Re: NOW Corporation - Site #3-14-008
Monthly Summary Report – “July” 2006

Dear Mr. Hoffman:

Enclosed is a monthly summary report on the operation, monitoring and maintenance (OM&M) of the remedial system at the NOW Corporation site in the Town of Clinton, New York. This report describes the OM&M of the groundwater pump-and-treat (P&T) system for a 36-day period (**June 21, 2006 – July 27, 2006**).

With the exceptions noted below (if any), the P&T system was online and operational throughout the reporting period. Approximately 780,100 gallons of water were treated during the period. Discharge from the treatment system averaged approximately 21,700 gallons per day (gpd). During the prior reporting period, the average discharge was 17,600 gpd.

As of the last day of the reporting period, a total of 53,604,900 gallons of groundwater had been recovered and treated by the system since it became operational in February 1998.

Table 1 summarizes influent and effluent analytical data for water samples collected on July 27, 2006. There were **no exceedances** of effluent limitations. A copy of the laboratory data report is included in this report.

Table 2 summarizes selected operational data recorded on the last day of the reporting period.

Earth Tech made one site visit during the reporting period to conduct the required system inspection, perform scheduled and/or unscheduled maintenance, and to collect water samples. The June 21st service visit was described in the previous report. Details for this reporting period follow:

July 27th – Monthly system inspection and sampling. The transfer pump in the middle settling tank was removed for cleaning in a dilute acid solution.

Please feel free to contact me at (518) 951-2262 if you have any questions regarding either this report, or the operation of the treatment system.

Sincerely,
Earth Tech Northeast

Notes:

1) Positive results are presented in **bold** typeface. Numeric values are in units shown in far right column.

2) Effluent concentration boxed in **bold** denotes exceedance of effluent limitations.

3) NA indicates not analyzed.

4) "J" indicates an estimated concentration below the method detection limit.

**INFLUENT & EFFLUENT WATER
ANALYTICAL REPORT**

Client: Earth Tech

Client Project: NOW Corp, 55849.01, 07/06

Lab Work Order: E1125

Date samples received: 7/28/06

Project Narrative

This data report includes the analysis results for six (6) aqueous samples that were received from Earth Tech on July 28, 2006. Analyses were performed per specification in the Chain of Custody form, with the exception described below. For reference, a copy of the Mitkem Sample Log-In form is included for cross-referencing the client sample ID and laboratory sample ID.

Mitkem could not perform volatile organics analysis by Method 8260 to meet a 0.5ppb reporting limit due to capacity commitments to the EPA. Instead, the samples were analyzed for volatile organics to a 0.5ppb reporting limit using EPA CLP Statement of Work method OLC03.2. This is a very similar technical approach to Method 8260, and generates data comparable to that method. All of the analyses were performed according to method specifications. Project-specific lists of volatile organic compounds are reported per project specifications.

Surrogate recoveries were within the QC acceptance criteria for the volatile organic analysis. Please note that the OLC03.2 method allows up to 3 out of the 14 surrogates to be outside of the QC limits. Laboratory control samples are not analyzed as a part of the OLC03.2 method. Due to elevated concentrations of target analytes, sample TW-2A was reanalyzed at a 100X dilution and samples INF and TW-1 were initially analyzed at 50X and 5X dilutions respectively. Due to potential carryover of trichloroethene from a previous analysis, sample TW-3 was reanalyzed. Results for both analyses are included in the report. The reanalysis indicates no significant carryover impacted the initial analysis.

Spike recoveries were within the QC limits in the laboratory control samples for oil & grease, metals, total dissolved solids, total suspended solids and cyanide analyses. Matrix spike and duplicate analyses were performed for cyanide on sample EFF. Spike recovery and replicate RPD were within the QC limits.

No other unusual occurrences were noted during sample analysis.

All pages in this report have been numbered consecutively, starting with the title page and ending with a page saying only "Last Page of Data Report".

This data report has been reviewed and is authorized for release as evidenced by the signature below.
