CERTIFICATIONS

I, Arnold F. Fleming, PE, certify that I am currently a NYS registered professional engineer and that this Site Management Plan was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10).

It is a violation of Article 145 of New York State Education Law for any person to alter this document in any way without the express written verification of adoption by any New York State licensed engineer in accordance with Section 7209(2), Article 145, New York State Education Law.

EXECUTIVE SUMMARY

This Periodic Review Report (PRR) is for the AFFCO Site (No. 3-36-036) remediated in 2012 under a New York State Consent Order Index (W3-0784-04-06) administered by the New York State Department of Environmental Conservation (NYSDEC). The PRR documents compliance with the Site Management Plan (SMP) for the reporting period from August 2, 2022 through August 2, 2023. The AFFCO Site is located at 361 Walsh Avenue, New Windsor, Orange County, New York.

The SMP outlines the requirements to be followed after remediation in order to ensure there is no exposure to any remaining contamination. The SMP includes both Engineering Controls and Institutional Controls to prevent exposure that are specified within an Environmental Easement. The Environmental Easement consists of two areas each with its own Engineering Control: (1) Piano Felt Building and attendant Sub-slab Depressurization System (SSDS) and (2) the Soil Management Area and attendant soil cover. Both engineering controls were inspected on July 13, 2023, and found to be in compliance with the SMP requirements. The Site also adheres to the Institutional Control requirements that are part of the Environmental Easement. Therefore, AFFCO is in compliance with the SMP requirements for the reporting period.

1.0 INTRODUCTION

This PRR is for the AFFCO Site (No. 3-36-036) remediated under a New York State Consent Order Index (W3-0784-04-06) administered by NYSDEC. The PRR documents compliance with the SMP for the reporting period from August 2, 2022 through August 2, 2023. The Site is in compliance with the SMP requirements for the reporting period.

AFFCO entered into the Consent Order with NYSDEC to remediate an area impacted by releases of 1,1,1-Trichloroethane (TCA) when the mandate was executed on November 17, 2004. Figure 1 shows the general Site Layout, Site boundaries, and Environmental Easement. Figure 2 is a Site plan depicting the remediated area.

Subsequent to remediation, NYSDEC created an Environmental Easement with requirements to prevent exposure to any remaining contamination. The Environmental Easement contains both Engineering Controls and Institutional Controls as protective measures to be followed to prevent exposure. The Environmental Easement is part of the Site Management Plan.

The Environmental Easement consists of two sub areas: (1) the Piano Felt Building and (2) a Soil Management Area. The Piano Felt Building contains a Sub-slab Depressurization System (SSDS) that mitigates potential vapor impacts. The Soil Management Area was remediated by a combination of excavation and *in situ* chemical oxidation. The boundaries of the Environmental Easement are more fully described in the metes and bounds description included in the Environmental Easement description (Appendix A).

The Site manufactured felt for over 100 years. One product line was the manufacture of felt filter face masks for particulates that used TCA in the production process. Site investigations began when traces of TCA appeared in water samples collected from a storm water outfall that discharged to the stream that borders the Site on the north, Quassaick Creek. The Site was subsequently placed on NYSDEC's List of Inactive Hazardous Waste Sites in 1991 (Site Code 3-36-036) due to the potential threat to the creek. The source of TCA was believed to from past leaks and spills from a process area and drum storage area near the former Feutron Building where the TCA was used and stored and where remediation took place (Figure 2). The facility stopped using TCA in 1992 when its use in manufacture ended.

Remediation took place from July 2012 through September 2012. The first remedial element was *in situ* chemical injection using the patented RemMetrik *in situ* treatment process in July 2012. Injection treated soils below the water table at approximately 10 feet below grade to 15 feet below grade in the 50-ft. by 50-ft. remediation area (Figure 2). Approximately 13,200 gallons of activated sodium persulfate were injected between July 9 and July 26, 2012. This was followed by a remedial excavation to approximately 11 feet below grade from August 27 through September 9, 2012.

The Site cleanup standards for soils are the Part 375 Commercial Use Soil Cleanup Objectives (CUSCO). Nearly all of the post-treatment soils met the more stringent Residential Use SCOs. All post-treatment and endpoint samples met the CUSCOs.

The cleanup goal for groundwater is NYSDEC TOGS 1.1.1, (TOGS) Class GA, Ambient Water Quality Standards and Guidance Values (AWQS) or asymptotic levels of VOCs in groundwater

following acceptable levels of treatment.

TCA concentrations in groundwater have not met the TOGs standards at this point, but have shown order-of-magnitude reductions and appear to have reached asymptotic levels and in some instances appear to still be decreasing. Most wells have only a few detected VOC compounds and fewer still have other VOCs above TOGS GA AWQS.

The groundwater sampling results from the most recent sampling event (Q3-Q4 2022) show an overall net sustained decreasing or level trend for TCA in all wells both within and outside the treatment area. TCA and Total VOCs show order-of-magnitude reductions in all sampled wells compared to pre-treatment maximums.

Comparison of the maximum pre-treatment (or immediate post-treatment) concentrations to the Q3-Q4 2022 results show very substantial reductions. These represent sustained reductions 10 years (2022-2012) after treatment. All told, the average weighted reduction for TCA and Total VOCs compared with pre-treatment levels is 94 percent for TCA and 84 percent for Total VOCs as of the 3Q-4Q 2022 sampling event. No material rebound in groundwater concentrations approaching pre-treatment levels has been observed in the years following remediation; levels remain approximately an order-of-magnitude or more below pre-treatment concentrations.

2.0 SITE OVERVIEW

Section 2 describes the general Site characteristics and conditions prior to remediation.

2.1 Site Location and Description

The Site is an active manufacturing facility located on the north side of Walsh Avenue, west of River Road in New Windsor, New York (Figure 1). The Site lies on the south side of Quassaick Creek, which flows into the Hudson River approximately 0.2 miles east of the Site. The surrounding area has a mixture of land uses, including industrial, commercial and residential. Potable water is supplied by the New Windsor Water Department.

The entire property occupies 23.185 acres, much of it is wooded and undeveloped. The Site operational area occupies approximately nine acres. The nine-acre operational area includes several large buildings, parking, open lawn and wooded areas, and encompasses the Environmental Easement. The Environmental Easement covers 0.5454 acres and is made up of the Soil Management Area (0.3845 acres) and the Piano Felt Building SSDS area (0.1609 acres) (Figure 1). The Environmental Easement is more fully described in the metes and bounds description that is part of the Environmental Easement (Appendix A).

2.2 Geology and Hydrological Conditions

2.2.1 Geological Conditions

The lithology within the treatment area consists of fill over alluvium underlain by glacial till. The soils consist of a mixture of fill over native soils. The fill lies from approximately 2 to 8 feet below grade and consists of a mixture of ash, cinders, brick, coal and concrete fragments in a silty sand and sandy silt matrix. This is underlain by grey to black silty sands and sandy silt. Below lies a compact glacial till that begins at approximately 13 to 15 feet below grade.

2.2.2 Hydrogeology

Depth to groundwater fluctuates depending on the season and amount of precipitation but is typically 8 to 10 feet below grade. Shallow groundwater flows towards Quassaick Creek.

2.3 Nature and Extent of Contamination

2.3.1 Soil Contamination

The principal contaminant of concern in soil was the chlorinated VOC TCA, the solvent used in the former production process. Other important contaminants, all chlorinated VOCs, included 1,1-Dichloroethane; 1,2-Dichloroethane; cis,1,2-Dichloroethane; trans,1,2-Dichloroethane;

Tetrachloroethane (PCE); 1,1,2-Trichloroethane; 1,1,2-Trichloroethane; and Trichloroethene (TCE). One non-chlorinated VOC, toluene, also had appreciable concentrations prior to remediation. Table 1 shows the pre-remedy data concentration spread for each of these compounds.

Table 1 - Summary of Pre-Remedy VOCs in Soil, µg/kg

VOC	No. Obs.	Min	p25	p50	p75	Max
1,1,1-Trichloroethane (TCA)	51	nd	410	2,600	12,000	5,270,000
1,1-Dichloroethane	51	nd	9.6	287	6,160	23,300
1,2-Dichloroethane	51	nd	nd	3.1	254	16,100
1,1-Dichloroethene	51	nd	22	544	2,770	86,800
cis,1,2dichloroethene	39	nd	nd	nd	39.7	5,590
Trans,1,2-Dichloroethene	51	nd	nd	nd	3	5,650
Tetrachloroethene (PCE)	39	nd	nd	nd	22.1	920
Trichloroethene (TCE)	51	nd	.57	33.7	351	30,900
1,1,2-Trichloroethane	51	nd	nd	nd	nd	1,780
Toluene	51	nd	nd	nd	nd	12,400

Min. – minimum conc.; p25 -25th percentile; p50 - 50th percentile (median); p75 - 75th percentile; Max. – maximum conc.; nd – non-detect

All of the primary VOCs in soil were below the CUSCOs. As shown in Table 1, most VOCs exhibited non-detect or low concentrations and comparatively few VOCs had elevated concentrations. Only TCA was above its CUSCO in three out of 51 soil samples (5.9 percent). The most elevated TCE soil concentrations were between 4 and 12 feet below grade, where TCA ranged from 1,150,000 µg/kg to 5,270,000 µg/kg (1,150 mg/kg to 5,270 mg/kg).

2.3.2 Groundwater Contamination

As with soil, the primary groundwater contaminant of concern prior to remediation was TCA. Approximately 62 percent of the 125 groundwater pre-remediation TCA groundwater samples were below its TOGS GA AWQS of 5 µg/L. Three of these 125 pre-remedy samples had TCE concentrations above 13,096 µg/L, the one percent solubility threshold indicating possible Dense Non-aqueous Phase Liquid (DNAPL). The three samples with these concentrations were all in what would eventually become the remediation area. No other VOCs had concentrations suggestive of DNAPL.

The concentrations of the remaining VOCs in Table 2 had roughly 50 to 75 percent of the results below their respective TOGS AWQS. The most elevated concentrations were predominantly in

the area that would eventually become the treatment area, although sample collection focused on this area.

Table 2 - Summary of Pre-Remedy VOCs in Groundwater, µg/L

VOC	No. Obs.	Min	p25	p50	p75	Max
1,1,1-Trichloroethane (TCA)	125	nd	nd	nd	20	50,000
1,1-Dichloroethane	69	nd	nd	2.8	130	36,100
1,2-Dichloroethane	69	nd	nd	nd	nd	233
1,1-Dichloroethene	68	nd	nd	nd	4.95	562
cis,1,2dichloroethene	19	nd	nd	nd	0.73	7.3
Trans,1,2-Dichloroethene	33	nd	nd	nd	nd	12
Tetrachloroethene (PCE)	32	nd	nd	nd	nd	2.2
Trichloroethene (TCE)	69	nd	nd	nd	2.3	28
1,1,2-Trichloroethane	60	nd	nd	nd	nd	34.5
Toluene	55	nd	nd	nd	nd	60.5

2.4 Site Cleanup

Site cleanup occurred in the 50-ft. by 50-ft. impacted area adjacent to the former Feutron Building (Figure 2). Cleanup took place from July 2012 through October 2012 in the form of *in situ* chemical injection followed by remedial excavation. The following sections describe Site conditions following remediation. The principal Compound of Concern was TCA. Per the February 2018 *Final Engineering Report,* the groundwater cleanup goals are the TOGS 1.1.1 Class GA Ambient Water Quality Standards or asymptotic levels of VOCs in groundwater following acceptable levels of treatment.

3.0 REMEDY PERFORMANCE, EFFECTIVENESS, & PROTECTIVENESS

Section 3 describes the post-remedy Site conditions. Soil cleanup met, and in most cases exceeded, the established cleanup goals. Groundwater, undergoing continued monitoring, is meeting the cleanup goals for this medium.

3.1 Post *in situ* Chemical Oxidation Soil Results

Of the 31 post-treatment soil samples collected following chemical injection, all but three VOC results met the Residential Use w/CP-51 Soil Cleanup Objectives, which are more stringent than the CUSCOs. The VOC compounds in the remaining three samples were well below the CUSCOs. An appreciable number of post-treatment soil samples were below the Unrestricted Use SCOs. The average overall Total VOC mass reduction was 76 percent. The average overall TCA mass reduction was 87 percent (Figure 3).

3.2 Post Remedial Excavation Soil Results

All post-excavation and post-treatment soil sample results were below the Site cleanup criteria, the Part 375 CUSCOs. Post-excavation endpoint sample results found all VOC concentrations below the NYSDEC Unrestricted Use Criteria with the exception of 1,1-Dichloroethane in one sample (PX-07) and 1,1-Dichloroethane, 1,1-Dichloroethene and 1,1,1-Trichloroethane in another sample (PX-3). These samples were below the CUSCOs (Figure 4).

3.3 Post Treatment Groundwater Results

Post-treatment groundwater sampling took place in April 2013. Of the 35 VOCs in the 8260 Target Compound List, 21 (60 percent) of the VOC results were below detection limits in all five groundwater samples within and downgradient of the treatment area. Of the 14 detected VOCs, five (14 percent of the total) were all below the TOGS AWQS or guideline values. Nine VOCs were above the TOGS AWQS or guidelines: Chloroethane, 1,1-Dichloroethane, 1,2-Dichloroethane, 1,1-Dichloroethene, Toluene, 1,1,1-Trichloroethane, 1,1,2-Trichloroethane, Trichloroethane, and Vinyl chloride. Among these nine VOCs, four of the compounds were below the TOGS AWQS or guidelines in 75 percent of the samples.

The VOCs with the highest groundwater concentrations were Chloroethane (334 µg/L), 1,1-Dichloroethane (2,540 µg/L), and 1,1,1-Trichloroethane (8,630 µg/L) in monitoring well EW-0. EW-0 and MW-1 (a.k.a. MW-1N) had the highest concentrations of VOCs compared to all other wells, as shown. Post treatment groundwater results for these compounds collected in April 2013 (Table 3) were as follows:

Table 3 - Post-treatment Groundwater Results in µg/L, April 2013

Sample ID	Chloroethane	1,1-Dichloroethane	TCA
S-8	nd	11.8	1.4
E1-N (E1-NEW)	73.9	154	48.4
EW-1X	nd	22.9	nd
MW-1N (MW-1)	136	438	1,560
EW-0	334	2,540	8,630
Median	73.9	154	48.4

nd – non-detect

As of the most recent groundwater sampling in August 2022 (3Q-4Q 2022), the results for the same compounds (Table 4) are as follows:

Table 4 - Post-treatment Groundwater Results in µg/L, August (3Q-4Q) 2022

Sample ID	Chloroethane	1,1-Dichloroethane	TCA
S-8	2.7	6.3	1.2
EW-1X	82.4	32.9	47.1
MW-1N (MW-1)	344	101	63.8
EW-0	5,250	5,680	3,200

nd – non-detect. E1-N (E1-NEW) is no longer sampled.

The groundwater sampling results from the 3Q-4Q 2022 Semi-Annual sampling event show that TCA concentrations remain well below their pre-remedy and immediate post-treatment concentrations and show an overall more-or-less steady trend, but with variability, particularly in EW-0. Material rebound has not occurred in 10 years following post-treatment groundwater sampling; levels remain approximately an order-of-magnitude or more below pre-treatment concentrations. Semiannual groundwater reports for the reporting period appear in Appendix C.

4.0 EC/IC COMPLIANCE REPORT

4.1 Engineering Controls

The SMP describes the engineering controls that have been implemented to prevent exposure to residual subsurface contamination at the Site. The two Engineering Controls are the SSDS in the Piano Felt Building and the soil cover in the Soil Management Area. Appendix B contains photographs from the Site inspection and the Site inspection form.

4.1.1 Sub-slab Depressurization System

Exposure to potential soil vapor contamination in the Piano Felt Building is prevented by a Sub-slab Depressurization System that creates a vacuum beneath the building floor and ventilates VOC vapors to the outside before they can enter the building (Figure 5).

4.1.2 Protective Soil Cover

Exposure to remaining contamination at the Site is prevented by the soil cover (Soil Management Area) as specified in the Environmental Easement and SMP (Figure 1):

> A protective soil cover shall be in place over the Soil Management Area. The entire Soil Management Area will be inspected to ensure adequate cover by soil and/or vegetation and that erosion of the cover has not occurred. The protective cover in the 50-ft. x 50-ft. remedial excavation shall be of soil or gravel such that it is approximately level with the surrounding Soil Management Area grade.

4.2 Institutional Controls

Institutional controls incorporated into the Site remedy include an Environmental Easement to prohibit certain on-Site uses, and implementation of the SMP specifying soil management, operation, maintenance, monitoring and reporting procedures during future Site use. These Institutional Controls are described below.

- Compliance with the Environmental Easement and the SMP by the Grantor and the Grantor's successors and assigns;
- All Engineering Controls must be operated and maintained as specified in the SMP;
- All Engineering Controls on the Controlled Property (i.e., the Site) must be inspected at a frequency and in a manner defined in the SMP.
- Groundwater, soil vapor and other environmental or public health monitoring must be performed as defined in the SMP;

- Data and information pertinent to Site Management of the Controlled Property must be reported at the frequency and in a manner defined in the SMP;
- On-Site environmental monitoring devices, including but not limited to, groundwater monitoring wells, must be protected and replaced as necessary to ensure proper functioning in the manner specified in the SMP;
- Engineering Controls may not be discontinued without an amendment or extinguishment of the Environmental Easement.

The Site has a series of Institutional Controls in the form of site restrictions. Adherence to these Institutional Controls is required by the Environmental Easement. Site restrictions that apply to the Controlled Property are as follows:

- The property may only be used for commercial use provided that the long-term Engineering and Institutional Controls included in the SMP are employed.
- The property may not be used for a higher level of use, such as unrestricted or restricted residential, use without additional remediation and amendment of the Environmental Easement, as approved by the NYSDEC;
- All future activities on the property that will disturb remaining contaminated material must be conducted in accordance with the SMP;
- The use of the groundwater underlying the property is prohibited without treatment rendering it safe for intended use;
- The potential for vapor intrusion must be evaluated for any new buildings or extensions to the Piano Felt Building and any potential impacts that are identified must be monitored or mitigated;
- Vegetable gardens and farming on the property are prohibited;
- The Site owner or remedial party will submit to NYSDEC a written statement that certifies, under penalty of perjury, that: (1) controls employed at the Controlled Property are unchanged from the previous certification or that any changes to the controls were approved by the NYSDEC; and, (2) nothing has occurred that impairs the ability of the controls to protect public health and environment or that constitute a violation or failure to comply with the SMP. NYSDEC retains the right to access such Controlled Property at any time in order to evaluate the continued maintenance of any and all controls. This certification shall be submitted annually, or an alternate period of time that NYSDEC may allow and will be made by an expert that the NYSDEC finds acceptable.

Institutional Controls identified in the Environmental Easement may not be discontinued without an amendment to or extinguishment of the Environmental Easement.

5.0 MONITORING PLAN COMPLIANCE REPORT

Monitoring has been in full compliance with the requirements outlined in the SMP. There have been no omissions or gaps in the monitoring frequency.

In its letter, dated December 1, 2022, NYSDEC approved the reduction in groundwater monitoring frequency to annually, beginning in 2023. Per the new sampling schedule, the time to sample is to be selected randomly, so as to mitigate potential seasonal effects. Sampling in 2023 will be completed in the fourth quarter of 2023.

In the same letter, dated December 1, 2022, NYSDEC also approved of the removal of monitoring well S-8 from all monitoring events. This well was last sampled on August 19, 2022.

6.0 OPERATION & MAINTAINANCE (O&M) PLAN COMPLIANCE REPORT

There is no OM&M plan for the facility. The only requirements are that the soil cover be in place, the SSDS system operate as designed, and groundwater monitoring and reporting occur at the required frequency. Both systems are operating as designed in the reporting period. Groundwater monitoring and reporting have been taking place at the required frequency

7.0 INVASIVE WORK

No invasive work took place during the reporting period (August 2, 2022 -- August 2, 2023).

8.0 OVERALL CONCLUSIONS AND RECOMMENDATIONS

With respect to the protective cover, the SMP (Section 4.3.1) states:

> A protective soil cover shall be in place over the Soil Management Area. The entire Soil Management Area will be inspected to ensure adequate cover by soil and/or vegetation and that erosion of the cover has not occurred. The protective cover in the 50-ft. x 50-ft. remedial excavation shall be of soil or gravel such that it is approximately level with the surrounding Soil Management Area grade.

The Site inspection on July 13, 2023 found the soil cover in adequate condition and in compliance with SMP requirements (Appendix B).

The Site inspection found the SSDS to have adequate vacuum and functioning properly.

There are no recommended changes to the SMP.

9.0 CERTIFICATION

As a condition of the Environmental Easement the Grantor of the easement or successor is required to submit to NYSDEC a written statement that certifies, under penalty of perjury, that: (1) controls employed at the Controlled Property are unchanged from the previous certification or that any changes to the controls were approved by the NYSDEC; and, (2) nothing has occurred that impairs the ability of the controls to protect public health and environment or that constitute a violation or failure to comply with the SMP. This annual statement must be certified by an expert that the NYSDEC finds acceptable.

The IC/EC Certification Form for this Site was completed based on the information provided in this PRR and the inspections described herein. A copy of the form is included as Appendix D. As indicated on the form, all ICs for this Site remain in place and effective.

ENVIRONMENTAL EASEMENT GRANTED PURSUANT TO ARTICLE 71, TITLE 36 OF THE NEW YORK STATE ENVIRONMENTAL CONSERVATION LAW

THIS INDENTURE made this 23rd day of August, 2017, between Owner(s) American Felt & Filter Company, Inc., having an office at 361 Walsh Avenue, New Windsor, New York 12553, County of Orange, State of New York (the "Grantor"), and The People of the State of New York (the "Grantee."), acting through their Commissioner of the Department of Environmental Conservation (the "Commissioner", or "NYSDEC" or "Department" as the context requires) with its headquarters located at 625 Broadway, Albany, New York 12233,

WHEREAS, the Legislature of the State of New York has declared that it is in the public interest to encourage the remediation of abandoned and likely contaminated properties ("sites") that threaten the health and vitality of the communities they burden while at the same time ensuring the protection of public health and the environment; and

WHEREAS, the Legislature of the State of New York has declared that it is in the public interest to establish within the Department a statutory environmental remediation program that includes the use of Environmental Easements as an enforceable means of ensuring the performance of operation, maintenance, and/or monitoring requirements and the restriction of future uses of the land, when an environmental remediation project leaves residual contamination at levels that have been determined to be safe for a specific use, but not all uses, or which includes engineered structures that must be maintained or protected against damage to perform properly and be effective, or which requires groundwater use or soil management restrictions; and

9-1-69.2

WHEREAS, the Legislature of the State of New York has declared that Environmental Easement shall mean an interest in real property, created under and subject to the provisions of Article 71, Title 36 of the New York State Environmental Conservation Law ("ECL") which contains a use restriction and/or a prohibition on the use of land in a manner inconsistent with engineering controls which are intended to ensure the long term effectiveness of a site remedial program or eliminate potential exposure pathways to hazardous waste or petroleum; and

WHEREAS, Grantor, is the owner of real property located at the address of 361 Walsh Avenue in the Town of New Windsor, County of Orange and State of New York, known and designated on the tax map of the County Clerk of Orange as tax map parcel numbers: Section 9 Block 1 Lot 69.2, being a portion of the property conveyed to Grantor by deed dated July 31, 1978 and recorded in the Orange County Clerk's Office in Liber and Page 2106/655. The property subject to this Environmental Easement (the "Controlled Property") comprises approximately 0.545 +/- acres, and is hereinafter more fully described in the Land Title Survey dated April 17, 1998 and last revised June 26, 2017 prepared by Steven P. Drabick, P.L.S., which will be attached to the Site Management Plan. The Controlled Property description is set forth in and attached hereto as Schedule A; and

WHEREAS, the Department accepts this Environmental Easement in order to ensure the protection of public health and the environment and to achieve the requirements for remediation established for the Controlled Property until such time as this Environmental Easement is

extinguished pursuant to ECL Article 71, Title 36; and

NOW THEREFORE, in consideration of the mutual covenants contained herein and the terms and conditions of Order on Consent Index Number: W3-0784-04-06, Grantor conveys to Grantee a permanent Environmental Easement pursuant to ECL Article 71, Title 36 in, on, over, under, and upon the Controlled Property as more fully described herein ("Environmental Easement").

1. Purposes. Grantor and Grantee acknowledge that the Purposes of this Environmental Easement are: to convey to Grantee real property rights and interests that will run with the land in perpetuity in order to provide an effective and enforceable means of encouraging the reuse and redevelopment of this Controlled Property at a level that has been determined to be safe for a specific use while ensuring the performance of operation, maintenance, and/or monitoring requirements; and to ensure the restriction of future uses of the land that are inconsistent with the above-stated purpose.

2. Institutional and Engineering Controls. The controls and requirements listed in the Department approved Site Management Plan ("SMP") including any and all Department approved amendments to the SMP are incorporated into and made part of this Environmental Easement. These controls and requirements apply to the use of the Controlled Property, run with the land, are binding on the Grantor and the Grantor's successors and assigns, and are enforceable in law or equity against any owner of the Controlled Property, any lessees and any person using the Controlled Property.

A. (1) The Controlled Property may be used for:

Commercial as described in 6 NYCRR Part 375-1.8(g)(2)(iii) and Industrial as described in 6 NYCRR Part 375-1.8(g)(2)(iv)

(2) All Engineering Controls must be operated and maintained as specified in the Site Management Plan (SMP);

(3) All Engineering Controls must be inspected at a frequency and in a manner defined in the SMP;

(4) The use of groundwater underlying the property is prohibited without necessary water quality treatment as determined by the NYSDOH or the Orange County Department of Health to render it safe for use as drinking water or for industrial purposes, and the user must first notify and obtain written approval to do so from the Department;

(5) Groundwater and other environmental or public health monitoring must be performed as defined in the SMP;

(6) Data and information pertinent to Site Management of the Controlled Property must be reported at the frequency and in a manner defined in the SMP;

(7) All future activities on the property that will disturb remaining contaminated material must be conducted in accordance with the SMP;

(8) Monitoring to assess the performance and effectiveness of the remedy must be performed as defined in the SMP;

(9) Operation, maintenance, monitoring, inspection, and reporting of any mechanical or physical components of the remedy shall be performed as defined in the SMP;

(10) Access to the site must be provided to agents, employees or other representatives of the State of New York with reasonable prior notice to the property owner to assure compliance with the restrictions identified by this Environmental Easement.

B. The Controlled Property shall not be used for Residential or Restricted Residential purposes as defined in 6NYCRR 375-1.8(g)(2)(i) and (ii), and the above-stated engineering controls may not be discontinued without an amendment or extinguishment of this Environmental Easement.

C. The SMP describes obligations that the Grantor assumes on behalf of Grantor, its successors and assigns. The Grantor's assumption of the obligations contained in the SMP which may include sampling, monitoring, and/or operating a treatment system, and providing certified reports to the NYSDEC, is and remains a fundamental element of the Department's determination that the Controlled Property is safe for a specific use, but not all uses. The SMP may be modified in accordance with the Department's statutory and regulatory authority. The Grantor and all successors and assigns, assume the burden of complying with the SMP and obtaining an up-to-date version of the SMP from:

Site Control Section
Division of Environmental Remediation
NYSDEC
625 Broadway
Albany, New York 12233
Phone: (518) 402-9553

D. Grantor must provide all persons who acquire any interest in the Controlled Property a true and complete copy of the SMP that the Department approves for the Controlled Property and all Department-approved amendments to that SMP.

E. Grantor covenants and agrees that until such time as the Environmental Easement is extinguished in accordance with the requirements of ECL Article 71, Title 36 of the ECL, the property deed and all subsequent instruments of conveyance relating to the Controlled Property shall state in at least fifteen-point bold-faced type:

This property is subject to an Environmental Easement held by the New York State Department of Environmental Conservation pursuant to Title 36 of Article 71 of the Environmental Conservation

Law.

F. Grantor covenants and agrees that this Environmental Easement shall be incorporated in full or by reference in any leases, licenses, or other instruments granting a right to use the Controlled Property.

G. Grantor covenants and agrees that it shall, at such time as NYSDEC may require, submit to NYSDEC a written statement by an expert the NYSDEC may find acceptable certifying under penalty of perjury, in such form and manner as the Department may require, that:

(1) the inspection of the site to confirm the effectiveness of the institutional and engineering controls required by the remedial program was performed under the direction of the individual set forth at 6 NYCRR Part 375-1.8(h)(3).

(2) the institutional controls and/or engineering controls employed at such site:

(i) are in-place;

(ii) are unchanged from the previous certification, or that any identified changes to the controls employed were approved by the NYSDEC and that all controls are in the Department-approved format; and

(iii) that nothing has occurred that would impair the ability of such control to protect the public health and environment;

(3) the owner will continue to allow access to such real property to evaluate the continued maintenance of such controls;

(4) nothing has occurred that would constitute a violation or failure to comply with any site management plan for such controls;

(5) the report and all attachments were prepared under the direction of, and reviewed by, the party making the certification;

(6) to the best of his/her knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and

(7) the information presented is accurate and complete.

3. Right to Enter and Inspect. Grantee, its agents, employees, or other representatives of the State may enter and inspect the Controlled Property in a reasonable manner and at reasonable times to assure compliance with the above-stated restrictions.

4. Reserved Grantor's Rights. Grantor reserves for itself, its assigns, representatives, and successors in interest with respect to the Property, all rights as fee owner of the Property, including:

A. Use of the Controlled Property for all purposes not inconsistent with, or limited by the terms of this Environmental Easement;

B. The right to give, sell, assign, or otherwise transfer part or all of the underlying fee interest to the Controlled Property, subject and subordinate to this Environmental Easement;

5. Enforcement

A. This Environmental Easement is enforceable in law or equity in perpetuity by Grantor, Grantee, or any affected local government, as defined in ECL Section 71-3603, against

the owner of the Property, any lessees, and any person using the land. Enforcement shall not be defeated because of any subsequent adverse possession, laches, estoppel, or waiver. It is not a defense in any action to enforce this Environmental Easement that: it is not appurtenant to an interest in real property; it is not of a character that has been recognized traditionally at common law; it imposes a negative burden; it imposes affirmative obligations upon the owner of any interest in the burdened property; the benefit does not touch or concern real property; there is no privity of estate or of contract; or it imposes an unreasonable restraint on alienation.

B. If any person violates this Environmental Easement, the Grantee may revoke the Certificate of Completion with respect to the Controlled Property.

C. Grantee shall notify Grantor of a breach or suspected breach of any of the terms of this Environmental Easement. Such notice shall set forth how Grantor can cure such breach or suspected breach and give Grantor a reasonable amount of time from the date of receipt of notice in which to cure. At the expiration of such period of time to cure, or any extensions granted by Grantee, the Grantee shall notify Grantor of any failure to adequately cure the breach or suspected breach, and Grantee may take any other appropriate action reasonably necessary to remedy any breach of this Environmental Easement, including the commencement of any proceedings in accordance with applicable law.

D. The failure of Grantee to enforce any of the terms contained herein shall not be deemed a waiver of any such term nor bar any enforcement rights.

6. Notice. Whenever notice to the Grantee (other than the annual certification) or approval from the Grantee is required, the Party providing such notice or seeking such approval shall identify the Controlled Property by referencing the following information:

County, NYSDEC Site Number, NYSDEC Brownfield Cleanup Agreement, State Assistance Contract or Order Number, and the County tax map number or the Liber and Page or computerized system identification number.

Parties shall address correspondence to:

Site Number: 336036
Office of General Counsel
NYSDEC
625 Broadway
Albany New York 12233-5500

With a copy to:

Site Control Section
Division of Environmental Remediation
NYSDEC
625 Broadway
Albany, NY 12233

All notices and correspondence shall be delivered by hand, by registered mail or by Certified mail and return receipt requested. The Parties may provide for other means of receiving and communicating notices and responses to requests for approval.

7. Recordation. Grantor shall record this instrument, within thirty (30) days of execution of this instrument by the Commissioner or her/his authorized representative in the office of the

recording officer for the county or counties where the Property is situated in the manner prescribed by Article 9 of the Real Property Law.

8. Amendment. Any amendment to this Environmental Easement may only be executed by the Commissioner of the New York State Department of Environmental Conservation or the Commissioner's Designee, and filed with the office of the recording officer for the county or counties where the Property is situated in the manner prescribed by Article 9 of the Real Property Law.

9. Extinguishment. This Environmental Easement may be extinguished only by a release by the Commissioner of the New York State Department of Environmental Conservation, or the Commissioner's Designee, and filed with the office of the recording officer for the county or counties where the Property is situated in the manner prescribed by Article 9 of the Real Property Law.

10. Joint Obligation. If there are two or more parties identified as Grantor herein, the obligations imposed by this instrument upon them shall be joint and several.

Remainder of Page Intentionally Left Blank

IN WITNESS WHEREOF, Grantor has caused this instrument to be signed in its name.

SCHEDULE "A" PROPERTY DESCRIPTION

DESCRIPTION OF SOILS MANAGEMENT AREA & SUB-SLAB DEPRESSURIZATION SYSTEM, AN ENVIRONMENTAL EASEMENT TO THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION

GRANT OF EASEMENT over, across and through all that certain plot, piece or parcel of land with the building and improvements thereon erected, situate, lying and being in the Town of New Windsor, County of Orange and State of New York bounded and described as follows:

BEGINNING at a point at the northwesterly corner of the 1story masonry building of the most northerly complex of buildings located on lands of American Felt & Filter Company Inc., Liber 5730, Page 201, said point of beginning being located South 65 degrees 16 minutes 40 seconds West for a distance of 42.37 feet from a corner in the northerly bounds of lands of the same at the intersection with the municipal boundary between the City of Newburgh and Town of New Windsor and lands now or formerly of Hudson Shipyard Lp, Liber 12960, Page 1797;

THENCE South 72 degrees 57 minutes 34 seconds East for a distance of 103.33 feet along the face of said masonry building to a point;

THENCE South 17 degrees 21 minutes 13 seconds West for a distance of 68.08 feet through said masonry building to a point at the outside corner of said building;

THENCE North 72 degrees 00 minutes 00 seconds West for a distance of 51.17 feet through said masonry building to a point at the outside corner of said building;

THENCE North 72 degrees 57 minutes 52 seconds West for a distance of 51.79 feet to a point at the outside corner of said building;

THENCE South 17 degrees 02 minutes 08 seconds West for a distance of 29.25 feet to a to a point at the northerly face of a two-story masonry building;

THENCE North 72 degrees 32 minutes 52 seconds West for a distance of 75.55 feet along the northerly face of said building to a point at the corner of said building;

THENCE South 17 degrees 20 minutes 58 seconds West for a distance of 43.06 feet along the westerly face of the two-story masonry building to a point at the corner of said building;

THENCE North 72 degrees 34 minutes 38 seconds West for a distance of 72.17 feet along the northerly face of the two story masonry building to a point at the most northwesterly corner of said building;

THENCE North 17 degrees 02 minutes 17 seconds East for a distance of 140.76 feet through lands of American Felt & Filter Company, Inc. to a point marked by an iron rod set at or near a chain link fence;

THENCE South 67 degrees 51 minutes 22 seconds East for a distance of 123.39 feet through lands of the same and along a chain link fence to a point marked by an iron rod set;

THENCE North 87 degrees 49 minutes 18 seconds East for a distance of 26.52 feet through lands of American Felt & Filter Company, Inc. to the POINT OR PLACE OF BEGINNING.

Together with and subject to covenants, and restrictions of record.

Said area contains 0.5454 acres more or less.

Site Investigation Form and Site Photographs

Site Inspection Form
Consent Order Index #W3-0784-04-06, Site #3-36-036
361 Walsh Avenue
New Windsor, New York.

Name of Inspector Jordan Arey + Landon Silverman Weather Partly Cloudy 80°F Date 7/13/23

Site personnel contacted/phone number Linda Miranda 845-561-3560

Is the Site limited to commercial use only? Yes

Has the Site use changed since the last certification? No

If Yes, explain how: N/A

What is the condition of the Composite Cover? X good ____ fair ____ poor

Are there cracks, clogs, or loose connections in the sub-slab depressurization system pipes? No

Differential pressure gauge reading (w.c.): 1.05 " H_2O

Is the sub-slab depressurization system operating properly? Yes

If No, explain why and what corrective actions should be taken: N/A

Attach additional sheets as needed

Signature of Inspector and Date 7/13/23

Reporting Period Semi-Annual Groundwater Reports

Fleming Lee Shue

November 9, 2022

Mr. John Spellman, P.E.
New York State Department of Environmental Conservation
Division of Environmental Remediation
625 Broadway
Albany, New York 12233-7016

Re: American Felt and Filter Company (AFFCO), New Windsor, NY
Semiannual Groundwater Monitoring Report No. 4 – November 2022
Site No. 3-36-036; Site Index No. W3-0784-04-06

Dear Mr. Spellman:

Fleming, Lee Shue Environmental Engineering and Geology D.P.C. (FLS), on behalf of American Felt and Filter Company (AFFCO) is presenting this Fourth Semiannual (SA) Groundwater Monitoring Report for the site in New Windsor, New York. The change in groundwater sampling frequency was approved by the Department in its May 6, 2020 approval of AFFCO's petition to reduce the frequency of groundwater sampling and eliminate one well, E1-NEW, from sampling. This fourth SA groundwater sampling event took place on August 19, 2022.

The Site was remediated between July and September 2012. The remedy was a combination of excavation and *in situ* chemical oxidation (ISCO) using the RemMetrik process (U.S. Patent No. 8,739,867 B2). The *in situ* injection took place in the 50-ft. by 50-ft. treatment area adjacent to the Fuetron Building in July 2012 and excavation occurred in August-September 2012. Post-treatment groundwater sampling took place in April 2013 in order for the treatment chemical, activated sodium persulfate, to fully react. FE prepared a Final Engineering Report (FER) and Site Management Plan (SMP) following the remedy and filed these with the New York State Department of Environmental Conservation (NYSDEC) in 2013 for review and comment. NYSDEC reviewed and approved these documents in 2017 after discussions and revisions made by FE. Quarterly groundwater sampling as outlined in the SMP began in the Second Quarter of 2012 after NYSDEC approved the FER and SMP and issued the Certificate of Completion on April 2, 2018.

A Site Layout Map showing the Site and Environmental Easement and Soil Management Area is included as Figure 1. Figure 2 is a groundwater contour map. Figure 3 identifies groundwater concentrations above NYSDEC Division of Water Technical and Operational Guidance Series 1.1.1 (TOGS) Ambient Water Quality Standards and Guidance Values (Class GA Standards). The

monitoring wells sampled, the respective analyses as required by the SMP and approved petition are as follows:

Well	TCL VOCs	Basic Groundwater Parameters[1]	Location
EW-0	x	x	Treatment Area
EW-1X	x	x	Treatment Area
MW-1	x	x	Adjacent to Treatment Area
S8	x	x	Downgradient of Treatment Area

[1] Iron, sulfate, sulfide, chloride, alkalinity

The groundwater results are discussed with respect to pre-treatment groundwater concentrations and concentration trends. The goal is to attain bulk reduction of groundwater concentrations and asymptotic trends in groundwater concentrations.

Data Validation

Data validation and review of the laboratory analytical data for the Target Compound List (TCL) Volatile Organic Compounds (VOCs) was completed by an in-house chemist not directly involved in the project. Data usability summary reports (DUSRs) are included as Appendix A. Data validation found all data usable for project decisions with the understanding of potential biases in estimated results.

The data were submitted to NYSDEC as an Electronic Data Deliverable (EDD) in accordance with Section 1.15 of NYSDEC's May 2010 DER-10 Technical Guidance for Site Investigation and Remediation. The EDD was submitted on November 9, 2022.

Groundwater Sampling & Analysis

Well purging and groundwater sampling were conducted in accordance with the approved Quality Assurance Project Plan (QAPP) and in accordance with the NYSDEC-approved SMP. Each well was purged using a low flow pump, ensuring minimum turbulence to prevent an increase in suspended solids. Each well was purged until groundwater parameters (temperature, pH, dissolved oxygen [DO], conductivity, oxidation reduction potential [ORP], and turbidity) stabilized or three well volumes were purged, or the well purged dry. The typical purge rates measured 200 to 240 milliliters per minute (mL/minute). Well purge logs are included as Appendix B.

FE conducted the current round of groundwater sampling on February 28, 2022. The samples were analyzed by SGS Laboratories of Dayton, New Jersey, a New York State Environmental Laboratory Approval Program (ELAP) certified laboratory. An electronic copy of the laboratory data report is included as Appendix C. The groundwater samples were managed in accordance with the NYSDEC Analytical Services Protocol (ASP) and analyzed for the following analyses/methods:

- Target Compounds List (TCL) VOCs, EPA Method 8260B

- Sulfate, EPA Method 300/SW846 9056A
- Sulfide, Method SM20 4500S2 F
- Alkalinity, EPA Method SM20 2320B
- Chloride, EPA Method 300
- Methane and Carbon Dioxide, Method RSK-175
- Iron, SW846 6010C
- Iron II, SM3500FE B-11

FE collected field Quality Assurance/Quality Control (QA/QC) samples as part of groundwater sampling. The QA/QC samples included one trip blank, one field blank, and one duplicate sample.

Groundwater Flow

Water level measurements were collected in the monitoring wells as part of the monitoring event and were used to prepare a shallow groundwater contour map as shown in Figure 2. Synoptic groundwater measurements were collected on August 19, 2022. Groundwater flow is towards Quassaick Creek, as expected.

Summary of Analytical Results

The discussion of the analytical results focuses on the principal contaminant, 1,1,1-Trichloroethane (TCA) and Total VOCs. Table 1 presents the analytical results for the current and previous rounds of groundwater sampling.

The semiannual sampling results are plotted and compared to the maximum pre-treatment concentrations for each of the principal contaminants. Groundwater concentrations typically fluctuate, often dramatically, with changing groundwater levels, the seasons, precipitation, and changes in groundwater flow direction throughout the year. This variation can dramatically affect contact between groundwater and contaminant, influence groundwater movement with more or less contaminated strata, affect contaminant migration and retardation through strata of different conductivities, and be influenced by geochemical factors that also occur within different strata. As a result, groundwater contaminant concentrations can fluctuate dramatically from one sampling event to another. Under these conditions, the maximum concentrations likely approximate actual groundwater contaminant concentrations and seem most appropriate as a basis for comparison. For this reason, it is more useful to compare the pre-remedy maximum groundwater concentrations with post-treatment groundwater over time and to use as a gauge of remedy effectiveness.

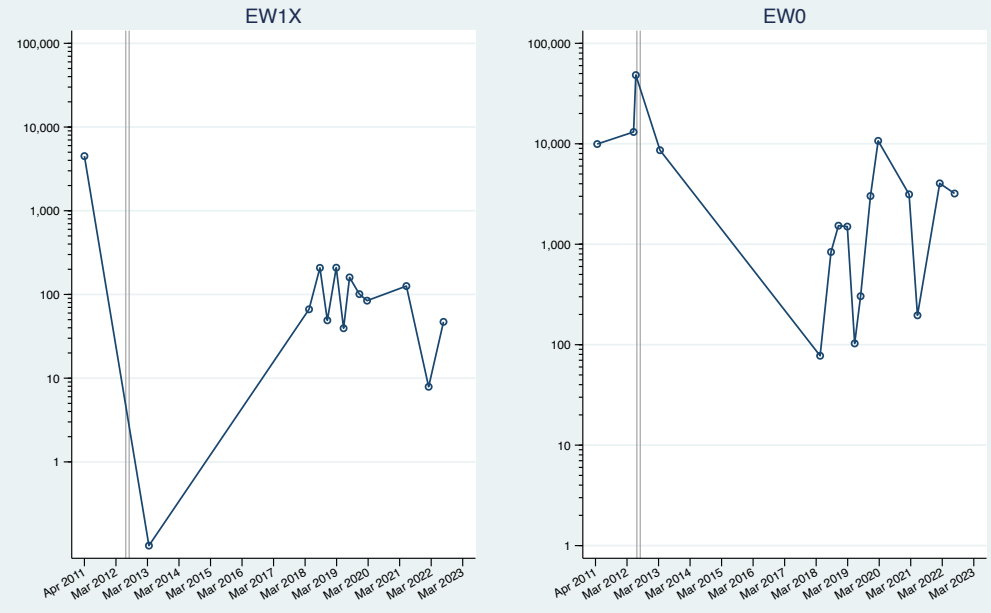
Treatment Area Wells

Monitoring wells EW-0 and EW-1X are the two monitoring wells within the treatment area. Figures 4 and 5 show the results of groundwater sampling trends for TCA and Total VOCs in the treatment area. Analysis of the 3Q 2022 semiannual groundwater sampling data identified the following trends.

Figure 4 shows that TCA in EW-0 decreased modestly from the last period, decreasing from 4,040 µg/L to 3,200 µg/L, although this concentration is within the range of fluctuation typically found in this well. TCE in EW-0 still remains well below the pre-treatment maximum by more than an order-of-magnitude, and although there is a good deal of variability, TCE overall shows a sustained decrease compared to the pre-treatment concentration. The net decrease remains an order-of-magnitude or more. TCA in EW-1X increased from 7.9 µg/L to 47.1 µg/L this period, but nonetheless exhibits a sustained decrease over time of well over an order-of-magnitude compared to the pre-treatment concentration.

Figure 5 shows that Total VOCs in EW-0 essentially mirror the concentration of TCA. Total VOCs in EW-0 increased from the last sampling period, from 11,030 µg/L to 14,344 µg/L, which is within the range typically found in this well. Total VOCs, overall, nevertheless remain more than an order-of-magnitude below the pre-treatment maximum concentration. Total VOCs in EW-1X increased from 98 µg/L to 176 µg/L this period, but remain well over an order-of-magnitude compared to the pre-treatment concentration and within the range of typical variation in this well. Most of the increase in Total VOCs is due to chloroethane, which is a TCA biodegradation by-product.[1]

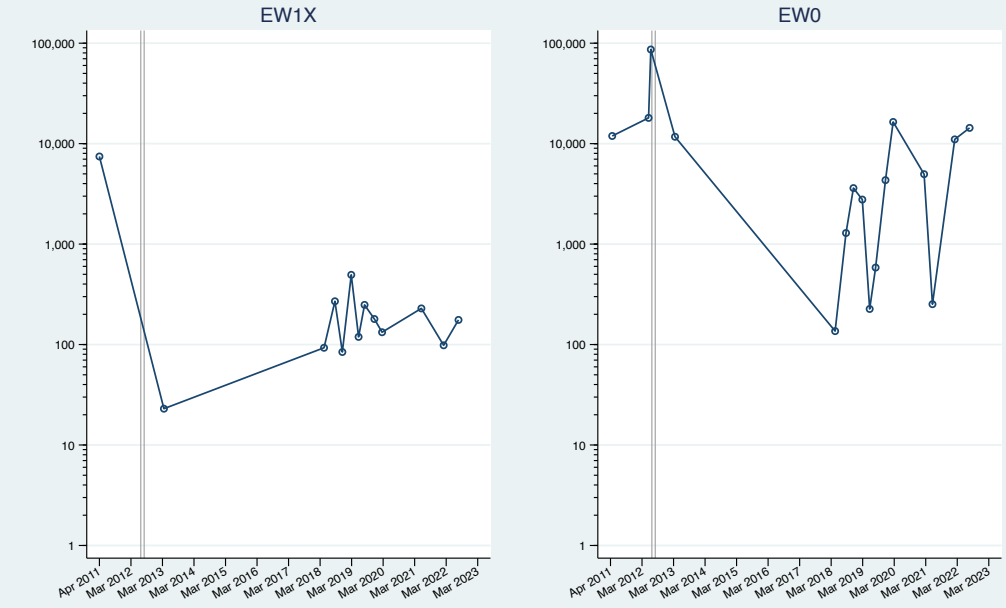
Figure 4. TCA in Treatment Area Groundwater, µg/L



Grey vertical lines show beginning and end of treatment period.
The 4,500 value in EW1X was collected near the EW1X location in 2001 and substituted as the pre-treatment value. It was infeasible to collect a pre-treatment sample in EW1X prior to treatment.

[1] Todd H. Wiedemeier et al., *Natural Attenuation of Fuels and Chlorinated Solvents in the Subsurface* (New York: John Wiley, 1999, p. 246.

Figure 5. Total VOCs in Treatment Area Groundwater, µg/L

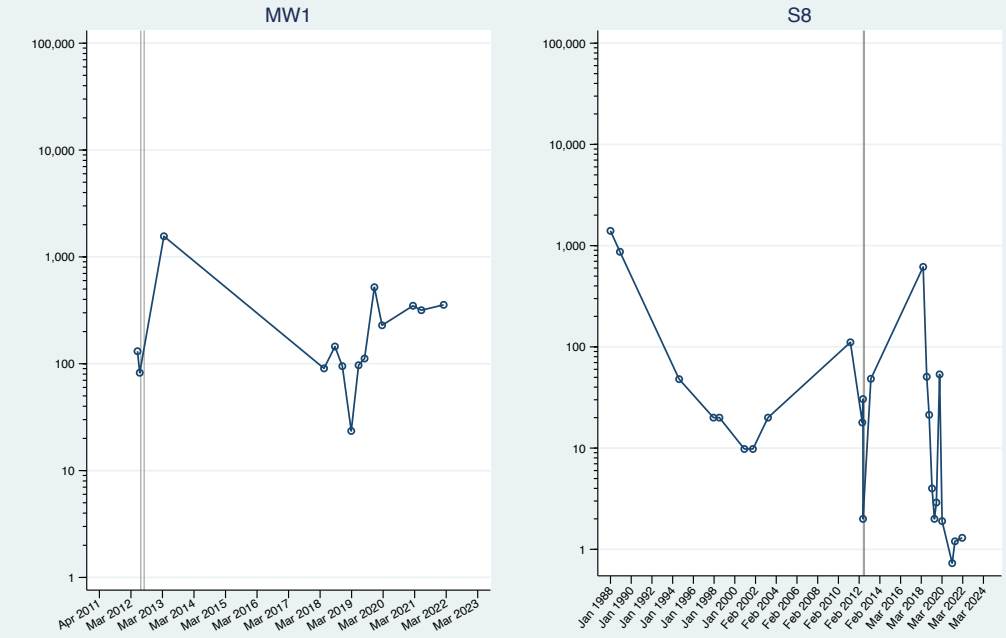


Grey vertical lines show beginning and end of treatment period.
The 7,455 value in EW1X was collected near the EW1X location in 2001 and substituted as the pre-treatment value. It was infeasible to collect a pre-treatment sample in EW1X prior to treatment.

Outside Treatment Area Wells

Monitoring wells MW-1 and S-8, are downgradient and outside the treatment area. Figures 6 and 7 show the results of groundwater sampling trends for TCA and Total VOCs in wells outside the treatment area. TCE in MW-1 remains about the same as previous measurements but still remains more than half an order-of-magnitude below the maximum concentration. TCA in S-8 remains about the same compared to the previous period and has remained below the TOGS AWQS standard of 5 µg/L for the last five monitoring periods.

Figure 6. TCA in Groundwater Wells Outside Treatment Area, µg/L



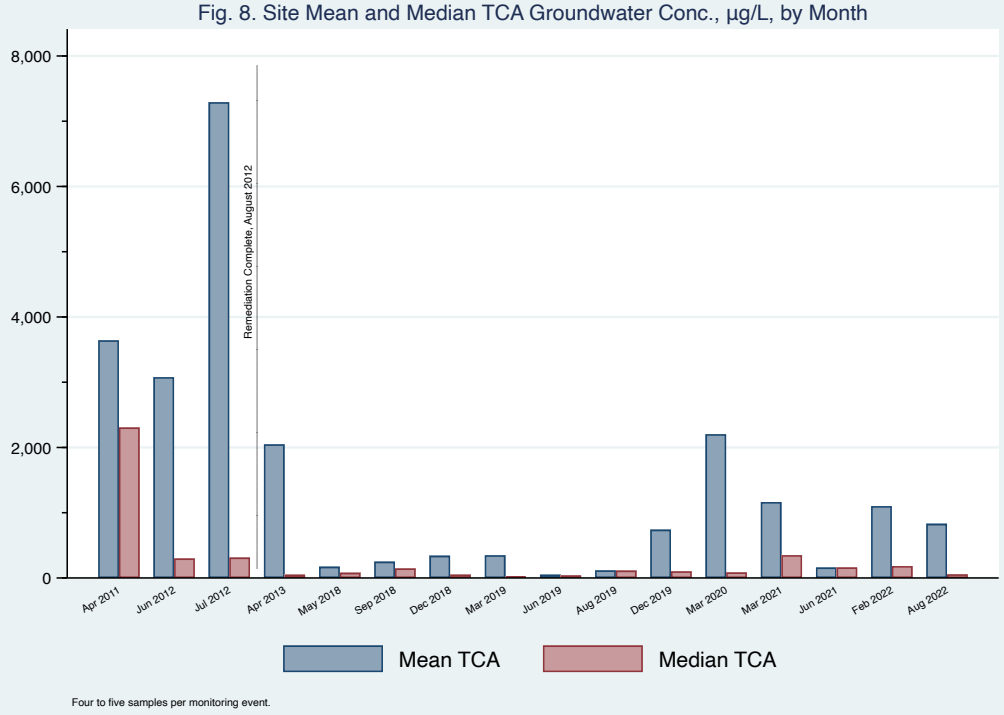
Grey vertical lines show beginning and end of treatment period.

Total VOCs again mirror those of TCA, remaining about the same in MW-1 and remaining very low in S-8.

Figure 7. Total VOCs in Groundwater Wells Outside Treatment Area, µg/L

Figure 8 shows the mean and median TCE groundwater concentrations before and after the remedy completed in 2012. There is a very large TCA reduction in the post-remedial period, albeit with some fluctuation. Most of this fluctuation is in EW-0. Nonetheless, overall TCA concentrations remain well below pre-remedy levels.

Fig. 8. Site Mean and Median TCA Groundwater Conc., µg/L, by Month



Four to five samples per monitoring event.

Groundwater Geochemical Conditions

Table 2 presents a running statistical summary of the basic groundwater parameters. Table 3 presents a running statistical summary of field groundwater parameters.

Sulfate is an electron acceptor and an energy source for microbial degradation. Sulfate is reduced to sulfide by microbes degrading contaminant. Sulfate was less than 17 mg/L, and sulfide was non-detect in all site samples this period, indicating that sulfate reduction is not an active biodegradation pathway.

Iron is an electron acceptor and an energy source for microbial degradation. Iron becomes more soluble when reduced to its dissolved state as Iron II (ferrous iron, Fe II) during microbial degradation. The median Fe II concentration was non-detect this period indicating that iron reduction is not an active biodegradation pathway.

Alkalinity is another indicator of microbial degradation and increased in response to microbial changes. Alkalinity this period was slightly higher than the previous period.

Dissolved oxygen (DO) is a key component of aerobic microbial degradation. DO remains low in most wells. The median DO concentration measured 0.12 mg/L, which is lower than the 0.5 mg/L considered the threshold for aerobic degradation to begin.

Oxidation Reduction Potential (ORP) ranged from -55 to 155 eV this period, which is not conducive to reductive dechlorination. Groundwater temperatures ranged from 17 to 26 degrees C this period.

Geochemical results and groundwater field parameters indicate insignificant biological activity occurred this period.

Degradation by-products

Despite the geochemical indicators being less than optimal for biodegradation, there are indications of ongoing biodegradation. Chloride concentrations have shown a steady increase since 2013, which is an indication of potential TCE breakdown as chlorinated ethenes contain a large mass of chlorine and is an indication of reductive dechlorination.[2] Likewise, methane has shown an overall gentle increase since 2018, but experienced an abrupt increase this sampling period, and is an indication that fermentation is occurring.[3] Carbon dioxide, an indicator of biological activity, increased this period. The levels of cis-1,2-DCE, vinyl chloride, and ethane, and chloroethane, increased this period, which are biodegradation by-products.

Net TCA and Total VOC Reduction in Groundwater

Table 4 shows the percent reduction in TCA and Total VOCs for the treatment area, outside the treatment area, and for all wells compared with the pre-treatment maximum concentrations. TCE and Total VOCs remain significantly lower than the pre-treatment maximum concentrations indicating there is no net material rebound. Overall, despite some fluctuation, TCA maintained a reduction of 94 percent and Total VOCs maintained an 84 percent reduction. This suggests sustained bulk reduction. A considerable portion of the Total VOCs are from a degradation compound.

Net Weighted Reduction	96	77

Table 4C - All Wells

Well	TCA % Reduction	Total VOCs % Reduction
S-8	>99	99
EW-1X	99	97
EW-0	93	83
MW-1[2]	0.5	41
Net Weighted Reduction	94	84

Summary and Conclusions

The groundwater sampling results from the 3Q22 SA sampling event show TCA concentrations remain well below their pre-treatment maximum (or immediate post-treatment) concentrations and show an overall more-or-less steady trend, but with variability, particularly in EW-0. An exception is in S-8 where TCA has remained below the TOGS Class GA AWQS for almost two years.

Overall, TCA maintained a 94 percent reduction compared with the pre-treatment maximum and Total VOCs maintained an 84 percent reduction compared with the pre-treatment maximum. This is evidence of sustained bulk reduction.

Most wells have only a few detected VOC compounds and fewer still have VOCs above the TOGS GA AWQS. The number of VOCs above TOGS is seven or less (Figure 3). Despite groundwater conditions being less than optimal for biodegradation, there is evidence for reductive

[4] % Reduction is the percent reduction for each well compared to its pre-treatment maximum concentration. Net Weighted Reduction is the weighted reduction for all wells in the specific group shown.
[5] Using the maximum TCA or Total VOC concentration immediately after treatment

dechlorination in the form of degradation by-products and generally increasing methane and chloride concentrations.

INTRODUCTION

A Data Usability Summary Report (DUSR) provides a thorough evaluation of analytical data with the primary objective to determine whether or not the data, as presented, meets the site/project specific criteria for data quality and data use.

This DUSR was conducted based on standard practice regulatory guidance documents, including New York State Department of Conservation (NYSDEC), June 1999, for technical review of analytical data in lieu of a full third-party data validation and the Analytical Service Protocol (ASP) for technical review of analytical data.

1.1 Project Information

Project Name	American Felt and Filter Co.
Laboratory	SGS – Accutest Laboratories, Dayton, NJ
SDGs	JD50363
Sample Summary	Four (4) field groundwater samples collected. One (1) Field duplicate, one trip blank and one field blank included. Collected in one day 8/19/22.
Analytical Methods	Target Compound List (TCL) MS Volatiles by SW846 8260C; GC Volatiles by Method RSK-175 General Chemistry by EPA 300/SW846; 353.2/LACHAT Metals (Fe) by EPA Method 6010D.

2.0 DUSR QUESTIONS

1. *Is the data package complete as defined under the requirements for the most current NYSDEC ASP Category B or USEPA CLP deliverables?*
   Yes.

2. *Have all holding times been met?*
   Yes.

3. *Do all the QC data: blanks, instrument tunings, calibration standards, calibration verifications, surrogate recoveries, spike recoveries, replicate analyses, laboratory controls and sample data fall within the protocol required limits and specifications?*
   Yes. Some QC exceptions resulted in qualification of data as noted in Table 2 and Section 5. All data are considered usable.

4. *Have all of the data been generated using established and agreed upon analytical protocols?*
   Yes.

5. *Does an evaluation of the raw data confirm the results provided in the data summary sheets and quality control verification forms?*
   Yes. The raw data was reviewed to verify that detected results met retention time and mass spectral criteria.

6. *Have the correct data qualifiers been used and are they consistent with the most current NYSDEC ASP?*

   Yes. The laboratory used the correct data qualifiers in reporting results. Data validation resulted in some updated qualifiers as shown in Table 2 and discussed in Sections 5.

7. *Have any quality control (QC) exceedances been specifically noted in the DUSR and have the corresponding QC summary sheets from the data package been attached to the DUSR?*

   Yes. QC exceedances are specified in the Method Specific Data Validation section (Sections 5). Corresponding samples were qualified and all data are considered usable. QC Summary sheets have been attached.

3.0 SAMPLE & ANALYSES SUMMARY

This section summarizes the Sample Delivery Groups (SDGs), sample descriptions and analytical parameters.

3.1 Sample Delivery Group Information

Table 1. Sample Descriptions and Validated Analyses

Sample ID	Lab ID	Sample Type	Collection Date	Matrix	Analyses
JD50363					
S-8	JD50363-1	Field	8/19/2022	GW	TCL VOCs by Method 8260C
EW-0	JD50363-2	Field	8/19/2022	GW	TCL VOCs by Method 8260C
MW-1	JD50363-3	Field	8/19/2022	GW	TCL VOCs by Method 8260C
EW-1X	JD50363-4	Field	8/19/2022	GW	TCL VOCs by Method 8260C
EW-0 DUP	JD50363-5	Field Duplicate	8/19/2022	GW	TCL VOCs by Method 8260C
FIELD BLANK	JD50363-6	Field Blank	8/19/2022	AQ	TCL VOCs by Method 8260C
TRIP BLANK	JD50363-7	Trip Blank	8/19/2022	AQ	TCL VOCs by Method 8260C

3.2 Analytical Methods

Trace Volatile Organic Compounds by and analyzed by EPA Method 8260C Gas Chromatography/Mass Spectrometry (GC/MS). RSK-175 volatile organic compounds, metals (Fe), and general chemistry parameters were also analyzed, but not validated as a part of this review.

4.0 DATA VALIDATION SUMMARY

The following is a summary of data validation actions for this project. Provided below are the qualifier definitions.

Qualifier	Definition
U	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.
UJ	The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.

Table 2 -Summary of Data Validation Actions

Sample ID	Analyte	Qualifier	Notes
EW-0 DUP	Chloroethane 1,1-Dichloroethane	J	Headspace present within sample vial during re-analysis. Only two compounds reported.
MW-1 EW-1X	Acetone	J	CCV %D outside of limits (low). Compound detected.

S-8 EW-0 EW-0 DUP FIELD BLANK TRIP BLANK	Acetone	J	CCV %D outside of limits (low). Compound non-detect.
S-8	Trans-1,2-Dichloroethene	J	Reported result less than RL.
EW-0	Toluene	J	Reported result less than RL.
MW-1	Cis-1,2-Dichloroethene Trans-1,2-Dichloroethene Acetone Chloroform Carbon disulfide Trichloroethene	J	Reported result less than RL.
EW-1X	1,2-Dichloroethane 1,4-Dioxane cis-1,2-Dichloroethene Acetone	J	Reported result less than RL.
EW-0 DUP	Toluene	J	Reported result less than RL.

Data validation details for each method are provided in the following sections.

5.0 DATA VALIDATION DETAIL – TRACE VOLATILE ORGANIC COMPOUNDS

5.1 Data Package Completeness
Data package is complete for the SDG.

5.2 Preservation
All JD50363 associated samples were properly preserved by acidification to a pH <2 and cooled and held at 4ºC (+/- 2 ºC). Note: Within analytical batch V2A9549, a reanalysis on two samples for chloroethane and 1,1-dichloroethane, client sample EW-0 DUP was analyzed from a sample with headspace within the vial. As such, all detected compounds from this sample are qualified J and non-detect qualified UJ.

5.3 Hold Times
As mentioned above, all samples (preserved) were analyzed within recommended method holding time. Improperly preserved samples were analyzed within 7 days.

5.4 Instrument Performance Check
In total, two (2) separate instruments were used in this project (GCMS2A and GCMS3D) Ion abundance criteria met in all instruments according to Table 1 of ASP Exhibit E.

5.5 Initial Calibration (ICALs)
Initial calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run and of producing linear calibration curve and provides mean Relative Response Factors (RRFs) suitable for quantitation.

Instrument GCMS3D
Initial calibration check (ICC) for this instrument associated with Run ID: V3D7582

Initial ICC was conducted 8/3/22. RRFs were acceptable for all compounds with the exception of n-butyl alcohol (0.009).

RSD%s were within acceptable bounds for all analytes (i.e., below maximum ASP Exhibit E Table 2 values). Three Initial Calibration Verifications (ICVs) were conducted and Percent Deviation was found acceptable for all compounds with the exception on non-reported compounds.

Instrument GCMS2A
Initial calibration check (ICC) for this instrument associated with Run ID: V2A9511

Initial ICC was conducted 7/31/22 RRFs were acceptable for all compounds with the exception of vinyl bromide (not reported).

RSD%s were within acceptable bounds for all analytes (i.e., below maximum ASP Exhibit E Table 2 values). Three Initial Calibration Verifications (ICVs) were conducted and Percent Deviation was found acceptable for all compounds.

5.6 Continuing Calibration Verification (CCV)

Instrument GCMS2A

Analytical Batch: V2A9549 (EW-0; EW-0 DUP) RE-RUN

Mean RRF was acceptable for all compounds. %D was within acceptable laboratory limits for all compounds with the exception of non-reported compounds. This analytical batch was a diluted rerun analyzed for chloroethane and 1,1-dichlroethane only. No qualifiers are assigned.

Instrument GCMS3D

Analytical Batch: V3D7613 (MW-1, FIELD BLANK, TRIP BLANK, EW-0, EW-1S, EW-0 DUP, S-8)

Mean RRF was acceptable for all compounds. %D was within acceptable laboratory limits for all compounds with the exception of acetone (20.8%).

Acetone was biased low in this analytical batch. As such, all non-detect results are qualified UJ and all detected results are qualified J. All remaining compounds are not reported and therefore no qualifiers are assigned.

5.7 Blanks

Method Blanks

A method blank analysis was performed in each analytical batch for each instrument (2 total batches). Results were non-detect for all compounds in each method blank with the exception of the following:

V3D7613 MB | carbon disulfide 0.47 ug/L. Compound is reported above the MDL, but below the RL. All project samples are non-detect and don't require qualification with the exception of MW-1 (0.74 ug/L). Both Method Blank and MW-1 reported concentration is less than the CRQL, as such, per guidance, the project sample is reported to the CRQL with a U.

Field Blank

FIELD BLANK was submitted as a field blank sample. All samples were non-detect for all compounds.

Trip Blank

One (1) trip blank sample was submitted with this SDG. Results were non-detect for all compounds.

5.8 Analysis Sequence
Samples were analyzed according to standard sequence.

5.9 Internal Standards
All internal standard area counts are within acceptable limits. All required VOC internal standards used. Includes SMCs tert-butyl alcohol-D9, pentafluorobenzene, 1,4-difluorobenzene, chlorobenzene-D5, 1,4-dichlorobenzene-d4. Some dilution required for samples with high concentrations of target compounds.

5.10 Laboratory Control Sample (LCS)
A LCS sample was analyzed as a part of each analytical batch. There are no required limits for NYSDEC ASP 2005 LCS samples so Lab limits are considered the applicable threshold.

Analytical Batch: V3D7613-BS
All analytes were detected within acceptable ranges within the LCS.

Analytical Batch: V2A9549-BS
All analytes were detected within acceptable ranges within the LCS. Analytical batch was a re-run, and only reported compounds were chloroethane and 1,1-dichloroethane.

5.11 Duplicates

Field Duplicates
Client samples EW-0 DUP served as a field duplicate for parent sample EW-0. All RPD were within acceptable limits (less than 30%) for all compounds. RPDs for detected results are summarized in the tables below.

Compound	Units	EW-0	EW-0 DUP	Relative Percent Difference
Chloroethane	ug/l	5250	5400	2.82%
1,1-Dichloroethane	ug/l	5680	5930	4.31%
1,2-Dichloroethane	ug/l	46.2	46.3	0.22%
1,1-Dichloroethene	ug/l	90.9	83.8	8.13%
Toluene	ug/l	11.9 J	11.7 J	1.69%
1,1,1-Trichloroethane	ug/l	3200	3120	2.53%
Vinyl chloride	ug/l	64.5	62.1	3.79%

Lab Duplicates
All lab duplicates were non-project samples.

5.12 Matrix Spike and Matrix Spike Duplicate
All MS and MSD samples were non-project samples and no assessment of matrix interference could be made.

5.13 Surrogates & System Monitoring Compounds (SMCs)
All ASP required surrogate compounds were used including tolunene-d8, 4-bromofluorobenzene, and 1,2-dichloroethane-d4. All were recovered within acceptable limits.

5.14 Project QA/QC (Field Duplicates)
Per Project QA/QC one field duplicate per 20 samples was submitted as a part of this event. Duplicate Sample (EW-0 DUP) was within acceptable limits except where noted in Section 5.11. Per Project QA/QC one field blank and at least one Trip blank were submitted per 20 samples. Field Blank (FIELD BLANK) were non-detect for all compounds except where noted in Section 5.7. Trip blanks were non-detect for all compounds. Project specific matrix spike collection was not specified in Project QA/QC. As such, no project samples were utilized as Matrix Spikes and no determination of Matrix interference could be made. All data are considered usable.

5.15 Detection Limits
Results reported above the MDL, but below the Reporting Limit (RL) are qualified J for all samples.

Re: SGS North America – Dayton, NJ Jobs # JD50363 – Reissues

Dear Mr. Panter,

The final reports for SGS jobs number JD50363 have been edited to reflect corrections to the final results. These edits have been incorporated into the revised report which is attached.

Specifically, additional Ethane and Ethene Compound as RSK-175 Method has been retrieved and reported on R samples. The attached revised report incorporates these revisions.

SGS apologizes for this occurrence and for any inconvenience this situation may have caused. Please contact me at 732-329-0200 if I can be of further assistance in this matter.

Sincerely,

Report Department

SGS North America Inc

CONTINUOUS SERVICE IMPROVEMENT!

Our goal is to continuously improve our service to you. Please share your ideas about how we can serve you better at EHS.US.CustomerCare@sgs.com. Your feedback is appreciated!

Organics ND = Not detected above the MDL

CASE NARRATIVE / CONFORMANCE SUMMARY

Client:	Fleming-Lee Shue, Inc.	**Job No**	JD50363
Site:	AFFCO, 361 Walsh Avenue, New Windsor, NY	**Report Date**	9/13/2022 3:22:36 PM

On 08/19/2022, 5 Sample(s), 1 Trip Blank(s) and 1 Field Blank(s) were received at SGS North America Inc. at a maximum corrected temperature of 2.9 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. Job Number of JD50363 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Compounds qualified as out of range in the continuing calibration summary report are acceptable as per method requirements when there is a high bias but the sample result is non-detect.

MS Volatiles By Method SW846 8260D

Matrix: AQ **Batch ID:** V2A9549

- All samples were analyzed within the recommended method holding time.
- Sample(s) JD50818-3MS, JD50818-4DUP were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- JD50363-5: Sample analyzed with head-space vial.

Matrix: AQ **Batch ID:** V3D7613

- All samples were analyzed within the recommended method holding time.
- Sample(s) JD50176-22MS, JD50176-22MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- Matrix Spike Recovery(s) for 1,1,2,2-Tetrachloroethane, 1,2-Dichloropropane are outside control limits. Outside control limits due to matrix interference.
- Matrix Spike Duplicate Recovery(s) for 1,1,2,2-Tetrachloroethane are outside control limits. Outside control limits due to matrix interference.
- JD50363-2: Dilution required due to high concentration of target compound.
- JD50363-5: Dilution required due to high concentration of target compound.
- JD50363-5 for 2-Hexanone: Associated CCV outside of control limits high, sample was ND.
- JD50363-2 for 2-Hexanone: Associated CCV outside of control limits high, sample was ND.
- JD50363-3 for 4-Methyl-2-pentanone(MIBK): Associated CCV outside of control limits high, sample was ND.
- JD50363-4 for 2-Hexanone: Associated CCV outside of control limits high, sample was ND.
- JD50363-6 for 4-Methyl-2-pentanone(MIBK): Associated CCV outside of control limits high, sample was ND.
- JD50363-4 for 4-Methyl-2-pentanone(MIBK): Associated CCV outside of control limits high, sample was ND.
- JD50363-4 for Methyl Acetate: Associated CCV outside of control limits high, sample was ND.
- JD50363-7 for Methyl Acetate: Associated CCV outside of control limits high, sample was ND.
- JD50363-7 for Acetone: Associated CCV outside of control limits high, sample was ND.
- JD50363-6 for 2-Hexanone: Associated CCV outside of control limits high, sample was ND.
- JD50363-7 for 2-Hexanone: Associated CCV outside of control limits high, sample was ND.
- JD50363-1 for 4-Methyl-2-pentanone(MIBK): Associated CCV outside of control limits high, sample was ND.
- JD50363-1 for Methyl Acetate: Associated CCV outside of control limits high, sample was ND.
- JD50363-3 for 2-Hexanone: Associated CCV outside of control limits high, sample was ND.
- JD50363-6 for Acetone: Associated CCV outside of control limits high, sample was ND.
- JD50363-7 for 4-Methyl-2-pentanone(MIBK): Associated CCV outside of control limits high, sample was ND.

MS Volatiles By Method SW846 8260D

Matrix: AQ **Batch ID:** V3D7613

- JD50363-4 for Acetone: Associated CCV outside of control limits high.
- JD50363-3 for Methyl Acetate: Associated CCV outside of control limits high, sample was ND.
- JD50363-1 for 2-Hexanone: Associated CCV outside of control limits high, sample was ND.
- JD50363-1 for Acetone: Associated CCV outside of control limits high, sample was ND.
- JD50363-3 for Acetone: Associated CCV outside of control limits high.
- JD50363-6 for Methyl Acetate: Associated CCV outside of control limits high, sample was ND.

GC Volatiles By Method RSK-175

Matrix: AQ **Batch ID:** GAA2622

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JD50363-3DUP were used as the QC samples indicated.
- JD50363-4R: Dilution required due to high concentration of non-target compound.

Matrix: AQ **Batch ID:** GWW5593

- All samples were analyzed within the recommended method holding time.
- Sample(s) JD50363-1DUP were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- JD50363-1: (pH=7)Sample is not acid preservation per method/client criteria. Sample analyzed within 7 days holding time.
- JD50363-2: (pH=7)Sample is not acid preservation per method/client criteria. Sample analyzed within 7 days holding time.
- JD50363-3: (pH=7)Sample is not acid preservation per method/client criteria. Sample analyzed within 7 days holding time.
- JD50363-4: (pH=7)Sample is not acid preservation per method/client criteria. Sample analyzed within 7 days holding time.

Metals Analysis By Method SW846 6010D

Matrix: AQ **Batch ID:** MP34757

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JD50176-22FSDL, JD50176-22MSD,JD50176-22MS JD50176-22SDL were used as the QC samples for metals.

General Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ **Batch ID:** GP42011

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JD50176-22DUP, JD50176-22MS were used as the QC samples for Sulfate, Chloride.

General Chemistry By Method SM2320 B-11

Matrix: AQ **Batch ID:** GN32581

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JD50091-16DUP were used as the QC samples for Alkalinity, Total as CaCO3.
- JD50363-3 for Alkalinity, Total as CaCO3: Sample was titrated to a final pH of 4.5.Sample received with head space.
- JD50363-2 for Alkalinity, Total as CaCO3: Sample was titrated to a final pH of 4.5.Sample received with head space.
- JD50363-1 for Alkalinity, Total as CaCO3: Sample was titrated to a final pH of 4.5.Sample received with head space.

General Chemistry By Method SM3500FE B-11

Matrix: AQ **Batch ID:** GN32757

- All method blanks for this batch meet method specific criteria.
- Sample(s) JD50363-1MS, JD50363-1MSD were used as the QC samples for Iron, Ferrous.
- JD50363-1 for Iron, Ferrous: Field analysis required. Received out of hold time and analyzed by request.
- JD50363-2 for Iron, Ferrous: Field analysis required. Received out of hold time and analyzed by request.
- JD50363-3 for Iron, Ferrous: Field analysis required. Received out of hold time and analyzed by request.

General Chemistry By Method SM4500S2- F-11

Matrix: AQ **Batch ID:** GN32669

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JD50363-1MS, JD50363-2DUP were used as the QC samples for Sulfide.

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by SGS North America Inc indicated via signature on the report cover

No hits reported in this sample.						
JD50363-7	TRIP BLANK					
No hits reported in this sample.						

(a) (pH=7)Sample is not acid preservation per method/client criteria. Sample analyzed within 7 days holding time.
(b) Sample was titrated to a final pH of 4.5.Sample received with head space.
(c) Dilution required due to high concentration of target compound.
(d) Associated CCV outside of control limits high.
(e) Sample analyzed with head-space vial.

Part of 9-1-69.2	Vapor Mitigation

• Subslab depressurization system operating in piano felt building.

Box 5

Periodic Review Report (PRR) Certification Statements

1. I certify by checking "YES" below that:

a) the Periodic Review report and all attachments were prepared under the direction of, and reviewed by, the party making the Engineering Control certification;

b) to the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and the information presented is accurate and compete.

YES	NO
X	

2. For each Engineering control listed in Box 4, I certify by checking "YES" below that all of the following statements are true:

(a) The Engineering Control(s) employed at this site is unchanged since the date that the Control was put in-place, or was last approved by the Department;

(b) nothing has occurred that would impair the ability of such Control, to protect public health and the environment;

(c) access to the site will continue to be provided to the Department, to evaluate the remedy, including access to evaluate the continued maintenance of this Control;

(d) nothing has occurred that would constitute a violation or failure to comply with the Site Management Plan for this Control; and

(e) if a financial assurance mechanism is required by the oversight document for the site, the mechanism remains valid and sufficient for its intended purpose established in the document.

YES	NO
X	

IF THE ANSWER TO QUESTION 2 IS NO, sign and date below and DO NOT COMPLETE THE REST OF THIS FORM. Otherwise continue.

A Corrective Measures Work Plan must be submitted along with this form to address these issues.
