# 1. Introduction

The Brookfield Avenue Landfill (BAL) site completed its seventh annual post-closure reporting period on March 31, 2022. This Report has been prepared by the New York City Department of Parks and Recreation (DPR) to fulfill the reporting requirements contained in the BAL Operation and Maintenance (O&M) Manual, the BAL Monitoring Plan (as modified), and 6NYCRR Part 360 and 363.

The remainder of this Report is organized into the following Sections:

- Section 2: Site Background – This Section provides a description of the BAL site and summarizes its pertinent history and significant remedial events from the initial Remedial Investigation Report in 1998 through 2017 when the DPR opened the site to the public as Brookfield Park in accordance with its end use plan.

- Section 3: Seventh Post-Closure Year Annual Summary Report – This Section summarizes the operation, maintenance and monitoring (OM&M) activities conducted at the site during the seventh annual post-closure reporting period from April 2021 through March 2022.

- Section 4: Conclusions and Recommendations – This Section provides the conclusions and recommendations related to the site's remedial systems and post-closure OM&M activities based on the first five years of post-closure work.

# 2. Site Background

BAL site is located at 575 Arthur Kill Road, north of Arthur Kill Road and east of Richmond Avenue in Staten Island, New York 10308, as shown in Figure 1. Prior to remediation, the site was listed as a Class 2 site on the NYSDEC's Registry of Inactive Hazardous Waste Disposal Sites (Site #2-43-006). From 1966 through 1980, the City of New York placed 5.1 million cubic yards of municipal solid waste on 132 acres of the 272-acre site. Illegal industrial and hazardous waste dumping, including waste oil, sludges, metal-plating wastes, lacquers and solvents, is also reported to have occurred at the BAL during this period.

Beginning in 1982, a number of site investigations were undertaken in response to the reports of illegal dumping. In 1983, the NYSDEC listed the BAL site as a Class 2a Inactive Hazardous Waste Disposal Site. A 1992 Order of Consent issued by the NYSDEC required the City of New York to develop and implement a remedial program for the site. Between 1993 and 2000, a Remedial Investigation/Feasibility Study (RI/FS) was conducted to investigate the nature and extent of contamination and assess hazards to human health and the environment. The RI/FS was designed to augment previous studies and assist selection of the appropriate remedial action alternative.

Operable Unit 1 (OU1) at the site was the remediation of the landfill. A Record of Decision (ROD) for OU1 was published in March 2002. It presented several remedial alternatives, and the selected

alternative entailed: capping, active landfill gas collection, leachate collection and a barrier wall. The specific components of the selected OU1 remedy are summarized below:

- Construction of a 6NYCRR Part 360 landfill cap featuring a gas-venting layer, synthetic membrane barrier layer, barrier soil protection layer, and vegetated topsoil layer.
- Construction and operation of an active gas-collection system.
- Installation of a barrier wall around the landfill perimeter to prevent the subsurface discharge of leachate and landfill gas.
- Construction of a surface water runoff collection system.
- Construction of a leachate collection system bordering Richmond Creek.
- Minimization of encroachment into freshwater and tidal wetlands.
- Institutional controls to ensure groundwater beneath the site is not extracted for potable use.
- Initiation of a long-term monitoring program to ensure the contained hazardous waste does not leave the site. This long-term monitoring program is a component of the Operations and Maintenance Plan for the site, developed in accordance with 6NYCRR Part 360 regulations.

The selected OU1 remedy also entailed the construction of landscaping, roads, vehicle parking areas, walking trails and appurtenant facilities. Following completion of the OU1 remediation, the Final Engineering Report (FER) was submitted to the NYSDEC and was approved on April 6, 2015, marking the official start of the BAL post-closure period. In August 2017, the NYSDEC reclassified the BAL to a Class 4 site on its Registry of Inactive Hazardous Waste Disposal Sites as it was properly remediated but required continued site management. On December 12, 2017, the DPR opened the site to the public as Brookfield Park as per its approved end use plan. The post-closure OM&M work was performed under the oversight of the New York City Department of Environmental Protection (DEP) Bureau of Wastewater Treatment (BWT) until June 30, 2018, when this site responsibility was also transferred to the DPR. DEP BWT is still responsible for the operation of the Eltingville Pumping Station located between the East and West Cells, which is not part of the landfill property.

The objective of the BAL OM&M program is to ensure the integrity of the remedial systems and prevent adverse impacts on public health, safety, and the environment. The OM&M work is being performed in accordance with the BAL Post-Closure Monitoring and Maintenance Operations Manual (O&M Manual), which was prepared in accordance with the 6NYCRR Part 360 regulations and approved by the NYSDEC as the Site Management Plan (SMP) required under 6NYCRR Part 375. The replacement 6NYCRR Part 363 landfill regulations went into effect on November 4, 2017, and the relevant portions have been implemented at the site as discussed in this Report.

The BAL Second Operable Unit (OU2) ROD requires monitoring the chemical characteristics of surface water and sediment in Richmond Creek and sediment quality in the tidal marsh and tributaries adjacent to the BAL during the 5$^{th}$, 10$^{th}$ and 20$^{th}$ years following completion of the OU1 remedy. The baseline round of monitoring for OU2 was performed during the fourth quarter of 2013 once the OU1 remediation had been substantially completed. The 5$^{th}$-year monitoring round was performed during this five-year review period in the third quarter of 2018, and the results were submitted to the NYSDEC in a separate report. The 10$^{th}$-year monitoring round is scheduled to be

performed during the fourth quarter of 2024, and the results of that monitoring will also be submitted to the NYSDEC in a separate report.

The BAL is also subject to the USEPA greenhouse gas reporting rule under the 40 CFR Part 98 Subpart HH regulations. Accordingly, a greenhouse gas monitoring plan for the site was prepared, the required data are collected, and annual greenhouse gas reports are submitted to the USEPA.

# 3. Seventh Post-Closure Year Annual Summary Report

This BAL Annual Post-Closure OM&M Summary Report section has been prepared by DPR to fulfill the reporting requirements contained in the O&M Manual, the OU1 Post-Closure Monitoring, Sampling and Analysis Plan (OU1 Monitoring Plan), and 6NYCRR Parts 360 and 363. This section of the report documents the OM&M activities performed between April 1, 2021, and March 31, 2022. The field and laboratory data related to these OM&M activities, as well as summary tables and figures for the post-closure environmental monitoring sample results, are provided in subsequent subsections.

## 3.1 Leachate Management System

### 3.1.1 System Description

The leachate management system (LMS) is one of the components of the selected remedy in the BAL ROD**.** The leachate collection, pre-treatment and disposal system was designed to control leachate produced via the percolation of rainwater through the waste materials and infiltration of groundwater through waste material and to produce a treated effluent acceptable for discharge to the Eltingville Pumping Station. From there, it is pumped to the Oakwood Beach Water Pollution Control Plant for subsequent treatment.

The primary elements and components of the LMS are the leachate collection trenches located around the periphery of the landfill cells inside their barrier walls, with a total of nine pumps that direct flow to the on-site oil/water separator system before discharge to the on-site Eltingville Pumping Station (see Figure 2). The east and west cells of the landfill have separate leachate collection and pumping systems, which run along their northern boundaries. The leachate trench systems consist of 6-inch-diameter perforated, corrugated polyethylene piping within stone-filled trenches underlying each cell's final cover system. There are approximately 4,000 linear feet of leachate collection trench in the East Cell and 1,800 linear feet in the West Cell.

There are six collection sumps in the East Cell trench and three in the West Cell trench, and leachate flows to them by gravity. Each sump contains two approximately 20-gpm pumps (one operating and one standby). The pumps direct leachate to two 150-gpm oil/water separator units that are designed to reduce the free-oil content of the collected leachate to below the required sanitary sewer discharge limits. The trace amount of condensate in the landfill gas collection system also flows to the oil/water separator. Following oil/water separation, the treated leachate flows by gravity through a Parshall flume metering manhole to the influent manhole of the Eltingville Pumping Station, where it is pumped to the Oakwood Beach Water Pollution Control

Plant for subsequent treatment. Under the current DEP Industrial Wastewater Discharge (IWD) Permit No. 18-P3149-1, the maximum allowed leachate discharge rate is 288,000 gallons per day (gpd). Long-term flows are expected to drop to half this amount. Monthly discharge water quality sampling and quarterly reporting are performed as required under the IWD Permit.

### 3.1.2 System Operation, Maintenance and Monitoring Summary

During this annual reporting period, the leachate management system was operated, monitored, inspected and maintained in accordance with the O&M Manual requirements. The preventative maintenance required on the leachate management system consisted of inspections of the piping, sumps and manholes to ensure the system was operating properly. Periodic inspections of the areas around the sump manholes were conducted to ensure no overflows had occurred and verify that no obstructions were affecting the under-drain pipes where they exited the drainage system. The inspection and maintenance tasks performed during this annual reporting period are summarized on forms submitted to DPR. When necessary, a DP-1 form, "Description of Deficiencies and Problems," is used to highlight specific problems requiring timely attention. The leachate management system inspection and monitoring documentation for this annual reporting period is included in Appendix A. The deficiencies and problems as of March 2022 are included in the following table:

| **BROOKFIELD AVENUE LANDFILL SITE** | |
|---|---|
| **Description of Stormwater System Deficiencies and Problesm – Seventh Post-Closure Year** | |
| **Description** | **Location** |
| **Excess vegetation at outfall** | 2EN, 3EN, 6EN, 7EN, 11EN, 12EN, 1EE, 1ES, 2ES, 8ES, 1EW, 2EW, 4EW, 5EW, 1WN, 2WN, 3WN, 1WE, 2WE, 3WE, 6WE, 2WS, 5WS, 6WS, 1WW, 2WW, 3WW |
| **Damage to outfall structure** | 6EN, 7EN, 6ES, 10ES, 1EW, 2EW, 2WN |
| **Erosion control fabric visible – erosion/washout** | Channel 2-1 and 3-1 |
| **Sediment build-up at outfall structure** | 1EN, 3EN, 4EN, 5EN, 6EN, 7EN, 10EN, 12EN, 13EN, 1EE, 2EE, 3EE, 1ES, 2ES, 7ES, 8ES, 9ES, 1EW, 2EW, 3EW, 1WN, 2WN, 3WN, 2WS, 3WS, 5WS, 1WW, 2WW, 3WW, 4WW, 8WW |
| **Standing water in pipe at outfall structure** | 2WN, 3WN, 1WE, 2WS, 3WS, 8WW |
| **Erosion around outfall pipe** | 4WW |
| **Sediment build-up in pipe** | 1EW, 5EW |

On August 7, 2018, the DEP IWD Permit for the leachate management system discharge was updated to reflect DPR as the Permit's Industrial User. Permit No. 18-P3149-1 is effective August 10, 2018, through August 9, 2023. Monthly leachate sampling and analysis were performed during this annual reporting period as required by the permit. The results indicate that no exceedances of the permitted discharge limits occurred during this annual reporting period. The Quarterly Self-Monitoring Reports were submitted to the DEP Industrial Pre-Treatment & Permit Section by the

due dates. A copy of the Quarterly Self-Monitoring Reports for this annual reporting period, which include the laboratory results, is provided in Appendix B. A copy of the IWD Permit is also included in Appendix B.

During this annual reporting period, all 18 leachate pumps, two per sump, were tested for live electrical load and operation. Measurements of water-level elevation and running pump hours were also taken. As shown in Table 1, the total pump run time for the period was 18,273 hours, with an average run time per pump of 1,015 hours. As shown in Table 2, the total volume of leachate collected and treated during this annual reporting period was 21,125,970 gallons, at an average flow of 57,879 gpd.

The frequency of sump pump maintenance has been adjusted based on the recommendations contained in the WILO Pump O&M Manual (Appendix B of BAL O&M Manual Appendix E, Equipment Manual). Specifically, the WILO Pump O&M Manual recommends maintenance be performed once every 8,000 operating hours or after two years, whichever is sooner. Based on the first three years of post-closure operation, this maintenance is required once every two years (not annually) unless an individual pump run time increases to 8,000 hours before the two-year scheduled maintenance. The biannual maintenance service on all 18 sump pumps was performed during this reporting period on February 7$^{th}$ through 9$^{th}$, 2022. During the biannual maintenance service, seven (7) of the 18 pumps at six (6) of the nine (9) pump stations were found to have issues and were shut off and recommended to be replaced. Pump replacement occurred in October 2022. Results from each pump inspection are described below.

Pump Station LSE1:
The inspection was completed on February 9 and 24, 2022. The station has two Wilo pumps installed; both pumps were tested and drew 3.0 of 4.1 full load amps. On February 9, the lifting cable for pulling the #1 pump was stuck under the pump and PSI was not able to remove the pump. PSI returned on February 24, and a vacuum truck operated by Innovative Recycling Technology (IRT) was used to remove approximately 5,800 gallons of leachate from the sump pit to allow PSI to access LSE1 pump No. 1. Following removal, IRT discharged the water into the oil water separator. PSI removed pump No. 1 and inspected the pump, no wiring or physical issues were identified and PSI reinstalled the pump and pull cables correctly. Pump No. 2 was removed, inspected, and found to be in good condition and reinstalled.

Pump Station LSE2:
The inspection was completed on February 9, 2022. The station has two Wilo pumps installed; both pumps were tested and drew 3.0 and 3.1 of 4.1 full load amps. They were removed and inspected, found to be in good condition and reinstalled.

Pump Station LSE3:
The inspection was completed on February 9, 2022. The station has two Wilo pumps installed. Upon PSI's arrival, the breaker for pump No. 2 was tripped. Pump No. 2 was inspected, and the motor insulation showed a short to the ground, which is why the motor tripped the breaker. On February 24, 2022, PSI returned to the Site and removed No. 2 for further assessment at their facility. The #1 pump had no issues; it was drawing 2.9 of 4.1 full load amps, and it was reinstalled.

Pump Station LSE4:
The inspection was completed on February 7, 2022. The station has two Wilo pumps installed; both pumps were tested and drew 3.2 of 4.1 full load amps. They were removed and inspected with no issues found. Both pumps were reinstalled.

Pump Station LSE5:
The inspection was completed on February 7, 2022. The station has two Wilo pumps installed. The No. 1 pump trips the breaker at startup. The No. 1 pump was inspected, and the motor insulation appears to short to ground, which is why the motor trips the breaker. The No. 1 pump also showed a seal failure. On February 24, 2022, PSI returned to the Site and removed pump No. 1 for further assessment at their facility. The No. 2 pump was removed and inspected, with no issues found. The pump is drawing 3.1 of 4.1 full load amps.

Pump Station LSE6:
The inspection was completed on February 7, 2022. The station has two Wilo pumps installed; both pumps were tested, and drew 3.0 of 4.1 full load amps. They were removed from the well and inspected with no issues found. Both pumps were reinstalled. PSI noted that the level in the station is just below the high-level float.

Pump Station LSW1:
The inspection was completed on February 8, 2022. The station has two Wilo pumps installed. The No. 2 pump was inspected, and the motor insulation shows a short to ground. On February 24, 2022, PSI returned to the Site and removed pump No. 2 for further assessment at their facility. The No. 1 pump was removed and inspected with no issues; it drew 3.1 of 4.1 full load amps. Pump No. 1 was reinstalled.

Pump Station LSW2:
The inspection was completed on February 8, 2022. The station has two Wilo pumps installed, and both of the pumps are showing a seal fail condition at the control panel. Both pumps were removed for inspection, and PSI personnel tried to spin each impeller, and both impellers were rough to turn, which indicated a possible bearing issue. Coupled with the seal failure indication, PSI recommended removing these pumps for a repair estimate. These were tested and drew 3.3 & 3.2 of 4.1 full load amps. On February 24, 2022, PSI returned to the Site to remove pump No. 2; however, upon inspection, PSI determined the electrical cables were sealed in the conduits with spray foam (instead of the correct conduit packing material) and therefore, the electrical lines and pump could not be removed. TRC and PSI are evaluating potential solutions, which may include removing the existing conduit and installing new wiring and conduit.

Pump Station LSW3:
The inspection was completed on February 8, 2022. The station has two Wilo pumps installed. Pump No. 1 showed a seal failure at the control panel and while inspecting the pump, the impeller was rough to spin, indicating a possible bearing issue. On February 24, 2022, PSI returned to the Site and removed pump No. 1 for further assessment at their facility. The No. 2 pump was removed

and inspected with no issue found; the pump was reinstalled. The pumps were drawing 3.2 of 4.1 full load amps. Both pumps were left in the off position.

The oil/water separator and the Parshall flume were visually inspected for flow and clarity. There was no observance or detection of free oil during this annual reporting period. In October 2019, DEP BWT Industrial Inspection and Permitting Section also performed an annual inspection of the oil/water separator and found it satisfactory.

During the reporting period, the current OM&M contractor observed standing stormwater in the vault of the East and West Cell Oil/Water Separator. The stormwater was pumped out, and the oil/water separator will continue to be inspected weekly for accumulated stormwater which will be pumped out if necessary.

DPR added telemetry to the flow meter in May of 2021. The upgrade includes the recording of the hourly flow data, including an instantaneous flow, total daily flow, and cumulative flow total in an excel spreadsheet which may be accessed and downloaded remotely.

DPR is presently evaluating the feasibility of automating system operational data collection for the LMS. Specifically, it is considering adding telemetry to the three West Cell sumps and East Cell sump LSE-6. The addition of telemetry at these sump locations is based on the operational data obtained to date, which indicates that these are the sumps that operate on a more frequent basis to control the LMS water level. Sumps with lower operating frequency (i.e., sumps LSE-1, 2, 4 and 5) would then be monitored on a less frequent basis. Recommendations for modifying the monitoring frequency of sump LSE-3 will be addressed once more data is obtained and evaluated.

## 3.2 Landfill Gas Management System

### 3.2.1 System Description

The site's active landfill gas management system was designed to limit off-site landfill gas migration. Under the 6NYCRR Part 360 regulations in effect at that time, the limits were 1) the lower explosive limit (LEL) at the property line (i.e., 5% gas in air), and 2) 25% of the LEL in structures (i.e., 1.25% gas in air). Under the 6NYCRR Part 363, which went into effect on November 4, 2017, the limit for methane at the property line was lowered to 1.25% gas in air, and the limit for methane in structures remained the same. The landfill gas management system operates in accordance with NYSDEC Air Facility Registration Certificate #2-6403-00207/00005.

The area of the site serviced by the gas collection system, as shown in Figure 3, and includes the entire landfill footprint. During the OU1 remediation, 84 vertical and 16 horizontal gas-collection wells were installed. There are separate gas collection headers for each cell. Both are connected to the Landfill Gas Management Compound (Gas Compound), which is a fenced area (e.g., concrete barrier/fence) located north of the Eltingville Pumping Station within the central corridor between the cells. The Gas Compound is equipped with two variable-frequency drive (VFD) blowers, two knockout pots, valves and controls, and a fully-enclosed landfill gas flare. Each blower can operate over a range of 50 to 500 standard cubic feet per minute (scfm). Under normal operations,

operating one blower provides sufficient capacity for both cells' collection systems. The second blower serves as a backup to maintain system operation during blower maintenance or repair. The blowers are configured in parallel and discharge via a common header to the landfill gas flare. This parallel configuration allows for flexibility in the operation of the landfill gas management system and over time, has proven to be the most effective mode of operation. The flare is five feet in diameter and 25 feet in height and provides complete thermal destruction of methane and other landfill gas trace compounds while operating at a capacity of 50-500 scfm. The flare contains a flame detector and thermocouple(s) mounted in close proximity to the combustion zone to provide confirmation of combustion. In the event the flare flame is out due to high wind, low combustible concentrations, or other events, the flare will automatically attempt to relight. If a relight is not accomplished, the system will automatically shut down.

### 3.2.2 System Operation, Maintenance and Monitoring Summary

During this annual reporting period, the components of the landfill gas management system, including the gas collection system, condensate system, enclosed flare system, electrical systems, fire alarm systems, below and above ground piping, and valves were operated, monitored, inspected and maintained in accordance with the O&M Manual requirements. The system has been in service since its startup on May 9, 2013.

Initially, the landfill gas flare was only operated when the OM&M contractor was onsite (i.e., 8 hours/day on non-holiday weekdays) due to restrictions set by the Fire Department of New York (FDNY). However, on November 2, 2016, FDNY issued a permit authorization to operate the flare continuously (24 hours/day, 7 days/week). The system has been operating on a continuous schedule since that time. To date, a total of 33,258 blower operating hours have been recorded.

During this annual reporting period, the flare occasionally shut down automatically due to low flame temperature and insufficient available methane conditions. On each occasion, the percentage of methane available was below the 25% minimum required for proper flare operation.

No Emergency Shutdown (ESD) testing was performed during this reporting period per the flare's permit requirements. FDNY conducted testing on October 6, 2021, on mechanical, electrical and system control features (combustible gas sensors, fire alarm, pull box, and ESD button) were found to be operable and satisfactory. The next annual ESD test will be performed in September 2022.

During the reporting period, telemetry was added to the flare system allowing remote access to the flare panel and remote re-start of the flare.

During this annual reporting period, the landfill gas flaring system processed 49,325,677 SCF of landfill gas, with an average methane concentration of 29.4%. The flare operated for 4,865 hours. The monthly operating data for this annual reporting period are summarized in the table below:

| BROOKFIELD AVENUE LANDFILL SITE | | | |
|---|---|---|---|
| **Monthly Flare Operation – Seventh Post-Closure Year** | | | |
| **Month** | **$CH_4$ (% by Volume)** | **Time in Service (Hours)** | **Flow (SCF)** |
| **21-Apr** | 31.9 | 375 | 4,567,705 |
| **21-May** | 24.7 | 379 | 4,309,072 |
| **21-Jun** | 36.6 | 393 | 5,116,860 |
| **22-Jul** | 32.7 | 436 | 5,383,728 |
| **21-Aug** | 32.6 | 468 | 6,067,851 |
| **21-Sep** | 34.8 | 445 | 5,424,903 |
| **21-Oct** | 32.5 | 463 | 5,825,210 |
| **21-Nov** | 23.2 | 412 | 3,717,221 |
| **21-Dec** | 28.7 | 301 | 2,042,651 |
| **22-Jan** | 29.3 | 236 | 2,086,420 |
| **22-Feb** | 25.2 | 138 | 739,823 |
| **22-Mar** | 20.9 | 445 | 4,044,233 |
| **Monthly Average** | **29.4** | **374** | **4,110,473** |
| **Totals** | **NA** | **4,865** | **49,325,677** |

Landfill gas extraction wells were also monitored for gas content (percent $CH_4$, $CO_2$ and $O_2$) as well as temperature and vacuum pressure on a monthly basis during the annual reporting period. Accumulated stormwater was also removed from the well vaults, and accumulated condensate was removed from drains as needed. Gas wells were also monitored for damage and parts fatigue, and repairs (e.g., installing new Fernco fittings, etc.) were performed as required.

During winter months, de-icing of filters and valves were often necessary to remove condensation that had frozen during offline periods. The landfill gas management system inspection and monitoring documentation for this annual reporting period are provided in Appendix C.

## 3.3 Final Cover System

### 3.3.1 System Description

The final cover system prevents the infiltration of stormwater into the landfill and the migration of landfill gas into the atmosphere. The OU1 ROD stipulated the construction of a 6NYCRR Part 360 landfill cap. The final cover system is comprised of a vegetated topsoil layer with a minimum thickness of 6 inches; a minimum 12-inch-thick barrier protection layer; a geocomposite drainage layer; a 40-mil-thick textured LLDPE (linear low-density polyethylene) geomembrane liner; and a geocomposite gas-collection layer over 12 inches of intermediate cover material. The surface of the final cover system also incorporates tree planting islands, several small constructed wetlands, walking trails, and observation areas. The final cover system components are detailed in Figure 4.

The O&M Manual requires the final cover system to be inspected on a quarterly basis, and after storm events equal to or greater than a 5-year storm. As shown in Figure 4, this system is divided into seven zones for inspection. It is inspected for surface cracks, vegetative growth, vector penetration, settlement, erosion, slope stability, seepage and vandalism. The inspection is performed by walking up and down the side-slopes and across each zone several times. Records of each final cover system inspection are summarized on an Inspection Checklist Form FCS-1 in accordance with the requirements of the O&M Manual. A Deficiency and Problems Form DP-1 is completed to summarize the items marked not satisfactory (NS) on the Inspection Checklist Forms.

#### 3.3.2 System Inspection and Maintenance Summary

During this annual reporting period, the vegetative portions of the cover system overall did not demonstrate any significant concerns. The final cover system inspection documentation for this annual reporting period is included in Appendix D.

## 3.4 Stormwater Management System

#### 3.4.1 System Description

The stormwater management system is an integral part of the capping and closure system required under the 6NYCRR Part 360 regulations to protect the landfill final cover system. The system was designed to collect, transport and discharge stormwater from the landfill to the wetland planting areas and Richmond Creek. The system reduces overall stormwater runoff rates and improves the quality of stormwater discharging to Richmond Creek. Stormwater must be conveyed freely from the landfill's vegetated cover and paved surfaces to drainage swales, detention basins, etc.

The stormwater management system consists of various components, shown in Figure 5, which require monitoring, inspection, and periodic maintenance. The system is divided into three subsystems (SWM-1, SWM-2 and SWM-3) for inspection and reporting:

- SWM-1: Geocomposite drainage flaps and stormwater drainage channels,
- SWM-2: Outlets, culverts, rip-rap inlet and outlet protection and revetment area, rock buttress areas, and
- SWM-3: Corrugated Plastic Pipe (CPP) downdrain pipes, pipe trenches, and energy dissipation structures.

These components are kept free of obstructions to ensure conveyance through the stormwater system as designed. The stormwater management system's maintenance includes removing accumulated sediment or obstructions, as needed. The O&M Manual requires that the stormwater management system be inspected on a monthly basis, and following major rainfall events (5-year storm or greater). A record of each inspection is summarized on Monthly Inspection Checklist Forms SWM-1, SWM-2, and SWM-3 in accordance with the O&M Manual. A Deficiency and Problems Form DP-1 is completed to summarize the items marked not satisfactory (NS) on the Monthly Inspection Checklist Forms.

### 3.4.2 System Inspection and Maintenance Summary

During this reporting period, the stormwater management system was inspected in accordance with the O&M Manual requirements. Asphalt in Zones 1 and 4A was observed to be distressed (i.e., cracking). The deficiencies identified during this annual reporting period did not affect the overall performance of this system. Areas of vegetation at outfall structures, debris at outfall structures, damaged outfall structures, and exposed erosion control fabric were identified during this reporting period.

Deficiencies identified during this reporting period do not necessarily affect the efficient performance of this system. When debris, sediment, or obstructions were encountered during inspections, they were immediately removed to ensure efficient stormwater flow. All structures and piping, including swales and culverts, were checked for efficient flow and competence. During this period, cleanout activities were performed at all stormwater outfall structures to remove accumulated debris and vegetation. Riprap was renewed as necessary. Generally, after every storm period, inspections are performed and issues are resolved.

The stormwater management system inspection documentation for this annual reporting period is provided in Appendix E.

## 3.5 Ancillary Systems

### 3.5.1 System Description

The ancillary systems are those support systems at the BAL that are used for site access and security. The ancillary systems consist of access roads, fences, signage, gates and locks. The main components of these systems are shown on Figure 4. The roadways are integral in providing access to perform required inspection, monitoring and maintenance activities. The security fences and gates prevent site access to unauthorized individuals.

The O&M Manual requires inspection of the roadways on a monthly basis and after 5-year storm events. The remaining ancillary systems (i.e., fences, gates, locks and signs) are to be inspected weekly. A record of each inspection is summarized on the Monthly Inspection Checklist Form ANS-1 in accordance with the requirements of the O&M Manual. A Deficiency and Problems Form DP-1 is completed to summarize items marked not satisfactory (NS) on an Inspection Checklist Form.

### 3.5.2 System Inspection and Maintenance Summary

Locks, gates, site identification signs and lamp bulbs are currently functional. Winter storm conditions required snow and ice removal. Other activities included the removal of outdated project signs, vehicle maintenance, weed removal around the gas wellheads, and repairs to the site trailers (flashing and siding). Any deficiencies identified during this annual reporting period and the change in personnel performing the inspections during the last quarter did not affect the overall performance of this system. Also, during this reporting period, the inspection and annual

certification of the site fire extinguishers located inside the office trailers and in the Flare Compound Area were performed. The ancillary system inspection documentation for this annual reporting period is provided in Appendix F.

## 3.6 Post-Closure Environmental Monitoring

The OU1 Monitoring Plan went into effect in April 2015 when the NYSDEC approved the OU1 FER. The OU1 Monitoring Plan addresses the performance evaluation of the effectiveness of the OU1 remedy, and includes requirements for monitoring groundwater, leachate and landfill gas at the site. The monitoring results for the leachate and landfill gas management systems were discussed in Sections 3.1 and 3.2 of this Report, respectively. This section discusses the perimeter gas monitoring, landfill surface emissions monitoring and ground-water monitoring performed during this annual reporting period. It should be noted that while landfill surface emissions monitoring is not required at the BAL site by any regulation, the O&M Manual encouraged that it be performed due to the site's recreational end use.

### 3.6.1 Perimeter Gas Monitoring Program

In addition to the active landfill gas collection and flaring discussed in Section 3.2, a total of 32 gas-monitoring wells were installed as part of the OU1 construction. Some of these wells were installed in the site's interior, between the two cells along the perimeter of each cell. The remaining wells were installed along the site property boundaries along Arthur Kill Road, Richmond Avenue, and the site's eastern boundary, as shown in Figure 3. The objective of the gas monitoring program is to determine the presence and extent of subsurface landfill gas (i.e., methane) migration. This monitoring is performed quarterly.

As initially discussed in Section 3.2.1, the previous 6NYCRR 360-2.17 (f) regulation was in effect until November 3, 2017, and required that subsurface combustible gas levels not exceed the lower explosive limit (LEL, i.e., 5% gas in air) at or beyond the site property boundary, or 25 percent of the LEL (i.e., 1.25% gas in air) inside structures, excluding landfill gas control/recovery system components. However, on November 4, 2017, the new 6NYCRR Part 363-7.1(e)(2) regulations went into effect, which requires that subsurface combustible gas levels not exceed 25% of the LEL (i.e., 1.25% gas in air) at or beyond the site property boundary. Building limits were unchanged.

Monitoring was performed for methane ($CH_4$), $CO_2$ and $O_2$ using a GEM 5000 Multi-Gas Monitor. The results are summarized in Table 3 and indicate that $CH_4$ concentrations in 27 of the 32 gas monitoring wells were below the 6NYCRR Part 363 action level during all four quarterly monitoring rounds. Exceedances of methane were noted in LFG-E-18, LFG-E-19, LFG-W-1, LFG-W-11, LFG-W-12, LFG-E-18, LFG-W-11 and LFG-W-12 had methane exceedances during all four quarterly monitoring rounds; LFG-E-19 had methane exceedances in the third quarter of 2021, fourth quarter of 2021, and first quarter of 2022; and LFG-W-1 had a methane exceedance in the third quarter of 2021. Although bar hole punches were not able to be performed at well LFG-W-11 because of the well location, a bar hole punch was performed in three locations in the vicinity of wells LFG-E-18, LFG-E-19, LFG-W-1, and LFG-W-12 which indicated $CH_4$ readings of 0%. The valves on the landfill gas management system extraction wells closest to this area are fully

open, and both landfill cells are surrounded by a 25 to 40-foot deep slurry wall. The existence of methane at these locations may be attributed to the naturally-occurring meadow mat soils present at depth in this area, as reported in the Final Remedial Investigation Report. Methane levels encountered at the wells in this vicinity will be tracked during the post-closure period, and appropriate measures will be taken if necessary.

The only permanent building on site is the Eltingville Pumping Station. DEP is responsible for the operation of this pumping station. Combustible gas levels within this building have been monitored by DEP operational personnel, and to date, no concentrations in excess of 25% of the LEL have been reported. In order to document these findings in the Post-Closure OM&M Reports, gas monitoring within the building has been incorporated into the Quarterly Perimeter Gas Monitoring Program. Gas monitoring is performed utilizing an Industrial Scientific Ventis MX-4 portable gas meter. As shown in Table 4, combustible gas was not detected in any of the building areas monitored throughout this annual reporting period. The results of this monitoring are included in Appendix C.

### 3.6.2 Surface Emissions Monitoring Program

While the BAL does not meet the criteria for landfill surface emissions monitoring stipulated under 6NYCRR Part 208, this monitoring was included in the O&M Manual due to the site's recreational end use. Surface emissions monitoring is performed semi-annually to ensure that the gas collection and final cover systems are limiting fugitive methane emissions to less than 500 parts per million (ppm) above the background at the landfill's surface (6NYCRR 208.4).

The semi-annual landfill surface emissions monitoring for this annual reporting period was performed in October 2021. On the landfill surface, 477 points were monitored for emissions of volatile organic compounds (VOCs), such as methane, using a flame ionization detector. The results did not indicate the presence of methane emissions more than 500 ppm above background. These results, as well as a plan showing the locations monitored, are included in Appendix G.

### 3.6.3 Ground Water-Monitoring Program

The first round of post-closure groundwater monitoring at the BAL was conducted during the second quarter of 2015. Although the OU1 Monitoring Plan originally called for quarterly monitoring, a reduction to annual monitoring in rotating calendar quarters (i.e., once every fifth quarter) was approved by the NYSDEC in September 2015.

Based on the revised schedule, post-closure ground water-monitoring rounds have been performed during the second quarter of 2015, the third quarter of 2016, the fourth quarter of 2017, the first quarter of 2019, and the second quarter of 2020; and in this reporting period during the third quarter of 2021. The next post-closure groundwater monitoring event will occur in the fourth quarter of 2022.

The third quarter 2021 monitoring round was performed from September 10$^{th}$ through 16$^{th}$, 2021. A total of 23 groundwater samples, two (2) duplicate samples, two (2) MS/MSD samples, four (4)

trip blank samples, and two (2) field blank samples were collected from existing monitoring wells as part of the sampling event. One monitoring well (LTMW-20) was inaccessible during the sampling event, due to overgrown vegetation. The 23 existing monitoring wells were gauged with an oil/water interface probe to determine the depth-to-water prior to purging/sampling activities. Subsequent to recording the depth to water at the monitoring wells, the monitoring wells were purged using dedicated disposable Teflon-lined polyethylene tubing and either a bladder pump for deeper wells or a peristaltic pump for shallower wells. The monitoring wells were purged via low flow/low stress method following the USEPA standard operating procedures. The depth of the pump intake was placed within the screen intervals and at least 2 feet above the bottom of the screen. Water quality parameters were measured and recorded using a Horiba U-52 Water Quality Meter every five minutes.

The third quarter 2021 groundwater samples were analyzed for the following compounds:

- Target Compound List (TCL) Semi-volatile Organic Compounds (SVOCs) via USEPA Method 8270;
- TCL Volatile Organic Compounds (VOCs) via USEPA Method 8260;
- Target Analyte List (TAL) Metals via USEPA Methods 6010/6020;
- TCL Pesticides via USEPA Method 8081;
- TCL Polychlorinated Biphenyls (PCBs) via USEPA Method 8082;
- Cyanide via USEPA Method 9012;
- Nitrate, Sulfate, Chloride, and Bromide via USEPA Method 300;
- Ammonia via Standard Method 4500;
- Total Organic Carbon via Standard Method 5310;
- Total Dissolved Solids via Standard Method 2540;
- Alkalinity via Standard Method 2320; and,
- Total Hardness via Standard Method 2340.

No target VOCs were detected at concentrations above the Class GA Standard in any of the monitoring wells. Similarly, no target semivolatile organic compounds (SVOCs) were detected at concentrations above the Class GA Standards. Six (6) metals (aluminum, barium, iron, magnesium, manganese and sodium) were detected at concentrations above the Class GA Standard in twenty-one (21) monitoring wells. Polychlorinated biphenyls (PCBs) were not detected. Pesticides were also not detected. Ammonia (2 monitoring wells), bromide (7 monitoring wells), chloride (9 monitoring wells), and sulfate (2 monitoring wells) were detected at concentrations above the Class GA Standard. Cyanide and nitrate were not detected at concentrations above the Class GA Standard.

Sulfate (LTMW-2 and LTMW-3), ammonia (LTMW-1 and LTMW-19), and barium (LTMW-1 and LTMW-4) were detected mainly in downgradient monitoring wells and their presence may be related to the landfill operation.

Bromide, chloride and metals, with the exception for barium, detected in groundwater samples at concentrations greater than the Class GA Standards, are naturally occurring compounds and their elevated presence may be a result of saltwater intrusion from the nearby wetland areas. A contributing source of manganese and iron in groundwater could also be associated with anaerobic

conditions generated by the decomposition of organic materials commonly found along low-lying marshland.

Groundwater within the West Cell flows towards the wetland to the Site's northern portion. In contrast, groundwater within the East Cell, in addition to flowing towards the wetland to the northern portion of the Site, flows radially to the western portion of the Site.

The laboratory analysis results are presented in Appendix H in Tables 1 through 6 and the depth-to-water measurements recorded on September 10, 2021, are provided in Table 7. Groundwater flow maps for the upper glacial and cretaceous aquifers, based on the third quarter 2021 data, are also provided in Figures 7 and 8. The low-flow sampling field data sheets, laboratory analytical results, and data usability summary reports are also provided in Appendix H

# 4. Conclusions and Recommendations

Based on the results of the post-closure activities performed during the Site's first five-year review period, the BAL engineering and institutional controls are in place, performing as intended and remain effective. The BAL remedy continues to be protective of public health and the environment and is compliant with the BAL OU1 and OU2 RODs. The activities associated with the O&M Manual and the OU1 Monitoring Plan are being implemented. Routine system maintenance and repair of each of the remediation systems should continue in compliance with the requirements of the O&M Manual.

Specific conclusions and recommendations for each of the remediation systems are identified in the following paragraphs.

## 4.1 Leachate Management System

The leachate management system continued to be operational and prevented off-site leachate migration during this review period. The Monthly M-1 sample results continue to meet the required IWD permit discharge limits.

In general, it is recommended that the pump stations and related equipment continue to be operated, inspected and maintained in accordance with the O&M Manual and that the discharge continue to be monitored monthly per IWD permit requirements. If deficiencies are noted, they should be repaired and/or replaced in a timely manner to minimize system downtime. In addition, the recommended corrective actions listed in Form DP-1, Leachate Management System, Description of Deficiencies and Problems, in Appendix A, of the Quarterly and Annual Reports, should be implemented. TRC is coordinating with PSI Process, Inc. to perform the repairs. Leachate pump repairs are anticipated to be performed during the third quarter of 2022.

As discussed in Section 3.1.2, DPR is considering adding telemetry to the flow meter at the discharge manhole as well as all three West Cell sumps and East Cell sump LSE-6. Once this telemetry is installed and more frequent operational data is analyzed, a recommendation may be made regarding a potential reduction in the frequency of on-site data collection from weekly to

monthly at many of the sumps in the East Cell, whose pumps operate infrequently since the water level at those locations appear to be at a steady state condition. Installation of telemetry at the four sumps proposed to automatically notify DPR of operating parameters and conditions would also be advantageous in system operation, evaluation and troubleshooting.

## 4.2 Landfill Gas Management System

After FDNY approval was obtained on October 31, 2016, and the annual permit issued on November 2, 2016, the landfill gas management system became operational 24 hours per day, seven days per week. During this review period, the system experienced downtime due to shut-downs for routine inspection, calibration, maintenance, repair and/or replacement of equipment, controlled shut-downs to protect equipment from anticipated severe weather conditions, flame failures caused by poor LFG quality, low flow faults attributed to condensate blockage, system evaluations by the manufacturer's representative, FDNY inspections, and occasional power failures associated with poor weather. Monitoring performed during this review period confirmed that the system is preventing off-site gas migration.

As the landfill ages, the methane quality and quantity generated by the landfill will continue to decline. The landfill gas management system performance should continue to be monitored in accordance with the O&M Manual requirements to determine if adjustments and/or modifications to the system are necessary to maximize landfill gas quality and quantity. In addition, the recommended corrective actions listed in Form DP-1, Landfill Gas Management System, Description of Deficiencies and Problems, in Appendix C, of the Quarterly and Annual Reports, should be implemented as deemed appropriate.

Elevated methane concentrations when detected at a gas monitoring well will be delineated horizontally using bar hole punches, where possible.

## 4.3 Final Cover System

Overall, the landfill final cover system continues to be protective of the landfill cap beneath it during the Site's review period. Conditions found were typical of those encountered during the landfill post-closure period, with only a few deficiencies occasionally noted.

In general, it is recommended that routine maintenance continue to be performed to prevent problem areas from expanding and worsening. This would include filling ruts caused by erosion, reseeding areas where necessary and maintaining landfill surface slope to promote stormwater runoff. In addition, the recommended corrective actions listed in Form DP-1, FCS-1, Description of Deficiencies and Problems, in Appendix D, of the Quarterly and Annual Reports, should be implemented.

## 4.4 Stormwater Management System

The stormwater management system continued to convey stormwater runoff to its outfall locations during the Site's review period. Conditions found were typical of those encountered during the landfill post-closure period, with a few deficiencies occasionally noted.

In general, it is recommended that silt and vegetation in drainage swales continue to be periodically removed and sediment be removed from other portions of the drainage system. Specifically, the recommended corrective actions listed in Form DP-1, SWM-1, SWM-2 SWM-3, Description of Deficiencies and Problems, in Appendix E, of the Quarterly and Annual Reports should be implemented as deemed appropriate.

## 4.5 Ancillary Systems

The roads and walking trails of the ancillary systems continued to provide access throughout the Site, while the fencing and gates continued to allow for controlled Site access during the Site's first review period. Conditions found were typical of those encountered during the landfill post-closure period, with a few deficiencies occasionally noted.

Once the site was opened to the public as Brookfield Park and DRP took over responsibility for BAL in 2018, DPR has had full-time staff located in an office on-site and certain responsibilities for the Ancillary Systems were taken over by DPR M&O and Parks Enforcement Patrol (PEP) personnel. These include maintenance of roads, walking trails, fencing, gates, guide rails, park signs, etc.

In general, it is recommended that routine maintenance continue to be performed to prevent problem areas from expanding and worsening. This would include repairing cracks in paved roadways, filling ruts and depressions in stone walking trails, and repairing site fencing guide rails and gates when necessary. While the cracks previously repaired in the paved roadway in the East Cell have not recurred at this time, it is recommended that this area should continue to be monitored in the future. In addition, the recommended corrective actions listed in Form DP-1, ANS-1, Description of Deficiencies and Problems, in Appendix F, of the Quarterly and Annual Reports, should be implemented.

## 4.6 Post-Closure Environmental Monitoring

The overall conclusion/recommendation for this five-year review period is that environmental monitoring in accordance with the OU1 Monitoring Plan, as modified and described in Section 5.6.3 below and approved by the NYSDEC, should continue to be performed. The specific conclusions and recommendations for each element of the Post-Closure Environmental Monitoring Program are provided below.

### 4.6.1 Perimeter Gas Monitoring Program

Gas monitoring was performed quarterly during this review period at the 32 perimeter gas wells in accordance with the O&M Manual, the OU1 Monitoring Plan and 6NYCRR Part 360 and Part 363 requirements. Exceedances of the 6NYCRR Part 360/363 action levels were encountered at

only three of the 32 perimeter wells during this period. However, the action level is for conditions at the property boundary, which is not pertinent to these wells. In addition, the methane in these wells may be attributed to the naturally occurring meadow mat soils present at depth in this area of the site identified during the Remedial Investigation. It is recommended that Methane levels at these wells are tracked during the post-closure period and appropriate measures will be taken if necessary. All of the perimeter gas monitoring wells located along the property boundary have had methane levels less than the regulatory action levels since 2016.

To date, there have been no detections of methane in the Eltingville Pumping Station above 25% of the LEL. In order to document these findings in the Post-Closure OM&M Reports, gas monitoring within the building has been incorporated into the Quarterly Perimeter Gas Monitoring Program.

Taken as a whole, the perimeter gas monitoring performed during this review period indicates that there is no evidence of off-site gas migration. It is recommended that prior to performing gas monitoring at each perimeter well, the well be allowed to properly vent/purge after the cap is removed to ensure that the readings are representative of soil conditions in the well screen zone and not due to the accumulation of trace amounts of gas in the well casing. It is further recommended that a bar-hole survey be performed between any perimeter well exhibiting an exceedance of the 6NYCRR Part 363 action level and the adjacent property boundary to identify conditions closer to the property line.

Gas monitoring performed during this review period indicates that the BAL landfill gas management system is meeting the requirements of 6NYCRR Part 363-7.1(e)(2) to limit combustible gas levels to less than 25% of the LEL at or beyond the property boundary or in any structure on or off the site, excluding the gas control/recovery system components.

### 4.6.2 Surface Emissions Monitoring Program

The semi-annual landfill surface emissions monitoring rounds performed during this review period indicated that methane concentrations were lower than 500 parts per million (ppm) above background. Therefore, although the BAL site does not meet the applicability criteria for landfill surface emissions monitoring stipulated under 6NYCRR Part 208, the landfill surface emissions monitoring performed during this review period continues to document that the landfill cover and gas management systems are meeting the surface emissions requirements of 6NYCRR 208.4.

### 4.6.3 Ground Water Monitoring Program

The third quarter 2021 groundwater monitoring round was performed from September 10 through 16, 2021. Samples were collected from a total of 23 existing groundwater monitoring wells as part of the sampling event. The laboratory analysis results are presented in Appendix H in Tables 1 through 6. The depth-to-water measurements recorded on September 10, 2021, are provided in Table 7. Target VOCs were not detected in groundwater at levels exceeding Class GA standards. Similarly, target SVOCs were not detected in groundwater at levels exceeding Class GA standards. Certain metals and leachate indicator parameters were detected in groundwater at concentrations

above Class GA standards, but the number of exceedances is limited and most are due to the naturally-saline groundwater at the Site.

## LEGEND (SYMBOL NOT TO SCALE):

- SITE BOUNDARY
- LTMW-## — LONG-TERM GROUNDWATER MONITORING WELL
- 4.40 — GROUNDWATER ELEVATION (IN FEET)
- 7.00 — GROUNDWATER SURFACE ELEVATION CONTOUR (IN FEET)
- GROUNDWATER FLOW DIRECTION
- CENTERLINE OF BARRIER WALL
- AS-BUILT FINAL GRADE

## NOTES:

1. HORIZONTAL AND VERTICAL DATUM IS A PROJECT SPECIFIC DATUM, REFERENCED FROM "TOPOGRAPHICAL SURVEY OF THE BROOKFIELD AVENUE LANDFILL, SITUATED ON STATEN ISLAND IN THE BOROUGH OF RICHMOND, COUNTY OF RICHMOND, CITY OF NEW YORK, STATE OF NEW YORK" DATED JUNE 4, 2003 PREPARED BY CHAS. H. SELLS, INC. TO CONVERT TO NAD 83 AND NGVD 1929 SEE RFI #7 AND #31.
2. COORDINATES AND ELEVATIONS ARE SHOWN IN U.S. SURVEY FEET.
3. MP ELEV = MEASURING POINT ELEVATION - THE TOP EDGE OF EACH WELL'S OUTER STEEL CASING.
4. TOS ELEV = TOP OF SCREEN ELEVATION.
5. TOP OF WELL CASING ELEVATIONS REFERENCE THE ELEVATIONS PROVIDED ON THE LONG-TERM GROUNDWATER MONITORING WELL LOCATION PLAN FIGURE 6 PREPARED BY LAYOUT INC. DATED 07-23-15.
6. DEPTH TO WATER FROM TOP OF CASING ELEVATIONS RECORDED BY TRC ON 09-21-2021.
7. DEPTH TO WATER ELEVATION AT LTMW-20 WAS NOT USED IN PREPARATION OF GROUNDWATER CONTOURS DUE TO BEING INACCESSIBLE.
8. DEPTH TO WATER ELEVATION AT LTMW-18c, LTMW-21, LTMW-22, AND LTMW-23 WERE NOT USED IN PREPARATION OF GROUNDWATER CONTOURS SINCE IT IS PART OF THE CRETACEOUS GROUNDWATER LEVEL MAP.

**Comments**

1. All wells were vented prior to monitoring.
2. Exceedance of the LEL for Methane is shown in bold. No additional bar punches were done due to location.
3. -- : No data available

Notes:

1. Methane monitoring was performed by walking along the interior perimeter of the building as well as other locations throughout each floor.
2. If methane readings were encountered, a description of the location would be included in the table above and a sketch of the building showing the location would be attached to this table.

Re: Issuance of Industrial Wastewater Discharge Permit No. 18-P3149-1

Attention: Ms Kay Zias

Enclosed is your Industrial Wastewater Discharge Permit No. 18-P3149-1, authorizing the discharge of industrial wastewater from your facility located at 575 ARTHUR KILL ROAD, STATEN ISLAND, NY 10308 into the New York City sewerage system. This control mechanism is effective as of August 10, 2018, and expires at midnight on August 9, 2023 and is contingent upon the Industrial User's compliance with any other Federal, State or Local laws applicable to the permitted activity. In order to continue discharging after the expiration date of this Permit, an application must be filed for a new Permit at least 120 days prior to the expiration date. **Please note that you are required to submit a self-monitoring report four times a year. Your first self-monitoring report pursuant to this Permit is due on September 30, 2018.**

Your Permit contains applicable Federal Categorical Standards and New York City Sewer Use Limits, as well as self-monitoring, reporting and record keeping requirements. Failure to comply with all terms and conditions contained in the Permit and the New York City Sewer Use Regulations (available upon request) may result in issuance of Notices of Violation currently carrying civil penalties of up to $10,000 per violation per day and/or other enforcement proceedings.

**Substantial changes have been made to the New York City Industrial Wastewater Discharge Permit. It is therefore vital that you read through your Permit carefully and become aware of the new requirements. Please make special note of the extensive changes in discharge limitations and monitoring requirements.**

In order to facilitate your periodic self-monitoring and reporting, a standardized four-page Industrial Self-Monitoring Report Form and an Analytical Report Form are enclosed. Additional forms are always available upon request. When completing the forms, your Permit should be referred to for specific monitoring and reporting requirements.

**The SMR must be submitted to:**

**Frances Leung, P.E., Chief**
**Industrial Inspections and Permitting Section**
**Bureau of Wastewater Treatment**
**New York City Department of Environmental Protection**
**96-05 Horace Harding Expressway**
**Corona, New York 11368**

Please contact Ms. Kene Umeasor at (718) 595-4712, if you have any questions regarding this Permit.

Sincerely,

Frances Leung, P.E., Chief
Industrial Inspections and Permitting Section

# NEW YORK CITY
# DEPARTMENT OF ENVIRONMENTAL PROTECTION
# INDUSTRIAL WASTEWATER DISCHARGE PERMIT

| | |
|---|---|
| Permit No.: | **18-P3149-1** |
| Effective Date: | **August 10, 2018** |
| Expiration Date: | **August 9, 2023** |

In accordance with the provision of Title 24, Chapter 5, Section 24-523 (c) (1) of the New York City Administrative Code (NYCAC)

| | |
|---|---|
| **Industrial User Name:** | **NEW YORK CITY PARKS AND RECREATION** |
| | **ENVIRONMENTAL REMEDIATION UNIT** |
| | **BROOKFIELD AVENUE LANDFILL REMEDIATION** |
| **Facility Address:** | **575 ARTHUR KILL ROAD** |
| | **STATEN ISLAND, NEW YORK 10308** |
| **Mailing Address:** | **OLMSTED CENTER, FLUSHING MEADOWS CORONA PARK** |
| | **117-02 ROOSEVELT AVENUE** |
| | **FLUSHING, NEW YORK 11368** |

is hereby authorized to discharge industrial wastewater from the above identified facility into the New York City sewerage system in accordance with the discharge limitations, monitoring requirements, and other conditions set forth in this Permit.

All discharges authorized herein shall be consistent with the terms and conditions of this Permit. The discharge of any pollutant not identified in this Permit, or any pollutant identified in this Permit more frequently than or at levels in excess of that authorized, shall constitute a violation of the Permit. This Permit is contingent upon the Industrial User's compliance with any other Federal, State or Local laws applicable to the permitted activity.

The Industrial User shall not discharge any process or regulated wastewater after the date of expiration. If the Industrial User wishes to continue to discharge after this expiration date, an application for reissuance of this Permit must be filed a minimum of 120 days prior to its expiration date.

By: _____

Leslie Lipton, Chief
Division of Pollution Control and Monitoring
Bureau of Wastewater Treatment

Issued this 7th day of August, 2018

## TABLE OF CONTENTS

| | | Page |
|---|---|---|
| **Part I** | **Specific Conditions** | I-2 |
| Section A | Discharge Limitations | I-2 |
| Section B | Monitoring Requirements | I-3 |
| Section C | Reporting Requirements | I-8 |
| Section D | Special Conditions | I-9 |
| **Part II** | **General Conditions** | II-1 |

## PART I - SPECIFIC CONDITIONS

### SECTION A. DISCHARGE LIMITATIONS

1. Discharge Points

The Industrial User is authorized to discharge leachate from the Brookfield Avenue Landfill, subject to the conditions in this Permit, through the discharge point(s) listed below to the New York City sewerage system.

| DISCHARGE POINT | DESCRIPTION |
|---|---|
| **M1** | A 6" diameter pipe discharging leachate into the sewer, located 54" below the ground in a 24" diameter manhole. The manhole is situated 192" from the facility driveway/walkway and 312" from a fence facing Entrance Road 1. |

2. Sewer Use Limits

The discharge from point **M1** shall not exceed the New York City Sewer Use Limits, including but not limited to:

**SEWER USE LIMITS**
**(15 R.C.N.Y. ch.19)**

| POLLUTANT | PERMISSIBLE MAXIMUM CONCENTRATION FOR ANY GIVEN TIME (MG/L) | DAILY AVERAGE MAXIMUM CONCENTRATION (MG/L) |
|---|---|---|
| pH | 5.0-12.0 Standard Units | --- |
| Cadmium | 2.0 | 0.69 |
| Chromium (Hexavalent) | 5.0 | --- |
| Copper | 5.0 | --- |
| Lead | 2.0 | --- |
| Mercury | 0.05 | --- |
| Nickel | 3.0 | --- |
| Zinc | 5.0 | --- |
| Cyanide (Amenable to Chlorination) | 0.2 | --- |
| Non-Polar Material | 50.0 | --- |

**The discharge of leachate with temperature above 150 degrees Fahrenheit and/or closed-cup flash point below 140 degrees Fahrenheit (using the test methods specified in 40 C. F. R. 261.21) at any time is prohibited.**

The following limits shall also apply:

| Pollutant | Permissible Maximum Concentration for any Given Time |
|---|---|
| Total Suspended Solids (TSS) | 350 ppm |
| Maximum Flow Rate | 288,000 GPD |
| Methyl-Tert-Butyl-Ether (MTBE) | 50 ppb |
| Tetrachloroethylene (Perc) | 20 ppb |
| Total PCB* | 1 ppb |

| Pollutant | Daily Limit (ppb) | Monthly Limit (ppb) |
|---|---|---|
| Benzene | 134 | 57 |
| Ethylbenzene | 380 | 142 |
| Naphthalene | 47 | 19 |
| Toluene | 74 | 28 |
| Xylenes (Total) | 74 | 28 |

* Total PCBs shall equal the sum of all concentrations of the 7 PCB compounds listed on pages I-4 and I-5 of this Permit.

## SECTION B. MONITORING REQUIREMENTS

1. Sampling

The Industrial User shall monitor the specified discharge points for the pollutants listed below. All sampling shall take place on days representative of normal operations. Sampling shall be conducted in accordance with 40 C.F.R. § 403.12(g)(3) which states, in pertinent part, that grab samples must be used for pH, cyanide, total phenols, oil and grease, sulfide, and volatile organic compounds. For all other pollutants, 24-hour composite samples must be obtained through flow-proportional composite sampling techniques, unless time-proportional composite sampling or grab sampling is authorized by the [Department]. Where time-proportional composite sampling or grab sampling is authorized by the [Department], the samples must be representative of the discharge. Where the Industrial User batch discharges, the company must state how it will take representative samples.

| POLLUTANT | SAMPLE LOCATION | FREQUENCY | SAMPLE TYPE |
|---|---|---|---|
| VOLATILE ORGANICS (VOC) | | | |
| Benzene | **M1** | Once a month | 4 grab samples, taken at least 1 hour apart for 1 day. Each grab sample must be individually preserved and sent to a certified laboratory. The laboratory may then composite the grab samples. |
| Ethylbenzene | **M1** | " " | " " |
| Methyl-Tert-Butyl-Ether (MTBE) | **M1** | " " | " " |
| Tetrachloroethylene (Perc) | **M1** | " " | " " |
| Toluene | **M1** | " " | " " |
| Xylenes | **M1** | " " | " " |
| Carbon tetrachloride | **M1** | " " | " " |
| Chloroform | **M1** | " " | " " |
| 1,1,1-trichloroethane | **M1** | " " | " " |
| SEMI-VOLATILE ORGANICS | | | |
| Naphthalene | **M1** | Once a month | A one-day composite sample. |
| 1,4-dichlorobenzene | **M1** | " " | " " |
| Phenol | **M1** | " " | " " |
| 1,2,4-trichlorobenzene | **M1** | " " | " " |
| PCB-1016[1] (Arochlor 1016) | **M1** | " " | " " |
| PCB-1242[1] (Arochlor 1242) | **M1** | " " | " " |
| PCB-1254[1] (Arochlor 1254) | **M1** | " " | " " |
| PCB-1221[1] (Arochlor 1221) | **M1** | " " | " " |

| POLLUTANT | SAMPLE LOCATION | FREQUENCY | SAMPLE TYPE |
|---|---|---|---|
| PCB-1232[1] (Arochlor 1232) | **M1** | Once a month | A one-day composite sample. |
| PCB-1248[1] (Arochlor 1248) | **M1** | " " | " " |
| PCB-1260[1] (Arochlor 1260) | **M1** | " " | " " |
| OTHER TOXIC ORGANICS OF CONCERN[2] | | | |
| 1) Volatile Organics (VOC) | **M1** | Once a month | 4 grab samples, taken at least 1 hour apart for 1 day. Each grab sample must be individually preserved and sent to a certified laboratory. The laboratory may then composite the grab samples. See Part II, Sect. C (1). |
| 2) Semi-Volatile Organics | **M1** | " " | A one-day composite sample. See Part II, Sect. C (1). |
| OTHER POLLUTANTS, PH, AND FLOW | | | |
| Cadmium | **M1** | Once a month | A one-day composite sample. |
| Chromium (Total) | **M1** | " " | " " |
| Chromium (Hexavalent)[3] | **M1** | " " | " " |
| Copper | **M1** | " " | " " |
| Lead | **M1** | " " | " " |
| Mercury | **M1** | " " | " " |
| Molybdenum | **M1** | " " | " " |
| Nickel | **M1** | " " | " " |
| Silver | **M1** | " " | " " |
| Zinc | **M1** | " " | " " |

| POLLUTANT | SAMPLE LOCATION | FREQUENCY | SAMPLE TYPE |
|---|---|---|---|
| Carbonaceous Biochemical Oxygen Demand (CBOD) | **M1** | Once a month | A one-day composite sample. |
| Total Nitrogen | **M1** | " " | " " |
| Chloride | **M1** | " " | " " |
| Cyanide (Total) | **M1** | " " | 4 grab samples, taken at least 1 hour apart for 1 day. Each grab sample must be individually preserved and sent to a certified laboratory. The laboratory should then composite the 4 grab samples. |
| Cyanide (Amenable)[4] | **M1** | " " | " " |
| Total Suspended Solids (TSS) | **M1** | " " | 4 grab samples, taken at least 1 hour apart for 1 day. Each grab sample must be individually preserved and sent to a certified laboratory. |
| Non- Polar Material | **M1** | " " | " " |
| pH | **M1** | " " | Either by 4 in situ measurements or by 4 grab samples, each taken at least 1 hour apart. |

**FOOTNOTES TO MONITORING REQUIREMENTS**

1. The analysis of PCB compounds must be done by EPA Method 608, with a method detection level less than or equal to 65 ppt.

2. Monitoring for Other Toxic Organics of Concern (OTOC) may not be required. See Part II, Sect. C(1). OTOC are comprised of two subcategories, volatile organic compounds (VOCs) and semi-volatile organic compounds. There are different sampling methods for each subcategory (See Part 1, Sect. B. Monitoring Requirements).These compounds include:

| | | | | | |
|---|---|---|---|---|---|
| | (1) | acenaphthene | VOC | (7) | 1,2-dichloroethane |
| VOC | (2) | acrolein | | (8) | hexachloroethane |
| VOC | (3) | acrylonitrile | VOC | (9) | 1,1-dichloroethane |
| | (4) | benzidine | VOC | (10) | 1,1,2-trichloroethane |
| VOC | (5) | chlorobenzene | VOC | (11) | 1,1,2,2-tetrachloroethane |
| | (6) | hexachlorobenzene | VOC | (12) | chloroethane |

(13) bis (2-chloroethyl) ether
VOC (14) 2-chloroethylvinyl ether (mixed)
(15) 2-chloronaphthalene
(16) 2,4,6-trichlorophenol
(17) parachlorometa cresol
(18) 2-chlorophenol
(19) 1,2-dichlorobenzene
(20) 1,3-dichlorobenzene
(21) 3,3-dichlorobenzidine
VOC (22) 1,1-dichloroethylene
VOC (23) 1,2-trans-dichloroethylene
(24) 2,4-dichlorophenol
VOC (25) 1,2-dichloropropane
VOC (26) 1,3-dichloropropylene (1,3-dichloropropene)
(27) 2,4-dimethylphenol
(28) 2,4-dinitrotoluene
(29) 2,6-dinitrotoluene
(30) 1,2-diphenylhydrazine
(31) fluoranthene
(32) 4-chlorophenyl phenyl ether
(33) 4-bromophenyl phenyl ether
(34) bis (2-chloroisopropyl) ether
(35) bis (2-chloroethoxy) methane
VOC (36) methylene chloride (dichloromethane)
VOC (37) methyl chloride (chloromethane)
VOC (38) methyl bromide (bromomethane)
VOC (39) bromoform (tribromomethane)
VOC (40) dichlorobromomethane
VOC (41) chlorodibromomethane
(42) hexachlorobutadiene
(43) hexachlorocyclopentadiene
(44) isophorone
(45) nitrobenzene
(46) 2-nitrophenol
(47) 4-nitrophenol
(48) 2,4-dinitrophenol
(49) 4,6-dinitro-o-cresol
(50) n-nitrosodimethylamine
(51) n-nitrosodiphenylamine
(52) n-nitrosodi-n-propylamine
(53) pentachlorophenol
(54) bis (2-ethylhexyl) phthalate
(55) butyl benzyl phthalate
(56) di-n-butyl phthalate
(57) di-n-octyl phthalate
(58) diethyl phthalate
(59) dimethyl phthalate
(60) 1,2-benzanthracene (benzo(a)anthracene)
(61) benzo(a)pyrene (3,4-benzopyrene)
(62) 3,4-benzofluoranthene (benzo(b)fluoranthene)
(63) 11,12-benzofluoranthene (benzo(k)fluoranthene)
(64) chrysene
(65) acenaphthylene
(66) anthracene
(67) 1,12-benzoperylene (benzo(ghi)perylene)
(68) fluorene
(69) phenanthrene
(70) 1,2,5,6-dibenzanthracene (dibenzo(a,h)anthracene)
(71) indeno (1,2,3-cd) pyrene (2,3-o-phenylene pyrene)
(72) pyrene
VOC (73) trichloroethylene
VOC (74) vinyl chloride (chloroethylene)
(75) aldrin
(76) dieldrin
(77) chlordane (technical mixture and metabolites)
(78) 4,4-DDT
(79) 4,4-DDE (p,p-DDX)
(80) 4,4-DDD (p,p-TDE)
(81) alpha-endosulfan
(82) beta-endosulfan
(83) endosulfan sulfate
(84) endrin
(85) endrin aldehyde
(86) heptachlor
(87) heptachlor epoxide (BHC-hexachlorocyclohexane)
(88) alpha-BHC
(89) beta-BHC

(90) gamma-BHC
(91) delta-BHC
(PCB-polychlorinated biphenyls)
(92) toxaphene
(93) 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD)
(94) azinophos-methyl
(95) chlorpyrifos
(96) demeton
VOC (97) dichloropropene
(98) halomethanes
(99) manganese (inorganic element)
(100) methoxychlor
(101) pentachlorinated ethane
(102) 2,3,4,6-tetrachlorophenol

**3.** If the Chromium (Total) level at discharge point **M1**, is less than or equal to 5.0 mg/L, then analyzing for Chromium (Hexavalent) at that point is not required. The Chromium (Total) level can be submitted in lieu of analyzing for Chromium (Hexavalent).

**4.** If the Cyanide (Total) level at discharge point **M1**, is less than or equal to 0.2 mg/L, then analyzing for Cyanide (Amenable) at that point is not required. The Cyanide (Total) level can be submitted in lieu of analyzing for Cyanide (Amenable).

2. Additional Monitoring Requirements

See Part II, Sect. C for additional monitoring requirements.

## SECTION C. REPORTING REQUIREMENTS

1. Periodic Reports Concerning Continued Compliance

The Industrial User shall implement a self-monitoring program, as required in Part I, Sect. B of this Permit. Reports are due on a quarterly basis as follows:

| Monitoring Period | Report Due Date |
|---|---|
| **June 1 to August 31** | **September 30** |
| **September 1 to November 30** | **December 31** |
| **December 1 to February 28** | **March 31** |
| **March 1 to May 31** | **June 30** |

Reports must be received by the Department on or before the due dates specified above.

2. Additional Reporting Requirements

See Part II, Sect. D for additional reporting requirements.

3. Submission of Reports and Notices

The self-monitoring report and all other reports and notices required by this Permit shall be submitted to the Department at the following address, unless otherwise indicated:

Frances Leung, P.E., Chief
Industrial Inspections and Permitting Section
Bureau of Wastewater Treatment
New York City Department of Environmental Protection
96-05 Horace Harding Expressway
Corona, New York 11368

It is recommended that you send all reports and notices by certified mail in the event that you are required to prove that such reports or notices were submitted in a timely manner.

4. Reporting Format

a. Periodic reports shall be submitted on the Department's Industrial User **Self-Monitoring Report Form**.

b. Analytical results submitted to the Department for any reason, including but not limited to self-monitoring reports, split sampling, and pursuant to Commissioner's Orders, shall be reported by the certified laboratory performing the analysis in a format consistent with the Department's **Analytical Report Form**. The sampling points referenced on the Analytical Report Form must be identified exactly as they are in the Industrial User's Permit.

c. Copies of the Self-Monitoring Report Form and the Analytical Report Form are enclosed with this Permit. Additional copies are also available from the Department upon request.

## SECTION D. SPECIAL CONDITIONS

1. The Industrial User must maintain a logbook on daily volume of discharge ( in gallons per day ). A copy of the logbook entries for the monitoring period must be submitted in each self-monitoring report.

## PART II - GENERAL CONDITIONS

### SECTION A. DEFINITIONS AND STANDARD CONDITIONS

1. Definitions

a. Biochemical Oxygen Demand - The laboratory determination of the quantity of oxygen utilized in the biochemical oxidation of organic matter in a given time and at a specified temperature. It is expressed in parts per million (ppm) or (mg/L) of oxygen used in a period of five days at 20 degrees Celsius.

b. Bypass - The intentional diversion of wastes from any portion of a treatment facility.

c. Commissioner - The Commissioner of the New York City Department of Environmental Protection.

d. Composite Sample - A sample composed of two or more discrete samples. The aggregate sample will reflect the average water quality covering the compositing or sample period.

e. Cooling Water -

i. Uncontaminated - Water used only for cooling purposes that has no direct contact with any raw material, intermediate or final product and that does not contain a level of contaminants higher than that of the intake water.

ii. Contaminated - Water used only for cooling purposes that may become contaminated either through the use of water treatment chemicals used for corrosion inhibitors or biocides or by direct contact with process materials and/or wastewater.

f. Daily Maximum - The maximum allowable discharge of a pollutant during a 24-hour period. Where daily maximum limitations are expressed in units of mass, the daily discharge is the total mass of the pollutant discharged over the course of the day. Where daily maximum limitations are expressed in terms of a concentration, the daily discharge is the arithmetic average measurement of the pollutant concentration derived from all measurements taken that day.

g. Department - The New York City Department of Environmental Protection.

h. Grab Sample - A sample which is taken from a wastestream on a one-time basis with no regard to the flow of the wastestream and without consideration of time. A single grab sample should be taken over a period of time not to exceed 15 minutes.

i. Indirect Discharge - The introduction of pollutants into a POTW from any non-domestic source regulated under section 307(b), (c), or (d) of the Clean Water Act.

j. Industrial User - A source of Indirect Discharge.

k. Instantaneous Maximum Concentration - The maximum concentration allowed in any single grab sample.

l. Interference - A discharge that alone or in conjunction with a discharge or discharges from other sources both:

i. Inhibits or disrupts the POTW, its treatment processes or operations or its sludge processes, use or disposal; and

ii. Causes a violation of any requirement of the POTW's SPDES Permit (including an increase in the magnitude or duration of a violation) or prevents the use or disposal of sewage sludge in compliance with the following statutory provisions and regulations or Permits issued thereunder (or more stringent State or local regulations): Section 405 of the Clean Water Act, the Solid Waste Disposal Act (SWDA) (including Title II, more commonly referred to as the Resource Conservation and Recovery Act (RCRA) and including State regulations contained in any State sludge management plan prepared pursuant to Subtitle D of the SWDA), the Clean Air Act, the Toxic Substances Control Act and the Marine Protection, Research and Sanctuaries Act.

m. Maximum Monthly Average - The maximum allowable value for the monthly average.

n. Monthly Average - The average of all samples taken during one calendar month. Thus, if only one sample is taken during a calendar month, the monthly average for that month will be based on only that one sample.

o. Pass Through - A discharge that exits the POTW into waters of the United States in quantities or concentrations that, alone or in conjunction with a discharge or discharges from other sources, cause a violation of any requirement of the POTW's SPDES Permit (including an increase in the magnitude or duration of a violation).

p. Publicly Owned Treatment Works (POTW) - A treatment works as defined by Section 212 of the Clean Water Act that is owned by the State or municipality. This definition includes any devices and systems used in the storage, treatment, recycling and reclamation of municipal sewage or industrial wastes of a liquid nature. It also includes sewers, pipes and other conveyances only if they convey wastewater to a POTW treatment plant.

q. Resource Conservation and Recovery Act (RCRA) - A Federal statute regulating the management of hazardous waste from its generation through ultimate disposal. The Act contains requirements for waste generators, transporters and owners and operators of treatment, storage and disposal facilities.

r. Sewer Use Regulations - Rules of the City of New York relating to the "Use of the Public Sewers." 15 R.C.N.Y. ch. 19.

s. Shall - mandatory.

t. Slug Discharge - Any discharge of a non-routine, episodic nature, including but not limited to an accidental spill or a non-customary batch discharge, which has a reasonable potential to cause interference or pass through, or in any other way violate the POTW's regulations, local limits or permit conditions.

u. Toxic Organics - Either the organic compounds listed in the definition of Total Toxic Organics (TTO) in Part I, Sect. A(2), and the Other Toxic Organics of Concern (OTOC) listed in Part I, Sect. B(1); or the Toxic Organics of Concern listed in Part I, Sect. B(1).

v. Upset - An exceptional incident in which there is unintentional and temporary noncompliance with technology based Permit effluent limitations because of factors beyond the reasonable control of the Industrial User, excluding such factors as operational error, improperly designed or inadequate treatment facilities or improper operation and maintenance or lack thereof.

2. Severability

The provisions of this Permit are severable, and if any provision of this Permit or the application of any provision of this Permit to any circumstance is held invalid, the application of such provision to other circumstances and the remainder of this Permit, shall not be affected thereby.

3. Duty to Comply

The Industrial User must comply with the provisions of the New York City Administrative Code (NYCAC) and the Sewer Use Regulations promulgated pursuant thereto, and all conditions of this Permit. Failure to comply with these requirements may be grounds for administrative action, or enforcement proceedings including civil and/or criminal penalties, injunctive relief and summary abatements.

4. Duty to Mitigate

The Industrial User shall take all reasonable steps to minimize or correct any adverse impact on the environment resulting from noncompliance with this Permit, including, but not limited to, such accelerated or additional monitoring as necessary to determine the nature and impact of the noncomplying discharge.

5. Permit Action

This Permit may be modified, revoked and reissued, or terminated for good cause, including, but not limited to, the following:

a. Incorporation of any new or revised Federal, State, or local pretreatment standards or requirements;

b. Material or substantial alterations or additions to the discharger's operations that were not covered in the effective Permit;

c. A change in any condition that requires either a temporary or permanent reduction or elimination of the authorized discharge;

d. Information indicating that the Permitted discharge poses a threat to the New York City collection and treatment systems, POTW personnel or the receiving waters;

e. Violation of any terms or conditions of this Permit;

f. Obtaining this Permit by misrepresentation or failure to disclose fully all relevant facts;

g. Upon request of the Industrial User, provided such request does not create a violation of any existing applicable requirements, standards, laws, or rules and regulations; or

h. Correction of typographical or other errors in the Permit.

The filing of a request by the Industrial User for a Permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance, does not stay any Permit condition.

6. Property Rights

The issuance of this Permit does not convey any property rights of any sort, or any exclusive privileges, nor does it authorize any injury to private or public property or any invasion of personal rights, nor any violation of Federal, State or local laws or regulations.

7. Limitation on Permit Transfer

This wastewater discharge Permit is issued to the named Industrial User for the specific operation(s) described herein. It is not assignable to any other named individual or entity or transferable to any other location without the prior written approval of the Department. Any change in the name of the Industrial User shall be considered to be such an assignment. The sale of 50% or more of the stock of the Industrial User, if the Industrial User is a corporation, or the change of any partners, general or limited, if the Industrial User is a partnership, or the change in ownership, if the Industrial User

is a sole proprietorship, shall also be considered an assignment. In the event of such a sale, the Industrial User must inform the purchaser of all responsibilities and obligations under this Permit.

8. Duty to Reapply

If the Industrial User wishes to continue an activity regulated by this Permit after the expiration date of this Permit the Industrial User must apply for and obtain a new Permit. The application must be submitted at least 120 days before the expiration date of this Permit.

9. Dilution

The Industrial User shall not increase the use of process water or, in any way, attempt to dilute a discharge as a partial or complete substitute for adequate treatment to achieve compliance with the limitations contained in this Permit.

The Industrial User shall post a Dilution Notice in a conspicuous manner. The Dilution Notice shall state that the New York City Department of Environmental Protection is to be notified of the illegal dilution of any wastewater discharges or any illegal discharges by calling 311, New York City's General Information Number. You must ask for and record your complaint number for proof of compliance with your notification requirements. The Dilution Notice shall include the following definition of illegal dilution: Illegal dilution is an increase in the use of process water, or any other attempt to dilute a discharge as a partial or complete substitute for adequate treatment to achieve compliance with a Pretreatment Standard or Requirement.

10. General Prohibitive Standards

The Industrial User shall comply with all of the general prohibitive discharge standards in the General Pretreatment Regulations, 40 C.F.R. pt. 403 and the Department's Sewer Use Regulations. Except as expressly allowed by this Permit, if the Industrial User discharges or causes to be discharged, including any run, leak, or escape into any public sewer, pipe, channel, pumping station, catch basins or any other sewer appurtenances, or waterway connecting with any public sewer, or into any private sewer connected with a public sewer any of the following described materials, substances or wastes, shall be strictly liable without regard to fault:

a. Construction materials, ashes, cinders, sand, mud, straw, shavings, metal, glass, rags, feathers, tar, plastic, wood, paunch manure, coffee grounds, fur, wax, or any solids or viscous substances capable of causing obstruction to the flow in sewers or other interference with the proper operation of the sewerage system;

b. Snow and ice at unauthorized locations;

c. Steam or wastewater above 150 degrees Fahrenheit;

d. Flammable or explosive liquids, solids or gases, including, but not limited to, gasoline, benzene and naphtha;

e. Oil sludges, waste oil, motor oil, diesel and other fuels, dielectric fluid, brake fluid, transmission fluid, hydraulic fluid, or other similar substances;

f. Non-polar material in concentrations greater than 50 mg/L for any given time;

g. Coal tar, its derivatives and waste;

h. Paints and related paint waste products from any source that tend to clog or otherwise interfere with the operation of the sewerage system;

i. Wastewater having a pH lower than 5.0 or higher than 12.0 or having any other corrosive property likely to cause damage to structures or equipment of the sewerage system or create a hazard to personnel;

j. Toxic substances in such quantities that the person knows or has reason to know may when discharged from a single source or in combination with other sources: (i) interfere with any sewage treatment process, including sludge digestion, (ii) limit the City's options for operating its sewerage system or disposing of the sewage sludge, grit or scum generated at water pollution control plants, (iii) be detrimental to the health of human beings, animals, or aquatic life, (iv) create any adverse effect in the receiving water, or (v) violate Federal or State laws or regulations or the requirements of a discharge Permit of a sewage treatment plant issued pursuant to Section 402 of the Federal Water Pollution Control Act, commonly referred to as the Clean Water Act, as amended, or any other Permit issued pursuant to Federal or State law;

k. Toxic substances in such quantities that, when discharged from a single source or in combination with other sources: (i) violate any Federal or State laws, regulations, rules or standards governing such discharge, or (ii) violate the toxic discharge limits to be set by the Commissioner contained in a list to be maintained by the Commissioner and which may be published from time to time in the City Record;

l. Any liquids or wastes containing pollutants of such quality and/or quantity that become burdensome in the operation and maintenance of a sewage treatment plant;

m. Any noxious or malodorous gas or substance capable of creating a public nuisance;

n. Any wastewater or substance, that in the opinion of the Commissioner, will result in a violation of any applicable Federal, State or local water quality standard concerning discoloration or other undesirable physical changes in the appearance of the receiving waters;

o. Radioactive material either directly or indirectly into the sewerage system, unless all restrictions, prohibitions, and requirements of Article 175 of the New York City Health Code are fully complied with;

p. Any still bottom or sludge residues resulting from dry cleaning processes, including dirt, lint, soils, perchloroethylene, tetrachloroethylene, solvents and any other deposits or residues extracted as a result of any dry cleaning processes;

q. Filters or filter media used in dry cleaning processes.

11. Compliance with Applicable Pretreatment Standards and Requirements

The Industrial User shall comply at all times with any and all applicable local, State and Federal pretreatment standards and requirements, including any such standards or requirements that may become effective during the term of this Permit.

12. Combined Sewer Overflow (CSO) Prevention

The Industrial User shall hold its process wastewater and non-contact cooling water to the maximum extent practicable during heavy rainfall.

13. Confidentiality

As provided in Section 19-09 of the Sewer Use Regulations, any information submitted to the Department, except for discharge and effluent data, may be claimed by the discharger to be confidential. Any such claim must be asserted at the time of submission of the information, and should contain a stamped legend or any other suitable form of notice on each page containing such information, employing language such as trade secret, proprietary or confidential business information. If no claim is asserted at the time of submission, the information may be made available to the public without further notice. If a claim is asserted, it will be treated in accordance with Section 19-09.

Effluent data shall be available to the public without restriction.

14. Duty to Provide Information

The Industrial User shall furnish to the Department within a reasonable time, any information that the Department may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this Permit, or to determine compliance with this Permit. The Industrial User shall also furnish to the Department, upon request, copies of records required to be kept by this Permit.

15. Annual Publication

A list of all Industrial Users who, at any time during the previous twelve (12) months, were in significant noncompliance with applicable pretreatment requirements shall be annually published by the Department in a newspaper of general circulation that provides meaningful public notice within the city of New York. The Industrial User is hereby apprised that noncompliance with the provisions of this Permit may result in an enforcement action and publication of its name in an appropriate newspaper in accordance with Section 19-10(g) of the Sewer Use Regulations.

16. Civil and Criminal Liability

Nothing in this Permit shall be construed to relieve the Industrial User from civil and/or criminal penalties for noncompliance under Section 24-524(f) of the NYCAC.

17. Penalties for Violations of Permit Conditions

Section 24-524(f) of NYCAC provides that any person who fails to comply with any of the provisions of Sections 24-504 through 24-522 and 24-523 of the Code, the Sewer Use Regulations, Order of the Commissioner or Environmental Control Board or a Permit condition shall be liable for a civil penalty of up to $10,000.00 for each violation. In the case of a continuing violation, each day's continuance shall be a separate and distinct offense. In addition to civil penalties, any person who knowingly violates or fails to comply with any of the above-cited provisions shall be guilty of a misdemeanor and subject to a fine of up to $10,000.00 and/or to imprisonment not exceeding thirty days. The Industrial User may also be subject to sanctions under State and/or Federal law.

## SECTION B. OPERATION AND MAINTENANCE OF POLLUTION CONTROL SYSTEMS

1. Proper Operation and Maintenance

The Industrial User shall at all times properly operate and maintain all facilities and systems for treatment, monitoring and control (and related appurtenances) that are installed or used by the Industrial User to achieve compliance with the conditions of this Permit. Proper operation and maintenance includes, but is not limited to, effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures. This provision requires the operation of backup or auxiliary facilities or similar systems only when necessary to achieve compliance with the conditions of the Permit.

2. Duty to Halt or Reduce Activity

Upon reduction of efficiency of operation or loss or failure of all or part of the pretreatment facility, the Industrial User shall, to the extent necessary to maintain compliance with its Permit, control production or all discharges or both until operation of the pretreatment facility is restored or an alternative method of pretreatment is provided. This requirement applies, for example, when the primary source of power of the pretreatment facility fails or is reduced. It shall not be a defense for an Industrial User in an enforcement action to state that it would have been necessary to halt or reduce the Permitted activity in order to maintain compliance with the conditions of this Permit.

3. Bypass of Pretreatment Facilities

a. Bypass is prohibited unless

i. it is unavoidable to prevent loss of life, personal injury, or severe property damage, no feasible alternatives exist, and the Industrial User submits notification as required by subparagraph (b) of this paragraph; or

ii. it is for essential maintenance to assure efficient operation, it does not cause pretreatment standards or requirements to be violated, and the Industrial User submits notification as required by subparagraph (b) of this paragraph.

b. Notification of bypass:

i. Anticipated bypass - If the Industrial User knows in advance of the need for a bypass, it shall submit prior written notice, at least ten days before the date of the bypass, to the Department.

ii. Unanticipated bypass - The Industrial User shall immediately notify the Department by calling 311, New York City's General Information Number, and shall submit a written notice to the Department within 5 days after the bypass. This report shall specify:

(1) a description of the bypass, its cause and duration;
(2) whether the bypass has been corrected; and
(3) the steps being taken or to be taken to reduce, eliminate and prevent a recurrence of the bypass.

When calling 311, you must ask for and record your complaint number for proof of compliance with your notification requirements.

4. Disposal of Hazardous Wastes

All solids, sludges, resins or residues, filter backwash or other pollutants removed in the course of pretreatment or control of wastewater shall be handled and disposed of in accordance with all New York State hazardous wastes requirements and RCRA requirements including, but not limited to, subtitles C and D thereof.

## SECTION C. MONITORING AND RECORDS

1. Toxic Organics

The Industrial User may not use the certifications provided below for any organic pollutants for which sampling is required under the Industrial User's applicable Federal Categorical Standards. The Industrial User must sample and analyze its wastewater for all such organic pollutants.

The Industrial User shall satisfy the following Toxic Organics requirements:

a. Indicate in each periodic report concerning continued compliance as required by Part I, Sect. C of this Permit which Toxic Organics, if any, were used or stored during the reporting period, and their amounts.

b. Sample and analyze its wastewater for those Toxic Organics that would reasonably be expected to be present.

c. In lieu of monitoring for Toxic Organics and upon scribed request, the Department may allow the Industrial User to make one of the following certifications in its periodic self-monitoring reports:

i. "Based upon my inquiry of the person or persons directly responsible for managing environmental affairs at my facility, I certify that, to the best of my knowledge and belief, no toxic organics were used or stored at my facility during the reporting period covered by this report. I certify that I am duly authorized by the establishment to make this statement on its behalf, and am fully aware that there are significant civil and criminal sanctions for submitting false information, including the possibility of a fine and/or imprisonment."

**OR**

ii. "Based upon my inquiry of the person or persons directly responsible for managing environmental affairs at my facility, I certify that, to the best of my knowledge and belief, there was no discharge to a public sewer of toxic organics during the reporting period covered by this report. I also certify that the explanations provided concerning the disposal of toxic organics from the facility are true, accurate and complete. I further certify that this facility is implementing a toxic organics management plan to protect against the release of such compounds to a public sewer. I certify that I am duly authorized by the establishment to make this statement on its behalf, and am fully aware that there are significant civil and criminal sanctions for submitting false information, including the possibility of a fine and/or imprisonment."

If certification **(ii)** is made, the facility must also submit a Toxic Organics Management Plan (TOMP) for approval by the Department. An acceptable TOMP must contain:

i. a list of all toxic organic compounds used or stored at your facility; and

ii. a description of the storage, handling and disposal practices for control of toxic compounds at your facility, including procedures for ensuring that toxic organics do not spill or leak into your wastewater.

2. <u>Sampling and Analysis</u>

a. Samples and measurements taken as required in this Permit shall be representative of the volume and nature of the monitored discharge. Samples shall be taken at the monitoring points specified in this Permit and, unless otherwise specified, before the effluent joins or is diluted by any other wastestream, body of water or substance. Monitoring points shall not be changed without prior written approval of the Department.

b. All handling and preservation of collected samples and laboratory analyses of samples shall be performed in accordance with 40 C.F.R. pt. 136. If 40 C.F.R. pt. 136 does not cover the pollutant in question, the handling, preservation, and analysis must be performed in accordance with the latest edition of "Standard Methods for the Examination of Water and Wastewater." All analyses shall be performed using a detection limit less than the lowest applicable regulatory discharge limit.

c. All laboratory analyses must be conducted by a New York State Health Department certified wastewater laboratory. The results must be certified by the laboratory and submitted on the laboratory's letterhead. For each sample, the laboratory report must indicate the date of sampling, time sample was taken, sample location, chain of custody, sampling preservation procedures, analytical techniques used, date of analysis, units of measurement, and the laboratory's sample identification; where the analytical result reported is below the method detection level, the laboratory report must also indicate the method detection level.

3. Flow Measurements

If flow measurements are required by this Permit, the appropriate flow measurement devices and methods consistent with approved scientific practices shall be selected and used to ensure the accuracy and reliability of measurements of the volume of monitored discharge. The devices shall be installed, calibrated and maintained to ensure that the accuracy of the measurements are consistent with the accepted capability of that type of device. Devices selected shall be capable of measuring flows with a maximum deviation of less than 10% from true discharge rates throughout the range of expected discharge volumes.

4. Inspection and Entry

The Industrial User shall allow duly authorized representatives of the Department to:

a. Enter upon the Industrial User's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this Permit;

b. Have access to and copy, at reasonable times, any records that must be kept by law or regulation and/or under the conditions of this Permit;

c. Inspect, videotape, photograph or otherwise record at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this Permit;

d. Sample or monitor, for the purposes of assuring Permit compliance, any substance or parameters at any location; and

e. Inspect, videotape, photograph or otherwise record any production, manufacturing, fabricating or storage area where pollutants, regulated or required under this Permit could originate, be stored or be discharged to the public sewer.

The applicant, by accepting any Permit issued, does hereby consent and agree to entry upon the premises as described herein.

5. Retention of Records

a. The Industrial User shall retain records of all monitoring information, including all calibration and maintenance records and original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this Permit, and records of all data used to complete the application for this Permit, for a period of at least three years from the date of the sample, measurement, report or application. This period may be extended by order of the Commissioner at any time.

b. All records that pertain to matters that are the subject of special orders or any other enforcement or litigation activities brought by the Department shall be retained and preserved by the Industrial User until all enforcement activities have concluded and all periods of limitations with respect to any and all appeals have expired.

6. Record Contents

Records of sampling information shall include:

a. The date, exact place, time and methods of sampling or measurement, and sample preservation techniques or procedures;

b. Who performed the sampling or measurements;

c. The date(s) analyses were performed;

d. Laboratory that performed the analyses;

e. The analytical techniques or methods used;

f. The results of each analysis;

g. The chain of custody of each sample;

h. Method detection level where analytical result reported is non-detect;

i. Units of measurement for each analytical result; and

j. Laboratory's sample identification for each sample.

7. Falsifying Information

It is unlawful to make any false statement representation or certification in any application, report, plan or other document required by this Permit or to falsify, tamper with or knowingly render any monitoring device or method inaccurate.

## SECTION D. ADDITIONAL REPORTING REQUIREMENTS

1. Additional Monitoring

If the Industrial User monitors any pollutant more frequently than required by this Permit, using test procedures prescribed in 40 C.F.R. pt. 136 or otherwise approved by EPA or specified in this Permit, the results of such monitoring shall be submitted to the Department in its next self-monitoring report.

2. Automatic Resampling

If the results of the Industrial User's wastewater discharge sampling indicates a violation, the Industrial User shall:

a. notify the Department within 24 hours of becoming aware of the violation; and

b. repeat the sampling and analysis and submit the results of the second analysis to the Department within 30 days after becoming aware of the violation.

3. Split Sampling Results

If the Industrial User requests and analyzes a split sample(s) during a Department sampling event, the results of such analysis shall be submitted to the Department within 45 days of the date the Industrial User received the sample(s) from the Department.

4. Accidental Discharge Notification

In the event of an accidental discharge in violation of any provision of the Sewer Use Regulations, the Industrial User shall immediately notify the Department, at any hour, by calling 311, New York City's General Information Number. You must ask for and record your complaint number for proof of compliance with your notification requirements.

Within five days following an accidental discharge, the Industrial User shall submit to the Department a detailed written report. The report shall specify:

a. the description of the accidental discharge, the cause thereof, and the impact on the Industrial User's compliance status, including the location of discharge, type, concentration and volume of waste;

b. the duration of noncompliance, including exact dates and time of noncompliance, and if the noncompliance continues, the time by which compliance is reasonably expected to occur; and

c. all steps taken to reduce, eliminate and prevent recurrence of such an upset, slug, accidental discharge, or other conditions of noncompliance.

5. Operating Upsets

Any Industrial User that experiences an upset in operations that places the Industrial User in a temporary state of noncompliance with the provisions of either this Permit or the Sewer Use Regulations, shall inform the Department immediately after becoming aware of the upset by calling 311, New York City's General Information Number. You must ask for and record your complaint number for proof of compliance with your notification requirements.

A written follow-up report thereof shall be filed by the Industrial User with the Department within five (5) days. The report shall specify:

a. the description of the upset or slug discharge, the cause(s) thereof and the upset's or slug discharge's impact on the Industrial User's compliance status;

b. the duration of noncompliance, including exact dates and times of noncompliance, and if the noncompliance continues, the time by which compliance is reasonably expected to occur; and

c. all steps taken or to be taken to reduce, eliminate and prevent recurrence of such an upset, slug discharge or other conditions of noncompliance.

6. Planned Changes

The Industrial User shall give written notice to the Department 90 days prior to any change in the Industrial User's name or address, or any facility expansion, production increase, or process modification that results in new or substantially increased discharges or a change in the nature of the discharge. The Industrial User shall also provide written notice 90 days prior to discontinuing any regulated process. The Industrial User shall notify the Department immediately of any changes at its facility affecting its potential for a slug discharge.

7. Anticipated Noncompliance

The Industrial User shall give a minimum of ten days advance notice to the Department of any planned changes in the Permitted facility or activity that may result in noncompliance with this Permit.

8. Signatory Requirements

All applications, reports or information submitted to the Department shall contain the following certification:

> "I certify under penalty of law that I have personally examined and am familiar with the information contained in this document and all attachments therein. Furthermore, based on my inquiry of those persons immediately responsible for obtaining the information contained in this document, I believe that this information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment."

This certification shall be signed by:

a. a responsible corporate officer if the Industrial User submitting the reports is a corporation. For the purpose of this paragraph, a responsible corporate officer means:

   i. president, secretary, treasurer or vice-president of the corporation in charge of a principal business function or any other person who performs similar policy or decision making functions for the corporation, or

   ii. the manager of one or more manufacturing, production or operating facilities, provided, the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit duty of making major capital investment recommendations, and initiate and direct other comprehensive measures to assure long-term environmental compliance with environmental laws and regulations; can ensure that the necessary systems are established or actions taken to gather complete and accurate information for control mechanism requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

b. a general partner or proprietor if the Industrial User submitting the report is a partnership or sole proprietorship, respectively.

c. a duly authorized representative of the individual designated in paragraph (a) or (b) of this section if:

   i. The authorization is made in writing by the individual described in paragraph (a) or (b);

   ii. The authorization specifies either an individual or a position having responsibility for the overall operation of the facility from which the industrial discharge originates, such as the position of plant manager, or a position of equivalent responsibility, or a position having overall responsibility for environmental matters for the company; and

iii. The written authorization is submitted to the Department.

If an authorization under this paragraph is no longer accurate because a different individual or position has responsibility for the overall operation of the facility or overall responsibility for the environmental matters of the company, a new authorization satisfying the requirement of this paragraph must be submitted to the Department prior to or together with any reports to be signed by an authorized representative.

**RE:** Q4 Industrial Wastewater Discharge Self-Monitoring Report
New York City Department of Parks and Recreation
Brookfield Landfill/Park
575 Arthur Kill Road, Staten Island, NY 10308
Permit No. 18-P3149-1
TRC Project No. 384968

Dear Ms. Leung:

Enclosed please find the Q4 Industrial Wastewater Discharge Self-Monitoring Report (SMR) for the monitoring period of March 1, 2021 to May 31, 2021 for the New York City Department of Parks and Recreation (NYCDPR) Brookfield Avenue Landfill. The report contains SMR Forms with certifications, flow summary tables, M-1 sample result summary tables, laboratory results for the M-1 samples, and chain of custody forms. The results of the monthly sampling indicate there were no exceedances of any permit compound limits.

Please do not hesitate to contact me at (917) 794-3107 or via email at wlindemuth@trccompanies.com if you have any questions.

Sincerely,
**TRC Engineers, Inc.**

**Lab Project No:** 1031819

This report is a true report of results obtained from our tests of this material. The report relates only to those samples received and analyzed by the laboratory. All results meet the requirements of the NELAC Institute standards. Laboratory reports may not be reproduced, except in full, without the written approval of the laboratory.

In lieu of a formal contract document, the total aggregate liability of Hampton-Clarke to all parties shall not exceed Hampton-Clarke's total fee for analytical services rendered.

# SDG Narrative

# HC Case Narrative

**Client:** TRC Engineering
**Project:** Brookfield Landfill

**HC Project:** 1031819

**Hampton-Clarke (HC) received the following samples on 3/18/21:**

| Client ID | HC Sample ID | Matrix | Analysis |
|---|---|---|---|
| M1- COMP (A-D) 3-17-2021 | AD22298-001 | Aqueous | Volatile Organics (8260D), SGT-HEM (1664B), TSS (SM2540D-11), *Cyanide (9012B), *Cyanide (Amenable) (9012B) |
| M1-COMP-3-18-2021 | AD22298-005 | Aqueous | Semivolatile Organics (8270E), PCB (8082A), Mercury (7470A), TAL Metals (6010D/6020B), Carbonaceous BOD (SM5210 B-11), Chloride (300.0), Nitrite/Nitrate (300.0),Cr(Hex) (SM3500-CrB11), *TKN (351) |

* - Indicates analysis was performed by a subcontracted laboratory.

*This case narrative is in the form of an exception report. Method specific and/or QA/QC anomalies related to this report only are detailed below.*

## Volatile Organic Analysis:

The Method Blank Spike for batch 92013 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The Matrix Spike and/or Matrix Spike Duplicate for batch 92013 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

2-Chloroethylvinylether did not recover in the Matrix Spike and/or Matrix Spike Duplicate in batch 92013 due to acid preservation of sample. 2-Chloroethylvinylether readily decomposes under acidic conditions. The recovery of 2-Chloroethylvinylether is within QC limits in the Laboratory Control Sample. Please refer to the applicable Form 3 for the recoveries.

## Base Neutral/Acid Extractable Analysis:

The MS/MSD RPD for batch 91180 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

## PCB Analysis:

Data conforms to method requirements.

## Metals Analysis:

The Post Spike for batch 90037 had recoveries outside QC limits. Please refer to the applicable Form 5/7 for the recoveries.

## Wet Chemistry Analysis:

The Matrix Spike for Nitrate, batch 2702 had recoveries outside QC limits. Please refer to the QC section for the recoveries.

The % difference between dilutions for sample AD22298-005 felt outside the of 30% limit.

## Subcontracted Analysis:

Please refer to attached subcontracted laboratory report. Samples AD22298-001, -002 were submitted to Pace Analytical for Cyanide, Cyanide Amenable and TKN analysis.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

# Reporting Limit Definitions

# HC Reporting Limit Definitions/Data Qualifiers

## REPORTING DEFINITIONS

**DF** = Dilution Factor

**LCS** = Laboratory Control Spike

**MBS** = Method Blank Spike

**MS** = Matrix Spike

**MSD** = Matrix Spike Duplicate

**MDL** = Method Detection Limit

**NA** = Not Applicable

**ND** = Not Detected

**PS** = Post Digestion Spike

**RL*** = Reporting Limit

**RT** = Retention Time

**Samples with elevated Reporting Limits (RLs) as a result of a dilution may not achieve client reporting limits in some cases. The elevated RLs are unavoidable consequences of sample dilution required to quantitate target analytes that exceed the calibration range of the instrument.*

## DATA QUALIFIERS

**A-** Indicates that the Tentatively Identified Compound (TIC) is suspected to be an aldol-condensation product. These compounds are by-products of acetone and methylene chloride used in the extraction process.

**B-** Indicates analyte was present in the Method Blank and sample.

**d-** For Pesticide and PCB analysis, the concentration between primary and secondary columns is greater than 40%. The lower concentration is generally reported.

**E-** Indicates the concentration exceeded the upper calibration range of the instrument.

**J-** Indicates the value is estimated because it is either a Tentatively Identified Compound (TIC) or the reported concentration is greater than the MDL but less than the RL. For samples results between the MDL and RL there is a possibility of false positives or misidentification at the quantitation levels. Additionally, the acceptance criteria for QC samples may not be met.

**R-** Retention Time is out.

**Y-** Indicates a contaminant found in the blank at less than 10% of the concentration of a contaminant found in the sample.

RE: Project: AD22298
Pace Project No.: 70166466

Dear Hampton Veritech:

Enclosed are the analytical results for sample(s) received by the laboratory on March 22, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Melville

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Lea Sherman

# PROJECT NARRATIVE

Project: AD22298
Pace Project No.: 70166466

**Method:** **EPA 351.2**
**Description:** 351.2 Total Kjeldahl Nitrogen
**Client:** Hampton Clark Veritech
**Date:** March 26, 2021

**General Information:**
1 sample was analyzed for EPA 351.2 by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**
The samples were analyzed within the method required hold times with any exceptions noted below.

**Sample Preparation:**
The samples were prepared in accordance with EPA 351.2 with any exceptions noted below.

**Method Blank:**
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**
All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 201304

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 70165881010,70166335002

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 991273)
  - Nitrogen, Kjeldahl, Total
- MS (Lab ID: 991275)
  - Nitrogen, Kjeldahl, Total

**Duplicate Sample:**
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

QC Batch: 201304

D6: The precision between the sample and sample duplicate exceeded laboratory control limits.

- DUP (Lab ID: 991274)
  - Nitrogen, Kjeldahl, Total
- DUP (Lab ID: 991276)
  - Nitrogen, Kjeldahl, Total

**Additional Comments:**

# PROJECT NARRATIVE

Project: AD22298
Pace Project No.: 70166466

**Method:** **SM22 4500-CN-E**
**Description:** SM 4500 CNE Cyanide, Total
**Client:** Hampton Clark Veritech
**Date:** March 26, 2021

**General Information:**
1 sample was analyzed for SM22 4500-CN-E by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**
The samples were analyzed within the method required hold times with any exceptions noted below.

**Sample Preparation:**
The samples were prepared in accordance with SM20/22 4500-CN-C with any exceptions noted below.

**Method Blank:**
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**
All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 201172

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 70165472001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 990503)
  - Cyanide

**Duplicate Sample:**
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

**Additional Comments:**

# QUALIFIERS

Project: AD22298
Pace Project No.: 70166466

## DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

## ANALYTE QUALIFIERS

| | |
|---|---|
| D6 | The precision between the sample and sample duplicate exceeded laboratory control limits. |
| M1 | Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery. |

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

# SDG Narrative

# HC Case Narrative

**Client:** TRC Engineering
**Project:** 384968

**HC Project:** 1041615

**Hampton-Clarke (HC) received the following samples on 4/16/2021:**

| Client ID | HC Sample ID | Matrix | Analysis |
|---|---|---|---|
| M1-A-D-04-15-2021 LAB COMP | AD22848-001 | Aqueous | Cyanide (Water) 9012B, Cyanide (Amenable) 9012B, Compositing by Wgt, SGT-HEM (Non-Polar Material) 1664B, Total Suspended Solids (SM2540D-11), Volatile Organics 8260D |
| M1-COMP-04-16-2021 | AD22848-002 | Aqueous | Semivolatile Organics 8270E, Carbonaceous BOD-5 Day (SM5210 B-11), Chloride (Water) 300.0, Cr (Hexavalent) 3500-Cr B11, Mercury (Water) 7470A, TAL Metals 6010D, TAL Metals 6020B, Nitrite-N (Aqueous) 300.0, Nitrate-N (Water) 300.0, PCB 8082A, Total Kjeldahl Nitrogen EPA 351* |

* - Indicates analysis was performed by a subcontracted laboratory.

*This case narrative is in the form of an exception report. Method specific and/or QA/QC anomalies related to this report only are detailed below.*

## Volatile Organic Analysis:

The Method Blank Spike, MS/MSD RPD, Matrix Spike and/or Matrix Spike Duplicate for batch 92177 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

2-Chloroethylvinylether did not recover in the Matrix Spike and Matrix Spike Duplicate in batch 92177 due to acid preservation of sample. 2-Chloroethylvinylether readily decomposes under acidic conditions. The recovery of 2-Chloroethylvinylether is within QC limits in the Laboratory Control Sample. Please refer to the applicable Form 3 for the recoveries.

## Base Neutral/Acid Extractable Analysis:

The MS/MSD RPD, Matrix Spike and/or Matrix Spike Duplicate for batch 91598 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

## PCB Analysis:

Data conforms to method requirements.

## Metals Analysis:

Data conforms to method requirements.

## Wet Chemistry Analysis:

Data conforms to method requirements.

## Subcontracted Analysis:

Please refer to attached subcontracted laboratory report. Samples AD22848-001, -002, -003 were submitted to PACE for Cyanide & Cyanide (Amenable), and Total Kjeldahl Nitrogen analysis.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

# Reporting Limit Definitions

# HC Reporting Limit Definitions/Data Qualifiers

## REPORTING DEFINITIONS

**DF** = Dilution Factor

**LCS** = Laboratory Control Spike

**MBS** = Method Blank Spike

**MS** = Matrix Spike

**MSD** = Matrix Spike Duplicate

**MDL** = Method Detection Limit

**NA** = Not Applicable

**ND** = Not Detected

**PS** = Post Digestion Spike

**RL*** = Reporting Limit

**RT** = Retention Time

**Samples with elevated Reporting Limits (RLs) as a result of a dilution may not achieve client reporting limits in some cases. The elevated RLs are unavoidable consequences of sample dilution required to quantitate target analytes that exceed the calibration range of the instrument.*

## DATA QUALIFIERS

**A-** Indicates that the Tentatively Identified Compound (TIC) is suspected to be an aldol-condensation product. These compounds are by-products of acetone and methylene chloride used in the extraction process.

**B-** Indicates analyte was present in the Method Blank and sample.

**d-** For Pesticide and PCB analysis, the concentration between primary and secondary columns is greater than 40%. The lower concentration is generally reported.

**E-** Indicates the concentration exceeded the upper calibration range of the instrument.

**J-** Indicates the value is estimated because it is either a Tentatively Identified Compound (TIC) or the reported concentration is greater than the MDL but less than the RL. For samples results between the MDL and RL there is a possibility of false positives or misidentification at the quantitation levels. Additionally, the acceptance criteria for QC samples may not be met.

**R-** Retention Time is out.

**Y-** Indicates a contaminant found in the blank at less than 10% of the concentration of a contaminant found in the sample.

Worksheet #: 589350

***Total Target Concentration*** 0

ColumnID: (^) Indicates results from 2nd column

*U - Indicates the compound was analyzed but not detected.*
*B - Indicates the analyte was found in the blank as well as in the sample.*
*E - Indicates the analyte concentration exceeds the calibration range of the instrument.*
*R - Retention Time Out*
*J - Indicates an estimated value when a compound is detected at less than the specified detection limit.*
*d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used*
*Chlordane (Total) is sum of a-Chlordane and y-Chlordane.*

Additional Notes

**Comments, Notes, Special Requirements, HAZARDS**

Indicate if low-level methods required to meet current groundwater standards (SPLP for soil):
- [ ] BN or BNA (8270D SIM)
- [ ] VOC (8260C SIM or 8011)
- [ ] SPLP (BN, BNA, Metals)
- [ ] 1,4 Dioxane

For NJ LSRP projects, indicate which standards need to be met:
- [ ] NJDEP GWQS
- [ ] NJDEP SRS
- [ ] NJDEP SPLP
- [ ] Other (specify):

Check if applicable:
- [ ] Project-Specific Reporting Limits
- [ ] High Contaminant Concentrations
- [ ] NJ LSRP Project (also check boxes above/right)

Cooler Temperature: 3.2, 2.1, 3.1

Please note NUMBERED items. If not completed your analytical work may be delayed.
A fee of $5/sample will be assessed for storage should sample not be activated for any analysis.

Internal use: sampling plan (check box) HC [ ] or client [ ] FSP#

# CONDITION UPON RECEIPT

Batch Number AD22848 Entered By: Ricardo
Date Entered 4/16/2021 7:35:00 PM

| | | |
|---|---|---|
| 1 | Yes | Is there a corresponding COC included with the samples? |
| 2 | Yes | Are the samples in a container such as a cooler or Ice chest? |
| 3 | No | Are the COC seals intact? |
| 4 | T-461 | <--- Thermometer ID. Please specify the Temperature inside the container (in degC).<br>3.2,2.1,3.1 |
| 5 | Yes | Are the samples refrigerated (where required)/have they arrived on ice? |
| 6 | Yes | Are the samples within the holding times for the parameters listed on the COC? IF no, list parameters and samples: |
| 7 | Yes | Are all of the sample bottles intact? If no, specify sample numbers broken/leaking |
| 8 | Yes | Are all of the sample labels or numbers legible? If no specify: |
| 9 | Yes | Do the contents match the COC? If no, specify |
| 10 | Yes | Is there enough sample sent for the analyses listed on the COC? If no, specify: |
| 11 | Yes | Are samples preserved correctly? |
| 12 | Yes | Was temperature blank present (Place comment below if not)? If not was temperature of samples verified? |
| 13 | Yes | Other comments ...Specify (TB date, sample matrix, any missing info, etc.)<br>sample 001 composited at lab |
| 14 | NA | Corrective actions (Specify item number and corrective action taken). |
| 15 | NA | Were any samples for ortho-phosphate or dissolved ferrous iron field filtered? |

RE: Project: AD22848
Pace Project No.: 70169944

Dear Hampton Veritech:

Enclosed are the analytical results for sample(s) received by the laboratory on April 20, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:
- Pace Analytical Services - Melville

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Lea Sherman
lea.sherman@pacelabs.com

# PROJECT NARRATIVE

Project: AD22848
Pace Project No.: 70169944

**Method:** **EPA 351.2**
**Description:** 351.2 Total Kjeldahl Nitrogen
**Client:** Hampton Clark Veritech
**Date:** April 26, 2021

**General Information:**
1 sample was analyzed for EPA 351.2 by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**
The samples were analyzed within the method required hold times with any exceptions noted below.

**Sample Preparation:**
The samples were prepared in accordance with EPA 351.2 with any exceptions noted below.

**Method Blank:**
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**
All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 205187

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 70169986002,70170003001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1015179)
  - Nitrogen, Kjeldahl, Total

M6: Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

- MS (Lab ID: 1015181)
  - Nitrogen, Kjeldahl, Total

**Duplicate Sample:**
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

**Additional Comments:**

# PROJECT NARRATIVE

Project: AD22848
Pace Project No.: 70169944

**Method:** **SM22 4500-CN-E**
**Description:** SM 4500 CNE Cyanide, Total
**Client:** Hampton Clark Veritech
**Date:** April 26, 2021

**General Information:**
1 sample was analyzed for SM22 4500-CN-E by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**
The samples were analyzed within the method required hold times with any exceptions noted below.

**Sample Preparation:**
The samples were prepared in accordance with SM20/22 4500-CN-C with any exceptions noted below.

**Method Blank:**
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**
All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Duplicate Sample:**
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

**Additional Comments:**

This report shall not be reproduced, except in full,

# PROJECT NARRATIVE

Project: AD22848
Pace Project No.: 70169944

**Method:** **SM22 4500-CN-E**
**Description:** 4500CNG Cyanide, Amenable
**Client:** Hampton Clark Veritech
**Date:** April 26, 2021

**General Information:**
1 sample was analyzed for SM22 4500-CN-E by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**
The samples were analyzed within the method required hold times with any exceptions noted below.

**Sample Preparation:**
The samples were prepared in accordance with SM22 4500-CN-G with any exceptions noted below.

**Method Blank:**
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**
All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Additional Comments:**

This data package has been reviewed for quality and completeness and is approved for release.

This report shall not be reproduced, except in full,

# QUALIFIERS

Project: AD22848
Pace Project No.: 70169944

## DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

## ANALYTE QUALIFIERS

| | |
|---|---|
| M1 | Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery. |
| M6 | Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution. |

# METHODOLOGY SUMMARY

**Volatiles:** N/A
.

**NJ EPH:** N/A

**Semi-Volatiles**: N/A

**Other (Wet Chemistry)**: The above water samples were received by Pace Analytical Services, LLC. for select wet chemistry analysis. The samples were prepared and analyzed using the following method(s):

Total Kjeldahl Nitrogen EPA 351.2
Total Cyanide SM22 4500-CN-E
Amenable Cyanide SM22-CN-E

SAMPLE NO.

AD22848-001

This report is a true report of results obtained from our tests of this material. The report relates only to those samples received and analyzed by the laboratory. All results meet the requirements of the NELAC Institute standards. Laboratory reports may not be reproduced, except in full, without the written approval of the laboratory.

In lieu of a formal contract document, the total aggregate liability of Hampton-Clarke to all parties shall not exceed Hampton-Clarke's total fee for analytical services rendered.

# SDG Narrative

# HC Case Narrative

**Client:** TRC Engineering
**Project:** 384968

**HC Project:** 1052120

**Hampton-Clarke (HC) received the following samples on 5/21/21:**

| Client ID | HC Sample ID | Matrix | Analysis |
|---|---|---|---|
| M1-ABCD COMP 05-20-2021 | AD23549-001 | Aqueous | Volatile Organics (8260D), SGT-HEM (1664B), TSS (SM2540D-11), *Cyanide (9012B), *Cyanide (Amenable) (9012B) |
| M1-COMP-05-20-2021 | AD23549-005 | Aqueous | Semivolatile Organics (8270E), PCB (8082A), Mercury (7470A), TAL Metals (6010D/6020B), Carbonaceous BOD (SM5210 B-11), Chloride (300.0), Nitrite/Nitrate (300.0),Cr(Hex) (SM3500-CrB11), *TKN (351) |

* - Indicates analysis was performed by a subcontracted laboratory.

*This case narrative is in the form of an exception report. Method specific and/or QA/QC anomalies related to this report only are detailed below.*

## Volatile Organic Analysis:

The Method Blank Spike for batch 93509 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The Matrix Spike and/or Matrix Spike Duplicate for batch 935099 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

2-Chloroethylvinylether did not recover in the Matrix Spike and/or Matrix Spike Duplicate in batch 93509 due to acid preservation of sample. 2-Chloroethylvinylether readily decomposes under acidic conditions. The recovery of 2-Chloroethylvinylether is within QC limits in the Laboratory Control Sample. Please refer to the applicable Form 3 for the recoveries.

## Base Neutral/Acid Extractable Analysis:

The Method Blank Spike for batch 92654 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The Matrix Spike and/or Matrix Spike Duplicate for batch 92654 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

Sample WMB92654MS had one or more surrogates outside QC limits. Please refer to the applicable Form 2 for the recoveries.

## PCB Analysis:

Full amount of surrogate was added to sample WMB92657. Please refer to the applicable Form 2 for the recoveries.

## Metals Analysis:

The Post Spike for batch 92296 had recoveries outside QC limits. Please refer to the applicable Form 5/7 for the recoveries.

MB92296 had hit of Zinc but samples reported for Zn and ND.

## Wet Chemistry Analysis:

The Matrix Spike and Matrix Spike Dup for Chloride, batch 2743 had recoveries outside QC limits. Please refer to the QC section for the recoveries.

## Subcontracted Analysis:

Please refer to attached subcontracted laboratory report. Samples AD23549-001, -002 were submitted to Pace Analytical for Cyanide, Cyanide Amenable and TKN analysis.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

# Reporting Limit Definitions

# HC Reporting Limit Definitions/Data Qualifiers

## REPORTING DEFINITIONS

**DF** = Dilution Factor

**LCS** = Laboratory Control Spike

**MBS** = Method Blank Spike

**MS** = Matrix Spike

**MSD** = Matrix Spike Duplicate

**MDL** = Method Detection Limit

**NA** = Not Applicable

**ND** = Not Detected

**PS** = Post Digestion Spike

**RL*** = Reporting Limit

**RT** = Retention Time

**Samples with elevated Reporting Limits (RLs) as a result of a dilution may not achieve client reporting limits in some cases. The elevated RLs are unavoidable consequences of sample dilution required to quantitate target analytes that exceed the calibration range of the instrument.*

## DATA QUALIFIERS

**A-** Indicates that the Tentatively Identified Compound (TIC) is suspected to be an aldol-condensation product. These compounds are by-products of acetone and methylene chloride used in the extraction process.

**B-** Indicates analyte was present in the Method Blank and sample.

**d-** For Pesticide and PCB analysis, the concentration between primary and secondary columns is greater than 40%. The lower concentration is generally reported.

**E-** Indicates the concentration exceeded the upper calibration range of the instrument.

**J-** Indicates the value is estimated because it is either a Tentatively Identified Compound (TIC) or the reported concentration is greater than the MDL but less than the RL. For samples results between the MDL and RL there is a possibility of false positives or misidentification at the quantitation levels. Additionally, the acceptance criteria for QC samples may not be met.

**R-** Retention Time is out.

**Y-** Indicates a contaminant found in the blank at less than 10% of the concentration of a contaminant found in the sample.

RE: Project: AD23549
Pace Project No.: 70174157

Dear Hampton Veritech:

Enclosed are the analytical results for sample(s) received by the laboratory on May 24, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Melville
- Pace National - Mt. Juliet

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Julie Litvin for
Lea Sherman

# PROJECT NARRATIVE

Project: AD23549
Pace Project No.: 70174157

**Method:** **SM 4500-CN E-11**
**Description:** Wet Chemistry 4500CN E-2011
**Client:** Hampton Clark Veritech
**Date:** June 11, 2021

**General Information:**
1 sample was analyzed for SM 4500-CN E-11 by Pace National Mt. Juliet. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**
The samples were analyzed within the method required hold times with any exceptions noted below.

H1: Analysis conducted outside the recognized method holding time.
- AD23549-001 (Lab ID: 70174157001)

**Method Blank:**
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**
All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Duplicate Sample:**
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

QC Batch: 1682627

D8: The sample and duplicate results for this parameter are less than 5 times the reporting limit, the RPD may not be statistically valid.
- DUP (Lab ID: R3663227-3)
  - Cyanide
- DUP (Lab ID: R3663227-6)
  - Cyanide

**Additional Comments:**

This report shall not be reproduced, except in full,

# PROJECT NARRATIVE

Project: AD23549
Pace Project No.: 70174157

**Method:** **EPA 351.2**
**Description:** 351.2 Total Kjeldahl Nitrogen
**Client:** Hampton Clark Veritech
**Date:** June 11, 2021

**General Information:**
1 sample was analyzed for EPA 351.2 by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**
The samples were analyzed within the method required hold times with any exceptions noted below.

**Sample Preparation:**
The samples were prepared in accordance with EPA 351.2 with any exceptions noted below.

**Method Blank:**
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**
All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 211059

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 70173899001

M6: Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

- MS (Lab ID: 1056465)
  - Nitrogen, Kjeldahl, Total

**Duplicate Sample:**
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

**Additional Comments:**

This data package has been reviewed for quality and completeness and is approved for release.

This report shall not be reproduced, except in full,

# QUALIFIERS

Project: AD23549
Pace Project No.: 70174157

## DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

## ANALYTE QUALIFIERS

| | |
|---|---|
| D8 | The sample and duplicate results for this parameter are less than 5 times the reporting limit, the RPD may not be statistically valid. |
| H1 | Analysis conducted outside the recognized method holding time. |
| M6 | Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution. |
| ML | Matrix spike recovery and/or matrix spike duplicate recovery was below laboratory control limits. Result may be biased low. |

This report shall not be reproduced, except in full,

**RE:** Q1 Industrial Wastewater Discharge Self-Monitoring Report
New York City Department of Parks and Recreation
Brookfield Landfill/Park
575 Arthur Kill Road, Staten Island, NY 10308
Permit No. 18-P3149-1
TRC Project No. 384968

Dear Ms. Leung:

Enclosed please find the Q1 Industrial Wastewater Discharge Self-Monitoring Report (SMR) for the monitoring period of June 1, 2021 to August 31, 2021 for the New York City Department of Parks and Recreation (NYCDPR) Brookfield Avenue Landfill. The report contains SMR Forms with certifications, flow summary tables, M-1 sample result summary tables, laboratory results for the M-1 samples, and chain of custody forms. The results of the monthly sampling indicate there were no exceedances of any permit compound limits.

Please do not hesitate to contact me at (917) 794-3107 or via email at wlindemuth@trccompanies.com if you have any questions.

Sincerely,
**TRC Engineers, Inc.**

Q1 Industrial Wastewater Discharge Self-Monitoring Report

# INDUSTRIAL USER SELF MONITORING REPORT

| 1. | ★ Establishment Information ★ | | | |
|---|---|---|---|---|
| A. | Name: Brookfield Avenue Landfill | | | |
| B. | Address: 575 Arthur Kill Road, Staten Island, NY 10308 | | | |
| | | | | |
| C. | Industrial Category: | | | |
| D. | Contact Official: Wes Lindemuth | | E. | Phone #: 917-794-3107 |
| F. | Reporting Period | | G. | Date sampled |
| | Start: 6/1/2021 | End: 8/31/2021 | Start: 6/16/2021 | End: 8/20/2021 |

Note: If the only wastewater discharges by your establishment into the public sewer system are sanitary or non-contact cooling water, do not address items in Tables 2, 3, 4, 5 and 6. In this case, check here [ ] and proceed directly to Table 7.

| 2. | ★Flow Information ★ | Average | Peak |
|---|---|---|---|
| A. | Total Plant Flow, gal/day | 64,178.15 | 171,030.00 |
| B. | Regulated Flow, gal/day | 64,178.15 | 171,030.00 |
| C. | Method of Flow Measurement: Flow meter (non-resettable) on the discharge line to the on-Site sanitary manhole. | | |
| The water volume discharged is monitored daily. | | | |
| | | | |

| 3. | ★ Sample Collection Information ★ |
|---|---|
| A. | Sampling Location: Prior to the gravity discharge from the oil/water seperator into the on-Site sanitary sewer system, |
| a sample port installed on the effluent end of the discharge piping collects samples. | |
| B. | Sampling Procedures: Samples are collected in accordance with 40 DFR, 403.12(g)(3) which states that grab samples |
| must be used for pH, cyanide, total phenols, oil & grease, sulfide and VOCs. | |
| For all other pollutants, 24-hours composite samples are obtained through time-proportional composite sampling techniques. | |
| | |
| C. | Preservatives Used: HCl, H2SO4, NaOH, HNO3 |
| | |

| 4. | This establishment's wastewater discharge DOES [ ] / DOES NOT [X] exceed nationwide categorical standard (s) or 15 RCNY 19-04 (a). |
|---|---|

| 5. | ★ Production Rate ★ |
|---|---|
| If applicable, provide production rate: Not Applicable | |
| | |
| | |

| 6. | ★ pH Monitoring ★ | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| (Four Samples Per Day - One Hour Apart - Once a Month) | | | | | | | | | | | | | |
| A. | Date | 6/16/2021 | | 7/22/2021 | | 8/19/2021 | | / / | | / / | | / / | |
| B. | Time/pH | 9:30 | 7.30 | 11:00 | 7.24 | 10:00 | 7.71 | | | | | | |
| | | 10:30 | 7.14 | 12:00 | 7.13 | 11:00 | 7.53 | | | | | | |
| | | 11:30 | 7.06 | 13:00 | 7.01 | 12:00 | 7.53 | | | | | | |
| | | 12:30 | 7.15 | 14:00 | 7.11 | 13:00 | 7.58 | | | | | | |

| 7. | ★ HAZARDOUS WASTES GENERATION ★ |
|---|---|
| This establishment DID [ ] / DID NOT [X] generate any hazardous wastes, during this reporting period. If hazardous wastes were generated, | |
| A. | Type of Waste: |
| B. | Amount Generated (in kilograms) : |
| C. | Method of Disposal : |
| | |

| 8. | ★ CERTIFICATION ★ |
|---|---|
| A. | NON-CONTAMINATED WASTEWATER DISCHARGE CERTIFICATION: |

I hereby certify, that during this reporting period, this facility has not discharged any industrial wastewater, chemicals, cleaners or like substances generated from or in relation to any of this establishment's operations other than sanitary or non-contact cooling water. I understand that I must obtain prior written approval from the Industrial Inspections and Permitting Section before I can discharge any such wastewater. I am aware that there are significant civil and criminal sanctions for submitting false information.

8. ★ CERTIFICATIONS (CONTINUED) ★

B. TOXIC ORGANICS CERTIFICATION:

I. "Based upon my inquiry of the person or persons directly responsible for managing environmental affairs at my facility, I certify that, to the best of my knowledge and belief, no Toxic Organics are used or stored at my facility. I certify that I am duly authorized by the establishment to make this statement on its behalf, and am fully aware that there are significant civil and criminal sanctions for submitting false information, including the possibility of a fine and/or imprisonment."

II "Based upon my inquiry of the person or persons directly responsible for managing environmental affairs at my facility, I certify that, to the best of my knowledge and belief, there was no discharge to a public sewer of toxic organics during the reporting period covered by this report. I also certify that the explanations provided concerning the disposal of toxic organics from the facility are true, accurate and complete. I further certify that this facility is implementing a toxic organics management plan to protect against the release of such compounds to a public sewer. I certify that I am duly authorized by the establishment to make this statement on its behalf, and am fully aware that there are significant civil and criminal sanctions for submitting false information, including the possibility of a fine and/or imprisonment."

C. AUTHORIZED FIRM REPRESENTATIVE CERTIFICATION:

I hereby certify, under penalty of law, that I have personally examined and am familiar with the information contained in this report and all attachments therein. Furthermore, based on my inquiry of those persons immediately responsible for obtaining the information contained in this report, I believe that the information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment. I further certify that the reported sampling results are representative of the facility's normal work cycles and expected pollutant discharges.

**OR**

b. "Based upon my inquiry of the person or persons directly responsible for managing environmental affairs at my facility, I certify that, to the best of my knowledge and belief, there was no discharge to a public sewer of cyanide-bearing waste during the reporting period covered by this report. I also certify that the explanations provided concerning the disposal of cyanide-bearing waste from the facility are true, accurate and complete. I certify that I am duly authorized by the establishment to make this statement on its behalf, and am fully aware that there are significant civil and criminal sanctions for submitting false information, including the possibility of a fine and/or imprisonment."

Name (print)_____ Signature_____

Title_____ Date_____ Phone Number_____

If certification b. (above) is signed and submitted, explanations concerning the disposal of cyanide-bearing waste from the facility shall be provided.

| 9. | ★ DESCRIPTION OF OPERATION ★ |
|---|---|
| Site is a former landfill which is now operated as public Park. The discharge is comprised of landfill leachate which is allowed to pass through an oil-water separator prior to discharge. | |
| | |
| | |
| | |
| | |
| | |
| | |

| 10. | ★ ATTACHMENTS ★ | Yes | No | N/A |
|---|---|---|---|---|
| A. | All laboratory analyses must be conducted by a New York State Health Department certified wastewater laboratory. The results must be certified by the laboratory and submitted on the laboratory's letterhead. For each sample, the laboratory report must indicate the date of sampling, time sample was taken, sample location, sampling preservation procedures, analytical techniques used, date of analysis, units of measurement, and the laboratory's sample identification; where the analytical result reported is below the method detection level, the laboratory report must also indicate the method detection level. | X | | |
| B. | Chain of custody for all samples. | X | | |
| C. | Explanation of non-compliance and what will be done to rectify it. A compliance schedule is to be included. | | | X |
| D. | Amount of spent solvents generated and method of disposal. Explanation of zero discharges to be included. | | | X |
| E. | Description of any major modifications or malfunctions in manufacturing or pretreatment operations. | | | X |
| F. | Hazardous wastes manifests. | | | X |

**Client PO:** 152591

**Report To:** TRC Engineering
1430 Broadway
10th Floor
New York, NY 10018
Attn: Wes Lindemuth

**Received Date:** 6/17/2021

**Report Date:** 7/23/2021

**Deliverables:** NYDOH-CatB

**Lab ID:** AD24067

**Lab Project No:** 1061738

This report is a true report of results obtained from our tests of this material. The report relates only to those samples received and analyzed by the laboratory. All results meet the requirements of the NELAC Institute standards. Laboratory reports may not be reproduced, except in full, without the written approval of the laboratory.

In lieu of a formal contract document, the total aggregate liability of Hampton-Clarke to all parties shall not exceed Hampton-Clarke's total fee for analytical services rendered.

# SDG Narrative

# HC Case Narrative

**Client:** TRC Engineering
**Project:** Brookfield Landfill

**HC Project:** 1061738

**Hampton-Clarke (HC) received the following samples on 6/17/21:**

| Client ID | HC Sample ID | Matrix | Analysis |
|---|---|---|---|
| M1-(A-D)-6-16-2021 | AD24067-001 | Aqueous | Volatile Organics (8260D), SGT-HEM (1664B), TSS (SM2540D-11), ***Cyanide (9012B), *Cyanide (Amenable) (9012B)** |
| M1-COMP-06-17-2021 | AD24067-002 | Aqueous | Semivolatile Organics (8270E), PCB (8082A), Mercury (7470A), TAL Metals (6010D/6020B), Carbonaceous BOD (SM5210 B-11), Chloride (300.0), Nitrite/Nitrate (300.0),Cr(Hex) (SM3500-CrB11), ***TKN (351)** |

* - Indicates analysis was performed by a subcontracted laboratory.

*This case narrative is in the form of an exception report. Method specific and/or QA/QC anomalies related to this report only are detailed below.*

## Volatile Organic Analysis:

The Method Blank Spike for batches 93691, 93699 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The Matrix Spike and/or Matrix Spike Duplicate for batch 93699 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

2-Chloroethylvinylether did not recover in the Matrix Spike and/or Matrix Spike Duplicate in batch 93699 due to acid preservation of sample. 2-Chloroethylvinylether readily decomposes under acidic conditions. The recovery of 2-Chloroethylvinylether is within QC limits in the Laboratory Control Sample. Please refer to the applicable Form 3 for the recoveries.

## Base Neutral/Acid Extractable Analysis:

The MS/MSD RPD for batch 92965 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

## PCB Analysis:

Data conforms to method requirements.

## Metals Analysis:

Due to contamination in LCS/LCSMR, batch 92402 was reset for Cu,Zn.

## Wet Chemistry Analysis:

The Matrix Spike and/or Matrix Spike Duplicate for Chloride, batch 2754, had recoveries outside QC limits. Please refer to the QC section for the recoveries.

## Subcontracted Analysis:

Please refer to attached subcontracted laboratory report. Samples AD24067-002 was submitted to Pace Analytical for TKN analysis.

Please refer to attached subcontracted laboratory report. Samples AD24067-001 was submitted to Con-Test for Cyanide, Cyanide Amenable analysis.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

# Reporting Limit Definitions

# HC Reporting Limit Definitions/Data Qualifiers

## REPORTING DEFINITIONS

**DF** = Dilution Factor

**LCS** = Laboratory Control Spike

**MBS** = Method Blank Spike

**MS** = Matrix Spike

**MSD** = Matrix Spike Duplicate

**MDL** = Method Detection Limit

**NA** = Not Applicable

**ND** = Not Detected

**PS** = Post Digestion Spike

**RL*** = Reporting Limit

**RT** = Retention Time

**Samples with elevated Reporting Limits (RLs) as a result of a dilution may not achieve client reporting limits in some cases. The elevated RLs are unavoidable consequences of sample dilution required to quantitate target analytes that exceed the calibration range of the instrument.*

## DATA QUALIFIERS

**A-** Indicates that the Tentatively Identified Compound (TIC) is suspected to be an aldol-condensation product. These compounds are by-products of acetone and methylene chloride used in the extraction process.

**B-** Indicates analyte was present in the Method Blank and sample.

**d-** For Pesticide and PCB analysis, the concentration between primary and secondary columns is greater than 40%. The lower concentration is generally reported.

**E-** Indicates the concentration exceeded the upper calibration range of the instrument.

**J-** Indicates the value is estimated because it is either a Tentatively Identified Compound (TIC) or the reported concentration is greater than the MDL but less than the RL. For samples results between the MDL and RL there is a possibility of false positives or misidentification at the quantitation levels. Additionally, the acceptance criteria for QC samples may not be met.

**R-** Retention Time is out.

**Y-** Indicates a contaminant found in the blank at less than 10% of the concentration of a contaminant found in the sample.

### Comments, Notes, Special Requirements, HAZARDS

Indicate if low-level methods required to meet current groundwater standards (SPLP for soil):
- [ ] BN or BNA (8270D SIM)
- [ ] VOC (8260C SIM or 8011)
- [ ] SPLP (BN, BNA, Metals)
- [ ] 1,4 Dioxane

For NJ LSRP projects, indicate which standards need to be met:
- [ ] NJDEP GWQS
- [ ] NJDEP SRS
- [ ] NJDEP SPLP
- [ ] Other (specify):

Check if applicable:
- [ ] Project-Specific Reporting Limits
- [ ] High Contaminant Concentrations
- [ ] NJ LSRP Project (also check boxes above/right)

Cooler Temperature: 2.8 3.2

Please note NUMBERED items. If not completed your analytical work may be delayed.
A fee of $5/sample will be assessed for storage should sample not be activated for any analysis.

Internal use: sampling plan (check box) HC [ ] or client [ ] FSP#

RE: Project: AD24067
Pace Project No.: 70177788

Dear Hampton Veritech:

Enclosed are the analytical results for sample(s) received by the laboratory on June 22, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Melville

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Lea Sherman
lea.sherman@pacelabs.com

# PROJECT NARRATIVE

Project: AD24067
Pace Project No.: 70177788

**Method:** **EPA 351.2**
**Description:** 351.2 Total Kjeldahl Nitrogen
**Client:** Hampton Clark Veritech
**Date:** June 29, 2021

**General Information:**
1 sample was analyzed for EPA 351.2 by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**
The samples were analyzed within the method required hold times with any exceptions noted below.

**Sample Preparation:**
The samples were prepared in accordance with EPA 351.2 with any exceptions noted below.

**Method Blank:**
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**
All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 214973

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 70176101001,70177476001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1081805)
  - Nitrogen, Kjeldahl, Total
- MS (Lab ID: 1081807)
  - Nitrogen, Kjeldahl, Total

**Duplicate Sample:**
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

**Additional Comments:**

This data package has been reviewed for quality and completeness and is approved for release.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

(631)694-3040

# QUALIFIERS

Project: AD24067
Pace Project No.: 70177788

## DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

## ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

**CASE NARRATIVE SUMMARY**

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

# SDG Narrative

# HC Case Narrative

**Client:** TRC Engineering
**Project:** Brookfield Landfill

**HC Project:** 1072321

**Hampton-Clarke (HC) received the following samples on 7/23/21:**

| Client ID | HC Sample ID | Matrix | Analysis |
|---|---|---|---|
| M1- COMP-(A-D)-07-22-2021 | AD24928-001 | Aqueous | Volatile Organics (8260D), SGT-HEM (1664B), TSS (SM2540D-11), *Cyanide (9012B), *Cyanide (Amenable) (9012B) |
| M1-COMP-07-23-2021 | AD24928-005 | Aqueous | Semivolatile Organics (8270E), PCB (8082A), Mercury (7470A), TAL Metals (6010D/6020B), Carbonaceous BOD (SM5210 B-11), Chloride (300.0), Nitrite/Nitrate (300.0),Cr(Hex) (SM3500-CrB11), *TKN (351) |

* - Indicates analysis was performed by a subcontracted laboratory.

*This case narrative is in the form of an exception report. Method specific and/or QA/QC anomalies related to this report only are detailed below.*

## Volatile Organic Analysis:

The Method Blank Spike for batch 94273 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The Matrix Spike and/or Matrix Spike Duplicate for batch 94273 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

2-Chloroethylvinylether did not recover in the Matrix Spike and/or Matrix Spike Duplicate in batch 94273 due to acid preservation of sample. 2-Chloroethylvinylether readily decomposes under acidic conditions. The recovery of 2-Chloroethylvinylether is within QC limits in the Laboratory Control Sample. Please refer to the applicable Form 3 for the recoveries.

## Base Neutral/Acid Extractable Analysis:

The MS/MSD RPD, Matrix Spike and/or Matrix Spike Duplicate for batch 93339 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

## PCB Analysis:

Data conforms to method requirements.

## Metals Analysis:

The Post Spike for batch 93870 had recoveries outside QC limits. Please refer to the applicable Form 5/7 for the recoveries.

## Wet Chemistry Analysis:

The Matrix Spike and Matrix Spike Dup for Chloride, batch 2769 had recoveries outside QC limits. Please refer to the QC section for the recoveries.

The difference between dilutions for CBOD sample AD24928-002 was more than 30%.

## Subcontracted Analysis:

Please refer to attached subcontracted laboratory report. Samples AD24928-001 and 002 were submitted to Pace Analytical for Cyanide, Cyanide Amenable and TKN analysis.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

# Reporting Limit Definitions

# HC Reporting Limit Definitions/Data Qualifiers

## REPORTING DEFINITIONS

**DF** = Dilution Factor

**DUP** = Duplicate

**LCS** = Laboratory Control Spike

**MBS** = Method Blank Spike

**MDL** = Method Detection Limit

**MR** = Matrix Replicate

**MS** = Matrix Spike

**MSD** = Matrix Spike Duplicate

**NA** = Not Applicable

**ND** = Not Detected

**PS** = Post Digestion Spike

**RL*** = Reporting Limit

**RT** = Retention Time

**SD** = Serial Dilution

**Samples with elevated Reporting Limits (RLs) as a result of a dilution may not achieve client reporting limits in some cases. The elevated RLs are unavoidable consequences of sample dilution required to quantitate target analytes that exceed the calibration range of the instrument.*

## DATA QUALIFIERS

**A-** Indicates that the Tentatively Identified Compound (TIC) is suspected to be an aldol-condensation product. These compounds are by-products of acetone and methylene chloride used in the extraction process.

**B-** Indicates analyte was present in the Method Blank and sample.

**d-** For Pesticide and PCB analysis, the concentration between primary and secondary columns is greater than 40%. The lower concentration is generally reported.

**E-** Indicates the concentration exceeded the upper calibration range of the instrument.

**J-** Indicates the value is estimated because it is either a Tentatively Identified Compound (TIC) or the reported concentration is greater than the MDL but less than the RL. For samples results between the MDL and RL there is a possibility of false positives or misidentification at the quantitation levels. Additionally, the acceptance criteria for QC samples may not be met.

**R-** Retention Time is out.

**Y-** Indicates a contaminant found in the blank at less than 10% of the concentration of a contaminant found in the sample.

11) Sampler (print name): Date:

**Additional Notes** Please composite samples M1-A-07-22-2021, M1-B-07-22-2021, M1-C-07-22-2021 and M1-D-07-22-2021 into one sample with sample ID M1-COMP (A-D)-07-22-2021.

**Comments, Notes, Special Requirements, HAZARDS**

Indicate if low-level methods required to meet current groundwater standards (SPLP for soil):
- [ ] BN or BNA (8270E SIM)
- [ ] VOC (8260D SIM or 8011)
- [ ] SPLP (BN, BNA, Metals)
- [ ] 1,4 Dioxane

Check if applicable:
- [ ] Project-Specific Reporting Limits
- [ ] High Contaminant Concentrations
- [ ] NJ LSRP Project (also check boxes above/right)

For NJ LSRP projects, indicate which standards need to be met:
- [ ] NJDEP GWQS
- [ ] NJDEP SRS
- [ ] NJDEP SPLP
- [ ] Other (specify):

Cooler Temperature: 2-8 3-1

Please note NUMBERED items. If not completed your analytical work may be delayed.
A fee of $5/sample will be assessed for storage should sample not be activated for any analysis.

Internal use: sampling plan (check box) HC [ ] or client [ ] FSP#

# CONDITION UPON RECEIPT

Batch Number AD24928 Entered By: maxwell
Date Entered 7/23/2021 4:48:00 PM

| | | |
|---|---|---|
| 1 | Yes | Is there a corresponding COC included with the samples? |
| 2 | Yes | Are the samples in a container such as a cooler or Ice chest? |
| 3 | No | Are the COC seals intact? |
| 4 | T0054 | <--- Thermometer ID. Please specify the Temperature inside the container (in degC).<br>2.8,3.1 |
| 5 | Yes | Are the samples refrigerated (where required)/have they arrived on ice? |
| 6 | Yes | Are the samples within the holding times for the parameters listed on the COC? IF no, list parameters and samples: |
| 7 | Yes | Are all of the sample bottles intact? If no, specify sample numbers broken/leaking |
| 8 | Yes | Are all of the sample labels or numbers legible? If no specify: |
| 9 | Yes | Do the contents match the COC? If no, specify |
| 10 | Yes | Is there enough sample sent for the analyses listed on the COC? If no, specify: |
| 11 | Yes | Are samples preserved correctly? |
| 12 | Yes | Was temperature blank present (Place comment below if not)? If not was temperature of samples verified? |
| 13 | NA | Other comments ...Specify (TB date, sample matrix, any missing info, etc.) |
| 14 | NA | Corrective actions (Specify item number and corrective action taken). |
| 15 | NA | Were any samples for ortho-phosphate or dissolved ferrous iron field filtered? |

RE: Project: AD24928
Pace Project No.: 70181784

Dear Hampton Veritech:

Enclosed are the analytical results for sample(s) received by the laboratory on July 26, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Melville

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Lea Sherman
lea.sherman@pacelabs.com

# PROJECT NARRATIVE

Project: AD24928
Pace Project No.: 70181784

**Method:** **EPA 351.2**
**Description:** 351.2 Total Kjeldahl Nitrogen
**Client:** Hampton Clark Veritech
**Date:** July 30, 2021

**General Information:**
1 sample was analyzed for EPA 351.2 by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**
The samples were analyzed within the method required hold times with any exceptions noted below.

**Sample Preparation:**
The samples were prepared in accordance with EPA 351.2 with any exceptions noted below.

**Method Blank:**
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**
All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Duplicate Sample:**
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

**Additional Comments:**

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

**Pace Analytical Services, LLC**

# PROJECT NARRATIVE

Project: AD24928
Pace Project No.: 70181784

**Method:** **SM22 4500-CN-E**
**Description:** SM 4500 CNE Cyanide, Total
**Client:** Hampton Clark Veritech
**Date:** July 30, 2021

**General Information:**
1 sample was analyzed for SM22 4500-CN-E by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**
The samples were analyzed within the method required hold times with any exceptions noted below.

**Sample Preparation:**
The samples were prepared in accordance with SM20/22 4500-CN-C with any exceptions noted below.

**Method Blank:**
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**
All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Duplicate Sample:**
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

**Additional Comments:**

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

# PROJECT NARRATIVE

Project: AD24928
Pace Project No.: 70181784

**Method:** **SM22 4500-CN-E**
**Description:** 4500CNG Cyanide, Amenable
**Client:** Hampton Clark Veritech
**Date:** July 30, 2021

**General Information:**
1 sample was analyzed for SM22 4500-CN-E by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**
The samples were analyzed within the method required hold times with any exceptions noted below.

**Sample Preparation:**
The samples were prepared in accordance with SM22 4500-CN-G with any exceptions noted below.

**Method Blank:**
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**
All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Additional Comments:**

This data package has been reviewed for quality and completeness and is approved for release.

# QUALIFIERS

Project: AD24928
Pace Project No.: 70181784

## DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

## ANALYTE QUALIFIERS

# SDG Narrative

# HC Case Narrative

**Client:** TRC Engineering
**Project:** Brookfield Landfill

**HC Project:** 1082012

**Hampton-Clarke (HC) received the following samples on 8/20/21:**

| Client ID | HC Sample ID | Matrix | Analysis |
|---|---|---|---|
| M1-COMP-(A-D)-08-19-2021 | AD25530-001 | Aqueous | Volatile Organics (8260D), SGT-HEM (1664B), TSS (SM2540D-11), *Cyanide (9012B), *Cyanide (Amenable) (9012B) |
| M1-COMP-08-20-2021 | AD25530-005 | Aqueous | Semivolatile Organics (8270E), PCB (8082A), Mercury (7470A), TAL Metals (6010D/6020B), Carbonaceous BOD (SM5210 B-11), Chloride (300.0), Nitrite/Nitrate (300.0),Cr(Hex) (SM3500-CrB11), *TKN (351) |

* - Indicates analysis was performed by a subcontracted laboratory.

*This case narrative is in the form of an exception report. Method specific and/or QA/QC anomalies related to this report only are detailed below.*

## Volatile Organic Analysis:

The Method Blank Spike for batch 96323 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

Spiking compounds were diluted out from Matrix Spike and Matrix Spike Duplicate for batch 96323. Please refer to the applicable Form 3 for the recoveries.

## Base Neutral/Acid Extractable Analysis:

The Matrix Spike and/or Matrix Spike Duplicate for batch 94741 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

## PCB Analysis:

Data conforms to method requirements.

## Metals Analysis:

The Post Spike for batch 94326 had recoveries outside QC limits. Please refer to the applicable Form 5/7 for the recoveries.

## Wet Chemistry Analysis:

The Matrix Spike and Matrix Spike Dup for Chloride and Nitrate , batch 2777 had recoveries outside QC limits. Please refer to the QC section for the recoveries.

**Subcontracted Analysis:**

lease refer to attached subcontracted laboratory report. Samples AD25530-001 and 002 were submitted to Pace Analytical for Cyanide, Cyanide Amenable and TKN analysis.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

# Reporting Limit Definitions

# HC Reporting Limit Definitions/Data Qualifiers

## REPORTING DEFINITIONS

**DF** = Dilution Factor

**DUP** = Duplicate

**LCS** = Laboratory Control Spike

**MBS** = Method Blank Spike

**MDL** = Method Detection Limit

**MR** = Matrix Replicate

**MS** = Matrix Spike

**MSD** = Matrix Spike Duplicate

**NA** = Not Applicable

**ND** = Not Detected

**PS** = Post Digestion Spike

**RL*** = Reporting Limit

**RT** = Retention Time

**SD** = Serial Dilution

**Samples with elevated Reporting Limits (RLs) as a result of a dilution may not achieve client reporting limits in some cases. The elevated RLs are unavoidable consequences of sample dilution required to quantitate target analytes that exceed the calibration range of the instrument.*

## DATA QUALIFIERS

**A-** Indicates that the Tentatively Identified Compound (TIC) is suspected to be an aldol-condensation product. These compounds are by-products of acetone and methylene chloride used in the extraction process.

**B-** Indicates analyte was present in the Method Blank and sample.

**d-** For Pesticide and PCB analysis, the concentration between primary and secondary columns is greater than 40%. The lower concentration is generally reported.

**E-** Indicates the concentration exceeded the upper calibration range of the instrument.

**J-** Indicates the value is estimated because it is either a Tentatively Identified Compound (TIC) or the reported concentration is greater than the MDL but less than the RL. For samples results between the MDL and RL there is a possibility of false positives or misidentification at the quantitation levels. Additionally, the acceptance criteria for QC samples may not be met.

**R-** Retention Time is out.

**Y-** Indicates a contaminant found in the blank at less than 10% of the concentration of a contaminant found in the sample.

RE: Project: 1082012
Pace Project No.: 70184948

Dear Hampton Veritech:

Enclosed are the analytical results for sample(s) received by the laboratory on August 23, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Melville

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Lea Sherman
lea.sherman@pacelabs.com

# PROJECT NARRATIVE

Project: 1082012
Pace Project No.: 70184948

**Method:** **EPA 351.2**
**Description:** 351.2 Total Kjeldahl Nitrogen
**Client:** Hampton Clark Veritech
**Date:** August 31, 2021

**General Information:**
1 sample was analyzed for EPA 351.2 by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**
The samples were analyzed within the method required hold times with any exceptions noted below.

**Sample Preparation:**
The samples were prepared in accordance with EPA 351.2 with any exceptions noted below.

**Method Blank:**
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**
All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 223388

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 70184609002,70184812002

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1126374)
  - Nitrogen, Kjeldahl, Total
- MS (Lab ID: 1126376)
  - Nitrogen, Kjeldahl, Total

**Duplicate Sample:**
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

QC Batch: 223388

D6: The precision between the sample and sample duplicate exceeded laboratory control limits.

- DUP (Lab ID: 1126375)
  - Nitrogen, Kjeldahl, Total
- DUP (Lab ID: 1126377)
  - Nitrogen, Kjeldahl, Total

**Additional Comments:**

# PROJECT NARRATIVE

Project: 1082012
Pace Project No.: 70184948

**Method:** **SM22 4500-CN-E**
**Description:** SM 4500 CNE Cyanide, Total
**Client:** Hampton Clark Veritech
**Date:** August 31, 2021

**General Information:**
1 sample was analyzed for SM22 4500-CN-E by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**
The samples were analyzed within the method required hold times with any exceptions noted below.

**Sample Preparation:**
The samples were prepared in accordance with SM20/22 4500-CN-C with any exceptions noted below.

**Method Blank:**
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**
All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 223663

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 70184818003

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1127994)
  - Cyanide

**Duplicate Sample:**
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

**Additional Comments:**

This report shall not be reproduced, except in full,

# PROJECT NARRATIVE

Project: 1082012
Pace Project No.: 70184948

**Method:** **SM22 4500-CN-E**
**Description:** 4500CNG Cyanide, Amenable
**Client:** Hampton Clark Veritech
**Date:** August 31, 2021

**General Information:**
1 sample was analyzed for SM22 4500-CN-E by Pace Analytical Services Melville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**
The samples were analyzed within the method required hold times with any exceptions noted below.

**Sample Preparation:**
The samples were prepared in accordance with SM22 4500-CN-G with any exceptions noted below.

**Method Blank:**
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**
All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Additional Comments:**

This data package has been reviewed for quality and completeness and is approved for release.

This report shall not be reproduced, except in full,

# QUALIFIERS

Project: 1082012
Pace Project No.: 70184948

## DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

## ANALYTE QUALIFIERS

| | |
|---|---|
| D6 | The precision between the sample and sample duplicate exceeded laboratory control limits. |
| L2 | Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low. |
| M1 | Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery. |

This report shall not be reproduced, except in full,

**RE:** Q2 Industrial Wastewater Discharge Self-Monitoring Report
New York City Department of Parks and Recreation
Brookfield Landfill/Park
575 Arthur Kill Road, Staten Island, NY 10308
Permit No. 18-P3149-1
TRC Project No. 384968

Dear Ms. Leung:

Enclosed please find the Q2 Industrial Wastewater Discharge Self-Monitoring Report (SMR) for the monitoring period of September 1, 2021 to November 30, 2021 for the New York City Department of Parks and Recreation (NYCDPR) Brookfield Avenue Landfill. The report contains SMR Forms with certifications, flow summary tables, M-1 sample result summary tables, laboratory results for the M-1 samples, and chain of custody forms. The results of the monthly sampling indicate there were no exceedances of any permit compound limits.

Please do not hesitate to contact me at (917) 794-3107 or via email at wlindemuth@trccompanies.com if you have any questions.

Sincerely,
**TRC Engineers, Inc.**

Wes Lindemuth

Q1 Industrial Wastewater Discharge Self-Monitoring Report

# INDUSTRIAL USER SELF MONITORING REPORT

| 1. | ★ Establishment Information ★ | | | |
|---|---|---|---|---|
| A. | Name: Brookfield Avenue Landfill | | | |
| B. | Address: 575 Arthur Kill Road, Staten Island, NY 10308 | | | |
| | | | | |
| C. | Industrial Category: | | | |
| D. | Contact Official: Wes Lindemuth | | E. | Phone #: 917-794-3107 |
| F. | Reporting Period | | G. | Date sampled |
| | Start: 9/1/2021 | End: 11/30/2021 | Start: 9/27/2021 | End: 11/24/2021 |

Note: If the only wastewater discharges by your establishment into the public sewer system are sanitary or non-contact cooling water, do not address items in Tables 2, 3, 4, 5 and 6. In this case, check here [ ] and proceed directly to Table 7.

| 2. | ★Flow Information ★ | Average | Peak |
|---|---|---|---|
| A. | Total Plant Flow, gal/day | 36,777.69 | 127,490.0 |
| B. | Regulated Flow, gal/day | 36,777.69 | 127,490.0 |
| C. | Method of Flow Measurement: Flow meter (non-resettable) on the discharge line to the on-Site sanitary manhole. | | |
| The water volume discharged is monitored daily. | | | |
| | | | |

| 3. | ★ Sample Collection Information ★ |
|---|---|
| A. | Sampling Location: Prior to the gravity discharge from the oil/water seperator into the on-Site sanitary sewer system, |
| a sample port installed on the effluent end of the discharge piping collects samples. | |
| B. | Sampling Procedures: Samples are collected in accordance with 40 CFR, 403.12(g)(3) which states that grab samples |
| must be used for pH, cyanide, total phenols, oil & grease, sulfide and VOCs. | |
| For all other pollutants, 24-hours composite samples are obtained through time-proportional composite sampling techniques. | |
| | |
| C. | Preservatives Used: HCl, H2SO4, NaOH, HNO3 |
| | |

| 4. | This establishment's wastewater discharge DOES [ ] / DOES NOT [X] exceed nationwide categorical standard (s) or 15 RCNY 19-04 (a). |
|---|---|

| 5. | ★ Production Rate ★ |
|---|---|
| If applicable, provide production rate: Not Applicable | |
| | |
| | |

| 6. | ★ pH Monitoring ★ | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| (Four Samples Per Day - One Hour Apart - Once a Month) | | | | | | | | | | | | | |
| A. | Date | 9/27/2021 | | 10/25/2021 | | 11/23/2021 | | / / | | / / | | / / | |
| B. | Time/pH | 10:30 | 7.14 | 10:30 | 6.83 | 9:30 | 5.91 | | | | | | |
| | | 11:30 | 7.21 | 11:30 | 6.81 | 10:30 | 6.15 | | | | | | |
| | | 12:30 | 7.27 | 12:30 | 6.80 | 11:30 | 6.27 | | | | | | |
| | | 13:30 | 6.91 | 13:30 | 6.79 | 12:30 | 6.20 | | | | | | |

| 7. | ★ HAZARDOUS WASTES GENERATION ★ |
|---|---|
| This establishment DID [ ] / DID NOT [X] generate any hazardous wastes, during this reporting period. If hazardous wastes were generated, | |
| A. | Type of Waste: |
| B. | Amount Generated (in kilograms) : |
| C. | Method of Disposal : |
| | |

| 8. | ★ CERTIFICATION ★ |
|---|---|

A. NON-CONTAMINATED WASTEWATER DISCHARGE CERTIFICATION:

I hereby certify, that during this reporting period, this facility has not discharged any industrial wastewater, chemicals, cleaners or like substances generated from or in relation to any of this establishment's operations other than sanitary or non-contact cooling water. I understand that I must obtain prior written approval from the Industrial Inspections and Permitting Section before I can discharge any such wastewater. I am aware that there are significant civil and criminal sanctions for submitting false information.

8. ★ CERTIFICATIONS (CONTINUED) ★

B. TOXIC ORGANICS CERTIFICATION:

I. "Based upon my inquiry of the person or persons directly responsible for managing environmental affairs at my facility, I certify that, to the best of my knowledge and belief, no Toxic Organics are used or stored at my facility. I certify that I am duly authorized by the establishment to make this statement on its behalf, and am fully aware that there are significant civil and criminal sanctions for submitting false information, including the possibility of a fine and/or imprisonment."

II "Based upon my inquiry of the person or persons directly responsible for managing environmental affairs at my facility, I certify that, to the best of my knowledge and belief, there was no discharge to a public sewer of toxic organics during the reporting period covered by this report. I also certify that the explanations provided concerning the disposal of toxic organics from the facility are true, accurate and complete. I further certify that this facility is implementing a toxic organics management plan to protect against the release of such compounds to a public sewer. I certify that I am duly authorized by the establishment to make this statement on its behalf, and am fully aware that there are significant civil and criminal sanctions for submitting false information, including the possibility of a fine and/or imprisonment."

C. AUTHORIZED FIRM REPRESENTATIVE CERTIFICATION:

I hereby certify, under penalty of law, that I have personally examined and am familiar with the information contained in this report and all attachments therein. Furthermore, based on my inquiry of those persons immediately responsible for obtaining the information contained in this report, I believe that the information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment. I further certify that the reported sampling results are representative of the facility's normal work cycles and expected pollutant discharges.

Please sign the following certification if required by the Permit/Directive:

D CYANIDE CERTIFICATION

The Industrial User must sign and submit one of the following certifications in its periodic self-monitoring reports:

a. "Based upon my inquiry of the person or persons directly responsible for managing environmental affairs at my facility, I certify that, to the best of my knowledge and belief, cyanide is not used or stored at my facility or generated in any of our manufacturing processes and there was no discharge of cyanide to the public sewer. I certify that I am duly authorized by the establishment to make this statement on its behalf, and am fully aware that there are significant civil and criminal sanctions for submitting false information, including the possibility of a fine and/or imprisonment."

Name (print) Wes Lindemuth Signature Wes Lindemuth

Title Senior Project Manager Date 12/30/2021 Phone Number 917-794-3107

**OR**

b. "Based upon my inquiry of the person or persons directly responsible for managing environmental affairs at my facility, I certify that, to the best of my knowledge and belief, there was no discharge to a public sewer of cyanide-bearing waste during the reporting period covered by this report. I also certify that the explanations provided concerning the disposal of cyanide-bearing waste from the facility are true, accurate and complete. I certify that I am duly authorized by the establishment to make this statement on its behalf, and am fully aware that there are significant civil and criminal sanctions for submitting false information, including the possibility of a fine and/or imprisonment."

Name (print)_____ Signature_____

Title_____ Date_____ Phone Number_____

If certification b. (above) is signed and submitted, explanations concerning the disposal of cyanide-bearing waste from the facility shall be provided.

| 9. | ★ DESCRIPTION OF OPERATION ★ |
|---|---|
| Site is a former landfill which is now operated as public Park. The discharge is comprised of landfill leachate which is allowed to pass through an oil-water separator prior to discharge. | |
| | |
| | |
| | |
| | |
| | |
| | |

| 10. | ★ ATTACHMENTS ★ | Yes | No | N/A |
|---|---|---|---|---|
| A. | All laboratory analyses must be conducted by a New York State Health Department certified wastewater laboratory. The results must be certified by the laboratory and submitted on the laboratory's letterhead. For each sample, the laboratory report must indicate the date of sampling, time sample was taken, sample location, sampling preservation procedures, analytical techniques used, date of analysis, units of measurement, and the laboratory's sample identification; where the analytical result reported is below the method detection level, the laboratory report must also indicate the method detection level. | X | | |
| B. | Chain of custody for all samples. | X | | |
| C. | Explanation of non-compliance and what will be done to rectify it. A compliance schedule is to be included. | | | X |
| D. | Amount of spent solvents generated and method of disposal. Explanation of zero discharges to be included. | | | X |
| E. | Description of any major modifications or malfunctions in manufacturing or pretreatment operations. | | | X |
| F. | Hazardous wastes manifests. | | | X |

**Additional Notes** please composite samples M1-A-09-27-2021, M1-B-09-27-2021, M1-C-09-27-2021 and M1-D-09-27-2021 into one sample with sample ID M1-COMP-(A-D)-09-27-2021

**Comments, Notes, Special Requirements, HAZARDS**

Indicate if low-level methods required to meet current groundwater standards (SPLP for soil):
- [ ] BN or BNA (8270D SIM)
- [ ] VOC (8260C SIM or 8011)
- [ ] SPLP (BN, BNA, Metals)
- [ ] 1,4 Dioxane

For NJ LSRP projects, indicate which standards need to be met:
- [ ] NJDEP GWQS
- [ ] NJDEP SRS
- [ ] NJDEP SPLP
- [ ] Other (specify):

Check if applicable:
- [ ] Project-Specific Reporting Limits
- [ ] High Contaminant Concentrations
- [ ] NJ LSRP Project (also check boxes above/right)

Cooler Temperature: 5.9 2.7

Please note NUMBERED items. If not completed your analytical work may be delayed.
A fee of $5/sample will be assessed for storage should sample not be activated for any analysis.

Internal use: sampling plan (check box) HC [ ] or client [ ] FSP#

**RE:** Q3 Industrial Wastewater Discharge Self-Monitoring Report
New York City Department of Parks and Recreation
Brookfield Landfill/Park
575 Arthur Kill Road, Staten Island, NY 10308
Permit No. 18-P3149-1
TRC Project No. 384968

Dear Ms. Leung:

Enclosed please find the Q3 Industrial Wastewater Discharge Self-Monitoring Report (SMR) for the monitoring period of December 1, 2021 to February 28, 2022 for the New York City Department of Parks and Recreation (NYCDPR) Brookfield Avenue Landfill. The report contains SMR Forms with certifications, flow summary tables, M-1 sample result summary tables, laboratory results for the M-1 samples, and chain of custody forms. The results of the monthly sampling indicate there were no exceedances of any permit compound limits.

Please do not hesitate to contact me at (917) 794-3107 or via email at wlindemuth@trccompanies.com if you have any questions.

Sincerely,
**TRC Engineers, Inc.**

Wes Lindemuth

Q3 Industrial Wastewater Discharge Self-Monitoring Report

# INDUSTRIAL USER SELF MONITORING REPORT

| 1. | ★ Establishment Information ★ | | | |
|---|---|---|---|---|
| A. | Name: Brookfield Avenue Landfill | | | |
| B. | Address: 575 Arthur Kill Road, Staten Island, NY 10308 | | | |
| | | | | |
| C. | Industrial Category: | | | |
| D. | Contact Official: Wes Lindemuth | | E. | Phone #: 917-794-3107 |
| F. | Reporting Period | | G. | Date sampled |
| | Start: 12/1/2021 | End: 2/28/2022 | Start: 12/27/2021 | End: 2/16/2022 |

Note: If the only wastewater discharges by your establishment into the public sewer system are sanitary or non-contact cooling water, do not address items in Tables 2, 3, 4, 5 and 6. In this case, check here [ ] and proceed directly to Table 7.

| 2. | ★Flow Information ★ | Average | Peak |
|---|---|---|---|
| A. | Total Plant Flow, gal/day | 41,266.33 | 153,490 |
| B. | Regulated Flow, gal/day | 41,266.33 | 153,490 |
| C. | Method of Flow Measurement: Flow meter (non-resettable) on the discharge line to the on-Site sanitary manhole. | | |
| | The water volume discharged is monitored daily. | | |
| | | | |

| 3. | ★ Sample Collection Information ★ |
|---|---|
| A. | Sampling Location: Prior to the gravity discharge from the oil/water seperator into the on-Site sanitary sewer system, |
| | a sample port installed on the effluent end of the discharge piping collects samples. |
| B. | Sampling Procedures: Samples are collected in accordance with 40 CFR, 403.12(g)(3) which states that grab samples |
| | must be used for pH, cyanide, total phenols, oil & grease, sulfide and VOCs. |
| | For all other pollutants, 24-hours composite samples are obtained through time-proportional composite sampling techniques. |
| | |
| C. | Preservatives Used: HCl, H2SO4, NaOH, HNO3 |
| | |

| 4. | This establishment's wastewater discharge DOES [ ] / DOES NOT [X] exceed nationwide categorical standard (s) or 15 RCNY 19-04 (a). |
|---|---|

| 5. | ★ Production Rate ★ |
|---|---|
| If applicable, provide production rate: Not Applicable | |
| | |
| | |

| 6. | ★ pH Monitoring ★ | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| (Four Samples Per Day - One Hour Apart - Once a Month) | | | | | | | | | | | | | |
| A. | Date | 12/27/21 | | 1/13/22 | | 2/15/22 | | / / | | / / | | / / | |
| B. | Time/pH | 9:15 | 7.31 | 12:00 | 7.11 | 11:30 | 7.76 | | | | | | |
| | | 10:15 | 7.29 | 13:00 | 7.04 | 12:30 | 7.71 | | | | | | |
| | | 11:15 | 7.22 | 14:00 | 7.21 | 13:30 | 7.76 | | | | | | |
| | | 12:15 | 7.22 | 15:00 | 7.18 | 14:30 | 7.63 | | | | | | |

| 7. | ★ HAZARDOUS WASTES GENERATION ★ |
|---|---|
| This establishment DID [ ] / DID NOT [X] generate any hazardous wastes, during this reporting period. If hazardous wastes were generated, | |
| A. | Type of Waste: |
| B. | Amount Generated (in kilograms) : |
| C. | Method of Disposal : |
| | |

| 8. | ★ CERTIFICATION ★ |
|---|---|
| A. | NON-CONTAMINATED WASTEWATER DISCHARGE CERTIFICATION: |
| | I hereby certify, that during this reporting period, this facility has not discharged any industrial wastewater, chemicals, cleaners or like substances generated from or in relation to any of this establishment's operations other than sanitary or non-contact cooling water. I understand that I must obtain prior written approval from the Industrial Inspections and Permitting Section before I can discharge any such wastewater. I am aware that there are significant civil and criminal sanctions for submitting false information. |

8. ★ CERTIFICATIONS (CONTINUED) ★

B. TOXIC ORGANICS CERTIFICATION:

I. "Based upon my inquiry of the person or persons directly responsible for managing environmental affairs at my facility, I certify that, to the best of my knowledge and belief, no Toxic Organics are used or stored at my facility. I certify that I am duly authorized by the establishment to make this statement on its behalf, and am fully aware that there are significant civil and criminal sanctions for submitting false information, including the possibility of a fine and/or imprisonment."

| Title | Date | Phone# |

**OR**

II "Based upon my inquiry of the person or persons directly responsible for managing environmental affairs at my facility, I certify that, to the best of my knowledge and belief, there was no discharge to a public sewer of toxic organics during the reporting period covered by this report. I also certify that the explanations provided concerning the disposal of toxic organics from the facility are true, accurate and complete. I further certify that this facility is implementing a toxic organics management plan to protect against the release of such compounds to a public sewer. I certify that I am duly authorized by the establishment to make this statement on its behalf, and am fully aware that there are significant civil and criminal sanctions for submitting false information, including the possibility of a fine and/or imprisonment."

C. AUTHORIZED FIRM REPRESENTATIVE CERTIFICATION:

I hereby certify, under penalty of law, that I have personally examined and am familiar with the information contained in this report and all attachments therein. Furthermore, based on my inquiry of those persons immediately responsible for obtaining the information contained in this report, I believe that the information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment. I further certify that the reported sampling results are representative of the facility's normal work cycles and expected pollutant discharges.

Please sign the following certification if required by the Permit/Directive:

D CYANIDE CERTIFICATION

The Industrial User must sign and submit one of the following certifications in its periodic self-monitoring reports:

a. "Based upon my inquiry of the person or persons directly responsible for managing environmental affairs at my facility, I certify that, to the best of my knowledge and belief, cyanide is not used or stored at my facility or generated in any of our manufacturing processes and there was no discharge of cyanide to the public sewer. I certify that I am duly authorized by the establishment to make this statement on its behalf, and am fully aware that there are significant civil and criminal sanctions for submitting false information, including the possibility of a fine and/or imprisonment."

Name (print) Wes Lindemuth Signature Wes Lindemuth

Title Senior Project Manager Date 3/23/2022 Phone Number 917-794-3107

**OR**

b. "Based upon my inquiry of the person or persons directly responsible for managing environmental affairs at my facility, I certify that, to the best of my knowledge and belief, there was no discharge to a public sewer of cyanide-bearing waste during the reporting period covered by this report. I also certify that the explanations provided concerning the disposal of cyanide-bearing waste from the facility are true, accurate and complete. I certify that I am duly authorized by the establishment to make this statement on its behalf, and am fully aware that there are significant civil and criminal sanctions for submitting false information, including the possibility of a fine and/or imprisonment."

Name (print)_____ Signature_____

Title_____ Date_____ Phone Number_____

If certification b. (above) is signed and submitted, explanations concerning the disposal of cyanide-bearing waste from the facility shall be provided.

| 9. | ★ DESCRIPTION OF OPERATION ★ |
|---|---|
| Site is a former landfill which is now operated as a public Park. The discharge is comprised of landfill leachate which is allowed to pass through an oil-water separator prior to discharge. | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |

| 10. | ★ ATTACHMENTS ★ | Yes | No | N/A |
|---|---|---|---|---|
| A. | All laboratory analyses must be conducted by a New York State Health Department certified wastewater laboratory. The results must be certified by the laboratory and submitted on the laboratory's letterhead. For each sample, the laboratory report must indicate the date of sampling, time sample was taken, sample location, sampling preservation procedures, analytical techniques used, date of analysis, units of measurement, and the laboratory's sample identification; where the analytical result reported is below the method detection level, the laboratory report must also indicate the method detection level. | X | | |
| B. | Chain of custody for all samples. | X | | |
| C. | Explanation of non-compliance and what will be done to rectify it. A compliance schedule is to be included. | | | X |
| D. | Amount of spent solvents generated and method of disposal. Explanation of zero discharges to be included. | | | X |
| E. | Description of any major modifications or malfunctions in manufacturing or pretreatment operations. | | | X |
| F. | Hazardous wastes manifests. | | | X |

**Comments, Notes, Special Requirements, HAZARDS**

Indicate if low-level methods required to meet current groundwater standards (SPLP for soil):
- [ ] BN or BNA (8270E SIM)
- [ ] VOC (8260D SIM or 8011)
- [ ] SPLP (BN, BNA, Metals)
- [ ] 1,4 Dioxane

Check if applicable:
- [ ] Project-Specific Reporting Limits
- [ ] High Contaminant Concentrations
- [ ] NJ LSRP Project (also check boxes above/right)

For NJ LSRP projects, indicate which standards need to be met:
- [ ] NJDEP GWQS
- [ ] NJDEP SRS
- [ ] NJDEP SPLP
- [ ] Other (specify):

Cooler Temperature: 2-8, 2.6

Please note NUMBERED items. If not completed your analytical work may be delayed.
A fee of $5/sample will be assessed for storage should sample not be activated for any analysis.

Internal use: sampling plan (check box) HC [ ] or client [ ] FSP#

**COMMENTS**

On 1-19-21 replaced new hoses from nitrogen tank to block valve. Also replaced heat trace surrounding the block valve due to faulty prior assembly.

5/5/21 Replaced missing bolt in B-10

5/5/21 Drained low spot at e-hill

5/5/21 Replaced broken valve at B-11

# APPENDIX G

# LANDFILL SURFACE EMISSIONS MONITORING

December 10, 2021
File No. 07215056.00

Mr. Wes Lindemuth
TRC
575 Arthur Kill Road
Staten Island, NY 10308

Subject: Brookfield Avenue Landfill

Surface Emissions Monitoring Report October 2021

Dear Wes:

On October 22, 2021, SCS Field Services (SCS-FS) conducted semi-annual surface emissions monitoring (SEM) at the Brookfield Avenue Landfill (Landfill). This monitoring was performed in order to satisfy the requirements of the NYC Department of Environmental Protection's Operation, Maintenance, and Monitoring Services Contract, section 2.4.2.B. – Surface Emission Monitoring. Although the monitoring was not performed for compliance with the Environmental Protection Agency's New Source Performance Standards (NSPS) for landfills, SCS-FS performed the SEM according to the procedures stipulated by the NSPS, as specified in 40 CFR 60.755 (c) and (d), and 40 CFR 60, Appendix A, Method 21.

SEM took place over a monitoring route on the landfill as shown on the attached Landfill Gas Collection Record Drawing, dated July 23, 2015, supplied by Layout, Inc. and attached to this report in ***Attachment 1***. A total of 477 points on the landfill were tested for emissions of volatile organic compounds (VOC), as methane, using a Foxboro TVA-1000B flame ionization detector. The TVA was calibrated using zero air and 500 parts per million (ppm) methane calibration gas. Upwind and downwind locations were monitored and recorded on the Calibration and Pertinent Data Form, provided in ***Attachment 2***. The monitoring data are presented in ***Table 1***, ***Attachment 3***.

## Observations

None of the monitoring points over the area surveyed had an emission level exceeding 500 parts per million above background. No further monitoring is required for this SEM event.

SCS-FS appreciates the opportunity to provide our services. Please contact either of the undersigned should you require further information or assistance.

Sincerely,

Mike Marks
Project Superintendent
SCS Field Services

Scott Schoffner
Project Manager
SCS Field Services

# CALIBRATION AND PERTINENT DATA FORMS

**SCS FIELD SERVICES**

## NSPS Surface Emissions Monitoring
## Calibration and Pertinent Data Form

Date: 10/22/21 Site: Brookfield Landfill Job Number: 07220079.00

Technician(s): Doug Cordisco

### Weather Observations

Wind Speed: 10 MPH Wind Direction: West Barometric Pressure: 29.96 "Hg

Air Temperature: 61 °F General Weather Conditions: Fair

### Calibration Information

Instrument Info Make/Model: TVA1000B Serial No: 414006484

| Cal Gas Info | Manufacturer | Lot # | Expiration Date | Concentration |
|---|---|---|---|---|
| Span Gas: | GASCO | 304-402042371-1 | 4/10/2025 | 500 ppm |
| Zero Gas: | GASCO | IBJ-1-15 | 11/15/2023 | 0 ppm |

Pre-monitoring Calibration Precision Check

*Procedure: Calibrate the instrument. Make a total of three measurements by alternating zero air and the calibration gas. Record the readings and calculate the average algebraic difference between the instrument reading and the calibration gas as a percentage.* ***The calibration precision must be less than or equal to 10% of the calibration gas value.***

| Trial | Zero Air Reading (ppm) | Cal Gas Reading (ppm) | \|Cal Gas Conc. – Cal Gas Reading\| |
|---|---|---|---|
| 1 | 0.1 | 501 | 1 |
| 2 | 0.1 | 503 | 3 |
| 3 | 0.1 | 501 | 1 |
| | | **Average Difference:** | 2 |

Calibration Precision = Average Difference / Cal. Gas Conc. X 100%

= 2 / 500 X 100%

= 0.33 %

Pre-monitoring Response Time Check

*Procedure: Introduce zero concentration methane/H2S into the instrument. Quickly change to the calibration gas and record stabilized reading. Record the amount of time it took the instrument to read 90% of the stabilized reading.* ***This average response time must be less than or equal to 30 seconds.***

| Trial | Stabilized Reading on Cal Gas | 90% of Stabilized Reading | Time to Reach 90% of Stabilized Reading (Seconds) |
|---|---|---|---|
| 1 | 501 | 451 | 5 |
| 2 | 503 | 453 | 5 |
| 3 | 501 | 451 | 5 |
| | | **Average Response Time:** | 5 |

Background Concentration Checks

Upwind Location Description: West of site on perimeter road Reading: 1.92 ppm

Downwind Location Description: East of site on perimeter road Reading: 2.06 ppm

Average Background Reading: 1.99 ppm

Post-monitoring Calibration Precision Check

Zero Air Reading: 0.6 ppm Cal Gas Reading: 511 ppm

The calibration gas prepared by Gasco is considered a certified standard. It is prepared by gravimetric, or partial pressure techniques. The calibration standard provided is certified against Gasco's G.M.I.S. (Gas Manufacturer's Intermediate Standard) which is either prepared by weights traceable to the National Institute of Standards and Technology (NIST) or by using NIST Standard Reference Materials where available.

# APPENDIX H

# ONCE EVERY FIFTH QUARTER GROUND WATER-MONITORING EVENT REPORT

1430 Broadway, 10th Floor
New York, NY 10018
T 212.221.7822
TRCcompanies.com

November 23, 2021

Ms. Arsheen Ehtesham
Project Manager
Environmental Remediation Unit
The City of New York Department of Parks & Recreation
Olmsted Center
Flushing Meadows-Corona Park
Flushing, NY 11368

**RE:** Once Every Fifth Quarter Groundwater Monitoring Event
Brookfield Landfill/Park
575 Arthur Kill Road, Staten Island, NY 10308
TRC Project No. 384968

Dear Ms. Ehtesham:

Please find attached the laboratory analytical results and tabulated data tables for the Once Every Fifth Quarter Groundwater Monitoring Event at the Brookfield Avenue Landfill in Staten Island, New York performed by TRC Engineers, Inc. (TRC) from September 10 through 16, 2021. The sampling was performed in accordance with the existing Post-Closure Monitoring and Maintenance Operations Manual.

A total of 23 groundwater samples, two (2) duplicate samples, two (2) matrix spike/matrix spike duplicate (MS/MSD) samples, four (4) trip blank samples, and two (2) field blank samples were collected from existing monitoring wells as part of the sampling event. One (1) monitoring well, LTMW-20, was inaccessible due to dense vegetation and poison ivy. The 23 accessible monitoring wells were gauged with an oil/water interface probe to determine the depth to water prior to purging/sampling activities. Subsequent to recording the depth to water at the well points, the well points were purged using dedicated disposable Teflon-lined polyethylene tubing and either a bladder pump for deeper wells or a peristaltic pump for shallower wells. The monitoring wells were purged via low flow/low stress method following the United States Environmental Protection Agency (USEPA) standard operating procedures. The depth of the pump intake was placed within the screen intervals, and at least 2 feet above the bottom of the screen. Water quality parameters were measured and recorded every five minutes using a Horiba U-52 Water Quality Meter.

Groundwater samples were collected following stabilization of the groundwater parameters. If the turbidity at the time of sampling was greater than 10 NTUs, a filtered metal sample was collected. Sampling equipment were properly decontaminated prior to sampling each well following the Post-Closure Monitoring and Maintenance Operations Manual. Groundwater sampling logs are presented in Appendix A.

No visual or olfactory indications of contamination were observed in the purge water or any of the groundwater samples collected. The groundwater samples were collected in pre-preserved laboratory-supplied containers. Each container was properly labeled and placed in an iced cooler for transport via courier to Hampton-Clarke, Inc., of Fairfield, New Jersey. Hampton-Clarke is a New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Protocol (ELAP)-certified analytical laboratory. Standard chain-of-custody procedures were followed.

The groundwater samples were collected and analyzed for the following compounds:

- Target Compound List (TCL) Semi-volatile Organic Compounds (SVOCs) via USEPA Method 8270;
- TCL Volatile Organic Compounds (VOCs) via USEPA Method 8260;
- Target Analyte List (TAL) Metals via USEPA Methods 6010/6020;
- TCL Pesticides via USEPA Method 8081;
- TCL Polychlorinated Biphenyls (PCBs) via USEPA Method 8082;
- Cyanide via USEPA Method 9012;
- Nitrate, Sulfate, Chloride, and Bromide via USEPA Method 300;
- Ammonia via Standard Method 4500;
- Total Organic Carbon via Standard Method 5310;
- Total Dissolved Solids via Standard Method 2540;
- Alkalinity via Standard Method 2320; and,
- Total Hardness via Standard Method 2340.

The results of the laboratory analysis are presented in Tables 1 through 6. The depth to water measurements recorded on September 10, 2021 are provided as Table 7. The laboratory analytical reports and the New York State Department of Environmental Conservation (NYSDEC) Equis Electronic Data Deliverables (EDDs) are presented in Appendix B.

The laboratory results were sent for data validation and the results of the data validation are summarized in the Data Usability Summary Report (DUSR) which was performed by Environmental Data Services, Inc. in accordance with 6 NYCRR Part 363 requirements., which include a discussion on each qualified result, the potential bias, and the effects on data usability. During the usability assessment, no data was rejected and the data was found to be acceptable for the intended purposes. A copy of the DUSR is presented in Appendix C.

Please do not hesitate to contact me in the office at (917) 794-3107 or via email at wlindemuth@trccompanies.com if you have any questions.

Sincerely,
**TRC Engineers, Inc.**

Wes Lindemuth
Senior Project Manager, CHMM, CSP

Notes

(1) - There is no GA value for total xylenes.
The standards for o-xylene, m-xylene, and p-xylene is 5 µg/L.

(2) - 0.4 µg/L applies to the sum of
of cis- and trans-1,3-dichloropropene.

µg/L - micrograms per liter

J - Estimated value

NC - No criterion

U - Non-detect

Shaded and **bold** results
the corresponding Class GA Value.

Notes

(1) - There is no GA value for total xylenes.
The standards for o-xylene, m-xylene, and p-xylene is 5 µg/L.

(2) - 0.4 µg/L applies to the sum of
of cis- and trans-1,3-dichloropropene.

µg/L - micrograms per liter

J - Estimated value

NC - No criterion

U - Non-detect

Shaded and **bold** results
the corresponding Class GA Value.

Notes
µg/L - micrograms per liter
J - Estimated value
NC - No criterion
U - Non-detect
ND* - Any detection is considered above the Class GA Stanard
Shaded and **bold** results exceed the corresponding Class GA Value.
Sample DUP-01-20210913 is a duplicate of LTMW-11-20210913
Sample DUP-02-20210914 is a duplicate of LTMW-5B-20210914

Notes
µg/L - micrograms per liter
J - Estimated value
NC - No criterion
U - Non-detect
ND* - Any detection is considered above the Class GA Stanard
Shaded and **bold** results exceed the corresponding Class GA Value.
Sample DUP-01-20210913 is a duplicate of LTMW-11-20210913
Sample DUP-02-20210914 is a duplicate of LTMW-5B-20210914

Notes
µg/L - micrograms per liter
J - Estimated value
NC - No criterion
U - Non-detect
Shaded and **bold** results exceed corresponding Class GA Value.
NA - Not analyzed

**Remarks:**

VOCs - 3 x 40ml HCL Vials; SVOCs - 2 x 1L Ambers; TAL Metals (unfiltered)/Hardness - 1 x 500ml HNO3 Plastic

TAL Metals (filtered) - 1 x 500ml HNO3 Plastic; Pesticides/PCBs - 2 x 1L Ambers; CN - 1 x 120ml NAOH Amber; Ammonia - 1 x 250ml H2SO4 Plastic

NO3, Chloride, SO4, Bromide - 1 x 250ml Plastic; TOC - 1 x 120ml H2SO4 Amber; TDS - 1 x 500ml Plastic; Alkalinity - 3 x 60ml Vial

*This case narrative is in the form of an exception report. Method specific and/or QA/QC anomalies related to this report only are detailed below.*

## Volatile Organic Analysis:

The Method Blank Spike for batches 96749, 96784, 96787, 96792, 96795 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The MS/MSD RPD, Matrix Spike and/or Matrix Spike Duplicate for batches 96770, 96784, 96792 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The Matrix Spike and/or Matrix Spike Duplicate for batch 96787 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

## Base Neutral/Acid Extractable Analysis:

The Method Blank Spike for batches 94959, 94960 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The MS/MSD RPD, Matrix Spike and/or Matrix Spike Duplicate for batches 94959, 94984 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The MS/MSD RPD, Matrix Spike for batch 94960 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

Samples AD26083-028, WMB94984, WMB94960, WMB94959MS, AD25969-001MS and MSD had one or more surrogate recoveries outside QC limits. Please refer to the applicable Form 2 for the recoveries.

Sample AD26083-019 had one or more surrogates outside QC limits. The sample was re-extracted and re-analyzed confirming recoveries outside QC limits due to matrix interference. The initial analysis is reported. Please refer to the applicable Form 2 for the recoveries.

## PCB Analysis:

Data conforms to method requirements.

## Pesticides Analysis:

The Matrix Spike and/or Matrix Spike Duplicate for batches 94962, 94974 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

## Metals Analysis:

The post Spike, Matrix Spike and/or Matrix Spike Duplicate for batches 94427, 94428, 94429 had recoveries outside QC limits. Please refer to the applicable Form 5/7 for the recoveries.

The MS/MSD RPD had recoveries outside QC limits in batch 94427. Please refer to the applicable Form 6/9 for the recoveries.

Samples AD26083-040, 041, 042, 043, 044, 045, 048, 049, 050 were reported at the dilution for Na due to concentration over linear range.

Samples AD26083-032, 036, 037 were reported at the dilution for Ca, Mg and Na due to concentration over linear range.

Samples AD26083-004, 007, 013, 015, 017, 020, 022, 024, 029, 031, 037, 039, 041, 043, 045, 047 were filtered and preserved in the laboratory per client's request.

## Wet Chemistry Analysis:

The Matrix Spike and/or Matrix Spike Duplicate for Chloride, Bromide, Nitrate, Sulfate , batches 2789, 2790, 2791, 2792, 2793 had recoveries outside QC limits. Please refer to the QC section for the recoveries.

The Matrix Spike and/or Matrix Spike Duplicate RPD for Chloride, Bromide, Sulfate , batch 2789 had recoveries outside QC limits. Please refer to the QC section for the recoveries.

Cyanide was recovered in Filed Blank-sample AD26083-033.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

| Sean Berls<br>Quality Assurance Officer | Or | Jean Revolus<br>Laboratory Director | 10/18/24<br>Date |

# Reporting Limit Definitions

# HC Reporting Limit Definitions/Data Qualifiers

## REPORTING DEFINITIONS

**DF** = Dilution Factor

**DUP** = Duplicate

**LCS** = Laboratory Control Spike

**MBS** = Method Blank Spike

**MDL** = Method Detection Limit

**MR** = Matrix Replicate

**MS** = Matrix Spike

**MSD** = Matrix Spike Duplicate

**NA** = Not Applicable

**ND** = Not Detected

**PS** = Post Digestion Spike

**RL*** = Reporting Limit

**RT** = Retention Time

**SD** = Serial Dilution

**Samples with elevated Reporting Limits (RLs) as a result of a dilution may not achieve client reporting limits in some cases. The elevated RLs are unavoidable consequences of sample dilution required to quantitate target analytes that exceed the calibration range of the instrument.*

## DATA QUALIFIERS

**A-** Indicates that the Tentatively Identified Compound (TIC) is suspected to be an aldol-condensation product. These compounds are by-products of acetone and methylene chloride used in the extraction process.

**B-** Indicates analyte was present in the Method Blank and sample.

**d-** For Pesticide and PCB analysis, the concentration between primary and secondary columns is greater than 40%. The lower concentration is generally reported.

**E-** Indicates the concentration exceeded the upper calibration range of the instrument.

**J-** Indicates the value is estimated because it is either a Tentatively Identified Compound (TIC) or the reported concentration is greater than the MDL but less than the RL. For samples results between the MDL and RL there is a possibility of false positives or misidentification at the quantitation levels. Additionally, the acceptance criteria for QC samples may not be met.

**R-** Retention Time is out.

**Y-** Indicates a contaminant found in the blank at less than 10% of the concentration of a contaminant found in the sample.

***Total Target Concentration*** 0

ColumnID: (^) Indicates results from 2nd column

*U - Indicates the compound was analyzed but not detected.*
*B - Indicates the analyte was found in the blank as well as in the sample.*
*E - Indicates the analyte concentration exceeds the calibration range of the instrument.*
*R - Retention Time Out*
*J - Indicates an estimated value when a compound is detected at less than the specified detection limit.*
*d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used*
*Chlordane (Total) is sum of a-Chlordane and y-Chlordane.*

ColumnID: (^) Indicates results from 2nd column

*U - Indicates the compound was analyzed but not detected.*
*B - Indicates the analyte was found in the blank as well as in the sample.*
*E - Indicates the analyte concentration exceeds the calibration range of the instrument.*
*R - Retention Time Out*
*J - Indicates an estimated value when a compound is detected at less than the specified detection limit.*
*d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used*
*Chlordane (Total) is sum of a-Chlordane and y-Chlordane.*

***Total Target Concentration*** 0

ColumnID: (^) Indicates results from 2nd column

*U - Indicates the compound was analyzed but not detected.*
*B - Indicates the analyte was found in the blank as well as in the sample.*
*E - Indicates the analyte concentration exceeds the calibration range of the instrument.*
*R - Retention Time Out*
*J - Indicates an estimated value when a compound is detected at less than the specified detection limit.*
*d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used*

*N-Nitrosodiphenylamine decomposes in the GC inlet and is detected as diphenylamine*

*Chlordane (Total) is sum of a-Chlordane and y-Chlordane.*

Worksheet #: 611546

***Total Target Concentration*** 0

ColumnID: (^) Indicates results from 2nd column

*U - Indicates the compound was analyzed but not detected.*
*B - Indicates the analyte was found in the blank as well as in the sample.*
*E - Indicates the analyte concentration exceeds the calibration range of the instrument.*
*R - Retention Time Out*
*J - Indicates an estimated value when a compound is detected at less than the specified detection limit.*
*d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used*

*N-Nitrosodiphenylamine decomposes in the GC inlet and is detected as diphenylamine*

*Chlordane (Total) is sum of a-Chlordane and y-Chlordane.*

Worksheet #: 611546

*Total Target Concentration* 0

ColumnID: (^) Indicates results from 2nd column

*U - Indicates the compound was analyzed but not detected.*
*B - Indicates the analyte was found in the blank as well as in the sample.*
*E - Indicates the analyte concentration exceeds the calibration range of the instrument.*
*R - Retention Time Out*
*J - Indicates an estimated value when a compound is detected at less than the specified detection limit.*
*d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used*

*N-Nitrosodiphenylamine decomposes in the GC inlet and is detected as diphenylamine*

*Chlordane (Total) is sum of a-Chlordane and y-Chlordane.*

Worksheet #: 611546

***Total Target Concentration*** 0

ColumnID: (^) Indicates results from 2nd column

*U - Indicates the compound was analyzed but not detected.*
*B - Indicates the analyte was found in the blank as well as in the sample.*
*E - Indicates the analyte concentration exceeds the calibration range of the instrument.*
*R - Retention Time Out*
*J - Indicates an estimated value when a compound is detected at less than the specified detection limit.*
*d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used*

*N-Nitrosodiphenylamine decomposes in the GC inlet and is detected as diphenylamine*

*Chlordane (Total) is sum of a-Chlordane and y-Chlordane.*

***Total Target Concentration*** 0

ColumnID: (^) Indicates results from 2nd column

*U - Indicates the compound was analyzed but not detected.*
*B - Indicates the analyte was found in the blank as well as in the sample.*
*E - Indicates the analyte concentration exceeds the calibration range of the instrument.*
*R - Retention Time Out*
*J - Indicates an estimated value when a compound is detected at less than the specified detection limit.*
*d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used*

*N-Nitrosodiphenylamine decomposes in the GC inlet and is detected as diphenylamine*

*Chlordane (Total) is sum of a-Chlordane and y-Chlordane.*

Worksheet #: 611546

***Total Target Concentration*** 0

ColumnID: (^) Indicates results from 2nd column

*U - Indicates the compound was analyzed but not detected.*
*B - Indicates the analyte was found in the blank as well as in the sample.*
*E - Indicates the analyte concentration exceeds the calibration range of the instrument.*
*R - Retention Time Out*
*J - Indicates an estimated value when a compound is detected at less than the specified detection limit.*
*d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used*

*N-Nitrosodiphenylamine decomposes in the GC inlet and is detected as diphenylamine*

*Chlordane (Total) is sum of a-Chlordane and y-Chlordane.*

*U - Indicates the compound was analyzed but not detected.*
*B - Indicates the analyte was found in the blank as well as in the sample.*
*E - Indicates the analyte concentration exceeds the calibration range of the instrument.*
*R - Retention Time Out*
*J - Indicates an estimated value when a compound is detected at less than the specified detection limit.*
*d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used*
*N-Nitrosodiphenylamine decomposes in the GC inlet and is detected as diphenylamine*
*Chlordane (Total) is sum of a-Chlordane and y-Chlordane.*
