**Re: NOW Corporation - Site #3-14-008**  
**Monthly Summary Report – “August” 2004**

Dear Mr. Hoffman:

Enclosed is a monthly summary report on the operation, monitoring and maintenance (OM&M) of the remedial system at the NOW Corporation site in the Town of Clinton, New York. This report describes the OM&M of the soil vapor extraction (SVE) system and the groundwater pump-and-treat (P&T) system for a 29-day period (**August 4 – September 2, 2004**).

The P&T and SVE systems were online and fully operational throughout the reporting period, with no downtime. Approximately 338,200 gallons of water were treated during the period. Discharge from the treatment system averaged approximately 11,700 gallons per day (gpd). During the prior reporting period, the average discharge was 10,300 gpd.

As of the last day of the reporting period, a total of 40,591,000 gallons of groundwater had been recovered and treated by the system since it became operational in February 1998.

Table 1 summarizes influent and effluent analytical data for water samples collected on August 19, 2004. With the exception of a small exceedance for cyanide, all effluent discharge requirements were met. As previously reported, a cyanide exceedance was noted in the June 2004 effluent sample, whereas there was no detection reported in the July sample. As I will report next month, the September 2004 sample was non-detect for cyanide. The cause of the intermittent cyanide detections in system effluent is unknown at this time. The compound has not been detectable in the influent groundwater.

Table 2 summarizes the operation and maintenance data recorded on the last day of the reporting period, while Table 3 summarizes monitoring well water level data collected on the sampling date. Table 4 summarizes the SVE system air analytical data, as well as the analytical results from a sample of the air-stripper stack emissions (sample PAS). Table 5 presents groundwater analytical results from a monitoring well sampling event conducted on August 24, 2004. A copy of the three laboratory data reports is included in this report.

Earth Tech made three site visits during the reporting period to conduct the required system inspections, maintenance, monitoring well water-level measurements, and sampling. Details

Mr. Carl Hoffman  
NYSDEC

follow:

August 19<sup>th</sup> – Routine bi-weekly system inspection, monthly sampling, and monitoring well water-level measurements. Technicians greased the air-stripper blower motor, changed oil in the vapor blower motor, and operated a “weed whacker” around the building, near the recovery wells, and in the vicinity of the monitoring wells scheduled to be sampled during the following week.

August 24<sup>th</sup> – Groundwater samples were collected from 15 site-related monitoring wells.

September 2<sup>nd</sup> – Routine bi-weekly system inspection and monitoring well water-level measurements. Technicians disassembled, cleaned, and reassembled the air stripper. A new Druck transducer was installed in recovery well TW-3, the submersible pump was taken off “manual,” and the pump discharge was set at a higher rate (5 gpm) in the “auto” mode. At the end of the reporting period, one recovery well pump (TW-2A) continued to operate at a reduced discharge (without transducer control) in the “manual” mode. The reduced discharges from wells TW-2A and TW-3 accounted for the low system discharge noted above for this reporting period (and for the prior period, as previously reported).

Historical and current groundwater analytical results from 15 monitoring wells are presented in Table 5. Monitoring well locations are shown on Figure 1. Five wells remain impacted at levels exceeding state groundwater standards (MW-1, 6S, 6D, 7S and 7D). Total VOCs at MW-1 have declined from 256 ppb in April 1993 to 146 ppb in August 2004. The dramatic reduction in VOC concentrations observed by May 1998 in MW-6S has since abated. In April 1993, total VOCs were 1408 ppb; the respective figure in August 2004 was 60 ppb. A similar early decline, followed by relative stability of VOC concentrations, was observed at MW-6D. Current VOC concentrations in the well are about 13% of the levels observed in January 1994. Total VOC concentrations in MW-7S and MW-7D have declined by only 25% or so since 1998. However, they remain the most contaminated monitoring wells at the Site (roughly 270 ppb of total VOCs). In most impacted wells, TCE is the dominant contaminant. MTBE was not detected in any monitoring well in the August 2004 sampling event.

Please feel free to contact me at (518) 951-2262 if you have any questions regarding either this report, or the operation of the treatment system.

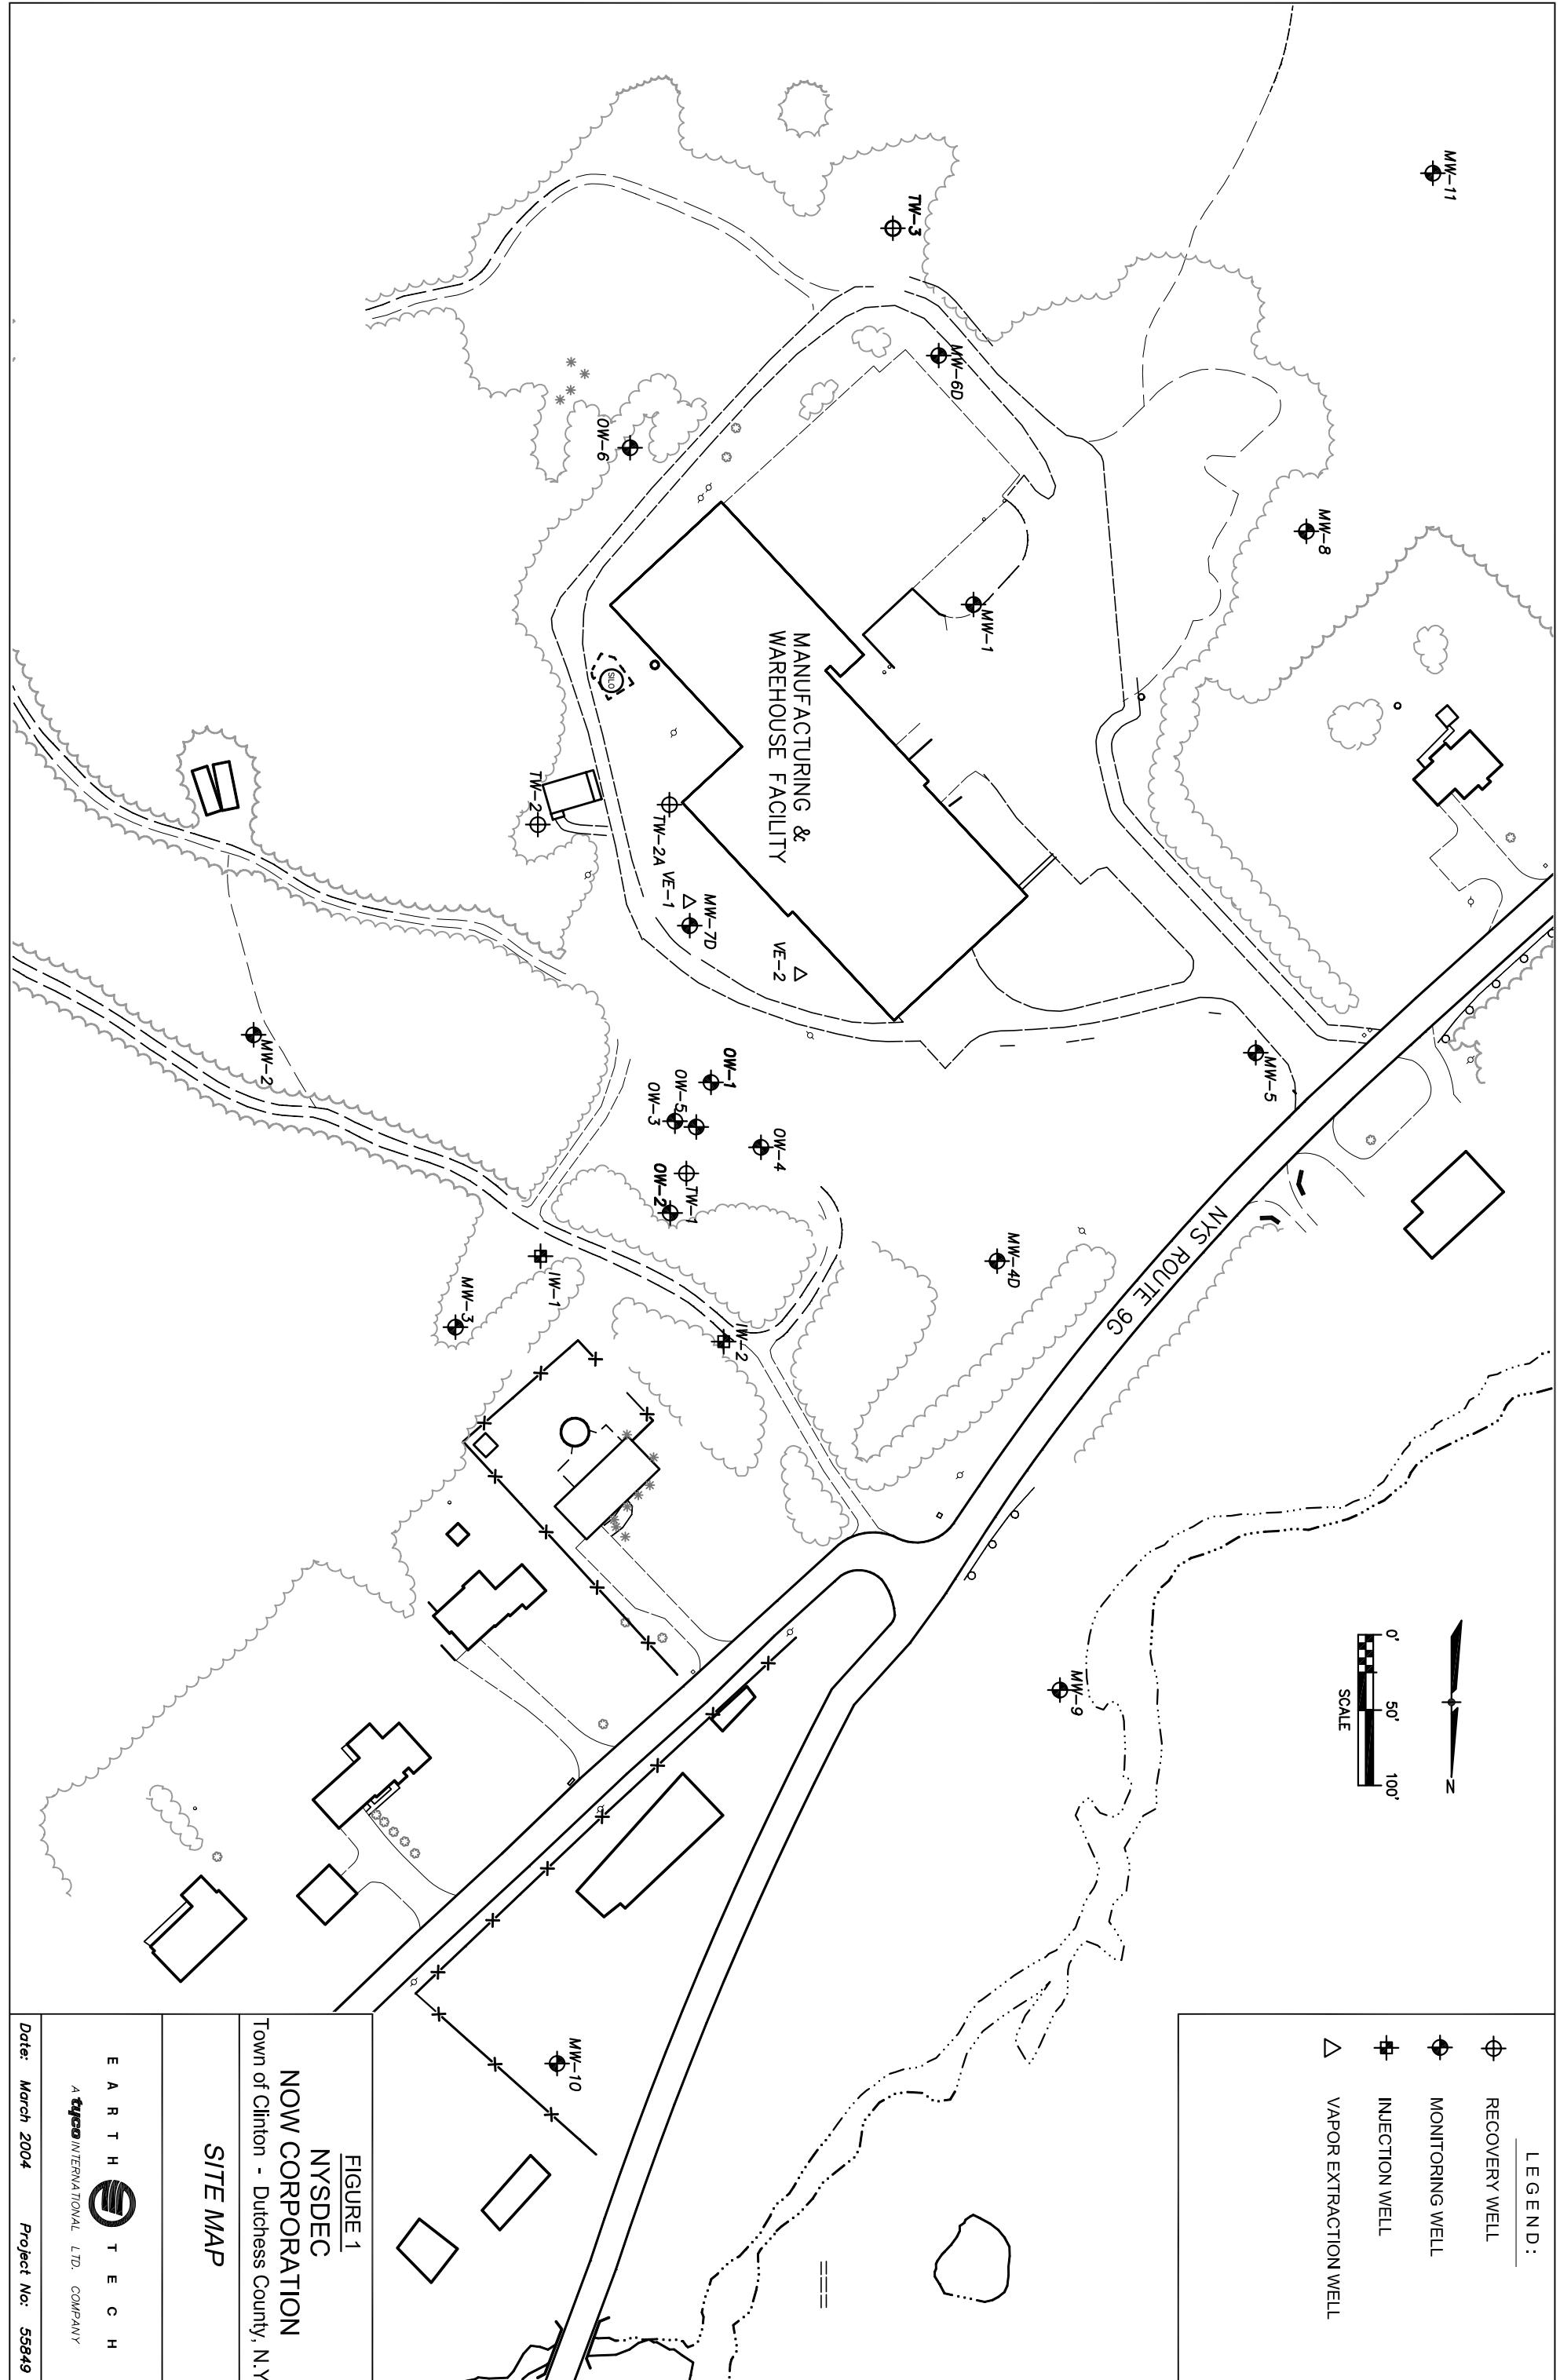

Sincerely,

Earth Tech Northeast

Stephen R. Choiniere  
Project Manager

*Notes:*

- 1) Positive results are presented in **bold** typeface. Numeric values are in units shown in far right column.
- 2) Effluent concentration boxed in **bold** denotes exceedance of effluent limitations.
- 3) NA indicates not analyzed.
- 4) "J" indicates an estimated concentration below the method detection limit.

**INFLUENT & EFFLUENT AIR  
ANALYTICAL REPORT**

09/10/2004

SEP 20 2004

Earth Tech  
ATTN: Steve Choiniere  
40 British American Blvd.,  
Latham, NY 12110

Project Reference: Now Corp., 55849.01  
Lab Number: A4082002-01/06

Enclosed are results for sample(s) received 8/20/04 by Air Technology Laboratories. Analyses were performed according to specifications on the chain of custody provided with the sample(s).

Report Narrative:

Sample analyses were performed within method performance criteria.  
All results are reported without qualifications.

Results were faxed to Steve Choiniere on 9/08/04.

ATL appreciates the opportunity to provide testing services to your company. If you have any questions regarding these results, please call me at (626) 964-4032.

Sincerely,

Mark Johnson  
Operations Manager  
[MJohnson@AirTechLabs.com](mailto:MJohnson@AirTechLabs.com)
