter of Preferred. Requested to submit all missing reports for 2011. Later received an e-mail from him saying: Ms. Doronova: As we discussed attached is the report from October. Please note that due to construction at the station property, we were forced to delay the next sampling event sampling until January 2012. Further, although concentrations continue to decrease, we have identified that there is an off-site contribution to the groundwater impacts believed to be the Luk Oil property across Gale Avenue (currently AmeriGas ??) Owner is Leelimits Petroleum. We are petitioning to drop the sampling to a bi-annual schedule. Thank you, Bill DL the report to eDocs. Will review. AD 03/09/2012: Reviewed the

SPILL NUMBER 9107165 (Continued) **S106703575**

report. It states that quarterly sampling activities resumed on August 2011 subsequent to the supplemental remedial efforts, which including VEFR activities and continued oxygen injection. The August 2011 quarterly sampling event included the following: " Measurement for floating product; " Measurement of water table elevation, temperature, and dissolved oxygen; " Purging and sampling of four monitoring wells, two injection wells and one emitter well; " Laboratory analysis of seven groundwater samples; and " Preparation of summary report including data summary and a groundwater flow map. Groundwater flow in August of 2011 was determined to be to the northwest towards Newtown Creek. During the August 2011 sampling, thirteen (13) of the fourteen (14) on-site wells were observed to be free of floating product however, free product was observed in IW-6 during the February 2011 quarterly sampling event (.50 ft). Floating product was also observed during the prior monitoring events in February 2011 (.49 ft.), October 2010 (.06 ft), November 2010 (.02 ft), and December 2010 (.21 ft). Free product had previously been detected in the E-4 well location, however, product removal activities has successfully mitigated the free product. A total of seven (MW-1 through MW-4, IW-1, IW-4 and E-4) of the 14 on-site wells were selected for sampling. Gasoline-related VOCs were detected in all of the groundwater samples at concentrations exceeding NYSDEC SGVs. Concentrations of BTEX detected in groundwater samples ranged from 2,129 ug/L in the MW-4 to 54.1 ug/L in the MW-1. MTBE concentrations ranged from 220 ug/L in the MW-2 to 7.1 ug/L in the IW-1 location. The consultant states that August 2011 groundwater quality data was compared to the historic groundwater data developed for the property. To date since the initiation of remedial activities at the Subject Property, TVOCs have dropped by more than 61% since the last quarterly sampling event in February 2011. BTEX and MTBE concentrations have also significantly decreased across the site. This indicates that the RegenOx injection and oxygen emitters are successfully providing mitigation of the gasoline-related impacts. AD 09/19/2012: Sent an e-mail to B. Schlageter requiring submission of all missing reports. AD 12/2012: Did not receive the reports. Called and left a message. AD 02/2013: Spoke with B. Schlageter regarding reports submission. The property owner is very sick and Preferred did not visited the site for several months. He will get back with the site status update. AD 06/04/2013: Called and spoke with Bill of Preferred regarding this site. The site owner contacted them recently, so they are planning to start groundwater monitoring soon. Bill will look for unsubmitted reports and will give an update. AD 01/17/2014: Called and spoke with B. Schlageter of Preferred Env. No GW monitoring was done at the site since we spoke last time. Site owner was uncooperative. Requested to submit the most recent owner’s contact information. Suggested to visit the site, sample all site wells and submit a summary report with conclusions and recommendations for further actions. AD 04/12/2016: Called and left a message to Mr.Joseph Macchia - who is listed as an authorized representative in PBS file. AD 04/13/2016: Called and spoke with Mr. William Tagert, (631-757-8829). He is a site owner’s son. Because of his mather’s health and old age, Mr. Tagert is looking after her business. Explained to him that the spill case is still open, and that he needs to contact environmental consultants to do a site current situation assessment. AD 04/14/2016: Received a call from Mr. Tagert. He said that he contacted Bill Schlageter from Preferred Environmental and scheduled site visit with sampling of wells. A

SPILL NUMBER 9107165 (Continued) **S106703575**

report with conclusions and recommendations for further actions will be submitted to DEC. AD 04/26/2016: called and spoke with Mark of Preferred. He confirmed that his company gave a proposal to Mr. Tagert and is now waiting for his response. AD 02/08/2017: called and spoke with Mr. Tagert. He told me that he hired Preffered Env. again and they are planning to sample site wells. Called and left a message for Bill Schlageter. AD 09/27/2017: Called and spoke with Mr. Schlageter. He said that they performed GW sampling at the site in March 2017 and sampled 6 wells. Requested to submit the report. It was submitted shortly via e-mail. Checked the report. The contaminant levels are dropped significantly according to the lab results in comparison to historical data. The most contaminated well MW-3 has 1,600 ppb of TVOCs (was 21,000ppb in 2009). Mr. Schlageter said that there are some issues with the payments from the site owner, so they did not propose any remediation at the site yet. AD 09/28/2017: called and left a message to Mr. Tagert. AD 09/29/2017: Received a call from Mt. Tagert. Discussed the site conditions. Mentioned that the contaminants levels dropped significantly and that additional rounds of sampling is needed to confirm down gradient trend, and that ORC socks or EFR should be considered for the site to expedite the cleanup. Mr. Tagert will contact Preferred Environmental to discuss further actions for the site. AD 11/2017: Called and left a message to Mr. Schlageter. AD 01/25/2018: Called and spoke with B. Schlageter regarding GW sampling report. They just got their results from the lab. The report will be submitted to DEC in two weeks. AD 04/18/2018: Called and left a message to Bill. AD 07/03/2018: Called and left a message to Mr. Schlageter. AD 08/02/2018: Called and left a message to Mr. Schlageter. Sent him an e-mail requesting GW sampling report submission. AD 08/09/2018: called and spoke with Mr. Schlageter. He will submit the report tomorrow, August 10th, 2018. AD 09/2018: Did not receive the report. Called and left a message. AD 11/28/2018: Called and spoke with Mr. Schlageter of Preferred requesting the report submission. He promised to send it shortly. AD 12/18/2018: Called and remained Mr. Schlageter regarding report. AD 01/31/2019: Received the following e-mail from Mr. Schlageter: Ms. Doronova: Attached is the quarterly GW Sampling Report you requested. Bill William J. Schlageter, NYS Licensed PG Vice President/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES NYS, NYC, PANY/NJ, New York City School Construction Authority-certified WBE 323 Merrick Avenue North Merrick, New York 11566 516 546 1100 fax 516 213 8213 Will review. AD 02/07/2019: Reviewed the report. The report is a summary of monitoring and quarterly sampling activities conducted by Preferred Environmental Services (Preferred) in October 2017 at the site. The Subject Property is currently a gasoline service station with two pump islands and an associated island canopy. NYSDEC Spill No. 94-10908 was assigned to the property on November 15, 1994 when petroleum related impacts were identified in soil and groundwater at the property. The October 2017 quarterly sampling event included the following: " Measurement for floating product, water table elevation, and well bottom depths; " Measurement of temperature, pH, conductivity, dissolved oxygen (DO), oxidation-reduction potential (ORP), turbidity, and purge water volumes (see Table 1); " Purging and sampling of four monitoring wells (designated as MW-1 through MW-4) and two injection wells (designated as IW-1 and IW-4); " Laboratory analysis of six (6) groundwater samples; and " Preparation of summary report including data summary and a potentiometric groundwater flow map. Depth to groundwater was measured between 7.78’

SPILL NUMBER 9107165 (Continued) **S106703575**

(MW-2) and 9.60' (IW-1) bgs. Groundwater flow at the site has historically been determined to have a westerly influence with both northwesterly and southwesterly flow vectors. The change in flow direction is likely attributed to a tidal influence in groundwater flow due to the proximity of the site to Newtown Creek. Groundwater flow in January of 2012, March of 2017 and October 2017 was determined to be primarily in the northern direction towards Newtown Creek. The consultant states that this flow direction indicates that the LukOil Gasoline Services Station located at 49-25 Van Dam Street is upgradient of the Subject Property. Numerous spills (9206855, 9411532, 0506824, 0505675, 0506088, 0513204, 0601896 and 0807157) have been reported at the LukOil property. Based upon groundwater flow direction, the Lukoil property is upgradient of the Subject Property and historic spills identified at this facility have the potential to be contributing petroleum impacts in groundwater at the Subject Property. GW sampling: During the October 2017 sampling, eleven (11) of the fourteen (14) on-site wells were observed to be free of floating product. One (1) well (E-4) was dry at 7.30 feet bgs. The remaining two (2) wells (IW-5 and IW-6) were unable to be gauged due to inaccessibility. It should be noted that prior monitoring events have documented free product in IW-6. Floating product was observed in IW-6 during historic monitoring events in February 2011 (0.49 ft.), October 2010 (0.06 ft), November 2010 (0.02 ft), and December 2010 (0.21 ft). Free product had also previously been detected in the E-4 well location, however, product removal activities has successfully mitigated the free product from all wells at the property. A total of six (6) (MW-1 through MW-4, IW-1, and IW-4) of the fourteen (14) on-site wells were selected for on-site sampling. The six (6) samples were analyzed by American Analytical Laboratories. The results were compared to NYSDEC Class GA Groundwater SGVs. gasoline-related VOCs were detected in all of the groundwater samples at concentrations exceeding NYSDEC SGVs. The highest concentration of TVOCs was detected in MW-3 at 1,339.38 ug/L and the lowest concentrations detected in MW-1 (45.59 ug/L). MW-3 is located cross-gradient of the tank farm and down-gradient of the LukOil Station to the south. Concentrations of BTEX detected in groundwater samples ranged from 12.20 ug/L in MW-1 to 922 ug/L in MW-3. MTBE ranged from 6.4 ug/L in IW-1 to 110 ug/L in MW-3. According to the consultant, the presence of elevated concentrations of BTEX and MTBE in MW-1 through MW-3, indicates that there is likely an off-site contribution to the groundwater impacts potentially originating from the LukOil facility at 49-25 Van Dam Street. October 2017 groundwater quality data was compared to the historic groundwater data developed for the property. To date, since the initiation of remedial activities at the Subject Property, TVOC concentrations have dropped by more than 90%. BTEX and MTBE concentrations have also significantly decreased across the Subject Property. This indicates that the oxygen emitters previously installed at the property, as well as natural bacteria present within the groundwater have historically and continue to (bacteria only) successfully mitigate the gasoline-related impacts according to the consultant. Based upon the results of the October 2017 Quarterly Groundwater Sampling event, Preferred offers the following: " Groundwater at the Subject Property remains impacted with gasoline-related VOCs at concentrations exceeding applicable Class GA SGVs; " Notable decrease in gasoline-related VOCs in groundwater across the Subject Property are a results of the successful

SPILL NUMBER 9107165 (Continued) **S106703575**

application of ReGenOx, and operation of the oxygen emitters; " Remaining impacts to groundwater, specifically those in MW-1 through MW-3, are likely in part attributed to an off-site source; and " Historic groundwater data indicate that residual gasoline-related impacts will continue attenuate naturally as bacteria present in the aquifer degrade petroleum compounds. Additional groundwater monitoring may be required to confirm compliant groundwater conditions. AD"

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Tank Info:

Tank Number:	024
Tank Id:	179052
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	E02 - Piping Secondary Containment - Vault (with Access)
	F00 - Pipe External Protection - None
	C00 - Pipe Location - No Piping
	A00 - Tank Internal Protection - None
	B01 - Tank External Protection - Painted/Asphalt Coating
	G11 - Tank Secondary Containment - Double-bottom (Aboveground)
	H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
	D00 - Pipe Type - No Piping
	I05 - Overfill - Vent Whistle
	J02 - Dispenser - Suction Dispenser
Tank Location:	Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type:	Stainless Steel Alloy
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	12/01/1998
Capacity Gallons:	250
Tightness Test Method:	NN
Date Test:	Not reported

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 10/10/95: This is additional information about material spilled from the translation of the old spill file: 14(550) TANKS C/SOIL. 12/10/96 MMM: TYREE PULLED TANKS, UPGRADED STATION AND DID INVESTIGATION. NO FREE PRODUCT LEFT ON GW. HIGH DISSOLVED BEING ADDRESSED WITH SVES SYSTEM. STIP RETURNED SIGNED.3/14/03 REASSIGNED FROM ROMMEL TO VOUGHT. 12/17/2003-Vought-See closed diesel spill #0106824 at same location. 3/19/04-Vought-File review by vought: Summary of Underground Tank Removals (Tyree Org)-April 1994. Tanks removed as part of station rebuild activities . A total of eighteen underground storage tanks were cleaned and removed from the site. Twelve were gasoline USTs, two were diesel USTs, one was waste oil and the remaining three are of unknown contents. Groundwater at ten feet below grade. A total of 625 tons of soil was removed from the excavation. Five endpoint soil samples were collected. Method 8021 was inadvertently ommitted from the analysis request . A soil vapor extraction trench was constructed along Van Dam street, two feet from the sidewalk so that the venting system would create a barrier for the potential migration of soi vapoprs based on the reported regional westerly groundwater flow . Four monitoring wells were installed as per DEC. One fuel oil tank remains to be removed and upon remova, one additional monitoring well will be installed. Soil analyticals from well installation show 7200ppb benzene(MW2), 72400ppb napthalene(MW-2), 1435000ppb xylene(W-2), 2490ppb benzene(MW-4), 10770ppb xylene(MW-4). Groundwater Monitoring Report (Tyree Org)-1-16/95. A one thousand(1000) gallon fuel oil tank was removed in June 1995. A monitoring well, MW-5, was installed at this location in August . No free product was encountered. The groundwater flow direction comes onto the site from the north and travels southerly. Once on site, the water flow turns a little to the south-southeasterly direction . Groundwater analyticals show 105ppb benzene(MW-1), 3260ppb benzene(MW-2) and 86400ppb MTBE(MW-2). Report recommends installation of upgradient well and performance of a soil vapor extraction test. Letter from DEC(Mulqueen) to Getty(Ochotorena)-6/26/95. Stipulation Agreement sent to Getty. Stipulation Agreement from Getty-6/30/95. Stipulation signed by Getty. Corrective Action Plan from Tyree-10/5/95. Summary of Underground Fuel Oil tank Removal Activities-January 1996. Removal of one (1000-gallon) fuel oil UST. Five endpoint soil samples were collected for analysis. A groundwater sample will have to be collected to determine if the groundwater is protected . The background soil sampling will be performed once the location is reviewed by the DEC and sidewalk opening permits are obtained . Three Geoprobe borings will be performed. This location is reported to be located in a former refinery . Soil analyticals show minor SVOC exceedences (646ppb benzo(a)anthracene, 595ppb benzo(a)pyrene).

GETTY # 00219 (Continued) **S105142547**

Quarterly Monitoring Reports from Tyree (October 1995 thru March 1996). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the south. Groundwater analyticals show 145ppb benzene(W-1), 4150ppb benzene(W-2), 5.19ppb xylene(W-3), 437ppb toluene(W-5). Remedial Action Plan (Tyree Org)-July 1996. The soil is intermixed with occasional charred material up to 6 inch in diameter and ashy soil located at the north end of the site . Soil venting pilot test performed on 4/18/96. The results of monitoring and the well survey indicate that groundwater on site flows predominantley west . The groundwater flow was previously incorrectly shown to flow southerly . Surrounding area is commercial. Pilot test results indicate that an approximate radius of infulence between 16 and 22 feet can be achieved with an applied cacuum of 34 to 53 inches . Since the contamination is minimal and localized no groundwater remediation is proposed at this time . Quarterly Monitoring Reports from Tyree (April 1996 thru March 1996). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the east-southeast. Groundwater analyticals show 146ppb benzene(W-1), 793ppb benzene(W-2) and 437ppb toluene(W-5). Quarterly Monitoring Reports from Tyree (March 1996 thru December 2000). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 17ppb benzene(W-1) and 4ppb benzene(W-2). Remedial activities described as none . Letter from Tyree to DEC(Rommmel)-6/15/01. Letter sent requesting removal of wells 3 and 4 from the monitoring/sampling regimen leaving wells 1,2 and 5. These changes will be effected as of July 1, 2001. If there are any objections to these changes, please notify us in writing . Quarterly Monitoring Reports from Tyree (March 2001 thru June 2001). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 30ppb benzene(W-1) and 24ppb benzene(W-2). Remedial activities described as none . Quarterly Monitoring Reports from Tyree (July 2001 thru September 2001). Three monitoring wells sampled. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 31ppb benzene(W-2). Remedial activities described as none . Historical Data Compilation (Tyree Org)-December 2001. Compilation including request for no further action. Quarterly Monitoring Reports from Tyree (January 2002 thru December 2003). Three monitoring wells sampled. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 43.3ppb benzene(W-1) and 63ppb MTBE(W-2). Remedial activities described as none . 3/23/04-Vought-DEC requires: 1)groundwater samples from downgradient locations of W-1 and W-2 2)submission of a soil and groundwater remediation plan. Vought sent letter with requirements on 3/23/04. 08/31/2005 - Feng - Project transferred from Vought to Feng. 10/20/2005 - Feng - Geoprobe Investigation Report by Tyree, dated November 29, 2004. on 11/10/2004 Tyree did two (2) groundwater sampling, B-1 and B-2, downgradient to W-1 and W-2, and four (4) soil samples, B-3 to B-6, in the vicinity of the former gasoline tankfield as per DEC Vought's letter on 3/23/2004. Groundwater analyticals show that some VOCs and SVOCs were slightly high and exceeded TAGM 4046. and soil samples collected from B-3 to B-6 show slightly high VOCs in B-3. Based on this report, Tyree recommended further remediation at this site is not necessary. groundwater monitoring wells be sampled on a quarterly basis and be monitored for natural attenuation . 10/18/2005 - Feng - Quarterly Monitoring Report, by Tyree, 4/2005 - 6/2005. 3 MWs onsite. downward trend in concentration. Groundwater flow in west direction. 90ppb BTEX and 20ppb MTBE in W-1. keep

GETTY # 00219 (Continued) **S105142547**

monitoring. 11/2/2005 - Feng - Quarterly Monitoring Report, by Tyree, 7/2005 - 9/2005. 3 MWs onsite. downward trend in concentration. Groundwater flow in west direction. W-1, increasing, 143ppb BTEX and 21ppb MTBE. W-2, 1 BTEX and 5 MTBE. W-3, 6 MTBE. 12/19/2005 - Feng - Quarterly Monitoring Report, by Tyree, 9/2005 - 11/2005. Active Lukoil gasoline retail/service station. 3 MWs onsite. downward trend in concentration. Groundwater flow in west direction. W-1, decreased and 68 ppb BTEX and 11 ppb MTBE. W-2, non-detected BTEX and 3 ppb MTBE. W-3, non-detected BTEX, 4 ppb MTBE. EFR on W-1, 0.01 gallon of gasoline has been removed. 05/25/06-Sun-Based on the Quarterly Monitoring Report, prepared by Tyree,dated April 6, 2006, Total BTEX ranged from Non-detect to 29 ppb, and MTBE concentrations ranged from 3 ppb to 9 ppb. No free product was detected in any monitoring wells. Based on these low concentrations of BTEX and MTBE and Sensitive Receptor Survey conducted for this site, the spill is closed and NFA letter will be issued. (Sun) "

Remarks: "REBUILDING STATION-SOIL WILL BE REMOVED & TRANSPORTED."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	3444
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

H02 - Tank Leak Detection - Interstitial - Manual Monitoring
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
K01 - Spill Prevention - Catch Basin
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
J02 - Dispenser - Suction Dispenser
I04 - Overfill - Product Level Gauge (A/G)
G01 - Tank Secondary Containment - Diking (Aboveground)
B05 - Tank External Protection - Jacketed

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:
Registry ID: 110000806478

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
Registry ID: 110019121038

Click Here:

Environmental Interest/Information System:
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"2/13/07 bf: sent ttf letter to: David Zuckermwise Ideal Trading Co., Inc. 38-01 Queens Blvd. Long Island City, NY 11101 3/7/07 received call from Mark Salamack of Petroleum Tank Cleaners. He was calling from the site. Owner was worried about fines since they exceeded timeframe in ttf letter. I told mark as long as work is proceeding, violations will not be issued. He expects work to be done by Friday 3/9/07. Whether work is done or not, he will send a letter regarding the progress or completion. The failure appears to be in the stick line. bf 3/9/07 received letter from Mark Salamack by fax. Dry leak. Failure was due to lines leading into the manhole cover. other problems being explored. When all problems are identified, repairs will be made. bf 3/14/07 Tank retested on 3/12/07 and failed. owner may take tank out of service. Spill#0613333. bf 4/16/07 Received letter from nathan Edeson, P.E. (718)878-7104. Ideal Trading had tank emptied and taken out of service. Property is in contract for sale. As part of buyer's due diligence, the exact nature of the tank failure and extent, if any, of of any petroleum contamination. Following the due diligence period, they will decide on closing or removing the tank and any contaminated soil that may be present. bf 5/29/07 Called Nathan Edeson for an update on the case. On May 31 and June 1, borings will be taken as part of the purchaser's Phase II. Study should be complete by July. Tank failure will be part of that study. bf 4/9/08 Sent fax to M. Salamack requesting closure letter. He is out of the office this week. bf 4/16/08 M. Salamack called and they are no longer working on the site. bf 1/22/10 PBS inspection. Issued NOV. bf 3/24/10 Held PBS administrative settlement conference. Submitted sampling results. As of now, results not reviewed. Mr. Edeson told me there were slight exceedances of STARS parameters. Will provide letter for conclusions within one week. bf 5/7/10 yesterday, letter for closure was hand delivered. Tank is still temporarlily out of service and has not passed a tightness test. Owner needs to either repair tank or close the tank. bf 12/01/10 Sampling showed an exceedances of benzo(a)pyrene for clean-up for industrial use found in DER-10 (2.91 ppm vs. 1.1 ppm). bf "
Remarks:	"Tank Test Failure. Dry portion leak... no give or let loose."

Hazardous Waste Summary:
Waste Code: D000
Waste Description: Not Defined

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D040
Waste Description: TRICHLORETHYLENE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED

FORMER LIBERTY BRASS TURNING CO (Continued) **1000192945**

IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: U228
Waste Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

BROWNFIELDS:

Name:	FORMER LIBERTY BRASS SITE - OFF-SITE
Address:	38-01 QUEENS BLVD
City,State,Zip:	LONG ISLAND CITY, NY 11101
Program:	BCP
Site Code:	535276
Acres:	Not reported
HW Code:	C241178A
SWIS:	4101
Town:	New York City
Record Added Date:	11/03/2016
Record Updated Date:	08/12/2019
Update By:	JCGRATHW
Site Description:	Location: This site is the off-site portion of the Former Liberty Brass BCP site# C241178. The site is located in an urban area in the Borough of Queens, Long Island City, New York. The site is approximately 0.52 acres and abuts both Queens Blvd and 38th Street. Site Features: Multiple lots with a mix of commercial and industrial land uses. The off-site area in the vicinity of the site is covered with pavement or buildings. Current Zoning and Land Uses: Properties in the immediate vicinity of the site are zoned M1-4, for light industrial use. Land use is commercial and manufacturing. Past Uses of the Site: The on-site parcel has a long history of manufacturing brass hardware parts. From 1970 until 2006 manufacturing of screw machine products and hardware occurred on the site. The manufacture of the brass spray tops for perfume bottles and metal plating was conducted on the site from 1917 to approximately 1950. The site was vacant prior to 1915. Off-site there is a health center to the west and previously a gasoline station bordering the site to the east. Other specific building uses are unknown at this time. Site Geology and Hydrogeology: The site is at an elevation of approximately 65 feet above mean sea level. Site topography is generally flat, with a very slight slope to the west. Bedrock on this site is 200 feet below ground surface (bgs). Several impermeable clay layers are found within the underlying sediments, generally creating three distinct aquifers. Soil beneath the site consists of several feet of fill material followed by native fine to course sands with silt and gravel. Intermittent clay layers were noted in the boring logs. Depth to groundwater is approximately 50 feet bgs and it flows to the northwest, toward the East River.
Env Problem:	Nature and Extent of Contamination: Due to soil vapor intrusion impact at the off-site area the remedial work plan consists only soil vapor intrusion study at two adjacent structures. There were five monitoring wells installed at the sidewalk as part of on-site investigation data from which also be considered as Off-site groundwater condition. Groundwater May 2019 data from three off-site monitoring wells reveals that TCE exceeded groundwater standards in all three wells and the concentrations ranged from 6.8 to 56 parts per billion (ppb). The groundwater standard for TCE is 5 ppb. Soil vapor and Indoor air Two sub-slab soil vapor and two indoor air samples were collected as part of off-site investigation from off-site structures. Detections were primarily TCE, with some related compounds (PCE, DCE) at much lower concentrations. In one of the

FORMER LIBERTY BRASS SITE - OFF-SITE (Continued) **S120706189**

	structures TCE concentrations in sub-slab and indoor air detected as 180 and 0.57 microgram per meter cube and in other structure 97 and 6 microgram per meter cube respectively. Based on the NYSDOH Matrix both structures need mitigation.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

BROWNFIELDS:

Name:	FORMER LIBERTY BRASS SITE
Address:	38-01 QUEENS BLVD
City,State,Zip:	LONG ISLAND CITY, NY 11101
Program:	BCP
Site Code:	513389
Acres:	0.517
HW Code:	C241178
SWIS:	4101
Town:	New York City
Record Added Date:	09/04/2015
Record Updated Date:	01/03/2020
Update By:	JCGRATHW
Site Description:	Location: The site is located in an urban area in the Borough of Queens, Long Island City, New York. The site is approximately 0.52 acres and abuts both Queens Blvd and 38th Street. Site Features: The site is currently vacant following the recent demolition of the on-site building. Concrete foundations, a 5000 gallon underground storage tank, and a 500 gallon underground storage tank remain on the site. Current Zoning and Land Use: The site is zoned M1-4, a manufacturing district. Surrounding land use is commercial and manufacturing. Past Use of the Site: The site has a long history of manufacturing brass hardware parts. From 1970 until 2006 manufacturing of screw machine products and hardware occurred on the site. The manufacture of the brass spray tops for perfume bottles and metal plating was conducted on the site from 1917 to approximately 1950. The site was vacant prior to 1915. Site Geology and Hydrogeology: The site is at an elevation of approximately 65 feet above mean sea level. Site topography is generally flat, with a very slight slope to the west. Bedrock on this site is 200 feet below ground surface (bgs). Several impermeable clay layers are found within the underlying sediments, generally creating three distinct aquifers. Soil beneath the site consists of several feet of fill material followed by native fine to course sands with silt and gravel. Intermittent clay layers were noted in the boring logs. Depth to groundwater is approximately 50 feet bgs and it flows to the northwest, toward the East River.
Env Problem:	Remediation is nearly complete for this Conditional Track 1 cleanup. The contaminants of concern were Trichloroethylene (TCE), Tetrachloroethylene (PCE) and cis-1,2-dichloroethylene (DCE). Currently, only TCE exceedances of cleanup objective are present on-site. The ongoing Conditional Track 1 remedy consists of soil vapor extraction and in-situ chemical oxidation for residual soil and groundwater contamination between 32 feet and 50 feet below ground surface (bgs) and a bioremediation reactive barrier to prevent volatile organic compounds from entering the site. The remaining TCE soil contamination ranges from 1.3 ppm (37’ bgs) to 2.3 ppm (32’ bgs). The Unrestricted Soil Cleanup Objective for TCE is 0.47 ppm. The remaining groundwater contamination of TCE ranges from 5.3 ppb to 6.8 ppb. The groundwater cleanup standard is 5 ppb for TCE. For soil vapor, an active sub slab depressurization system mitigates the remaining soil vapor contamination. The remedy must achieve Unrestricted Soil Cleanup and groundwater quality objectives by

FORMER LIBERTY BRASS SITE (Continued) **S118256198**

	December 2023 for the Applicant to maintain their Track 1 cleanup status.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

FINDS:
Registry ID: 110004356900

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	9533
Material Code:	0002
Common Name of Substance:	#4 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
K00 - Spill Prevention - None
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
F06 - Pipe External Protection - Wrapped
J02 - Dispenser - Suction Dispenser
L00 - Piping Leak Detection - None
G02 - Tank Secondary Containment - Vault (w/access)
I05 - Overfill - Vent Whistle

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel Tank in Concrete
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	08/01/1970
Capacity Gallons:	5000
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	MFLEONAR

Environmental Interest/Information System:
OSHA ESTABLISHMENT
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"02/13/2008-Ahmed-Talked to Mike Matri (Tel 732 750 6432, Cell 732 841 1377). There was a leak in the flex line under dispenser and has been shutdown by the contractor. The contractor will repair that on 02/14/2008 and Mike will notify us as soon as they repair the flex line and clean up the spilled gasoline in the secondary containment of the dispenser. After getting confirmation from Mike DEC will close the spill. 02/14/2008-Ahmed Hasan- Talk to Micheal Matri (732 841 1377). As per him the contractor repaired the flex line and the spilled gasoline was cleaned by absorbent pads from the secondary containment. This case is closed."
Remarks:	"LEAKING FLEX LINE- CONTRACTOR FOUND IT UNDER DISPENSER AND HAS BEEN SHUT DOWN AND REPAIRS AND CLEAN UP IN PROGRESS AND SPILL IS CONTAINED IN PAN"

DEC Memo:	"11/24/12 TJD T/C with Mike Matri @Hess. Leak from suction line in double wall pipe. Small volume of product drained to STP sump and was recovered. Alvin Petroleum responded to location for repairs. Crompco to follow for a line test. Station to reopen following passing test. 12/4/2012 Sangesland spoke to Mike Matri at Hess. He looked up the case and said Crompco checked the system and found 5 gal of gasoline in a STP sump. Primary wall of a double walled line failed. Line was replaced, gasoline cleaned and the system retested and passed. System was put back in service. "
Remarks:	"1113 THE CALLER STATED THE UNIT CAUSED A MINOR SPILL BUT CONTAINED. THE CLEAN UP IS IN PROGRESS BY ALVIN REMEDIATION."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 12/02/2003 Reassigned from Sangesland to Sun. 04/16/2004 File Update by Sun: -Tri-annual Report-October 2003 through January 2004, prepared by William Schaefer of GSC-Seven (7) monitoring wells were gauged and sampled on 01/17/04. No free product was detected in any of the monitoring wells. Groundwater depths ranged from 46.85 feet to 48.55 feet below grade. Groundwater flow direction was towards west. MW-6 had the highest BTEX concentration of 48,300 ug/l, including 6,900 ug/l for Benzene, 21,000 ug/l for Toluene, 3,300 ug/l for Ethylbenze, and 17,100 ug/l for total Xylenes. Concentrations of MTBE ranged from 18 ug/l(MW-4) to 11,000 ug/l (MW-6). A passive recovery bailer (PRB) is being utilized in MW-1 to recover free product. Per Michael Matri, the Project Manager of Hess in the letter to the Department dated March 20, 2003, Hess has complete a soil vapor extraction (SVE) pilot test and is evaluating the feasibility of SVE couped with in-situ air sparging technology for on-site remediation. Final remedial selection will be presented within a REmedial Action Plan (RAP) to be submitted to the Department for review and comment. 10/20/2005: Project reassigned from Sun to Andersen. Reviewed most recent Site Status Update Report dated 6/2/2005. Report indicates that an SVE-1 well was installed and has been used for groundwater monitoring since 10/4/2004, but is not currently being used for remediation. 10/24/2005: Stip mailed 10/24/05. 1/26/06: 1/25/06 meeting with Quantum, NYSDEC and GSC/Kleinfelder: GSC will foil the spills in the area. An RAP will be prepared. 3/1/06: Signed stipulation agreement, effective date 2/23/06. Investigation plan due 4/10/06. 4/10/06: Received and reviewed an investigation plan. Two wells were proprosed up-gradient. One additional downgradient well also required. 6/19/06: An air sparge pilot test has been re-scheduled for 6/22/06. 6/29/06: Meeting on 6/28/06 with Hess, NYSDEC, Quantum, EnviroTrac and GSC. An access agreement is in progress for off-site delineation. 6/30/06: Received a cc of a letter requesting access from Sunlight Diner to install an offsite well. 7/10/06: Reviewed a site status update report dated June 27, 2006. Groundwater sampled on May 4, 2006. Max BTEX 36,590 ppb (SVE-1), max MTBE 2,530 ppb (MW-5). Fluctuating contaminant concentrations. Delineation awaiting access. 7/17/06: Received email from Albert Tonn stating that Hess was denied access for delineation at Sunlight Diner. Sent letter to Sunlight Diner indicating access was required. 9/15/06: Access not granted for delineation. Refered to legal to get access. 10/3/06: Sent letter to Hess restating requirement of off-site wells on the sidewalk, in order for Hess to get permits from NYCDOT to drill on the sidewalk. 10/23/06: DEC attorney Urda spoke to attorney for Sunlight Diner. They are requesting $1,000 for access. Hess is considering it. A court order may be required. 11/9/06: Received email from Gail Helfrick: A revised access agreement has been prepared, and it is currently being reviewed by Hess' legal counsel. The access agreement will be sent to the property owner for his/her review in the near future. We will notify you when the agreement is sent to the property owner. 11/15/06: Received email from Gail Helfrick: The access agreement was sent to the property owner on Friday, November 10, 2006. Received cc of access agreement. 12/7/06: Reviewed triannual update report dated 11/22/06. Groundwater

HESS GAS STATION (Continued) **S102663166**

sampled on 9/18/06. Max BTEX 21,500 ppb (MW6), MTBE 2,260 ppb (MW1). Off-site delineation in progress. RAP required. Fluctuating gw concentrations. 12/29/06: Received a cc of an access agreement to Sunlight Diner indicating Hess will make a payment of $1000 for access. 1/17/07: Meeting on 1/16/07 with Hess, Delta, and NYSDEC. An access agreement is still in progress for off-site delineation at Sunlight Diner. SVE/AS pilot testing is planned following delineation. 4/17/07: Reviewed site status report. Two off site wells were installed to the west of the site. Both are impacted. Wells were resurveyed and groundwater flow direction is to the west. The site may be a high point, it is unclear what the flow direction is to the east of the site. Off site well is still required in the Sunlight Diner parking lot to the east of the site. Sent RAP required letter, due June 12, 2007. Wells were sampled on 1/25/07. Max BTEX 40,200 ppb (SVE1), max MTBE 1,900 ppb (SVE1). 7/27/07: Reviewed site status report. Sent RAP overdue letter. 10/17/07: Spoke to Tim Fisher. RAP in progress. 2/12/08: Reviewed July 2007 - October 2007 Site Status Report. Wells sampled on September 10, 2007. Max BTEX 23,400 ppb (MW6), max MTBE 1,000 ppb (MW6). BTEX present in off-site wells MW8 and MW9. RAP was not received. Case referred to DEC Urda for enforcement. 4/3/08 - Carlson: Reviewed Novemebr 2007 - February 2008 Site Status Report. Wells sampled on 1/16/08. Maximum BTEX concentration 21,000 ppb (MW6), maximum MTBE concentration 950 ppb (SVE1). RAP has not been submitted yet. 6/26/08 - Carlson: Reviewed Remedial Action Plan and Remedial Action Plan Addendum. The report proposes the installation of a Soil Vapor Extraction and Air Sparge System (SVE/AS). The proposed SVE/AS system will include six (6) SVE wells with a radius of influence of 45 feet, and eight (8) AS wells with a radius of influence of influence of 20 feet. Shallow and deep cluster SVE wells will be used at each SVE location. The air effluent will be discharge through a 30 ft stack. Following system startup, the system will undergo a 30-day test period where system maintenance and air effluent will be monitored. The necessity of off-gas treatment will be determined following this test period. System operation, maintenance, and monitoring will include monthly air-effluent monitoring with a PID, quarterly air effluent monitoring through laboratory analysis, triannual groundwater gauging and sampling, and triannual reporting. Four off-site groundwater monitoring wells are proposed along 38th Street. These wells do not provide cross-gradient delineation. Sent letter approving RAP, rejecting proposed delineation points and requiring 1) relocation of one of the proposed AS points so it is within the SVE ROI, 2) submittal of a startup report, and 3) submittal of a revised investigation plan. What is the status of delineation at Sunlight Diner? 8/7/08 - Carlson: Reviewed July 2008 Update Report. Wells sampled on 5/22/08. Maximum BTEX concentration 14,759 ppb (MW5). Maximum MTBE concentration 519 ppb (MW6). Three off-site well locations proposed. 8/25/08 - Carlson: Sent letter approving delineation workplan. Three wells were proposed. Received cc of access agreement sent from Hess to Citibank. 10/22/08 - Carlson: Meeting with Hess and Envirotrac. Investigation report and system startup due in February 2009. 11/24/08 - Carlson: Received email update from Ed Russo: the subsurface aspect of the SVE/AS system has been completed. All system components have been ordered and we will be fabricating the above-ground portion of the system in the coming weeks/months as we receive the equipment. Once completed, we will bring the system to the site for installation. CONED is working to

HESS GAS STATION (Continued) **S102663166**

provide us with power so that once the system has been delivered to the site, we can start it ASAP. Regarding offsite well installations, the well within the Jiffy Lube property has been installed and will be included in the quarterly sampling plan. We are waiting for access to the Citibank property and for a permit for the sidewalk well proposed along Queens Blvd before we can move forward with those installations. 12/1/08 - Carlson: Reviewed November 2008 Update Report. Wells sampled on 9/10/08. Fluctuating groundwater concentrations. Maximum BTEX concentration 44,985 ppb (MW2). Investigation report and system startup due in February 2009. 12/22/08 - Carlson: Received cc of access agreement with off-site owner. 12/23/08 - Carlson: Received email from Ed Russo. December sampling event postponed until January in order to include new wells. Report will follow two months after sampling. 2/25/09 - Carlson: Received notification that well installation scheduled for Sunday March 1st. 3/30/09 - Carlson: Meeting with Hess and Envirotrac. RIR deadline extended to June 2009. 4/8/09 - Carlson: Reviewed March 2009 Update Report. SVE/AS not operational yet. Two remaining off-site wells will be installed in first quarter 2009. Wells sampled 1/21/09. Maximum BTEX concentration 15,676 ppb (MW5). Received email from Ed Russo. Wells were installed. System is still being fabricated in their shop. 6/3/09 - Carlson: Reviewed June 2009 Update Report. SVE/AS system startup waiting for coned hookup. Two off-site wells were installed. MW12 is clean. MW11 showed some VOC impact in groundwater. 8/19/09 - Carlson: Meeting with Hess. They are still waiting for Coned hookup. 10/21/09 - Carlson: Reviewed September 2009 Update Report. Wells sampled on 7/8/09. Maximum BTEX concentration 27,420 ppb. SVE/AS system in stalled and waiting for Coned hookup. 11/9/09 - Carlson: Received email from Ed Russo. Coned asked them to reroute electical conduit before service can be installed. This will take several weeks. 1/8/2010 - Carlson: Reviewed December 2009 Update Report. Wells sampled 10/21/2009. Maximum BTEX concentration 21,717 ppb (MW5). Electrical conduit is being rerouted - requirement for Coned hookup for system. 1/27/2010 - Carlson: Meeting with Hess. 4/22/2010 - Carlson: Reviewed update report. Wells sampled on 1/13/2010. They are rerouting electical conduit in order to get Coned hookup. 5/25/2010 - Carlson: System startup scheduled for 6/8/2010. 7/13/2010 - Carlson: Reviewed update report. SVE/AS started for test period on 6/8/2010. Startup report to be submitted. 7/29/2010 - Carlson: Reviewed startup report. ROI are within design parametes, discharge is within guidance limits. Issued system operation approval letter. 8/31/11 - Obligado - I reviewed the 2Q11 update report. Maxixum BTEX is approximately 4800 ug/L in MW5. Benzene is below discharge limits. 9/11/2012 - 1Q2012, 6/29/2012, by EnviroTrac. The groundwater was sampled on 4/12/2012. DTW 45.92 to 47.98. Flows to southwest. NO LNAPL. MW-3, 1,025 BTEX, 2.8 MTBE. MW-11, 413.3 BTEX, 2.4 MTBE. SVE/CW-4, 2,095.3 BTEX, MTBE ND. MW-1, 66.9J BTEX, 0.22J MTBE. MW-6, 708.7 BTEX, 3.7 MTBE. SVE-1, 728.1 BTEX, 2.8 MTBE. SVE/AS operational. MW-11, 256 BTEX. MW-9, 38.5 BTEX. SVE/CW-100 71 BTEX. MW-7, 283.9 BTEX. MW-6, 228.2 BTEX. MW-1, 23.36 J BTEX. MW-5, 434.7 BTEX. SVE/CW-4, 147 BTEX. 6/5/2015 - Feng - Reviewed Work Plan for Spill Closure, dated 5/5/2015, by EnviroTrac. EnviroTrac proposes to install 11 soil borings to confirm the remedial cleanup efficiency. Approve the work plan. Approval letter to Hess/EnviroTrac. 9/23/2015 - 2Q2015, 6/17/2015. On 4/8/2015, gauged 17 wells and sampled 14 wells. DTW 46.68 to 48.48 feet bg. Flows to southwest. MW-11, 16.7 BTEX. SVE-1, 41.8 BTEX. MW-9, 13.8 BTEX. SVE/CW-100 17.6 BTEX. MW-7, 193.2 BTEX. MW-5, 676.5 BTEX. MW-6, 440.3 BTEX. MW-1, 52.5 BTEX. SVE/CW-4, 210.9 BTEX. 3Q2015, 9/23/2017. On 7/22-8/3/2015, post remedial soil sampling was conducted. On 7/31/2015, sampled 13 monitoring wells. DTW 46.32 to 48.85 feet. Flows to southwest. NO LNAPL. MW-3, 50.7 BTEX. SVE-1, 78.9 BTEX. SVE/CW-4, 38.9 BTEX. MW-6, 395.8 BTEX. MW-5, 121.9 BTEX. SVE/CW-100, 24.9 BTEX. MW-7, 15.8 BTEX. 12/28/2015 - 4Q2015, 12/23/2015. 10/8/2015 gauged 17 and sampled 14 monitoring wells. DTW 46.69 to 48.54 feet. Flows to southwest. MW-3, 99.7 BTEX. SVE-1, 183 BTEX. SVE/CW-4, 266.1 BTEX. MW-6, 331.8 BTEX. MW-1, 58.5 BTEX. MW-5, 1,022.5 BTEX. MW-7, 36.9 BTEX. 2/11/2016 Reviewed Request for Spill Closure, dated 10/16/2015, by EnviroTrac. Spill is closed based on: 1)Sources removal have been done. In June and July 1997, 54 tanks, i.e. (47) 550-gallon gasoline USTs, (3)

HESS GAS STATION (Continued) **S102663166**

4,000-gallon gasoline USTs, (2) 2,000-gallon gasoline USTs, (1) 4,000-gallon diesel UST, and (1) 550-gallon fuel oil UST. A total of 2,720 tons of soil were removed from the site. Endpoint samples were collected and showed soil contamination at 13 feet. 2)Delineation of soil contamination has been done. Soil borings/monitoring wells have been installed around the site to delineate soil contamination. Soil sampling show no significant elevated VOCs concentration at the soil borings/monitoring wells sidegraident/downgradient, i.e. MW-1, MW-5, MW-10, MW-11, MW-8, and MW-9. 3)Delineation of groundwater contamination has been completed. The groundwater flows consistently toward west/southwest. Downgradient monitoring wells, MW-8, MW-9 and MW-12. Monitoring data at these monitoring wells show either low VOCs concentrations or downward trend VOCs concentration. 4)Product recovery effort including EFR events were conducted from 8/2000 to 12/2004. These events have removed 410 gallons of water and 11 gallons of product. 5)SVE/AS system has been operational from 8/2010 to 11/2014. The system was shut down due to asymptotic conditions. 6)Post remediation soil sampling show no significant soil contamination at 11 soil borings. 7)As of 4th quarter 2015 monitoring data, overall groundwater concentration has shown low/downward trend in all the wells. The maximum BTEX was detected in MW-5 with 1,022.5 ug/L. 8)The site is still an active gasoline station. No plan to change the use of the site at the time of this spill closure. 9)Inclusion of remaining contamination language in the spill closure letter in case site is redeveloped. Spill is closed. Spill closure letter to Hess/EnviroTrac. "

Remarks: "during tank pull contaminated soil found"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Region:	2
DER Facility ID:	260182
DEC Memo:	"4/25/05 From O'Dowd Notes(KMF): 4/94 Part of new assessment, GT installed 3 MWs. Analyzed 1 soil sample from two borings and 3 GW results. The avg water table elevation is 16.52'bgs. SB-2 had less than 2.5ppb and SB-3 had less than 0.10ppb benzene. MW-1 had 14ppb, MW-2 had 56ppb and MW-3 had 3200ppb benzene. Sunoco will have to delineate better by installing more MWs. Car wash maybe influencing direction of GW flow. 12/10/2003 Reassigned from Tipple to Sun. 10/31/05: Project reassigned from Sun to Andersen. Reveiwed the biannual status report for January-June 2005. The SVE/AS system was shut down in 10/2004 at the request of the NYSDEC , and the report indicates that future activities include investigate and develop plan to address dissolved levels in areas of MW3 and MW4 . 12/9/05: December 8 meeting between Sunoco, NYSDEC, and EnviroTrac. Sunoco is working on a new remedial action plan to finish remediation. 3/9/06: Reviewed the 4th quarter 2005 monitoring report and a sensitive receptor survey and request for closure. Depth to water 50 ft. Max MTBE concentration 2900ppb in MW4. Max BTEX concentration 664ppb in MW-3. Request for closure denied. 5/2/06: Reviewed first quarterly

NEW YORK SERVICE STATION INC (Continued) **1001028280**

2006 report. Max BTEX 410ppb, max MTBE 2700 ppb. SVE shutoff. Sent letter requiring RAP by 7/2/06 for MW 3 and 4. 5/11/06: Received RAP. Pulsed operation of existing SVE system proposed. Quarterly reports will continue to be submitted. 5/17/06: RAP approved. 8/16/06: Reviewed April - June 2006 status report. SVE pulsed operation monthly. Groundwater sampled on June 26, 2006. BTEX hotspot MW3 not sampled because well was inaccessible. Max MTBE 1900 (MW4). Steady MTBE decline in MW4. 8/18/06: Meeting on 8/17/06 with Sunoco, NYSDEC, and EAR. 11/14/06: Reviewed project status report for July - September 2006. Groundwater sampled on September 12, 2006. Max BTEX 216 ppb (MW3), max benzene 140 ppb (MW3), max MTBE 960 ppb (MW4). Pulsed operation of SVE system in MW3 and MW4. Declining trend. 2/8/07: Spoke to Bill Schlageter, representing the future property owner. He expressed concern that Sunoco was no remediating the site in a timely matter. 2/20/07: Reviewed update report for July 2006 - September 2006. SVE and pulsed operation mobile sparge events in operation. Sent email requesting groundwater sampling be upgraded from biannual to quarterly. 3/23/07: Meeting on 3/22/07 with Sunoco, NYSDEC, and EAR. Overall downward trend. Sunoco may request system shutdown soon. 4/2/07: Received phone message from Bill Schlageter (917-715-0752). Tried to return call and the line was busy. 4/3/07: Called Bill Schlageter (917-715-0752) but the line was busy. 4/4/07: Spoke to Bill Schlageter. He wanted to check on status for property owner. 6/11/07: Reviewed update report. Monthly pulsed SVE and mobile air sparge. Quarterly sampling. Wells sampled on January 19, 2007. Max BTEX 1056 ppb (MW3), max MTBE 1400 ppb (MW4). Fluctuating concentrations in some wells. 10/12/07: Emailed Russell Hammond regarding overdue report. 10/16/07: Received email from Russell Hammond. Report will be submitted by the end of this week. 3/18/08: Reviewed October 2007 - December 2007 project status report. The SVE system was shut down on August 22, 2007 due to low recovery rates. Wells gauged and sampled on 10/08/07. Maximum BTEX concentration 1943 ppb (MW3). Maximum MTBE concentration 1900 ppb (MW4). Another Remedial Action Plan may be necessary. 5/15/08 - Carlson: Reviewed January 2008 - March 2008 project status report. Wells sampled on 1/18/08. Max BTEX concentration 1352 ppb (MW3), maximum MTBE concentration 1600 ppb (MW4). MNA. 9/4/08- Carlson: Reviewed April - June 2008 Project Status Report. Wells sampled on 4/28/08. Maximum BTEX concentration 1,384 ppb (MW3). Maximum MTBE concentration 1,500 ppb (MW4). MNA does not appear to be effective. 9/29/08 - Carlson: Meeting with Russell Hammond of Sunoco and Karen Waryas of EAR. Delineation workplan due by 10/30/08. 11/5/08 - Carlson: Received extension request to submit delineation workplan by 11/14/08. Approved request. 11/26/08 - Carlson: Received workplan. Proposed well locations are along 38th street and far from the site. Requested revised workplan with wells approximately 40 ft N of MW 4 and 40 ft west of MW3. 12/17/08 - Carlson: Received email from Karen Waryas: The location to the north of MW-4 would not be accessible as the area behind the station building is used as part of the car wash. A technician will be out there this week to determine if there is anywhere else onsite/closer to the site that would be appropriate. I will get back to you as soon as we have a better idea. 12/22/08 - Carlson: Reviewed July 2008 - September 2008 Project Status Report. Wells sampled on 7/23/08. Maximum BTEX concentration 449 ppb (MW3), maximum MTBE concentration 1,500 ppb (MW4). 1/28/09 - Carlson: Reviewed October - December 2008 Update Report. Wells sampled on 10/10/08. Maximum BTEX concentration 693 ppb (MW3). Maximum MTBE

NEW YORK SERVICE STATION INC (Continued) **1001028280**

concentration 1,500 ppb (MW4). Revised delineation workplan is overdue. 1/29/09 - Carlson: Meeting with Sunoco and EAR. Revised workplan due 2/28/09. 3/13/09 - Carlson: Approved revised workplan for installation of two monitoring wells. Workplan notes that on-site access agreement requires that well installation take place when the car wash is not in service (on a rainy day). 5/22/09 - Carlson: Reviewed January 2009 - March 2009 Update Report. Wells sampled on 1/14/09. Maximum BTEX concetration 263 ppb (MW3). Maximum MTBE concentration 1,400 ppb (MW4). 6/1/09 - Carlson: Meeting held with Sunoco and EAR. Investigation report submission deadline extended to 7/15/09. 12/3/09 - Carlson: Reviewed update report. Off-site well mw6 was installed. On-site well MW7 was not installed yet; Boring log and soil sampling data for MW6 is attached in Appendix B. 12/8/2010 - Carlson: Meeting with Sunoco. On-site well installed, info in next quarterly report. 3/19/2010 - Carlson: Reviewed October 2009 - December 2009 update report. Groundwater sampling data for new wells MW6 and MW7 is included, but boring logs and soil sampling data is not included. Will this be provided in a separate report - investigation report overdue. 4/6/2010 - Carlson: Meeting with Sunoco. Requested work plan for RAWP or delineation at deeper depths. 6/30/2010 - Carlson: Reviewed first quarter 2010 update report. Emailed Jamie Brown - please submit/resubmit soil boring log and analytical for installation of MW7. 7/1/2010 - Carlson: Received revised 4th quarter 2009 update report with MW7 boring and soil analytical data. 7/2/2010 - Carlson: Issued letter requiring RAWP to treat remaining soil and groundwater impact. Due 8/2/2010. 7/6/2010 - Carlson: Reviewed workplan for installation of a multi level well (4 sampling depths). Sent email - revised work plan required with modified construction design to include bentonite layers in annular space between screened sampling points, revision due in 30 days. 8/19/2010 - Carlson: Received revised work plan for installation of a multi level well. four screened intervals with bentonite seals between the intervals. Issued approval letter. 9/1/2010 - Carlson: Reviewed April 2010 to June 2010 Project Status Report. 9/21/2010 - Carlson: Spoke to Jamie Brown (EAR) tank and dispenser island will be removed - NYSDEC will be notified, multi level well installation postponed. 11/5/2010 - Obligado - I reviewed a work plan to remove USTs and install a multi level well. I approved the plan. 2/22/11 - Obligado - I reviewed the 4th Quarter 2010 monitoring report. 4 USTs were removed in NOvember 2010. A Closure report will be submitted. Ground water samples were collected in October. Max BTEX was 1300 ug/L in MW7. 960 ug/L MTBE found in MW4. 3/22/11 - Obligado - I reviewed the UST Removal Report. Three 4000 gallon USTs were removed and one 1000 gallon waste oil UST were removed. The tanks were reportedly in good condition. Photodocumentaiton confirms condition of tanks. Endpoint samples were below Soil Cleanup criteria. Waste manifests were included. 4 tons of soil were removed. 12/1/2011 - Carlson: Reviewed 2nd and 3rd quarter update reports. USTs removed and site excavated in 11/2010. Multi level well installed on 4/19/11 in former UST area. Groundwater impact remains above standard in several wells. 2/9/2012 - Carlson: Reviewed 4th Quarter 2011 Update Report. Wells sampled on 11/18/11. Low level BTEX and MTBE remain in several wells. Additional remedial action may be required. 7/3/2012 - Sarah got a call from Nahum Kedem from Athenica Environmental Service, 718-784-7490. He is hired by the property owner. Called him and left a message telling him the change of project manager for this stie. 7/5/2012 - spoke with Nahum Kedem of Athenica Environmental.

NEW YORK SERVICE STATION INC (Continued) **1001028280**

They represent the owner of the property. The owner wants to develop the site asap, but no solid plan or schedule yet. They want to start with current status of the site first and then the plan of the development. Advise him to do FOIL and give him the FOIL unit's contact information. 11/23/2012 - 3Q2012, 10/2012, by CGE. The groundwater was sampled on August 21, 2012. DTW 46.56 (MW-3 and MW-6) to 50.77 (MW-1). NO LNAPL. MW-4, 1.6 BTEX, 850 MTBE. MW-7, 1,288 BTEX, less than 51 MTBE. MW-3, 234 BTEX, less than 21 MTBE. MW-2, 1.7 BTEX, 590 MTBE. MW-8A, 431 BTEX, 360 MTBE. MW-8B, 12 BTEX, 700 MTBE. MW-8C, 2.9 BTEX, 480 MTBE. MW-8D, 21 BTEX, 550 MTBE. 4/5/2013 - 4Q2012, 1/9/2012, by CGE. The groundwater was sampled on 11/12/2012. DTW 46.84 (MW-3) to 51.04 (MW-1). NO LNAPL. CGE plan to monitor the site on a semi-annual basis in 2013. The next sampling will be in 5/2013. MW-2, 820 MTBE. MW-3, 23 BTEX. MW-4, 1,200 MTBE. MW-7, 1,607 BTEX. MW-8A, 326 BTEX, 410 MTBE. MW-8B, 11 BTEX, 1,000 MTBE. MW-8C, 10 BTEX, 1,100 MTBE. MW-8D, 26 BTEX, 510 MTBE. 7/26/2013 - 1Q2013, 4/2013, by CGE. The monitoring was done on 3/27/2013. DTW 47.11 (MW-6) to 51.38 (MW-1). MW-4, BTEX ND, 940 MTBE. MW-7, 520 BTEX, less than 42 MTBE. MW-2, 1.8 BTEX, 660 MTBE. MW-3, 11.7 BTEX, less than 16 MTBE. MW-8A, 369 BTEX, 350 MTBE. MW-8B, 101 BTEX, 620 MTBE. MW-8C, 1.0 BTEX, 190 MTBE. MW-8D, 9.8 BTEX, 170 MTBE. Plan to monitor the site on a semi-annul basis during 2013. 06/27/2014: This spill case was transferred to A. Doronova. - AD 08/05/2014: Sent the following e-mail to Sunoco contact - Russell Hammond (e-mail: rhammond@sunocoinc.com) and copied to Anthony Fiorentine (afiorentine@cg-env.com): Dear Mr. Hammond: My name is Ainura Doronova. I am a NYSDEC project manager for the following spill cases, which were recently transferred to me: 1. Spill No. 1011266, 550 Humbolt Street, Brooklyn; 2. Spill No. 0913725, 1626 Steelwell Avenue, Brooklyn; 3. Spill No. 0809869, 42-02 21st Streeet, Queens; 4. Spill No. 0708451, 972 Remsen Avenue, Brooklyn; 5. Spill No. 0502868, 1781 Bay Ridge Parkway, Brooklyn; 6. Spill No. 0407558, 5 Flatbush Avenue, Brooklyn; 7. Spill No. 0304033, 805 65th Street, Brooklyn; 8. Spill No. 9909665, 175-33, Horace Harding Expressway, Queens; 9. Spill No. 9900619, 1650 Forest Avenue, Staten Island; 10. Spill No. 9808686, 188-06 Hillside Avenue, Queens; 11. Spill No. 9711173, 2310 Tillotson Avenue, Bronx; 12. Spill No. 9609282, 1781 Arthur Kill Rd., Staten Island; 13. Spill No. 9501327, 2701 Knapp Stret, Brooklyn; 14. Spill No. 8905358, 32-32 Queens Boulevard, New York; 15. Spill No. 8904831, 38-15 Queens Boulevard, Queens; 16. Spill No. 8904151, 161-15 46th Avenue, New York; 17. Spill No. 8808987, 135-45 Cross Bay Boulevard, Queens; 18. Spill No. 8706272. 2052 Victory Boulevard, Staten Island. From now on, please submit all your future documentation (letters, reports, work plans, RAPs) related to these spill cases to my attention. Please note, that you should submit one hard copy of the document (report/work plan) and e-copy on a CD by regular mail. Please, do not submit large size documents via e-mail, since we have limited storage capacity, so it should be used only for correspondence. Feel free to contact me if you have any questions. Thank you. Sincerely, Ainura Doronova Environmental Engineer 1 Division of Environmental Remediation NYS Department of Environmental Conservation Region 2 (718) 482-6453 AD 02/2015: Contacted Mr. Fiorentine regarding general sites meeting. Requested list of the Sunoco sites managed by Clean Globe Env. AD 03/20/2015: Received the following response from Mr. Fiorentine: Hello Ms. Doronova, Clean Globe Environmental is currently responsible for the following 11 Sunoco spill sites: " 2319 Tillotson

Avenue, Bronx " 32 Highland Boulevard, Brooklyn " 805 65th Street, Brooklyn " 1781 Bay Ridge Parkway, Brooklyn " 161-15 46th Avenue, Flushing " 38-15 Queens Boulevard, Long Island City " 32-32 Queens Boulevard, Long Island City " 135-45 Cross Bay Boulevard, Ozone Park " 1650 Forest Avenue, Staten Island " 1781 Arthur Kill Road, Staten Island " 2052 Victory Boulevard, Staten Island Let me know if you have any dates that are free so that we may set up a meeting to review the status of these sites. Thank you , Tony Fiorentine Anthony M. Fiorentine / Principal / CGE / P.O. Box 446, Kings Park, NY 11754 (631) 338-4170 mobile / (888) 454-5923 office & fax / afiorentine@cg-env.com 03/24/2015: The meeting is scheduled for April 23, 2015. AD 04/23/2015: DEC met with a Sunoco representative - Russel Hummond and Sunoco s consultants: Tony Fiorentino of Clean Globe Env. (CGE), and Todd Painter of Environmental assesment and Remediation (EAR) to discuss the current status of each site, go over historical monitoring and recovery data, and discuss further actions to help expedite closure of the spills. DEC received updated remedial progress and monitoring reports. High-priority sites and potential spill closure candidates were discussed. Sunoco s consultants reported overall progress in reducing BTEX levels in soil and groundwater at the sites. It was agreed that reports recommending spill closure will be prepared for several sites. - A Site Status Report for a period from October through December 2014 was submitted to DEC on this meeting. Will review AD 06/10/2015: Reviewed the report. It states that there are eight wells MW-1 through 8. MW-8 is a nested well cluster with four (4) screened intervals (MW-8A, 8B, 8C, and 8D). Liquid phase hydrocarbons (LPH) have not been detected in any of the wells since monitoring began in April 1994. The average depth to water was 48.89 feet and ranged from 46.98 feet (MW-6) to 51.25 (MW-1) ft. below the top of the well casing on November 18, 2014. Eleven (11) groundwater samples were collected (MW-1 through MW-8D) on November 18, 2014. Samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tertbutyl ether (MTBE) via EPA method 602. During the November 18th sampling event, BTEX concentrations ranged from ND (MW-1, 5, and 6) to 25.7 micrograms per liter (ug/L) (MW-3). MTBE concentrations ranged from below detection limit (MW-3, 5, 6, and 7) to 830 ug/L (MW-4). Quarterly groundwater monitoring will continue at the site. AD 08/04/2015: Received a first quarter 2015 report. Will review. AD 09/03/2015: Received a second quarter 2015 report. Will review. AD 09/08/2015: Reviewed 1st quarter 2015 monitoring report. The report states that there are eight wells MW-1 through 8. MW-8 is a nested well cluster with four (4) screened intervals (MW-8A, 8B, 8C, and 8D). No free product was detected for the reporting period in any of the site wells. Liquid phase hydrocarbons (LPH) have not been detected in any of the wells since monitoring began in April 1994. The average depth to water was 48.49 feet and ranged from 46.85 feet (MW-3) to 50.06 (MW-7) ft. below the top of the well casing on February 24, 2015. GW sampling: Ten (10) groundwater samples were collected (MW-2 through MW-8D) on February 24, 2015. Samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tert-butyl ether (MTBE) via EPA method 602. GW data: During the February 24th sampling event, BTEX concentrations ranged from ND (MW-5 and 6) to 279.9 micrograms per liter (ug/L) (MW-8A). MTBE concentrations ranged from below detection limit (MW-3, 5, 6, and 7) to 950 ug/L (MW-4). CGE will continue monitor and sample the groundwater at the site on a quarterly basis. AD 10/15/2015: Reviewed

NEW YORK SERVICE STATION INC (Continued) **1001028280**

second quarter 2015 monitoring report. The report states that there are eight wells MW-1 through 8 at the site. MW-8 is a nested well cluster with four (4) screened intervals (MW-8A, 8B, 8C, and 8D). No free product was detected for the reporting period in any of the site wells. Liquid phase hydrocarbons (LPH) have not been detected in any of the wells since monitoring began in April 1994. The average depth to water was 48.52 feet and ranged from 46.85 feet (MW-6) to 51.06 (MW-1) ft. below the top of the well casing on May 11, 2015. GW sampling: Ten (10) groundwater samples were collected (MW-2 through MW-8D) on May 15, 2015. Samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tert-butyl ether (MTBE) via EPA method 8260. GW data: During the may 15th sampling event, BTEX concentrations ranged from ND (MW-1, 2, 5, and 6) to 210 micrograms per liter (ug/L) (MW-8A). MTBE concentrations ranged from below detection limit (MW-1, 3, 5) to 990 ug/L (MW-4) which is a slight increase comparing to the previous sampling data (910 ug/L). CGE will continue monitor and sample the groundwater at the site on a quarterly basis. AD 03/10/2016: Received third and fourth quarters 2015 reports. Will review. AD 04/12/2016: Reviewed third quarter 2015 monitoring report. The report states that there are eight wells MW-1 through 8. MW-8 is a nested well cluster with four (4) screened intervals (MW-8A, 8B, 8C, and 8D). No free product was detected for the reporting period in any of the site wells. Liquid phase hydrocarbons (LPH) have not been detected in any of the wells since monitoring began in April 1994. The average depth to water was 49.06 feet and ranged from 46.82 feet (MW-6) to 51.15 (MW-1) ft. below the top of the well casing on August 6, 2015. GW sampling: Ten (10) groundwater samples were collected (MW-1, MW-3 through MW-6, and MW-8A - MW-8D) on August 6, 2015. Samples were analyzed for BTEX and MTBE via EPA Method 602. MW-2 was blocked by a large planter and was not sampled. GW data: During the August 6th sampling event, BTEX concentrations ranged from below method detection limit (MW-1, 5, 6, 8C, and 8D) to 140.3 micrograms per liter (ug/L) (MW-8A). MTBE concentrations ranged from below detection limit (MW-1, 3, 5, 6, 8C, and 8D) to 830 ug/L (MW-4). Sensitive receptors: The area use is mainly commercial with residential apartments off of Queens Boulevard above the stores. The closest residential apartments are located over 500 feet to the East. The closest body of water is Newtown Creek which is approximately 2,500 feet to the Southwest. Groundwater flow may be influenced by the onsite well for car washing purposes. Conclusions: Groundwater conditions at the site continue to improve. Based on the decreasing trend of BTEX and MTBE no remedial action work is proposed. Attempts will be made to access and sample MW-2. If the results of groundwater sampling are favorable, a closure of the spill number may be requested in 2016. CGE plans to continue monitoring the groundwater at the site. The next scheduled groundwater sampling event will take place in November 2015. AD 04/26/2016: Reviewed fourth quarter 2015 monitoring report. The report states that there are eight wells MW-1 through 8. MW-8 is a nested well cluster with four (4) screened intervals (MW-8A, 8B, 8C, and 8D). No free product was detected for the reporting period in any of the site wells. Liquid phase hydrocarbons (LPH) have not been detected in any of the wells since monitoring began in April 1994. The average depth to water was 49.16 feet and ranged from 47.16 feet (MW-3) to 51.64 (MW-1) ft. below the top of the well casing on October 21, 2015. GW sampling: Eleven (11) groundwater samples were collected (MW-1, MW-3 through MW-6, and MW-8A - MW-8D) on October 21,

NEW YORK SERVICE STATION INC (Continued) **1001028280**

2015. Samples were analyzed for BTEX and MTBE via EPA Method 602. GW data: During the October 21st sampling event, BTEX concentrations ranged from below method detection limit (MW-1, 2, 5, 6, and 8D) to 441.1 micrograms per liter (ug/L) (MW-8A). MTBE concentrations ranged from below detection limit (MW-1, 3, and 7) to 850 ug/L (MW-4). Conclusions and recommendations: Groundwater conditions at the site continue to improve. Based on the decreasing trend of BTEX and MTBE no remedial action work is proposed. Groundwater sampling will continue on a quarterly basis in 2016. CGE plans to continue monitoring the groundwater at the site. The next scheduled groundwater sampling event will take place in February 2016. AD 10/14/2016: Received the following e-mail from Mr. Fiorentino: Hello Ainura, I wanted to send you the reports for 38-15 Queens Blvd. We have been monitoring the site on a quarterly basis for several years. The property was being used as a car wash and recently has been shut down completely. The current owner is trying to sell the property and would like to know the status of the spill number. It looks like the recent data shows that the BTEX is very low and in most cases below the detection limits. MTBE is present in some of the wells but the total VOCs on the CP-51 list is below 1,000 for all the wells. Let me know if you think we could close this spill based on the current data. Thanks, Tony Anthony M. Fiorentine / Principal / CGE / P.O. Box 446, Kings Park, NY 11754 (631) 338-4170 mobile / (888) 454-5923 office & fax / afiorentine@cg-env.com www.cleanglobeenvironmental.com Will review. AD 11/18/2016: Reviewed the 1st quarter 2016 report. It states that there are eight wells MW-1 through 8 at the site. MW-8 is a nested well cluster with four (4) screened intervals (MW-8A, 8B, 8C, and 8D). No free product was detected for the reporting period in any of the site wells. Liquid phase hydrocarbons (LPH) have not been detected in any of the wells since monitoring began in April 1994. The average depth to water was 49.17 feet and ranged from 39.82 feet (MW-3) to 52.94 (MW-1) ft. below the top of the well casing on March 1, 2016. Eleven (11) groundwater samples were collected (MW-1 through MW-7, and MW-8A - MW-8D) on March 1, 2016. Samples were analyzed for BTEX and MTBE via EPA Method 602. During the March 1st sampling event, BTEX concentrations ranged from below method detection limit (MW-1, 2, 5, 6, and 8D) to 145.6 micrograms per liter (ug/L) (MW-8A). MTBE concentrations ranged from below detection limit (MW-3, 7, and 8D) to 710 ug/L (MW-4). Neighborhood: The area use is mainly commercial with residential apartments off of Queens Boulevard above the stores. The closest residential apartments are located over 500 feet to the East. The closest body of water is Newtown Creek which is approximately 2,500 feet to the Southwest. Groundwater flow may be influenced by the onsite well for car washing purposes. According to the consultant, groundwater conditions at the site continue to improve. Based on the decreasing trend of BTEX and MTBE no remedial action work is proposed. Groundwater sampling will continue on a quarterly basis in 2016. AD 11/25/2016: Reviewed the 2nd quarter 2016 report. It states that there are eight wells MW-1 through 8 at the site. MW-8 is a nested well cluster with four (4) screened intervals (MW-8A, 8B, 8C, and 8D). No free product was detected for the reporting period in any of the site wells. Liquid phase hydrocarbons (LPH) have not been detected in any of the wells since monitoring began in April 1994. The average depth to water was 50.16 feet and ranged from 47.21 feet (MW-3) to 53.28 (MW-1) ft. below the top of the well casing on May 4th, 2016. GW sampling: Eleven (11) groundwater samples were collected (MW-1 through MW-7, and MW-8A -

NEW YORK SERVICE STATION INC (Continued) **1001028280**

MW-8D) on May 4th, 2016. Samples were analyzed for BTEX and MTBE via EPA Method 602. During the May 4th sampling event, BTEX concentrations ranged from below method detection limit (MW-1, 2, 3, 4, 5, 6, 7, 8A and 8D) to 11.2 micrograms per liter (ug/L) (MW-8C). MTBE concentrations ranged from below detection limit (MW-3, 7, 8A, and 8D) to 570 ug/L (MW-2). Groundwater conditions at the site continue to improve. Based on the decreasing trend of BTEX and MTBE no remedial action work is proposed. Groundwater sampling will continue on a quarterly basis in 2016. AD 12/02/2016: Reviewed the 3rd quarter 2016 report. It states that there are eight wells MW-1 through 8 at the site. MW-8 is a nested well cluster with four (4) screened intervals (MW-8A, 8B, 8C, and 8D). No free product was detected for the reporting period in any of the site wells. Liquid phase hydrocarbons (LPH) have not been detected in any of the wells since monitoring began in April 1994. The average depth to water was 50.56 feet and ranged from 48.04 feet (MW-3) to 53.74 (MW-1) ft. below the top of the well casing on August 16, 2016. Ten (10) groundwater samples were collected (MW-1 through MW-3, MW-5 through MW-7, and MW-8A through MW-8D) on August 16, 2016. Samples were analyzed for volatile organic compounds on the CP-51 list via EPA Method 8260. During the August 16th sampling event, BTEX concentrations ranged from below method detection limit (MW-1, 2, 5, 6, and 8D) to 122 micrograms per liter (ug/L) (MW-7). MTBE concentrations ranged from below detection limit (MW-3, 7, and 8D) to 500 ug/L (MW-2). The area use is mainly commercial with residential apartments off of Queens Boulevard above the stores. The closest residential apartments are located over 500 feet to the East. The closest body of water is Newtown Creek which is approximately 2,500 feet to the Southwest. Groundwater flow may be influenced by the onsite well for car washing purposes. Groundwater conditions at the site continue to improve. Based on the decreasing trend of BTEX and MTBE no remedial action work is proposed. Groundwater sampling will continue on a quarterly basis in 2016 or until the spill number is closed. MTBE levels are still moderate at 500ppb in MW-2. AD 04/12/2017: Received an e-mail from K. Patel of DER: Hello This morning, we received a report of finding contaminated soil during excavation at site 38-01 Queens Blvd (BCP #: C241178, spill #: 1700380). As per PW Grosser, contaminated soil caved into excavation from the next door property (38-15 Queens Blvd) due to soil erosion. PW Grosser has backfilled the hole and has stopped working in this area. Construction crew has reported petroleum staining and odors in the soil from underneath the neighboring property which is under remediation (spill #: 8904831). Spill case # 1700380 has been closed and referred to spill #: 8904831. Thanks Hiralkumar Patel Called and spoke with Tony Fiorentine. Asked him to send someone to check on the site and get back to DEC with an update. Called and left a message to Richard Camp of PW Grosser, who works on the neighboring site. Gave his contact info to Mr. Fiorentine. Later in the day received a phone call from Mr. Camp. He told me that soil contamination was found during underpinning process at the depth of 6 to 7 feet. The soil was mixed with water. Called and talked with Tony Fiorentine. He spoke with PW Grosser's staff and was told that the soil contamination was localized and PID readings were at 20ppm, which is not high. They suspect that the water is rain water, since the depth to GW at the site is 50' bgs. Tony will send his staff to the site to check on the contamination. Requested to take pictures and to update DEC on the results of the site inspection. AD 04/20/2017: DEC had an annual

NEW YORK SERVICE STATION INC (Continued) **1001028280**

meeting with a Sunoco representative and their consultants to discuss remedial progress at each site. High-priority sites and three potential spill closure candidates were discussed. Plans for additional investigation and/or remediation were discussed for priority sites with persistently high levels of contamination, and it was agreed that work plans will be submitted to DEC for review and approval within the next few months. Remediation and monitoring of these sites will continue on a regular basis. AD 11/28/2017: Received the following e-mil from Mr. Fiorentine: Hi Ainura, I have attached a letter requesting closure of the spill number associated with the former Sunoco gasoline station at the above subject site. We have investigated the stained soils that were discovered adjacent to the gas station and believe that they were not impacted with petroleum. Let me know if you require any additional information in order to close this spill. Thanks, Tony Anthony M. Fiorentine / Principal / CGE / P.O. Box 446, Kings Park, NY 11754 (631) 338-4170 mobile / (888) 454-5923 office & fax / afiorentine@cg-env.com Will review. AD 01/11/2018: Reviewed the submitted report. It states that the site conditions have continued to improve and all wells have had total volatile organic concentrations consistently well below 1,000 ug/L. CGE has completed the investigation of stained soils that were discovered during the ongoing construction project adjacent to the property, to the west along Queens Blvd., and concluded that the stained soils were not associated with Sunoco or past operations of the gasoline station or the repair shop. Additionally, based on discussions with the environmental consultant for the construction project and PID readings collected in the field, there is no evidence that the stained soils were impacted with petroleum. CGE offers the following explanation of the discovery of the stained soils and the source: On April 12, 2017, Clean Globe Environmental LLC (CGE) was notified by the New York State Department of Environmental Conservation (NYSDEC), and PW Grosser Corporation (PWGC) of the discovery of stained soil adjacent to the Former Sunoco Service Station located at 38-15 Queens Blvd. Long Island City, NY. The stained soil was discovered during ongoing construction activities of the adjacent property to the west along Queens Blvd. PWGC took photographs of the stained soil (see attachment). Two yards of stained soil was segregated and placed in a plastic lined wooden container by PWGC. The stained soil was screened using a Photo Ionization Detector (PID), and resulted in a reading of approximately 20 ppm. The segregated soil was eventually combined with other excavated soil and disposed of by PWGC after receiving permission from their NYSDEC contact. On August 3, 2017, Mr. Russell Hammond from Sunoco, Inc. and Mr. Anthony Fiorentine from CGE visited the site to inspect the area where the stained soils were located. Mr. Hammond and Mr. Fiorentine spoke to the Manager of United Management Group, Manny Ganz. The three inspected the area inside the car wash to compare the area where the stained soils were found with the interior of the car wash. It was evident from the location, that the stained soils are in the same vicinity as two buried water recycling tanks. The tanks capture water from the car wash operation where it can be reused. Based on the observations from the August 3rd site visit, and the discussions with PWGC it is evident that the stained soils are not associated with Sunoco and or past operation of the gasoline station or repair shop. It is also evident that the soil was not impacted with petroleum and was discolored by soap and grime from car washing operations. Based on the current groundwater conditions,

NEW YORK SERVICE STATION INC (Continued) **1001028280**

CGE is requesting that the spill number associated with the former Sunoco service station be closed. Will discuss closure request with J. Kolleeny of DEC. AD 01/17/2018: Called and spoke with Mr. Fiorentine regarding most recent sampling event. He said that it was in January of 2017. Told him that the closure request will be discussed with J. Kolleeny and that he needs to be ready to sample the wells if necessary. AD 01/18/2018: Discussed the closure request with J. Kolleeny. It was agreed that since most recent GW data is one year old, new sampling round should be done to obtain current situation with GW. Called and spoke with Mr. Fiorentine. Requested to sample wells with elevated levels of VOCs. AD 02/21/2018: Received the following e-mail from Mr. Fiorentine: Hi Ainura, Attached please find the report for the former Sunoco site. As we previously discussed, we collected the additional groundwater samples to see if the concentrations were consistent with past results. Of the 5 samples we collected 4 of them went down and 1 went up slightly. Please consider closing this spill based on the data. Thanks, Tony Anthony M. Fiorentine / Principal / CGE / P.O. Box 446, Kings Park, NY 11754 (631) 338-4170 mobile / (888) 454-5923 office & fax / afiorentine@cg-env.com Will review. AD 04/09/2018: Reviewed the report. It states that there are 8 wells MW-1 through 8. MW-8 is a nested well cluster with 4 screened intervals (MW-8A, 8B, 8C, and 8D). Liquid phase hydrocarbons (LPH) have not been detected in any of the wells since monitoring began in April 1994. The average depth to water was 50.67 feet and ranged from 47.96 feet (MW-3) to 53.10 (MW-1) feet below the top of the well casing on January 24, 2018. GW sampling: Five (5) groundwater samples were collected (MW-1, MW-2, MW-3, MW-8B, and MW-8C) on January 24, 2018. Samples were analyzed for volatile organic compounds on the CP-51 list via EPA Method 8260. GW data: During the January 24th sampling event, BTEX concentrations were below the method detection limit in all five wells. MTBE concentrations ranged from 79 in MW-8C to 430 ug/L in MW-2. The well with the highest Total Volatile Organic compounds was MW-2 at 430 ug/L. The area use is mainly commercial with residential apartments off of Queens Boulevard above the stores. The closest residential apartments are located over 500 feet to the East. The closest body of water is Newtown Creek which is approximately 2,500 feet to the Southwest. Groundwater flow may be influenced by the onsite well for car washing purposes. Conclusions: The results indicate that MTBE concentrations in four out of the five wells have decreased since the last sampling event in February of 2017. The only well that showed an increase in MTBE was MW-1 which increased from 260 ug/L to 310 ug/L. Based on the decreasing trends evident from the historic groundwater sampling, no additional work is proposed at this time. Will discuss the closure request with J. Kolleeny. AD 05/18/2018: called and left a message to Mr. Fiorentine. AD 06/14/2018: Discussed the site with J. Kolleeny of DEC. Based on the following: -removal of the source of contamination (4 USTs were removed in 2010); - remediation (SVE/AS) performed at the site; - absence of VOCs in site GW wells; - latest GW data which indicate only low levels of MTBE with historically decreasing trend in concentrations; - depth to GW is around 50 feet, it was decided to approve spill case closure request. Called and spoke with Mr. Fiorentine to confirm the site current status. It is used as a carwash. They use deep well for this purposes. The well was sampled and no contamination was detected in the well. Will issue a letter. AD 06/18/2018: Issued and sent closure approval letter to Mr. Hammond. Case closed. AD"

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

BROWNFIELDS:

Name:	FORMERLY ACCO BRANDS
Address:	32-00 SKILLMAN AVENUE
City,State,Zip:	LONG ISLAND CITY, NY 11101
Program:	BCP
Site Code:	57873
Acres:	0.72
HW Code:	C241061
SWIS:	4101
Town:	New York City
Record Added Date:	04/28/2004
Record Updated Date:	01/22/2019
Update By:	JHOCONNE
Site Description:	Location: The Site is located in an urban area of Long Island City, Queens at 32-00 Skillman Avenue and is surrounded by mixed commercial, industrial and residential uses. The former ACCO Brands, Inc. (ACCO) facility is bounded by Skillman Avenue and the Sunnyside Rail Yard to the north; 32nd Place to the east; Queens Blvd. to the south; and Van Dam Street to the west. Surrounding land uses include multi-family residential properties, community and educational institutions, and various commercial, industrial, and retail uses. Site Features: The Site is approximately 0.72 acres in size and consists of the footprint of the basement of the on-site 1.8 acre 3-story building. Current Zoning and Land Use: The site is located in an industrial zoned area and is zoned M1-4. The upper floors of the Site are currently used for commercial and light industrial purposes, the basement is unoccupied, and a penthouse which houses a private racquet club, fitness center, spa and restaurant occupies the rooftop of the Site. Past Use of the Site: The facility was constructed in 1950 and ACCO (or its predecessor corporations) occupied the facility from 1952 to 1999. The site was reportedly occupied by several automotive service centers and gasoline stations prior to 1950. During their occupancy of the facility, ACCO manufactured staplers and stapler components. Paints, thinners, solvents and cleaners were used as part of the manufacturing process and have led to site contamination. Wastes generated included paint filters, sludge, rags, and paint. Operable Units: The Site was divided into two operable units. An operable unit represents a portion of a remedial program

SWINGSTELL, LLC (Continued) **U000407641**

for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU-1) is the on-Site source area in the basement of the building. Operable unit 2 (OU-2) consists of the off-Site dissolved groundwater plume and associated soil vapor. Site Geology and Hydrogeology: The site is underlain by silty sand with varying amounts of gravel, silts and clays. Soil borings indicate a laterally pervasive low permeability layer beneath the entire footprint of and to the west of the Site. Parts of the low permeability layer, which dips to the south-southeast, are compromised by a layer of organic peat. TCE has been detected in the shallow, intermediate and deep aquifer zones at the Site. Depth to groundwater in the shallow aquifer is approximately 10 ft. below grade with a flow to the northwest. Depth to groundwater in the intermediate aquifer is 35 ft. below grade with a flow to the west-northwest. Depth to groundwater in the deep aquifer is 60 ft. below grade with a flow to the north-northwest.

Env Problem:

Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. OU-1 Soil Based upon investigations conducted to date, the primary contaminant of concern for soil is trichloroethene (TCE) that was identified in the soil in an unlined pit in the basement of the facility. The extent of impacted soils is confined to the western half of the footprint of the basement. Concentrations of TCE found in soil on site ranged from 56.9 parts per million (ppm) to 256 ppm, which exceeds the soil cleanup objectives (SCO) for the protection of groundwater (0.47 ppm) and restricted residential use (21 ppm). Data does not indicate any off-site impacts in soil related to this site. OU-1 Groundwater TCE was encountered in shallow groundwater samples collected at approximately 15 ft. below ground surface (bgs), intermediate groundwater samples collected approximately at 32 ft. bgs and deep groundwater samples collected at approximately 49 ft. bgs. Concentrations of TCE in shallow groundwater on-site ranged from 108 parts per billion (ppb) to 129,000 ppb, which exceeds the groundwater standard of 5 ppb. Concentrations of TCE found in intermediate groundwater on-site ranged from 2.1 ppb to 417,000 ppb and in deep groundwater on-site ranged from 700 ppb to 1,280 ppb. Maximum groundwater contaminant concentrations are encountered in the western half of the Site. High concentrations of contaminants above groundwater standards are migrating off-site (see below). OU-1 Soil Vapor The maximum sub-slab soil vapor concentration of TCE found in samples collected beneath the on-site building were 160,000 ug/m3 in the eastern portion of the basement and 260,000 ug/m3 in the northern portion of the basement. Actions were needed to address soil vapor intrusion and as a result a previously-installed soil vapor extraction system was converted to a vapor mitigation system in the on-site building. Contaminated soil vapor is migrating off-site (see below). OU-2 Groundwater TCE was encountered in shallow, intermediate and deep groundwater samples. Depth to groundwater is approximately 10 ft. bgs in the shallow aquifer, approximately 35 ft. bgs in the intermediate aquifer, and approximately 60 ft. bgs in the deep aquifer. Maximum concentrations of TCE found in; shallow off-site groundwater samples was 140,000 ppb, in intermediate off-site groundwater samples was 45,800 ppb and in deep off-site groundwater samples was 65 ppb. Approximate plume length is 500 ft. down-gradient

SWINGSTELL, LLC (Continued) **U000407641**

from the site towards east. OU-2 Soil Vapor Off-site studies of soil vapor intrusion were conducted at several locations. Concentrations of TCE in sub-slab and indoor air samples collected at two off-site locations during the Remedial Investigation exceeded the recommended action levels as established by NYSDOH and vapor mitigation systems have been installed in these buildings.

Site Description:	This site has transitioned to the BCP. See site C241061. Location: The Site is located in an urban area of Long Island City, Queens at 32-00 Skillman Avenue and is surrounded by mixed commercial, industrial and residential uses. The former ACCO Brands, Inc. (ACCO) facility is bounded by Skillman Avenue and the Sunnyside Rail Yard to the north; 32nd Place to the east; Queens Blvd. to the south; and Van Dam Street to the west. Surrounding land uses include multi-family residential properties, community and educational institutions, and various commercial, industrial, and retail uses. Site Features: The Site is approximately 0.72 acres in size and consists of the footprint of the basement of the on-site 1.8 acre 3-story building. Current Zoning and Land Use: The site is located in an industrial zoned area and is zoned M1-4. The upper floors of the Site are

FORMERLY ACCO BRANDS, INC. (Continued) **S100494133**

currently used for commercial and light industrial purposes, the basement is unoccupied, and a penthouse which houses a private racquet club, fitness center, spa and restaurant occupies the rooftop of the Site. Past Use of the Site: The facility was constructed in 1950 and ACCO (or its predecessor corporations) occupied the facility from 1952 to 1999. The site was reportedly occupied by several automotive service centers and gasoline stations prior to 1950. During their occupancy of the facility, ACCO manufactured staplers and stapler components. Paints, thinners, solvents and cleaners were used as part of the manufacturing process and have led to site contamination. Wastes generated included paint filters, sludge, rags, and paint. Operable Units: The Site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU-1) is the on-Site source area in the basement of the building. Operable unit 2 (OU-2) consists of the off-Site dissolved groundwater plume and associated soil vapor. Site Geology and Hydrogeology: The site is underlain by silty sand with varying amounts of gravel, silts and clays. Soil borings indicate a laterally pervasive low permeability layer beneath the entire footprint of and to the west of the Site. Parts of the low permeability layer, which dips to the south-southeast, are compromised by a layer of organic peat. TCE has been detected in the shallow, intermediate and deep aquifer zones at the Site. Depth to groundwater in the shallow aquifer is approximately 10 ft. below grade with a flow to the northwest. Depth to groundwater in the intermediate aquifer is 35 ft. below grade with a flow to the west-northwest. Depth to groundwater in the deep aquifer is 60 ft. below grade with a flow to the north-northwest.

Env Problem: This site has transitioned to the BCP. See site C241061. Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. OU-1 Soil Based upon investigations conducted to date, the primary contaminant of concern for soil is trichloroethene (TCE) that was identified in the soil in an unlined pit in the basement of the facility. The extent of impacted soils is confined to the western half of the footprint of the basement. Concentrations of TCE found in soil on site ranged from 56.9 parts per million (ppm) to 256 ppm, which exceeds the soil cleanup objectives (SCO) for the protection of groundwater (0.47 ppm) and restricted residential use (21 ppm). Data does not indicate any off-site impacts in soil related to this site. OU-1 Groundwater TCE was encountered in shallow groundwater samples collected at approximately 15 ft. below ground surface (bgs), intermediate groundwater samples collected approximately at 32 ft. bgs and deep groundwater samples collected at approximately 49 ft. bgs. Concentrations of TCE in shallow groundwater on-site ranged from 108 parts per billion (ppb) to 129,000 ppb, which exceeds the groundwater standard of 5 ppb. Concentrations of TCE found in intermediate groundwater on-site ranged from 2.1 ppb to 417,000 ppb and in deep groundwater on-site ranged from 700 ppb to 1,280 ppb. Maximum groundwater contaminant concentrations are encountered in the western half of the Site. High concentrations of contaminants above groundwater standards are migrating off-site (see below). OU-1 Soil Vapor The maximum sub-slab soil vapor concentration of TCE found in

FORMERLY ACCO BRANDS, INC. (Continued) **S100494133**

samples collected beneath the on-site building were 160,000 ug/m3 in the eastern portion of the basement and 260,000 ug/m3 in the northern portion of the basement. Actions were needed to address soil vapor intrusion and as a result a previously-installed soil vapor extraction system was converted to a vapor mitigation system in the on-site building. Contaminated soil vapor is migrating off-site (see below). OU-2 Groundwater TCE was encountered in shallow, intermediate and deep groundwater samples. Depth to groundwater is approximately 10 ft. bgs in the shallow aquifer, approximately 35 ft. bgs in the intermediate aquifer, and approximately 60 ft. bgs in the deep aquifer. Maximum concentrations of TCE found in; shallow off-site groundwater samples was 140,000 ppb, in intermediate off-site groundwater samples was 45,800 ppb and in deep off-site groundwater samples was 65 ppb. Approximate plume length is 500 ft. down-gradient from the site towards east. OU-2 Soil Vapor Off-site studies of soil vapor intrusion were conducted at several locations. Concentrations of TCE in sub-slab and indoor air samples collected at two off-site locations during the Remedial Investigation exceeded the recommended action levels as established by NYSDOH and vapor mitigation systems have been installed in these buildings.

Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered with a building and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A soil vapor extraction system was installed beneath the on-site building, which prevents vapors beneath the slab from entering the building. Sub-slab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed in off-site buildings to prevent inhalation of site contaminants in indoor air due to soil vapor intrusion.

DEC Memo: "Sangesland did a search and could not find an open spill on this site. Why were they doing quarterly monitoring on the site? Is there an old spill number with a different address? 05/17/06-Vought-Spill transferred from DEC Vought to DEC Piper as per DEC Austin. 2/26/07-DEC Piper left message at GES requesting callback and info. 5/7/07-DECP iper receoved fax from GES stating oil dicovery is separate fro mPerc cont. There is a 20K #2 oil tank adjacent to the MW. It is believed that oil was pumped in from delivery due to wrong fill. Oil has reoccured in well. CSL sent to Mgmt. Agent. 5/10/07- DECP iper spoke w. owner. He informed me there is no way oil was delivered to MW. In that case lines or tank may be leaking. He will test tank and lines and perform subsurface investigation. 7/20/07- DEC Piper recieved tank test results. Tank failed Inspection revealed a hole on top of tank. Samples were collected thrpough bottom of tank though are clean of VOC and slight SVOCs. 2/3/08- DEC Piper spoke w. Don Carlo Env. Borings were completed around tank. and along street. Street samples were clean though boring made by others showed contamination. Adjacent boring were clean. Piper instructed Danny Sing to have proposal generated to clean and inspect tank and perform borings though bottom. 4/16/08- DEC Piper - I met Don Carlo, Danny Sing and Ted Yen on site. I explained to them that product was discovered in the mw-11 adjacent ot the fill. The tank failed a tightness test and samples were collected from the ends of the tank. Further investigation is needed. Two borings down to groundwater will be completed adjacent to fill, and three boring will be conducted through the bottom of the tank. A third boring and gw sample will be collected in the boiler rooom which is downgradient of the tank. I recieved additional boring results. Soil and groundwater were below tagm. No free product was observed. Tank was slurriyed after inspection. Based on work to date, this spill is closed. See e--docs if warranted."
Remarks: "CALLER HAS FOUND OIL FLOATING IN TOP OF THE WELLS DURING A QUARTERLY SAMPLING EVENT. oNE WELL WAS AFFECTED AND IS NEAR THE BOILER ROOM OF THE BUILDING. UNKNOWN AS TO HOW THE PRODUCT GOT INTO THE WELL AND SMELLS LIKE A FUEL OIL MATERIAL. HAS NOT BEEN EXCATED IT YET."

Tank Info:

Tank Number: 004
Tank Id: 49455
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

K01 - Spill Prevention - Catch Basin
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
F00 - Pipe External Protection - None
D10 - Pipe Type - Copper
G04 - Tank Secondary Containment - Double-Walled (Underground)
I05 - Overfill - Vent Whistle
C02 - Pipe Location - Underground/On-ground
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Tank Converted to Non-Regulated Use
Pipe Model: Not reported
Install Date: 08/01/1997
Capacity Gallons: 240
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 01/24/2014
Register: True
Modified By: CGFREEDM
Last Modified: 04/14/2017
Material Name: #2 fuel oil (on-site consumption)

Tank Number: 005
Tank Id: 49456

DEC Memo: "Tyree Closure letter dated 7/8/2008 states: The above noted site utilizes one 4,000 gallon premium grade gasoline underground storage tank (UST), one 4,000 gallon regular grade gasoline UST and one 4,000 gallon diesel fuel UST. On April 10, 2008 WCC Tank Technology, Inc. performed an inspection of the interior tank lining for all three USTs. The results of the inspection revealed that the tanks failed on the visual inspection and the tank lining thickness. The tanks did pass on the tank metal thickness. It should also be noted that the three tanks were tightness tested and all passed, as such there was no release to the environment. A copy of the tank inspection report is included with this report. The NYSDEC was immediately notified and spill No. 08-00383 was assigned to the site. The three tanks were re-lined subsequent to the initial inspection. On June 20, 2008 the three tanks and the associated piping system were tightness tested. The results of the tightness test indicated that all of the tanks and the associated piping passed. A copy of the tightness testing report is included with this report. Based on this information, the DEC is closing this spill case. "
Remarks: "LINE TEST FAILED"

GETTY S/S #344 - GETTY PROPERTIES (Continued) **S104278677**

Contact Name: MATT BOECKEL
DEC Memo: "05/22/09 CSL was sent to Getty Petroleum Marketing 1500 Hempstead Turnpike East Meadow, NY 11554 Attn: Scott Hanley 08/31/09- Tyree sent the Subsurface Investigation Report dated June/22/09. The report stated that the piping and the four(4) product dispensers were removed in May 2009. The USTs has been drain of all fuel and are scheduled to be abondoned. On May 22,2009 the subsurface investigation activities were initiated , Based upon recent analytical datas it appears that the source of the soil and groundwater contamination is located in the area of the USTs and pump island. A total of seven (7)soil/groundwater borings were installed as part of the investigation. Soil samples were collested from ground surface to depths ranging from thirty-five(35) feet to forty (40) feet below grade. Groundwater was encountered at (27) feet below grade. The analytical results for soil samples indicate No VOCs exceeding the RSCOs. Some SVOC'S were slighly exceding the RSCOs for the samples ND-W, ND-E, WD-N, WD-S and B-TFE(13-14 ft). The analytical results for grounswater indicate Methyl-tert Butyl Ether and Benzene slighly exceeding the RSCOs. SVOC s are not exceding the RSCOs. As per Scott Hanley Getty Marketing (516) 542-5023 and Kevin Shean Getty Realty Corporation (516) 478-5400 there is no plan for developing the site until 20015. The site is going to be used for vehicle repair inside and for storage of vehicle outside. Getty Marketing leased the property. Getty Realty Corporation owns the property. Spill Closed"
Remarks: "CALLER STATES THAT THEY GOT TEST RESULTS BACK FROM A PHASE 2 SHOWING SOIL CONTAMINATION CLEAN UP IS PENDING."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 3/1/2002-VOUGHT-Initial tank test performed by ProTest Laboratories. Second and third tank test performed by Federal Electrical Supply Corporation (718-729-5700). The reason for spill report was initial tank test failure. As a result of failure vent line, fill line, suction line and return line were replaced by Petroleum Tank Cleaners. Tank was tested again on 2-6-2002 and failed again because testers failed to close off return line to day tank. Tank and system was tested for third time and passed on 2-14-2002. Isaac Mungra and Anthony (PTC) confirmed that there was no soil or groundwater contamination. Tank tests and repair invoices were provided. Spill closed by Vought. "

DEC Memo:	"The spill is consolidated under spill 17-11603. 6/13/2018 - Feng - Duty Desk. Spoke to Stephanie Pollert of Impact Environmental. There is a pre-existing spill 17-11603 which is managed by Kumar Patel. They then had a tank test and it failed. The tank is now isolated. There is still oil inside the tank, about 6 inches. Confirmed that the oil depth has no change so it is not actively leaking. They had done soil borings around the tank area. Product is found in the monitoring wells, in thickness of 4 inches. The RIR is submitted to Kumar Patel yesterday. Talked to K. Patel and the spill is consolidated under spill 17-11603. Stephanie Pollert 631-269-8800"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Tracking of remediation for this spill has been consolidated under spill no. 89-00605. See also spill nos. 00-04702 and 06-06326 for further details. 8/4/2003: This spill site has been transferred from Sigona to Harrington (Remedial Bureau B - central office) for management. (Sigona) 4/2/2004: Sent letter to Exxon Mobil regarding the need to investigate groundwater in the area beneath the #7 train. Exxon Mobil to begin discussions with NYCTA regarding permits to drill in their right-of-way. (Harrington) 8/24/2004: Sent letter to Exxon Mobil approving the SI work plan. (Harrington) 6/28/2005: Sent letter to Exxon Mobil regarding their off-site SI report. Requested more investigation north and west of MW-7 (in parking lot beneath #7 train). Also requested results of AS/SVE pilot testing. (Harrington) 9/23/2005: Sent letter to Exxon Mobil approving the supplemental SI work plan. (Harrington) 2/3/2006: Approved the feasibility study report in an e-mail to Exxon Mobil. The RAP, which will be due in May, will outline the proposed SVE/AS system to be installed at the site. Off-site investigation beneath #7 train to begin shortly. (Harrington) 6/15/2006: PM conducted a site visit with GSC-Kleinfelder personnel. Off-site wells under the #7 train have been installed. Sampling indicates elevated levels of BTEX in groundwater (above 20 ppm). Will evaluate EFR events at these locations to address concentrations. Mobil to propose SVE for areas in the east and center of the site (beneath station building and in the area of the abandoned in-place USTs along Queens Boulevard). Testing indicates that SVE piping installed by previous consultant is viable. System would only require installation of a few more SVE wells. (Harrington) 9/7/2006: Contaminated soil has been discovered during station upgrade activities (in the area of the remote fill ports located in the center dispenser island). Sent an e-mail to Exxon Mobil instructing them to revise the RAP submitted last month, allowing for changes to the proposed SVE/AS system layout necessitated by the findings of the upgrade effort. (Harrington) 1/15/2007: Project management assumed by Bureau B personnel. (Harrington) 7/24/2007: Project re-assigned to Harrington for management. (Harrington) 7/25/2007: PM visited the site with Kleinfelder personnel (Martin). PM currently awaiting upgrade report. Kleinfelder working with an electrician to run 2-200 amp lines along the southern boundary of the site in order to provide service to the proposed SVE system location (site's SW corner where the PVC stick-ups are located). Kleinfelder to submit an SVE pilot test work plan to determine whether system piping is still functional. Once testing is complete, RAP will be revised to include system revisions needed based on pilot testing and station upgrade results. (Harrington) 10/16/2007: PM sent an e-mail to Exxon Mobil approving the Station Upgrade Activity Report. As indicated previously, pilot test work plan is now due. (Harrington) 5/1/2008: The PM sent an e-mail to Exxon Mobil approving the Feasibility Study Work Plan. The work plan calls for the evaluation of both soil vapor extraction and air sparge technologies. This work will commence in June. (Harrington) April '10 On 10/27/09, PM approved RAP, but revised the CAP to expedite the system install. ExxonMobil signed CO on 11/6/09. Reviewed System Design Report and sent comments. PM required additional AS/SVE points in the northeast corner of the property and gave EM 20 days to submit revised system layout provide coverage to this area. Approved revised SVE/AS System Design Report 2/4/10 May

MOBIL S/S #17-GBH (Continued) **S100142688**

'10 Installation of Remedial wells/ trenching to begin in June. Due to the amount of work involved, 2 shifts are scheduled. MTA and DOT permits in place July 2010 - Even though the SVE/AS system design and Consent Order were finalized over 6 months ago, Ken Drake from EM states the system is too large. PM and Sally Dewes having conference call 7/29 August 2010 - EM was concerned that the system was so large that only 20% - 30% could be run at any time (the property is ~0.5 acre and covering the entire property with SVE shallow, SVE deep, and AS points). EM provided me with the Phase II Site Assessment Report which was not available at the time of the design. PM was able to trim/ scale back the design without addressing necessary problem areas November 2010 - EM has handed the project over to Liberty Petroleum Realty LLC. See 11/18/10 letter from Liberty. February 2011 - SVE/AS system trenching underway April 2011 - SSUR will be submitted by 5/5/11 which will include an update on the SVE/AS system installation August 2011 - MTA permit obtained for installing the additional AS well November - waiting for system to be delivered December - SSUR under review January 2012 - Arcadis sent me a revised schedule per my request as well as the Final Engineering Report April 2012 - SSUR under review, system operation is a year overdue at this point June 2012 - Arcadis received Notice of No Objection from NYCOER and the Air Permit from NYCDEP. Trenching is underway August 2012 - trenching completed and the system has been delivered. Currently, the electrians are providing the shed power. PM was on-site to watch them working because we received vapor complaints from the Community Board. December 2012 - System is operational May 2013 - system still operating well June 2014 - remedial system may have to be augmented in one area were air sparge can't be implemented either due to the aquifer formation itself or the sparge well wasn't installed properly January 2015 - only one area with remaining groundwater impact (SVE-13) due to the fact that the surrounding AS wells (AS-402 and AS-403) were installed improperly. High-pressure redevelopment of these two AS wells in late 2014 established air flow for the first time since the system began operation. System now collecting mass from SVE-13 December 7, 2015 - Haggerty: SVE/AS monitored for 3 quarters post system shut down; no significant rebound encountered. Spill Closed"

Updated By:	SRHEIGEL
Site Description:	Location: The former Roehr Chemicals facility is located in an urban area at 52-20 37th Street, Long Island City, Queens, at the corner of Starr Avenue. Roehr Chemicals operated four buildings on five lots described as Queens County Tax Map Block 310, Lots 1, 8, 23, 24 and 28. The Site is identified as Block 310, Lot 28. Current Zoning and Land Use: The site is located in a mixed-use area with industrial, commercial and residential uses. The Long Island Expressway (Interstate 495) is located about 1200 feet north of the site. Calvary Cemetery is located immediately east of the site across 37th Street, and Newtown Creek is located approximately 1750 feet southwest of the site. Site Features: The site consists of a one story building on a 100 feet x 100 feet property. The building is presently used as a warehouse for storing packing boxes, and the adjacent partial yard is used for storage and parking. Past Uses of the Site: On this site bulk pharmaceuticals and pharmaceutical intermediates were manufactured from 1957 to 1991. Several VOCs, such as xylene, benzene and diethyl-ketone, were used in the production of these items. During site operations involving the removal of spent xylene, a containment system failed, leaking xylene to the surrounding soil. Lot 28 contained the main building and has been the focus of the investigation and remediation. Other lots that were part of Roehr Chemical (Block 310, Lots 1, 8, 23, & 24) were investigated and closed in August 1992 under RCRA closure. Geology and Hydrogeology: Groundwater flows to the southwest, toward Cavalry Cemetery and eventually toward Newtown Creek. Groundwater is approximately 25-30 feet below ground surface.
Env Problem:	Nature and Extent of Contamination: Prior to Remediation, the Remedial Investigation/Feasibility Study (RI/FS) found groundwater contaminated with xylene and acetone. The RI showed an elongate and narrow xylene plume leaving the site and entering the Calvary Cemetery. An off-site investigation was conducted in October 2000 to determine the impact of on-site contamination on the groundwater quality downgradient of the Calvary Cemetery. A series of geoprobe borings and four monitoring wells were installed along Review Avenue. Total xylenes in many of these wells were found to be at a maximum

ROEHR CHEMICALS INC (Continued) **1000243997**

	concentration of 19 ppb. Post-Remediation - The remedial actions taken to date have adequately addressed the significant threat posed to the environment by the contamination. The remedial actions included the operation of a soil vapor extraction and air sparging system with groundwater monitoring. With the operation of a AS/SVE system, the groundwater concentrations of site related contaminants were reduced to non-detect levels in most wells. The AS part of the remedial system has been pulsed and the SVE was shut off in June 2013. It was determined that a significant reduction in groundwater concentrations of xylene and ethylbenzene have been achieved. The concentration of xylene has been reduced from a maximum of 105,000 ppb to 63 ppb in the most recent sampling round.
Health Problem:	People are not expected to contact contaminated soil because buildings and pavement cover most of the site. People may contact contaminated soils if they dig below surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply system that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are not needed to address the potential for soil vapor intrusion in on or off-site structures.

ROEHR CHEMICALS INC (Continued) **1000243997**

Updated By: SRHEIGEL
Site Code: 55924
Site Description: Location: The former Roehr Chemicals facility is located in an urban area at 52-20 37th Street, Long Island City, Queens, at the corner of Starr Avenue. Roehr Chemicals operated four buildings on five lots described as Queens County Tax Map Block 310, Lots 1, 8, 23, 24 and 28. The Site is identified as Block 310, Lot 28. Current Zoning and Land Use: The site is located in a mixed-use area with industrial, commercial and residential uses. The Long Island Expressway (Interstate 495) is located about 1200 feet north of the site. Calvary Cemetery is located immediately east of the site across 37th Street, and Newtown Creek is located approximately 1750 feet southwest of the site. Site Features: The site consists of a one story building on a 100 feet x 100 feet property. The building is presently used as a warehouse for storing packing boxes, and the adjacent partial yard is used for storage and parking. Past Uses of the Site: On this site bulk pharmaceuticals and pharmaceutical intermediates were manufactured from 1957 to 1991. Several VOCs, such as xylene, benzene and diethyl-ketone, were used in the production of these items. During site operations involving the removal of spent xylene, a containment system failed, leaking xylene to the surrounding soil. Lot 28 contained the main building and has been the focus of the investigation and remediation. Other lots that were part of Roehr Chemical (Block 310, Lots 1, 8, 23, & 24) were investigated and closed in August 1992 under RCRA closure. Geology and Hydrogeology: Groundwater flows to the southwest, toward Cavalry Cemetery and eventually toward Newtown Creek. Groundwater is approximately 25-30 feet below ground surface.
Env Problem: Nature and Extent of Contamination: Prior to Remediation, the Remedial Investigation/Feasibility Study (RI/FS) found groundwater contaminated with xylene and acetone. The RI showed an elongate and narrow xylene plume leaving the site and entering the Calvary Cemetery. An off-site investigation was conducted in October 2000 to determine the impact of on-site contamination on the groundwater quality downgradient of the Calvary Cemetery. A series of geoprobe borings and four monitoring wells were installed along Review Avenue. Total xylenes in many of these wells were found to be at a maximum concentration of 19 ppb. Post-Remediation - The remedial actions taken to date have adequately addressed the significant threat posed to the environment by the contamination. The remedial actions included the operation of a soil vapor extraction and air sparging system with groundwater monitoring. With the operation of a AS/SVE system, the groundwater concentrations of site related contaminants were reduced to non-detect levels in most wells. The AS part of the remedial system has been pulsed and the SVE was shut off in June 2013. It was determined that a significant reduction in groundwater concentrations of xylene and ethylbenzene have been achieved. The concentration of xylene has been reduced from a maximum of 105,000 ppb to 63 ppb in the most recent sampling round.
Health Problem: People are not expected to contact contaminated soil because buildings and pavement cover most of the site. People may contact contaminated soils if they dig below surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply system that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the

ROEHR CHEMICALS INC (Continued) **1000243997**

indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are not needed to address the potential for soil vapor intrusion in on or off-site structures.

Click Here:

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ROEHR CHEMICALS, INC. (Continued) **S113492645**

Site Description: Location: The former Roehr Chemicals facility is located in an urban area at 52-20 37th Street, Long Island City, Queens, at the corner of Starr Avenue. Roehr Chemicals operated four buildings on five lots described as Queens County Tax Map Block 310, Lots 1, 8, 23, 24 and 28. The Site is identified as Block 310, Lot 28. Current Zoning and Land Use: The site is located in a mixed-use area with industrial, commercial and residential uses. The Long Island Expressway (Interstate 495) is located about 1200 feet north of the site. Calvary Cemetery is located immediately east of the site across 37th Street, and Newtown Creek is located approximately 1750 feet southwest of the site. Site Features: The site consists of a one story building on a 100 feet x 100 feet property. The building is presently used as a warehouse for storing packing boxes, and the adjacent partial yard is used for storage and parking. Past Uses of the Site: On this site bulk pharmaceuticals and pharmaceutical intermediates were manufactured from 1957 to 1991. Several VOCs, such as xylene, benzene and diethyl-ketone, were used in the production of these items. During site operations involving the removal of spent xylene, a containment system failed, leaking xylene to the surrounding soil. Lot 28 contained the main building and has been the focus of the investigation and remediation. Other lots that were part of Roehr Chemical (Block 310, Lots 1, 8, 23, & 24) were investigated and closed in August 1992 under RCRA closure. Geology and Hydrogeology: Groundwater flows to the southwest, toward Cavalry Cemetery and eventually toward Newtown Creek. Groundwater is approximately 25-30 feet below ground surface.

Env Problem: Nature and Extent of Contamination: Prior to Remediation, the Remedial Investigation/Feasibility Study (RI/FS) found groundwater contaminated with xylene and acetone. The RI showed an elongate and narrow xylene plume leaving the site and entering the Calvary Cemetery. An off-site investigation was conducted in October 2000 to determine the impact of on-site contamination on the groundwater quality downgradient of the Calvary Cemetery. A series of geoprobe borings and four monitoring wells were installed along Review Avenue. Total xylenes in many of these wells were found to be at a maximum concentration of 19 ppb. Post-Remediation - The remedial actions taken to date have adequately addressed the significant threat posed to the environment by the contamination. The remedial actions included the operation of a soil vapor extraction and air sparging system with groundwater monitoring. With the operation of a AS/SVE system, the groundwater concentrations of site related contaminants were reduced to non-detect levels in most wells. The AS part of the remedial system has been pulsed and the SVE was shut off in June 2013. It was determined that a significant reduction in groundwater concentrations of xylene and ethylbenzene have been achieved. The concentration of xylene has been reduced from a maximum of 105,000 ppb to 63 ppb in the most recent sampling round.

Health Problem: People are not expected to contact contaminated soil because buildings and pavement cover most of the site. People may contact contaminated soils if they dig below surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply system that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is

ROEHR CHEMICALS, INC. (Continued) **S113492645**

referred to as soil vapor intrusion. Environmental sampling indicates that actions are not needed to address the potential for soil vapor intrusion in on or off-site structures.

Site Description: Location: The 0.88-acre site is located at 27-10 49th Avenue in the Borough of Queens, NY in a commercial/urban area. It is situated at the southeast corner of 49th Avenue and 27th Avenue. The site is bordered to the east by the Dutch Kills, to the south by commercial property, to the west by 27th Avenue, and to the north by the 49th Avenue. The Dutch Kills is part of the Newtown Creek NPL site. Site Features: The site currently consists of a two-story warehouse with offices located on the first and second floor. The remainder of the site is paved parking for the building. Current Zoning and Land Use: The site is currently zoned as manufacturing M3-2 and is surrounded by warehouses and industrial uses. The nearest residential properties are located 0.54-miles east of the site. The site is currently vacant and rehabilitation is pending. Past Use of the Site: The site was developed with one small commercial building of unknown use, which was demolished sometime between 1954 and 1961. Sometime between 1961 and 1966, a larger building was developed on the subject property, was operated by Truck Sales & Services. The property has been owned by Kinloch Company Inc. since 1990. Black Bear Lubricants Inc., which mixed and packaged engine oils, hydraulic oils, gear lubricant,

27-10 49TH AVENUE-OER (Continued) **S125896304**

transmission oils, grease, and industrial lubricants on the property, operated on the property since at least 2000. Black Bear ceased operations in December 2017. Walter s Limousine Service and Carey Limousine both operated on the property since at least 2000. Walter s Limousine Service ceased operation sometime between 2005 and 2010. Carey Limousine is currently still in operation. Site Geology and Hydrogeology: A total of 45 shallow borings were advanced to depths between four and 12 feet below the ground surface (bgs). The stratigraphy of the site, from the surface down, consists of approximately 9 feet of fill material containing brick, concrete, fly ash, slag, fine silty sands, clay, and fine gravels. This urban fill is underlain by native material consisting of fine to medium sands with some silt. Groundwater was encountered between 8 and 12-ft bgs. General flow was reported to be toward the east in the direction of the Dutch Kills. The Dutch Kills flows from the north toward the south.

Env Problem: Nature and Extent of Contamination: In late 2017 and early 2018, intrusive environmental investigation work was performed for a potential property transaction related to the site. Based on the petroleum contamination which was encountered Spill No. 1802299 was generated on 5/29/2018 by the owner s representatives. The focus of the remedial investigation was aimed at petroleum, as closed USTs, oil/water separators, hydraulic lifts and petroleum repackaging operations were known to have existed in the past. Soils and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and PCBs. Soil vapor and indoor air was analyzed for TO-15 contaminants. Contaminants of concern identified include chlorinated VOCs (including tetrachloroethene (PCE) and trichloroethene (TCE)), SVOCs, metals including barium and lead, and PCBs. Soil Samples were collected from 2 to 12-ft bgs based on observations and field screening. Elevated concentrations of CVOC PCE were detected in the soil samples with a maximum concentration of 61.6 parts per million (ppm). The maximum barium and lead concentrations were 1,310 and 3,850 parts per million respectively. These concentrations exceed the Protection of Groundwater SCOs and do not exceed commercial SCOs. Groundwater A total of four SVOCs were detected in groundwater. Chrysene was reported with a maximum concentration of 123 ppb, fluoranthene was reported at 652 ppb, phenanthrene was reported at 1,010 ppb and pyrene was reported at 721 ppb. A groundwater sample collected from a temporary well nearest the Dutch Kills had a reported total PCB concentration of 0.972 ppb. Soil Vapor Soil vapor concentrations of PCE ranged from 480 to 1,100 ug/m3. TCE ranged from 39 to 120 ug/m3. Significant Threat: No evaluation has been made thus far to determine if the contaminants represent an environmental significant threat.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description:	Location: The 0.34 acre (14,664 square foot) site is located at 36-04 Review Avenue in the Borough of Queens, NY in an urban area. It is situated at the southwest corner of Review Avenue and Greenpoint Avenue. The site is bordered to the east by Review Avenue, to the south by industrial buildings owned by the same owner and occupied by the same operator, to the west by Railroad Avenue, and to the north by the approach to the Greenpoint Avenue Bridge. Site Features: The Site currently consists of a combination of one- and two-story

36-04 REVIEW AVENUE (Continued) **S122449253**

industrial buildings totaling approximately 0.28 acres (12,390 square feet). The remainder of the site is paved parking for the building. Current Zoning and Land Use: The site is currently zoned as manufacturing M3-1 and is surrounded by warehouses and industrial uses. The nearest residential properties are located across the street to the east on Review Avenue. The site is currently occupied by Allied Extruders, a manufacturer of polyethylene and polypropylene film and bags. Past Use of the Site: Allied Extruders has occupied the site since approximately 1980. Prior to that time, the site was occupied by numerous industrial uses including Eastern Distillery Company (alcoholic beverage distillery), Andrews Lead Company (a lead pipe and sheet metal manufacturer), Carbona Products Company (manufacturer of carbon tetrachloride dry cleaning chemicals), Foundry Chemicals Company (unknown chemical manufacturer) and Paragon Smelting Company (lead and metal smelter). In addition, there are a number of suspected underground storage tanks at the site. It is unknown what is or was stored in those tanks. Site Geology and Hydrogeology: Six soil borings conducted in early 2017 identified soil consisting mainly of dark brown fine silty sand and some clay down to 20 feet below ground surface (ft-bgs), which was the boring terminus. Groundwater was encountered between 5 and 20 ft-bgs, due to varying surface elevations. General flow is expected to be to the west towards Newtown Creek, which is located approximately 450 feet from the site.

Env Problem: Nature and Extent of Contamination: A Phase II investigation was conducted in February 2017. Soils and groundwater were analyzed for volatile organic compounds (VOCs, semi-volatile organic compounds, metals, pesticides and PCBs. Contaminants of concern identified include petroleum and chlorinated VOCs including carbon tetrachloride (CCl_4) and its daughter compound chloroform, trichloroethene (TCE), and 1,1,1-trichloroethane (TCA). Soil Samples were collected from 2 to 15 ft-bgs based on observations and field screening. Elevated concentrations of VOCs were detected in the soil samples, specifically CCl_4 at a maximum concentration of 4500 parts per million (ppm), chloroform at a maximum concentration of 120 ppm, TCE at a maximum concentration of 700 ppm, and TCA at a maximum concentration of 1500 ppm. These concentrations all exceed the Protection of Groundwater SCOs and, with the exception of chloroform, exceed the Industrial Use SCOs. Groundwater CCl_4 was detected at a maximum concentration of 15,000 parts per billion (ppb), chloroform at a maximum concentration of 8900 ppb, TCE at a maximum concentration of 3300 ppb, and TCA at a maximum concentration of 3600 ppb. In addition, other VOCs were detected at concentrations exceeding the applicable AGWS including 1,1-dichloroethane at 750 ppb, 1,1-dichloroethene at 250 ppb, and toluene at 3200 ppb. Soil Vapor No soil vapor samples were taken as part of the Phase II investigation. Significant Threat: No evaluation has been made thus far to determine if the contaminants represent an environmental significant threat.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description:	Location: Sunnyside Yard (the Site) is located at 39-29 Honeywell Street, Long Island City, Queens County, New York. Site Features: The Site is a railroad maintenance and storage facility that currently encompasses approximately 133 acres. Newtown Creek, which defines the border between Queens and Kings Counties, is located less than 0.5 mile south of the western portion of the Site. The Site is bordered by commercial/residential properties, with Northern Boulevard located to the north, 42nd Place located to the east, Thompson Avenue to the west, and Skillman Avenue located to the south. Current Zoning/Use: The Site is located in Manufacturing Zone (M1-1) and used as a railroad maintenance and storage facility Historic Use: The Yard was originally constructed in the early 1900's by the Pennsylvania Tunnel and Terminal Company, a subsidiary of Pennsylvania Railroad (later

AMTRAK SUNNYSIDE YARD (Continued) **S103575644**

known as the Penn Central Transportation Company). On April 1, 1976, the Consolidated Rail Corporation (Conrail) acquired the Site, and the same day conveyed it to Amtrak, which has continued to operate it as a storage and maintenance facility for railroad rolling stock. Prior to September 29, 1961, a portion of the yard was owned by Long Island Rail Road (LIRR). Today, the LIRR maintains a right-of-way through the Yard. The Long Island Railroad (LIRR) is constructing tunnels through the Yard as part of its East Side Access (ESA) project. An extensive cleanup program was completed in 1996 to remove PCB contaminated sediment from impacted sewer manholes with subsequent sampling to identify sewer segments and manholes with recurring PCB contaminated sediment impacts. Operable Units: The site is divided into six operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. The operable units for this site are: Operable unit 1 (OU1) is the soil above the water table within the footprint of the High Speed Trainset Facility Service and Inspection (HSTF S and I) Building. Operable unit 2 (OU2) is the soil above the water table within the footprint of the HSTF S and I Building ancillary structures. Operable unit 3 (OU3) is the soil and separate phase petroleum hydrocarbon accumulation above the water table and soil below the water table within 8 acres in the north central portion of the Site. Operable unit 4 (OU4) is the soil above the water table (unsaturated zone) at the Site, excluding OU-1, OU-2, and OU-3. Operable unit 5 (OU5) is the sewer system (water and sediment) beneath the Site. Operable unit 6 (OU6) is the groundwater and saturated soil beneath the Site. Site Geology and Hydrology: Historic fill on the Site is predominantly comprised of reworked glacial deposits (unstratified sand, silt, clay and gravel) and railroad ballast, with lesser amounts of ash, cinders and construction debris. With the exception of paved areas, land occupied by buildings, and vegetated areas, the railroad ballast is ubiquitous at the land surface throughout the Site. Groundwater beneath the Site occurs in fill deposits, wetlands, or the Upper Pleistocene glacial deposits. The saturated Upper Pleistocene deposits comprise the Upper Glacial aquifer. The depth to groundwater across the Site varies from one to fifteen feet below ground surface. Groundwater within the shallow deposits flows predominantly west across the Site. However, groundwater between Queens Boulevard and Honeywell Street flows northerly and northwesterly toward the buried flow path of the Dutch Kills Creek and/or East River. In the deeper deposits, groundwater predominantly flows west across the Site.

Env Problem: Nature and Extent of Contamination: Prior to Remediation: Remedial investigations have been conducted in multiple phases under NYSDEC oversight pursuant to the consent order. Seventeen specific areas of concern (AOC) were identified of concern (COCs). The following environmental exposure pathways and ecological risks have been identified for the Site: The Site poses an environmental threat associated with the potential impacts of contaminants to groundwater from soils impacted by the COC’s. Continued migration of contaminated groundwater from off-site sources poses a potential environmental threat to on-site groundwater. Off-site sources will be addressed by remedial programs for the respective neighboring sites, as appropriate. There are no wetlands or other exposure pathways to fish and wildlife receptors in the Site. Operable Unit 1: Polychlorinated

AMTRAK SUNNYSIDE YARD (Continued) **S103575644**

biphenyls (PCBs) were detected in 16 of 19 soil samples; all but one were less than 1 parts per million (ppm). The maximum concentration was 2 ppm. Six semi-volatile organic compounds (SVOCs), specifically carcinogenic polycyclic aromatic hydrocarbons (cPAHs), were detected above Technical and Administrative Guidance Memo (TAGM) 4046 Recommended Soil Cleanup Objectives (RSCOs) at depths up to three feet below ground surface (bgs). However, there was only one exceedance of the site specific soil cleanup level (SSSCL) of 10 ppm. Operable Unit 2: The soil above groundwater was sampled at depths up to three feet bgs. PCBs were detected in 15 of the 20 samples at a maximum concentration of 4.5 ppm. The other compounds of concern (COCs), lead and total cPAHs, were also detected at levels below the SSSCLs of 1000 ppm and 25 ppm respectively. Therefore, No Action was selected in the Record of Decision (ROD). Operable Unit 3: Surface Soil - The SSSCLs were exceeded for PCBs (2 out of 102 samples); lead (3 out of 3) and cPAHs (2 out of 27). The maximum concentration for PCBs was 73 ppm; for lead it was 1,080 ppm and cPAHs 108 ppm. Additionally, half an acre of visible petroleum contaminated surface soil was delineated at an average depth of one foot bgs. Subsurface Soil - There were no exceedances of the SSSCLs for the COCs. Waste Materials - The waste material onsite consists of PCB contaminated petroleum present in: (1) surface soils as mentioned above; (2) a potentially mobile separate phase hydrocarbon (SPH) plume floating over the groundwater surface; (3) a residual SPH trapped in soil pores below the water table; and (4) residues in underground structures. Sixty-five samples of SPH were collected and analyzed for PCBs. The maximum concentration was 360 ppm. SPH and sludge samples taken from underground structures contained PCB concentrations of 512 and 517 ppm respectively. Operable Unit 4: Surface Soil - There were exceedances of the SSSCLs for PCBs (60 out of 786 samples); lead (52 out of 471); and cPAHs (31 out of 436). The maximum PCB concentration was 25,000 ppm; cPAH was 113 ppm and lead was 7,020 ppm. Subsurface Soil - There were exceedances in soil samples for the SSSCLs viz. PCBs (13 of 455); lead (17 of 354) and cPAHs (18 of 376). The maximum PCB concentration was 3500 ppm; lead was 2600 ppm and cPAH was 119 ppm. Operable Unit 5: Sewer Sediment - PCBs were detected in 29 samples of sediment from the sewers at concentrations ranging from 0.053 ppm at MH-69 to 120 ppm at MH-6. PCB concentrations at MH-6 (one sample) and MH-38 (two samples) exceeded the 25 ppm NYSDEC-approved site specific soil cleanup level. MH-6 was remediated as an IRM in October 2011. Sewer Water - Discrete water samples (filtered and unfiltered) were collected from 12 manhole locations and analyzed for PCBs during performance of the OU-5 RI. PCBs were detected in 17 of 39 unfiltered samples with concentrations ranging from 0.14 parts per billion (ppb) to a high of 83 ppb. Five of the unfiltered samples, one from MH-3, three from MH-6 and one from MH-40 exceeded the 1 ppb waste water effluent limit. The waste water effluent limit is appropriate since the sewer discharges to a Waste Water Treatment Plant. Only one of the 39 filtered samples (MH-3) contained PCBs at a concentration (1.8 ppb) slightly exceeding the 1 ppb waste water effluent limit. Operable Unit 6: Saturated Subsurface Soil - A total of 159 samples of soil were collected from 29 boring locations. There were no exceedances of the SSSCLs for the COCs. Groundwater - Three plumes of chlorinated volatile organic compounds (CVOCs) were defined at the site. However, none of these were attributable to site operations, but are attributable to off-site sources. No site related groundwater contamination of concern was

AMTRAK SUNNYSIDE YARD (Continued) **S103575644**

identified. Post Remediation: Remediation has been completed in OU-1 where 472 tons of contaminated soil, fill and debris were excavated and disposed of along with 280 cubic yards of concrete and asphalt and 2,450 gallons of liquid. A No Action ROD was issued for OU-2. Remediation has been initiated at OU-3 and OU-4. The OU-5 ROD for cleaning the sewers was issued on March 27, 2011, and the OU-6 ROD (No Action) was issued on March 30, 2010.

Health Problem:	Groundwater in the area of the site is not used as a source of potable water. Access to the site is controlled, preventing trespassers from coming in contact with contaminated soils.

SHWS:

Name:	QUANTA RESOURCES
Address:	37-80 REVIEW AVENUE
City,State,Zip:	LONG ISLAND CITY, NY 10111
Program:	HW
Site Code:	58532
Classification:	2
Region:	2
Acres:	2
HW Code:	241005
Record Add:	11/18/1999
Record Upd:	08/12/2019
Updated By:	JCGRATHW

Site Description: Location: The Quanta Resources Site is an approximately 2 acre parcel located at 37-80 Review Avenue. The site is bounded on the northeast by Review Avenue and on the southwest by the Southern Line of the Long Island Rail Road (LIRR). On the northwest it is bounded by an alley (Preston Street) that runs from Review Avenue to the LIRR tracks. On the southeast it is bounded by the property currently owned by Phoenix Beverages (an imported beer distributor). Farther to the northeast, across Review Avenue, is Calvary Cemetery. Farther to the northwest, across the alley, is the North Capasso property, also referred to as Review Avenue Development I (RADI). Farther to the southwest, across the LIRR tracks, is the South Capasso property. Newtown Creek lies beyond the South Capasso property farther to the southeast approximately 450 feet from the site. Fencing bounds the property on all sides. Current Zoning and Land Use: The site is located within a highly industrialized area of Long Island City, Queens, New York. Zoning in this area is designated as heavy manufacturing. Site Features: The site has been inactive since being abandoned in November 1981. Tanks and several buildings remain on site. Past Uses of the Site: The Quanta Resources property and surrounding properties have been used for a variety of industrial purposes since the late 19th century. A Sanborn Fire Insurance Map from 1898 indicates that the site was partially occupied by vacant and dilapidated brick wrecks of an oil refinery. Available information indicates the earliest recorded actual owner of the property was American Agricultural Chemical Company. In 1931 the property was transferred to Triplex Oil. Triplex Oil used the

REVIEW AVENUE DEVELOPMENT II (Continued) **1000321850**

property for refining of used crank case oil for approximately 40 years. From 1972 until 1980 the facility was operated by several different owners including Pentalic Corporation, Sea Lion Corporation, Ag-met Oil Service, Inc., Hudson Oil Refining Corp., and Portland Holding Corp. In 1980 Quanta Resources acquired the property, and used the property for the re-refining of used crankcase oil and other liquid recycling before filing for bankruptcy on October 6, 1981. A Consent Order was signed with numerous PRPs in May 2002 for the undertaking of investigation and remediation activities. An RI/FS was completed. Soil and groundwater contamination has been confirmed. The primary contaminants of concern include petroleum hydrocarbons, chlorinated solvents, PCBs, heavy metals and PAHs. Measurable LNAPL was found in 24 of 29 onsite and offsite monitoring wells. The Site was accepted into BCP. The BCA agreement was executed on 12/2/05 (see C241005). A PRAP was issued in June 2006. A PRAP Public Meeting was held on June 28, 2006 and the ROD was signed 2/9/07 requiring a $15,560,000 remedy which includes an LNAPL recovery system. Remedial Design is underway. A number of potential LNAPL source areas existed on the Quanta Resources Site throughout its operational history, however, the primary suspected source area is the tank farm area located in the northeastern portion of the site. A New York City emergency remedial action removed approximately 640,000 gallons of waste oil from the property. Some of the waste oil contained tetrachloroethene, methyl chloride, 1,1,1-trichloroethane and trichloroethene. Sludge, waste oil, and diesel fuel, all contaminated with PCBs, were also removed from badly deteriorated leaking tanks and drums. As part of NYSDEC's Phase II Investigation, three on-site groundwater monitoring wells were installed. During installation it was discovered that there was a seven foot layer of oil (also known as Light Non-Aqueous Phase Liquid - LNAPL) lying above the groundwater table. An LNAPL recovery system was installed at the site in 2016. This system continues to operate and is effective in remediating the site. See Site Code C241005 for post ROD updates.

Env Problem: The site presents a significant threat due to the soil and groundwater contamination, free product LNAPL plume and close proximity to Newtown Creek. An RI/FS was completed. Soil and groundwater contamination has been confirmed. The primary contaminants of concern include petroleum hydrocarbons, chlorinated solvents,heavy metals and PAHs. Measurable LNAPL was found in 24 of 29 onsite and offsite monitoring wells. ROD signed 2/07. Site has transitioned into the Brownfield program. Site is now tracked as Review Avenue Development II - Site # C241089

Health Problem: Waste oil previously stored on-site has caused widespread contamination of groundwater and soils. Approximately 500,000 gallons of contaminated waste oil remains at the site, floating on the water table. The aquifer of concern is not used as a source for drinking water. Groundwater wells in this area of Queens are used only for commercial and industrial purposes. A fence surrounds the site restricting access and minimizing the potential for direct contact exposures to on-site contaminates. The potential exists for the floating oil plume to migrate into the nearby Newtown Creek which empties into the East River. Further investigation is required.

REVIEW AVENUE DEVELOPMENT II (Continued) **1000321850**

Record Updated Date:	02/26/2020
Update By:	GWBURKE
Site Description:	Location: The Former Quanta Resources Site, a.k.a. Review Avenue Development II Site (RAD II) is an approximately 1.8 acre parcel located at 37-80 Review Avenue, within a highly industrialized area of Long Island City, Queens, New York. This site is adjacent to the Review Avenue Development I (RAD I) (seperated only by Preston Alley which is a access alley/paper street). The Long Island Railroad tracks boarder the property along the southwest. Site Features: The site is a fenced, open gravel parking lot. All above ground and below ground tanks, structures, and buildings were removed as part of an interim remedial measure in 2008. Current Zoning/Uses: The RAD II site is currently being used as a parking lot. It is zoned for commercial and industrial uses. Historical Uses: The RAD II property and surrounding properties have been used for a variety of industrial purposes since the late 19th century. A Sanborn Fire Insurance Map from 1898 indicates that the site was partially occupied by vacant and dilapidated brick wrecks of an oil refinery. Available information indicates the earliest recorded actual owner of the property was American Agricultural Chemical Company. In 1931 the property was transferred to Triplex Oil. Triplex Oil used the property for refining of used crank case oil for approximately 40 years. From 1972 until 1980 the facility was operated by several different owners including Pentalic Corporation, Sea Lion Corporation, Ag-met Oil Service, Inc., Hudson Oil Refining Corp., and Portland Holding Corp. In 1980 Quanta Resources acquired the property, and used the property for the re-refining of used crankcase oil and other liquid recycling before filing for bankruptcy on October 6, 1981. The site has been inactive since being abandoned in November 1981. Site Geology and Hydrogeology: The site is underlain by several feet of urban fill. The fill overlies unconsolidated glacial deposits, predominately interbedded fine to course sand with some laterally discontinuous layers of silt and clay. Groundwater occurs at a depth of about 15 to 20 feet below ground surface. The general direction of groundwater flow is to the south-southwest, toward the Newtown Creek. A light non-aqueous phase liquid (LNAPL) is present at the water table under the site.
Env Problem:	Nature and Extent of Contamination: A viscous light non-aqueous phase liquid (LNAPL)is present at the watertable over the entire site. The LNAPL is a weathered petroleum. Groundwater flow is toward the south-southwest toward the Newtown Creek. The extent of the LNAPL has been delineated and it has not migrated beyond the Long Island Railway tracks downgradient. Known or suspected contaminants include: Petroleum, Chlorinated Solvents, other VOCs, and metals, impacting the soil and groundwater. An LNAPL collection and treatment system has been completed and is operating on-site. Significant Threat: The site presents a significant threat due to the soil and groundwater contamination, free product LNAPL plume and close proximity to Newtown Creek.
Health Problem:	Exposure to contaminated groundwater or soil is unlikely because the area is served by public water and access to the site is restricted by fencing. The potential for exposure via soil vapor intrusion off-site will be evaluated during the remedial design and will also be evaluated if new construction is planned on-site in the future.

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	D002
Waste Description:	CORROSIVE WASTE
Waste Code:	F001
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F002
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F003
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT

STANDARD MOTOR PRODUCTS INC (Continued) **1000310304**

NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U080
Waste Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Waste Code: U154
Waste Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U220
Waste Description: BENZENE, METHYL- (OR) TOLUENE

Waste Code: U226
Waste Description: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Waste Code: U239
Waste Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

SHWS:

Name:	STANDARD MOTOR PRODUCTS, INC.
Address:	37-18 NORTHERN BOULEVARD
City,State,Zip:	LONG ISLAND CITY, NY 11101
Program:	HW
Site Code:	58682
Classification:	2
Region:	2
Acres:	1.1000000000000001
HW Code:	241016
Record Add:	11/18/1999
Record Upd:	03/09/2020
Updated By:	JHOCONNE

Site Description: Site Location: The site is located at 37-18 Northern Boulevard, Long Island City, Queens County, New York in the northwestern section of the county. Bordering the Site is Northern Boulevard to the north; Amtrak s Sunnyside Railroad Yard (Sunnyside Yard) to the south; 39th Street, an automobile dealership, and a Hess (formerly Merit) gasoline station to the east; and commercial and industrial properties to the west. Site Features: The Site is approximately rectangular in shape and occupies approximately one acre of land. The Site contains a six-story industrial building with approximately 42,000 square feet per floor. A narrow strip of land on the south side of the property contains a loading dock and a dirt access path for vehicles. This strip of land is owned by the Metropolitan Transportation Authority (MTA) and was part of a long-term lease to Standard Motor Products. Current Zoning/Use(s): The site is being used for commercial office space. There is a commercial vegetable farm occupying part of the building s roof. Past Uses of the Site: The Site has historically been involved in industrial and manufacturing activities since 1919. A small plating line for chrome plating of small machine parts operated from approximately 1975 to 1984. The site was previously used for painting automobile parts prior to distribution. In 1984, aqueous based paints replaced the previously used solvent-based paints. All painting operations were

STANDARD MOTOR PRODUCTS INC (Continued) **1000310304**

gradually eliminated between 1990 and 1991. The site also housed several other processes and included die-casting operations that ceased in the 1970s; rubber production that was eliminated around 1985; and degreasing which utilized chlorinated solvents that ended in 1990. Until March 2008, automobile parts and components at the site were manufactured in the basement. The manufacturing operations included metal fabrication and machining, plastic injection molding, and assembly. A small photography laboratory for production of newsletters, brochures also operated. Hazardous or toxic materials involved in plant operations are lubricating oils for machinery, caustics for degreasing, phenolics used in molding processes, epoxies for coil production, and water-based inks involved in their small-scale printing. All wastes were temporarily stored on-site in secure containers prior to off-site disposal at a licensed treatment, storage, and disposal (TSD) facility. Site Geology and Hydrogeology: The Site is underlain by the following units (in order by increasing depth): urban fill, Upper Pleistocene glacial deposits (including both till and channel deposits), and bedrock. The fill is predominantly comprised of reworked glacial deposits (sand, silt, clay, and gravel) and railroad ballast with minor amounts of construction debris and other materials. The Upper Pleistocene glacial deposits consist mainly of ground moraine deposits (unstratified, poorly sorted mixture of sand, silt, clay, and gravel). Bedrock was encountered at a depth of 74 feet below land surface (i.e. 53 feet below mean sea level). The groundwater beneath the Site occurs under water table (unconfined) conditions. The depth to groundwater in the vicinity of the Site is approximately 5 feet below ground surface (bgs). The water table occurs in either fill or glacial deposits. Groundwater elevation data show that flow is primarily from east to west beneath the Site. Due to the proximity to the East River, the hydraulic gradients are gentle which is consistent with the regional groundwater contour map and the groundwater contours present on the adjacent Sunnyside Yard property. The groundwater flow rate was estimated to be 0.78 feet/day.

Env Problem: Nature and Extent of Contamination: Soil - At one location, arsenic was detected at 19 parts per million (ppm), which is above the applicable soil cleanup objective (SCO) of 16 ppm. Groundwater - Tetrachloroethylene (PCE) has been found at concentrations of up to 17 parts per billion (ppb). Trichloroethylene (TCE) has been found at concentrations of up to 78 ppb. Cis-1,2-Dichloroethene (cis-1,2-DCE) has been found at concentrations of up to 93 ppb. Vinyl chloride (VC) has been found at concentrations of up to 31 ppb. 1,1,1-Trichloroethane 1,1,1-TCA) has been found at concentrations of up to 180 ppb. An air sparge and soil vapor extraction system was installed to remediate site groundwater and has been operating since September 2013. Soil Vapor- The highest concentrations of chlorinated VOCs were detected at SB-05. Sub-slab samples contained PCE at concentration of up to 620 ug/m3. TCE and cis-1,2-DCE have been found at concentrations of up to 2,800 ug/m3 and up to 52 ug/m3 respectively. Chlorinated ethanes were found and included 1,1,1-TCA and 1,1-DCA at concentrations up to 5,200 ug/m3 and up to 450 ug/m3 respectively. An Interim Remedial Measure (IRM) consisting of a sub-slab depressurization system (SSDS) has been installed in the building and is currently in operation.

Health Problem: The on-site structure will have an active sub-slab depressurization system which will prevent contamination from entering the building via soil vapor intrusion. A air sparge/soil vapor extraction system

STANDARD MOTOR PRODUCTS INC (Continued) **1000310304**

will address contaminants present in the groundwater. Exposure to site-related contaminants in drinking water are not expected because public water serves the area.

SHWS:
Name: BRIDGE CLEANERS
Address: 39-26 30TH STREET
City,State,Zip: LONG ISLAND CITY, NY 11101
Program: HW
Site Code: 440982
Classification: 2
Region: 2
Acres: 0.17299999999999999
HW Code: 241127
Record Add: 10/15/2010
Record Upd: 02/18/2020
Updated By: MJKOMORO
Site Description: Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. It is occasionally occupied. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 75 x 100 foot lot totally enclosed by a one-story cement block building. OU2 is the off-site area. For OU2, the off-site investigation area encompasses is the sidewalks along from 39th Avenue to 40th Road, between 29th Street and 31st Street. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to 9 feet below grade. In the larger OU2 investigation area, groundwater ranged from 11 to 30 feet below grade, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. Operable Unit (OU) Numbers 01 and 02 are the subject of this document.
Not reported
Env Problem: NATURE AND EXTENT OF CONTAMINATION: For OU1: On-Site Areas Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE) and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property, and the higher results were near the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. NYS was denied access to the building, and conducted an off-site investigation in February 2012. Elevated groundwater levels were found downgradient from the site (PCE 440 ppb, TCE 32 ppb). Soil: Soil samples in 2011, and later soil samples in 2014 found low level PCE contamination in soil. The highest soil sampled indicated 9.6 ppm PCE. The protection of groundwater standard and the unrestricted soil cleanup objective are both 1.3 ppm for PCE. Groundwater: Site groundwater was first sampled in 2011. The highest levels were obtained in 2011, with a maximum concentration of 1470 ppb PCE in groundwater. In 2014, the PCE concentrations ranged from 165-340 ppb, in 2016 PCE ranged from 44 to 200 ppb. TCE was present at much lower levels (maximum of 14 ppb). The groundwater standard for both PCE and TCE is 5 ppb. Sampling in Nov 2018 and May 2019 indicated that PCE levels had dropped in 4 on-site wells, but that one well (GW-2) continued to show PCE at 240ppm, then at 210 ppm. The TCE level at this well decreased from 14 ppm to 4.1 ppm (maximum on-site concentration). Soil Vapor: Sub-slab soil vapor samples were taken in 2014. Results ranged up to 668,000 ug/m3 PCE and up to 2140 ug/m3 TCE. PCE in indoor air was 270 ug/m3. Sub-slab samples in 2016 resulted in similar levels (up to 543,000 ug/m3 PCE and up to 3750 ug/m3 TCE). In Nov 2018, post-construction soil vapor monitoring was conducted. The range of PCE in soil vapor was 69.8-1890 ug/m3 PCE, 3.1-72 ug/m3 TCE. OU2 Off-Site Investigation Area Soil: Based on soil results from the 2012 off-site characterization, soil samples were not included in the off-site scope of work. Groundwater: Eight groundwater wells were installed in addition to seven pre-existing sidewalk wells. Two rounds of sampling were completed. PCE was present at a maximum value of 369 ppb in MW-3. TCE was present at a maximum of 181 ppb in MW-3. Historically, MW-3 also contained the highest amount of PCE (440 ppb) during the 2012 site characterization. The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Eleven soil vapor points were installed in the investigation area. The highest soil gas result at SV-104 was 4400 ug/m3 TCE and 2400 ug/m3 PCE on the south side of 40th Ave, across from MW-6. During the second set of sampling, the highest levels were also located at SV104, though the levels decreased to 1300 ug/m3 TCE and 590 ug/m3 PCE. Sub-slab and indoor air samples were completed in 4 structures. The highest sub-slab level was 9500 ug/m3 PCE and 7.2 ug/m3 in the indoor air. This structure was designated as Mitigate. One other was also designated as monitor/mitigate.

Health Problem: People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site.

Health Problem: People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site.

Site Code: 440982
Site Description: Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. It is occasionally occupied. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 75 x 100 foot lot totally enclosed by a one-story cement block building. OU2 is the off-site area. For OU2, the off-site investigation area encompasses is the sidewalks along from 39th Avenue to 40th Road, between 29th Street and 31st Street. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to 9 feet below grade. In the larger OU2 investigation area, groundwater ranged from 11 to 30 feet below grade, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. Operable Unit (OU) Numbers 01 and 02 are the subject of this document.
Not reported
Env Problem: NATURE AND EXTENT OF CONTAMINATION: For OU1: On-Site Areas Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE) and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property, and the higher results were near the common property line. PCE was found at 910 ppb

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. NYS was denied access to the building, and conducted an off-site investigation in February 2012. Elevated groundwater levels were found downgradient from the site (PCE 440 ppb, TCE 32 ppb). Soil: Soil samples in 2011, and later soil samples in 2014 found low level PCE contamination in soil. The highest soil sampled indicated 9.6 ppm PCE. The protection of groundwater standard and the unrestricted soil cleanup objective are both 1.3 ppm for PCE. Groundwater: Site groundwater was first sampled in 2011. The highest levels were obtained in 2011, with a maximum concentration of 1470 ppb PCE in groundwater. In 2014, the PCE concentrations ranged from 165-340 ppb, in 2016 PCE ranged from 44 to 200 ppb. TCE was present at much lower levels (maximum of 14 ppb). The groundwater standard for both PCE and TCE is 5 ppb. Sampling in Nov 2018 and May 2019 indicated that PCE levels had dropped in 4 on-site wells, but that one well (GW-2) continued to show PCE at 240ppm, then at 210 ppm. The TCE level at this well decreased from 14 ppm to 4.1 ppm (maximum on-site concentration). Soil Vapor: Sub-slab soil vapor samples were taken in 2014. Results ranged up to 668,000 ug/m3 PCE and up to 2140 ug/m3 TCE. PCE in indoor air was 270 ug/m3. Sub-slab samples in 2016 resulted in similar levels (up to 543,000 ug/m3 PCE and up to 3750 ug/m3 TCE). In Nov 2018, post-construction soil vapor monitoring was conducted. The range of PCE in soil vapor was 69.8-1890 ug/m3 PCE, 3.1-72 ug/m3 TCE. OU2 Off-Site Investigation Area Soil: Based on soil results from the 2012 off-site characterization, soil samples were not included in the off-site scope of work. Groundwater: Eight groundwater wells were installed in addition to seven pre-existing sidewalk wells. Two rounds of sampling were completed. PCE was present at a maximum value of 369 ppb in MW-3. TCE was present at a maximum of 181 ppb in MW-3. Historically, MW-3 also contained the highest amount of PCE (440 ppb) during the 2012 site characterization. The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Eleven soil vapor points were installed in the investigation area. The highest soil gas result at SV-104 was 4400 ug/m3 TCE and 2400 ug/m3 PCE on the south side of 40th Ave, across from MW-6. During the second set of sampling, the highest levels were also located at SV104, though the levels decreased to 1300 ug/m3 TCE and 590 ug/m3 PCE. Sub-slab and indoor air samples were completed in 4 structures. The highest sub-slab level was 9500 ug/m3 PCE and 7.2 ug/m3 in the indoor air. This structure was designated as Mitigate. One other was also designated as monitor/mitigate.

Health Problem: People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site.

Site Code: 440982
Site Description: Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. It is occasionally occupied. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 75 x 100 foot lot totally enclosed by a one-story cement block building. OU2 is the off-site area. For OU2, the off-site investigation area encompasses is the sidewalks along from 39th Avenue to 40th Road, between 29th Street and 31st Street. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to 9 feet below grade. In the larger OU2 investigation area, groundwater ranged from 11 to 30 feet below grade, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. Operable Unit (OU) Numbers 01 and 02 are the subject of this document.
Not reported
Env Problem: NATURE AND EXTENT OF CONTAMINATION: For OU1: On-Site Areas Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE)

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property, and the higher results were near the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. NYS was denied access to the building, and conducted an off-site investigation in February 2012. Elevated groundwater levels were found downgradient from the site (PCE 440 ppb, TCE 32 ppb). Soil: Soil samples in 2011, and later soil samples in 2014 found low level PCE contamination in soil. The highest soil sampled indicated 9.6 ppm PCE. The protection of groundwater standard and the unrestricted soil cleanup objective are both 1.3 ppm for PCE. Groundwater: Site groundwater was first sampled in 2011. The highest levels were obtained in 2011, with a maximum concentration of 1470 ppb PCE in groundwater. In 2014, the PCE concentrations ranged from 165-340 ppb, in 2016 PCE ranged from 44 to 200 ppb. TCE was present at much lower levels (maximum of 14 ppb). The groundwater standard for both PCE and TCE is 5 ppb. Sampling in Nov 2018 and May 2019 indicated that PCE levels had dropped in 4 on-site wells, but that one well (GW-2) continued to show PCE at 240ppm, then at 210 ppm. The TCE level at this well decreased from 14 ppm to 4.1 ppm (maximum on-site concentration). Soil Vapor: Sub-slab soil vapor samples were taken in 2014. Results ranged up to 668,000 ug/m3 PCE and up to 2140 ug/m3 TCE. PCE in indoor air was 270 ug/m3. Sub-slab samples in 2016 resulted in similar levels (up to 543,000 ug/m3 PCE and up to 3750 ug/m3 TCE). In Nov 2018, post-construction soil vapor monitoring was conducted. The range of PCE in soil vapor was 69.8-1890 ug/m3 PCE, 3.1-72 ug/m3 TCE. OU2 Off-Site Investigation Area Soil: Based on soil results from the 2012 off-site characterization, soil samples were not included in the off-site scope of work. Groundwater: Eight groundwater wells were installed in addition to seven pre-existing sidewalk wells. Two rounds of sampling were completed. PCE was present at a maximum value of 369 ppb in MW-3. TCE was present at a maximum of 181 ppb in MW-3. Historically, MW-3 also contained the highest amount of PCE (440 ppb) during the 2012 site characterization. The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Eleven soil vapor points were installed in the investigation area. The highest soil gas result at SV-104 was 4400 ug/m3 TCE and 2400 ug/m3 PCE on the south side of 40th Ave, across from MW-6. During the second set of sampling, the highest levels were also located at SV104, though the levels decreased to 1300 ug/m3 TCE and 590 ug/m3 PCE. Sub-slab and indoor air samples were completed in 4 structures. The highest sub-slab level was 9500 ug/m3 PCE and 7.2 ug/m3 in the indoor air. This structure was designated as Mitigate. One other was also designated as monitor/mitigate.

Health Problem: People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants

Update By:	MJKOMORO
Site Description:	Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and a courier service. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to 9 feet below grade.
Env Problem:	NATURE AND EXTENT OF CONTAMINATION: Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE)and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property. The higher results were closer to the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. In April 2011, the site operator obtained 2 soil samples from beneath the Bridge Cleaners slab and found tetrachloroethene (PCE) at 3.45 ppm and 0.757 ppm. The unrestricted soil cleanup objective is 1.3ppm for PCE. In September 2011, the owner independently obtained samples of soils and groundwater under the building,and provided results to DEC in

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

November 2011. The three groundwater results under the building were 537 ppb, 841 ppb and 1470 ppb PCE. Fifteen soil samples were below the unrestricted soil cleanup objectives for PCE. Groundwater samples also contained TCE in the 11-12.5 ppb range. After unsuccessfully attempting to obtain site access for a more thorough investigation, NYSDEC conducted an offsite investigation in February 2012. Groundwater elevations show groundwater flow from northeast to southwest. Concentrations of PCE and TCE upgradient of the site were approximately 21 ppb and 1 ppb respectively. Downgradient concentrations were 440 ppb and 32 ppb respectively. One of 14 soil samples, at side gradient monitoring well MW-4, contained PCE at 3.3 ppm. The depth of this contamination was 29-30 feet below grade, and below the water table at 25.5 feet. In the first quarter of 2014, after entering the Brownfield Program, additional groundwater, soil and soil vapor samples were obtained from within the building. Five groundwater samples ranged from 165 to 340 ppb for PCE, and TCE concentrations from 2-7 ppb. Soil samples obtained from the same 5 locations did not exceed unrestricted soil cleanup objectives.
Sub-slab soil vapor, however, ranged from approximately 20,000 ug/m3 to 668,000 ug/m3 below the slab (PCE) and up to 2140 ug/m3 TCE. PCE in indoor air was 270 ug/m3. Based on the soil vapor results, there is a need to mitigate the building. In Nov 2014, a new consultant was hired by the BCP applicant. Soil in the NW corner of the building was found at 1.8-9.6 ppm (exceeding the protection of groundwater SCOs) for PCE (1.3ppm). An IRM design has been developed to address the source area.

Health Problem: People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site.

Site Description:	LOCATION: This is an off-site investigation of the area downgradient of the Bridge Cleaners site, Site Number C241127, which located at 39-26 30th Street in Long Island City, an urban area. SITE FEATURES: The investigation area encompasses sidewalks along 29th Street from 39th Ave to 40th Road, along 30th Street from 39th Avenue to approximately 40th Ave, and along 40th Ave to 31st Street. CURRENT ZONING: This section of Long Island City is zoned Special Purpose District which allows mixed residential and commercial use. The specific designation for the site is M1-3/R7X. Buildings within the city block are primarily commercial. There are residential units including a three story apt building along 29th Street. The downgradient block also contains a limited number of residential buildings.Recent construction in the area includes a self-storage facility and hotels. HISTORICAL USES: This area of Long Island City has historically included mixed residential and light manufacturing. Formerly the area included a printing operation, commercial laundry and drycleaner, wire die manufacturer, gas station, and distribution

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

points for a variety of products. SITE HYDROLOGY/GEOLOGY: Groundwater elevation levels vary from 11.04 AMSL to 10.01 AMSL, which is about 20 feet below land surface in the vicinity of the site. Soils in the area are expected to be primarily sand and silty sand. C241127A projects for the off-site portion of this site are being tracked under site 241127 OU2.

Env Problem: NATURE AND EXTENT OF CONTAMINATION: In October 2010, a property location in this block was identified as a potential site (P-site) due to soil vapor and groundwater results collected by an adjacent property owner. After unsuccessfully attempting to obtain access for a more thorough investigation, NYSDEC conducted a limited offsite investigation in February 2012. Groundwater and soil samples were taken. Based on this investigation, the Bridge Cleaners Site (C241127) was determined to be causing a significant threat to public health and the environment. The site entered the NYS Brownfield Cleanup Program and remained in the Program until December 2016. Groundwater: Groundwater elevations show groundwater flow from northeast to southwest. Concentrations of tetrachloroethylene (PCE) and trichloroethylene (TCE) upgradient of the site were approximately 21 ppb and 1 ppb respectively. Downgradient concentrations were 440 ppb and 32 ppb respectively. The groundwater standard for both PCE and TCE is 5 ppb. Soil: One of 14 soil samples, at a side gradient monitoring well MW-4, contained PCE at 3.3 ppm. The depth of this contamination was 29-30 feet below grade. Scope of Off-Site Investigation 2016: This 2016 Remedial Investigation will define the nature and extent of contamination emanating from the Bridge Cleaners Site in groundwater, soil vapor and any other parts of the environment that may be affected. Shallow and deep groundwater wells will be installed upgradient and downgradient of the Bridge Cleaners site (C241127). After well installation, two sets of samples will be collected. Based on the initial sampling, groundwater samples will be collected for Compound Specific Isotope Analysis (CSIA). This analysis will be used to determine whether the source of the Tetrachloroethene (PCE) and Trichloroethene (TCE) groundwater contamination is exclusively from the Bridge Cleaners site or from other sources in the immediate area. Eleven soil vapor samples will also be collected initially. After the results are obtained, the Department may request access from owners of eight structures along 29th Street for sub-slab and indoor air sampling. OU2 Off-Site Investigation Results Soil: Groundwater: Eight groundwater wells were installed in addition to seven pre-existing sidewalk wells. Two rounds of sampling were completed. PCE was present at a maximum value of 389 ppb in MW-3. TCE was present at a maximum of 181 ppb in MW-3. Historically, MW-3 also contained the highest amount of PCE (440 ppb) during the 2012 site characterization. The groundwater standard for both PCE and TCE is 5 ppb. PCE and TCE were not observed in the 4 deep wells installed. Soil Vapor: Eleven soil vapor points were installed in the investigation area. The highest soil gas result at SV-104 was 4400 ug/m3 TCE and 2400 ug/m3 PCE on the south side of 40th Ave, across from MW-6. During the second set of sampling, the highest levels were also located at SV104, though the levels decreased to 1300 ug/m3 TCE and 590 ug/m3 PCE. Sub-slab and indoor air samples were completed in 4 structures. The highest sub-slab level was 9500 ug/m3 PCE and 7.2 ug/m3 in the indoor air. This structure was designated as Mitigate. One other was also designated as mitigate. C241127A projects for the off-site portion of this site are being tracked under site 241127 OU2.

Site Description:	The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. Manhattan Adhesives is currently an empty factory building that is located at the foot of the Greenpoint Ave., Bridge in Brooklyn. Besides the Manhattan Adhesives factory, about 10 feet from the northeast wall is a manhole (not a sewer or drain) into which liquid waste was allegedly discharged. This waste came from a condemned oil storage site located at the intersection of Rt. 280, and the NJ Turnpike in NJ. The manhole is suspected of being the opening to an underground tank; however, the quantity of the waste allegedly dumped exceeds the capacity of most tanks. This information was obtained from the State Senate Committee on Crime and the Brooklyn District Attorney's office. Phase I State Superfund has been completed. A partial phase II investigation was completed during 1985 and recommended no further action. The Responsible Party has agreed to undertake an investigation in 1986. An investigation has not found hazardous waste on-site.

Site Description:	Site Description: The site is a vacant lot that extends from 31st Street to 32nd Street and is located between 37th Avenue and 38th Avenue near Sunnyside Yards in the western portion of Queens (Long Island City). The property is in a predominantly Commercial Use and Industrial/Manufacturing area with some Mixed Residential & Commercial use. Site Features: The site is fenced (wooden construction), somewhat flat and vacant with no structures. The surface is a mixture of soil, construction debris and concrete rubble. Historical Use(s): As of 1898, the subject property contained a two-story bottling and laboratory facility occupied by Hiscox & Company Patent Medicines. By 1915, the building was occupied by Mercury Motor Works and two two-story dwellings were constructed in the western portion. By 1936, the main building expanded, occupying more of the property and was occupied by Renner-Maras Inc. Ornamental Iron Works. In addition, one of the dwellings was identified as an office. By 1947, the building was identified as a loft and electro-plating facility. By 1970, the western building was built-out to the property and was identified as Bliss Display Corp, a manufacturer. The eastern portion was used for painting and the southern was used for woodworking. By 1995, the property was occupied by one manufacturer. By 1996, a small portion was used for parking. The property remained substantially unchanged through 2006. Site

MOTOR AND IRON WORKS (Continued) **S118705940**

Geology and Hydrogeology: The topography of the site is generally level and is approximately 36 feet above mean sea level. The site is located approximately 0.87 miles northeast of Dutch Kills and 1.1 miles east of the East River. There is no groundwater data but according to the USGS, the depth to groundwater is expected between 21 and 30 feet bgs in the vicinity of the site. Groundwater was not encountered to the maximum depth of exploration of 27 feet bgs. The groundwater gradient is expected to slope generally to the southwest towards Dutch Kills. The major aquifer systems beneath the subject property are the Upper Glacial and Lloyd aquifers. The subsurface beneath the site consists of unconsolidated sand and gravel layers from the ground surface to approximately 50 feet below ground surface where the Raritan confining unit is encountered. Bedrock beneath the subject property is located approximately 200 feet below ground surface. The lithology generally consisted of up to five feet of fill material underlain by a silt or clay lens extending to a maximum observed depth of seven feet followed by fine-grained poorly graded sand to the terminal depth of investigation at 23 feet bgs. The historic fill encountered was evidenced by brick and concrete, which predominantly was embedded in a silty sand matrix.

DEC Memo:	"6/27/2016: Rashad 37-21 32 Street has an alternate address of 37-13 - 37-23 32 Street and 37-12 - 37-18 33 Street. No additional spills or PBS registrations found for this site. Called Mark, this site is an OER site and they found contamination during RIR field work. Shaminder contacted us this morning with regards to this site: I am reviewing an RIR which indicated VOCs in soils at 20 feet depths. Groundwater was not sampled due to refusal at 27 feet depths. Soil/fill samples results were compared to New York State Department of Conservation (NYSDEC) Unrestricted Use Soil Cleanup Objectives and Restricted Residential Use Soil Cleanup Objectives (SCOs) as presented in 6NYCRR Part 375-6.8 and CP51. Soil/fill samples collected during the RI showed that no PCBs were detected in any of the soil samples. VOCs including 1,2,4-Trimethylbenzene (42,000 ug/kg), 1,3,5-Trimethylbenzene (13,000 ug/kg), Ethyl Benzene (3,800 ug/kg), n-Propylbenzene (6,700 ug/kg) and total Xylenes (19,000 ug/kg) were detected above Unrestricted Use SCO in one deep soil sample SB-9 (21-23). The email had two documents attached. First document has site maps with soil concentrations as well as soil vapor results. Soil vapor results are as follows: SV-1: Tetrachloroethene-150ug/m3, SV-2: tetrachloroethene-230ug/m3, SV-3: Tetrachloroethene-170ug/m3, SV-4 Tetrachloroethene-160ug/m3, trichloroethene-400ug/m3, SV-5: tetrachloroethene-260ug/m3, trichloroethene-170ug/m3, SV-6 tetrachloroethene-220ug/m3, trichloroethene-200ug/m3, SV-7 tetrachloroethene-96ug/m3, trichloroethene-420ug/m3. Soil analyticals found contamination at SB-9 21-23 feet: 1,2,4 Trimethylbenzene-42,000ppb, 1,3,5

MOTOR AND IRON WORKS (Continued) **S118705940**

Trimethylbenzene-13,000ppb, Ethyl Benzene-3,800ppb, n-propylbenzene-6,700ppb, and total xylene-19,000ppb. 7/7/2016: Rashad Sent contaminated soil letter to NYCOER for site, it has been uploaded to D2 and mailed to owner. 9/6/2016: Rashad Received call from Paul Stewart of Advanced Cleanup Technologies. He said that he is working with OER on site and that the RAWP is in the final stages of approval. Received email from Shaminder: Above spill was recently called in during Site investigations. Since then, RIR and RAWP have been prepared. A copy of RAWP is attached for your review. Development includes excavations of full footprint of property to more than 22 feet deep for cellar and sub-cellar (to be used as parking garage) and a seven story residential building. Remedy includes: 1.Excavation and removal of soil/fill exceeding Track 4 Site Specific SCOs. 2.Performance of a remedial action for the petroleum spill #16-03003 under New York State Department of Environmental Conservation (NYSDEC) Spill program. 3.Collection and analysis of end-point samples to determine the performance of the remedy with respect to attainment of SCOs. End point samples for spill closure will be performed per DER-10 requirements. 4.Construction of an engineered composite cover 5.Installation of a vapor barrier system 6.Installation of a passive sub-slab depressurization system (SSDS) 7.parking garage with high volume air exchange in conformance with NYC Building Code. Attached to email was RIR and summary. It has been uploaded to D2. Review or RAWP is as follows: Site is in VCP. The proposed future use of site will be a seven story mixed use building with retail stores on first floor, and residential apartments on the upper six floors. The cellar will be built to a max depth of 10 feet bgs, the subcellar will be built to a depth of 20 feet bgs. The majority of the property will be excavated to a depth of 22 ftbgs. Elevator pits will be excavated to depth of 26 ft bgs, the excavation is not expected to reach the groundwater table. The sub-cellar will contain 45 parking spots. The cellar will contain 25 parking sports. Groundwater was not encountered, refusal was reached at 27 ft bgs. The proposed remedial action will consist of: community air monitoring, excavation and removal of soil for the majority of the site to a depth of 22 feet below grade except for two recessed area to the northwest and northeast, which will be excavated to 2 feet bgs. A small portion will be excavated to 27 ft bgs. Removal of all USTs that are encountered during soil removal actions and registrations of all found tanks. Performance of remedial actions for the open spill case on property which include installation and monitoring of off site groundwater wells as required and approved by NYSDEC, and may include the removal of LNAPL present beneath the site, treatment of groundwater plume via injections of biorem and chem ox if required by NYSDEC, excavation and removal of petroleum impacted soil, where feasible to 2 feet below groundwater and the implementation of a groundwater monitoring program. A separate RAWP Addendum may be required by NYSDEC. Construction of an engineered composite cover of a min of 6 inch thick reinforced concrete building slab. Installation of a vapor barrier system consisting of vapor barrier beneath the building slab and outside of sub-grade foundation sidewalls. Vapor barrier will be 20 mill in thickness. Installation of passive SSDS. Property is also E-designated. 9/7/2016: Rashad Spoke to DEC Vought and sent report review letter approving RAWP to NYCOER pending proposed monitoring well locations. 10/5/2016: Rashad Shaminder submitted addendum to myself and John Durnin, John is DEC project manager for hazardous waste remediation project on this site.

MOTOR AND IRON WORKS (Continued) **S118705940**

Sent email to John seeking if I should administratively close this spill and refer it to his hazardous waste project. 10/6/2016: Rashad Review of the addendum is as follows; they are proposing installation of two down gradient groundwater monitoring wells along the western boundary of the site. Also five additional soil vapor samples have been proposed along the northern and southern boundaries of the site. Discussions with John continue on possible case transfer (Remediation ID number 241191). 10/13/2016: Rashad On 10/12 DEC Durnin sent comments to Shaminder for the RAWP Addendum which include: Revised RAWP Addendum (see figure below) Site investigation decisions for this P site are based on the entire property being excavated to the depth of at least 22 feet. The north corner of the site along 32nd Street (recessed area) and the east corner of the site along 33rd Street (recessed area) both are only going to be excavated to a depth of 2 feet. Should the developer not implement this excavation plan, the soil investigation would require additional sampling from 2 feet to 22 feet across to entire property. Soil Vapor According to the June 22, 2016 draft RIR (page 20), nine soil vapor samples (SV-1 through SV-9) were collected but only 7 are documented (SV-1 to SV-7). This should be corrected in the final RIR. Relocate proposed SV-11 away from the former basement area to ensure the soil vapor sample (6 -7 probe depth) is representative of the soil conditions without any influence of the former basement. Add soil vapor sample points SV-13 and SV-14 at each end of the site near 32nd Street and 33rd Street to evaluate the potential for off-site migration. Soil There is only one soil sample, SB-9 (21 -23) below the two foot depth. All the other soil samples are from the 0 to 2 depth. The off-site soil borings for MW-1 and MW-2 must be logged continuously and screened with a PID. Any visual evidence of contamination or elevated PID readings will require soil sample collection and laboratory analysis for VOCs, SVOCs and Metals. Groundwater Based on groundwater data from other OER Brownfield Sites in the area, the groundwater flow direction is most likely in the westerly direction and approximately 20 feet deep. Indicate the diameter of the proposed wells and the type of well drilling rig to be used. Since refusal was encountered at 27 feet during a previous attempt, a larger drill rig is needed to install the four proposed monitoring wells. Provide well construction details for all new wells. MW-1 and MW-2 must be greater than 20 feet apart to be representative of a broader area of groundwater, to not influence one another and to enhance the verification of the groundwater flow direction. MW-2 needs to be far enough along 32nd Street to reasonably be downgradient of the site. MW-3 should be located near SB-9 where elevated levels of Trimethylbenzenes, Ethyl Benzene, n-Propylbenzene and total Xylenes were encountered in the soil at 21 to 23 feet. MW-4 will show if there is off-site groundwater impacting the site (assuming a westerly groundwater flow). As per DEC Vought, no further comments are needed for petroleum remediation as DEC Durnin has taken the lead and addressed the Departments comments/concerns. 10/31/2016: Rashad On 10/28 DEC Durnin asked for update to revised addendum. Alysha from OER sent revised addendum report. It has been uploaded to D2. 11/9/2016: Rashad John Durnin sent email: There has been a question raised regarding the revision of the RAWP Addendum for 37-21 32nd Street, Spill #16-03003. The consultant, Advanced Cleanup Technologies, Inc. (ACT) prepared the revised addendum to the Remedial Action Work Plan (RAWP) and RAWPs required a P.E. to do the work. However, the work I ve been reviewing and commented on involves

MOTOR AND IRON WORKS (Continued) **S118705940**

investigative work necessary to evaluate if this project (NYSDEC P Site) will be in the NYCOER BF program or the NYSDEC BF program, typically investigative work not requiring a P.E. Is it possible that this is actually an addendum to an existing RIWP prepared by ACT in early 2016? Alysha replied: The addendum is for the existing RIWP and will be also included as an appendix in the Stipulation List. 1/5/2017: Rashad Emailed DEC Durnin about possible case transfer due to my resignation at DEC, received no response. 1/6/2017: Rashad After meeting with RSE Austin spill will be assigned to DEC Durnin. There is a DEC approved RI Work Plan addendum for additional wells and SVI sampling. Waiting for this to be done. DEC sent a sidewalk opening permit request letter on February 23, 2017. (3/31/2017) The additional well samples and SVI sampling were completed in May 2017. Site remediation/construction began in January 2018. Daily reports are available on the NYCOER EPIC website (16TMP0372M). Once the site remediation is completed, DEC will evaluate the open spill and determine if it can be closed. The DEC Project Manager, John Durnin, will retire in April 2018. The new Project Manager will be Kyle Forster. (3/29/2018), "

Site Description:	Location: The site is located at 460 Kingsland Avenue in the Greenpoint section of Brooklyn, New York (Figure 1). 460 Kingsland Avenue is located within a commercial/industrial area and is bordered

460 KINGSLAND AVENUE (Continued) **U003074537**

by Newtown Creek to the east (which has served as an industrial water way for nearly 140 years), Kingsland Avenue to the west, Greenpoint Avenue (John Jay Byrne) Bridge to the north, and OU-4 to the south. To the east, Newtown Creek has been designated a Federal Superfund Site and is under the jurisdiction of the United States Environmental Protection Agency (USEPA). Site Features: The property is composed of an approximate 3.55-acre parcel, identified as Block 2612 Lot 20 on the Brooklyn tax map. Land surface elevations are approximately 7 feet above mean sea level (AMSL) within the southeastern portion of and gradually rise to approximately 11 feet (AMSL) within the northwestern portion of the site. Currently, the site contains two abutting one-story buildings. Current Zoning and Land Use: The property is zoned M3-1 for heavy manufacturing and industrial use. Exterior areas are paved and used for parking and storage. The site is subleased to numerous third parties for parking, storage, and for use as office space. Past Use of the Site: Historical maps indicate the site and surrounding areas were undeveloped marshlands until the late 1800s when the land was filled for industrial development. The northern portion of the site was operated by the Columbus Distilling Company and the Chris Cunningham Boiler Works from approximately 1892 to 1919. The southern portion of the site was operated by ExxonMobil s predecessors as part of a petroleum refinery operation from approximately 1892 to 1920. By approximately 1920, refinery operations had expanded to include the entirety of 460 Kingsland Avenue. The refinery operations within the site continued until 1966. Under ExxonMobil s former operations, 460 Kingsland Avenue also served as a petroleum bulk storage yard. An oil water separator (OWS) was located along southern site boundary. Based on a review of historic aerial photographs, the OWS appears to have been filled sometime between 1961 and 1966. In 1967, ExxonMobil s predecessors sold the property to a freight company and a trucking terminal was built, which currently remains on-site. On or about August 29, 1981, a former site owner reported that the bulkhead had collapsed into Newtown Creek, along with considerable amounts of fill/soil, asphalt parking lot and concrete curb stop. The bulkhead collapse was repaired with fill and a new steel sheet pile bulkhead was installed along the property. As documented in the Updated PCB Source Evaluation Report (September 7, 2012), PCB contamination in this area appears to be attributable to PCB-laden fill materials associated with the bulkhead reconstruction. Site Geology and Hydrogeology: The stratigraphic units underlying the site form three distinct hydrogeologic units; the shallow aquifer, the shallow confining unit, and, the regional aquifer. The shallow aquifer is primarily comprised of the saturated fill materials deposited above the historical creek and marsh sediments. The depth to groundwater in the shallow aquifer varies from approximately 1.5 to 8.5 feet below land surface (ft/bls) within the site and the saturated thickness of the shallow aquifer within the site is typically less than 10 feet. The shallow confining unit is made up of deposits from the historical creek and marsh sediments. Historically, marsh land and open water covered the entirety of 460 Kingsland Avenue. The shallow confining unit ranges in thickness from approximately 5 to 20 feet across the site. The shallow confining unit has very low groundwater movement rates such that, it isolates the shallow aquifer from the underlying regional aquifer. This causes confined or semi-confined conditions within the regional aquifer. The geology of the shallow confining unit is identified as a clay or peat material with varying levels of silt.

460 KINGSLAND AVENUE (Continued) **U003074537**

	The regional aquifer is found throughout the site below the shallow aquifer and shallow confining unit. It is made up of fine to medium grained sands, with varying amounts of silt and coarser materials and was found to be at least 10 to 15 feet in thickness. Groundwater movement is consistent in the regional aquifer compared to the shallow aquifer, due to the sand and silty sand material that comprise this layer.
Env Problem:	Soil sampling indicates that hazardous waste disposal has occurred at the site. Groundwater sampling at the site indicates that PCBs may be present in the shallow groundwater at levels above the NYSAWQS. Additional site characterization is necessary to examine complete nature and extent in groundwater and soil and to determine if a significant amount of waste is present. Petroleum impacts are present in site in shallow and deeper soils, and in groundwater from former refining operations on and near the site.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.
