Re: Transmittal of 2007 Annual Report
Former IBM Building 952/982 Site
Inactive Hazardous Waste Disposal Site ID Number 314076

Dear Mr. Desnoyers:

In accordance with Section 3.4 of the Operation and Maintenance (O&M) Plan for the referenced site dated February 24, 1994, IBM is submitting the attached annual report for the 2007 calendar year. This report presents the results of groundwater extraction and treatment operations at this site, as well as ongoing groundwater monitoring.

Please note that no confirmed detections of constituents of concern above the New York State Groundwater Quality Standard occurred in any of the perimeter monitoring wells. Therefore, no contingencies have been activated with respect to increased frequency of monitoring at any of these wells, in accordance with section 3.5 of the O&M Plan, as revised.

Based on the successful operation of the groundwater extraction and treatment system during the previous fourteen years of operation, there are no changes proposed in the remedial actions for this site.

After you have had an opportunity to review this annual report, should you or your staff have any questions or comments, please call Steve Brannen at (845) 433-1509.

Sincerely,
International Business Machines Corporation

Joseph L. Ferri
Manager, Environmental Programs

1 INTRODUCTION

Groundwater Sciences Corporation (GSC) has prepared this report for International Business Machines Corporation, Poughkeepsie, New York (IBM) to satisfy the reporting elements specified in the *Operations and Maintenance Plan for the Groundwater Collection and Treatment System at the IBM Building 952 and 982 Leased Property*, dated February 24, 1994 (O&M manual). The Former B952/982 site is located in the Town of Poughkeepsie, New York, with frontage on both South Road and Neptune Road (Figure 1-1).

Since the transmittal of the O&M plan to New York State Department of Environmental Conservation (NYSDEC), IBM has terminated its lease on the property; however, in accordance with the O&M plan, IBM continues to operate and maintain the groundwater collection and treatment system located at the site. The on-site groundwater collection and treatment system consists of one groundwater extraction well, 952-30R. Long-term operation of this system began on December 1, 1993. Since that time, two minor modifications to the O&M Plan have been implemented at the site with approval of the NYSDEC. The most recent modification was proposed in the 2003 Annual Groundwater Monitoring Report and approved in a letter dated April 24, 2004 from the NYSDEC.

The reporting elements described in Section 3.4 of the O&M manual are addressed in subsequent sections of this report and include databases, spreadsheets, tables, figures and graphs necessary to describe the progress of the remedial activity during the 2007 calendar year. This report also includes a summary of the effectiveness of the groundwater extraction system and the groundwater treatment system.

2 GROUNDWATER COLLECTION AND TREATMENT

The following subsections present various data relating to the groundwater collection and treatment system installed at the site.

2.1 Extraction Well 952-30R Operation Summary

Daily operating data for the groundwater extraction well, 952-30R, is presented in Table A-1 (Appendix A). The average pumping rate for the reporting period is approximately 3.0 gallons per minute with 1.61 million gallons of water extracted and treated and approximately 0.15 pounds of volatile organic compounds were removed.

As per the O&M manual, the necessary observation and recording of pressure readings from the various gauges installed in the treatment stream has been performed and the sediment filters have been changed to prevent a reduction in the flow rate from pressure buildup in the suspended solids filters (refer to Appendix A, Table A-1).

During this reporting period (see Table A-1, Appendix A) the system was shutdown for routine system operational maintenance such as filter replacement and pump replacement (November 1, 2007).

2.2 Treatment System Effectiveness Evaluation

Appendix B contains a summary printout of the system influent, mid granular activated carbon and final effluent sampling results for the reporting period. The effluent results are well within the discharge limits established for the Publicly Owned Treatment Works (POTW) and, therefore, no adjustments or improvement in the organic removal treatment unit is required.

2.3 Extraction Well 952-30R Effectiveness Evaluation

The effectiveness of groundwater extraction well 952-30R can be measured in two ways: a) the hydraulic effectiveness of groundwater extraction in containing the area of elevated chemical concentrations in groundwater and; b) the effectiveness of this system in eventually reducing the measured groundwater concentrations in the area of elevated concentrations. The following two subsections address these measures of effectiveness of the groundwater extraction system currently in use at this site.

2.3.1 Hydraulic Effectiveness

Table C-1 of Appendix C summarizes the quarterly water level data for 2007. Figures 2-1 through 2-4 are plan view drawings of the site showing the groundwater elevation readings in the pumping well, 952-30R, and at each of the groundwater monitoring wells on the site for the first through fourth quarters 2007, respectively. Based on the data posted for each of the quarters, it is possible to see that drawdown effects are observed in the monitoring wells 952-10RA and 952-31R, which are also wells where the most persistent concentrations have been observed.

2.3.2 Long-Term Reduction in Concentrations

As noted in the previous section, 952-30R exerts hydraulic control on wells that have shown the most persistent concentrations (952-10RA and 952-31R). Figure 2-5 is a time versus concentration plot for chlorinated benzenes detected in monitoring well 952-10RA. As can be seen by this figure, dichlorobenzene concentrations at this monitoring location have decreased since pumping at 952-30R began.

3 REMEDIAL ACTION MONITORING

The following subsections discuss the results of the groundwater monitoring at the locations at the Former B952/982 site as shown on Figure 1-1.

3.1 Chemical Constituents in Groundwater

A summary printout of the groundwater monitoring completed at the site for the reporting period, including the associated field quality assurance and quality control data is presented in Appendix D. In order to easily examine the spatial distribution of the principal constituents in groundwater at this site, the average quarterly results for the indicator compound 1,2-dichlorobenzene have been posted on Figure 3-1. The wells in which elevated concentrations are observed include 952-10RA, 952-30R (groundwater extraction well) and 952-31R. There were no detections for 1,2-dichlorobenzene during 2007 at any perimeter monitoring location.

3.2 Comparison to Action Levels

As specified in the O&M manual, groundwater monitoring results for down gradient monitoring wells were compared with the NYSGQS for the following constituents: 1,2-dichlorobenzene; 1,3-dichlorobenzene; 1,4-dichlorobenzene; chlorobenzene; 1,2,4-trichlorobenzene; bis-2 ethylhexyl phthalate; total phenols; 1,1-dichloroethane; 1,1-dichloroethene; 1,1,1-trichloroethane; total 1,2-dichloroethene; tetrachloroethene; trichloroethene and chloroform. None of these compounds were detected above the NYSGQS during 2007 sampling.

4 CONCLUSIONS AND RECOMMENDATIONS

The following sections present conclusions and recommendations for the operation and maintenance of the groundwater collection and treatment system in use at the Former IBM Buildings 952 and 982 site.

4.1 Treatment System Effectiveness

The final effluent results from the treatment system are well within the discharge limits established for the Publicly Owned Treatment Works (POTW) and, therefore, no adjustments or improvements in the organic removal treatment unit are required.

4.2 Groundwater Sampling and Analysis Plan

Based on the over 14 years of groundwater monitoring at the site since the installation and startup of the groundwater collection and treatment system, and the implementation of the approved revised sampling and analysis plan during 2004, no modification to the groundwater sampling and analysis plan is proposed.

EXPLANATION OF REPORTING CONVENTIONS AND KEY TO COMMENT CODES

REPORTING CONVENTIONS

NA Not Analyzed
NDex Not Detected at Detection Limit X
RMFLex Below Minimum Reporting Limit of X

CODE EXPLANATION

A Non-Standard Measurement Unit
C Sample contained sediment which may have contributed to reported results
d 24 Hour Composite Sample
B Organic analyte detected in both the sample and the laboratory blank
D Compounds identified at a secondary dilution factor
E Concentration exceeds the calibration range of the GC/MS instrument
J Estimated Value
N Spiked sample recovery not within control limits
P Lower of 2 GC column concentrations that have more than 25% difference
R Reported value is less than the CRDL but greater than the IDL
S Surrogate recoveries exceed acceptable control limits
W Post digestion spike FAA out of control limits; sample absorbance < 50%
• Manhole flooded when sediment sample collected
B The reported value is less than the Contract Required Detection Limit (CRDL), but greater than the Instrument Detection Limit (IDL) (Inorganics)
H Sample was prepped or analyzed beyond specified method holding time

EXPLANATION OF REPORTING CONVENTIONS AND KEY TO COMMENT CODES

REPORTING CONVENTIONS

NA Not Analyzed
ND@X Not Detected at Detection Limit X
BMRL@X Below Minimum Reporting Limit of X

CODE EXPLANATION

A Non-Standard Measurement Unit
C Sample contained sediment which may have contributed to reported results
d 24 Hour Composite Sample
B Organic analyte detected in both the sample and the laboratory blank
D Compounds identified at a secondary dilution factor
E Concentration exceeds the calibration range of the GC/MS instrument
J Estimated Value
N Spiked sample recovery not within control limits
P Lower of 2 GC column concentrations that have more than 25% difference
R Reported value is less than the CRDL but greater than the IDL
S Surrogate recoveries exceed acceptable control limits
W Post digestion spike FAA out of control limits; sample absorbance < 50%
* Manhole flooded when sediment sample collected
B The reported value is less than the Contract Required Detection Limit (CRDL), but greater than the Instrument Detection Limit (IDL) (Inorganics)
H Sample was prepped or analyzed beyond specified method holding time

EXPLANATION OF REPORTING CONVENTIONS AND KEY TO COMMENT CODES

REPORTING CONVENTIONS

NA Not Analyzed
ND@X Not Detected at Detection Limit X
BMRL@X Below Minimum Reporting Limit of X

CODE EXPLANATION

* Non-Standard Measurement Unit
c Sample contained sediment which may have contributed to reported results
d 24 Hour Composite Sample
B Organic analyte detected in both the sample and the laboratory blank
D Compounds identified at a secondary dilution factor
E Concentration exceeds the calibration range of the GC/MS instrument
J Estimated Value
N Spiked sample recovery not within control limits
P Lower of 2 GC column concentrations that have more than 25% difference
R Reported value is less than the CRDL but greater than the IDL
S Surrogate recoveries exceed acceptable control limits
W Post digestion spike FAA out of control limits; sample absorbance < 50%
* Manhole flooded when sediment sample collected
B The reported value is less than the Contract Required Detection Limit (CRDL), but greater than the Instrument Detection Limit (IDL) (Inorganics)
H Sample was prepped or analyzed beyond specified method holding time
