Re: Groundwater sampling event for the  
Wallkill Wellfield Site, City of Middletown, Orange County, New York  
ESI File: LM 97145.40

Dear Mr. Olivo:

This Letter Report of Groundwater Sampling (Letter Report) summarizes fieldwork performed by Ecosystems Strategies, Inc. (ESI) on the above-referenced property. The investigative and analytical work summarized in this Letter Report was performed to document current on-site and off-site groundwater conditions. These data are provided as qualitative indications of changes in groundwater quality. These data have not been reviewed by a validator and therefore will not be considered a definitive assessment of site conditions.

ESI personnel performed groundwater sampling of both on-site and off-site wells on April 29, April 30, May 1, May 5, June 12, June 13, and June 17, 2008. The groundwater monitoring wells addressed in this Letter Report include MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-7, MW-8, MW-9, MW-10, MW-12, MW-13, MW-16, MW-19, W-30, MW-202, MW-203, MW-204, MW-206, MW-207, MW-209, MW-211, MW-219, and MW-220. A Fieldwork Map indicating well locations and associated selected site features is provided as an attachment to this Letter Report.

## **Fieldwork Methodology**

Prior to sampling, wells were screened using a photo-ionization detector (PID) calibrated to 100 parts per million calibration gas equivalents (ppm-cge) isobutylene in air. Screening results were utilized in determining the presence or absence of elevated concentrations of PCE vapors in the work area. In addition, the groundwater monitoring wells were purged using a two-inch diameter, properly decontaminated, stainless steel submersible Grundfos Low Flow pump with dedicated tubing attached.

Field indicator parameters (temperature, pH, specific conductance, dissolved oxygen, turbidity, and oxidation reduction potential [ORP]) were measured during low-flow well purging using a Horiba U-22 field instrument with an inline testing cell (see Table 1). Well purging was considered adequate when the field-measured parameter readings stabilized. Once the field indicator parameters stabilized, groundwater samples were collected using dedicated tubing.

---

P. Olivo

Page 2 of 3

### **Sample Collection**

All groundwater samples were collected in a manner consistent with USEPA and NYSDEC sample collection protocols. Samples were collected directly into laboratory-cleaned, 40-milliliter vials containing hydrochloric acid as a preservative for VOCs.

After sample collection, the sample containers were placed in a cooler prior to transport to the laboratory. The water samples were transported within 24 hours via courier to York Analytical Laboratories, Inc., a New York State Department of Health Environmental Laboratory Approval Program (ELAP) certified laboratory (ELAP Certification Number 10854) for chemical analyses. Appropriate chain of custody procedures were followed.

### **Laboratory Analysis**

All water samples were submitted to the laboratory and analyzed for the halogenated fraction of VOCs utilizing USEPA Method 8260.

### **Laboratory Results**

Although the laboratory analytical results for the 2008 sampling event were not validated, ESI believes those data are useful and will be utilized as part of the historical record.

For the purpose of organization and clarity, the reference and discussion of laboratory data is segregated into three distinct categories to more accurately classify the extent of tetrachloroethylene (PCE) in groundwater obtained from selected wells during the current groundwater sampling event. Groundwater samples are categorized as those with concentrations less than 50 µg/l, those with concentrations between 50 µg/l and 500 µg/l, and those with concentrations greater than 500 µg/l. All data is summarized in Table 2 and all laboratory data reports are included as an attachment to this Letter Report.

#### *Concentrations of PCE Less than 50 µg/l*

No concentrations of PCE above laboratory minimum detection levels were detected in MW-1, MW-2, MW-7, MW-8, MW-10, MW-12, or MW-207. MW-1, MW-2, MW-8, MW-10, and MW-12 are shallow wells that document the general absence of PCE to the northwestern of the Site at shallow depths. MW-7 is an overburden (shallow) well and MW-207 is a bedrock (deep) well located southwest and crossgradient of the Wallkill Wellfield building.

Low concentrations of PCE were detected in MW-6 (45 µg/l), MW-13 (4 µg/l), and MW-211 (23 µg/l). MW-6 and MW-13 are both overburden wells and MW-211 is a bedrock well. MW-6 and MW-211 are located to the southeast of the on-site building. MW-13 is located to the northwest of the Site.

ESI File: LM97145.40  
Page 3 of 3

### *Concentrations of PCE Between 50 and 500 µg/l*

Concentrations of PCE between 50 µg/l and 500 µg/l were detected at overburden wells MW-3 (430 µg/l) and MW-16 (450 µg/l), and at bedrock wells W-30 (62 µg/l), MW-202 (110 µg/l), MW-206 (130 µg/l), MW-209 (190 µg/l), MW-219 (220 µg/l), and MW-220 (340 µg/l). All of the wells, with the exception of W-30 and MW-202, are located downgradient of the Wallkill Wellfield Building. MW-209 and MW-219 are the most downgradient bedrock wells.

### *Concentrations of PCE Greater than 500 µg/l*

Concentrations of PCE greater than 500 µg/l were detected at overburden wells MW-4 (3,200 µg/l), MW-5 (17,000 µg/l), MW-9 (820 µg/l), and MW-19 (520 µg/l); and at bedrock wells MW-203 (1,500 µg/l), and MW-204 (680 µg/l). All of these wells are downgradient of the Wallkill Wellfield Building.

### **Comparison of Data**

Both off-site and on-site PCE levels have decreased in comparison to the 2005 sampling event, with the exception of overburden well MW-9 and bedrock well MW-219. However, PCE levels in MW-9 have remained fairly consistent when comparing data from the 2000, 2003, 2005 and 2008 sampling events. Data does not exist for MW-219 before 2005 (see Fieldwork Map).

An apparent hot spot exists in the overburden near overburden well MW-5. Remediation of this area is included in the Remedial Action Workplan submitted to the USEPA on August 12, 2008.

Please review this document and call me at (845) 452-1658 should you have any questions or comments.

Sincerely,

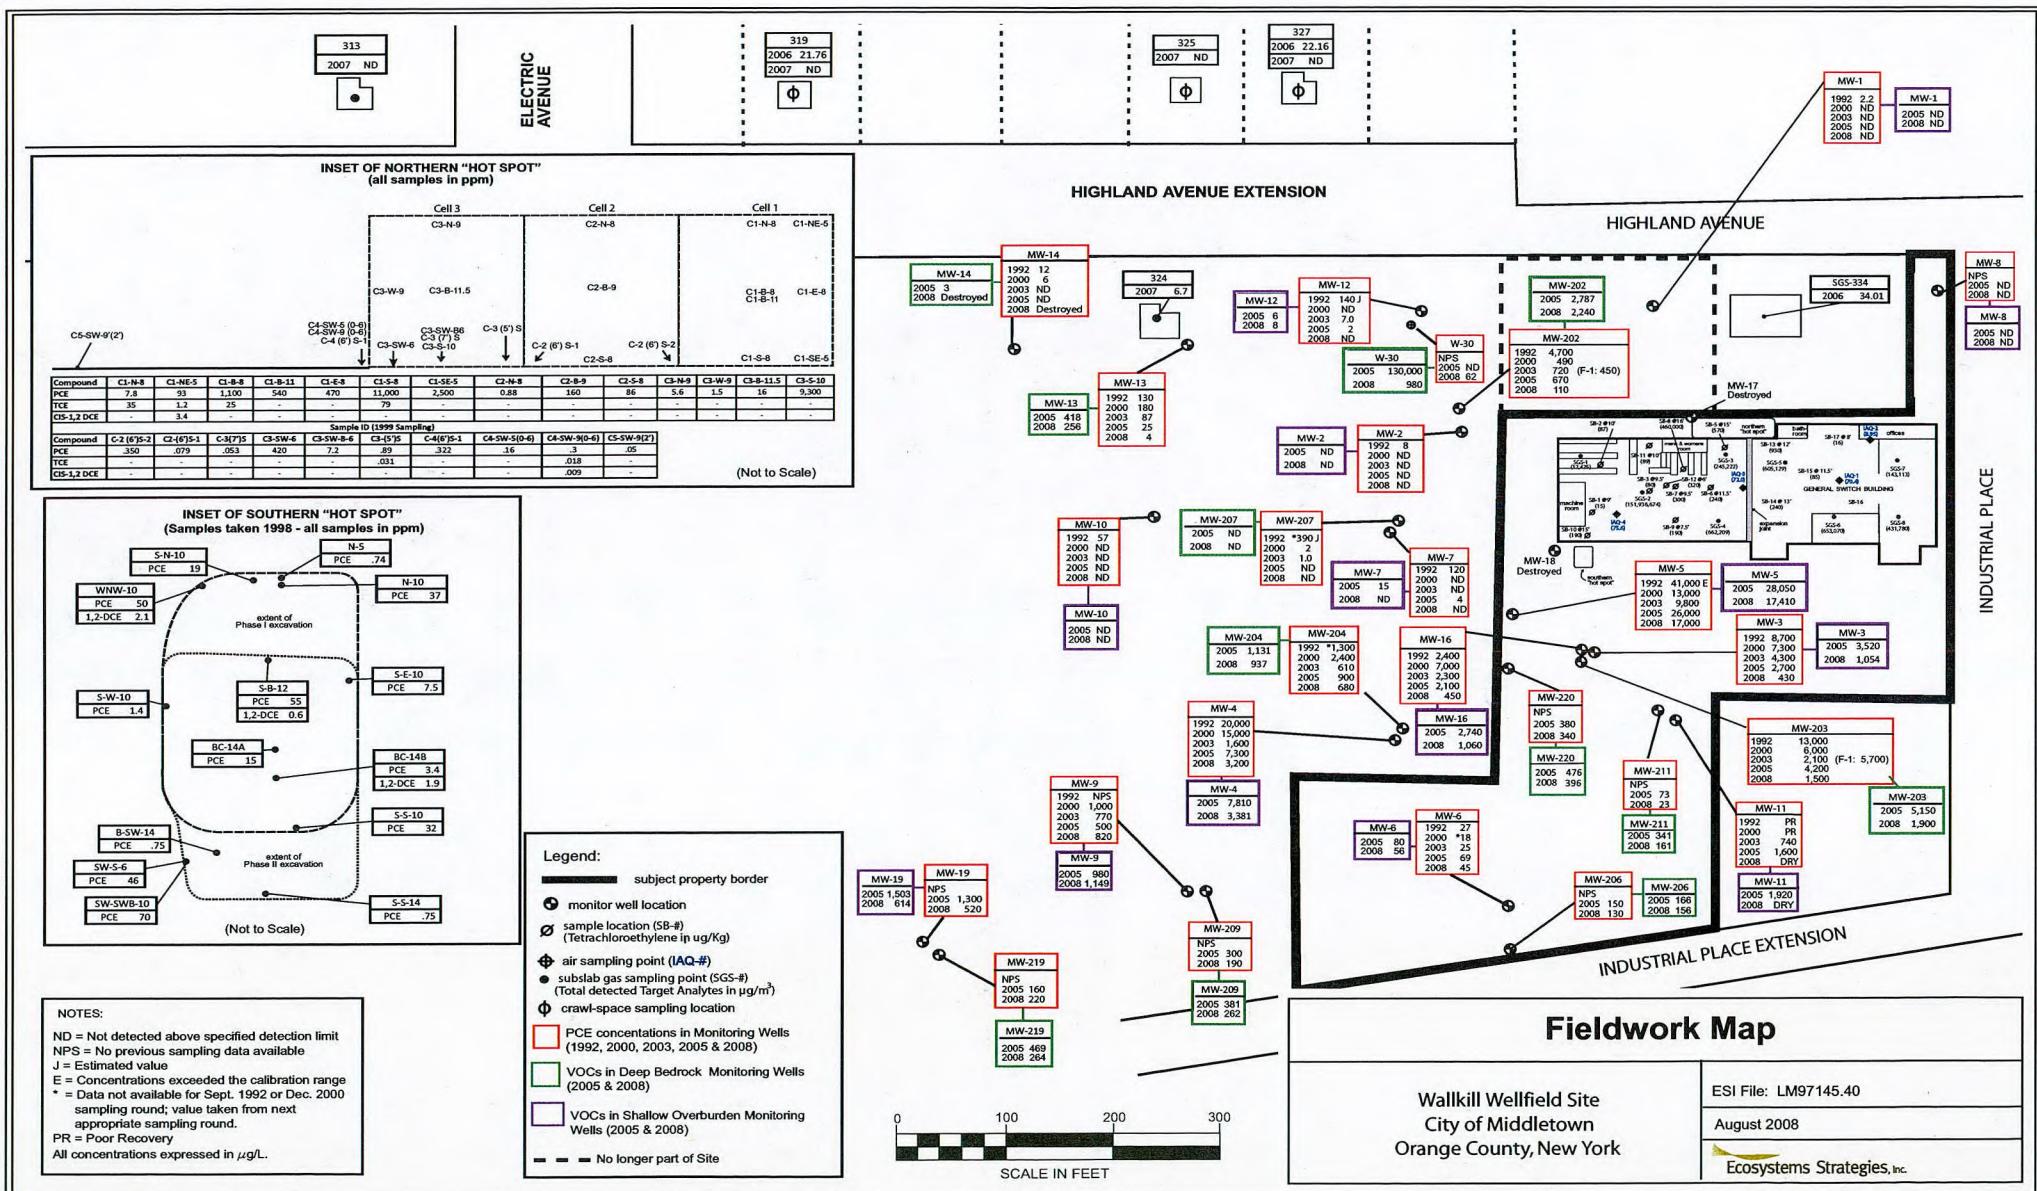

ECOSYSTEMS STRATEGIES, INC.

## Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on 05/01/08. The project was identified as your project "LM 97145".

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the NELAC acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All the analyses met the method and laboratory standard operating procedure requirements except as indicated under the Notes section of this report, or as indicated by any data flags, the meaning of which is explained in the attachment to this report, if applicable.

The results of the analyses, which are all reported on an as-received basis unless otherwise noted, are summarized in the following table(s).

York Project No.: 08050104

**Notes for York Project No. 08050104**

1. The "RL" is the REPORTING LIMIT and is adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. This REPORTING LIMIT is based upon the lowest standard utilized for calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation.
6. All analyses conducted met method or Laboratory SOP requirements.
7. It is noted that no analyses reported herein were subcontracted to another laboratory.
8. Other attachments to this report, including Chain-of-custody documentation and Case narratives are hereby made a part of this report.

## Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on 05/01/08. The project was identified as your project "LM97145".

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the NELAC acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All the analyses met the method and laboratory standard operating procedure requirements except as indicated under the Notes section of this report, or as indicated by any data flags, the meaning of which is explained in the attachment to this report, if applicable.

The results of the analyses, which are all reported on an as-received basis unless otherwise noted, are summarized in the following table(s).

## Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on 05/01/08. The project was identified as your project "LM97145".

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the NELAC acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All the analyses met the method and laboratory standard operating procedure requirements except as indicated under the Notes section of this report, or as indicated by any data flags, the meaning of which is explained in the attachment to this report, if applicable.

The results of the analyses, which are all reported on an as-received basis unless otherwise noted, are summarized in the following table(s).

## Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on 06/16/08. The project was identified as your project "LM97145".

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the NELAC acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All the analyses met the method and laboratory standard operating procedure requirements except as indicated under the Notes section of this report, or as indicated by any data flags, the meaning of which is explained in the attachment to this report, if applicable.

The results of the analyses, which are all reported on an as-received basis unless otherwise noted, are summarized in the following table(s).

## Analysis Results

Client Sample ID			MW-19

**Units Key:** For Waters/Liquids: mg/L = ppm ; ug/L = ppb

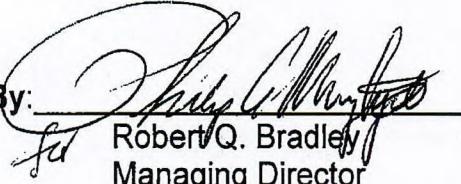

For Soils/Solids: mg/kg = ppm ; ug/kg = ppb

Report Date: 6/23/2008  
Client Project ID: LM97145  
York Project No.: 08060537

**Notes for York Project No. 08060537**

1. The "RL" is the REPORTING LIMIT and is adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. This REPORTING LIMIT is based upon the lowest standard utilized for calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation.
6. All analyses conducted met method or Laboratory SOP requirements.
7. It is noted that no analyses reported herein were subcontracted to another laboratory.
8. Other attachments to this report, including Chain-of-custody documentation and Case narratives are hereby made a part of this report.

## Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on 06/16/08. The project was identified as your project "LM97145".

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the NELAC acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All the analyses met the method and laboratory standard operating procedure requirements except as indicated under the Notes section of this report, or as indicated by any data flags, the meaning of which is explained in the attachment to this report, if applicable.

The results of the analyses, which are all reported on an as-received basis unless otherwise noted, are summarized in the following table(s).

York Project No.: 08060536

**Notes for York Project No. 08060536**

1. The "RL" is the REPORTING LIMIT and is adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. This REPORTING LIMIT is based upon the lowest standard utilized for calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation.
6. All analyses conducted met method or Laboratory SOP requirements.
7. It is noted that no analyses reported herein were subcontracted to another laboratory.
8. Other attachments to this report, including Chain-of-custody documentation and Case narratives are hereby made a part of this report.

## Definitions for FLAGS used as a Results Suffix

Flags are sometimes used on results to indicate certain occurrences during the analysis process. The most common flags used by York are defined below.

<u>FLAG</u>	<u>DEFINITION</u>
J	J indicates an estimated value. This flag applies to Tentatively Identified Compounds or, when requested, for a target compound whose result is less than the reporting limit but whose mass spectral data meet identification criteria. For example if the reporting limit is listed as 10 ppb and the analysis shows 3 ppb, the result can be reported as 3 J. The client must request the use of J flags for the laboratory to report such flags.
B	B indicates that the analyte was also found in the associated batch method blank. This flag indicates possible/probable blank contamination and warns the data user to be aware. This mostly applies to the volatiles acetone and methylene chloride and the semi-volatiles bis-(2-ethylhexyl) phthalate and other phthalates.
E	This flag is used to indicate that the reported concentration of an analyte exceeded the calibration range of the analytical system. In this case the result reported is treated as a minimum value. This often applies where clients request an additional analyte after sample analysis, such as acetone, where the initial analysis did not require dilution since acetone was not a target compound. This flag will also apply if after numerous dilutions a specific target compound would significantly dilute out all other targets.
A	This flag indicates that the compound is a known artifact present in the sample. This flag typically refers to compounds detected in AIR samples taken into Tedlar bags. These compounds are either from the manufacturing process or, since Tedlar bags are somewhat permeable, they are subject to intrusion of common laboratory solvents such as acetone, methylene chloride, hexane and Freon-113.

## Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on 06/18/08. The project was identified as your project "LM97145".

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the NELAC acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All the analyses met the method and laboratory standard operating procedure requirements except as indicated under the Notes section of this report, or as indicated by any data flags, the meaning of which is explained in the attachment to this report, if applicable.

The results of the analyses, which are all reported on an as-received basis unless otherwise noted, are summarized in the following table(s).
