Summary of Events:

- AOS 1210. Marcus (Arcadis); John Lalonde, Abscope Crew on site.
- PW onsite 1230; begin drilling at 1250.
- Completed QC-6, located in Area 3, in the northwest corner. Due to softness of material, used 3 inch spoons instead of a core barrel.
- PW augered to 16 feet bgs before sampling. The starting elevation was 425, and the target depth of ISS is 404 (21 feet bgs).
- Had fully treated material from 16 to 18.4 feet bgs. Till-like material, little to no treatment from 18.4 to 20 feet bgs. Fully treated material from 20-21 feet bgs, then 6 inches of till material.
- All borings were tremie grouted to surface.

PROJECT SCHEDULE:

- Continue backfill of site.
- Install recovery wells.

ISSUES PENDING:

- None

ITEMS OF CONCERN:

- A wellhead was found in the sidewall of the excavation, where the stockpile had been. It was determined that this was from a well in the middle of the access road that was accidentally ripped off. Arcadis plugged riser to prevent more material from entering the well. They would also try to locate the second well that was in that location to determine if it had been damaged.
