**Re: NOW Corporation - Site No. 3-14-008
O&M Summary Report: July 2020**

Dear Mr. Long:

This monthly summary report describes the operation, maintenance and monitoring (OM&M) of the remedial system at the NOW Corporation site in the Town of Clinton, New York, for a 40-day period (**June 17, 2020 – July 27, 2020**).

With the exceptions noted below, if any, the pump and treat system was online and operational throughout the reporting period. Approximately 181,000 gallons of water were treated. Discharge from the treatment system averaged approximately 4,533 gallons per day (gpd).

As of the last day of the reporting period, a total of 119,595,651 gallons of groundwater had been recovered and treated by the system since it became operational in February 1998.

Table 1 summarizes influent and effluent analytical data for water samples collected on July 27, 2020. **There was one exceedance of effluent limitations.** Trichloroethene was found at a concentration above the effluent limitation of 6 µg/L at a value of 12 µg/L. A copy of the analytical laboratory report is attached. Total VOCs in the most contaminated extraction well (TW-2A) were 1,212 µg/L; last month's value was 1,228 µg/L.

Table 2 presents operational data recorded on the sampling date.

AECOM made one site visit to conduct the required system inspection, perform scheduled maintenance, and to collect water samples. NYSDEC-required field documentation related to the COVID-19 (novel coronavirus) pandemic is attached. Details for the current period are as follows:

July 27 – Cleaned and disinfected high-touch areas; general housekeeping. Performed monthly system inspection and influent and effluent sampling.

The pump in extraction well TW-3 was off during this reporting period but was manually activated to obtain the sample. The pumps in extraction wells TW-1 and TW-2 were operational throughout the period.

The VFD regulating the stripper blower remained at 55 Hz upon departure.

Receipt

The samples were received on 7/28/2020 8:00 AM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.2° C.

GC/MS VOA

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-542741 recovered above the upper control limit for 2-Hexanone, 4-Methyl-2-pentanone (MIBK) and 2-Butanone (MEK). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: INF-072720 (480-172943-2), TW-1-072720 (480-172943-3), TW-2-072720 (480-172943-4), TW-3-072720 (480-172943-5) and TRIP BLANK (480-172943-6).

Method 8260C: The following samples were diluted to bring the concentration of target analytes within the calibration range: INF-072720 (480-172943-2) and TW-2-072720 (480-172943-4). Elevated reporting limits (RLs) are provided.

Method 8260C: The continuing calibration verification (CCV) associated with batch 480-542900 recovered outside acceptance criteria, low biased, for Chloromethane. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported. The associated sample is impacted: EFF-072720 (480-172943-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 6010C: The interference check standard solution (ICSA) associated with the following samples showed results for Barium at a level greater than 2 times the limit of detection (LOD). It is believed that the solution contains trace impurities of this element and the results are not due to matrix interference. These results are consistent with those found by the manufacturer of the ICSA solution. EFF-072720 (480-172943-1), INF-072720 (480-172943-2), (LCS 480-542646/2-A) and (MB 480-542646/1-A)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method SM 2540D: Reanalysis of the following sample(s) was performed outside of the analytical holding time due to failure of quality control parameters in the initial analysis, analyst error. The original batch 543026 was set in the oven and then disposed of by accident prior to weigh-backs. No usable data exists from original batch. EFF-072720 (480-172943-1) and INF-072720 (480-172943-2)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.
