## CERTIFICATION

I, Andrew M. Millspaugh, P.E., certify that I am a New York State registered professional engineer and that this Periodic Review Report (PRR) was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the Division of Environmental Remediation (DER) Technical Guidance for Site Investigation and Remediation (DER-10) and that all activities were performed in accordance with the DER-approved work plan and any DER-approved modifications.

## **EXECUTIVE SUMMARY**

The Orange County Landfill (Landfill) is located in the Town of Goshen, Orange County, New York (refer to Figure 1) and is registered as a Class 2 Inactive Hazardous Waste Disposal Site ("the Site"), Registry No. 3-36-007 by the New York State Department of Environmental Conservation (NYSDEC).

The NYSDEC issued a Record of Decision (ROD) on January 28, 1994 for Operable Unit 2 that required construction of a final cover over the Landfill waste mass, which was completed in 1995. A second ROD addressing the Site as a whole, including any contamination that may have migrated from the waste mass, was issued on March 26, 1998 for Operable Unit 1. The selected remedies for the Landfill include Institutional Controls (IC) through a Declaration of Covenants and Restrictions that restricts disturbance of the Landfill cover and places restrictions on site uses, and Engineering Controls (EC) provided by the Landfill cover and leachate collection systems, air and water quality monitoring, and regular inspections and maintenance activities. Post-closure water and air quality monitoring, leachate removal, and inspections and maintenance at the Landfill have been provided by Orange County since 1996. A Site Management Plan (SMP) was approved by the NYSDEC on August 5, 2014, which incorporates the Institutional/Engineering Control (IC/EC) Plan, the Inspection and Monitoring Plan, and the Operation and Maintenance Plan to provide for the continual post-closure monitoring and maintenance of the Landfill.

An annual Periodic Review Report (PRR) is required to document site management activities outlined in the SMP. This PRR covers the period through September 30, 2020.

The remedial program implemented at the Landfill has been successful in meeting the remedial objectives set forth in the RODs. Leachate generation and contaminant migration through groundwater has been reduced, contaminated surface run-off and direct human/animal contact with waste is eliminated, and Landfill gas migration/buildup is prevented. Groundwater seeps exhibiting some detectable leachate constituents have been occasionally observed along the banks of the Cheechunk Canal, downgradient of the Landfill. The County received NYSDEC approval of the Remedial Action Work Plan (RAWP) on March 20, 2017 to address the observed seeps. Subsequently on May 31, 2017, the County requested that the NYSDEC issue the required Water Quality Certification so that coverage under the United States Army Corps of Engineers (USACE) Nationwide Permit (NWP) No. 38 could be obtained. A revised request was submitted by the County on July 12, 2017 and the County submitted Form 4345 for Pre-Construction Notification (PCN) to the USACE Northern District on September 14, 2017. The Water Quality Certification Permit was reissued in 2019 and extended through the end of 2019 as requested by Sterling Environmental Engineering, P.C.'s (STERLING) letter dated December 31, 2018.

Field activities associated with the RAWP were initiated in October 2019, including soil excavation of the seep areas, armoring the excavation areas with stone, and installation of a 320-foot long horizontal directional drill (HDD) groundwater recovery well upgradient of the seeps. The HDD well pump and appurtenances were installed in July 2020 and are undergoing startup testing. On July 9, 2020, the County submitted a Groundwater Recovery System Pilot Program Work Plan, which was approved by the NYSDEC in July 2020. Following completion of startup testing, the pilot program will be initiated in accordance with the approved Work Plan.

In an email dated August 20, 2019, the NYSDEC informed the County that the Landfill required sampling for the emerging contaminants per-and polyfluoroalkyl substances (PFAS) and 1,4-Dioxane. On behalf of the County, STERLING submitted a Post-Closure Monitoring - Additional Analytes Sampling Plan (per- and polyfluoroalkyl substances (PFAS) & 1,4-Dioxane) on September 9, 2019. Sampling for PFAS and

1,4-Dioxane was performed concurrently with the 2020 annual groundwater sampling event on August 11, 2020.

Based on the results of activities performed from August 7, 2019 through September 30, 2020, no additional changes to the approved SMP are recommended. The requirements for discontinuing site management have not been met. As such, continued compliance with the approved SMP and the proposed seep remediation are appropriate.

## **1.0 INTRODUCTION**

The Orange County Landfill (Landfill) is located in the Town of Goshen, Orange County, New York (refer to Figure 1) and is registered as a Class 2 Inactive Hazardous Waste Disposal Site, Registry No. 3-36-007 by the NYSDEC.

An annual Periodic Review Report (PRR) is required to document site management activities outlined in the Site Management Plan (SMP). This PRR covers the period through September 30, 2020.

### **1.1 Summary of Site Contamination and Site History**

The NYSDEC issued a Record of Decision (ROD) on January 28, 1994 for Operable Unit 2 that required construction of a final cover over the Landfill waste mass, which was completed in 1995. A second ROD addressing the site as a whole, including any contamination that may have migrated from the waste mass, was issued on March 26, 1998 for Operable Unit 1. The selected remedies for the Landfill include Institutional Controls (IC) through a Declaration of Covenants and Restrictions that restricts disturbance of the Landfill cover and places restrictions on site uses, and Engineering Controls (EC) provided by the Landfill cover and leachate collection systems, air and water quality monitoring, and regular inspections and maintenance activities. Post-closure water and air quality monitoring, leachate removal, and inspections and maintenance at the Landfill have been provided by Orange County since 1996. An SMP was approved by the NYSDEC on August 5, 2014, which incorporates the Institutional/Engineering Control (IC/EC) Plan, the Inspection and Monitoring Plan, and the Operation and Maintenance Plan to provide for the continual post-closure monitoring and maintenance of the Landfill.

### **1.2 Effectiveness of the Remedial Program and Compliance**

The remedial program implemented at the Landfill has been successful in meeting the remedial objectives set forth in the RODs. Leachate generation and contaminant migration through groundwater has been reduced, contaminated surface runoff and direct human/animal contact with waste is eliminated, and Landfill gas migration/buildup is prevented. Groundwater seeps exhibiting some detectable leachate constituents have been occasionally observed along the banks of the Cheechunk Canal, downgradient of the Landfill. The County received NYSDEC approval of the Remedial Action Work Plan (RAWP) on March 20, 2017 to address the observed seeps. Subsequently on May 31, 2017 the County requested that the NYSDEC issue the required Water Quality Certification so that coverage under the United States Army Corps of Engineers (USACE) Nationwide Permit (NWP) No. 38 could be obtained. A revised request was submitted by the County on July 12, 2017 and the County submitted Form 4345 for Pre-Construction Notification (PCN) to the USACE Northern District on September 14, 2017. The Water Quality Certification Permit was reissued in 2019 and extended through end of 2019 as requested by Sterling Environmental Engineering, P.C.'s letter dated December 31, 2018.

Field activities associated with the RAWP were initiated in October 2019, including soil excavation of the seep areas, armoring the excavation areas with stone, and installation of a 320-foot long horizontal directional drill (HDD) groundwater recovery well upgradient of the seeps. The HDD well pump and appurtenances were installed in July 2020 and are undergoing startup testing. On July 9, 2020, the County submitted a Groundwater Recovery System Pilot Program Work Plan, which was approved by the NYSDEC in July 2020. Following completion of startup testing, the pilot program will be initiated in accordance with the approved Work Plan.

### **1.3 Recommendations**

Based on the results of activities performed from August 7, 2019 through September 30, 2020, no additional changes to the approved SMP are recommended. The requirements for discontinuing site management have not been met. As such, continued compliance with the approved SMP and the proposed seep remediation are appropriate.

### **2.0 SITE OVERVIEW**

The Landfill consists of a 75-acre waste mass on a 300-acre rural parcel approximately three (3) miles west of the Village of Goshen on the south side of Route 17M in the Town of Goshen, Orange County, New York (see Figure 1).

The Landfill property is bounded by the Cheechunk Canal to the southeast and by the Old Channel of the Wallkill River to the northwest and southwest. To the northwest of the Landfill, a proposed Landfill expansion of an additional 75-acres was intended. The expansion project was never completed nor used for landfilling. To the northeast edge of the Landfill lies a landfill-to-gas energy system facility. The New Hampton Transfer Station is located on the northeast border of the 300-acre parcel (see Figure 2).

The Orange County Department of Public Works operated the Landfill between 1974 and January 1992. Approximately 7,000,000 cubic yards of predominantly municipal waste was disposed; however, waste oil, septic sludge, industrial waste, and hazardous waste are documented to have also reportedly been disposed at the Landfill.

The Landfill was classified as a “Class 2” Inactive Hazardous Waste Disposal Site by the NYSDEC in March 1992 identified by Site Number 336007. The NYSDEC issued two RODs, dated January 1994 and March 1998, respectively. The January 1994 ROD accelerated the capping of the Landfill and the March 1998 ROD addressed contamination that may have migrated from the waste mass.

The selected remedies for the Landfill include institutional and engineering controls. Institutional control (IC) is provided in the form of a Declaration of Covenants and Restrictions that restricts disturbance of the Landfill cover and places restrictions on site uses. Engineering controls (EC) are provided by the Landfill cover and leachate collection systems, annual air and water quality monitoring, and regular inspections and maintenance activities.

The ongoing post-closure activities are outlined by the approved SMP and are based on the requirements of the Technical Guidance for Site Investigation and Remediation (DER-10), Section 6.2. The June 6, 2014 SMP (approved by the NYSDEC on August 5, 2014) incorporates the IC/EC Plan, the Inspection and Monitoring Plan, and the Operation and Maintenance Plan, which provide for the continual post-closure monitoring and maintenance of the Landfill.

Since January 1996, Orange County has submitted Post-Closure Monitoring and Maintenance (PCMM) reports to the NYSDEC documenting the Landfill inspection, environmental monitoring, and leachate management activities. Since 2014, the NYSDEC has required annual documentation in the form of a PRR. This PRR covers inspection, monitoring, operating and maintenance activities, and compliance for the period from August 7, 2019 through September 30, 2020.

### **3.0 PERFORMANCE, EFFECTIVENESS, AND PROTECTIVENESS**

The Landfill has been subject to a PCMM Program since January 1996 (with revisions in January 1999, December 2002 and June 2014) that provides for regular site inspections; groundwater, surface water, and leachate monitoring; leachate collection and management; mowing; and Landfill gas management. Monitoring sample locations are shown on Figure 2.

#### **3.1 Groundwater Quality**

Historical results obtained over two decades of monitoring indicate groundwater near the Landfill is characterized by levels of turbidity and concentrations of total dissolved solids (TDS), iron, and manganese, and occasional concentrations of ammonia, bromide, chloride, phenolics, sulfate, arsenic, beryllium, cadmium, chromium, copper, lead, magnesium, nickel, selenium, sodium, and thallium that exceed groundwater standards (NYSDEC Division of Water Technical and Operational Guidance Series 1.1.1 (TOGS 1.1.1), Ambient Water Quality Standards and Guidance Values (June 1998)). Historically, leachate indicator parameters such as alkalinity, ammonia, chemical oxygen demand (COD), chloride, sulfate, TDS, TKN, and total organic carbon (TOC) along with inorganic compounds such as iron, magnesium, manganese, potassium, and sodium were evaluated.

In an email dated August 20, 2019, the NYSDEC informed Orange County that the Landfill required additional sampling to include emerging contaminants per-and polyfluoroalkyl substances (PFAS) and 1,4-Dioxane. On behalf of the County, STERLING submitted a Post-Closure Monitoring - Additional Analytes Sampling Plan (per-and polyfluoroalkyl substances (PFAS) & 1,4-Dioxane), dated September 9, 2019. Sampling for PFAS and 1,4-Dioxane was performed concurrently with the 2020 annual post-closure monitoring event on August 11, 2020.

Sampling for emerging contaminants occurred at five (5) monitoring wells (MW-220, MW-233S, MW-233D, MW-245S, and MW-245D). The following quality assurance/quality control (QA/QC) samples were also collected: One (1) duplicate (DUP08112020), one (1) matrix spike (MW-245D-MS), one (1) matrix spike duplicate (MW-245D-MSD), one (1) field reagent blank (FB08112020), and one (1) equipment blank (EB08112020). Samples were analyzed for 1,4-Dioxane using USEPA Modified Method 8270D-SIM and for 21 target PFAS compounds, including perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS), using USEPA Method 537. A Category B Deliverable data package was prepared by the laboratory and a Data Usability Summary Report (DUSR) was prepared by a certified Data Validator (Donald Anné of Alpha Geoscience) and is provided in Appendix A. Copies of laboratory analytical reports are provided in Appendix B. The Category B data packages for the sampling of the emerging contaminants are provided in Appendix C. The DUSR outlines applicable qualifications and indicates that analytical data were acceptable and usable with no data qualified as rejected.

Field parameters and groundwater elevations for site groundwater are presented in Tables 1 and 2, respectively. A groundwater contour map for the overburden hydrogeologic unit is provided as Figure 3. Groundwater analytical results are summarized in Tables 3 and 3-A and are compared to the NYSDEC TOGS 1.1.1, June 2004.

The 2020 analytical results are consistent with past monitoring results. No VOCs, 1,4-Dioxane or PFAS were detected at any of the overburden or bedrock monitoring wells sampled in 2020.

Emerging contaminants results for the sampling are provided in Table 3-A.

Groundwater quality results in 2020 indicate no exceedances for 1,4-Dioxane, PFAS, alkalinity, biological oxygen demand (BOD), bromide, COD, chloride, hardness, hexavalent chromium, sulfate, TKN, TOC, volatile organic compounds (VOCs), aluminum, antimony, barium, beryllium, boron, cadmium, calcium, chromium, cobalt, copper, mercury, nickel, potassium, selenium, silver, thallium, vanadium, and zinc. A slight exceedance for total lead was observed at the downgradient overburden monitoring well (PZ-4), while dissolved lead was non-detect. Ammonia and phenol in groundwater exceedances were reported for downgradient overburden well MW-245D. TDS in groundwater exceedances were reported at the upgradient monitoring well pair (MW-233S and MW-233D) and all downgradient monitoring wells (MW-220, MW-245S, MW-3B, and PZ-4), except downgradient bedrock well MW-245D which was equal to the groundwater standard (500 mg/L). No significant differences in concentrations were observed for select leachate indicator parameters (ammonia, phenols, and TDS) compared to where exceedances were historically reported.

Slight exceedances for arsenic in groundwater were observed at three (3) downgradient overburden monitoring wells. No significant differences in concentrations or data trends were observed for iron, magnesium, manganese, and sodium in groundwater where exceedances were historically observed.

The following table indicates the highest concentration areas for parameter exceedances:

<b>Parameter</b>	<b>Highest Concentration Areas</b>
Ammonia	MW-245D
Nitrate	MW-233S
Phenols	MW-245D
TDS	PZ-4
Arsenic, Total	MW-220
Arsenic, Dissolved	MW-3B
Iron, Total	MW-220
Iron, Dissolved	MW-245S
Lead, Total	PZ-4
Magnesium, Total	PZ-4
Magnesium, Dissolved	PZ-4
Manganese, Total	PZ-4
Manganese, Dissolved	MW-245S
Sodium, Total	MW-233D
Sodium, Dissolved	MW-233D

A detailed summary of reported parameter exceedances for the 2020 PCM event is provided below.

Parameter Exceeding Water Quality Standard (TOGS 1.1.1)	Monitoring Well Location (Unfiltered Analytical Results)
Turbidity (5 NTU)	Downgradient Overburden MW-220 (43.79 NTU), MW-245S (28.23 NTU), and PZ-4 (18.32 NTU), Downgradient Bedrock MW-245D*** (84.23 NTU), and Upgradient Overburden MW-233S (98.67 NTU)
Ammonia (2.0 mg/L)	Downgradient Bedrock MW-245D (6.4 mg/L)
Phenolics (0.001 mg/L)	Downgradient Bedrock MW-245D (0.007 mg/L)
TDS (500 mg/L)	Downgradient Overburden MW-3B (560 mg/L), MW-220 (680 mg/L), MW-245S (690 mg/L), and PZ-4 (820 mg/L), Upgradient Overburden MW-233S (560 mg/L), and Upgradient Bedrock MW-233D (570 mg/L)
Arsenic, Total (0.025 mg/L)	Downgradient Overburden <b>MW-3B (0.02532 mg/L)</b> , MW-220 (0.07915 mg/L), and PZ-4 (0.04208 mg/L)
Iron, Total (0.3 mg/L**)	Downgradient Overburden <b>MW-3B (0.655 mg/L**)</b> , <b>MW-220 (10.8 mg/L**)</b> , <b>MW-245S (0.822 mg/L**)</b> , <b>PZ-4 (28.5 mg/L**)</b> , and Downgradient Bedrock MW-245D (1.06 mg/L)
Lead, Total (0.025 mg/L)	Downgradient Overburden PZ-4 (0.02817 mg/L)
Magnesium (35 mg/L)	Downgradient Overburden <b>MW-220 (41.6 mg/L)</b> and <b>PZ-4 (54.4 mg/L)</b>
Manganese, Total (0.3 mg/L**)	Upgradient Overburden MW-233S (0.3871 mg/L**), Downgradient Overburden <b>MW-3B (0.5011 mg/L**)</b> , <b>MW-220 (1.311 mg/L**)</b> , <b>MW-245S (1.594 mg/L**)</b> , and <b>PZ-4 (2.54 mg/L**)</b> , and Downgradient Bedrock MW-245D (0.1134 mg/L)
Sodium, Total (20 mg/L)	Upgradient Bedrock <b>MW-233D (107 mg/L)</b> , Downgradient Overburden <b>MW-3B (29.1 mg/L)</b> , and <b>PZ-4 (23.1 mg/L)</b> , Downgradient Overburden <b>MW-245S (38.3 mg/L)</b> and Downgradient Bedrock <b>MW-245D (51.9 mg/L)</b>

\* Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value.

\*\* The standard for the sum of iron and manganese is 0.5 mg/L.

**Bolded** Total Metals values also or only exceeded NYS TOGS 1.1.1 Water Quality Standards and Guidance Values for Dissolved Metals (Filtered) results.

A summary of current groundwater quality compared to historical results is presented below:

- MW-3B (Downgradient Overburden Hydrogeologic Unit) - TOGS 1.1.1 exceedances for TDS, arsenic, iron, manganese, and sodium were reported. TDS, iron, manganese, and sodium have consistently exceeded their applicable standard at this downgradient monitoring well since 2011. TDS, manganese, and sodium concentrations continue to exhibit consistent trends compared to historical results. Reported concentrations for arsenic and iron have decreased compared to 2014, 2015, 2017, 2018, and 2019 results, and are at the lower end of the published historical range for each analyte. Dissolved arsenic in groundwater concentration exceeded NYS TOGS 1.1.1. Both

the total iron in groundwater concentration and dissolved iron in groundwater concentration exceeded NYS TOGS 1.1.1. Both the total manganese in groundwater concentration and dissolved manganese in groundwater concentration exceeded NYS TOGS 1.1.1. Both the total sodium in groundwater concentration and the dissolved sodium in groundwater concentration exceeded NYS TOGS 1.1.1.

- MW-220 (Downgradient Overburden Hydrogeologic Unit) - TOGS 1.1.1 exceedances for turbidity, TDS, arsenic, iron, magnesium, and manganese were reported during this sampling event. Turbidity, TDS, iron, magnesium, and manganese have consistently exceeded their applicable standard at this downgradient overburden monitoring well. Values of these parameters are similar to 2014, 2015, 2017, 2018, and 2019 results. The arsenic detection in groundwater was the highest result over the last six (6) monitoring events although well below the historical maximum on February 1989) and near the historical average of 0.04 mg/L. Both the total magnesium in groundwater concentration and dissolved magnesium in groundwater concentration exceeded NYS TOGS 1.1.1. Both the total manganese in groundwater concentration and dissolved manganese in groundwater concentration exceeded NYS TOGS 1.1.1.
- MW-233S (Upgradient Overburden Hydrogeologic Unit) - TOGS 1.1.1 exceedances for turbidity, nitrate, TDS, and manganese were reported during this sampling event. Turbidity, nitrate, TDS, and manganese exceeded their applicable standard at this upgradient overburden well in 2019. The 2020 values of these parameters are similar to 2019 results.
- MW-233D (Upgradient Bedrock Hydrogeologic Unit) - TOGS 1.1.1 exceedances for TDS, and sodium was reported during this sampling event. Analytical results for this upgradient monitoring well are similar to the reported results for 2015, 2017, 2018, and 2019. The 2020 TDS result is consistent with historical results. Both the total sodium in groundwater concentration and dissolved sodium in groundwater concentration exceeded NYS TOGS 1.1.1.
- MW-245S (Downgradient Overburden Hydrogeologic Unit) - TOGS 1.1.1 exceedances for turbidity, TDS, iron, manganese, and sodium were reported during this sampling event. TDS, iron, manganese, and sodium have consistently exceeded their applicable standard at this downgradient monitoring well. Values of these parameters, except TDS, have decreased or are similar to 2014, 2015, 2017, 2018, and 2019 results. Sodium concentrations have steadily increased since 2012, and the 2020 sodium results were similar to the 2017, 2018, and 2019 results. Both the total manganese in groundwater concentration and dissolved manganese in groundwater concentration exceeded NYS TOGS 1.1.1. Both the total sodium in groundwater concentration and dissolved sodium in groundwater concentration exceeded NYS TOGS 1.1.1.
- MW-245D (Downgradient Bedrock Hydrogeologic Unit) - TOGS 1.1.1 exceedances for turbidity, ammonia, phenolics (estimated), iron, and sodium were reported. Turbidity, ammonia, iron, and sodium consistently exceed their applicable standard. Ammonia levels are similar to 2019 results. Iron concentrations were similar to 2017, 2018, and 2019 results and within the published historical range. Sodium concentrations are also within the published historical range and have steadily decreased since 2014. Both the total sodium in groundwater concentration and the dissolved sodium in groundwater concentration exceeded NYS TOGS 1.1.1.
- PZ-4 (Downgradient Overburden Hydrogeologic Unit) - TOGS 1.1.1 exceedances for turbidity, TDS, arsenic, iron, lead, magnesium, manganese, and sodium were reported during this sampling

event. TDS, iron, and manganese have consistently exceeded TOGS 1.1.1 standards. Water quality parameter results for turbidity, TDS, magnesium, and manganese were stable and remain at the lower end of the published historical range. Total iron concentrations increased as compared to 2014, 2015, 2017, 2018, and 2019 results. The reported concentration for sodium has steadily increased compared to 2014, 2015, 2017, and 2018 results but is similar to 2019 results. Total iron in groundwater concentration and dissolved iron in groundwater concentration exceeded NYS TOGS 1.1.1. Both the total magnesium in groundwater concentration and dissolved magnesium in groundwater concentration exceeded NYS TOGS 1.1.1. Both the total sodium in groundwater concentration and dissolved sodium in groundwater concentration exceeded NYS TOGS 1.1.1.

### **3.2 Surface Water Quality**

Analytical results for site surface water are presented in Table 4. The surface water samples were collected from downstream surface water monitoring locations SW-5 and SW-8 and from upstream surface water monitoring location SW-13 (see Figure 2).

Reported concentrations for iron exceeded the TOGS 1.1.1 Class C surface water quality standard of 0.3 mg/L at SW-13 (0.72 mg/L), SW-5 (0.69 mg/L), and SW-8 (0.86 mg/L). Review of historical concentrations (1999 - 2019) indicate that 2020 iron in surface water results were similar to 2019 results and near the middle of past reported concentrations at each location. Reported concentrations for aluminum in surface water slightly exceeded the TOGS 1.1.1 Class C surface water quality standard of 0.1 mg/L at SW-13 (0.211 mg/L), SW-5 (0.263 mg/L), and SW-8 (0.194 mg/L). Reported concentrations for aluminum in surface water are consistent with historical concentrations. The estimated result (0.015 mg/L) for phenolics in surface water at the upstream sample location SW-13 slightly exceeded TOGS 1.1.1 standards (0.001 mg/L).

There were no VOCs detected above method detection limits in any of the surface water samples collected. No water quality parameters exceeded standards or guidance values besides phenolics, iron, and aluminum. The 2020 exceedances were consistent with historical results for parameters at each location.

### **3.3 Leachate Quality**

Analytical results for leachate collected from manhole 7 (MH-7) and manhole 15 (MH-15) are summarized in Table 5 and are generally consistent with previous results. Leachate water quality is generally characterized by detectable to elevated concentrations of leachate indicators such as ammonia, bromide, chloride, nitrate, phenolics, sulfate, and TDS and inorganic parameters, including antimony, boron, iron, magnesium, manganese, nickel, and sodium. Inorganic analytes that were not detected include: beryllium, cadmium, hexavalent chromium, lead, mercury, selenium, silver, thallium, vanadium, and zinc.

The VOCs 1,4-Dichlorobenzene (estimated as 1.5 µg/L), benzene (estimated as 0.42 µg/L), and chlorobenzene (estimated as 0.76 µg/L) were detected at manhole MH-15, while no VOCs were detected at manhole MH-7.

### **3.4 Air Quality**

In accordance with the SMP, Landfill gas monitoring consists of measuring explosive gas (percent lower explosive limit, or % LEL) and VOCs in the headspace at each monitoring well/piezometer, leachate manholes MH-7 and MH-15, and along the Landfill perimeter. Explosive gas and VOC measurements were

obtained with a MultiRAE gas monitor. VOCs are also analyzed in post-closure groundwater, surface water, and leachate samples.

Explosive gas was detected at monitoring well MW-303S with a reading of >99% LEL. Explosive gas was detected at manhole MH-7 with a reading of 10% LEL. No VOCs were detected at any of the monitoring wells and was observed to be 0.2 ppm at MH-7. All other air monitoring locations measured no VOCs and 0% LEL.

A perimeter explosive gas survey was performed on August 12, 2020. Gas measurements as % LEL were collected at approximately 100-foot intervals from the subsurface Landfill perimeter from temporary probe holes installed at depths of 12 to 18 inches. No explosive gas or VOCs were detected. The results indicate that explosive gas is not migrating off the Landfill property. The August 2020 air quality monitoring survey for explosive gas and VOCs indicated the Landfill is in full compliance with the requirements set forth in 6 NYCRR 360-2.15(k)(4) and 2.17(f) (effective prior to November 4, 2017).

### **3.5 Seeps**

In accordance with the SMP, observation for leachate outbreaks is the focus of regular inspections performed by Orange County personnel. Conditions indicative of leachate outbreaks, such as wet spots, dead vegetation, surface sloughing, or discoloration are documented, if present. No visible seeps were observed during the August 11 and 12, 2020 sampling and inspection event; therefore, no seep samples were collected.

## **4.0 INSTITUTIONAL/ENGINEERING CONTROL PLAN COMPLIANCE**

The multiple institutional and engineering controls for the Landfill implemented by the RODs and documented in the SMP continue to be in place and performing as designed. These controls were reviewed and evaluated through this PRR.

### **4.1 Institutional Controls**

Institutional controls (IC) include non-physical means of enforcing a restriction on the use of real property that limits human and environmental exposure, restricts the use of groundwater, provides notice to the potential owners, operators, or members of the public, or prevents actions that would interfere with the effectiveness of the remedial program or with the effectiveness and/or integrity of operation, maintenance, or monitoring activities at or pertaining to the Landfill property.

#### **4.1.1 Deed Restrictions**

The IC for the Landfill is in the form of a Declaration of Covenants and Restrictions filed with the deed for the Landfill property. The Declaration of Covenants and Restrictions was executed on June 13, 2014 and continues to protect both human health and the integrity of the Landfill. No uses, disturbances, or interferences have been allowed by Orange County. Any future use to the Landfill footprint must be approved by Orange County and NYSDEC. The underlying groundwater is not a source of drinking water for nearby residents.

## **4.2 Engineering Controls**

Engineering controls (EC) include physical barriers or methods employed to actively or passively contain, stabilize, or monitor contamination, restrict the movement of contamination to ensure the long-term effectiveness of the remedial program, or eliminate potential exposure pathways to contamination. The following sections describe the ECs and their goals as part of the remedy for the Landfill from the ROD dated March 1998.

### **4.2.1 Part 360 Landfill Cover System**

Installation of the standard Part 360 Landfill cover system (completed in November 1995) minimizes infiltration of precipitation to wastes and the resultant generation of leachate and prevents the release of previously disposed wastes. The cover system is regularly inspected by Orange County to evaluate its performance and assess the physical condition of the following Landfill components: settlement and erosion of Landfill cover, vegetative growth, slope stability, damage due to presence of vector populations over or near Landfill cover (e.g., burrow holes), monitoring well and Landfill gas vent integrity, presence or absence of leachate outbreaks, surface water drainage structures, site fencing, gates, and access roads, and evidence of trespassing. A completed Inspection Checklist, Institutional and Engineering Control Form, and select photographs from the annual site inspection and monthly site inspections are provided in Appendix D. The Landfill appears secure and stable, and the Landfill cover is intact with no evidence of stressed vegetation or damage due to settlement or active vectors. No evidence was observed of significant settlement or evidence of erosion of the Landfill cover. There were no observed leachate discharges or iron-stained soils during the Annual Landfill Inspection other than the previously identified and monitored seep. The stormwater drainage system appeared to be functioning as designed.

During the monthly post-closure field inspections conducted between August 2019 and August 2020 the Landfill cover system was observed to be well maintained and remained in good condition. Completed inspection reports are included in Appendix D. No damage to the Landfill cover system was observed. Beyond the regular ongoing post-closure care, no actions or special maintenance is required for the Part 360 Landfill cover system at this time.

### **4.2.2 Leachate Collection System**

The leachate collection system is located along the perimeter of the waste mass. Leachate from the waste mass is collected through underground pipes that flow by gravity to sumps. From these sumps, leachate is pumped into aboveground storage tanks where the leachate is regularly removed for offsite treatment. Modifications to the collection system were introduced with the March 1998 ROD where approximately 950 feet of additional leachate collection piping was installed to contain leachate outbreaks encountered during excavation of a new drainage ditch along the southeastern perimeter road.

The perimeter leachate collection system continues to function as designed. Records regarding leachate removal and treatment are provided in Appendix E. The total leachate removed from the Landfill for treatment at an offsite permitted facility from August 1, 2019 through August 31, 2020 was 548,062.35 gallons.

#### **4.2.3 Groundwater Monitoring Wells**

Existing groundwater monitoring wells are located along the upgradient, crossgradient, and downgradient perimeter of the Landfill waste mass. The wells are used to monitor groundwater quality around the Landfill property. Monitoring wells are routinely checked for sediment buildup in the well using depth to bottom measurements, and for the integrity of the outer casing, lid, and lock. These monitoring wells are sampled every fifth quarter for 6 NYCRR Part 360 Baseline Parameters for indication of contamination by the Landfill waste mass.

Overall, the monitoring well network is functioning as designed and Orange County will continue the approved annual monitoring program.

#### **4.2.4 Surface Water Runoff Features**

Surface water runoff features are located on and around the Landfill property. Terraces and riprap channels on the Landfill cover system direct stormwater runoff to the Landfill perimeter drainage ditches successfully preventing the occurrence of standing water on the Landfill. The surface water runoff is directed from perimeter drainage ditches into drainage basins to reduce particulates and sediment before ultimately discharging into the Cheechunk Canal. These surface water runoff features are checked monthly for sediment buildup, overgrowth of vegetation, overflow of drainage ditches or basins, improper drainage of terraces and channels, and sloughing of the Landfill cover. Appendix D contains documentation of monthly inspections of the surface water runoff features in 2019 through August 12, 2020. Based on the observed conditions, no corrective measures are needed for the surface water management features. Orange County will continue to perform monthly inspections.

### **4.3 IC/EC Certification**

As required by DER-10, Section 6.3(a), the completed and signed NYSDEC IE/EC Certification Form is provided as Appendix F. All ICs/ECs are in place and functioning as designed. The previously noted seeps between the Landfill and the Canal are the subject of a NYSDEC approved RAWP.

## **5.0 MONITORING PLAN COMPLIANCE**

The Landfill was granted a post-closure monitoring variance by the NYSDEC in December 2002 reducing the monitoring of the Landfill from quarterly to every fifth quarter. The NYSDEC approved further modifications to the monitoring plan on August 5, 2014. Monitoring includes collection of groundwater, surface water, and leachate samples for analysis of 6 NYCRR Part 360 Baseline parameters, as well as water level measurements from select monitoring wells, and air quality monitoring. Monitoring wells and sample locations are shown on Figure 2. The following sections describe the monitoring requirements for groundwater, surface water, leachate, and air quality.

### **5.1 Groundwater Monitoring**

The groundwater monitoring program provides for collection of water quality samples from one piezometer location (PZ-4) and six (6) monitoring wells spread out around the Landfill property. In addition, static water level measurements were measured from additional overburden and bedrock monitoring wells and piezometers around the Landfill perimeter. A groundwater contour map is provided in Figure 3.

Depth to water measurements were obtained at or near the Landfill perimeter to determine groundwater elevations in the overburden and upper bedrock aquifer systems. Groundwater flow direction in the overburden aquifer is to the east-southeast towards the Cheechunk Canal (see Figure 3). Groundwater flow direction in the bedrock aquifer is similar, which is consistent with historical reports. Groundwater gradients are similar in both aquifer systems and upward vertical gradients are noted throughout the Landfill perimeter, consistent with historical trends.

During the 2020 sampling event, groundwater samples were obtained from five (5) downgradient locations and two (2) upgradient locations using low flow methodology and analyzed for 6 NYCRR Part 360 Baseline parameters. An upgradient sample was collected from the overburden hydrogeologic unit (MW-233S) and bedrock hydrogeologic unit (MW-233D) located approximately 1,150 feet east of MW-230 well pair and upgradient of the Landfill.

As described in Section 3.1, results generally show groundwater samples collected upgradient and downgradient of the Landfill waste mass indicate no significant differences in data trends where exceedances were historically observed. Overall, the groundwater monitoring program meets the remedial objectives by providing suitable means to determine the effectiveness of the selected remedy. Orange County will continue groundwater monitoring according to the approved SMP.

## **5.2 Surface Water Monitoring**

The approved surface water monitoring program consists of annual sampling of three (3) locations (SW-13, SW-5, and SW-8) along the Cheechunk Canal adjacent to the Landfill. These locations are located upgradient, crossgradient, and downgradient of the Landfill (see Figure 2).

The three (3) surface water samples were analyzed for 6 NYCRR Part 360 Baseline parameters and compared to TOGS 1.1.1 standards and guidance values. The surface water monitoring program meets the remedial objectives for the site in that it provides direct means to determine the effectiveness of the selected remedy. Orange County will continue surface water monitoring according to the approved SMP.

## **5.3 Leachate Monitoring**

Leachate monitoring consisted of sampling of two (2) manhole locations (MH-7 and MH-15) located on the eastern and western edges of the Landfill footprint, respectively. Leachate samples were analyzed for 6 NYCRR Part 360 Baseline parameters.

Section 4.2.1.1 of the approved SMP requires that if conditions indicative of leachate outbreaks such as wet spots, dead vegetation, surface sloughing, or discoloration are observed near the Landfill, further remediation investigation is warranted to evaluate the condition and determine the appropriate corrective action. The leachate monitoring program is consistent with the approved SMP for the site. Orange County will continue leachate monitoring according to the approved SMP and have implemented the following remedial measures, as detailed in the RAWP approved by the NYSDEC on March 20, 2017:

1. Excavation and removal of impacted soil at the seeps
2. Installation of 320-foot long HDD groundwater recovery well

Visibly stained soil in the immediate vicinity of identified seeps along the northern bank of the Cheechunk Canal was excavated in October 2019. Following the excavation, the excavated areas were stabilized with

nonwoven geotextile fabric and at least 24 inches of medium stone fill. Installation and development of the HDD also occurred in October 2019. The HDD well pump and appurtenances were installed in July 2020 and are undergoing startup testing. On July 9, 2020, the County submitted a Groundwater Recovery System Pilot Program Work Plan, which was approved by the NYSDEC in July 2020. Following completion of startup testing, the pilot program will be initiated in accordance with the approved Work Plan.

#### **5.4 Air Quality Monitoring**

Air quality monitoring includes field measurements of explosive gas and VOC levels in the headspaces of the manholes, piezometers, and monitoring wells sampled during each monitoring event. VOC analyses are also performed on collected groundwater, surface water, and leachate samples. Results of the air quality monitoring are described in Section 3.4.

The air quality monitoring program meets the remedial objectives to evaluate the effectiveness of the selected remedy in that it provides a direct means to determine if Landfill gases are prevented from migration and buildup. Orange County will continue air quality monitoring according to the approved SMP.

### **6.0 OPERATION AND MAINTENANCE PLAN COMPLIANCE**

The Operation and Maintenance (O&M) Plan for the Landfill, outlined in the approved SMP, consists of the following components:

- Repair, if necessary, of the Landfill cover system in accordance with approved specification materials and methods;
- Annual mowing of the vegetated cover system;
- Annual or more frequent mowing of grass-lined ditches;
- Addition, if necessary, of soil amendments (fertilizer, lime) to the cover system;
- Annual or more frequent clearing of drainage swales, ditches and channels;
- Investigation of stressed vegetation and gas odors;
- Vector control;
- Snow plowing and upkeep of the perimeter access road;
- Collection, removal, and disposal of leachate;
- Preventative maintenance of leachate pumps; and,
- Repair or replacement, if necessary, of monitoring wells and piezometers.

During this reporting period, the following O&M activities were performed:

- Monthly inspections of the Landfill cap and cover materials, surface water drainage features, monitoring wells, leachate collection system, and the Landfill property (Appendix D);
- Mowing of the Landfill cover system on July 14, 2020 and August 12, 2020;
- Regular leachate removal from aboveground storage tanks for treatment at permitted facilities (see Appendix E);
- Groundwater, surface water, leachate, and air quality monitoring performed on August 11, 2020 and August 12, 2020; and,
- Regular inspection of seeps.

Operational issues were addressed by Landfill staff, including:

- The Orange County inspector noted in the August 15, 2019 Monthly Inspection Report (Appendix D) that the transformer at leachate collection tank L-1 was repaired. TAM Enterprises, Inc. (TAM), Orange County's contractor, was awarded the contract to maintain and remove all leachate from onsite tanks and manholes during the remainder of the reporting period (Appendix D).

Operation and maintenance of the property continues to protect human health and the overall integrity of the Landfill. There were no deficiencies in complying with the O&M Plan during this reporting period. The components of the remedy subject to O&M requirements (Landfill cover, gas venting and leachate collection systems, and surface water runoff features) are functioning as designed. The integrity of the monitoring network remains intact. Regular inspections performed by Orange County personnel continue to show compliance with the March 1998 remedy determined for the Landfill, with the exception of the seeps.

## 7.0 CONCLUSIONS AND RECOMMENDATIONS

The Landfill continues to comply with the required activities set forth in the SMP for the subject reporting period. The ICs and ECs implemented at the Site continue to function as designed. The environmental monitoring plan for the Landfill is ongoing and remains in accordance with the approved variance granted by the NYSDEC in August 2014. Orange County will continue to perform regular inspections to maintain the integrity of the Landfill and surrounding property and protect human health and the environment.

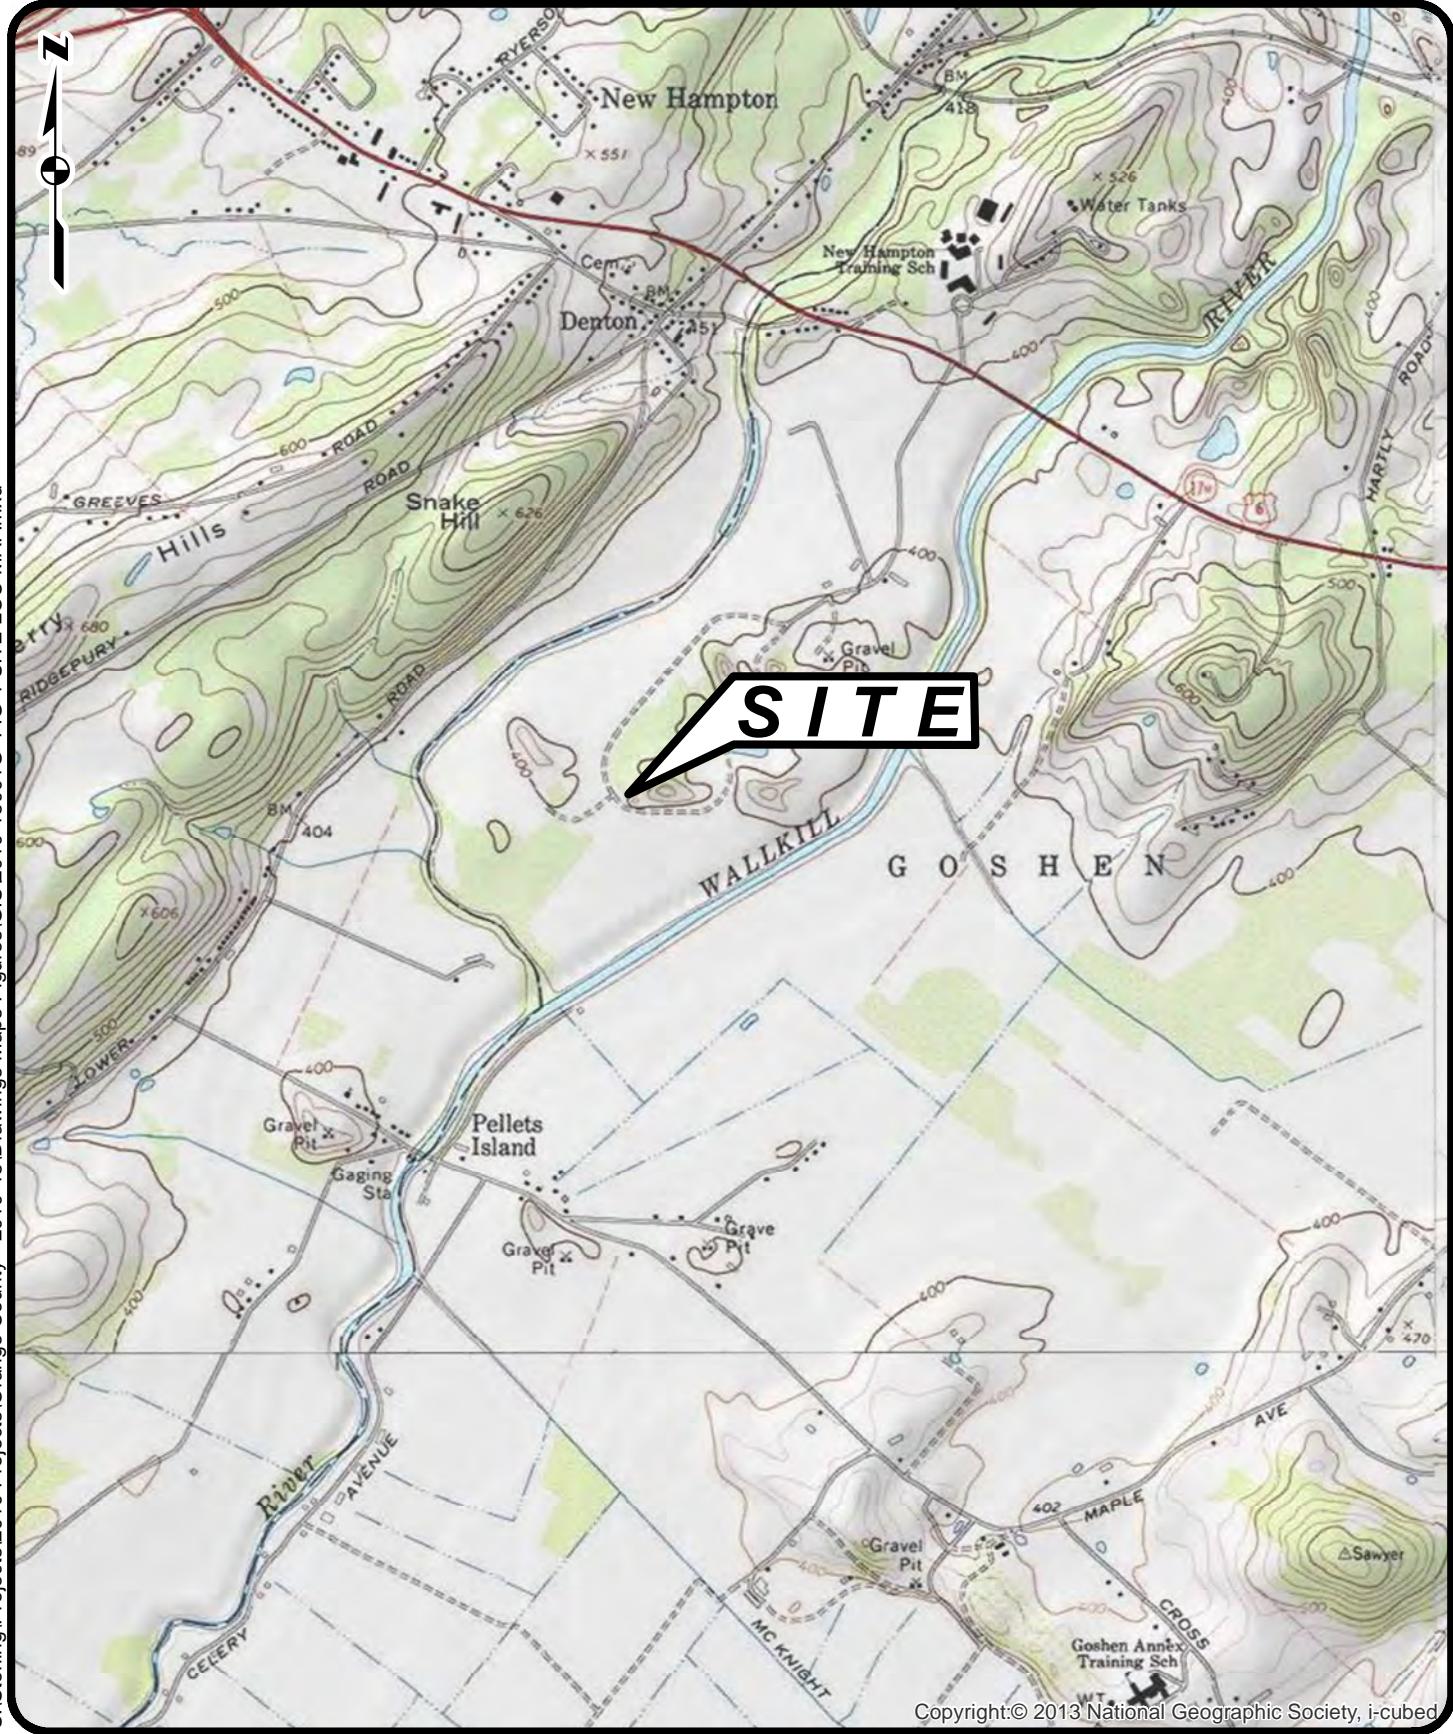

The following conclusions are made based on observations and analytical results collected during this reporting period:

- Groundwater flow direction in the overburden and bedrock aquifer systems is to the east-southeast towards the Cheechunk Canal. Groundwater gradients are similar in both aquifer systems and upward vertical gradients are noted throughout the Landfill perimeter.
- No site-related VOCs were detected at or above the respective laboratory method detection limits in groundwater or surface water samples.
- Applicable TOGS 1.1.1 groundwater standards were exceeded for ammonia, nitrate, phenolics, TDS, arsenic, iron, lead, magnesium, manganese, and sodium, as described in Section 3.1.
- Groundwater quality results indicate no significant differences in data trends where exceedances were historically observed.
- Applicable TOGS 1.1.1 Class C surface water standard was exceeded for iron and aluminum at all surface water sampling locations (SW-5, SW-8, and SW-13) and phenolics only at SW-13. A comparison of upstream (background conditions) to downstream surface water quality indicates that the farthest downstream surface water results were lower than the reported upstream conditions, including water quality parameters historically tracked such as chloride, hardness, phenolics, TKN, iron, magnesium, manganese, and sodium.

- The 2020 analytical results for leachate collected from onsite manholes are consistent with previous results.
- The August 2020 air quality monitoring survey for explosive gas and VOCs indicated the Landfill is in full compliance with the requirements set forth in 6 NYCRR 360-2.15(k)(4) and 2.17 (Effective prior to November 4, 2017).
- The Landfill appears secure and stable, and the Landfill cover is intact with no evidence of stressed vegetation, damage due to settlement, erosion or active vectors.
- The stormwater drainage system appears to be functioning as designed.
- In support of the ongoing seep issue, Orange County will continue to pursue implementation of the approved RAWP.

**Notes:**

Values in **BOLD** indicate an exceedance of applicable water quality standard.

Values in **ITALIC** indicate the guidance value where no surface water standard is available.

U or ND = Not Detected (ND). The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

J = Result is less than the laboratory reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value.

<sup>(A)</sup> = T.O.G.S. 1.1.1 Ambient Water Quality Standards for Class C Surface Water, A(C): Fish Propagation (fresh waters)

<sup>(B)</sup> = The sample specific reporting limit does not support the applicable groundwater standard.

<sup>H(FC)</sup> = T.O.G.S. 1.1.1 Ambient Water Quality Standards for Class C Surface Water, H(FC): Human Consumption of Fish (fresh waters)

<sup>(1)</sup> = Surface water standard for ammonia (mg/L) is interpolated using the temperatures and pH of the individual samples. SW-5 = 1.30, SW-8 = 1.38, SW-13 = 1.31.

<sup>(2)</sup> = Laboratory Method Detection Limit is greater than or equal to the applicable water quality standard.

<sup>(3)</sup> = Applies to the sum of 1,2-1,3-1,4-Dichlorobenzene, or applies to each individual isomer, or applies to the sum of m-, o-, and p-xylenes, or applies to the sum of cis-trans 1,3-Dichloropropene, or applies to the sum of HCN and CN- expressed as CN (cyanide), or applies to ionic silver.

<sup>(4)</sup> = Standard applies to the dissolved form, not total recoverable.

<sup>(5)</sup> = Surface Water Standard for Cadmium, Chromium, Copper, Lead, Nickel, and Zinc are based on the individual sample's hardness.

Cadmium (mg/L): SW-5 = 0.00291; SW-8 = 0.00283; SW-13 = 0.00288

Chromium (mg/L): SW-5 = 0.10443; and SW-8 = 0.10161; SW-13 = 0.10331

Copper (mg/L): SW-5 = 0.01281; SW-8 = 0.01245; SW-13 = 0.01266

Lead (mg/L): SW-5 = 0.00595; SW-8 = 0.00574; SW-13 = 0.00587

Nickel (mg/L): SW-5 = 0.07411; SW-8 = 0.07205; SW-13 = 0.07329

Zinc (mg/L): SW-5 = 0.11795; SW-8 = 0.11465; SW-13 = 0.11663

<sup>(6)</sup> = Standard applies to ionic aluminum or silver.

**APPENDIX A**

**DATA VALIDATION REPORTS AND  
DATA USABILITY SUMMARY REPORTS (DUSR)**

September 11, 2020

Ms. Amanda Castignetti, EIT  
Environmental Engineer  
Sterling Environmental Engineering, P.C.  
24 Wade Road  
Latham, New York 12110

Re: Data Validation Report  
Orange County Landfill, Project # 2010-15  
August 2020 Ground Water Samples

Dear Ms. Castignetti:

The data usability summary report (DUSR) and QA/QC reviews are attached to this letter for the above referenced project sampling event. The data for Alpha Analytical Labs, SDG L2032661 were acceptable with some minor issues that are identified and discussed in the validation summaries. There were no data that were flagged as rejected, unusable (R) in the data pack.

A list of common data validation acronyms is attached to this letter to assist you in interpreting the validation summaries. If you have any questions concerning the work performed, please contact me at (518) 348-6995. Thank you for the opportunity to assist Sterling Environmental Engineering, P.C.

Sincerely,  
Alpha Geoscience

## Data Validation Acronyms

AA	Atomic absorption, flame technique
BHC	Hexachlorocyclohexane
BFB	Bromofluorobenzene
CCB	Continuing calibration blank
CCC	Calibration check compound
CCV	Continuing calibration verification
CN	Cyanide
CRDL	Contract required detection limit
CRQL	Contract required quantitation limit
CVAA	Atomic adsorption, cold vapor technique
DCAA	2,4-Dichlophenylacetic acid
DCB	Decachlorobiphenyl
DFTPP	Decafluorotriphenyl phosphine
ECD	Electron capture detector
FAA	Atomic absorption, furnace technique
FID	Flame ionization detector
FNP	1-Fluoronaphthalene
GC	Gas chromatography
GC/MS	Gas chromatography/mass spectrometry
GPC	Gel permeation chromatography
ICB	Initial calibration blank
ICP	Inductively coupled plasma-atomic emission spectrometer
ICV	Initial calibration verification
IDL	Instrument detection limit
IS	Internal standard
LCS	Laboratory control sample
LCS/LCSD	Laboratory control sample/laboratory control sample duplicate
MSA	Method of standard additions
MS/MSD	Matrix spike/matrix spike duplicate
PID	Photo ionization detector
PCB	Polychlorinated biphenyl
PCDD	Polychlorinated dibenzodioxins
PCDF	Polychlorinated dibenzofurans
QA	Quality assurance
QC	Quality control
RF	Response factor
RPD	Relative percent difference
RRF	Relative response factor
RRF(number)	Relative response factor at concentration of the number following
RT	Retention time
RRT	Relative retention time
SDG	Sample delivery group
SPCC	System performance check compound
TCX	Tetrachloro-m-xylene
%D	Percent difference
%R	Percent recovery
%RSD	Percent relative standard deviation

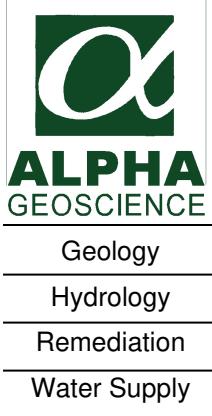

## **Data Validation Qualifiers Used in the QA/QC Reviews for USEPA Region II**

- U = Not detected. The associated number indicates the approximate sample concentration necessary to be detected significantly greater than the level of the highest associated blank.
- R = Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sample. Supporting data or information is necessary to confirm the result.
- N = Tentative identification. Analyte is considered present. Special methods may be needed to confirm its presence or absence during future sampling efforts.
- J = Analyte is present. Reported value may be associated with a higher level of uncertainty than is normally expected with the analytical method.
- J- = Analyte is present. Reported value may be biased low and associated with a higher level of uncertainty than is normally expected with the analytical method.
- J+ = Analyte is present. Reported value may be biased high and associated with a higher level of uncertainty than is normally expected with the analytical method.
- UJ = Not detected, quantitation limit may be inaccurate or imprecise.

Note: These qualifiers are used for data validation purposes. The data validation qualifiers may differ from the qualifiers that the laboratory assigns to the data. Refer to the laboratory analytical report for the definitions of the laboratory qualifiers.

## **Polyfluorinated Alkyl Substances (PFAS) Acronyms**

PFBA	Perfluorobutanoic acid
PFPeA	Perfluoropentanoic acid
PFHxA	Perfluorohexanoic acid
PFHpA	Perfluoroheptanoic acid
PFOA	Perfluorooctanoic acid
PFNA	Perfluorononanoic acid
PFDA	Perfluorodecanoic acid
PFUnA	Perfluoroundecanoic acid
PFDoA	Perfluorododecanoic acid
PFTriA or PFTrDA	Perfluorotridecanoic acid
PFTeA or PFTA	Perfluorotetradecanoic acid
PFBS	Perfluorobutanesulfonic acid
PFPeS	Perfluoropentanesulfonic acid
PFHxS	Perfluorohexanesulfonic acid
PFHpS	Perfluoroheptanesulfonic acid
PFOS	Perfluoroctanesulfonic acid
PFNS	Perfluorononanesulfonic acid
PFDS	Perfluorodecanesulfonic acid
FOSA	Perfluoroctane Sulfonamide
NMeFOSAA	N-methyl perfluorooctane sulfonamidoacetic acid
NEtFOSAA	N-ethyl perfluorooctane sulfonamidoacetic acid
4:2 FTS or 4:2	1H, 1H, 2H, 2H-perfluorohexanesulfonic acid
6:2 FTS or 6:2	1H, 1H, 2H, 2H-perfluoroctanesulfonic acid or 6:2 Fluorotelomersulfonate
8:2 FTS or 8:2	1H, 1H, 2H, 2H-perfluorodecanesulfonic acid or 8:2 Fluorotelomersulfonate

**Data Usability Summary Report  
for Alpha Analytical Labs  
SDG Number: L2032661**

**5 Ground Water Samples, 1 Field Duplicate,  
1 Field Blank, and 1 Equipment Blank  
Collected August 11, 2020**

Prepared by: Donald Anné  
September 11, 2020

---

The data package contained the documentation as required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results of PFAS analyses for 5 ground water samples, 1 field duplicate, 1 field blank, and 1 equipment blank, and results for 1,4-dioxane analyses for 5 ground water samples and 1 field duplicate.

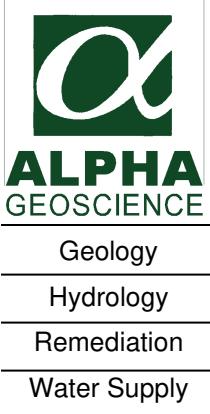

The overall performances of the analyses are acceptable. Alpha Analytical Labs did fulfill the requirements of the analytical method.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The positive PFAS results for PFHxA were qualified as “not detected” (U) at the reporting limits for sample MW-233S, FB08112020, EB08112020, MW-220, and MW-245S because the sample was associated with the method blank containing PFHxA and reported concentration for PFHxA was below the reporting limits.
- The positive PFAS results for PFPeA were qualified as “not detected” (U) at the reporting limits for sample MW-233S, MW-220, and MW-245S because the sample was associated with the equipment blank containing PFPeA and reported concentration for PFPeA was below the reporting limits.
- The positive PFAS results for PFHxA were qualified as “estimated, biased high” (J+) for samples MW-245D and DUP08112020 because the concentration reported in the samples were above the reporting limit but were not significantly greater than (more than 10 times) the highest associated blank level.
- The positive PFAS results for PFPeA were qualified as “estimated, biased high” (J+) for samples MW-233D, MW-245D, and DUP08112020 because the concentrations reported in the samples were above the reporting limit but were not significantly greater than (more than 10 times) the highest associated blank level.

- The positive PFAS results for 6:2FTS were qualified as “estimated” (J) for samples MW-245D and DUP08112020 because the surrogate used to quantitate 6:2FTS was above QC limits in the samples.

All data are considered usable with estimated (J or J+) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

**QA/QC Review of Method 537 (Modified) PFAS Data  
for Alpha Analytical Labs SDG Number: L2032661**

**5 Ground Water Samples, 1 Field Duplicate,  
1 Field Blank, and 1 Equipment Blank  
Collected August 11, 2020**

Prepared by: Donald Anné  
September 11, 2020

**Holding Times:** The samples were analyzed within USEPA holding times.

**Initial Calibration:** The %RSDs for applicable PFASs were below the method maximum (20%) or the R or R squared were above the method minimums, as required.

**Continuing Calibration:** The percent recoveries for 8:2FTS and PFNS were outside QC limits on 08-15-20 (I24052). Positive results for 8:2FTS and PFNS should be considered estimated (J) in associated samples.

**Blanks:** Method blank WG1398828-1BLANK contained a trace of PFHxA (0.384 ng/L). Equipment blank EB08112020 contained a trace of PFPeA (0.416 ng/L). Positive results for PFHxA and PFPeA that are below the reporting limit (RL) should be reported as not detected (U) at the reporting limit in associated samples. Positive results for PFHxA that are above the RL and less than ten times the highest blank level should be considered estimated, biased high (J+) in associated samples.

**Surrogate Recovery:** One of eighteen surrogate recoveries (M2-6:2FTS) for samples MW-233D, MW-245D, and DUP08112020 was above QC limits. Positive results associated with this surrogate should be considered estimated (J) in these samples.

**Matrix Spike/Matrix Spike Duplicate:** The relative percent differences for target PFAS were below the allowable maximum and the percent recoveries were within QC limits for aqueous MS/MSD sample MW-245D.

**Laboratory Control Sample:** The relative percent differences for target PFAS were below the allowable maximum and the percent recoveries were within QC limits for aqueous samples WG1398828-2 and WG1398828-3.

Field Duplicates: The relative percent differences for applicable PFAS were below the allowable maximum (20%) for aqueous field duplicate pair MW-245D/DUP08112020 (attached table), as required.

Compound ID: Checked compounds were within LC quantitation limits.

## EPA Method 537 PFC

### Calculations for Field Duplicate Relative Percent Difference (RPD) SDG No. L2032661

S1= MW-245D

S2= DUP08112020

Analyte	S1	S2	RPD (%)
Perfluorobutanoic Acid (PFBA)	<b>0.922</b>	<b>0.930</b>	NC
Perfluoropentanoic Acid (PFPeA)	2.71	2.66	2%
Perfluorohexanoic Acid (PFHxA)	2.78	2.74	1%
Perfluoroheptanoic Acid (PFHpA)	<b>0.685</b>	<b>0.645</b>	NC
Perfluoroctanoic Acid (PFOA)	<b>1.30</b>	<b>1.29</b>	NC
1H,1H,2H,2H-Perfluorooctanesulfonic Acid (6:2 FTS)	7.63	7.55	1%
Perfluorooctanesulfonic Acid (PFOS)	2.13	2.06	3%
Perfluorodecanoic Acid (PFDA)	<b>0.282</b>	<b>0.308</b>	NC
PFOA/PFOS, Total	<b>3.43</b>	<b>3.35</b>	NC

\* RPD is above the allowable maximum (20%).

All results are in ng/L.

**Bold numbers were values that are below the CRQL or above the high standard.**

ND - Not detected.

NC - Not calculated, both results must be within the linear range for valid RPDs to be calculated.

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

**HOLD POLICY** - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Volatile Organics

L2032544-01 through -05: The pH of the sample was less than two. It should be noted that 2-chloroethylvinyl ether breaks down under acidic conditions.

#### Nitrogen, Total Kjeldahl

The WG1398000-4 MS recovery, performed on L2032544-01, is outside the acceptance criteria for nitrogen, total kjeldahl (69%); however, the associated LCS recovery is within criteria. No further action was taken.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)  Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

### Footnotes

Report Format: DU Report with 'J' Qualifiers

**Project Name:** ORANGE COUNTY LF  
**Project Number:** 2010-15 (TASK 500)

**Lab Number:** L2032544  
**Report Date:** 08/18/20

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

#### Terms

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

**Difference:** With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

**Final pH:** As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

**Frozen Date/Time:** With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

**Initial pH:** As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

**PAH Total:** With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthrenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

**PFAS Total:** With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

#### Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration. (DoD and NYSDEC Part 375 PFAS only.)
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

**Report Format:** DU Report with 'J' Qualifiers

**Project Name:** ORANGE COUNTY LF  
**Project Number:** 2010-15 (TASK 500)

**Lab Number:** L2032544  
**Report Date:** 08/18/20

**Data Qualifiers**

- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

---

**The following analytes are not included in our Primary NELAP Scope of Accreditation:**

**Westborough Facility**

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene  
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.  
EPA 8270D: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.  
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

**Mansfield Facility**

SM 2540D: TSS  
EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.  
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.  
EPA TO-12 Non-methane organics  
EPA 3C Fixed gases  
Biological Tissue Matrix: EPA 3050B

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

**HOLD POLICY** - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

**Lab Number:** L2032781  
**Report Date:** 08/19/20

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Volatile Organics

L2032781-01 through -10: The pH of the sample was less than two. It should be noted that 2-chloroethylvinyl ether breaks down under acidic conditions.

L2032781-09: The sample has elevated detection limits due to the dilution required by the sample matrix (foam).

The WG1399724-6/-7 MS/MSD recoveries, performed on L2032781-01, are below the acceptance criteria for 2-chloroethylvinyl ether (0%/0%) due to the concentration of this compound in the MS/MSD falling below the reported detection limit.

#### Total Metals

L2032781-04: The dissolved result is greater than the total result for calcium, magnesium, and boron. The sample containers were verified as being labeled correctly by the laboratory, and aliquots were analyzed from each bottle, confirming the original results.

L2032781-09: The sample has elevated detection limits for all elements, with the exception of aluminum, boron, calcium, magnesium, and mercury, due to the dilution required by the high concentrations of target elements.

The WG1398488-3/-4 MS/MSD recoveries, performed on L2032781-01, are outside the acceptance criteria for selenium (69%/71%). A post digestion spike was performed and was within acceptance criteria.

#### Dissolved Metals

The WG1398825-3/-4 MS/MSD recoveries, performed on L2032781-01, are outside the acceptance criteria for aluminum (128%/128%). A post digestion spike was performed and yielded an unacceptable recovery for aluminum (180%). The serial dilution recovery was not applicable; therefore, this element fails the matrix test

**Project Name:** ORANGE COUNTY LF  
**Project Number:** 2010-15 (TASK 500)

**Lab Number:** L2032781  
**Report Date:** 08/19/20

#### **Case Narrative (continued)**

and the result reported in the native sample should be considered estimated.

The WG1398825-3/-4 MS/MSD recoveries, performed on L2032781-01, are outside the acceptance criteria for iron (162%/127%). A post digestion spike was performed and was within acceptance criteria.

The WG1398825-3/-4 MS/MSD RPD for iron (24%), performed on L2032781-01, is above the acceptance criteria.

The WG1398826-4 MSD recovery for calcium (69%), performed on L2032781-01, does not apply because the sample concentration is greater than four times the spike amount added.

#### BOD, 5 day

L2032781-03 and -09 were set at the correct dilution for BOD analysis according to prep screening; however, not enough depletion occurred. Therefore, the sample result is reported as "non-detect" at an elevated detection limit. Due to the expiration of the method required holding time, re-analysis could not be performed.

#### Anions by Ion Chromatography

The WG1398682-3/-4 MS/MSD recoveries, performed on L2032781-01, are outside the acceptance criteria for chloride (76%/83%) and bromide (87%/89%); however, the associated LCS recoveries are within criteria. No further action was taken.

#### Chemical Oxygen Demand

The WG1399029-3 MS recovery, performed on L2032781-01, is outside the acceptance criteria for chemical oxygen demand (120%); however, the associated LCS recovery is within criteria. No further action was taken.

#### Total Organic Carbon

The WG1398753-3 Laboratory Duplicate RPD for total organic carbon (38%), performed on L2032781-01, is above the acceptance criteria; however, the sample and duplicate results are less than five times the reporting limit. Therefore, the RPD is valid.

**Lab Number:** L2032781  
**Report Date:** 08/19/20

**Case Narrative (continued)**

Phenolics, Total

WG1398288: A Matrix Spike and Laboratory Duplicate were prepared with the sample batch, however, the native sample was not available for reporting; therefore, the results could not be reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)  Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

### Footnotes

Report Format: DU Report with 'J' Qualifiers

**Project Name:** ORANGE COUNTY LF  
**Project Number:** 2010-15 (TASK 500)

**Lab Number:** L2032781  
**Report Date:** 08/19/20

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

#### Terms

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

**Difference:** With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

**Final pH:** As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

**Frozen Date/Time:** With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

**Initial pH:** As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

**PAH Total:** With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthrenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

**PFAS Total:** With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

#### Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration. (DoD and NYSDEC Part 375 PFAS only.)
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

**Report Format:** DU Report with 'J' Qualifiers

**Project Name:** ORANGE COUNTY LF  
**Project Number:** 2010-15 (TASK 500)

**Lab Number:** L2032781  
**Report Date:** 08/19/20

**Data Qualifiers**

- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

---

**The following analytes are not included in our Primary NELAP Scope of Accreditation:**

**Westborough Facility**

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene  
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.  
EPA 8270D: NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.  
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

**Mansfield Facility**

SM 2540D: TSS  
EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.  
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.  
EPA TO-12 Non-methane organics  
EPA 3C Fixed gases  
Biological Tissue Matrix: EPA 3050B

**Box 1**

Site No. **336007**

**Site Name Orange County Landfill**

Site Address: Route 17M Zip Code: 10924  
City/Town: Goshen  
County: Orange  
Site Acreage: 75.000

Reporting Period: January 01, 1995 to September 30, 2020

YES      NO

1. Is the information above correct?

If NO, include handwritten above or on a separate sheet.

2. Has some or all of the site property been sold, subdivided, merged, or undergone a tax map amendment during this Reporting Period?

3. Has there been any change of use at the site during this Reporting Period (see 6NYCRR 375-1.11(d))?

4. Have any federal, state, and/or local permits (e.g., building, discharge) been issued for or at the property during this Reporting Period?

**If you answered YES to questions 2 thru 4, include documentation or evidence that documentation has been previously submitted with this certification form.**

5. Is the site currently undergoing development?

**Box 2**

YES      NO

6. Is the current site use consistent with the use(s) listed below?    
Closed Landfill

7. Are all ICs in place and functioning as designed?

**IF THE ANSWER TO EITHER QUESTION 6 OR 7 IS NO, sign and date below and DO NOT COMPLETE THE REST OF THIS FORM. Otherwise continue.**

**A Corrective Measures Work Plan must be submitted along with this form to address these issues.**

**Description of Institutional Controls**

<u>Parcel</u>	<u>Owner</u>	<u>Institutional Control</u>
16-1-1.1	O. C. Dept. Envion. Facilities Services	
		Ground Water Use Restriction
		Landuse Restriction
		Building Use Restriction
		Site Management Plan
		Monitoring Plan
		O&M Plan
		IC/EC Plan

This is a municipal landfill that has been capped under Title 3, with leachate collection. Landfill gas collection and control is no longer required per Division of Air Resources. Periodic groundwater monitoring and inspections and reporting in accordance with June 6, 2014 SMP are required.

The Department concluded seeps along the Cheechunk Canal are leachate and Orange County was notified in a letter dated 11/25/13. Orangs County and their consultant, Sterling Environmental, have been investigating this matter. Also, the Department has drafted an Order on Consent that will require the following items to be submitted between the beginning of Decemeber 2014 and the end of January 2015: Long Term Seep Evaluation Report, Expedited IRM Work Plan, Long Term Seep Elimination Feasibility Study, and Supplemental Sediment Investigation Work Plan.

**Periodic Review Report (PRR) Certification Statements**

1. I certify by checking "YES" below that:

- a) the Periodic Review report and all attachments were prepared under the direction of, and reviewed by, the party making the Engineering Control certification;
- b) to the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and the information presented is accurate and compete.

YES      NO

X     

2. For each Engineering control listed in Box 4, I certify by checking "YES" below that all of the following statements are true:

- (a) The Engineering Control(s) employed at this site is unchanged since the date that the Control was put in-place, or was last approved by the Department;
- (b) nothing has occurred that would impair the ability of such Control, to protect public health and the environment;
- (c) access to the site will continue to be provided to the Department, to evaluate the remedy, including access to evaluate the continued maintenance of this Control;
- (d) nothing has occurred that would constitute a violation or failure to comply with the Site Management Plan for this Control; and
- (e) if a financial assurance mechanism is required by the oversight document for the site, the mechanism remains valid and sufficient for its intended purpose established in the document.

YES      NO

**Enclosure 3**  
**Periodic Review Report (PRR) General Guidance**

- I. Executive Summary: (1/2-page or less)
  - A. Provide a brief summary of site, nature and extent of contamination, and remedial history.
  - B. Effectiveness of the Remedial Program - Provide overall conclusions regarding;
    1. progress made during the reporting period toward meeting the remedial objectives for the site
    2. the ultimate ability of the remedial program to achieve the remedial objectives for the site.
  - C. Compliance
    - 1. Identify any areas of non-compliance regarding the major elements of the Site Management Plan (SMP, i.e., the Institutional/Engineering Control (IC/EC) Plan, the Monitoring Plan, and the Operation & Maintenance (O&M) Plan).
    - 2. Propose steps to be taken and a schedule to correct any areas of non-compliance.
  - D. Recommendations
    - 1. recommend whether any changes to the SMP are needed
    - 2. recommend any changes to the frequency for submittal of PRRs (increase, decrease)
    - 3. recommend whether the requirements for discontinuing site management have been met.
- II. Site Overview (one page or less)
  - A. Describe the site location, boundaries (figure), significant features, surrounding area, and the nature and extent of contamination prior to site remediation.
  - B. Describe the chronology of the main features of the remedial program for the site, the components of the selected remedy, cleanup goals, site closure criteria, and any significant changes to the selected remedy that have been made since remedy selection.
- III. Evaluate Remedy Performance, Effectiveness, and Protectiveness

Using tables, graphs, charts and bulleted text to the extent practicable, describe the effectiveness of the remedy in achieving the remedial goals for the site. Base findings, recommendations, and conclusions on objective data. Evaluations and should be presented simply and concisely.
- IV. IC/EC Plan Compliance Report (if applicable)
  - A. IC/EC Requirements and Compliance
    - 1. Describe each control, its objective, and how performance of the control is evaluated.
    - 2. Summarize the status of each goal (whether it is fully in place and its effectiveness).
    - 3. Corrective Measures: describe steps proposed to address any deficiencies in ICECs.
    - 4. Conclusions and recommendations for changes.
  - B. IC/EC Certification
    - 1. The certification must be complete (even if there are IC/EC deficiencies), and certified by the appropriate party as set forth in a Department-approved certification form(s).
- V. Monitoring Plan Compliance Report (if applicable)
  - A. Components of the Monitoring Plan (tabular presentations preferred) - Describe the requirements of the monitoring plan by media (i.e., soil, groundwater, sediment, etc.) and by any remedial technologies being used at the site.
  - B. Summary of Monitoring Completed During Reporting Period - Describe the monitoring tasks actually completed during this PRR reporting period. Tables and/or figures should be used to show all data.
  - C. Comparisons with Remedial Objectives - Compare the results of all monitoring with the remedial objectives for the site. Include trend analyses where possible.
  - D. Monitoring Deficiencies - Describe any ways in which monitoring did not fully comply with the monitoring plan.
  - E. Conclusions and Recommendations for Changes - Provide overall conclusions regarding the monitoring completed and the resulting evaluations regarding remedial effectiveness.
- VI. Operation & Maintenance (O&M) Plan Compliance Report (if applicable)
  - A. Components of O&M Plan - Describe the requirements of the O&M plan including required activities, frequencies, recordkeeping, etc.
  - B. Summary of O&M Completed During Reporting Period - Describe the O&M tasks actually completed during this PRR reporting period.
  - C. Evaluation of Remedial Systems - Based upon the results of the O&M activities completed, evaluated

- the ability of each component of the remedy subject to O&M requirements to perform as designed/expected.
- D. O&M Deficiencies - Identify any deficiencies in complying with the O&M plan during this PRR reporting period.
  - E. Conclusions and Recommendations for Improvements - Provide an overall conclusion regarding O&M for the site and identify any suggested improvements requiring changes in the O&M Plan.

VII. Overall PRR Conclusions and Recommendations

- A. Compliance with SMP - For each component of the SMP (i.e., IC/EC, monitoring, O&M), summarize:
  1. whether all requirements of each plan were met during the reporting period
  2. any requirements not met
  3. proposed plans and a schedule for coming into full compliance.
- B. Performance and Effectiveness of the Remedy - Based upon your evaluation of the components of the SMP, form conclusions about the performance of each component and the ability of the remedy to achieve the remedial objectives for the site.
- C. Future PRR Submittals
  1. Recommend, with supporting justification, whether the frequency of the submittal of PRRs should be changed (either increased or decreased).
  2. If the requirements for site closure have been achieved, contact the Departments Project Manager for the site to determine what, if any, additional documentation is needed to support a decision to discontinue site management.

VIII. Additional Guidance

Additional guidance regarding the preparation and submittal of an acceptable PRR can be obtained from the Departments Project Manager for the site.
