## Summary of Events:

- AOS 0810. Marcus (Arcadis); John Lalonde, Abscope Crew on site.
- PW rig having mechanical issues; begin drilling at 0930.
- Completed QC-4, located in Area 2, cell 19A. Due to softness of material, used 3 inch spoons instead of a core barrel.
- Had fully treated material, full recovery from 0-20 feet bgs. Less recovery from 20-24 feet bgs, but material is fully treated. The proposed depth in this area, minus the pre-excavation, is 23 feet bgs.
- Completed QC-5, located in Area 1 inside gas holder #1. Since only depth of treatment was being verified at this location, PW augered to 2 feet bgs before sampling.
- Had fully treated material from 2-6 feet bgs. The 6-8 foot interval was all brick (holder bottom). The proposed depth in this area, minus the pre-excavation, is 8 feet bgs.
- PW rig broke down at 1345, unable to complete drilling.
- All borings were tremie grouted to surface.
